ADDITIONS AND CORRECTIONS

- P. 15^b, l. 5, read: Nr. 24 and 31, instead of Nov. 24 and 31.
P. 18^a, l. 32, read: 1894, Nr. 1, instead of Nov. 1, 1894.
P. 38^a, l. 4 from beneath: the words "The *Ashtin*... and" are to be cancelled.
P. 74^b, l. 23, instead of 1385, to be read 1386.
P. 88^b, l. 30, instead of Nov. 2, to be read: Sept. 3.
P. 109^b, l. 3, read: 637, instead of 630 (Feb. 2, 1222).
l. 49, 64, instead of Nāblin, to be read Nāblus.
P. 112^a, l. 46, 69, instead of v., to be read iv.
P. 203^a, l. 23, 26, 37, instead of Kalfa, to be read Kaifa.
P. 231^b, l. 42, to be added: or *istuturva*.
P. 253^a, l. 9, instead of 275, to be read 255.
l. 62, instead of l.v., to be read *della nascita*.
P. 256^a, l. 53 and 59, read: third, instead of second.
P. 272^a, l. 46, instead of Khalīfān, to be read Khalīkān.
P. 308^a, l. 28, read: two, instead of a.
P. 308^b, addition of the author to the art. *SHAMMAR*. Palgrave may be relied on for the main facts. He certainly went to Shammar, Kaysin and Riyāḍ; Daughly was convinced of this. He is untrustworthy in details: He sketched in times, distances, incidents very imperfectly remembered. (Kindly communicated by Dr. D. G. Hogarth).
Art. *SHATTARIVA*. Cf. further: Muḥammad Ghoshī b. Ḥamū b. Mūsā Shattārī, *Gulzar-i Ahrār*, Cod. Calc., especially fol. 22 vvv.; *Ethi. Cat. Pers. MSS. India Office*, No. 1915; *Iwanow, Cat. Pers. MSS. A.S.B.*, No. 1303; *Go., Carson Coll.*, No. 434.
P. 344^b, l. 8, instead of Constantine, read: Constantinus.
P. 330^a, l. 53, 56, instead of Dörenbourg, to be read Dörenbourg.
P. 389^a, Art. *SUR-ŪY*. The last sentence is to be read as follows: In the year 1300 of the era of the Seleucids (989 A.D.), according to al-Būnī, the stars of the 9th and 10th stations set on the 3rd of Shubāḥ, those of the 23rd and 24th rose on the 16th of that month.
P. 414^b, l. 5, instead of 434, to be read: 454.
P. 506^b, l. 10, Add: The place occurs on a map by Rawlinson, in *J. R. G. S.*, x, (1841).
l. 8 beneath, insert: According to H. Bell (cf. his *The Origin of Islam in its Christian Environment*, London 1926, p. 52, note) *sur* is derived from Syriac *šwr*, also found in the forms *šwrā* and *šwra*, which is used in the sense of "writing", especially "a portion of scripture".
P. 612^b, l. 38, instead of: naïveté of his language, when expressing terror, read: naïveté of his dialectal language.
P. 636^a, l. 5, instead of *Muhāḡirah*, to be read *Muhāḡaru*.
P. 660^a, l. 2, instead of 1101, to be read 1099.
P. 679^b, l. 44, instead of Kal'ūn, to be read Kal'ūn.
P. 689^a, l. 18, instead of Černyav, to be read: Černyev.
P. 735^a, Art. *THA'AL*. To be added: cf. Ign. Krachkovsky, *Le manuscrit du "kitāb al-muḡāḡal" de Tā'āl au Musée Arabe (Comptes Rendus de l'Ac. des sciences de l'U. R. S. S., 1930, p. 211—217)*.
P. 804^b, l. 62, instead of *Origine*, to be read *Origine*.
P. 855^b, l. 45, instead of Chat and Ghadames, read: el-Baskut and Fohrut and an important rectification of the frontier in the region of Chat and Ghadames.
P. 885^a, l. 9, instead of *Uḡūd*, to be read: *Uḡūd*.
l. 40, instead of *Mohammadan*, to be read: *Mohammaden*.
P. 976^a, l. 42, instead of Nāḥ I, to be read Naḡr b. Aḡmad.
P. 980^a, to the first alinea to be added: The building of the monument of Firdaws has been taken in hand by the Committee for the Preservation of National Monuments (*Angjman-i Sāḡh-e millī*).
P. 987^b, l. 28, instead of Aḡwas, read: Aḡwas.
P. 988^b, l. 7, instead of 326, read: 282.
P. 990^a, l. 17, add: Siamondi (1815), Fauriel (1846), von Schack (1865), Burdach (1918), Sliger, Asia (1919) and Nykl (1931) have made enquiries into the possibilities of contact between Orient and Occident regarding this point.
l. 58, add: Finally the 'adhr love became an abstract idea of beauty.
l. 60 *sq.*, read: Zahrī, *Kitāb al-Zahrā*; extracts have appeared in my *Recueil de textes inédits* (Paris 1929), p. 232—240; the text will be edited by Nykl, who has also translated the *Tamāḡ* of Ibn Ḥam (The Dove's Neck-ring, Paris 1931).

ADDITIONS AND CORRECTIONS

- P. 994^a, l. 45, to be read: Umayyad period, Creswell thinks that it was rebuilt by the 'Abbasid prince 'Isa b. Mūsā; this would lead to its identification with East Maškūl, which was one of the last stations of Husayn before Karbalā' (cf. my *Mission*, I, 27, vol. 2).
- P. 1048^a, l. 35, instead of Sallier, to be read: Sallier.
l. 37, after "by", insert: G. K. Potter (London 1929, following Dershowitz and Schamann) and by.
l. 60, read: many, instead of any.
l. 65, to be added: cf. *al-Muḥṭaṭṭif*, xxxiv. (1908), p. 308 ap.
- P. 1049^b, l. 3, instead of Sallier, to be read: Sallier.
l. 9, to be added: and Ph. Hitti, in *R. A. A. D.*, x. (1930), p. 543—545, 592—603.
l. 52, instead of 1200, read: 1136^b.
- P. 1052^b, l. 52, to be added: a Waḳūf-Me'sūf Direction ("Waḳūfko-menitihā direksija").
- P. 1063, Art. 'Uḫayr. To be added to the *Bibliography*: Joshua Finkel, in *Muslims in Persia*, Princeton 1933, p. 162.
- P. 1177^a, art. Yūḫūk, *Bibliography*. To be added: *Türkmen 'Ağrıları*, ed. by the General Direction of the affairs of the nomads and the emigrants, Istanbul 1334 (by *نصرت قزاقچیس*), with the addition: "translated from German", esp. p. 33—45 and p. 175—184. Ahmet Reşit, *Anadolu'da Türk Ağrıları* (1906—1200), Istanbul 1930 (contains several documents concerning the Turkish nomadic tribes in the period between 1550 and 1786); Ali Rıza, *Çengizli Türkmen Oymakları*, I, Istanbul 1931—1932 (review by F. Kowalewski, in *Archiv Orientalni*, vi. 296—304); E. M. Hoppe, *Die Yuraks*, in *J. E. A. S.*, 1933, p. 25—28; vols. ii. and iii. of the work of Ali Rıza have been published at Ankara in 1933; they contain further interesting discussions and photographs regarding the Yuraks. (F. RAHAKIAROVIC).
- P. 1183^a, l. 22, to be read as follows: and Zāḫag are ruled by the same king. Ḳāḳū b. Tūḫān, d. in 907, mentions etc.;
l. 7 *ad infra*, in stead of Samatrabāḫmī, read: Samatrabāḫmī.
- P. 1183^b, l. 24, in stead of *Wai*, read: *wai*;
l. 32, in stead of eastern, read: western;
l. 35, to be added: G. Condes, *Les inscriptions malaises de Srīngga*, *Bull. de l'Éc. franç. de l'Extrême-Orient*, xxx, 1930, p. 337—380; G. Perroud, *Quatre textes épigraphiques de Sumatra et de Bangka*, *J. A.*, 1932, p. 271—326 and the literature cited there.
l. 37, in stead of Malayu, read: Malayu;
- P. 1213^b, *Bibliography*. To be added: Malatī (d. 377 = 987), *Kiṣṣ al-Tamīh wa 'l-Ḥādī*, Mr. Dāmascus (private copy. Makes the chief of the Z. & Zaidī, a political opponent of the *sayyids* and the Arabs); Ibn Abī 'l-Ḥadīd, *Ḥārūf Naḥṣ al-Balāḡa*, Cairo, n. d., II, 316—362. — The Shā'fī author Ahmad b. al-Mu'allī 'Amrī, from Barra, has written a *Kiṣṣ al-Ḥādī* *Ḥārūf al-Zawāḡ*, which is lost (Astarābādī, *Mawṣūf al-Maṣṣaf*, 10th Tehran 1306, p. 30). The orthodox Shā'fī emphasise, as an apocalyptic coincidence, the *subtle* of this rebel and the *ḡāḡa* of their mahdī (Ibn Zaynab Na'mānī, *Kiṣṣ al-Ḥādī*, 10th Teheran, p. 73—75).

(445) 22

an account is given by Taḥī al-Dīn in a work composed in 1552/3. The clocks of King Alfonso of Castile owe their perfection to Moorish skill.

Wiedemann and F. Hauser, *Über die Uhren im Bereich der islamischen Kultur, Nova Acta*, vol. c, No. 5 (Halle 1915); do., *Uhr des Archimedes, Nova Acta*, vol. ciii, No. 2; E. von Bassermann-Jordan, *Die Geschichte der Zeitmessung und der Uhren*. (J. Ruska)

SĀ'ĀDA (A.) felicity, good fortune. The root *s-ā-d* and some of its derivatives is associated in various connections with pre-Islamic Arab conceptions. Its general meaning is given as 'auspicious, fortunate (*y-m-a*, opposite *n-f-s*)'. The proper name Sa'd (feminine Sa'da, see the article SĀ'D) may therefore be synonymous with Hebrew names like Benjamin and Gad. Sa'd is also found as the name of a god; Welhausen (*Reise arabischen Heidentums*, p. 65) suggests that al-Sa'da (a house round which the Arabs used to run) was originally an epithet of al-'Uzzā. Sa'd followed by the genitive also often occurs as the name of a star (cf. also the articles SĀ'D, AL-SĀ'DĀN) and as the name of a tribe.

The form *Sa'da* in the *talbiya* formula (which is especially used on the Ḥajj) but also in the *salāt*, see the article TALBIYA) may be very closely connected with the root meaning (= *y-m-a*); cf., however, the Arabic dictionaries under *s-ā-d*.

Sa'ada (also with a following noun in apposition, in the proper name Sa'adat 'Alī Khān; see this article) seems to be a specifically Muslim term (opposite: *shāghira*). It is not found in the Korān; in Ḥadīth it has an eschatological colouring (cf. *yawm al-sa'ada*, day of the resurrection, Dozy, *Supplément*, s. v.), especially in connection with predestination. It is said, for example, that the people of *sa'ada* are helped by God towards works of *sa'ada* (al-Bukhārī, *Ḍifa'at*, bāb 83; Muslim, *Kutub*, trad. 6; al-Tirmidhī, *Kutub*, bāb 3). As a result of a development of a train of thought common to monotheistic religions, the word in the combination *ahl-al-Sa'ada* = the Muslims (cf. Dozy, *op. cit.*) assumes a less exclusive meaning. In court language it means majesty, highness and *Dār al-S* court (Dozy s. v.). *Der-i Sa'adat* is a name for Constantinople and *Sa'adat* a title in the Turkish official hierarchy.

Bibliography in the article itself.

(A. J. WENSINCK)

SĀ'ĀDAT 'ALĪ KHĀN, Nawāb of Oudh (q. v.), from 1795 to 1814; on the death of his brother, Asaf al-Dawla, in September 1797, a reputed son, Wazīr 'Alī Khān, who had been purchased by the late Nawāb but never formally adopted, had been appointed to succeed, but four months later he was set aside as incompetent, and the British Governor-General, Sir John Shore, installed in his place Sa'adat 'Alī Khān, who had been living under British protection in Benares since 1776. His reign is noteworthy for the extension of British control over the Oudh territories. A treaty concluded with the late Nawāb in 1775 had placed these territories under the protection of the East India Company, which undertook to provide troops for their defence in return for an annual subsidy; in 1798, a fresh

treaty increased the subsidy to 76 lakhs a year and transferred the fort of Allahābad to the Company as an arsenal, the Company undertaking to maintain a body of 10,000 men for the defence of the Nawāb's dominions both against internal and external enemies. The mutinous behaviour of the Nawāb's troops prompted the new Governor-General, the Marquis Wellesley (1798—1805), to propose that this useless and dangerous force, which Sa'adat 'Alī Khān had himself declared would be useful only to the enemy, should be disbanded and replaced by the Company's troops. Alarmed by the dangers that threatened his person, Sa'adat 'Alī Khān was at first eager for this reform, but afterwards refused his consent, and only in 1801 yielded to pressure and signed the Treaty of Lucknow; this relieved him from all pecuniary obligations to the Company, by the cession of six districts yielding a revenue equal to the cost of the Company's troops, and the Nawāb undertook to introduce into his territories a system of administration conducive to the prosperity of his subjects and calculated to check the ruin that threatened the resources of his country. He carried out his promise so effectually as to leave behind him the reputation of having been the wisest and strongest administrator that Oudh had ever known. He died in 1814 and was succeeded by his second son, Ghāfī al-Dīn Haider.

Bibliography: Sayyid Ghulām 'Alī, *Imād al-Sa'adat*, p. 169—174 (Lucknow 1897); Dargā Prāsād, *Bihār-i-Awāl*, p. 99—109 (with portrait; Lucknow 1892); Sir C. U. Aitchison, *Collection of Treaties relating to India*, I, p. 118—137 (Calcutta 1909); Sir John Malcolm, *The Political History of India from 1784 to 1823*, I, p. 170—177, 273—283 (London 1826); *A Selection from the Despatches of the Marquis Wellesley*, ed. by S. J. Owen, p. 188—207 (Oxford 1877); H. C. Irwin, *The Garden of India, or chapters on Oudh history and affairs*, p. 100—111 (London 1880). The following sources appear to be still unpublished: Harukh Rāe, *Mudim al-Akhbar* (Brit. Mus., Or. 1624); Muḥammad Muḥtashim Khān, *Tārīkh-i-Muḥtashim* (Bankipore Public Library, No. 605).

SAB', SAB'A, the number seven, which has a special significance for Muslims as for other — Semitic and non-Semitic — peoples. The preference for this number in various conceptions and actions goes back in part to borrowing from Jews, Christians and other peoples but in part was already indigenous among the pre-Muhammadan Arabs. The latter is doubtless true of the sevenfold (*taḥaf*) around the Ka'ba, the sevenfold course between al-Sāfa and al-Marwa (cf. SĀ'Ā) and the sevenfold casting of stones at the Ḥajj (see TAMARA I 1012 *sq.*). Another series of these beliefs is connected with peculiarly Muslim customs and views. As early as the Korān we find mention of the seven Mithān (iv. 87), which expression is usually referred to the *faṭiha*, which consists of seven verses (cf. A. Geiger, *Was hat Mohammed aus dem Judenthume aufgenommen?*, p. 58). The Muslim community bases its right to acknowledge various lections of the sacred text of the Korān on one (of many) explanations of the tradition, that the Korān was revealed in seven *ahruf* (Bukhārī, *Al-kunūṭ*, bāb 4; *Faḍl al-Korān*, bāb 4, 27; Muslim, *Ṣaḥīḥ al-Muḥḥarir*, trad. 270—274; Abu Dāūd, *Witr*, bāb 22; Nasā'i, *Iftikhār* bāb

37 etc.; cf. Goldäher, *Die Richtigungen der islamischen Koranauslegung*, Leiden 1920, p. 37 sqq.). In matters relating to ritual purity the figure three has as a rule the preference (cf. THALMUTH). We are only told that soiled vessels should be cleansed seven times (e. g. Muslim, *Tuhāra*, trad. 89—93; Abū Da'ūd, *Tuhāra*, bāb 37). Ritual prostration should take place on seven parts of the body (Bukhārī, *Adhān*, bāb 133, 134, 137, 138; Muslim, *Ṣalāt*, trad. 227; Abū Da'ūd, *Ṣalāt*, bāb 150 etc.). In another case seven alternates with four, namely in the grouping of commands and prohibitions (Bukhārī, *al-Maḥallim wa'l-Ghadāb*, bāb 5; Muslim, *Libās*, trad. 3 etc.; cf. Bukhārī, *Tuhāra*, bāb 40; *Ḥaḍ*, bāb 26, etc.); in the dating of the *Lailat al-Qadr* seven is found as well as the, in this case much more frequent, numeral ten (Bukhārī, *Lailat al-Qadr*, bāb 2).

On the Christian model the deadly sins are limited to seven (Bukhārī, *Waḍ'iyā*, bāb 23; *Ḥudūd*, bāb 44; Muslim, *Imān*, trad. 144); but other classifications are also found.

In cosmology also the number seven is a favourite, one which may be partly due to borrowing. There are seven heavens and seven earths (*Sūra* ii. 27; Bukhārī, *Bad' al-Khalq*, bāb 2). Hell has seven gates (*Sūra* xv. 44); Medina also ultimately has seven gates (Bukhārī, *Fitan*, bāb 26). Cf. further the article SAB'YA. The number seven is particularly frequent in medicine and magic. Water was poured over the sick Muhammad in seven waterskins (Bukhārī, *Wuḍū'*, bāb 145); ulcerated parts of the body are cauterised seven times (Bukhārī, *Tamannā*, bāb 6). In Doutté, *Magie et religion dans l'Afrique du nord* (Algiers 1909), p. 154, there is an account of a *ḡadūal* consisting of 7×7 squares, of which the upper row contains the "seven seals". In the same work the text of the amulet of the *saḥ'a 'ahūd* is given (p. 112). Cf. further the same book, p. 91, 100, 118.

Numbers like seventy (*saḥ'ana*), seven hundred, etc. have also a special significance. Earthly fire is described as one seventieth part of hell-fire in strength (Bukhārī, *Bad' al-Khalq*, bāb 10). The sweat of the children of men on the Day of Resurrection will percolate seventy ells into the earth (Bukhārī, *Riḥāḥ*, bāb 47). When a sevenfold *istighfār* is mentioned, we are probably to assume New Testament influence in this case (*Sūra* ix. 81). Seventy thousand members of Muhammad's *Umma* will go straight to Paradise without a day of reckoning (*ḥisāb*; Bukhārī, *Bad' al-Khalq*, bāb 8; Muslim, *Imān*, trad. 316; Tirmidhī, *Ḥiyāma*, bāb 12, 16); seventy thousand will enter with radiant countenance (Bukhārī, *Libās*, bāb 18; *Riḥāḥ*, bāb 50, 51; Muslim, *Ḍiyāna*, trad. 14—17); seventy thousand through the intercession of a member of the community (*Dārīmī*, *Riḥāḥ*, bāb 87); seventy thousand in Paradise will be given the appendage to the liver of the fish to eat (Bukhārī, *Riḥāḥ*, bāb 44; Muslim, *Ṣifāt al-Murāḥḡin*, trad. 30). The *Bait al-Ma'mūr* is entered daily by seventy thousand angels, who never return there again (Bukhārī, *Manāḡib al-Anṣār*, bāb 42).

We may safely assume that the number seven was regarded as a rounded whole; but it is going too far, following out this conception, to try to derive with Hehn the root *s-b* and its equivalents in other Semitic languages from the root *ṣ-b* (work quoted below, p. 91 sqq.).

Bibliography: J. Hehn, *Siebenzahl und Sabbat bei den Babyloniern und im alten Testament* (Leipzig. Semit. Stud., ii. 5, Leipzig 1907) (A. J. WENSTEDT).

SABA¹, the name of the people and kingdom in South-western Arabia in the first millennium B.C., frequently mentioned in the Old Testament, in Greek, Roman and Arabic literature and especially in the South Arabian inscriptions; the old Arabic sources, which are mainly inscriptions, and isolated references in Greek sources, give us further information regarding the history of Saba¹ in the first centuries A. D. down to the period of Muhammad. In Assyrian, on the evidence of the cuneiform inscriptions down to the eighth century, *Sab'u* was the name of a country, as was *Shab(a)* (also *Shabt(1)*, *Shabo*) in the hieroglyphic texts, although of a comparatively late date. In the Bible, *Saba* was the name of a people and country and in the South Arabian inscriptions also *Saba*¹ means the land or kingdom and people (which is in keeping with the Sabaeen constitution).

The oldest known literary references to Saba¹ are, of course, the Semitic, especially those in the cuneiform inscriptions. While the oldest certain mentions only date from the eighth century, historical documents from Mesopotamia of a much earlier period seem to refer to Saba¹. For example *Sabu* in a Sumerian inscription of Aradnannar, Patesi of Lagash, a contemporary of the last kings of Ur, of the second half of the third millennium B.C., is perhaps a name for the "land of the Sabaeans". Hommel (in Hilprecht's *Explorations in Bible Lands*, Philadelphia 1903, p. 739) speaks of *Sabum* of the time of the kings of Ur (after 2500 B. C.) as the *Saba* of the Old Testament ("in Central Arabia"); on this see also *Die altisraelitische Überlieferung*, Munich 1897, p. 37). In the inscriptional narratives of the campaign of Tiglat-Pileser III (745—727) against North Arabia, among the tribes who offered their submission we find Sabaeans mentioned, the oldest certain reference for this people. Sargon II (722—705) in his Annals (for the year 715) mentions the Arabs of the desert dwelling afar off, the Queen Samst of Aribi already mentioned in the narrative of Tiglat-Pileser just quoted and the Sabaeen Itamar, who along with others brought rich gifts of tribute (gold, frankincense, jewels, etc.). With the latter name Lenormant compared Itamar, the name, known from inscriptions, of several rulers of the oldest period of Saba¹. Schrader's *Keilschriften und das Alte Testament*¹ (henceforth quoted as *K. A. T.*, p. 55) and Kiepert's (*Lehrb. d. alten Geogr.*, p. 187) suggestion that the reference here is not to the South Arabian Saba¹ has been rejected by D. H. Müller (*Burgen und Schlösser Südarabien*, ii. (1881), p. 989 (do. in *Sabäische Denkmäler*, 1883, p. 108 against Delitzsch, *Wo lag das Paradies?* Leipzig 1881, p. 303, who sought to locate the Sab'u of Sargon's inscriptions in North Arabia; cf. Winckler in the *M. V. A. G.*, 1898, p. 18; but see also W. M. Müller, *Studien z. Vorderasiatischen Geschichte*, *ibid.*, p. 36); Glaser, *Skizze der Geschichte u. Geographie Arabiens*, ii. Berlin 1890, p. 263 and Grimme (*Mohammed*, Munich 1904, p. 18) from the fact that the tribute consisted of regular South Arabian products deduced that even in Tiglat-Pileser's time, as in Sargon's, the Sabaeans were South Arabians;

others have more recently been inclined again to transfer It'amar's abode to North Arabia (cf. M. Hartmann, *Die arabische Frage in Der islamische Orient*, li. Berlin 1909, p. 131, 458).

From Sprenger's point of view, who maintained it to be certain that Arabia was the original home of the Semites (*Leben und Lehre des Mohammed*, i. Berlin 1869, p. 241 sq. and *Die alte Geographie Arabiens*, Bern 1875, p. 293 sq.; following him Schrader, *Z. D. M. G.*, xxvii. 421 and other notable authorities), which is still the view most generally held (cf. E. Meyer, *Gesch. d. Altertums*, p. 2, p. 386 sq.), one can understand his untenable suggestion that the Sabaeans and the Minaeans came from Hadramūt and that the kingdom of Saba² was founded from Shabwat (*Geogr.*, p. 162, 230, 246, 248, 301). More recently Winckler (e.g. *K. A. T.*, 1903, p. 7, 11, 136 sq., 156; *Die Völker Vorderasiens in Der Alte Orient*, i. 2, 1, 10) and Weber (*Arabien vor dem Islam*, p. 3 sq.; *Westasien in Helmholtz's Weltgeschichte*, iii. 3, 5, 220, 225) have categorically declared Arabia to be the original home of the Semites. Hommel (*Grundr. der Geogr. u. Geschichte der alten Orient*, i. Munich 1904, p. 10 sq., 24, 80, 132) more cautiously sees in Eastern Arabia (including Chaldaea) at least the last starting point for the migration of all the Western Semites. Hartmann, *op. cit.*, p. 93 sqq. has adopted a decided position against this theory of the original home. There are well-founded reasons against believing that Arabia should be regarded as the cradle of all Semitic peoples. Even with this hypothesis and the assumption of an Arab migration based upon it (see most recently *Westasien*, p. 226, but also the admission there p. 242) the relation between Arabia and Babylonia does not become absolutely clear. The reverse is really more probable, that the superfluous population of the fertile Euphrates region was forced towards Arabia, in the first place to the pasturelands bordering it on the west, from which Semites naturally found their way back from time to time. In spite of Nöldeke's arguments (*Die semitischen Sprachen*, Leipzig 1899, p. 11) it is as little probable that North Africa is the home of the Semites (so again Grimm, *op. cit.*, p. 6 sq., 9 and other writers) or that there was a south-northward tendency in the immigration of the Sabaeans towards Africa. On the contrary there are indications, according to Gaidi's view (*Della sede primitiva dei popoli semitici*, in the *Atti della R. Accad. dei Lincei*, 1879), which is defended by Jacob (*Altarab. Studien*, Berlin 1897, p. 28 sq.), that the southern Euphrates territory was the oldest known home of the Semites, from which in the course of centuries migrations took place towards west and south. The way in which Arabia was peopled from there cannot, of course, be more definitely ascertained. Probably the Semites did not penetrate into Arabia by a single route but by two main routes; the one, which may have been taken by the tribes out of whom rose the Minaeans and Sabaeans of the historical period, seems to have led through the arable lands along the west coast to the south, somewhat on the line of the later caravan route, and the other along the western shore of the Persian Gulf to Oman and Hadramūt, roughly in the direction of the later eastern frankincense route. The Sabaeans, or their mother-stock, would naturally keep to the west and south coast regions, which offered the most suitable areas for

settlement on account of their good soil and water-supply. According to Hommel, the Sabaeans probably first entered South Arabia from Djof in North Arabia in the eighth century B. C. (see *Grundriss*, p. 142).

The Old Testament (Gen., x. 7, 1 Chr., i. 9) calls *Sheba* the eponym of the land and people of South Arabia, the first son of Ra'mā, therefore a Kshite, but in Gen., x. 28 (1 Chr., i. 22) he is called a son of Yokhān and in Gen., xxi. 3 (1 Chr., i. 32) a son of Yokhān, son of Abraham. These are not, however, references to three different Shebas: a people with such extensive trading connections had obviously intermarried a good deal with neighbours on the sea, on the caravan routes or in the stations and could therefore easily be given different genealogical classifications (Dillmann on Gen., x. 7). According to some, *Sheba* is originally identical with *Saba* and only dialectically differentiated from it to distinguish the African Sabaeans (e.g. v. Krenner, *Die indarabische Sage*, Leipzig 1866, p. 110 sq.; D. H. Müller in the tenth edition of Gesenius's *Hebr. Wörterb.*).

The etymology of the name Saba² is not certain (on the best known attempts to explain it, — those of Krenner, Hommel, D. H. Müller and Glaser — as well as on other points see my more comprehensive treatment of the subject in Pauly-Wissowa-Kroll's *Realencycl. der klass. Altertumswiss.*, s. v. *Saba*, henceforth quoted as *R. E.*, col. 1499. —

The Bible shows that the Sabaeans supplied Syria and Egypt with spices, especially with frankincense, and also exported gold and jewels thither (cf. Psalm, lxxii. 15; Ezek., xxvii. 22; Isaiah, lx. 6; Jerem., vi. 20) and the Greek and Roman accounts (see below) agree with this. Other Biblical passages, which describe the Sabaeans as a wealthy trading people — the essential feature of the Biblical account of Saba² — are Ezek., xxxviii. 13; Ps., lxxii. 10; Job, vi. 19 (referring to Sabaean caravans), i. 13 (where the Sabaeans appear plundering in North Arabia; according to D. H. Müller, *Encyclopaedia Britannica*, 1889, article *Yemen*, p. 738, colonists or caravans, which occasionally combined robbery with trading, at any rate according to a good source (*K. A. T.*, p. 150, and the story is not a bold poetic fiction, as W. M. Müller, *Studien*, p. 36, note 1 suggests); according to Winckler, *op. cit.* (cf. Hommel, *Explorations*, p. 748), in the passage in Job the Sabaeans are thought of as Beduins of the North Arabian desert). Joel, iii. 8, mentions the Sabaeans as "a people far off" to whom the sons and daughters of Tyre and Sidon will be sold by Judah (cf. the mention of sacred slaves, e.g. from Gaza in South Arabian inscriptions; see Hartmann, *op. cit.*, p. 421). — To appreciate properly the much discussed story of the Queen of Sheba (1 Kings, x. 1, 4, 10, 13; cf. 2 Chron., ix. 1 sq., 9, 12), who is said to have visited Solomon, it is decisive that all that we know of Saba² and Ma'in contradicts the supposition that there were queens there (*K. A. T.*, p. 237). In any case we are not to see in the story evidence of the existence of the rule of queens in Saba², in which Glaser still believed (*op. cit.*, p. 380, 384 sq., 403); also E. Meyer, *Gesch. des Altertums*, i. 2, p. 23, still less a support for the assumption that the oldest Sabaean inscriptions belong to the ixth or xth century, or that in the time of Solomon there was only one great land of the Sabaeans stretching far to the north (Gla-

ver, *op. cit.*, p. 403). Nor have we to identify in the Sabaean princess a queen of Yathib, the alleged ancestral home of the Sabaeans (Hommel, *Aufsätze und Abhandlungen*, henceforth quoted as *A.A.*, p. 231, note 1, 235, note 1, 272, 312 sq. and Weber, *Studien*, i. 32), but in all probability we have simply in the guise of fiction a memory of the existence of queens in North Arabia, of whom for example those of Arībi are known from history to have existed. The motif has also found a place among the Arabs (in Kor'an xxvii. 16 sq.) and has been developed in the legend of Bilqīs [q. v.], 'Queen of Saba'.

Next in chronological order come the references to Saba' in Greek and Roman literature. In the former the oldest is Theophrastus, *Hist. Plant.*, ix. 4, 2, a much discussed passage of great importance for history and topography, in which (on good authorities, perhaps even Androstenes) Saba' and three other South Arabian kingdoms are quoted as the place of origin of spices. In the sentence *γίνεται δ' αἰθάνος καὶ ἡ σάββα καὶ κάρια καὶ ἐν τῇ νοτιοανατολικῇ ἐν τῇ τῷ Ἀράβῳ χωρίῳ ἐπὶ τῇ Σαβᾷ καὶ Ἀδράμουτα καὶ Κερίβαν* (var. *Κατάβαν*) καὶ Μανιά (var. *Μάιν*), Σαβᾷ does not mean, as many think, a town (namely Σαβᾷ, the capital of the Sabaeans), but the land of Saba', just as Ἀδράμουτα means the land of Hadramūt (on the form of the name, the Greek representation of which has been wrongly interpreted among recent writers even by Th. Bent, *Expedition to the Hadramut in the Proc. R. Geogr. Soc.*, 1895, p. 316 and *Southern Arabia*, 1900, p. 71 sq., see *R. E.*, col. 1300) and Κερίβαν Κatabān (see the art. *ΚΑΤΑΒΑΝ*). The expression *ἐπὶ Σαβᾷ* in this passage does not mean 'around Saba'', as it has been translated e.g. by D. H. Müller, Hartmann (*op. cit.*, p. 420), and still more recently, but 'in Saba'', i. e. 'in the land of Saba'.

Theophrastus is obviously mentioning here the three well-known South Arabian territories and a fourth not so well-known, Mami, as the areas which produce frankincense (αἰθάνος, name of tree and resin, also αἰθανωτός, name of the resin, Arabic *lubān*; on the other Semitic equivalents see *R. E.*, col. 1301), myrrh (σάββα, *myrr*, etc., Arabic *myrr*, also found in inscriptions), cassia and cinnamon (κάρια: perhaps not Semitic). On wrong modern interpretations of this passage and the passage of similar content in Herodotus, iii. 107, particularly for a refutation of the utterly unfounded proposal to read in Theophrastus ΣΑΡΑ (said to be for *Shahr*, *Shahrāt*) instead of ΣΑΒΑ, and also in Pliny, *Nat. Hist.*, xii. 52, and Solin, 710, *Sara* for *Saba*, and finally on Glaser's (*op. cit.*, p. 41 sq.) extraordinary notion that Theophrastus's statements regarding the South Arabian kingdoms refer to Somaliland in its whole extent, see *R. E.*, col. 1302 sq. Noteworthy also are Theophrastus's details (ix. 4, 2-4, 7-10) regarding frankincense and myrrh (as regards which Theophrastus's statement regarding the area which produces them is wrongly limited to Hadramūt as a result of the already mentioned misinterpretation of the passage [in the above quoted *Grundriss d. Geographie*, p. 137 and following it again quite recently], ix. 4, 5 sq.; on the Sabaeans as dwellers in a mountainous area, which yields myrrh and frankincense, and as exporters of these products; on the honesty of the Sabaeans in intercourse with one another, which rendered the watching of the spice-bearing

trees unnecessary (cf. *Periplus Maris Erythraei*, p. 32); concerning the temple of Helios, the most sacred in the land of the Sabaeans, which was used as a place for keeping the whole harvest of myrrh and frankincense, an instructive testimony to the worship of the sun among the South Arabians; for further details, as well as for information regarding the actual occurrence of these spice-trees in South Arabia see *R. E.*, col. 1307 sq. and the quotations from and collocation of the travellers' reports in A. Grohmann, *Südarabien als Wirtschaftsgelände*, Vienna 1922, p. 128 sqq., 136 sqq.; lastly on the attempt to connect Saba' with the land of frankincense, Pont, see *R. E.*, col. 1312 sq.).

The next most ancient Greek authority on Saba' is contained in the much more copious statements of Eratosthenes preserved in Strabo, xvi. iv. § 2, still very important for the historical side of Sabaean studies, which in combination with the Theophrastus passage give a fairly clear picture of the oldest configuration of the South Arabian kingdoms as known to the Greeks and Europeans in general in the time of Eratosthenes. According to this authority, who, like Theophrastus, was able to make use of the results of the campaigns of Alexander as well as itineraries of sailors and caravan-travellers, there lived in South Arabia four main peoples: the *Μαῖναι* on the Red Sea with their capital *Κάτρα*, next to them the *Σαβᾶν* with their capital *Μανιά*, then the *Καταβανῶν* down to the straits and passage into the Arabian Gulf with the capital *Τάμνα*, and furthest east the *Χαβαρίτων* with their (chief) town (πόλις) *Χαβήραον*. All these towns were under absolute rulers (kings) and were prosperous. This passage (with the others in Strabo) contains the oldest known account of the respective topographical situation of the four South Arabian kingdoms with a complete list of the four principal nations and the capitals. The Sabaeans, according to Eratosthenes, were neighbours of the Minaeans (see the article *ΜΑΐΝ* for further information). It does not follow from his statement that the latter lived in the territory on the Red Sea, that he thought the Sabaeans did not also live on the sea, as Glaser (*Sitzb.*, p. 16) deduced and Weber (i. 9 in the main text) was also inclined to conclude. The correct interpretation is in agreement with the evidence of Arabic sources and of other Greek and Roman authors, for example Agatharchides (Diodorus, iii. 46) and Pliny (vi. 145) on Sabaean places on the Red Sea and the reference in Stephana Byzantinus, *Μανιά: μετρήματα Σαβαίων πρὸς τῇ ἑσπέρῃ θαλάσσῃ*, referring expressly to the passage in Strabo, in which we can still see the correct idea that Saba' stretched down to the sea. According to the description of Eratosthenes, which naturally begins with the north (this disposes of W. M. Müller's doubts, *Studien* etc., p. 36, note 2), Saba' was in his time bounded on the north by the kingdom of Ma'in, on the south (and south-west) by Katabān and by Hadramūt in the east. At that time the land of the Sabaeans stretched to the west and south coasts, as it did in the time of Pliny (vi. 154; *ad utroque maria porrectis gentibus*); only their territory on the south coast, concerning which D. H. Müller, *Burgon*, ii. 987, was rather doubtful, was larger. It apparently included the Raidān coast between Aden and Hawar (according to Glaser, p. 20). Glaser's disbelief in the statement of Theophrastus to the effect that the Sabaeans also owned a part

of the frankincense coast, was unfounded and quite wrong, as well as the alteration in the text which he proposed to suit his hypothesis in two passages in Theophrastus *Σαβαῖος* for *Σαβῆος* (Glaser, *Punt*, p. 45 sq.; cf. above). Pliny also (xii. 52), which Glaser, following Sprenger, had also to alter, repeats that the Sabaeans had possession in the frankincense region, which Sprenger himself acknowledged (*Bemerkungen* etc., *Z D M G*, xlv. 505). *Μαλαβα*, the name of the capital of the Sabaeans according to Eratosthenes and Artemidoros, reproduces the Arabic name (inscriptions Maryab, Marib, in the authors Ma'rib) as accurately as possible with the suffixed vowel *a*.

In the time of Eratosthenes, the part of the west coast south of Saba' and the most westerly part of the south coast was inhabited by the *Καταβανίται*; the eastern neighbours of the Sabaeans were the *Χατταμνίται* whom he mentions last (see *R. E.*, col. 1324 sq. and the article ΚΑΤΑΒΑΝ).

A comparison of the passage in Strabo with the list of South Arabian peoples in Theophrastus (see above) shows that three of them are mentioned by both authors, the peoples of Saba', Hadramot and Katabān, while our two authorities differ regarding the name of the fourth people, whom Theophrastus calls the *Μαμάλοι* (var. *Μάλοι*) and Strabo the *Μαίναλοι*. The assumption of a corruption in the text would easily restore perfect agreement between the two. Mordtmann for example in the *Z D M G*, xxx. 323 has explained *Μαμάλοι* as a corruption of *Μαίναλοι* and H. Müller also (*R. E.* in the articles *Arabia*, ii. 348 and *Chatramis*, where Eratosthenes is confused with Pliny, and *Anzeiger Ak. Wien*, 1909, p. 4) has assumed that the reading MAINAIA may be restored with absolute certainty for MAMAAI in Theophrastus; that is to say both authors are referring to the Minaeans. But this proposed alteration in the text, which would take the oldest mention of the Minaeans among the Greeks back to the time of Alexander the Great, need not be considered absolutely necessary (Hommel, *Grundriss*, p. 138 has also argued against it). The two Greek authors are writing from different points of view; the botanist is not so concerned as the geographer with giving a full list of South Arabian kingdoms but is only interested in those regions which yield spices. The form Mamali also finds support in the *Μαμάλοι* of Ptolemy, vi. 7, 5. Sprenger who sticks to *Μάλοι* (*op. cit.*, p. 92, 263, 266) identifies the latter without giving any evidence with Mahra (as does Hommel, *op. cit.*, p. 137: "probably the Mahra coast"). Hartmann, *op. cit.*, p. 420, simply takes Mali for the land of the Minaeans without giving the slightest proof.

Following the passage from Eratosthenes, we have in Strabo xvi. iv. § 5 sq. the relatively short account by a later authority, Artemidoros, of the land of the Sabaeans. The people — very fortunately (cf. Agatharchides in Photius, § 97 and K. Müller, *Geogr. Graec. Minores*, i. 186) — are called "a very powerful people" in whose land myrrh, frankincense and cinnamon grow and on the coast — a fact confirmed by modern travellers — the balsam tree also (cf. Theophrastus, iv. 4, 14 *ἀρωματικά*) and other aromatic trees and plants. Then follows information regarding the abundance of fruits in the land, regarding the capital Mariaba, laws and duties of the king, commerce and the wealth gained by the Sabaeans through trading, as well as their agriculture and other details,

which are repeated in almost the same words by Diodoros (iii. 47) from Agatharchides, who was also Artemidoros's authority — a fact which does not seem to have been appreciated in modern writers, who regard Artemidoros as an independent source. The above quoted reference to the occurrence of frankincense among the Sabaeans seems to be contradictory to Strabo's (xvi. iv. § 2) note *ἡμεῖς δὲ λιβανὸν μὴ ἐκ Καταβανίας οὐδὲν δὲ ἔχοντες*, following Eratosthenes; to remove the difficulty it has been assumed sometimes that there was confusion on the part of Eratosthenes and sometimes, as in quite recent writers, that the Katabānians had lands in the frankincense region and that there was later a change in their ownership by which part at least of Katabān passed to Saba'. However possible this may be and however little misgiving one may have about it in this case, it must also be borne in mind that Strabo's sentence cannot be taken from its context and placed in another context as an argumentum ex silentio. From the statement that Katabānia produced frankincense it does not follow that Katabānia alone produced it and that it was not found elsewhere in South Arabia. Besides the substance of Eratosthenes's remark is only found in Strabo's version.

Strabo (xvi. iv. § 23) goes on to give an account of the campaign against South Arabia of Aelius Gallus in the year 24 B. C., based on direct information; he is the earliest authority on the campaign (cf. also ii. 118, xvii. 819; Pliny, vi. 160 and Dio Cassius, liii. 29 [= Zonaras, x. 33]). The complete failure of this campaign, which was the first and most important direct contact between Rome and distant Saba' and which had been undertaken by Augustus, as Strabo tells us, in the hope of winning the wealth of the Arabs, especially of the Sabaeans, was, as Glaser (*op. cit.*, p. 45 sq.) has already emphasised in contradiction to Strabo's version, the result of the ignorance of the Romans regarding the country and people and the want of any special preparations (on the specialist literature on the subject and modern critics of the eastern policy of Augustus like Flügel, Mommsen, Winckler, Glaser, Weber, Hartmann, on the accounts of the fighting in Strabo and Pliny, the route of Gallus's march — which Sprenger for example gives wrongly — and the minor military successes of the Romans regarding which the accounts differ cf. *R. E.*, col. 1344 sq., 1380 sq.). In disagreement with the usual accounts (in d'Anville, Gibbon, Karl Müller, Sprenger, whom almost all recent writers followed, Kiepert, Mommsen, Zehme, Mordtmann, Ang. Müller, D. H. Müller, Winckler, Weber) I only mention here that the farthest point reached by the Roman expedition, which Strabo (§ 24) calls *Μαρεβάβα*, the town of the *Παυμαῖται* who were ruled by Iasaros, the *Monumentum Ancyranum*, v. 22 and Pliny vi. 160 call Mariba, was not the Sabaean capital Marib, as, following Vincent, Forbiger and Ritter, Glaser has again recently (*op. cit.*, p. 57 sq.) rightly emphasised and Landberg also, according to whom (*Arabica*, v. 82) Strabo's *Μαλαβα* (as it has generally been written since the time of v. Kremer instead of *Μαρεβάβα*, although without any justification) is undoubtedly the Maryama the ruins of which lie in the district of Baḥān al-Kuḥāb on the Wādī Baḥān (south-east of Marib; see the description in Landberg, *op. cit.*, p. 21 sq.; full information

regarding this district *ibidem*, p. 3—63; the old contrary view is still championed by Grimmer, *Mohammed*, p. 20). Glaser was, however, wrong in his attempt to locate this town exactly, which he, thinking of Caripeta in Pliny, vi. 160 which, as Fresnel had already pointed out, recalls the Arabic *Ḥarība* 'ruins', saw in the later Sabaeans capital *Ṣirwāh* (west of *Mārib*). Caripeta, however, goes back not to *Ḥarība* but to the place-name *Ḥarīb*. Much more worthy of attention is Landberg's connection of the Ramanite city, — the name of which, it is true, he wrongly reads *Mariba* and erroneously considers to be the *Mariba* Baramalacum in Pliny, vi. 157 — with the Arabic *Mariyama* and with *Marīyā* in Ptolemy, vi. 7, 33, as well as with *Mariamat* in the inscriptions, with which is to be identified the *Marīyā* of Ptolemy, vi. 7, 33, presumably the modern *Mariyama* in *Ḥaḍramūt* (not as Mordtmann-Müller, *Sabäische Denkmäler*, p. 104, thought). But he wrongly records it as a city of the *Māfirā*, the Arabic *Ma'īn* (p. 24). Landberg is wrong also in his location (in *Bahān al-Dawla*, a district south of *Bahān al-Kaḥlāb*) of the limit reached by the Roman expedition, mentioned by Dio Cassius, the name of which he wrongly (following Glaser) considered to be *Adula*, *ʿAdūla*, as the name should rather be written, is, according to D. H. Müller's suggestion, the *YṬL* (usually read *Yathil*) of the Minaean inscriptions. Mommesen wrongly (*Momumentum Ancyranum*, v. 22) found a contradiction between the statement of Augustus regarding the terminus of the campaign (*"usque in Sabaeorum fines"*) and those of Strabo and Pliny and sought to explain it by saying that Augustus was describing South Arabia with a generalising but not correct expression as the "land of the Sabaeans". The farthest point reached by the expedition was actually — as Augustus rightly says — in the land of the Sabaeans and, according to Strabo, in the land of the Ramanitai i.e. of the *Radmān* or the *Rhādāni* of Pliny, which is in agreement with the *Momumentum*. *Ilasaros*, whose name and person have been wrongly interpreted, is the *Ilharīh* *Yahdīb*, whom we know from inscriptions, regarding whose attitude to the political situation in Saba¹ during the Roman campaign Hartmann (p. 153 sq., 173 sq. etc.) has made erroneous suggestions (see *R. E.*, col. 1371 sq.).

The reports of this campaign, the military and political importance of which for the history of Saba¹ has been very much overestimated by Sprenger, Dillmann and Fabricius, brought the Roman world a better knowledge of the land and people of South Arabia — among other information a correction of the Greek statements hitherto current regarding the spices which Arabia exported. As a result of the information obtained from Gallus, Strabo (§ 24) was able to distinguish the divisions of South Arabia according to the predominant activity or quality of its inhabitants — in contrast to the earlier political division of South Arabia based on Eratosthenes (Strabo, § 2) —, a division made from the social and economic point of view which included for example the caste-system that still exists to-day in Arabia, similar to Pliny's account, vi. 161, who also relies on Gallus. Strabo goes on to deal with family life in South Arabia, including community of women, a testimony, with which passages in the inscriptions have been compared, as evidence for polyandry in Saba¹, the

occurrence of which Hartmann (*op. cit.*, p. 7) has wrongly denied; it must be granted, however, that many inscriptions, when properly interpreted, can no longer be used as evidence for the existence of polyandry.

Copious information regarding the land and the capital, the customs, mode of life and constitution of the Sabaeans and about South Arabia generally are contained in the two excerpts from Agatharchides (πρὸς τὴν Ἐρυθρὴν θάλασσαν, vol. 5, probably concluded about the year 132/1) preserved in almost identical terms in the *Bibliotheca Photius* and in Diodorus (iii. 38—48). Agatharchides was the source used by Artemidoros also. The statements regarding spices which filled the whole land with natural, pleasant odours may be compared with Herodotos, iii. 113, Pliny, xii. 86, and Wrede's report (*Reisen*, p. 80 on the *Wādī Muntash*, p. 77 on the *Djabal Sūdān*, p. 82 on the *Wādī Khilāfat*). Noteworthy also is the information he gives regarding the Sabaeans royal city *Ṣābā*, on the constitution, on the laws and duties of the kings, whose rule was hereditary in a particular family (which is confirmed by the South Arabian inscriptions), regarding customs and activities of the people, who are praised as brave soldiers, industrious tillers of the soil and traders and skilful sailors, and regarding the trade with Egypt, Syria and Phoenicia and the resultant wealth and luxury of the Sabaeans which surpassed that of all other Arabs (cf. the above mentioned statements of Strabo following Artemidoros). *Ṣābā* and *Marīyā* in Strabo, xvi. iv. § 2 (following Eratosthenes), § 19 (following Artemidoros), in Stephanus Byzantinus, s. v., as well as *Marīyā* (corrupted from *Mariyā*, according to Mordtmann) in Pliny, vi. 155 are (what Glaser, *op. cit.*, p. 58, 62, 153, 287 has not noticed) only two different names of the same town, the capital of Saba¹, *Mārib* [q. v.]. The name *Ṣābā* finds an analogy in the fact that Arab writers also sometimes call the Sabaeans capital Saba¹, e.g. al-Idrīsī, Abu 'l-Fidā², as well as Ibn Khordādhbeh and the Turks (see Mordtmann, *Sabäische Denkm.*, p. 3, note 1). The statement in Photius that the capital stood on a not high hill has been erroneously doubted by Kremer (*op. cit.*, p. 9, note 2) and confirmed by the observation of modern travellers, like Arnaud, Halévy and Glaser (Strabo's remark: "on a hill covered with trees" may be considered a sign of the decline in vegetation). — From the statement in Photius (§ 101, middle of the page) Ritter (*Erdkunde*, xii. 249), Kremer (*op. cit.*, p. 9) and Glaser, *op. cit.*, p. 10) have wrongly deduced that the Sabaeans sent out colonies or at least trading settlements into foreign lands, especially India; we are rather to understand trading voyages by sea by *πρὸς ἄλλαν* (intransitive) *ἀπὸ ἑαυτῶν*.

The literary references to Saba¹ and Arabia in general, as well as the reports of merchants and travellers, influenced the later literature of the Greeks and that of the Romans from the first century A.D. It is to them — particularly to poets of the time before the expedition of Gallus — that we owe the typical conception of the rich and fortunate Sabaeans in a remote Eldorado. I shall here pass over these references in poetic literature, as they have not the importance of independent sources and only observe that as a result of this conception of Saba¹, the chief country in Arabia, — as is intelligible with poetic lan-

guage — *Sabaicus* gradually came to be used, not with the limited application to Saba², but in the general sense of "Arabian", so that even expressions like Vergil, *Georgica*, l. 53, *males una turba Sabaci (mittunt)* ll. 117, *villis est turba virga Sabaris*, etc., are not to be used as arguments in the reconciliation of apparent differences in the nomenclature of South Arabian areas, that produced frankincense, and it cannot be deduced from them that Vergil allotted the frankincense tree to the Sabaeans alone as distinct from other South Arabians.

The amplification of the previous knowledge of the country from first-hand accounts, as a result of the Roman campaign, is also reflected in Pliny's references, which augment the extracts preserved from the older Greek writers by many details, although they are in parts confused and corrupt. The majority of the towns mentioned by him in vi. 160, which Gallus is said to have destroyed, can be proved to have existed from the South Arabian inscriptions, or from al-Hamdānī, the first author who mentions them after Pliny, or from other geographical sources. Pliny's account, based on new information regarding Arabia, which goes back to Gallus or reached Rome by other ways from time to time, is of historical importance in as much as it mentions a people, not mentioned by Strabo or Agatharchides, who produced a lasting alteration in political conditions in Saba². After giving (probably from Juba) in vi. 158 the *Homeritae* after the Minaei (Ma'in) and Rhodamnei (Badman) among the Arabian peoples, in 161 Pliny, expressly quoting the explorations of Gallus as his authority for this period, calls attention with the words *numerosissimi sunt Homeritae* to a fact which forms a turning point in the history of Saba², the rise of the Himyar (Homeritae, the *Qusairi* of the Greeks). This is the oldest reference preserved to the Himyar and their strength. At the time of Gallus, political supremacy in South Arabia was no longer in the hands of the Sabaeans under the ancient dynasty of the "Kings of Saba²", but had passed to the Himyar under rulers with the title "Kings of Saba² and Dhū Raḥḥān". The definite report of Gallus, who says that the Himyar were a predominating people in South Arabia and the legitimate conclusion that they were at this time already in possession of the hegemony, agrees at once and convincingly with Glaser's deduction (cf. *Die Arabier*, p. 31) from the inscriptions that the beginning of Himyar rule is to be placed in the second — at latest the first — century B.C., and is evidence against the attempt (made by Mordtmann, Mommsen, Hartmann and others) to shift the beginning of the Himyar period to a date after the beginning of the Christian era, nor does it even help the misadventures of others, like Krenner and D. H. Müller, to place it towards the end of the first century B.C. Glaser (*op. cit.*, p. 38) would not pronounce definitely for this date of about 70 B.C., but talks of "somewhere after 175 B.C., but certainly not after the birth of Christ" it is tempting, he says, to take 115 B.C., but there are objections (p. 31 *sq.*; so also Weber, *Arabien vor dem Islam*, p. 33; Hommel, *Geschichte des alten Morgenlandes*³ (Sammlung Göschel, Leipzig 1908, p. 148 and cf. here the article ARABIA, l. 377 *sqq.*, etc.). Sprenger's (*op. cit.*, p. 76 *sq.*, 225; Dillmann's (*op. cit.*, p. 204) and Hartmann's (*op. cit.*, p. 469,

note 1) hypotheses of the contemporaneity of and even of a causal connection between the rise of the Himyar power and the Roman campaign thus lose any basis.

A further reference to the kingdom of the Himyar is in Pliny, vi. 104, *intus oppidum, regia eius, appellatur Sapphar*, i. e. Zafar, the capital of the Himyar. We see, however, from Pliny that the Sabaeans in the time of Juba still held an important position — although they were no longer the lords of Southern Arabia — and the land ruled by them was no smaller in area than in the time of Eratosthenes. Of minor points, we shall only mention here that of Pliny's references (vi. 161) to their economic life and their wealth the expression *agrorum rigas* finds confirmation in the testimony of the inscriptions to the old irrigation works of South Arabia (wells, canals, dams and cisterns) and in the statements of al-Hamdānī regarding irrigation (see below), the mention immediately afterwards of *melis cerisque provintus* (cf. Strabo, xvi., 17, § 2) agrees with the fact that almost all the mountain regions of South Arabia are rich in honey (cf. Sprenger, *op. cit.*, p. 249; Glaser, *op. cit.*, p. 69 — evidence for honey and wax in the Raḥḥān district; also Landberg, *Arabica*, v. 238; Bent, *Expedition*, p. 330, *Southern Arabia*, p. 117; Harris, *A Journey*, p. 22 and other travellers' narrations; cf. the statements in al-Hamdānī, *Qasrat al-Arab*, p. 103, 105, 123, 194). The words preceding in Pliny, *silvarum fertilis odorifera* (cf. Agatharchides in Photius, § 95 and Dioscoros) refer to the Sabaean wealth in the frankincense region (Sprenger, *op. cit.*, p. 250), *auri metalla* to the occurrence of gold, namely in the coast regions (cf. Agatharchides, § 95, on the land of the Debai rich in gold; Strabo, xvi., iv. § 18; Pliny, vi. 150 on the *auri metalla* of the *litus Hamanum* and especially al-Hamdānī, p. 155, 177 etc. on gold mines in South Arabia and modern travellers such as Halévy and Glaser (Glaser, *op. cit.*, p. 69; Bent, p. 77) would look for the gold mines in 'Asir only or in Saao (East Somaliland), but there can be no possibility of a reference to East Africa in the Pliny passage. Sprenger, *op. cit.*, p. 249, would also locate the mines in the interior of the country (see further discussion below). Pliny's note (xii. 58) on the gathering of frankincense may be compared with the statements of Yāqūt (*Mu'djan*, iii. 577). Of importance for the history of civilisation also is the fact reported in xii. 54 that the collection of frankincense was considered a religious act, that only the Sabaeans as lords of the land of frankincense and with them the Minaeans were allowed to look upon the frankincense tree (whom it was being ceremonially treated), that there were said to be not more than 3,000 privileged families who claimed the hereditary right to the sole possession of frankincense trees for themselves and their descendants: *veret viciari se id nec ullo congressu seminarum fungumque, cum incidunt eas arbores aut metant, pollui*, where Sprenger (*op. cit.*, p. 92) and Glaser (*op. cit.*, p. 3; Bent, p. 44) proposed quite unjustifiable alterations in the text. *Congressus seminarum fungumque* are to the present day in Islām more or less connected with *ḥandalā* (pollution; cf. Sprenger, *op. cit.*, p. 219). Hartmann, *op. cit.*, p. 415, remarks that the passage in Pliny appears to throw some light on the aversion of the Muslims to burning fragrant spices etc. at funerals, which is dismissed

by de Goeje (*L'encensement des morts chez les anciens Arabes in Actes du 1^{er} Congrès intern. des Orientalistes*, iii, 1.), and concludes that it was forbidden in South Arabia to use frankincense in the funeral service, while nothing was known of this in North Arabia; but so early a writer as Pliny, xii, 82 talks of the *hominum etiam in morte luxuria* in Arabia Felix and modern travellers also confirm the use of incense at interments.

It is instructive for the ancient history of South Arabia that Pliny still gives for the time of Juha and Gallus the same four peoples that Eratosthenes gives as the chief peoples with a regal constitution, the Sabaei, Minaei, Catathanes and Atramentae (Charatamotitae); see the articles KATATHAN and MA'IN. The words in vi, 154, following the mention of the Sabaeni: *pars eorum* (Sabaeorum) *Atramentae quorum caput Sabota* etc., and xii, 52: *Atramentae pagus Sabaeorum in monte excelsa, a quo sita manifestibus distat regio eorum turrisera* (similarly Solin, p. 710: *Atramentae pagus Sabaeorum*, who is dependent on Pliny, a fact which Springer, *op. cit.*, p. 296 and Glaser, *Punt*, p. 47 have not recognised), show that Hadramūt in the time of Juha (not only in the first century A.D., as Glaser, *Punt*, p. 46 thought) had become a part of Saba', and that Saba' extended farther to the east, so that a change in the balance of power in South Arabia had set in while the Sabaean efforts at expansion were being continued (Beni, *Southern Arabia*, p. 49, 240, 265 and 269 speaks of ruins of Sabaean antiquity in the coast area of Zafar near Mirdā). The following words: *regia tanta omnium Marebata* (*Marebata*, see above) again emphasises Saba's suzerainty over Hadramūt and the position of Ma'rib as the capital of the whole kingdom (on erroneous alterations in the text of Pliny and Solin see above). The principal passage on the transport of frankincense is xii, 63: (*tus collectum Sabotae* *convehitur ibi decimas deo quem vocant Sabim mensura non pondere sacerdotes capiunt nec ante mercatores licet*). The frankincense was therefore bound to pass through the capital of Hadramūt, Sabota (Shalwat in the inscriptions, also mentioned by al-Hamdani, now a ruined site between Raithān and Shibām) and pay duty there. This custom of levying tolls still survives among many tribes, Glaser (*op. cit.*, p. 27) informs us. An analogy to the statement that taxes were levied on spices by the temple is quoted by D. H. Müller from the inscriptions, *Burgon*, ii, 1024, note 3 (on the inscription Halévy, *op. cit.*, p. 187); see also Rhodokanakis, *Studien*, i, 6 (on Glaser, 480 = Arnaud, 35); compare also Theophrastus's statement (ix, 4) regarding the tithes paid out of the frankincense harvest for the priests of the temple of Helios of the Sabaeni (and Landberg, *Arabia*, p. 457 on the harvest tithes to the *Magh'ibā*). The God Sabia was considered by Morinmann (*Sabäische Denkmäler*, p. 57) to be the moon-god Sin, indeed, he later regularly explained the name Sabia as Sin (*Z.D.M.G.*, xlv, 186). Quite recently the Pliny passage has been again referred to the moon-god, sometimes with proper caution, and sometimes as if it were an established fact. Not only, however, has it no connection with the moon-god, but the context of Pliny suggests that Sabia refers to Sabota; besides, Theophrastus speaks of the sun-god, from which it does not, of course, follow that

Sabia is to be identified with the sun-god, as do Ritter, Sprenger, Glaser, etc. The name also, in these identifications, would remain unexplained. Probably Sabia is a form of name which appears to have arisen neither through a misunderstanding nor through a corruption of the text, but is simply "the (Lord, God) of Sabota" (Shalwat; either *Uhu* Shalwat or regularly *'Shab(a)wi'*; cf. *R.E.*, s. v. Sabia).

It is not the above quoted mention of the Homeritae in Pliny that is to be regarded as the oldest known reference in literature to the Himyar, but the *Periplus Maris Erythraei*, which is older than Pliny's work, but younger than his principal literary sources, and, indeed, as I have endeavoured to show in *R.E.*, col. 1462 ff., differing from previous dates proposed by Dillmann, Mommsen, Hartmann, Glaser etc., seems to have been composed between 40 and at latest 51 A.D., probably between 40 and 45. A light is thrown on the political situation by the statement in the *Periplus*, § 23, that Charibael, the lawful king of two peoples, the Homeritae and their neighbours, the Sabaites i. e. Sabaeans, was ruling in the capital Saphar. Saba', therefore, was under Himyarite rule at the time of the composition of the work. Saphar is Zafar (near Yarim), the capital of the "Kings of Saba' and Uhu Raidān", an identification which Landberg, *Arabica*, v, 50, could not assert. Ma'rib was no longer the royal capital. *Sabaeorum*, the Egyptian form for *Sabotae*, is also found in the Axum inscription and this too supports the emendation proposed by the editor (Fabricius, p. 60 following Salmassius). The Himyarite king Charibael is probably the Karib'il Watar Yuhā'im, King of Saba' and Uhu Raidān, known from inscriptions and coins. Hartmann's attempt to identify him (*op. cit.*, p. 154 ff., 173 ff.) collapses with his baseless premises.

A tremendous revolution in the history of Saba' took place in the period between the erection of the inscription of Adulis (*Corpus inscr. Graecae*, iii, 5127 B) in about the first third of the second century A.D., about 127, and that of the bilingual inscription of Axum of the middle of the fourth century (before 356). In the former the King of the Axumites mentions that he has waged war from Axum *ad usque* (al-Hawra') southwards as far as the land of the Sabaeans. While he was thus forced to halt in his campaign on the northern frontier of Saba', Aizanas ('Ezānā), who erected the bilingual inscription, already calls himself "King of Axum and Himyar and Saba'", etc. The most important parts of South-west Arabia had therefore been conquered by the Axumites since the beginning of the second century A.D. The doubts of Dillmann, Hartmann and others regarding the actuality of this conquest, with the inscriptional testimony for which the mention of ambassadors *ad gentem Axumitarum et Homeritarum* (Cod. Theod., xii, 12, 2) agrees, are unfounded. The fact that Himyar occurs before Saba' in the series of titles enables one to deduce that the former was the kingdom proper, beside which Saba' occupied the second place, having not yet sunk into insignificance. With the official title of the inscriptions may be compared the double title of the Himyar king in the *Periplus*.

The testimony of the Abyssinian inscriptions, that Aizanas was king of Himyar and Saba', agrees, as Glaser (*Die Abessinier*, p. 5 ff.) emphasises,

with the fact that the South Arabian inscriptions from the end of the third to the last quarter of the fourth century mention no Yemeni rulers; the latter do not appear again until 378 A.D. and then occur uninterruptedly until the first quarter of the sixth century, when (525) the Abyssinians again conquered South-west Arabia. The foundation of the power of the Axumite kingdom was an interruption of the last period of the South Arabian kingdom, from the beginning of which, about 300 A.D., the kings assumed the longer title "of Saba', Dhū Raidān and Ḥaḍramūt and Yemmal" in place of the previous title "of Saba' and Dhū Raidān".

From the statements of Ptolemy, who, apart from unimportant references, is the Greek literary source for Saba' that follows the *Monumentum adulitanum* in order of time, it may be deduced that in his map the Sabaeans (vi. 7.23) no longer occupied so large an area as they still did even in the time to which Strabo and Pliny refer, but seem to have become limited to the northern half of their former territory; the Himyarites, on the other hand, occupied a considerable part of the south coast, and other smaller peoples are also mentioned as inhabiting the South Arabian territory, which must have belonged to the Sabaeans as late as the end of the second century A.D. Quite recently the words of Ptolemy: *Καταβάναι μὲν τῆς Ἀραβίας ἐστὶν, ὑπὸ τοῦ ἡμισφαιρίου τοῦ Ἀνατολικοῦ* have been erroneously interpreted to mean that after the Sabaeans the frankincense region was under the rule of the Katabānians, and further assumptions were based on the statement that Katabānians were still settled there, although an independent kingdom of Katabān then no longer existed. The lucid syntax and the linguistic practice of Ptolemy, according to which *ὑπὸ* with the accusative means "south of", "situated below", shows that it is just the reverse that is the case. Ptolemy separates geographically the frankincense region and the homes of the Katabānians. Sprenger (p. 264 etc.), from his likewise erroneous point of view, has difficulty with the statement that the Katabānians in the time of Ptolemy were "thrust out of this possession" (cf. the article KATABĀN).

In agreement with the Arabic sources, Ptolemy introduces us to a period of progressive decline of Saba'. The occasional mentions of Saba' in the Greek topographers of the first centuries A.D. are of no independent value. The name Saba' disappears from Greek and Roman literature from the end of the fourth century A.D. After this date we only have an occasional isolated reference to the Himyarites, whose name became gradually applied to the whole of South Arabia.

Only half a century ago, Sprenger (*op. cit.*, p. 236) was able to say that the Greeks and Pliny were the only sources that gave us information regarding the Sabaeans. Our knowledge of the history of ancient South Arabia which, until quite recently, could only be supplemented a little by the isolated references in the Old Testament and the quite insufficient, because utterly unhistorical, traditions of the Arabs, was increased in an extraordinary fashion by finds of inscriptions, principally in South Arabia, and the increasing progress in the study of the ancient history of the east has also thrown new light on the history of Saba'.

Yet the explorer Glaser (*op. cit.*, p. 159), famous for his epigraphical finds, does not hesitate to say that the correct interpretation of the few statements

in the classical authors is no less necessary than the elucidation of the inscriptions of Saba', and that the latter and the passages in classical writers supplement and explain one another. In any case we must not lose a sense of perspective in face of the decisive importance of the inscriptions for the study of political and cultural history; being the only direct historical source they form our most important material for research into the past of Saba' and South Arabia generally. The history of the opening of this rich and still unexhausted mine of material for research is associated with very few names. Carsten Niebuhr, a member of the expedition sent out by the Danish government in 1763, who travelled through South Arabia from Lohayya to Mokhā, Ta'izz and San'a', being more particularly engaged in geographical, ethnographical and natural history work, first reported, as the result of enquiries, the existence of old inscriptions in the ruins of Zafār (south-west of Yatta) near San'a' (*Beschreibung von Arabien*, Copenhagen 1772, p. 94), without having seen the text itself, except for a copy of an inscription which a Dutchman had sent him; after him the first knowledge of South Arabian inscriptions was brought to Europe by Seetzen, a native of Oldenburg, who, stirred by Niebuhr's information, copied inscriptions in and around Zafār on his return from San'a' to 'Aden (1810). The copies sent by him to Europe of five short, unimportant, Sabaeans texts were published in 1811 and, though at first not understood, formed the humble beginning of the science of Sabaeans studies, the future importance of which was as yet quite unrealised. Further progress was made by Wellstedt (1834/5: discovery of the inscription of Ḥimn al-Gharab on the Ḥaḍramūt coast and of Nakab al-Ḥaḍjar), Cruttenden (1836: five short Sabaeans fragments in San'a'), both Englishmen, by Wrede (1843; but the report of his travels in Ḥaḍramawt and the copy of the Ḥaḍramawt inscription of 'Obae were only published in 1870 from his papers after his death by Maltzan) and others, among whom special mention must be made of Arnaud who in 1843 was the first European to visit Mārib and to pave the way for later more successful discoveries (ignored by Glaser, *Petermann's Mitteil.*, 1887, p. 27), and there as well as in San'a' and Sirwāh prepared copies of 56 inscriptions in all, mainly short ones. A valuable addition to our knowledge was the acquisition of inscribed stones and bronze plates from 'Amrān by Choghlan (1860). Gesenius (1841), Rödiger (1841, 1842) and Oslander (1856, 1863/4) then gained renown by deciphering and elucidating the material found. The *Eben Sifr* is only of importance as a description of Yemen; this is the Hebrew account of the travels of Jacob Saphir (I, 1861; II, 1866) who went from al-Hodaida via San'a' to 'Amrān and then back to 'Aden; the book was first made generally known through D. H. Müller (*Bergen*, i. 6 sq.) and formed a kind of guide-book for Halévy. A new epoch in the study of inscriptions is marked by the rich results of the memorable journey of Jos. Halévy, who, one may say, was the first European since Aelius Gallus to succeed (in 1869) in travelling from San'a' right up to the Wādī Naḍjān and entering the land of the South Arabian Djs, the centre of the ancient Minaean country, and visiting several very ancient Arabian sites, rich in inscriptions, which so far no other European since him has seen. The con-

crete scientific yield of this journey of exploration, not sufficiently appreciated by his immediate contemporaries, consisted of 686 copies of inscriptions of which about 50 (some 30 Minnean) were fairly long (published in the *J. A.*, 1872), the most important addition to our store of inscriptions yet made, which, marking a tremendous advance on the initial stages, helped to lay the true scientific foundation for Sabaeen research and the knowledge of the sources for the study of the ancient history of South Arabia. Some new inscriptions were made known through the journey of Captain Miles (and Werner Munzinger) in the Wādī Maifa'at (1870). The travels of Heinrich von Malzan (1870/1, in the coast regions of Yemen and Hadramawt), Millingen (1873, from al-Hodaida to San'a'), R. Manroni (1877—80, between 'Aden, San'a' and al-Hodaida), Schapira (1879, from 'Aden to San'a' and district and back to al-Hodaida) and Harris's more recent *Journey through the Yemen* (London 1893) are not of interest from the epigraphical point of view but from the geographical; Manroni's work and Malzan's later contributions are also valuable for the study of dialects. The Austrian S. Langer (1882), who sacrificed his life to the spirit of research on his epigraphical journeys from al-Hodaida first to San'a', then to 'Aden, as did Seetzen before him and Huber after him, gained copies of 22 inscriptions (Nos. 19—32 only add letters). Further details of the history of discovery in Arabia are given in Weber's monographs, *Arabien vor dem Islam*, p. 10 199. (which also contains information regarding the history of civilisation and religion, contents, alphabets and language of the inscriptions) and more especially his *Forschungsergebnisse in Sudarabien bis zum Aufsteigen Eduard Glaser (Der Alte Orient*, viii, 4, 1907) and Hommel's account in Hilprecht's *Explorationen*, p. 693 199. (see also his *Chrestomathie*, p. 63 199, with bibliography). A new era in this branch of research was introduced by the Arabian travels of the Austrian Glaser whose epigraphic discoveries (in all over 2,000 inscriptions) far surpassed all previous efforts in this field. D. H. Müller's prophecy (*Bergan*, I, 340): "There will still be courageous men, who will place themselves in the service of science and undertake the exploration of the country and collection of inscriptions", was realised in Glaser in an undreamed-of fashion. On his first three journeys alone, (1882—1884 (from al-Hodaida to San'a' and from there three tours of exploration north and west from this neighbourhood), 1885—6 (from al-Hodaida to San'a' and from there to the south-east and east as far as 'Aden; exploration of the ruins of Zafar), 1887—8 (from 'Aden to San'a' and thence to Ma'rib, where alone he copied nearly 400 inscriptions, while Arnaud and Halévy together only got 44 copies mostly of small fragments), he enriched our knowledge by some 1032 inscriptions, by sketch maps and philological observations and some 616 Arabic manuscripts. A portion of the manuscripts was published by the French Academy (*C. I. S.*, IV, i.—iii.), numerous inscribed stones (mostly Minnean) are in London, others in Berlin (published by Mordtmann in 1893). The manuscripts for the most part went to Berlin and to the British Museum (see C. Riou, *Suppl. à la Cat. of Arabic MSS. in the B. M.*, London 1894). Of his epigraphical discoveries special mention may be made of the Hadaḡān inscription, the great

Sirwāh inscription, one of the most important historical documents from South Arabia (on his fourth journey he brought back a further and perfect squeeze of it), and the two great inscriptions from Ma'rib relating to the building of the dam. His fourth journey was the most successful (1892—1894, from 'Aden to San'a', from which natives were sent out to prepare squeezes; among the new inscriptions were nearly 100 Katabān; linguistic studies; acquisition of 251 Arabic manuscripts). A portion of the treasures acquired for Vienna, a valuable collection of 39 inscribed stones, coins, numerous sculptures and other antiquities, was published by D. H. Müller. Further particulars are given by Weber in *Edwards' Glossar: Forschungsergebnisse in Sudarabien in Der Alte Orient*, x, 2, 1909 (cf. Hommel, *Explorationen*, p. 717, 720 199). Glaser could not make further use of the opportunity he still had for further journeys and discoveries because he no longer found the necessary comprehension of the importance of scientific work at the Ministry concerned. Innumerable treasures were thus irrevocably lost to science.

Working on the epigraphic material that has been gradually accumulating since Halévy's time, Halévy, Prætorius, Mordtmann, D. H. Müller, Glaser and others (for details see *Bibliography*) have made important contributions to the elucidation of the language and contents of the inscriptions. As to later journeys of exploration in South Arabia, A. Decker's journey in Yemen in 1887 was only planned to study botany. L. Hirsch, who in 1893 was, so far as we know, the first European to visit Shibām, the modern capital of Hadramawt, and Tarim, was only studying natural history, with topography and ethnography. Soon after him in 1893—4, J. Théodore Bent with his wife travelled in Hadramūt as far as Shibām and in 1895 in the frankincense country (Zafar to Mirbat), likewise without being particularly interested in epigraphy. Carlo Landberg in 1896 took a squeeze and photograph of the already known inscription of Hija al-Ghurāh; the results of his enquiries made in 'Aden in 1895—97 regarding previously little known regions between Yemen proper and Hadramūt, particularly regarding Dathinn, 'Awālik, al-Hadina and also regarding Baiḡān, Maryama, Kaidān, Harib, Timna' and even Shabwa are given in his valuable work *Arabica* (iv. and v.). The South Arabian expedition of the Vienna Academy in 1898—9, which was also supported by the King of Sweden, only succeeded in reaching 'Azīza in the Wādī Maifa'at and did not get to Shabwa. While the epigraphical results of this expedition fell behind expectations, its members took the opportunity in 1899 of making linguistic and natural history researches on the island of Socotra (see *Сокотра*) (G. W. Bury, who went to Baiḡān on behalf of the expedition, brought back from Kohlān (Katabān) squeezes and photographs of inscriptions). In 1902 W. Hein collected linguistic material in Ghishā in Hadramūt on behalf of the Vienna Academy and at the same time collected information there and later in Vienna from natives regarding Hadramūt. His collected notes, published without any editing in 1914 after his death, contain much that is new and noteworthy. Hartwig Derenbourg was able from squeezes obtained by the French Academy to publish a few *Neue Texte yemenitische Inschriften in der Rev. d'Assyriologie et d'Arch. Or.*, v, 117 199.

Glaser's finds, epoch-making of their kind, are not yet completely published (a survey of the inscriptions discovered by Glaser was given so far as then known by Hommel, *Christomathie*, p. 59—62; see also Glaser, *Allgemeine Nachrichten*, I, 1908, I A 29). The great work prepared by him on Saba' (announced, for example, in Hommel, *Explorations*, p. 722, and Weber, *Glaser's Forschungen*, p. 15, on Glaser's authority) has not yet been published. The great mass of documents left by him (consisting of copies of about 1,000 inscriptions, of geographical and archaeological notes, diaries, sketches and maps), the importance of which may be summed up by saying that it is the first duty of Sabaean studies to arrange them methodically and publish them scientifically, was handed over to D. H. Müller to edit. But neither was he spared to publish this material. After his death in 1910, N. Rhodokanakis in Graz was given the task. The latter calls his treatise *Der Grundriss der Öffentlichkeit in den sudarabischen Urkunden* (S. B. Ak. Wien, clxxvii. Abh. 2, 1915; interpretation of inscr. Glaser N^o. 890 = Halévy 49; Gl. 904 = Halévy 51; Gl. 1548/9 [Sabaeum], Gl. 1606 [Katābān] and Oslander 4; with systematic discussion of the problems of debt, taxation, ownership and legislation raised by the inscriptions) the first preliminary study to the "Corpus Glaserianum", the publication of which the Vienna Academy has in hand; he describes as a second preliminary study the first part of his *Studien zur Lexikographie und Grammatik des Altsudarabischen* (S. B. Ak. Wien, clxxviii. Abh. 4, 1915; explanation of passages in the Ḥabish inscription, Glaser 1076 and Gl. 480 [cf. above] and especially a grammatical essay on the so-called parasitic *ā* in South Arabic, for the phonetic explanation of which he postulates a double accent in Minaean-Sabaeum; the appendix contains annotations to various inscriptions). Next came his *Die Bodenwirtschaft im alten Sudarabien* (Anz. Ak. Wien, 1916, N^o. xxvii, a survey of the results of the researches contained in the second part of his *Studien zur Lexikographie* etc.) and the second part itself (S. B. Ak. Wien, clxxxv. Abh. 3, 1917; discussion of Minaean-Sabaeum inscriptions relating to buildings, boundaries and irrigation, and of inscriptions relating to agriculture with explanatory notes on the dedication and erection of buildings, on legal questions relating to water supplies and the possession of land, on taxation and administration). The next three publications of Rhodokanakis contain hitherto unpublished Katābān inscriptions: *Katābānische Texte zur Bodenwirtschaft* (S. B. Ak. Wien, xciv. Abh. 2, 1919, five inscriptions from the Glaser collection: edicts of Katābān kings on the management of state properties, with a thorough investigation, into Katābān economy and administration) and *Katābānische Texte zur Bodenwirtschaft*, Series 2 (S. B. Ak. Wien, cxviii. Abh. 2, 1922, three inscriptions with far reaching investigations, particularly as regards the third, Glaser 1693 [concerning date, locality and character of the language of the text] with observations on the Ḥamīdānids and dynasties in South Arabia generally, and lastly *Die Landwirtschaft an der Mauer von Kephir-Tinnus* (S. B. Ak. Wien, cc. Abh. 2, 1924, discussion of the inscription Glaser 1404 [remains of a building protocol], 1397 [a criminal and taxation law] and, to explain the *makarrish* title among the Katābā-

nians, still more texts); on the inscription Gl. 1605 [cf. see W. Z. K. M., xxii. 23 sq. in *Katāb. Texte*, I, 6, note 3, it is mentioned that O. Weber is preparing an abbreviated edition of the "work on inscriptions" left by Glaser. The work collecting all South Arabian inscriptions in which references are also given to earlier, less important publications, is Part iv. of the *Paris Corpus Inscriptionum Semiticarum* (*Inscriptiones Semiticae et Sabaeae continens*, Tomus I, in four fascicles, 1889, 1892, 1900, 1908; of Tomus II the first two parts, 1911, 1914, have appeared; after the death of H. Derenbourg the editorship was taken over by M[ayer] L[ambert]; Tomus III will contain the Minaean and Katābān inscriptions). The language of the inscriptions which may be divided into two main dialects, the Minaean and Sabaeum, is discussed by Hommel in the *Grundriss*, p. 133 sqq., who includes under the Minaean, along with the Minaean royal inscriptions proper, the Katābān and Ḥaḥramūt inscriptions (so also *Explorations*, p. 728 sq.). On the grammar of Minaean-Sabaeum (which he considers the oldest representative of the "Arabic section of the Western Semitic", of which we have coherent texts, *Grundriss*, p. 78 sq.) see his fundamental account in his *Christomathie*, p. 9 sq. (on the language see also earlier contributions by D. H. Müller, *Encycl. Brit.*, article *Yemen*, p. 740 (brief); Weber, *Arabien*, p. 15 sq. (popular); on the script see Oslander in the *Z. D. M. G.*, xx. 205 sq.; D. H. Müller, *Sab. Denkm.*, p. 105 sq.; Hommel *Christom.*, p. 3 sq.; *Explorations*, p. 730, *Grundriss*, p. 145 sq. (Weber, *Arabien*, p. 13 sq.; *Wustanien*, p. 235) etc.; on the religion, Oslander in the *Z. D. M. G.*, vii. 463 sq.; D. H. Müller, *Enc. Brit.*, 741 (*Burgen*, ii. 1032); Hommel, *A. A.*, I, 156 sq., *Explor.*, p. 733 sq., *Grundriss*, p. 85 sq., 143; cf. in this *Encycl.*, I, 377 sqq. (Weber, *Arabien*, p. 18 sq. [popular]; Grimme, *Mohammed*, p. 29 sq.); on symbols of deities on the monuments Grotmann (see below, *Bibliography*).

Important material is also yielded by the Minaean, Liḥyān, Nabataean and Thamūdian (proto-Arabic) inscriptions in North-Western Arabia, which Doughty discovered in 1876—78, and the texts of the copies prepared by Euting (1883/4) — in some cases for a second time, after Doughty and Huber — of the Minaean and Liḥyān inscriptions of al-'Ola (published by D. H. Müller, *Epigraphische Denkmäler aus Arabien*, 1889; the Minaean have again been published by Mordtmann, *Beiträge*, 1897).

One of the principal questions raised by the sources for the history of ancient Saba' is what is known as the Minuan question, i. e. the relation in order of time of the inscriptions of the Minaean kings to the Sabaeum and with this the relation of the two kingdoms to one another. Working on the material available just before Glaser's travels, D. H. Müller (*Burgen*, ii. 955 sq., 981 sqq., 985 sqq.) had for the first time attempted to prepare a list of Sabaeum rulers (cf. Hartmann, *op. cit.*, p. 133 sq., 137 sq.) and divided the history of Saba' into three periods (a survey is given also in the article *Yemen* in the *Encycl. Brit.*). These periods are known as 1) the *Makarrish* period (the pronunciation *Makarrish* selected by him and afterwards retained of the word *makarrish*, the vocalisation of which is uncertain, the name of the priest-kings, is not to be used;

others read *mukarab*, *wahrab*, *mukab*, plur. *mukrib*; see Morittmann, *Anzeige*, Z. D. M. G., xlv, 1891; Glaser, *Alexander*, p. 65; Hommel, A. A., p. 134; cf. above I. 399 sq.; Hartmann, *op. cit.*, p. 132, 599 etc.; 2) the period of the kings of Saba, and 3) the period of the kings of Saba and Bal-din. According to him, the beginning of the kingdom of Saba would be placed in the eighth century B. C., to which period also belongs the mention of the Sabaean It'amar in the Sargon inscription, and its end in the first century A. D. While the chronology of the Sabaean kingdom and its dynamics may be laid down with an accuracy that is fairly satisfactory, the question of the age of the Minaean kingdom is incomparably more difficult to settle, because there is no clue available for the definite dating of the inscriptions of the Minaean kings. In their attempts to arrange also the Minaean kings Morittmann, Z. D. M. G., xlvii, 407 sq., Weber, *Studien*, p. 44 sq., and Hartmann, *op. cit.*, p. 126 sq. (cf. also Hommel, A. A., p. 26, *Chronologie*, p. 90, *Grundriss*, p. 136) have come to conclusions essentially different from that reached by D. H. Müller (*Berlin*, II. 1021 sq.) before them. The latter thought that the two kingdoms of Saba and Ma'in existed side by side with one another and were rivals (p. 1031). In direct opposition to this view Glaser (in 1889) in the first part of his *Stäbe* argued that the Minaean kingdom preceded the Sabaean in time and was destroyed by the latter which thereupon assumed the hegemony over South Arabia. Bearing in mind the number (about 29) of the names of Minaean kings so far discovered and a supposed duration of their rule of about 750 years, he was forced to put the beginning of Minaean rule back before 1500 B. C., indeed, he even went back as far as 2000 B. C. (I. 55). In several passages of the second volume of his *Stäbe* and in later publications he again comes back to the subject of his Minaean theory. He claimed to have proved that the Minaean inscriptions date far back into the second, probably even the third, millennium B. C. (II. 110; cf. 330). He had no misgivings about supposing that we have to take the Minaean kingdom back to the beginning of the Hyksos period, i. e. the twenty-second century B. C., Glaser's theory was defended by Hommel (first in the *Beilage zur Münchener Allgem. Zeitung*, 1889, No. 291, and in his later works, e. g. in the A. A., p. 2 sq., 10, 40, 235; in the *Altisrael. Oberlieferung*, p. 77, in his *Chronologie*, p. 2 (p. 86 further bibliographical references), in *Exploration*, in the *Grundriss*, p. 134, 159, in his *Gesch. der alten Morgenl.*, p. 106, 123, 148, in this *Encyclop.* I. 399 sq., also notably by Winckler (*M. V. A. G.*, 1898, p. 19, 43 sq.; 1906, p. 89 sq.), in his *Geschichte Israels*, his *Altisraelische Forschungen*, in K. A. T., p. 146 sq., 150 and in Helmolt's *Weltwissen*, III. 247 sq.) and by Weber (in his monographs [already mentioned], in *Der Alte Orient* and in his edition of Winckler's *Weltwissen*, p. 235 sq.), Grunne, *op. cit.*, p. 16 sq. and Bousinger, *Geschichte Israels*, p. 16. H. Derenbourg, *Notice minime sur l'épigraphie minéenne*, Paris 1895, p. 7 also puts the Minaeans before the Sabaean.

A survey of the essential points in the lively controversy raised by Glaser's bold proposals has been given by Weber, *Studien*, I., and he has at the same time collected everything that seems to

support Glaser. Immediately after the appearance of the first part of Glaser's *Stäbe*, Halévy raised objections to this Minaean theory; D. H. Müller then reiterated his view (*Beilage zur Münch. Allgem. Zeitung*, 1890, Nov. 24 and 31; *W. Z. K. M.*, VIII. 6, 161). The following also declared themselves against Glaser: Morittmann (*Anzeige*, p. 182 sq.; Z. D. M. G., xlvii, 400; *Beilage*, p. 105 sq., 115); Sptenger, *Bemerkungen*, p. 502 sq.; E. Meyer, *Geschichte d. Altertums*, II. 382; Lagrange in the *Rev. bibl.*, 1902, XI. 256 sq.; Lidzbarski, *Epigraphie f. semit. Epigraphik*, II. 101 sq.; Hartmann, Z. A., x. 25 sq. and in his main work, p. 4, 131 sq.; Haart, *Geschichte der Araber*, I. 46 sq. etc. Meyer further pointed out that all previous assumptions regarding the history of the Semitic alphabet would be upset by Glaser's placing the Minaean inscriptions in the second millennium B. C. We can hardly place the origin of the Phoenician alphabet before 1000 B. C., the date of origin of the Minaean script, which is characterised by the regular, almost technical formation of geometrical figures, is certainly not earlier. This seems at once to take the ground from Glaser's theory. We must describe the dating of this alphabet to 2000 B. C. (Hommel, *Grundriss*, p. 109, 146; Weber, *Weltwissen*, p. 163; cf. Hommel, *Exploration*, p. 730) or even "at the latest far back into the third millennium" (Weber, *Arabien*, p. 15) as a quite improbable hypothesis, in spite of all that has been ascertained in recent time regarding the oldest form of the Hebrew alphabet. Nor have the speculations regarding the South Arabian epigraphy which have been renewed by the discovery of what are known as the Kemit Sinai inscriptions led to anything. Against the views of Hommel, Weber, Winckler, etc. Haart also says regarding the supposed age of the alphabet that the date 1500 is certainly much too high for the period of Minaean rule.

Greco-Roman tradition also affords arguments on the Minaean question, notably the above quoted testimony of Eratosthenes in Strabo, xvi. 768, which has already been cited against Glaser by Halévy, D. H. Müller and others and of which Morittmann has said that he cannot see how this passage is to be explained away. Weber, *op. cit.*, p. 9 betrays the precariousness of his case when he says that he must assume without giving any reason that Eratosthenes was probably "mistaken"; i. e. in his account true and false, past and present conditions are confused. Glaser, *op. cit.*, p. 15 had previously sought to dispose of the contradiction between his views and the clear evidence of Eratosthenes by asserting without proof that the latter was wrongly informed. For the interpretation of this passage, for suspecting which neither Glaser nor Weber give any ground of proof or probability and, indeed, none can be given, it is decisive that according to it all four leading South Arabian peoples — including, of course, the Minaeans whom our author mentions first, as well as the Sabaean and the other two — were under absolute rulers (*monarchien*). The fact that Eratosthenes gives for the time of his authority irrefutably the same kind of constitution, namely the regal, for Minaeans and for Sabaean, cannot be disposed of by any artifice. It also shows what value there is in Glaser's assertion (Weber, *op. cit.*, p. 7 sq.) "that the classical authors nowhere mention a kingdom, but always only a land of Minaea", or in Winckler's

(*op. cit.*, p. 45) statement that between 500 and 200 B.C., there were no Minaeans in North Arabia because there never had been any at any time. Grimmer's doubts (*op. cit.*, p. 17) as to whether the Minaeans of the Greeks are the people in question in the inscriptions are also unfounded.

Against Glaser's theory the circumstance is also decisive (cf. Hartmann, *op. cit.*, p. 131 *sq.*, 136) that, as we can deduce with absolute certainty from the mention of kings and kingdoms together in the inscriptions, there were kings of Ma'in and kings of Saba' reigning alongside of one another. To Glaser's argument that the two kingdoms practically never mention each other in their inscriptions, even Weber (*op. cit.*, p. 18) was forced to confess that "the Minaeans actually brought themselves on two or three occasions to break the mysterious silence", and the Sabaeans likewise. But this means confessing the impossibility of holding this theory in any form.

Glaser's view that the Minaeans had already begun to decline soon after the Hyksos period (*op. cit.*, p. 451) and had sunk into barbarism towards the end of the first century B.C. (p. 22, 69, 93, 95, 232), or were actually an extinct people (Weber, *Arabien*, p. 31) is disposed of by the statement of Artemidoros (Strabo, xvi. 776) and extracts by others from Agatharchides (§ 87, 97, in the middle) on the commercial activity and the wealth of the Minaeans and further by Pliny's statement regarding their independent position alongside of Saba' and their competition with the Sabaeans in the frankincense trade (see above), still more palpably by the significant fact that Ptolemy calls the Minaeans alone "a very great people" out of all the peoples of Southern Arabia.

The inscription of the Minaean sarcophagus of Gize, which shows that Minaeans were still supplying spices for the Egyptian temples in the Ptolemaic period, and the Minaean and Greek inscription on Delos of the second century B.C., which records the erection of an altar to Minaean gods, are likewise, as Prætorius has rightly observed (*Z. D. M. G.*, liii. 220), unfavourable to Glaser's theory, and, agreeing with the Greek and Roman evidence, are proofs that the people, language and culture of the Minaeans survived into the second century B.C. and certainly to a still later period.

The palaeography and grammar of the inscriptions likewise give no support to the Minaean theory. D. H. Müller was the first to point out that of the Sabaeen inscriptions those written boustrophedon belong to the oldest period of Sabaeen history and at the same time show the earliest forms of letters. Contradicting Hommel's (*A. A.*, p. 22 *sq.*, *Christomathis*, p. 2, 6) suggestion that the Minaean inscriptions are older in grammar and epigraphy than the Sabaeen, Mordtmann (*Beiridge*, p. 107) held that the Minaean inscriptions that have survived to us are later than the oldest Sabaeen texts and older than the Sabaeen texts of the later period (*ibid.* p. xi, note 2) and that Hommel's deductions from the palaeography of the Minaean inscriptions were very wide of the mark.

He also insisted (*op. cit.*, p. 106, *Z. D. M. G.*, xlvii. 400) that the fact that only one of the extant (or so far known) Minaean inscriptions is written boustrophedon, is not very much in favour of the claim for a very high antiquity for these

inscriptions in contrast to the Sabaeen. It must, of course, be remembered that there are texts written boustrophedon which are later than normal ones written from right to left. But although the Minaean alphabet may show occasional less developed forms, it is recognised (e.g. by Weber, p. 11) that the forms of the Minaean letters on the whole agree perfectly with the Sabaeen of the oldest period. In spite of the archaic features of the Minaean language in comparison with the Sabaeen (on the dialectal distinctions between the two see D. H. Müller, *Burgen*, p. 1009; specially thorough, especially from the lexical point of view, is Mordtmann, *op. cit.*, p. 107 *sq.*, *Z. D. M. G.*, lii. 400; Hommel, *Grundriss*, p. 133, note 3), Hommel, *A. A.*, p. 23, asserted that the Minaean inscriptions might nevertheless be later than the Sabaeen or contemporary with them, as in them older forms — as happens elsewhere — might have survived into the latest period (see also Mordtmann, p. 115 on the more conservative retention of the older vocabulary in Minaean and (p. xi.) of archaic forms of the script); we need not take account of mixed forms of earlier and later origin occurring in one and the same text.

None of the grounds on which Glaser bases his theory are convincing (they are detailed in Weber, *op. cit.*, p. 7). That Sabaeans are so rarely mentioned in Minaean texts and Minaeans even more rarely in Sabaeen sources, facts on which Glaser and his supporters lay so much stress, is explained partly from the relations of the two rivals (D. H. Müller, *Burgen*, p. 1031; Hartmann, *op. cit.*, p. 135), partly from the fact that the "subject matter of the inscriptions, which are not in any sense annals, afford little opportunity for mentioning such matters" (Mordtmann, *op. cit.*, p. 115, note 1), as the texts preserved from this period deal mainly with the buildings and religious matters, being occasional or ad hoc inscriptions, and only rarely touch on foreign affairs (Lidzbarski, *op. cit.*, p. 102). But these few references are quite sufficient to settle the main question. It is noteworthy that, although Grimmer (*op. cit.*, p. 17) still proposed to put the date of the earliest Minaean kings far beyond 1500 B.C., other champions of this theory, in calculating the earliest initial date for the Minaean kingdom, have now gone in the other direction and put it much below Glaser's figure. While Winckler in the first edition of *Helmolt's Vestaen*, p. 244 still held that the Minaean period could hardly have begun after 1500 B.C. (cf. p. 245), Weber significantly wrote in the second edition in the same passage (p. 235) "hardly after 1200 B.C." (cf. p. 237, "from about 1200 B.C."). Hommel, although he still put the collapse of the Minaean kingdom about 650 B.C. (*ibid.*, p. 396), and, according to him, the South Arabian (p. 394) inscriptions "begin from at least 800 B.C., but more probably many centuries earlier", also later (here above i. 399 *sq.*), says that Glaser's assumption would presuppose the placing of the Minaean kingdom from 1200 to 700 B.C. at least (in *Explorationen*, p. 729 he still puts it at 1400—700 B.C.), and that at most it may be granted that "the oldest Sabaeen inscriptions were contemporary with the latest Minaean" (above i. 399 *sq.*). On Weber's clever defence, Lidzbarski (p. 101) says that it will hardly gain further adherents for the Minaean theory and Weber himself has to confess (*Glaser's*

Forschungen, p. 30) that "no obvious proof for Glaser's view has yet been produced".

Against the theory, in perfect agreement with the Greek and Roman authorities and the ancient South Arabian sources, most readily agreeing with them, and following D. H. Müller, we must insist that the kingdom of Ma'rib existed contemporaneously with that of Saba' and at the very earliest began in the eighth century B.C. (see, for example, Mordtmann in *W. Z. K. M.*, viii, 371; Hartmann, *op. cit.*, p. 132 etc.). Its end did not come about 230 A.C. (so Hartmann, *op. cit.*; similarly Mordtmann, *Amurru*, Z. D. M. G., xlv, p. 184 and *Beilage*, p. 106: "soon after Eratosthenes"), but it existed at least down to the second century A.C. Saba's rivalry first with Ma'rib (and Katabān) as well as with the Himyars was of far reaching significance for its history. The period of transition from its oldest period, the so-called *mukarris* period, the period of the priest-kings, and the next epoch, whose rulers residing in Ma'rib, contemporaries of the kings of Katabān and Hadramūt, bear the title "kings of Saba'" (expressing the emancipation of the kingship from the priesthood) and whose beginning may be placed about 300 B.C., is represented for us by the great Sirwāh inscription (Glaser, No. 1000). The following (the Himyarite) period, that of the "kings of Saba' and Dhū Raidān" (from the hill or ancestral citadel of Raidān; the name occurs in Sanskrit also as *Duryādhana* [in the second book of the *Mahābhārata*]) and the last period (from 300 A.D. to the end of the independence of Hadramūt, that of "the kings of Saba' and Dhū Raidān and Hadramūt and Yemna'") have been sketched above.

At the period of the rise of Islām, Saba' was beginning to disappear from the memory of the Arab world. For Islām, which kindled new wars in the land and brought about the final collapse of the ancient kingdom, the decline of which had been begun by the Persians and Abyssinians, Saba' soon became an echo of the past, indeed, the very essence of the pre-Muhammadan period, with which only scholars still concerned themselves. The new creed had the greatest interest in obliterating all recollection of the pagan period; not only in the stone monuments which still survived the natural weathering — these were destroyed to provide material for new buildings, or to be burned for lime or sometimes out of sheer vandalism — but also in literature, and even in consigning the ancient language to oblivion. This explains why, as Sprenger (*op. cit.*, p. 244) rightly remarks, it would be useless labour to seek for any reliable information regarding the Sabaeans in Arabic sources. The relative value of the various sources for our knowledge of Saba' was estimated with equal accuracy by the most successful discoverer of inscriptions (Glaser, *Skizze*, II, §59) in his verdict that it was not the legendary tradition of the Arabs, containing very little matter of value and usually misleading, and not the poetry of the time shortly before and after Muhammad, which would give us a true picture of the past, but "simply and solely the ancient inscriptions and the few statements in the classical authors". The relatively scanty references in Arabic authors may be divided for our purpose into two main groups. The one consists of valuable geographical and historical statements regarding architectural remains of Saba's past and details

of ancient Sabaeon history, including archaeological matter and the other far less valuable legendary elements, which survived in tradition after the disappearance of Sabaeon culture and which also permeated the quasi-historical references to the affairs of the Himyar state which lay nearer in point of time. The supreme authority for information of the first category, who, of all Muslim authors, gives us the most numerous and most valuable items of information regarding Saba', is al-Hamdānī whose "Description of the Peninsula of Arabia" is our main literary source for the geography of Arabia in general and who (he was a Yemeni, a native of San'a'), out of patriotic interest in the old buildings and other antiquities of South Arabia that still existed in his time, has collected everything associated with them, often, indeed, already interwoven with legend, in his *Itih*, a history of Yemen and a description of its antiquities. The part of the eighth book of the *Itih*, which still exists, describing the citadels was, edited for the first time (Arabic text and German translation with explanatory notes) by D. H. Müller (*Die Burgen und Schlösser Südarabiens nach dem Itih des Hamdānī*, S. H. A. W. W., 1879, xlv, 335 sqq. and xcvi, 1881, p. 955 sqq.), who added additional notes from the tenth book, which deals with the genealogy of the Hamdānī, as well as illuminative passages from the *Sifa Dīwān al-Arab*. Part I gives in the first place al-Hamdānī's account of Ghumdan and San'a'; al-Hamdānī quotes verses on Ghumdan and then gives the story of the foundation of the building by Shem and South Arabian traditions regarding San'a'; he goes on to give further information regarding the temperature of the country, the preservation of food in it; details regarding the topography of San'a', the ruins of the citadel of Ghumdan, and quotes verses relating to it, which reflect the legends clinging to the castle as a wonder of architecture. He next deals with Shihām-Yashkum, the old monuments and great palaces in Shihām, Shihām Bait Akyās (cf. the descriptions in the *Dīwān* and *Yāqūt*, *Mu'jam*, iv, 437, iii, 248 sq.). Next comes the district of Dahr, Bait Hanbas (cf. al-Bakrī, ed. Wartenfeld, p. 198 and the *Dīwān*), Hadakān and Kida', Sirwāh, one of the most celebrated castles of Yemen (verses are quoted), Ghaimin (the Himyar tradition regarding As'ad Tubba' is quoted, given in full in Kremer, *op. cit.*, p. 86 sq.), Dāmigh, Zafar and other citadels. This is followed by a short list of the citadels of Sarw (highlands of the Himyars) and Hadramūt. Al-Hamdānī's description of Ma'rib and Saba' is important for its subject matter, on the basis of which Müller (in Part II) endeavoured on several points to throw a brighter light on ancient Saba' and in particular to show that it is the inscriptions which must be used for the reconstruction of the lists of Sabaeon kings, rather than the statements of Arab tradition. Al-Hamdānī's description deals with the state of the remains of the dam, the inundation which spoiled the dam, the citadels of Ma'rib (with quotations from the poets). Al-Hamdānī's unhistorical statements regarding the builder of the dam (Lakman b. 'Ad, a mythical personage) are corrected by the evidence of inscriptions which mention Ithamar Balyin as the builder. It is worthy of note that Arnaud's description of the remains of the dam and Halévy's report agree with al-Hamdānī's account in the main details. Of

the Yemeni citadel of Rawḥān (between al-Djof and Ma'rib) al-Hamdāni says that it at one time belonged to the family of the Naḥk (on which he also gives information in the tenth book; following him also Naḥwān, *Ḥaṣn al-ʿUḥān*; Müller, *op. cit.*, ii, 2001, note 3). In the Minaean area he mentions the citadels of Bardiḥ and Ma'in (with quotations from the poets).

The *Ḥaṣn* also contains geographical details regarding the territory of Saba', which, however, no more enables us to form a comprehensive impression picture than the scattered notices in later Arab geographers, because they consist almost entirely of isolated names; and it is difficult to form a general idea from them. D. H. Müller, in editing the text (2 vols., Leiden 1889-1891) had therefore to struggle with extraordinary difficulties. Glaser, who, like Sprenger before him, had made very great use of al-Hamdāni, was later able to test the readings of this edition on the spot for the areas in which he travelled from his own observations and the evidence of natives.

The few memories of the history of the Sabaeans period that have survived in the prose or poetic traditions of the Arabs are beyond the range of our consideration, as they have more or less assumed the form of legend. A. v. Krenke, *op. cit.* (cf. his *Altarabische Geschichte über die Völker der Jemen*, Leipzig 1867), has collected the essential matter on the subject. In tradition also we find analogies to the Greek stories (cf. e.g. von Krenke, p. 150 on *Ḥu' Fa'ib*). The building of the dam at Ma'rib or at least its improvement was attributed to Queen Bilqis (cf. above); legends also became associated with the inundation. In the division of the pre-Muhammadan history of Yemen in the Arab historians into three periods (the first down to Tabḥā' Abū Karīb, the second to Ḥu' Nuwās and the third to Isfām) still reflects the actual division into Sabaeans, Himyarite and Abyssinian-Persian epochs (Müller, *Bergan*, i, 338). Even the lists of Himyarite kings preserved by these historians have no scientific value and at most give us a few old names which were adopted by the genealogists, but can have no claim to historical accuracy. Besides, these lists of kings refer only to the later period of Himyarite history (*ibid.* ii, 981, 997).

More important for us are the items of information found in Muslim literature regarding the social and economic life of ancient and more modern Saba', which link up with the inscriptions and Graeco-Roman sources. The finds made in the country itself are in harmony with the various classical literary sources, which agree in showing that the Sabaeans attained the greatest importance of all Arab peoples of the pre-Muhammadan period, in particular of the four leading peoples of South Arabia who were known even to the Greeks; these still extant monuments of the once highly developed civilisation, to which Saba' mainly owed its historical importance, consist of the inscriptions found since Arnaud's journey of exploration, sculptures and remains of colonnades, palaces, temples, city-walls, towers, public works, especially water-works etc., which confirm the brilliant picture of Sabaeans culture given by Agatharchides and the writers after him (see above) and at the same time show that even the legends of Islamic tradition concerning the former glory of the Himyar kingdom have a historical basis.

Striking evidence of this in Arabic literature is the above mentioned description of Qumḥān in al-Hamdāni and the poetic references to this much admired citadel (see Müller, *Bergan*, i, 345-377) as well as to other citadels in Saba', e.g. Salḥā and Balāḥ. Agatharchides's remarks on the splendid buildings of the kings and private individuals in Saba' and the descriptions of Sabaeans castles by the Arabs are confirmed by the testimony of the inscriptions, which to a great extent commemorate the building of houses (palaces) and fortifications. Of public works built to assist agriculture like barriers and dams, the most celebrated was the dam of Ma'rib. The ancient South Arabs achieved great things in the way of irrigation works in view of the dependence of their agriculture on artificial irrigation. In the South Arabian inscriptions these are frequently mentioned (cf. the references collected by Hartmann, *op. cit.*, p. 398 sq. and the discussions in Rhodokanakis, *Sauda*, ii, (e.g. p. 78 sq. etc.). Cisterns of the Himyar period may still be seen in South Arabia to-day.

This civilisation, on which since Arnaud's time the finds and observations of Halévy and especially of Glaser have thrown new light, owed its rise to the industry and commerce of the Sabaeans, in particular to the cultivation of frankincense. The land offered all the necessary conditions for its cultivation. According to al-Hamdāni (*Ḥaṣn*, p. 31, 8) Yemen was called *al-Ḥadira* 'the green', on account of its wealth in trees, fruits and crops (cf. Ibn al-Faḥrī, *Kitāb al-Balāḥ*, BGA, v, 34). Even Agatharchides's description of the richness of the flora of Saba' is quite satisfactorily explained by the natural formation of the country. The healthy, temperate interior of Yemen and Hadramūt produces a rich vegetation on the slopes of the hills and in the valleys. Accounts of modern journeys also bear testimony to the fertility of the soil of Yemen, and also to distinction in its woods. Al-Mas'ūdī's description, based on older authorities, of Saba' as 'the most luxurious and most fertile part of Yemen, rich in gardens, plantations and meadows', with a 'splendid climate' (cf. Krenke, *op. cit.*, p. 10, note 1) is in close keeping with Agatharchides's praise of the wealth of Saba'.

The uniformity of the temperature in the region of San'a' is emphasised by al-Hamdāni (Müller, *Bergan*, i, 343). Glaser and other travellers record that the temperature of the higher regions of Yemen is temperate and favourable to vegetation.

A parallel to the statement of Agatharchides that the Sabaeans provided the Ptolemies and Syrians with gold and the Phoenicians with costly wares of the most varied kinds, is found in the biblical passages already mentioned, relating to the Sabaeans exports of frankincense, gold and jewels to Egypt and Syria. South Arabia from the earliest times had been the very land of frankincense and the Sabaeans in particular, as inhabitants of the most fertile parts of the southern half of Yemen and owners of the frankincense country, were naturally destined to trade especially in spices. The idea — expressed in Strabo (xvi, iv, § 29, 22) — that the trade in spices was the source of the wealth of the Sabaeans is already found in 1 Kings, x, 1 sq. Adana was the great centre for trade with India and Egypt (*Edon* *Apollon*,

Periplus, p. 26; Ptolemy, vi. 7, 3; Mela, iii. 8, 8; Pliny, vi. 159; Philostorgius, *Hist. eccl.*, iii. 53; and Aden (q.v.) still is "the natural centre of the circle formed by Africa, Arabia, Mesopotamia and India" (W. Schmidt, *Das indisch-arab. Arabien*, Frankfurt a. M. 1913, p. 101, who, like Mommsen, *Römische Geschichte*, v. 611) wrongly speaks of a destruction of Adana by the Romans in the first century A.D.). The references in inscriptions to sacred vessels of gold and silver, medieval finds of gold (al-Hamdānī, *Djastur*, p. 79; cf. Müller, *Burgen*, ii. 1008, *Südarabische Studien*, p. 135 sq.; Sprenger, *op. cit.*, p. 56 sq.), modern gold-washing, reported by Halévy and Glaser, and lastly the archaeological finds of Sabaean silver and gold coins and gems (on gems see al-Hamdānī, *op. cit.*; Müller, *Burgen*, i. 366, 374, *Südarabische Altertümer*, Vienna 1899; Glaser, *op. cit.*, p. 367; Landberg, *Arabica*, v. 128; on finds of coins see Schlumberger, *Le trésor de Souda*, Paris 1880; D. H. Müller, *Südarabische Altertümer*, Vienna 1899, pp. 65–78, Pl. xiv; E. S. G. Robinson in the *Nomismatic Chronicle*, 1923, pp. 365–368; G. F. Hill, *Brit. Mus. Cat. Coins of Arabia*, 1922, *passim*; do., *Ancient Coins of South Arabia*, in the *Proceed. of Brit. Acad.*, London 1915), all corroborate the accounts preserved in Diodorus from Strabo (following Agatharchides) of gates, walls, ceilings, pillared walls of Sabaean houses embellished with gold, silver and jewels, and of the gold and silver drinking vessels and other valuable household utensils and (the above-mentioned) Greek, Roman and Arabic literary references to the occurrence of natural gold (and silver, according to al-Hamdānī [cf. Sprenger, *op. cit.*, p. 58, 283 sq.] and other sources, also to modern authorities (*ibid.*, p. 158)).

Research has recently been devoted to the economic life of ancient South Arabia also. Rhodokanakis was the first to deal systematically with economic and the associated legal questions from the inscriptions (*Die Bodenwirtschaft in Studien*, vol. ii., and in his later (above mentioned) articles). From these studies it is clear that there existed in ancient South Arabia a strict system of regulation and administration of agriculture, dictated by national interests, especially a strict regulation of the distribution of water and of the actual tilling of the soil, and we gain an insight into a strictly regulated organisation of labour, into conditions of ownership and legal views, into the economic organisation of the state and of the temples. Historically important is the fact that the system of land administration and the constitution were (in the main at least) the same in all ancient South Arabian states.

Rhodokanakis's investigations into the economic conditions inspired A. Grohmann to his researches the results of which he has given in his work already mentioned (an earlier specimen was given in his *Die altorientalische Agrarwirtschaft in den Berichten des Forschungsinstitutes für Osten und Orient*, ii. Vienna 1918, p. 34 sq.). It deals with the land (geology, climate, water-supply), population, indigenous products (especially aromatic plants), mineral wealth, hunting, cattle-rearing and agriculture. Especially valuable are the many references from inscriptions and literary sources and from records by travellers (including works by Glaser still in manuscript). Grohmann gave himself a much wider subject than W. Schmidt, who

laid most stress on economic geography in his work (above quoted) and writes with special knowledge on modern trade and commerce; his historical observations suffer from the fact that he is not an Orientalist.

Bibliography: Of the literature to be consulted, the sources have already been quoted in the article, especially the inscriptions (the main collection is the *Paria Corpus Inscript. Semit.*, iv) and the principal historical, geographical and linguistic works, Sprenger, *Geographie*; D. H. Müller, *Burgen und Schlösser*; Hommel, 1) *Aufsätze und Abhandlungen* (3 parts, 1802–1901), 2) *Chrestomathie*, 3) *Explorations in Arabia*, 4) *Grundriss*; Glaser, *Skizze*, ii. (Part i. of the year 1889 was published privately); J. H. Mordtmann-D. H. Müller, *Sabäische Denkmäler*, Vienna 1883; J. H. Mordtmann, *Beiträge zur minütlichen Epigraphik* (*Semitist. Studien*, ed. by C. Bezold, part 12, Weimar 1897); M. Hartmann, *Die arabische Frage*; Otto Weber's monographs (on Arabia and journeys of exploration in *Der Alte Orient*) and *Studien zur südarabischen Altertumskunde*, i–iii, *Mitt. VAG*, 1907; Rhodokanakis, *Abhandlungen*, also Krenmer's two works and Landberg's *Arabica*, Leiden 1897, 1898; and of Arabic literature al-Hamdānī's *Islām and Sifa Djastur al-'Arab* (in D. H. Müller's edition). An almost complete bibliography of the antiquities of South Arabia (including Sokotrā) from 1774 to 1892 was given by Hommel in his *Chrestomathie* (p. 63–88) and a continuation (down to 1907) by Weber (*Studien*, iii., 1908, where on p. 70 he promised supplements to Hommel; some are given below). Here we must confine ourselves to quoting books and articles which in their succession form milestones of progress in the investigation of the land and people of Saba, and to more recent literature (since 1908) and for the hundreds of special articles, mainly linguistic in their nature, and for the publication and interpretation of separate inscriptions we must refer the reader to these two collections and to the reviews in the *Z. D. M. G.* (from 1908 onwards). Of travellers' narratives we may here mention: *Auszug aus einem Briefe ... Saiten's an Herrn v. Hammer* (with 1 plate) in the *Fundgruben des Orients*, ii. Vienna 1811, p. 275 sq.; J. R. Wellsted, 1) *Account* . . . (1 plate), *JASB*, iii. (1834), 554 sq., 2) *Narrative of a Journey . . . to the ruins of Nakab al-Hajar* (1 plate) in the *J. R. Geogr. Soc.*, 1837, vii. 20 sq.; do., *Travels in Arabia*, London 1838; Wellsted's *Reisen in Arabien*, Germ. edit. etc. by E. Rödiger, Halle 1842; Carter, *Transactions of the A. S. B.*, 1834; C. J. Cruttenden, 1) *Narrative of a Journey from Mokha to San'a* (1 plate), *J. R. Geogr. Soc.*, 1838, viii. 267 sq., 2) *Journal of an Excursion to San'a* . . . *Proceed. of Donb. Geogr. Soc.*, 1838; P. Botta, *Relation d'un voyage dans l'Yémen*, Paris 1841; Th. S. Arnaud, *Relation d'un voyage à Mareb*, *J. A.*, 1845, series 4, vol. v. 211 sq., 309 sq. (publ. by Mohl; see below under Fresnel); *Mission dans l'Yémen*, *Rev. d'Egypte*, i., 1894, ii., 1895; F. Fresnel, *Notice sur le voyage de M. de Wrede dans la vallée de Doan*, *J. A.*, 1845, series 4, vol. vi. 386 sq.; *Lettre de M. . . . de Wrede . . . sur son voyage en Arabie*, *Bull. de la Soc. de Géogr.*, 1845, series 3, vol.

iii. 41 sq. (from his papers: A. v. Wroble's *Reise in Hadramaut*, by H. v. Maltzan, Braunschweig 1870, with plate); K. Ritter, *Erdkunde*, viii., Berlin 1847 (comprehensive survey based on all then known accounts of Arabia); *Eben Saïr* (see above); J. Halévy, 1) *Rapport sur une mission archéologique dans le Yémen*, J. A., 1872, series 6, vol. xix. (*Itinéraire*, p. 8 sqq., *Classification des inscriptions*, p. 60 sqq., *Inscriptions Sabéennes*, p. 129 sqq., *Traduction*, p. 489 sqq.); 2) *Voyage du Nedjran*, *Bull. de la Soc. de Géogr.*, 1873, series 6, vol. vi., 1877, vol. xiii.; S. B. Miles and W. Munzinger, *Account of an Excursion into the Interior of Southern Arabia*, J. R. Geogr. Soc., 1874, xli.; H. v. Maltzan, *Reise nach Südarabien*, Braunschweig 1873; Ch. Millingen, *Notes of a Journey in Yemen*, J. R. Geogr. Soc., 1874, xli.; K. Manzoni, *El Yemen, Tre anni nell' Arabia Felice*, Roma 1884; H. Kiepert, *Schäpiras Reise in Yemen in Globus*, 1880, xxxviii. 183 sqq.; S. Langer, *Reiseberichte aus Syrien und Arabien*, Vienna 1883; E. Glaser, 1) *Meine Reise durch Arabien und Hadramaut*, *Petersburgs Geogr. Mitt.*, 1884, xxx. 170 sqq., 204 sqq., 2) *Von Hadramaut nach Sana'a*, *Ibid.*, 1886, xxxii. 1 sqq., 33 sqq., 3) *Über meine Reisen in Arabien*, *M.G.G.W.*, 1887, p. 18 sqq., 77 sqq., 4) *E. Förderung deutscher Wissenschaft. . . in Bremen, Nov. 1, 1894, 6) *Bericht über einen Vortrag Glaser's über seine vierte Reise*, *Bell. z. Münch. Allg. Ztg.*, 1894, No. 97, 7) *E. Glaser's Reise nach Marib*, ed. by D. H. Müller and N. Rhodokanakis, Vienna 1913 (*Sammlung E. Glaser*, I.); A. Deless, *Voyage au Yémen*, Paris 1887; F. T. Haig, *A journey through Yemen in the Proc. R. Geogr. Soc.*, 1887, vol. ix.; (Harris see above); L. Hirsch, 1) *Reisen in Süd-Arabien, Mähra-Land und Hadramaut*, Leipzig 1896 (on it cf. Glaser, *Peterm. Mitt.*, xlii. 1897, *Litteraturber.*, p. 37 sq.), 2) *Neue Wanderungen in Yemen in Globus*, lxxiv. (1898), ii. 204 sqq., 221 sqq.; C. Landberg, *Die Südarab. Expedition der Akad. der Wissensch. in Wien*, Munich 1899; D. H. Müller, 1) *Die Südarab. Expedition der Akad. in Wien*, Vienna 1899, 2) *Zur Geschichte der Südarab. Expedition*, Vienna 1907; F. Charnay, *Une excursion au Yémen*, *Bull. Soc. Geogr. Anvers*, 1899, xliii. 79 sq.; A. Bardey, *Rapport sur El-Yémen*, *Bull. de Géogr. hist.*, 1899; Th. Bent, *Southern Arabia*, London 1900; H. Borchardt, *Reiseberichte aus dem Yémen*, *Z.G. E. B.*, 1902, p. 593 sqq.; W. Hein, 1) *Vorläufiger Bericht über die Reise nach Aden und Ghishin*, *Ans. Akad. Wien*, 1902, xxxix. 107 sq., 2) *Südarabische Itinerarien*, *MGG Wien*, iv. 1914, p. 32 sqq.; A. Beneyton, *Mission d'études au Yémen in La Géographie*, xxvii., 1913. — From Glaser's still unpublished papers Grohmann very frequently quotes his diaries and "in addition also G. W. Bury's description of his journey to Bahān in 1899" (cf. *cit.*, p. ix.; p. 56, note 1: *Expedition to Bihān*, MS.; also p. 4, note 1 etc.; Bury, *Arabia Infelix*, London 1915; also passage: *The Land of Us*, London 1911, and *Notes*); also Glaser's unpublished essay *Ost-yemen und Nordhadramaut*, p. 139 etc. — The following are exclusively concerned with present day conditions in the area once covered by the

ancient Sabaeo-Himyar kingdom which roughly corresponds to the modern Yemen (from about 19° N. Lat., Djebel Tathlith, to the south coast and in the east as far as Hawra): Zwerner, *Arabia*, Chicago 1901; Raif Fuad-Bey, *Land und Leute im heutigen Yemen in Peterm. Mitt.*, 1912, lviii., part 2; E. Behn, *Yemen, Grundzüge der Bodenplastik und ihr Einfluss auf Klima und Lebenswelt*, Diss. Marburg 1910, apart from meteorological, astronomical and natural history researches and several monographs by Glaser, Bent and others. W. Schmidt's and A. Grohmann's books have been already mentioned. On commercial activity on the south coast at the present day information is given by the *Report of the Aden Chamber of Commerce* (Aden from 1898 onwards). To the works mentioned in the beginning of the bibliography we may here add the following: J. Halévy, *Études Sabéennes*, J. A., 1873, series 7, vols. i.; ii.; A. Zohma, *Arabien und die Araber seit 100 Jahren*, Halle 1875; D. H. Müller, 1) *Südarabische Studien*, S. B. Ak. Wien, 1877, lxxvi. 103 sqq., 2) *Epigraphische Denkmäler aus Arabien*, *Denkschr. Ak. Wien*, xliii. (1894); E. Glaser, 1) *Zwei Inschriften über den Dammbruch von Marib*, *M.V.A.G.*, 1897, 2) *Altjemenitische Nachrichten*, Munich 1906, 3) *Die Abessinier in Arabien*, Munich 1895, 3) *Pant und die Südarabischen Reiche*, *M.V.A.G.*, 1899, p. 51 sqq.; H. Grimme, *Mohammed*, Munich 1904; Hogarth, *The Penetration of Arabia*, London 1905; J. Thes., *Saba* (R. E., s. v., cols. 1298—1511 where this material has been dealt with by me with special reference to Greek and Roman literature).

The earlier publications of inscriptions (Bird, Fresnel [to supplement the statement R. E., col. 1400, reference should be made to col. 1402: the copies as well as the transcriptions of the inscriptions with the philological observations 194 sq. in letters to Mohl are from Fresnel], Pridoux, Rehatsek, Langer [published by D. H. Müller, *Z. D. M. G.*, 1883, xxxvii. 319 sq.], Mordmann, Derenbourg, etc.) are given in greater detail in the *Paris Corpus* (see above) and in the more recent publications. Of these we will mention the more comprehensive here: J. H. Mordmann, 1) *Himjarische Inschriften und Altertümer in den Königl. Museen zu Berlin*, Berlin 1893, 2) *Musée Impérial Ottoman, Antiquités Himyarites*, Constantinople 1898; D. H. Müller, *Südarabische Altertümer im Kunsthistorischen Hofmuseum*, Vienna 1899; H. Derenbourg, 1) *Les monuments sabéens et himyarites du Mufti . . . de Marasile*, *Rev. Archéol.*, 1899, series 3, vol. xxxv.; 2) *Répert. d'Épigraphie sem.*, i. (1901 sq.), ii. (1907). Of the *Inschriften der Südarabischen Expedition der Akademie in Wien* (collected in 1899) so far only a few have been published (in the publications of Rhodokanakis). — For Sabaeo studies, the researches made on the modern dialects of South Arabia are also important. Beginnings were made as early as H. v. Maltzan in the *Z. D. M. G.*, 1873, xxvii. and others have followed him. Count C. Landberg, *Études sur les dialectes de l'Arabie méridionale*, i., *Hadramout*, ii., *Dahana* (Leiden 1901—1913) are valuable. Rich material is contained in the *Schriften der Südarabischen Expedition* of the Academy in Vienna,

l.—x. (1900—1910, Somali, Mehri, Hadrami, Sokotri, Zfar, ed. by L. Reinisch, D. H. Müller, A. Jahn, N. Rhodokanakis) finally M. Bittner's *Studien* on Mehri, Sokotri and Shawri in *SB Ak. Wien*, clxii, 1909 191. (J. TKATSCII)

[All previous works on the extensive ancient coinages of South Arabia have been superseded by G. F. Hill, *Catalogue of Greek Coins of Arabia, Mesopotamia and Persia in the British Museum*, London 1922, pp. xlv. — lxxxiv., 45—80, Plates VII—XI, L and L.V. A full bibliography is given on p. xlv. It is now certain that the greater part of the coins hitherto vaguely classed as "Himyarite" are really Sabaeans and that small groups of coins may also be attributed to the Minaeans and Katabanians. — Editorial].

ŠABANDĪA, chief place of the *nāhiya* of the same name, picturesquely situated on the South-eastern bank of lake ŠabandĪa which is well known for its clear water and its many fishes. S. belongs to the *wilāyat* Stambul and to the *Sanĵaĥ* Ismīd. It is the residence of a *Mudir* and has about 8000 inhabitants (of whom three-quarters are Muslims), 15 mosques, 2 *Madrasas*, 15 schools and about 1200 houses (cf. V. Guinet, *La Turquie d'Asie* iv. 378). Of the history of the town little is known; there are remains from the Byzantine period, not however from antiquity. The origin of the name is obscure; Ewliya Celebi reports that a certain ŠabandĪ Kūĵa founded the town (cf. *Travels*, transl. by J. v. Hammer, London 1850, ii. 91); but this report is probably not trustworthy and the personage mentioned is apparently a *hero eponymus*. More trustworthy seems the statement that the grand-westir of Sulaimān the Great, Šarīf Rūstem Paĥa, founded a mosque, a public bath and an inn with 170 rooms in the town, a statement which concords with local tradition (cf. M. Kleonimos and Chr. Papadopoulos, *Βιβλικά*, Constantinople 1861, p. 41). The place was only of some importance as a post-station; nowadays it is a railway halting-place. Of greater importance is the lake, especially because of the projected canalisation which was planned long ago, but never was carried out. Pliny (*Epist. ad Trajanum*, ed. Kukuia, Leipzig 1912, N^o. 41, 42, 61 and 62) mentions ancient remains (*ep. cit.*, p. 290 a); he proposed to Trajan to bring about a communication with the Gulf of Ismīd. The lake is 15 km long and reaches a breadth of 5 km; it occupies an area of 98 sq. km and has a circumference of 36 km (cf. Guinet, *op. cit.* iv. 334). It is already mentioned by Ammianus Marcellinus, xvi. 8, 3 under the name of lacus sumonensis (=suphonensis?; cf. W. Tomaschek (*SB Ak. Wien*, vol. 124, 1891, N^o. 8, p. 7). In mediaeval authors the mountain at the lake is called Siphones (G. Pachymeres, ed. Bekker ii. 332, 8), Siphon (Anna Comnena who calls the lake *Βαθὺς Ἄλως*; cf. ed. Reifferscheid ii. 72, 23; the reading *Βαθὺς Ἄλως* in Eucyrius ii. 14 is to be corrected into *Καὶ ὁ Ἄλως*; cf. J. Bidez and L. Parmentier in *Revue de l'Instruction publ. en Belgique* xl. [1897], p. 13-15 and *Byz. Zeitschrift* vi. 457), Sophon (Georg. Cedrenus, *Hist.*, ed. Bekker ii. 371, 628; Skylitzes, p. 710; Niceph. Bryenn. p. 77, 79, 82; Michael Att., p. 189; Theophanes, p. 610). ŠabandĪa is perhaps a popular transformation of Sophon.

The project of the canal (see above) was discussed several times, but without success, in the Muslim era, e. g. during the reign of Murād III

in 999/1591 (the year 909 in Hādĵĵ Khalifa, *Djĵānnumā*, p. 666, 12 is due to a printer's error and has given rise to mistakes, cf. J. v. Hammer, *Gesch. d. Osmanischen Reiches*, iv. 200 note; further during the reign of Muṣṭafā III in 1578 and later also (cf. Baron de Tott [Töth], *Mémoires*, i. 97). Cf. further the

Bibliography: On ŠabandĪa: Ewliya Celebi, *Siyāhat Nāme*, Constantinople 1314—18, ii. 171 sq., 459 sqq., v. 74; Hādĵĵ Khalifa, *Djĵānnumā*, p. 666, 673, 11; transl. M. Norberg ii. 493 (cf. J. Otter, *Voyage* ii. 45); *Le voyage de M. d'Aramon par Jean Chardin*, Paris 1887, p. 61 sq.; J. B. Tavernier, *Voyages* i. 6; P. Lucas, *Voyages* i. 204 sq.; Ft. Hammer, *Umblick*, p. 177. — In Selānki's *Ta'riḥ*, Constantinople 1281, p. 277, 282 sq. the lake is called *Alḥz gōll* instead of *lyān gōll*; cf. lacus Ivaris in Leupoldius, *Hist. Musulm.*, p. 57, 18 (from this form preceded by the usual *al* the name could be derived as well); J. v. Hammer, *Geschichte d. Osm. Reiches*, i. 72, 578; iv. 200 (after Selānki); F. Taeschner, *Das anatolische Wegenetz*, Leipzig 1924, p. 93 sq., 245; W. M. Ramsay, *Historical Geography of Asia Minor*, London 1890, p. 188. (FRANK BARINGER)

SABBĪH, title of Sūra lxxvii. of the *Kur'ān*, which is also called *al-Aḥz*, after the last word of the first verse.

AL-ŠĀBĪ', ABŪ Iṣḥāq IBRAHĪM b. HILĀL b. IBRAHĪM b. ZAHRŪN AL-ĤAKKĀNĪ was an adherent of the sect of Šāb'ians (q. v. al-Šāb'ā) and was born on the 5th of Ramaḍān, 313 A.H., according to the most trustworthy authority, his grandson Hilāl, while the *Fihrist* gives the year 320, which is certainly too late a date. His father Hilāl was a skilful doctor and in the service of Tūrṭān, who died in 324 A.H. Ibrahīm was brought up to the same sciences as other members of his family, who were all skilled in medicine, astronomy and mathematics. He is stated to have made an astrolabe of the size of a large silver coin for al-Mutahhar b. 'Abd Allāh, the Westir of the Būyid Amīr 'Aḍud al-Dawla. At an early date, however, he gave up these pursuits and became

a secretary in the State-chancellery, and here he came into prominence when the Bāyid Mu'izz al-Dawla (died 356 A.H.) sent a messenger to the Waṣīr al-Muhallabī asking him to draw up without loss of time a letter to Muhammad b. Ilyās, governor of Kirman, to ask his daughter in marriage for prince Ṣāḥib-tiyār, the later Amīr 'Izz al-Dawla. The Waṣīr, his friends and secretaries had been having a heavy drinking-bout and only Ibrahim al-Sābī was capable of drawing up the desired document, which found general approval. He must have come prominently to the notice of Mu'izz al-Dawla, who in the year 349 A.H. on the death of Abū Ishāq Ibn Thawāba appointed him chief secretary of the department of State-documents (Dīwān al-Inshā'). The Amīr tried his utmost to convert him to Islām, offering him even the post of Waṣīr as a reward, but he refused and remained true to his religious convictions till his death. However, he was a man of good manners and complied as such as much as possible with Muslim customs and fasted during the month of Ramaḍān; besides, his knowledge of the Qur'ān was perfect and he quoted from it frequently in his official letters. Upon the death of Mu'izz al-Dawla he retained his post in the Chancellery under his son 'Izz al-Dawla and in the year 364 A.H. when the latter's uncle 'Aḍud al-Dawla came to Baghḍād it was part of Ibrahim's duty to draw up the contract for an amicable settlement about their respective positions. 'Aḍud al-Dawla had at first been very favorably disposed towards Ibrahim and invited him to come to Shīraz, which he refused to do as he feared his relations during his absence might be converted to Islām. The document, however, contained terms which offended 'Aḍud al-Dawla, especially as 'Izz al-Dawla was given the prerogatives of his father Mu'izz al-Dawla, which incurred the hatred of 'Aḍud al-Dawla. The quarrel between the uncle and his nephew was disastrous for Ibrahim, for when 'Izz al-Dawla was killed in 367 A.H. and 'Aḍud al-Dawla entered Baghḍād, he was apprehended on Saturday, the 26th of Dhū l-Ka'da. 'Aḍud al-Dawla had vowed that he would have him trampled to death by elephants, but several prominent persons, among them the Waṣīr al-Muḥallabī b. 'Abd-Allāh interceded for him and he was cast into prison, where he lingered several years. To give him a chance to regain the favour of 'Aḍud al-Dawla he was ordered while in prison to write a history of the Bāyid dynasty, which was to have the title *Kutub al-Taḍfī*, after the new title of 'Aḍud al-Dawla, Tādī al-Milla. The Amīr made it his business to read the sheets of the work himself as they were composed and to make such corrections as he desired. Ibrahim, annoyed at the mode in which the work was composed, had the indiscretion to tell a friend upon his enquiry how the work was proceeding, that what he was writing was lies and bagatelles which he was scribbling. This remark was conveyed to 'Aḍud al-Dawla and only the death of the latter saved Ibrahim from violent death. After the accession of Sharaf al-Dawla he was released from prison on the 20th of Dhu'l-Hijja 371 A.H. He was compelled to live the remainder of his days in retirement and died on Thursday the 12th of Shawwāl, 384 at the age of 71 years. Some authorities state that he attained the age of 91 years, but both the date of his death and his age are confirmed by the superscriptions of the elegy which the Shānī al-Rādī composed upon his

death (ed. Beirut, l. 204; British Museum, Add. 25759 and Add. 19410). He was buried in the Shānī cemetery at Baghḍād. The elegy of al-Rādī was a token of a long and sincere friendship and when reproached about mourning an unbeliever, he replied that he mourned him for his personal merits. The poem is also quoted in extenso by Tha'ālībī in the *Yatima* (ed. Damascus, li. 81—85). Of the works of Ibrahim the *Kutub al-Taḍfī* is lost, but it is quoted occasionally by later historians e.g. Mirkhwānd, *Geschichte der Sultane aus dem Geschlechte Būyeh* (ed. Wilcken, Berlin 1832), p. 13 of the Persian text, and anonymously by Ibn Miskawayh, Arabic text li. 21—22, 23, 53, 59, 86, 87, 404. The genealogy of the Bāyids quoted by Mirkhwānd *l.c.*, seems to confirm the statement of Ibrahim. Ibn Abī Usāib'a (l. 224, 23) attributes the *Kutub al-Taḍfī* erroneously to Simān b. Thābit. Ibrahim's other works are: 1) a history of his own family, which is also lost. His reputation rests rather upon his 2) *Rasā'id* or official letters which were collected and have come down to us (MS. Leiden 345, Paris 3314) and of which many examples are quoted in the *Yatima*, the *Irshād* of Yāqūt, the *Sabā' al-Aḥbāb* of Kalkāghandī and the *Ma'āhid al-Tamgha*. They are historically of the highest importance as they supplement our knowledge of the period of the decay of the caliphate. Though the Persian influence is noticeable in the diffuseness of his style, it is free from Saffī, and lucid when compared with later specimens of the same art. 4) His poems, of which ample specimens are quoted in the works mentioned above and in many anthologies, are not to be distinguished from the productions of other poets of his time. They contain verses in praise of notable persons of the age, among them the waṣīr al-Muḥallabī (died 358 A.H.), al-Muḥallabī b. 'Abd-Allāh, waṣīr of 'Aḍud al-Dawla (committed suicide in 369 A.H.), 'Aḍud al-Dawla, Sābūr b. Ardashīr, waṣīr of Bahā' al-Dawla (deposed 381 A.H.), 'Abd al-'Azīz b. Yūsuf, successor of Sābūr, Shāms al-Dawla (reigned 372—388) and others; among his elegies is one upon his son Simān.

2. HIZAL B. AL-MUHAMMAD AL-SĀBĪ, the grandson of Ibrahim b. Hizāl was born in Shawwāl 359 A.H. and was a Sābī'an like the other members of his family. His mother was the sister of the physician and historian Thābit b. Sinān b. Kurra. He was the first member of his family who forsook

his old faith and became a Muslim. This was in the year 399 in consequence of a dream he had. He was secretary of Fakhr al-Mulk Abū Ghālib Muhammad b. Khulaf, who at his death had with him on deposit the sum of 30,000 dinārs. He was afraid to make use of the money, fearing the interference of the wazīr Mu'ayyid al-Mulk al-Ḥasan al-Rūh-khādī (died 430 A. H.); but when the latter found it out, he allowed him to keep the money. He did not use it, however, as he was in State-employment and left it to his son Ghārs al-Nīmāt. He died on Thursday the 17th of Ramaḍān, 448 A. H. The nine works which he composed have all been lost except the fragments edited by H. F. Amedroz, Leiden 1904. They consisted of the following: 1) *Ṭarīkh*, a history in continuation of that of his father-in-law Thābit b. Sinān, containing the events of the years 360—447. Of this the fragment published contains events of the years 389—393 only, and the portion preserved makes us regret the loss of the remainder. He relied for the earlier parts upon much valuable information supplied by his grandfather, who for so many years had access to all the most important documents. 2) *Kitāb al-Wuṣṣā'*, a continuation of the works of al-Šāli and al-Djāshiyārī. Of this only the beginning is preserved in the printed edition and some of the most important lives of wazīrs are lost. This work is quoted under the title *Kitāb al-A'yān wa'l-Anwāl* by Ibn Zāfir in the *Baṣ'at al-Baḍā'ih* (Cairo 1316, i. 63, 169; ii. 102), where fragments of a later portion are preserved. Ibn Khallikān calls this work by the longer title *Kitāb al-Anwāl wa'l-A'yān wa Mutanaddi'l-Anwāl wa'l-Iḥṣān* and states that it is in one volume and contains pleasant stories and rare anecdotes. 3) *Gharar al-Balāgha fī'l-Rasā'il*, a collection of his own epistles. 4) *Kitāb Riḥlat 'an il-Mulūk wa'l-Wuṣṣā'*, a collection of official letters, resembling that of his grandfather. 5) *Kitāb Rasā'il Dār il-Khilāfa*, probably an exposition of the various public offices in Baghdād. 6) *Kitāb Akhḥār Baghdād*, chronicle of the city of Baghdād. 7) *Kitāb Ma'āthir Ahlihi*, chronicle of his own family. 8) *Kitāb al-Kawā'id*, a manual for secretaries, probably after the model of the work with the same title by al-Šāli. 9) *Kitāb al-Siyāra*.

Bibliography: *Kitāb al-Wuṣṣā'*, Introduction, p. 5—7, 13; Khayr, *Tārīkh Baghdād*, Ms. B. M.; Ibn Khallikān, ed. Wüstenfeld, Nr. 756 = Cairo 1310, ii. 202; Ibn Hidjāz, *Ṭawārīḥ al-Awā'id* (Cairo 1304), i. 76; J. F. A. S. 1901, p. 501 and 749; v. Kretmer, *Darbīk. Ak. Wien*, xxxvi. 283—362; Wüstenfeld, *Geschichte der Arab. Lit.*, 198; Brockelmann, *Gesch. Arab. Lit.*, i. 323. Other members of the family according to the following genealogy were:

3. ABŪ IḤSĀN IBRAHĪM b. ZAHIRŪN was a skillful doctor and came from al-Raqqa to Baghdād where he died on the 20th of Šafar, 309 A. H. Ibn Abi Uṣaybi'a, i. 227; Kifl, *Hukamā'* (ed. Cairo 1326), p. 55.

4. HILĀL b. IBRAHĪM b. ZAHIRŪN ABŪ 'L-ḤUBAID, the father of Ibrāhīm, was a clever physician and in the service of the amir Thān. Kifl, *Hukamā'* (ed. Cairo), p. 229.

5. THĀBIT b. IBRAHĪM b. ZAHIRŪN, also a physician, was an old man when 'Aḍud al-Dawla came to Baghdād in 364 A. H. Though at first not well received he was later granted a pension and died the 11th of Dhū'l-Ka'da, 365 A. H. He was born at al-Raqqa on the 27th of Dhū'l-Ka'da, 281 A. H. Ibn Abi Uṣaybi'a, i. 227—230; Vāḳūf, *Irshād*, i. 341.

6. AL-MUḤASSIN b. IBRAHĪM ABŪ 'ALĪ transmitted the books of Sinān b. Thābit b. Kurra. Ibn Abi Uṣaybi'a, i. 224—227; Vāḳūf, *Irshād*, i. 339 sqq.

7. MUḤAMMAD b. HILĀL ABŪ 'L-ḤASAN GHĀRS AL-NĪMA, son of the historian Hilāl. He was born in 416 A. H. and inherited at the death of his father valuable property which was valued at 12,000 dinārs; he lived a very quiet life and by improving his wealth he was worth 70,000 dinārs when he died in 480 A. H. His children soon squandered this wealth, and with him the glory of his family ended. He had founded a small library of 400 volumes of which Ibn al-Aḳānī was made librarian, but the latter proved to be dishonest and sold many of the books. Ghārs al-Nīmāt was also for a time in the chancellery of the caliph al-Kā'im. He tried to continue the history of his father, but it was only a small volume and became towards the end very succinct, probably because he dared not write all he wanted to say. According to al-Safadi, Hishat-Allāh b. al-Mubārak accuses him of having included many falsehoods in his history. We cannot verify this as all his works have been lost. His other works were 2) *al-Hafawāt al-Nādira min al-Mughaffila al-Mahḥūṣa wa'l-Saḥā'at al-Bārda min al-Mughaffala al-Mahḥūṣa* which contained historical tales, and 3) *Kitāb al-Rak'* which was after the model of the *Nigwār al-Mubāḥarāt* of al-Tanūkhī. Ibn Khallikān (ed. Cairo 1310), ii. 202; Ibn al-Kifl, *Hukamā'* (ed. Cairo), p. 77; Safadi, *Waf' il-Wafayāt*, British Museum, MS. Or. 5320, fol. 110r.

(F. KREMER)

AL-ŠĀBĪ'A, the Sabaeans. This name has been given to two quite distinct sects: 1. the Mandaeans or Sabhes, a Judaeo-Christian sect practising the rite of baptism in Mesopotamia (Christians of John the Baptist); 2. the Sabaeans of Harrān, a pagan sect which survived for a considerable period under Islām, of interest for its doctrines and of importance for the scholars whom it has produced.

The Sabaeans mentioned in the Kor'an, who are on three occasions placed along with the Jews and Christians among the "people of the book", i. e. possessors of a revealed book, are apparently the Mandaeans. The name must come from the Hebrew root *š-b* "to plunge, to immerse", by loss of *sin* and must mean "baptists", those who practise baptism by immersion. The pagan Sabaeans, who did not know this rite at all, may have adopted this name as a measure of precaution to secure the advantages of the toleration accorded by the Kor'an to Jews and Christians.

Arab writers from the fourth century A. H. onwards very frequently mention the Sabaeans of Harrān and always with interest. Al-Shahrastānī devotes a very long section to them and the exposition of their doctrines. He classes them among those who admit spiritual substances (*al-rūḥāniyyūn*), especially the great astral spirits. They recognise as their first teachers two philosopher-prophets: Adhimin (Agathodemon = the good spirit) and Hermes who have been identified with Seth and Idris respectively. Orpheus was also one of their prophets. They believe in a creator of the world, wise, holy, not produced, and of inaccessible majesty, who is reached through the intermediary of the spirits. The latter are pure and holy in substance, in act and state; as regards their nature, they have nothing corporeal, neither physical faculties nor movements in place nor changes in time. They are our masters, our gods, our intercessors with the sovereign Lord; by purifying the soul and chastising the passions, one enters into relations with them. As to their activities they produce, renew and change things from state to state; they cause the force of the divine majesty to flow down towards the lower beings and lead each of them from his beginning to his perfection. Among them are the administrators of the seven planets, which are like their temples. Each spirit has a temple; each temple has a sphere and the spirit is to his temple as the soul is to the body. Sometimes they call the planets fathers and the elements mothers. Their activity consists in moving these spheres and in acting upon the elements and the physical world through them; from this result the mixtures in the compositions, then the corporeal faculties. The general beings proceed from the general spirits and the particular from the particular spirits; thus rain in general has its spirit, its spiritual master, and every drop of rain has its own. They preside over the phenomena of the world, winds, storms, earthquakes and give to each being its faculties and lay down laws for it; their condition is very spiritual and analogous to that of the angels.

Al-Shahrastānī distinguishes between the Sabaeans who worshipped the stars, called temples, directly and those who worshipped idols made with hands (*al-shaḥāḥ*, persons), representing the stars in temples made by man. There is a very curious note on the temples and idols of the Sabaeans, as well as on their ceremonies in al-Dimishqī, (*Cosmographie*, ed. A. F. Mehren, 1866): the shape of the temples, the number of the degrees, the colour of the ornaments, the material of the idols and the nature of the sacrifices varied with the planets, and this is interesting for the history of the liturgy. Here and elsewhere we find the accusation of human sacrifices made, which undoubtedly is not to be maintained. The Jewish philosopher Maimonides says he had seen idols which resembled those of which al-Dimishqī speaks. Al-Shahrastānī further tells us that all the Sabaeans had three prayers; they purified themselves by ablution after contact with a corpse, forbade the flesh of swine, dogs, birds with talons and pigeons. They did not have circumcision, allowed divorce only by decree of the judge and forbade bigamy.

The Sabaeans were at first scattered throughout the north of Mesopotamia and had their principal centre at Harrān, the ancient Carrhae; their liturgical language was Syriac. The Caliph Ma'mūn

thought of persecuting and destroying them; but their intellectual merits gained them toleration. Towards 259 (872) the celebrated Thābit b. Qurra, having had a quarrel with his co-religionists, was excommunicated at Harrān and came to Baghdad, where he founded another branch of Sabaeism. The Sabaeans community in Baghdad lived for some time in peace; but the Caliph Kābir began to persecute them and forced Sīnā, son of Thābit, to embrace Islam. In about 364 (975) the Sabaeans Abū Ishāq b. Hīlāl, who was secretary to the Caliph Mu't and Ju'ī, caused an edict of toleration to be issued in favour of his co-religionists of Harrān, Raḥḥā and Dīyār Modār and protected those of Baghdad. In the 11th century A.D. there were still many Sabaeans at Baghdad and at Harrān. In 424 (1033) there was left only a temple of the moon, which formed a citadel at Harrān; this temple was at that date taken by the Alid Egyptians. After the middle of the 11th century A.D. all trace of the Sabaeans of Harrān is lost; we still find them at Baghdad till the end of this century.

The great men who have rendered this sect illustrious are: Thābit b. Qurra, the eminent geometrician, original astronomer, translator and philosopher; Sīnā b. Thābit, physician and meteorologist; other physicians and astronomers of the same family; Thābit b. Sīnā and Hīlāl b. al-Muḥamman, historians; Abū Ishāq b. Hīlāl, vizier, and other members of the family; al-Batūnī (Albatagūn), the celebrated astronomer; Abū Dja'far al-Khāzin, mathematician; Ibn al-Wahshīya, the author of *Nabataean Agriculture*, although professing to be a Muslim, in every way belonged to the Sabaeans school; Dīshir (Geber), the famous alchemist, about whom, it is true, there is very little known for certain, was probably a Sabaeans. Finally it may be mentioned that these scholars are quoted on mineralogy by al-Dimishqī.

(B. CARRE DE VAUX)

SABĪL, a way, road, or path, is used in the *Kur'ān* (1) literally, e.g. *man istafā ilāhī sabīlan* (Sara iii, 91 etc.) "who is able to journey thither"; (2) figuratively, as in the expression *saḥīf-Allah*, for which see *ḤIKMĀD*; (3) figuratively, in the sense of the true way, the Apostle's way, as in the passage *ya tālūtun ittakhadhna wa'a 'l-rasūl sabīlan* (Sara xxv, 29) "Oh! would that I had taken with the Apostle a path!" i.e. his

path, or the true path; (4) figuratively, in the sense of a means of attaining or acquiring an object, or a way out of a difficulty or trouble, as in the passage *aw yaffalu illāhu lahuwa sabīlan* (Sūra iv. 19) "or God make some way for them"; (5) in the expression *ibn al-sabīl* "a son of the road", that is a traveller, or wayfarer, mentioned as a fit object of compassion, or charity. The word is now applied also to a public drinking fountain. The great merit naturally attached in arid countries and tropical climates to the provision of wells, cisterns and fountains for thirsty travellers is recognized in Islam, as in most oriental religions, and it is possible that the use of *sabīl* in this sense is suggested by the expression *Sabīl-Allāh*, applied to any work undertaken for the sake of God.

(T. W. HAIG)

SABİL ALLĀH. [See *IMĀN*].

SABIYA "Severer", the name of various Shi'a groups who restrict the number of visible Imāms to seven. Confusion came upon the legitimist Shi'a, who believe that the character of Imām is transmitted by divine providence from father to son, when about 145 (762) Ismā'il, the (eldest?) son of the sixth Imām Dja'far al-Sādiq [q. v.], died before his father. While the majority replaced Ismā'il by another son of Dja'far, Mūsā al-Kāsim, the seventh in the series of the twelve visible Imāms of the *Ithnā-ʿashariya* [q. v.], "twelvers", and others attached themselves to the otherwise less prominent sons, Muhammad, 'Abd Allāh and 'Alī, the strictest legitimists remained faithful to Ismā'il. They denied that he died before his father's death. The evidence brought forward in support of this view seems to have impressed even their opponents, for the latter found it necessary, in order to dispose of Ismā'il, to attack his character; they said that, on account of his evil life, his father had withdrawn from him the right of succession at first intended for him. These accusations, particularly that of wine-drinking, can be explained as an attack on the slackening of the law by the Severers directed back against the Imāms who gave them their name.

From the first Severer movement was not a united one. A *Muhārakiya* sect "stood fast" by Ismā'il, so that for them he is the last Imām and the Mahdī [q. v.]. But the majority continued the imamate down to his son Muhammad, who becomes *Kā'im al-Zamān* [q. v.] with the official title of al-Tāmm "finisher", a title which, in some of the minor systems, seems to be prejudiced by the fact that he is in turn followed by inviolable Imāms, known only to the initiated. In spite of the position of Muhammad al-Tāmm, however, the name of Ismā'il remains attached to the main groups. In their hierarchical view therefore the Severers belong to the many "*Wāḥidīya*" "those who stand fast". This is, in part, naturally, explained by the political conditions of the period. In 145 the Abbāsid Caliph al-Mansūr had put down the rising at Medina led by al-Nafs al-Zakiya Muhammad b. 'Abd Allāh b. al-Hasan b. 'Alī; in the following year, the latter's brother, Ibrāhīm of Baḡra, also fell. The 'Alid question was thus disposed of for the time and with such success that even in these activist circles, who chose their Imāms from the vigorous 'Alids, who actually took to the sword, a "*Djārūdiya*" sect "stood" by al-

Nafs al-Zakiya as the concealed Mahdī. The tendency to hope for a return increased still further among the legitimists, who were bound by their dogma to definite persons, as it would have been useless to carry on into active history an imamate which had really become hopeless. There were "some who stood fast" by each of Ismā'il's brothers; the *Muḥawwīya*, nicknamed *Mamḡra*, "ruined spoon", often called simply the *Wāḥidīya*, became of some importance. Strictly speaking, such groups also come under the head of Severers. But, as a rule, *Sabiya* is used identically with *Ismā'īliya* [q. v.]. For them steadfastness did not develop into the abandonment of political aims — although it was over a century before this became apparent — but rather into the very skilful plan of retaining the very effective idea of an Imām given by sacred birth and yet rejecting the individual that chance brought forward in the person of the often very incapable first-born of the seed of 'Alī and Ḥusayn. The Severer movement thus attained considerable importance in secular history also, through men who appeared as *ḍis* [q. v.] of the hidden seventh Imām, Muḥammad b. Ismā'il, like Ḥamdān Karmat, or his successor, who came forth from concealment, like the Fātimid Sa'id b. 'Abd Allāh b. Maimūn, or as his "return" himself, as Tahart III. 2218, the narrates of the Karmatian missionary Yahyā b. Dhikrawāh). Karmatians, Fātimids, Assassins and the *Ismā'īlis* of India, Persia and Central Asia are the groups through which the Severer movement finds its place in secular history, but the Druses also and in a way the Mulkīlā and Nuḡairis also may be traced back to the old *Sabiya*.

The *Sabiya* itself, however, is quite as much a religion — and an independent religion — movement as a political one. The remarkable feature that the number of Imāms was fixed at seven at the same time with the different sons of Dja'far is more simply understood if we assume that the political reasons already mentioned were further supported by a point of view which periodized all cosmic and historical happenings by the sacred number of seven. The example of the *Khayyābiya*, who worshipped Ismā'il's father, Dja'far, as a god, shows that in the early days of development of the *Sabiya* the deification of Imāms was not entirely unprecedented. We cannot, of course, in the circumstances deal with the theology of the Severers. We only know of a single one out of the different systems and even that is often obscure, through being known only from hostile representations. We may claim for the Severers as their individual contribution to theology a gnostic cosmogony in which names and things are often, however, not used consistently. The steps of emanation are (1) God, (2) universal intelligence (*ʿaql*), (3) universal soul (*nafs*), (4) primeval matter, (5) space or the pleroma, (6) time or the kenoma, (7) the world of earth and man. This number seven recurs in the lower world in the 7 prophets or *wāḥid* "speakers" in the redemption story: Adam is the first *wāḥid*, but as a rule not the first man; then follow Noah, Abraham, Moses, Jesus, Muhammad and Muhammad al-Tāmm. Between each two of these *wāḥid* there are inserted seven "silent ones", *ṣāmit*, of whom the first, as special helpers of the *wāḥid*, under titles like *ṣāḥib*, "releaser", or *asās*, "foundation", are particularly

important because it is only through the esoteric exposition attributed to them that the teachings and laws of the *ṣūfī* receive their true meaning or are completely explained. These *ṣūfī* are Seth — which reminds one of the gnosis of the Sethians — Shem, Ishmael (son of Hagar), Aaron, Peter, 'Alī and the seventh is the inaugurator of the particular Seveener group in question, e.g. 'Abd Allāh b. Maimān. Alongside of the *ṣūfī*, there is a further lower hierarchy arranged in sevens or twelves, notably the *ḥudūdī* (q. v.) and the *ḥāfī*. The system is, however, very much upset by a theory of incarnation which actually equates the seventh Imām to God; thus Ibn Tāhir al-Baghdādī, p. 288 reports, on the authority of a man who had been for a period engaged in Imāmī propaganda, that the latter had been expected to see in Muhammad al-Tāmm Him who had revealed himself to Moses. In several groups, e.g. the Indian Ismā'īlī, the cosmogony and with it the periodisation after the sacred number seven has fallen into the background and 'Alī has become God as the first Imām. The way thus leads from the Seveeners on to the 'Alī Hāfī (q. v.). Starting with 'Alī, they count right down to the 47th Imām, Agha Khān Muḥammad Shāh. Next to the Imām and in history often surpassing him in importance here is the *ḥudūdī*. Muḥammad the Prophet appears as the *ḥudūdī* of 'Alī. But he is substituted for political reasons for Salīm al-Fārisī, who is really intended.

For salvation the recognition of the concealed Imām known only to the initiated is absolutely necessary; consequently the "instruction" of them attains increased importance and they are accordingly also called Ta'limīya. Initiation into the esoteric religion takes place through 7 or 9 initiatory stages. Ibn Tāhir, l. c., 282 *qq.* mentions (1) the *ṭafarrus*, the "exact investigation", a psychological method not particularly skilful, or almost a means of working oneself entirely into him who is to be won and of placing oneself on common ground with him. Then (2) the adept is "shown" in the *ḥadīth* the whole "beauty" of his previous belief with the suggestion that it is much more splendid than he has suspected hitherto, after which (3) in the *ṭafarrus* he becomes "shaken by doubt" that he is not yet fully conscious of his belief. After such anthroposophical spiritual guidance, the moment arrives at which the novice is "bound" and "attached" to the secret authority with the formula that real knowledge only exists in the Concealed One and his organs through (4) the *raḥī* and (5) the *ṭafarrus*. In (6) the *ṭafarrus* the real esoteric meaning is by allegorical explanations brought out of the external covering of the letter, under which all historical prophecies and laws are "obscured". (7) The "grounding" *ṭafarrus* can now begin in a novitiate proper of some length, after the expiry of which the disciple (8) subscribes himself body and soul by "agreements sealed by oaths", *ṣawābiq bilālmān*, to the bond, in return for which he is "released" in the (9) *ḥadīth* and *ṭafarrus* from all earlier dogmatic restraints and all external legislation outside these obligations.

The whole system is deliberately supported for form's sake on Korān passages, which is the more easily done in consequence of the frequently obscure allusions made in the sacred book. Thus the adept is surprised to learn from Korān xv. 99, "serve thy Lord till certainty comes to thee",

that his previous worship of God has only been a preliminary step. The passages in which the word *ḥadīth* "inner" occurs are made to supply *dicta probantia* for an extravagant, and of its kind not exactly original, system of allegory, including an extensive alphabetic kabbala, which is not limited to the mysterious letters of the Sūra's and to names of Imāms or dogmatic formulae. — It has not contributed to the elucidation of the relations of Muslim sects that one group is called after many features and that, for example, the Seveeners are also included as Bāṭinīya (q. v.) along with other bodies of quite different tendencies, like the Kharrāmīya (see KHARRAMĪYA) and Madaḥīya, and often even described as the Bāṭinīya and on this account called by their opponents by the corresponding nickname Ma'atīlīya, "emptiers, nihilists".

The actual origin of the speculative ideas of the Seveeners is, so far, hardly better known to us than to the Muslim authors, whose opinions must be taken with particular caution as their point of view was vitiated by hatred of the heretics. The Sunni symbolists usually insist on Jewish or Christian, still more Sabaeans and especially Parsi, origin; but as a matter of fact they already suspect also a connection with Hellenistic philosophy and Hermetic writings. The point still requires investigation as to how Neo-Platonic speculations, Parsi mysteries and such myths as are found in the Christian "treasure-cave" came to be clothed in a Korānic covering and developed into Ismā'īlī gnosis. The part played as an intermediary by the "Pure Brethren", *ḥāḥawīn al-Ṣafā'* (q. v.) remains also to be investigated.

All classes of Seveeners are very unfavourably criticised by the Muslims, even by the Shī'as. They are regarded as extreme "exaggerators", *ḥāḥawī* (q. v.) and usually are considered to be beyond the pale of Islām, so that some symbolists do not quote them at all. The main reason is that they drop the divinity of Allāh and the finality of Muḥammad's prophecy. It is, however, due to the great elasticity of Muslim names of sects, and to a polemical rather than matter-of-fact frame of mind that they are also called Dahrīya (q. v.) and associated with the materialists, who are essentially different from them. A contributory cause of the unfavourable opinion held of them was, of course, the bitterness felt at their revolutionary aims and their underground political propaganda in the name of the seventh Imām, but still more at their casting off the external law of religion, which is usually dismissed as sheer libertinism; the accusations commonly made against secret sects of sodomy and nightly orgies with wine and community of women also play a great part in the charges made against them. The charges of religious, moral and political nihilism made against them have also found a way into the European literature of the subject. Further investigation, which does not refuse to consider the possibility of syncretism, recognising that every religious system that has become concrete is a syncretic formation with ramifications, will alone be able to show how far the theology, or if one prefers the term, the theosophy of the Seveener movement represents an intelligible reaction against the theology of the God of Islām, so aloof from man, and in how far the libertinism, said to be general and certainly existing in many, is an attempt to

meet the disjointed total of the prescriptions of the Šari'a with a system of ethics, such as is taught by Naṣir-i-Khusrāw, for example, in verses 373-397 of his *ṣiḥḥat al-niḥāya*, regarding the seven sins of character and the seven cardinal virtues; in this investigation it will not much matter whether the "book of illumination" was written when the poet had already attained a very important place in the hierarchy of the Seveners as *ḥuffā* of the Ismā'īlīs, or whether it was written before he joined them, and reveals the attitude of mind which definitely decided him to join this body. Individual bodies of the Seveners, like the Assassins and Karmatians, were certainly extremely intolerant to other Muslims; but in contrast to this we have the tolerant and wise administration of many of the Fatimids in Egypt. Some groups are occasionally said to have been communist, but this is certainly not a general feature. While in the fourth and fifth centuries the Muslim writers report their spread and their propagandist activities in the whole Mahammadan world, the old groups have long become consolidated. But their ideas continued to be effective and were carried from Persia far to the north and from India especially to East Africa. In spite, however, of the consciousness of connection with the old Seveners, the nature of their beliefs has been essentially transformed. The political aspect has disappeared and the religious side is not so aggressive. It is noteworthy that the modern Šab'īya are often just those who are the strongest supporters of the feeling of solidarity in Islam.

(R. STROTHMANN)

ŠABR (A.) The significance of this conception could hardly be conveyed in a West-European language by a single word, as may be seen from the following. According to the Arabic lexicographers, the root *š-b-r*, of which *šabr* is the *nomen actionis*, means to restrain or bind; thence *šabahu yashbu* "to bind and then slay someone". The slayer and the slain in this case are called *šābir* and *mašbū* respectively. The expression is applied, for example, to martyrs and prisoners of war put to death; in the Hadīth often to animals which — contrary to the Muslim prohibition — are tortured to death (e.g. al-Bukhārī, *Ḥaḥ*, 23; Muslim, *Sūḥ*, trad. 58; Aḥmad b. Hanbal, *Musnad*, III, 171). The word has a special technical application in the expression *yamīnu šabru*, by which is meant an oath imposed by

the public authorities and therefore taken unwillingly (e.g. al-Bukhārī, *Manāḥif al-Anṣār*, 14b 27; *Alimān*, 14b 17; Muslim, *Ṭūḥ*, trad. 176).

In the *Ḥ* and *ʿ* derivations from the root *š-b-r* frequently occur, in the first place with the general meaning of being patient. Muḥammad is warned to be patient like the Apostles of God before him (xxviii, 16; alvi, 34: "for Allāh's threats are fulfilled", is added in xxx, 60). A double reward is promised to the patient (xxiii, 113; xxviii, 54; cf. xxv, 75). In xxix, 16, it is even said that the *šābir* shall receive their reward without *ḥisāb* (which in this case is explained as measure or limitation).

The conception is given a special application to the holy war (e.g. iii, 140; viii, 66); in such connections it can be translated by endurance, tenacity. The eighth stem is also used in almost the same sense, e.g. *Sūra* xix, 66: "Serve him and persevere in his service". The third stem is also found (iii, 200; cf. below).

The word is next found with the meaning resignation, e.g. in the Joseph (xii, 18) where Jacob, on hearing of the death of his son, says: "Now goodly resignation is fitting" (*ṣabara ḥamīdun*).

Sometimes *šabr* is associated with *ṣiḥ* (ii, 42, 148). According to the commentators, it is in these passages synonymous with fasting and they quote in support the name *shahr al-šabr* given to the month of Ramaḥm.

As an adjective we find *šābir* in the Kor'an, associated with *ḥabir* (*Sūra* 14, 3 etc.); cf. thereon al-Ṭabarī, *Tafsīr*: "It is well with the man who is resigned when misfortune afflicts him, grateful when gifts of grace become his"; and Muslim, *Zuhd*, trad. 64: "Wonderful is the attitude of the believer; everything is for the best with him; if something pleasant happens to him, he is thankful and this proves for the best with him; and if misfortune meets him, he is resigned and this again is for the best with him." The ideas of *šabr* and *ḥabir* are also associated in al-Ghazālī, cf. below.

The later development of the conception is, of course, also reflected in the commentaries on the Kor'an; it is difficult to say in how far these interpretations are already inherent in the language of the Kor'an. In any case, the conception *šabr*, in all its shades of meaning, is essentially Hellenistic in so far as it includes the *ἀνυστασία* of the Stoic, the patience of the Christian and the self-control and renunciation of the ascetic; cf. below. In place of many other explanations of the commentators, we will give here only that of Fakhr al-Dīn al-Rāzī (*Mafāḥ al-Ghaib*, Cairo 1278, on *Sūra* iii, 200). He distinguishes four kinds of *šabr*: (1) endurance in the laborious intellectual task of dealing with matters of dogma, e.g. in the doctrine of *ṭawḥīd*, *ʿaḥ*, *maḥṣūn*, *maḥṣūl* and disputed points; (2) endurance in completing operations one is bound or recommended by law to do; (3) steadfastness in refraining from forbidden activities; (4) resignation in calamity, etc. *Maḥṣūn* is, according to him, the application of *šabr* to one's fellow-creature (like neighbours, people of the Book), refraining from revenge, the *Amr bil-ma'rūf wa'l-nahy ʿani'l-munkar*, etc.

The high value laid upon *šabr* is also seen in the fact that *šābir* is included among the beautiful names of Allāh. According to the *Lisān* (s.v.

ṣabr), Ṣabr is a synonym of ḥalīm; — with the difference that the sinner need not fear any retribution from the Ḥalīm, but he is not sure of such leniency from the Ṣabr. Allāh's ṣabr is in the Ḥadīth increased to the highest degree in the saying that no one is more patient than He, towards that which wounds His hearing (al-Bukhārī, *Tawḥīd*, bāb 3).

In the Ḥadīth, ṣabr is, in the first place, found in general connections like: to him who practises ṣabr Allāh will grant ṣabr, for ṣabr is the greatest charisma (al-Bukhārī, *Zabāḥ*, bāb 50; *Riḍā*, bāb 20; Ahmad b. Hanbal, iii, 93); in the Ḥadīth also, ṣabr is applied to endurance in the holy war. A man asked Muḥammad: "If I take part in the Dīḥād with my life and my property and I am killed ṣābir^{an} and resigned, rushing forward without fleeing, shall I enter Paradise?" And Muḥammad answered: "Yes". (Ahmad b. Hanbal, iii, 325); the word is found in other passages in the sense of enduring, e.g. towards the public authorities: "after my death ye shall suffer things, but exercise ṣabr until ye meet me at the heavenly pool" (*ḥawā*) (al-Bukhārī, *Riḍā*, bāb 53; *Fitan*, bāb 2; cf. *Aḥḥām*, bāb 4; Muslim, *Ṣabr*, trad. 53, 56 etc.). The word here usually has the meaning of resignation as in the oft recurring saying: "The (true) ṣabr is revealed at the first blow (*inḥām*) 'I-ṣabr 'inda 'l-ḥadāṭi 'l-ūla, or anwāl 'al-matn or anwāl 'l-ḥadāṭi, al-Bukhārī, *Ḍiyā'at*, bāb 32, 43; Muslim, *Ḍiyā'at*, trad. 15; Abū Dāūd, *Ḍiyā'at*, bāb 22 etc.).

Significant, in other respects also, is the story of the epileptic woman who asked Muḥammad for his *al-ḥā* for her healing; he replied to her that if she refrained from her request and exercised ṣabr, paradise would be her portion (al-Bukhārī, *Mardā*, bāb 6; Muslim, *al-Birr wa'l-ḥila*, trad. 54). The word is often found in this connection associated with the proper word for resignation, viz. *ḥatā'a* (e.g. al-Bukhārī, *Aimūn*, bāb 9; Muslim, *Ḍiyā'at*, trad. 11); with this should be compared the following *ḥadīth ḥadīth*: "If my servant is deprived of the light of both his eyes, I grant him paradise in compensation" (al-Bukhārī, *Mardā*, bāb 67; Ahmad b. Hanbal, iii, 285).

In conclusion we may remark that in the canonical Ḥadīth the meaning resignation is exceedingly rare, which receives so great an importance in ethico-ascetic mysticism (cf. what has already been said above on *ṣāra* 2, p. 128). Bāb 20 of al-Bukhārī's *Kiṭāb al-Riḍā* (which, like the chapter *ṣāra* in the other collections of traditions, represents the oldest stage of this tendency in Islam) has in the *tarḡam*: "Umar said: 'We have found the best of our life in ṣabr.' Here we already can trace the Hellenistic sphere of thought for which resignation was the kind of life fitting the true man, the wise man, the martyr.

What the Korān and Ḥadīth say about ṣabr occurs in part again in ethico-mystical literature; but the word has here become, so to speak, a technical term and to a very high degree, as ṣabr is the cardinal virtue in this school of thought. As with other foundational conceptions (see the series of definitions of Ṣāfi and Ṣūfī in Nicholson's essay in the *J. R. A. S.*, 1905), we find numerous definitions of ṣabr, definitions which often point rather to fertility of imagination

than give an exhaustive exposition of the idea, but are of great value for the light they throw upon the subject like lightning flashes. Al-Ḥaṣṣārī in his *Kiṭāb* (Baṣṣā 1287, p. 99 sq.) gives the following collection: — "The gulping down of bitterness without making a wry face" (al-Djānāid); — "the refraining from unpermitted things, silence in suffering blows of fate, showing oneself rich when poverty settles in the courts of subsistence"; — "steadfastness is fitting behaviour (*ḥuṣn al-adab*) under blows of fate" (Ibn 'Atā); — "bowing before the blow without a sound or complaint"; — "the ṣābir is he who has accustomed himself to suddenly meeting with forbidden things" (Abū 'Uthmān); — "ṣabr consists in: welcoming illness as if it were health"; — "steadfastness in God and meeting His blows with a good countenance and equanimity" (Amr b. 'Uthmān); — "steadfastness in the ordinances of the Book and of the Sunna" (al-Khawwāṣ); — the ṣabr of the mystics (literally: lovers) is more difficult than that of the ascetics" (Yahyā b. Ma'ād); — "refraining from complaint" (Ra'wān); — "seeking help with God" (Ibn 'I-Nūn); — ṣabr is like His name (Abū 'Alī al-Dakḥḥ); — "there are three kinds of ṣabr, ṣabr of the *muta-ṣabir*, of the *ṣābir* and of the *ṣābir* (Abū 'Abd Allāh b. Khafī); — "ṣabr is a steel that never stumbles" (Alī b. Abī Ṭalīb); — ṣabr is: not to distinguish between the condition of grace and that of trial, in peace of spirit in both; *ṣābir* is calm under blows, while one feels the heavy trial" (Abū Muḥammad al-Djānāid; cf. *ḥawāṭi*).

This literature, besides play on words and definitions, is also fond of producing shades of meaning by prepositions. Al-Shiblī asked a man: "what kind of ṣabr is the most difficult for him who practises it?" He answered: "al-ṣabr *fi'l-ḥāl*". Then al-Shiblī said: "No". The man: "al-ṣabr *illāḥ*". Al-Shiblī: "No". The man: "al-ṣabr *ma'a'l-ḥāl*". Al-Shiblī: "No". The man: "But what then?" Then al-Shiblī said: "al-ṣabr *'an* 'l-ḥāl", and he added an explanation which threatened to drive his interrogator crazy (al-Ḥaṣṣārī, *Kiṭāb*, p. 100, 3).

Al-Ghazālī treats of ṣabr in the fourth part of the *Iḥyā'*, which describes the virtues that make blessed, Book II. We have seen that already in the Korān *ṣabr* and *ḥukm* are found in association. Al-Ghazālī discusses the two conceptions in the second book separately, but in reality in close connection. He bases the combination, not on the Korānic phraseology, but on the *ṣūfī*: "belief consists of two halves: the one ṣabr and the other *ḥukm*". This again goes back to the tradition: "ṣabr is the half of belief" (cf. the traditions given above which also associate ṣabr and *ḥukm*).

Al-Ghazālī comprises the treatment of ṣabr under the following heads: (1) the excellence of ṣabr; (2) its nature and conception; (3) ṣabr, the half of belief; (4) synonyms with reference to the object of ṣabr; (5) kinds of ṣabr as regards strength and weakness; (6) opinions regarding the necessity of ṣabr and how man can never dispense with ṣabr; (7) consequences of ṣabr and means of attaining it. — This division is virtually adopted by Bar Hebraeus in his *Ḥikāyat* for the *Metaphysics* (see A. J. Wensinck, *Bar Hebraeus' Book of the Dove*, Leiden 1919, p. cxvii-cxix).

Only the following out of these sections can

be given here. *Sabr*, like all religious *maḥmūdāt*, consists of three parts, *maḥrifā*, *ḥāl* and *ʿamal*. The *maḥrifā* are like the tree, the *ḥāl* the branches and the *ʿamal* the fruits. Out of the three classes of beings man alone may possess *sabr*. For the animals are entirely governed by their desires and impulses; the angels, on the other hand, are completely filled by their longing for the deity, so that no desire has power over them and as a result no *sabr* is necessary to overcome it. In man, on the contrary, two impulses (*ḥawā*) are fighting: the impulse of desires and the impulse of religion; the former is kindled by Satan and the latter by the angels. *Sabr* means adherence to the religious as opposed to the sensual impulse.

Sabr is of two kinds: (a) the physical, like the endurance of physical ills, whether active, as in performing difficult tasks, or passive, as in suffering blows, etc.; this kind is laudable; (b) the spiritual, like renunciation in face of natural impulses. According to its different objects, it is called by synonyms like *ʿiṣā*, *ḍaḥḍ al-naṣe*, *ṭuḡḡā*, *ḥilm*, *waṭ al-qadr*, *ḥimān al-ʿarr*, *ṭahd*, *ḥimān*. From this wide range of meaning we can understand that Muḥammad, when asked, could answer: "*ḥimān* is *sabr*". This kind is absolutely laudable (*maḥmūd tāmm*).

As regards the greater or less strength of their *sabr*, three classes of individuals are distinguishable: (a) the very few in whom *sabr* has become a permanent condition; these are the *ṣiddīqūn*, the *muḥarrarūn*; (b) those in whom animal impulses predominate; (c) those in whom a continual struggle is going on between the two impulses: these are the *muḥāḥidūn*; perhaps Allāh will heed them. One of the gnostics (says al-Ghazālī) distinguishes three kinds of *ṣābirūn*: those who renounce desires, these are the *ṣāḥibūn*; those who submit to the divine decree, these are the *ṣāḥibūn*; those who delight in whatever Allāh allows to come upon them, these are the *ṣiddīqūn*.

In section VI, al-Ghazālī shows how the believer requires *sabr* under all circumstances; (a) in health and prosperity; here the close connection between *sabr* and gratitude is seen; (b) in all that does not belong to this category, as in the performance of legal obligations, in refraining from forbidden things, in whatever happens to a man against his will, either from his fellow-men or by God's decree.

As *sabr* is an indication of the struggle between the two impulses, its salutary effect consists in all that may strengthen the religious impulse and weaken the animal one. The weakening of the animal impulse is brought about by asceticism, by avoiding whatever increases this impulse, e.g. by withdrawal, (*ʿazā*) or by the practice of what is permitted, e.g. marriage. The strengthening of the religious impulse is brought about (a) by the awakening of the desires for the fruits of the *Maḥmūdāt*, e.g. by means of the reading of the lives of saints or prophets; (b) by gradually accustoming this impulse to the struggle with its antagonist, so that finally the consciousness of superiority becomes a delight.

SABR or **SABTU**, the aloe, the dried juice from the leaves of a group of African aloes belonging to the Liliaceae; a bitter drug and strong purgative, described as early as by Dioscorides, which is highly esteemed in Arab medicine. At the present day the aloe of Sokotra is considered the best quality. Al-Dimashki (*Nuḥbat al-Dahr*, ed. Mehren, p. 81) gives a good description of the plant; and a description of how the sap is obtained is given by al-Nawairi; see also the lexicons (Lane, *Lexicon*, ii. 1645).

SABB, the Arabic equivalent of the Hebrew *Shabbat*, the name of the Jewish day of rest. According to the Korān, Sūra iv. 153, the Sabbath was imposed upon the Jews on Sinai as a binding law; according to Sūra xvi. 125, upon those "who have differences of opinion regarding this", by which expression, according to the commentators, either the Jews or — which is more probable — the Jews and Christians are intended. Sūra vii. 163–166, ii. 61, iv. 50 contain allusions to a legend, according to which Jewish sabbath-breakers were punished by being turned into apes (or swine). This story is said to have happened at Allā (on the Red Sea) in the reign of David.

Muḥammad did not adopt the Sabbath commandment; on the contrary, he definitely rejected it. That the reason for it given in the Bible, namely that God rested from his labours on the seventh day, did not appeal to him, is indicated in the Korān (l. 37) and in the Ḥadīth they are very fond of referring to this, as Goldziher shows in his essay quoted below. It is on this alleged "rest of God" that the reproach of anthropomorphism, continually made against the Jews, is very frequently based; as a result of the tendency of anti-Jewish polemics to calumniate more and more on this point, the seventh day acquired an actually unfavourable character in many traditions and was characterized as a "day of deceit and treachery", or as a day intended for evil things.

That on the other hand the Jewish Sabbath formed the model for the institution of the Friday service may be regarded as certain. Tradition contains definite evidence of this (Wessink, *Muḥammad in de Joden te Medina*, p. 111 sq.). In its later development the Friday observance borrowed many of the Jewish Sabbath laws or at least adopted features that recall them, but Friday never acquired the character of a day of rest. For further information on this see the article *HUMĀ*.

SABTA. [See **CRUYA**.]

AL-SABTI, AHMAD b. DJAFAR AL-KHAZRAJJI ABU 'L-'ABHS AL-SABTI, a holy man famous for his virtues and his miracles, born at Ceuta in 540 (= June 24, 1145—June 12, 1146) and died on Monday Djumada II 6, 601 (= Jan. 31, 1205) at Marrākhish where he was buried near the Tāzrit gate. He studied more particularly under Abū 'Abd Allāh al-Fakhkhār, the pupil of the celebrated Kādī 'Iyās of Ceuta. He was eloquent and had no difficulty in convincing his questioners; he was very pious and used to recite the Qur'an by day and night; he recommended the giving of alms. He himself kept nothing out of the numerous gifts he received, except what sufficed for his needs and those of his family for one day only. He retained good for evil and showed compassion to widows and orphans. At the beginning of his career he lived in a *fundūq*, where he taught and with his fees provided for the wants of foreign students. He used to go through the streets of the town reprimanding and even beating those who did not say their prayers.

The memory of the saint remained very vivid among the people but became surrounded by numerous legends. Thus he is said to have prophesied the capture of Ceuta by the Christians to punish his compatriots for their ill-treatment of him; legend relates that after his departure from this town, he was very badly received by the holy men of Marrākhish who feared that his cult would one day eclipse theirs; he has actually become the principal patron saint of this town. But his power extends much farther. The popular belief in Morocco sees in him the master of the winds who is invoked at sea to calm a storm and to raise the necessary wind during a calm. In many places in Algeria as well as in Morocco, the first measure of new grain is given to the poor in his honour.

(MORT. BEN CHENEN)

AL-SABU', *Ṣurat al-Sab'*, the constellation of the Wolf, and *Ṣura Kīyas Sabu' al-Dahr*, constellation of Cetus, Kīyas (cf. al-Bihār, *al-Kunūn al-Maʿnūb*, Berl. Ms. or. 8^o, 275, p. 207 a and 220 b). The *Ṣurat al-Sab'* with the Arabs (just as with Ptolemy) consists of 19 single stars, none of which is of more than the third magnitude (according to modern star catalogues the brightest are of 2.8 and 2.9 magnitude). The Greeks called the constellation (undefined) *vi θωρίω* (= the beast); but even among the oldest Hellenists the suggestion of a *raging* beast seems to have been present. The name is in Babylonian (mul) ur-us (= loud) Ur-idim, but in

Sumerian: *z* (*zakkab*) kalbu ṭhegā, which means "raging dog" (*Wolf* probably = Lupus + Centaurus to the north-east); cf. F. X. Kugler, *Sternkunde und Sternnamen in Babyl.*, Ergänzungen (Münster 1913/14, p. 28, 32, 223), *al-Sabu'*, which is also used for L. 109 is in Arabic probably the direct reproduction of the Greek: *ri ṭhegōi*; J. J. Scaliger, as a matter of fact, is said to have found on his Turkish planisphere the name *al-Anda*, the likeness, applied to it.

The animal was formerly thought of in close connection with the centaur. The latter was thought to hold the animal by the forefoot. The Arabs then called the stars of the two constellations, on account of their accumulation at *Shawrīḥ* (= branch of palm with bunch of dates, or a bunch of grapes).

SABUN soap (cf. English soap), has penetrated through Latin *sapo* and Greek *σαπών* as a loan-word to the East also. According to Pauly-Wissowa, (*Realenz. d. klass. Altert.*, second series, iii. 1112, the ancients were not acquainted with our soap; in Pliny *sapo* means a hair-dye (*ratilaudis capillus*) and also medical salves; for cleansing purposes certain poor earths were used, which were sometimes perfumed. There can, however, be no doubt that soap came into use in the middle ages along with other latherly lotions and in addition to its uses for cleansing the person and for washing was much used for external application in medicine. The statements made regarding its manufacture in Lane, *Lexicon*, iv. 1649 sound quite modern; the "Maghribi" soap, which is not cut into pieces but looks like boiled starch, is apparently our soft soap.

(J. RINCK)

SABUR [See **SHARḤA**.]

SABUR b. ARDAHSH, ABU NAḤS, vizier of the Buyid Bāhā' al-Dawla (q. v.). Sabūr was appointed vizier in 380 (990—991). He did not, however, remain long in office, for he was dismissed in the following year, but in 382 (992—993) was restored to his former rank. At the same time Bāhā' al-Dawla also appointed Abū Manṣūr b. Ṣāliḥ vizier and the two then acted jointly as viziers of the Buyid Emīr. After some time, however, the Dailamī troops began to show their dissatisfaction with Sabūr; his house was sacked and he had to go into hiding (383 = 993—994). As his colleague Ibn Ṣāliḥ was not inclined to fill the office alone, Abū 'L-Kāsim 'Alī b. Ahmad was given the post of vizier; but as soon as the Dailamīs had settled down again Sabūr came back. In 386 (996—997) Bāhā' al-Dawla again appointed him vizier; this time he remained only two months in office and then went to al-Rayḥa. His public activities did not come to an end with this, however, for by the year 390 (999—1000) we again find him in Baghdad as vizier of Bāhā' al-Dawla. In Muharram of the following year (December 1000) the Turkish mercenaries mutinied and demanded that

they should be paid before taking the field. Sābūr had to fly; hostilities developed between the Turks and the rest of the populace in which the Sūnīs took the side of the former and it was only after much bloodshed that the riots were quelled. After Sābūr had fled, he wrote to Bal' al-Dawā and laid the blame for what had happened on an 'Alid, Abu 'l-Ḥasan b. Yahyā, and his companions and then appeared before Ishāq al-Dawā in Shirāz and secured permission from him to arrest them. But when he went to Wasit to carry out this plan, he was outwitted and had to abandon it. In the meanwhile Abu 'l-Ḥasan had made his peace with Bal' al-Dawā and when in the beginning of Dhu'l-Ḥijja 1, 392 (end of March, 1002) Sābūr appeared in Baghdad, the latter had played his last card, so that he left the city within the same month and retired again to al-Jaythā. He died in 416 (1025–1026). In the first period of his viceroyalty — in 381 (991–992) or, according to another statement, not till 383 (993–994) — he had founded a great library, to which he is said to have presented over 10,000 volumes. This existed down till Tughrulbeg's entry into Baghdad when it was set on fire.

(K. V. ZETTERSTEN)

SĀD, the fourteenth letter of the usual Arabic alphabet (numerical value: 90; cf. the article **ARJAD**). How the now usual form of Sād developed out of the Nabataean (still closely resembling the primitive Semitic form) form of the letter may be seen from plate I of the article **ARABIC WRITING**. As to its pronunciation, Sād was even in ancient times and still is an unvoiced, velarized (and according to Meinhof "stopped") alveolar spirant, in which a groove is formed on the front part of the tongue. All these elements (except perhaps the last) were recognised and described as early as Sibawaihi. Of our European sounds the French *s* in *son* is nearest to it, if we add the so-called *ishād* (velarisation: according to Meinhof, with "stopping" at the same time, — Sibawaihi only notes the transition from *s* into *ṣ* (and further into *ḍ*) before *d* (for example, *maḍār* instead of *maḍār*); at the present day it is also found before other voiced consonants (cf. Egyptian Arabic *zuḡḡayr* < *zuḡḡayr*). For further information see Schade, *Sibawaihi's Lautlehre* (see Index). Cf. also Mattson, *Études phonologiques sur le dialecte arabe vulgaire de Beyrouth* (Upsala 1911), p. 24 ff. and especially C. Meinhof, *Was sind emphatische Laute, und wie sind sie entstanden?* in the *Zeitschr. f. Eingeborenensprachen*, xi, 81–106 (especially p. 83–86). — Sād is also the title of Sūra xxxviii of the Korān.

(A. SCHAEHR)

SĀ'D, constellation of good fortune, a common name in Arab astronomy for small groups of stars. They are all in the three adjoining constellations of Pegasus, Aquarius and Capricorn and usually consist of two, sometimes of three or four stars of low magnitude. Four groups form four successive stations of the moon, namely 22. *Sā'd al-ḡhabib* = αβ in Capricorn, 23. *Sā'd bulb* = μν in Aquarius, 24. *Sā'd al-ḡnīd* = βδ in Aquarius and 25. *Sā'd al-ḡḡayr* = γζ in Aquarius. A further four belong to Pegasus: *sā'd*

al-baḡ'īn (3α), *sā'd al-ḡmūd* (ζξ), *sā'd al-nāṣ* (αμ) and *sā'd al-maḡar* (εε). Lastly *sā'd al-mulk* = π in Aquarius.

Bibliography: L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, p. 114, 191 ff., 269.

(J. RUSKA)

SĀ'D n. Abī Waḡḡā, an Arab general. His father's full name was Mālik b. Waḡḡā b. 'Abd. Manāf b. Zuhra b. Kilāb b. Morra. Sā'd, who had become a convert to Islam at the age of seventeen (cf. al-Bukhārī, *Manāqib al-Daḡar*, lib 31; Ibn Mājja, *Sunan*, introductory chapter, lib 11), was one of the oldest companions of the Prophet, being a special favourite of his and one of those who had been promised Paradise (Almad b. Ḥaḥal, i, 193; ii, 222); he took part not only in the battles of Badr and Uhud but also in the campaigns that followed. When al-Muḥannaṣ b. Ḥāritha, who assumed command in al-Hira after the departure of Khālid b. al-Walid, in view of the danger threatening of an encounter with the Persians, asked the Caliph 'Umar for reinforcements, the latter at first appeared inclined to take command of the army himself, probably simply in order to stir up the enthusiasm of the Muslims; in the end, however, he did not do so but gave the post of commander-in-chief to Sā'd, according to one version because Djarir b. 'Abd. Allāh al-Baḡḡālī, who had already been sent to the 'Irāk to support the hard pressed Muslims, would not consent to be subordinate to the Bakrī al-Muḥannaṣ. In spite of his proved bravery and ability, the Beduin al-Muḥannaṣ, who had not adopted Islam till after the death of Muḥammad, would, in view of the well known jealousy among the Arab tribes, probably have proved less suitable as commander-in-chief than Sā'd who belonged to an old Meccan family and was known to be one of the most faithful followers of the Prophet. Sā'd advanced against the Persians with a large army and encamped at al-Qādisiyya [q. v., ii, 511 ff.] on the frontiers of Persia and Arabia. Here — probably in the first half of the year 16 (summer of 637) — a great battle was fought, which is said to have lasted several days; the details of it have been much elaborated by the Arab historians. Illness prevented Sā'd from taking part in the battle personally and he had to confine himself to directing the whole operations, which, however, was not quite in accordance with the traditional Arab custom. After the Sāsānian leader Rostam had fallen, the slaughter ended in the complete defeat of the Persians and Sā'd was now master of the whole of 'Irāk al-'Arabī; nor were the Persians able to hold permanently al-Mada'in [q. v.], the capital of the provinces east of the Tigris. The young Sāsānian king Yazdgerd had to flee and abandon his capital to Sā'd. When the latter entered the city, he obtained countless booty and made al-Mada'in his headquarters for the time being. At the end of the same year his nephew Ḥāshim b. 'Uṭba b. Abī Waḡḡā again inflicted a disastrous defeat on the Persians at Djalāla [q. v.].

To this period also belongs the foundation of Kufa. To Sā'd likewise is due the credit of having made a strong military camp here, which in course of time grew into an important city; Sā'd was appointed first governor of the rapidly growing settlement. He seems, however, not to have paid

due attention to the Caliph's insistence on the maintenance of old-fashioned simplicity. At any rate we are told that Sa'd built a splendid palace in Kufa modelled on the Ték-i Khusrav at al-Mada'in; but when 'Umar, who feared the injurious influence of Persian luxury on the simple habits of the Arabs, heard of this, he is said to have administered a sharp rebuke to Sa'd and even to have had the palace burned by Muhammad b. Maslama. Sa'd was dismissed from his post as early as the year 20 (640/641) because the seditious and turbulent inhabitants of Kufa — of all possible elements, Arabs and Persians, Jews and Christians — accused him of being unjust and tyrannical. When, however, Muhammad b. Maslama appeared in Kufa by the Caliph's order to investigate Sa'd's conduct in his office, only one or two individuals dared to appear against him. Nevertheless Sa'd was dismissed and 'Ammār b. Yāsir appointed his successor; but the latter only remained a short time in office and was followed by al-Mughira b. Shu'ba [q. v.]. The great military and administrative services of Sa'd were, however, later fittingly recognised by 'Umar. When on his deathbed the latter empowered six of Muhammad's most trusted companions to choose a new ruler within three days, he chose Sa'd as one of his advisers and is even said to have added that if Sa'd was not given the office himself, he would recommend the future Caliph to compensate him with a governorship, because he had been removed from his post neither for incompetence nor for treacherous conduct. Following this suggestion, 'Uthmān in 25 (645/6) restored to him the governorship of Kufa; again, however, he was dismissed after a short period of office and his place given to al-Walid b. 'Ukba b. Abi Mu'it. After the assassination of 'Uthmān, Sa'd was requested to come forward as a claimant to the throne but declined, because he wished to live in peace; nor was he inclined to take any steps to take vengeance on the murderers. When 'Alī was chosen Caliph, Sa'd declined to pay homage to him and retired to his estate in al-Akīf, where he lived till his death remote from politics, which one of his sons made a reproach against him (Mas'ūm, *Zuhd*, trad. 11; Ahmad b. Hanbal, *Musnad*, i. 168, cf. 177). According to the usual statement he died in 50 (670/671) or 55 (674/675), aged about 70. He is said to have left vast wealth behind him and was buried in Medina.

(K. V. ZETTERSTERN)

SA'D b. MU'ADH b. AL-NU'MAN b. IMRU' AL-QAYS b. ZAYD b. 'ABD AL-ʿAZHAR AL-ANṢARĪ AL-AWSĪ, a contemporary of Muhammad's. He was head of the great clan of the Banū 'Abd al-ʿAzhar in Medina. Sa'd was won over to the new faith by Ma'qab b. 'Umayr, who accom-

panied the twelve Medinan participants in the first meeting at al-Akaba [q. v.] when they returned home and made a successful propaganda for Islam. From the very first he showed great zeal for the faith and when Muhammad undertook an expedition against Bawā, he appointed Sa'd (or, according to a different report al-Sa'ī b. Uthmān b. Ma'ūn) to be his deputy in Medina. The latter carried the standard in the battle of Badr and with Sa'd b. 'Uldāda [q. v.] he went to the assistance of the Prophet when the latter was wounded in the battle of Uhud. Like Sa'd b. 'Uldāda and 'Uldā b. Hudair, he protested against the negotiations with the Ghatafan in the "war of the ditch", but was soon afterwards severely wounded in the hand by the arrow of a Qurayshī. After the retreat of the confederates Muhammad decided to rid himself of the troublesome Banū Kuraiza and began to besiege them in Medina, although their only crime lay in the fact that they had remained neutral during the "war of the ditch". The negotiations, which they were soon forced to begin with the Prophet, ended in their surrendering unconditionally, probably in the hope that they could save themselves through the intervention of their former allies, the Aws. When Muhammad asked them whether they would leave the decision to a man of the tribe of Aws they declared their readiness to do so. Sa'd, who lay mortally wounded in the mosque where he was being tended by a woman, was then asked for his opinion and after he had secured a promise from the Prophet and all present that they would obey his decision implicitly, he declared that the men should be killed, the women and children sold as slaves and their property divided. The verdict was put into execution the next day. Over 600 Jews are said to have sacrificed their lives for their faith and soon afterwards Sa'd also died of his wound; he is represented in Tradition as a glorified hero of the faith.

SA'D b. MUHAMMAD [See HAJJA HAJJA].

SA'D b. 'UṢṢA b. DULAIM b. HARTHA b. ABI HAZIMA b. DHA'KARA b. TAKIF AL-KHAZRAJĪ, a contemporary of Muhammad's. The distinguished and prosperous Sa'd was one of the few people who were able to write in Arabia in his time; he was besides celebrated as a fine swimmer and archer. In the history of Islam we first meet with his name in the accounts of the second meeting at al-Akaba [q. v.] where he is mentioned among the nine Khazrajī who were chosen to be guarantors (*naḥīb*) of the new converts. He then fell into the hands of the Meccans and was severely handled by them; it was only through the intervention of two Meccan friends, to whom he had once done valuable service, that he succeeded in escaping. During Muhammad's expedition against al-Absā' [q. v.] Sa'd remained

behind as his deputy in Medina. In the battle of Badr, according to the most reliable authority, he did not take part; on the other hand he was at the battle of Uhud where with Sa'd b. Mu'adh [q. v.] he tended the wounded Prophet. In the other military enterprises of Muhammad also, he proved himself an exceedingly energetic champion of Islam; and several times acted as standard-bearer. In particular he distinguished himself by great liberality. During the siege of the Basal Najd he distributed dates among the Muslims at his own expense; the troops besieging the Basal Karra were likewise supplied with provisions by him. He supported the expedition to Tabuk by a particularly handsome contribution. When the Prophet began secret negotiations with the two chiefs of the Ghatafan in the "war of the ditch", Uysina b. Hishm and al-Harith b. 'Awf and promised them a third of the next date-harvest of Medina if they would retire and the Ghatafan declared their readiness to do so, his plan met with opposition from those Muslims who were inclined for fighting; the most ardent opponents of the attempt to bring about an agreement are said to have been Sa'd b. 'Ubadah, Sa'd b. Mu'adh and 'Uthayb b. Hufayr. In the intended campaign against Mecca which led to the treaty of al-Hudaybiya Sa'd's energy and thirst for fighting were clearly seen. Although he insisted that Muhammad should take the necessary precautions and provide the Muslims with the necessary weapons, the Prophet declined to follow his advice. After the death of 'Abd Allah b. Ubayy [q. v.] Sa'd became undisputed head of the Khazraj and it need cause no surprise that he was proposed as successor to the Prophet. As soon as the news of Muhammad's death had spread through Medina, the Aws and Khazraj assembled; Sa'd addressed them and recommended some one among the Ansar. The majority of those present were already inclined to pay homage to him at once. Then other Muslims appeared, notably Abu Bakr and 'Umar, and after fairly heated negotiations which threatened to end in open fighting, Abu Bakr received homage as Caliph. Henceforth Sa'd retired from public life and later went to al-Hawran where he died "two and a half years after the accession of 'Umar" i. e. about the year 15 (636/637).

SA'D b. ZANGI ABU SHU'BA' MU'AWWAZ AL-DIN, Salghurid Atabeg of Fars. According to the *Ta'rikh-i Ghusa* he claimed the throne at the death of his elder brother, Takla b. Zangi, but his claim was contested by his cousin Tughril, the son of his father's elder brother Sankur, who had founded the dynasty. Tughril retained the royal title for nine years, but throughout that period warfare between him and his cousin continued without a decisive result for either, the country was wasted and depopulated, none would till the ground, and famine and pestilence smote the people. At length, in 399/600 (1203), Sa'd captured his cousin and as-

ceded the throne of Fars according to Mirkhwand this happened in 693 A. H., after Tughril had been defeated by Takla but at the beginning of his reign the famine was so sore in the land that the strong starved and ate the weak, and even when the famine had abated the pestilence remained, but Sa'd gradually restored prosperity to his people, and, having completed this task, conquered Kirman from the Shataskiras. In 698/13 (1216) he invaded Iraq, but was taken prisoner by the army of Sulayman Muhammad Khwarizmshah, and in order to regain his freedom was obliged to pay a ransom of two thirds of a year's revenue of his kingdom, to surrender Isfahar and Arghar, and to agree to pay tribute annually. On his return to Shiraz his son Abu Bakr, who had occupied the throne during his captivity, opposed his restoration, and a battle was fought between father and son, in which Sa'd was wounded in the eye with an arrow, but the citizens admitted him into the city by night, and he seized and imprisoned his son. When Sulayman Khwarizmshah passed through Fars on his return from India in 1224 he interceded for Abu Bakr, and succeeded in persuading Sa'd to release him. Sa'd b. Zangi died in 626/1230 (1231), or, according to Mirkhwand on the 21st of Jumada I 623 (May 20th 1226), and was succeeded by his son, Abu Bakr.

M. S.) ii. 96, 150 sq., 202; Muhammad al-Nawawi, *Histoire du Sultan Djelal al-Din Munkshirvan*, transl. Houdas, Paris 1895, p. 5 1/2, 24—26, 33—34. (T. W. HAIG)

SA'D AL-DAWLA. [See RAMDANTIE].

SA'D AL-DIN. [See SA'DIYA].

SA'D AL-DIN b. HAJAN DIN. [See KHUJA EFENDI].

SA'D AL-DIN AL-HAMAWI. MUHAMMAD b. AL-MU'AYYAD b. ABI 'L-HASAN b. MUHAMMAD b. HAMAWAH, born in 587 (1191) or 595 (1198/9). The surname of al-Hamawi has nothing to do with the town of Hamā but comes from his great-grandfather Hamawah or Hamōye; in some old texts the more correct form Hamūy is found (ham-ū-y-y). According to al-Ya'qubi, he was a native of Djawain. In his youth he joined in Khawarizm the Dervish body called *Dhahabiya-i Khawarizm* which had gathered round the great Sufi Naqsh al-Din Kahrā and he became one of the twelve great *Khalifa* of the *Shaykh*. Like many of the latter's disciples he emigrated during the period of Mongol domination. After leading a retired and devout life in Syria in the Djabal Khumayn, he returned to Khawarizm and settled at Bahrabad. He died on Friday 10th Dhu l-Hijja (on the day of the 'Id al-kurban) in 658 A. H. (Nov. 10, 1260), according to the author of the *Ta'rikh-i Ghusa*, or in 650 (Feb. 11, 1252), according to the *Nafahat al-Uns* (whose statements are based on al-Ya'qubi). His tomb is also at Bahrabad.

Sa'd al-Din was one of the famous mystics of his time. Sa'd al-Din al-Konyawi took part while a young man in his mystic gatherings. Al-Ya'qubi also speaks of his disciples, of his miracles and of sayings attributed to him. In the collections of legendary lives we read that his soul quitted his body for 13 days. Sa'd al-Din composed mystical poems in Arabic and Persian, especially *rubai*; he was also the author of several treatises on the

taqwawuf, such as the *Maḥabba al-Awliya* and the *Saḥamīyat al-Awāḥ wa-Nuḥūṣ al-Awāḥ*, according to Ḥajjī Khalīfa, this last work was written at Hama. In the opinion of several Muslim authors who deal with mysticism, however, these treatises are very obscure because of the great number of veiled allusions.

His son Sulṭān al-Muḥaddithin Sa'd al-Dīn Ibrāhīm had been summoned from Bahraḥ by the Amir Nawrūz, at the time of the conversion of Ḥabashā Khān to Islam (*Dawlat-Shāh*, ed. Browne, p. 213, on the authority of al-Banākātī). Down to the eleventh century of the Hijra (eighteenth A.D.). We find at Bahraḥ dervishes whose *ḥilla* dated back to Sa'd al-Dīn; among them was Muḥammad al-Dhawānī, author of an imitation of the *Guṣṣa* (Dawlat-Shāh, p. 241). The Shīfī Mawlānā Sa'd al-Dīn of Bahraḥ, mentioned by al-Nawā'i continually recited the sayings of the Shaikh. The tradition of the Yasāwīs wrongly regarded him as one of the *ḥalīfa* of Ahmad al-Yasawī.

(KÖPRÜLÜ ZADE FU'AD)

SA'D AL-DİN KÖPEK (or GÖBEK (in early texts and inscriptions: *K-u-b-ē īn Muhammad*), a very important personage in the history of the Seldjūqs of Asia Minor. There is a tradition according to which he was himself a convert to Islam but this is contradicted by the fact that his father was called Muhammad. His origin and date of birth are unknown. We first meet with him as *ṣargūmān* in the palace of 'Alā' al-Dīn Kaiḫūwād and next, in connection with 'Alā' al-Dīn's building operations at Kabadābād (on this place and its buildings see Khalil Edhem, *Kāṭariyya Shihri*, Constantinople 1334, p. 50), as *mīr* and as *amir al-khān*. As the office of *amir al-khān* was of considerable importance in the Seldjūq palaces, we may deduce that in the reign of 'Alā' al-Dīn, Sa'd al-Dīn was already one of the most important personages in the state. Indeed, there still stands in a plain three hours from Konya on the road from Konya to Ak-Sarai a large *kāḥn* which Sa'd al-Dīn built, the interior of which was completed in the last year of 'Alā' al-Dīn (638 = 1237); at that date then he already occupied an important position. It is not, however, till the early years of the reign of Ghiyāth al-Dīn Kaiḫūwād that we find Sa'd al-Dīn playing an important part in history. He had attached himself to Ghiyāth al-Dīn and supported the latter's claim to the throne against 'Izz al-Dīn Kūddī Arslān; it is to his influence also that we must attribute the fact that Ḥusām al-Dīn Kīr Khān, one of the

Amirs of Kūwārīm, who had taken refuge with the Seldjūqs and who was governor of Būzā, was accused of belonging to 'Izz al-Dīn's party and imprisoned. As a result of that event the Amirs of Kūwārīm, settled in Asia Minor, laid waste the Seldjūq empire with thousands of Kūwārīmīs and went on into Syria and Mesopotamia where after numerous adventures they were in the end wiped out completely (cf. Kamāl al-Dīn, *Histoire d'Alep*, ed. Moquet, Paris 1900, p. 111; Koprulu Zade Fu'ad, *Amasunt al-Baṣṣa*, p. 60). With the principal amirs of the time of 'Alā' al-Dīn, Sa'd al-Dīn was an accomplice of this Sultan in the execution of his mother-in-law, Malika 'Adiliya and her two sons; in this way he attained considerable influence. Ibn Bibi and the historians who follow him are wrong in making Sa'd al-Dīn exclusively responsible for these crimes, which were repeated in 634/5 = 1238. As public opinion was greatly shocked by these happenings, Sa'd al-Dīn Köpek was appointed commander of a military expedition; in the month of Dhū'l-Hijja, 635 (July-Aug., 1238) he captured Şumṣāshāt. Profiting by the influence, which this victory secured him, he succeeded in having great amirs like Ḥusām al-Dīn Kaimarī and Kamāl al-Dīn Kāmyar put to death. But the Sultan, who, on the one hand, wished to clear himself of the general repugnance which he had inspired by putting all the responsibility on Sa'd al-Dīn and, on the other, was anxious to get rid of an accomplice who threatened to become dangerous, had him put to death treacherously. Ibn Bibi gives a detailed account of this.

The great *kāḥn* of Sa'd al-Dīn already mentioned is known among the people as the *ḥalāḥ al-kāḥn*. This imposing structure measuring 200—240 feet long and 200 feet broad is now in ruins. At the outer gate is an inscription of 634 A.H. dedicated to Ghiyāth al-Dīn Kaiḫūwād. Tradition says that Köpek Oghlu, who played a certain part in the history of Amasunt during the reign of Sulṭān Mehmed I, was a grandson of Sa'd al-Dīn and that at the place now called Köpek Koyi in the vicinity of the town there is a *ḥalāḥ*, which belonged to the family. This tradition, however, is devoid of definite proofs.

SA'D AL-FIZR is the name by which a large section of the tribe of Tamīm is named. The curious name *Fizr* has received no satisfactory explanation and the philologist Abū Manṣūr al-Azhārī asserts that he never met any person who could explain it. Some lexicographers explain it as meaning "more than one", others as "goats", but we may assume that Ibn Duraid is correct when he derives it from the verb "*fazara*" with the meaning "to split" and that "*fizr*" means "a chip" or "fragment". The Arab genealogists give the name of the common ancestor as Sa'd b. Zaid Manṣūr b. Tamīm and relate tales to account for the curious name which amount to the following: Sa'd had much cattle which he ordered his sons, by different mothers, to take to pasture; they refused and he invited the kindred tribesmen

of Malik b. Zaid Manat to come and rob the camels. Then when only goats remained he gave his sons the same order and they again refused to take them to pasture. In his anger he called Arabs of every tribe together (or, according to another version, took his animals to the fair of Ukay) and asked them to take each one goat as plunder (*intakha*), but allowed no one to take more than one. Thus the goats were scattered all over the country and this is said to be the origin of the proverb: "I shall not do that till the goats of al-Fizr (are collected again into one herd)". The goats are probably imagined to have had the *mawr* or brand-mark of his clan. The underlying idea appears to be that the divisions of this tribe were found scattered over the whole of Eastern Arabia. The tribe of Tamim is mentioned in the remotest antiquity, centuries earlier than the Arab genealogists can imagine, and the genealogies in their case are more fictitious than with other tribes, and all they can serve is to show which of the clans shortly before and after the introduction of Islam felt to possess a certain relationship. The poet al-Akhtal says: "In every wilder are Sa'd" pointing to their wide distribution. Of the many subdivisions mentioned by genealogists only those derived through his sons Ka'b and al-Harith appear to have had a claim to pure descent, while the descendants of the other sons, 'Abd Shams, 'Uthman, 'Awf, 'Uwafa and Malik were called the "Abna'". There were doubts as to the purity of their descent; they were settled in Bahrain and had largely intermixed with the Persian settlers when this province was under Persian rule. They were as regards numbers perhaps the largest Arab tribe and for this reason played an important part in the wars shortly before Islam and during the conquests and many persons mentioned in the early times of Islam were members of the various clans of Sa'd al-Fizr. They sided with 'Ali during the struggle for the caliphate and were most prominent during the unruly times in Khurasan under the later Umayyads and appear to have settled in Persia in large numbers. Others emigrated to North-Africa and the Aghlabi rulers of Ifrikiya claimed descent from them. The many subdivisions cannot be enumerated here, but it must be stated that the genealogists are far from unanimous in the affiliation of the various sections, and their names disappear early from history under the general name of Tamim. — Importance may be attached to the tribe of Sa'd al-Fizr and their nearest kindred clans for having spoken that Arabic which forms the basis of the classic Arabic of literature, as the earliest philologists seem to have framed the rules of Arabic grammar upon the dialect of Tamim. This was no doubt on account of their widespread diffusion through which their dialect was understood in most parts of Arabia.

(F. KRENKOW)

SADA, a town in South Arabia, the capital of the district of the same name in Yemen. It lies on the pilgrim road from Mekka to San'a', 60 parasangs (120 miles) or five days' journey from the latter town. In the days of paganism the town is said to have been called *Djuma'* and to have been built on the site later occupied by *Hija Talamus* built by the Imam al-Mutawakkil 'ala 'l-lah Ahmad b. Sulaiman b. al-Mutahir. According to al-Hamdani, the name *Sada* owes its origin to the following circumstance: — a man from the *Hijaz*, who was passing by the strong castle that stood in *Djuma'* and lay down exhausted beside it, marvelling at its height called out twice *laqat qat aladu* "he has raised it in fine fashion". Similar popular etymologies are found in other places. Six minutes south of the modern *Sada* lay the village of al-Khank, where the ruins of a great reservoir for irrigating the land and of other buildings survived into Muslim times. Near *Sada* is also the town of al-Ghail, which name al-Biruni would regard as the ancient name of *Sada*.

Sada was and — in spite of the catastrophes that have overwhelmed it — still is a flourishing, populous and wealthy town, in which merchants from all parts, especially from al-Bagra, met. The principal industry of the city has always been the dressing of hides and sole-leather which was exported mainly to the *Hijaz* and Yemen, and the manufacture of leather water-skins of particularly fine quality. For *Sada* lies in the very centre of very vast plantations of the *karaz* tree (*acacia arabica* W.), the leaves of which are used in dressing leather. In *Sada* excellent lances (*said*) and spear-heads used also to be made. Iron, which was brought to *Sada* from the vicinity in the form of dust and was purified there, must have been used for the latter. Iron is still found near *Sada*. Gold used also to occur in the neighbourhood — at al-Kuffa —. The flourishing trade of the town and the busy caravan traffic as well as its native industry yielded large sums in dues and taxes to the treasury of the Zaidi Imams, whose capital it was. Yaqut estimated the yield at 100,000 dinars. The Imams al-Hadi Yahya b. al-Husain (d. 298 = 910/911) and Yusuf b. Yahya (d. 430 = 1012/13) are buried in *Sada*.

SADAK. [See MAHR.]

SADAQA, *alms*, is so called, according to the Arab writers, from the verb *sadaqa*, because the Muslim's almsgiving shows the sincerity (*sida*) of his religion; but it is, in point of fact, merely a

transliteration of the Hebrew word *ṣēdāqā*, which meant originally "honesty", but was used by the Pharisees for what they considered the chief duty of the pious Israelite, namely almsgiving, a meaning which it still retained at the time of the coming of Islam and afterwards. Its proper sense is, therefore, voluntary or spontaneous almsgiving or what we call "charity".

Arabic authors, however, use the word *Ṣadāqa* in two different senses. In the first place it is frequently employed as synonymous with *Zakāt* [q. v.], that is, the legal poor-rate, which is involuntary, and of which the amount is fixed. It is so used in the *Qurʾān*, ix. 34, 35, 104, 113 (see Lane, s. v.). It is so used also in the *Muwaffāq* of Mālik ibn Anas, in which, in the *Kitaḥ al-Zakāt*, *Ṣadāqa* is substituted for *Zakāt*. He does this apparently when it is a case of *Zakāt* upon quadrupeds (*manāʾiḥ*, camels, flocks and herds), but also in other cases. In Buhārī, on the other hand, *Ṣadāqa* seems to be put for *Zakāt* quite indiscriminately, and the two words are used simultaneously as synonyms. Instances will be found in the notes to Houdas and Marçais' translation. Thus in l. 31 of the *Kitaḥ al-Zakāt* the two words are used indifferently. Buhārī uses *Zakāt* where Mālik uses *Ṣadāqa* (e. g. l. 43); he quotes the tradition "There is no *Ṣadāqa* on less than five *ḍiḥad* of she-camels" in the same form as Mālik, yet speaks of the *Ṣadāqat al-Fitr* where Mālik uses the usual *Zakāt al-Fitr*. The same failure to distinguish between the two words is found also in later writers, both legal and historical (e. g. Ibn al-Aṭṭar, *al-Nawāḥi*, iii. 42, after Ṭabarī). If there were any doubt as to the identity of this *Ṣadāqa* and *Zakāt*, it would be removed by the fact that the six or seven classes of persons who are entitled to benefit by them are the same in each case, namely, the poor and needy, those engaged in the work of distributing the *Ṣadāqa* or *Zakāt*, Muslim captives in enemy hands, debtors, those engaged in the *Djihad*, travellers, and (originally) the *Muallafat Qulūbuhum*.

The proper use of the word *Ṣadāqa* is, however, as has been said, in the sense of voluntary almsgiving. In this sense it is, for the sake of distinction, called *Ṣadāqat al-Tafarruḥ* ("alms of spontaneity"). Ibn al-Arabi thus defines this *Ṣadāqa*: "Voluntary *Ṣadāqa* is an act of worship arising from free choice mixed with authority; and if it be not so then is it no voluntary *Ṣadāqa*, for the man makes it obligatory upon himself, just as God makes mercy obligatory upon Himself towards those who repent, and corrects those who do ill in ignorance".

Ṣadāqa appears to be used in this sense in the remaining passages of the *Qurʾān* where it occurs, other than the two cited above. Alms may be given openly (ii. 273), so long as this is not done for ostentation (ii. 266); but alms given in secret are better. There is more profit in alms than in many (ii. 277), but they must be given with goodwill (ii. 265). Those who are disposed to be charitable must not be discouraged (ix. 80), but the reverse (iv. 114). Voluntary alms, of which the amount was left to the giver, were prescribed to be given before interviewing the Prophet, but this import was remitted provided the interviewers had paid their *Zakāt* (lviii. 13, 14). Alms might also be given in place of some other obligation, such as that of shaving the head after the pilgrimage (ii. 192). These passages naturally form a basis

for much that is found in the succeeding writers. In the *Kitaḥ al-Zakāt* of his *Muwaffāq* Mālik ibn Anas frequently cites a certain "Letter" of 'Umar ibn al-Khaṭṭāb in regard to the *Ṣadāqa*. This unfortunately refers to the *Ṣadāqa* in the sense of *Zakāt* only. Mālik himself treats of the *Ṣadāqa* in its etymological sense along with a variety of other matters in the closing paragraphs of his work. He does not use any distinctive term such as *Ṣadāqat al-Tafarruḥ*. What he says is as follows. Under the heading "Inciting to almsgiving" he records a saying of Muḥammad: "Whoever gives an alms out of honest gain (and God accepts only the honest) is only placing it in the palm of the Merciful, and He will make it grow for him, just as one of you lets his weanling foal or camel grow until it becomes like a mountain". Anas ibn Mālik [q. v.] used to tell how Abū Ṭāḥa, who was the richest Anṣārī in Medina, prized above all his wealth a well beside the mosque, from which Muḥammad was in the habit of drinking. When the verse "You shall never win piety until you spend of what you love" (iii. 92) came down, he wished to give this well. Muḥammad, however, persuaded him to keep it in his own family. Zaid ibn Aslam is the authority for the prophetic saying: "Give to the beggar, as if he come upon a mare". The wives of the believers are exhorted not to look down upon the alms given by their neighbour, "even if it be the burnt leg of a sheep". 'Aṭṭā [q. v.], when fasting, gave to a beggar the only loaf she had with which to break her fast. She received the timely present of a sheep. To some who were ever begging Muḥammad gave, but with the reproof that "the best of gifts is endurance". It was when speaking from the pulpit about almsgiving and about refraining from begging that the Prophet used the oft-quoted saying: "The upper hand is better than the lower hand". Mālik interprets that the upper hand is the hand that spends and the under hand is the hand that asks. 'Umar even refused his stipend on the ground that Muḥammad had advised them not to take anything from another. Muḥammad explained that he was speaking of asking for gifts. 'Umar replied that he would never ask, nor would he refuse what came without asking. Muḥammad also said: "By Him in whose hand my life is, it were better for one of you to take a rope and gather fuel upon his back, than to beg from one to whom God has given of his bounty, whether he give or refuse". A certain Asadi who had encamped in the *Baḳā'* al-Gharqad [q. v.] was urged by his family to seek something of Muḥammad. He went and found another applicant being sent away with the words: "The beggar who possesses an ounce of gold or its equivalent is guilty of importunity (*ḍiḥāf*)", the Prophet adding that he had nothing to give. Mālik explains that an ounce is 40 dirhams. He adds that the Asadi returned to his family without begging, but when the Prophet received fresh supplies, he was not forgotten.

Under the heading "What is disliked in regard to alms" Mālik notes that the family of Muḥammad may not accept alms, which are only "the outpouring of mankind" (*amṣāk al-nās*). It was not lawful for Muḥammad to give alms out of the *Ṣadāqa* (that is, the *Zakāt*). He might give only of his own. So too Aslam wished a man to

request of 'Umar to let him ride one of the camels of the "Ṣadaka", but the other asked him if he would like to drink the water in which a person had washed himself. Aslam exclaimed: "God forgive you! Do you say the like of this to me?" The other replied: "Alms are but the offscouring of men, which they wash from off them". There is some slight confusion here between the two senses of *Ṣadaka*. So far Malik.

Al-Bukhārī in the following century deals with *Ṣadaka* in both its senses in the 25th book of the *Ṣaḥīḥ*, on *Zakāt*, without perhaps being aware that he is speaking of two different things. Of the voluntary almsgiving he says in various *Abwāḥ*, that alms is the duty of a Muslim. If he lacks the means to give alms, he must work and gain them. If he cannot find work, he must at least refrain from ill, and this will be counted to him for alms. The alms given should be according to his means, out of the surplus of his possessions. They must be given with the right hand, and not given to the wrong person. A wife may give alms out of her husband's substance, and a slave out of his master's. Begging is not to be indulged in; but alms may be taken from the rich and given to the poor. Almsgiving atones for sin.

Al-Ghazālī discusses almsgiving in the *Kitāb awrār al-Zakāt* of the *Iḥyā' al-'Ulūm*, especially in the 8th *maṣiḥa*, in which he defines the proper recipient of alms. He must be ascetic, learned, truthful, uncomplaining, necessitous and related to the giver. In the 4th *faṣl* he takes up *Ṣadakat al-Taḥawwū'*. After recounting sayings ascribed to Muḥammad and others, he comes to the question raised in the *Qur'ān*, whether it is better to do alms in secret or openly. Those who prefer to give in secret, say that this preserves the self-respect of the recipient, and does not cause people to talk, nor excite the envy of others. Others hold that alms given openly prevent mistakes and misunderstanding, promote humility, and so on. Ghazālī, like Sir Roger de Coverley, decides that much may be said on both sides, and that all depends on circumstances and motives. He then turns to the question whether it is better to accept *Zakāt* or *Ṣadaka*. Some prefer the former because it is a legal due, and does not place those who accept it under an obligation. On the other hand the recipient of the *Zakāt* may not be worthy of help, and the element of friendliness is eliminated. Once more Ghazālī declines to make a general rule. Cases differ.

Ibn al-'Arabi deals with this matter in the *Futūḥ al-Makkiyya*, in *ḥik* 70, on "the secrets of the *Zakāt*". He also discusses the question of secret or open alms. His definition of voluntary alms has been given above.

The Shi'ite views of *Ṣadaka* and *Zakāt* are similar to those of the Sunnis, but, while both debar the family of the Prophet from benefit of *Zakāt*, the Shi'ites permit them to share in the *Ṣadaka*.

Care for the poor is a characteristic of the Semitic peoples, but the Arabs were not troubled by the feeling of pity. It is possible, therefore, that the provision made for those in need, whether by voluntary or involuntary aid, may have been borrowed from the Hebrews. Cf. Tobit, xii. 8 sq.; Matt. vi. 1, which certainly appear to be quoted. Alms are not a feature of Arabia before Islam, but Freytag gives (xxiv. 5) the proverb: "The best alms are words".

ṢADAKA E. MANṢUR B. DUBAIB B. 'ALI B. MAZYAD, SAID AL-DAWLA ABU 'L-HASAN AL-ASADI, ruler of al-Hilla. After the death of his father in 479 (1086/1087), Ṣadaka was recognised by the Saljuq Sultan as lord of the territory of Malik Shāh on the left bank of the Tigris. During the fighting between Sultan Barkiyārūq and his brother Muḥammad, Ṣadaka was at first on the side of the former, but when Barkiyārūq's vizier, al-A'az Abu 'l-Mahasin al-Dihistānī, demanded a large sum of money from him in 494 (1100/1101) and finally threatened him with war, Ṣadaka abandoned Barkiyārūq and had the *khutba* read in name of Muḥammad. The Sultan then tried to win him back by peaceful means; but Ṣadaka demanded that the vizier should be handed over to him and as Barkiyārūq could not grant this, the negotiations fell through. Instead of agreeing with Barkiyārūq, Ṣadaka drove the Sultan's governor out of Kufa and himself occupied the town. In the following year al-Hilla [q. v.] was founded; previously the Banū Maryad had lived in tents.

When Gümüştekin al-Kaisarī by Barkiyārūq's orders appeared in Baghdad in the middle of Rabi' I. 496 (end of December, 1102), Ighār b. Urtak, Muḥammad's governor there, made an alliance with Ṣadaka. In the meanwhile the Caliph al-Mustaghir had Barkiyārūq again proclaimed Sultan; nevertheless Ṣadaka still declined to acknowledge his suzerainty. Soon afterwards Barkiyārūq's name was again dropped from the *khutba* and the imāms confined themselves for the time being to praying for the Caliph only without mentioning by name either of the two contending Sultans. But the war was continued; by Rabi' II. 496 (January, 1103) Gümüştekin had to evacuate Baghdad and as he was unable to hold out in Wasit either, Muḥammad was again recognised as Sultan in both cities. Ṣadaka then extended his power over a great part of the 'Irāq; in the same year, he took the town of Hill on the Euphrates, which Barkiyārūq had granted as a fief to one of his followers, and appointed his cousin Thābit b. Kamil governor of it. In Shawwāl, 497 (June-July, 1104), Wasit met the same fate and here Mahaddih b. al-Dawla al-Sa'īd b. Abi 'l-Khair was appointed governor. Next came the turn of Basra, which had fallen into the hands of the Saljuq Ismā'īl b. Arslāndīk during the war between

Barkiyārūq and his brothers. It was not till after the death of Barkiyārūq that Sulṭān Muḥammad was able to think of dislodging Ismā'īl from it and in 499 (1105/1106) he asked Šadaqa to fight him. In 500 (1106) he asked Šadaqa to fight him. In 500 (1106) Šadaqa took the field against Ismā'īl, who was soon forced to surrender, whereupon Šadaqa appointed one of his grandfather Duḥayr's Mamluks named Alimūṭish to govern Bagda. But as the latter was very soon surprised and captured by Beduin bandits, the Sulṭān himself appointed another governor in his place. In 500 (Oct., 1106) Kalikabādh b. Ḥazim al-Dailamī, lord of Takrit, had also to yield. After the death of Barkiyārūq, Muḥammad had sent the Emir Akmanṣar al-Bursakī (q. v.) to Takrit to occupy the town. As Kalikabādh would not obey, he was besieged. After several months had passed, he saw the impossibility of holding out any longer, and sent to Šadaqa and surrendered the city to him. Warrām b. Abi Firda was then appointed governor of Takrit. But Muḥammad could not always look on quietly while Šadaqa's power kept growing, especially as the latter never had any scruples about affording shelter to anyone who had fallen into disgrace with the Sulṭān. When Abū Dulaf Surkhsh b. Kalikabādh, lord of Sawa, took refuge with him and Šadaqa refused to hand him over, long negotiations between Šadaqa and the Sulṭān only resulted in an open breach between sovereign and vassal. The Sulṭān set out in person from Baghdad with a large army and in the fierce battle which was fought (according to the most usual statement) in the latter half of Rabi'ah, 501 (beginning of March, 1108) Šadaqa was killed at the age of fifty-nine. Like his ancestors he bore the title 'Malik al-'Arab'; the highest praise is given him by Arab poets and historians for his virtues, notably his liberality and readiness to give assistance, and he is rightly described by A. Müller (*Der Islam im Morgen- und Abendland*, II, 122) as "a true Beduin, brave, stubborn and wily".

(K. V. ZETTERSTEN)

AL-SA'DĀN, the two lucky stars, Jupiter and Venus in contrast to the two unlucky stars (*nasib*), Saturn and Mars. Jupiter is called the great good fortune, *al-Sa'd al-akbar*; whoever is born under his rule will be among the happy ones in the future life and distinguished for devoutness, fear of God, brightness and continence. Venus is called the little good fortune, *al-Sa'd al-aṣḡar*; whoever is born under Venus may expect good fortune and success in this life, in all worldly pleasures, such as food and drink and especially in all love and matrimonial affairs.

(J. RUSKA)

SA'DI, Shaikh Muḥib al-Dīn, whose renown is second to that of no Persian poet, was born at Shīrāz in 580/1184. His father was in the service of the Salghurid Atabeg, Sa'd b. Zangī, from whom the poet took his *Takhalluṣ*, or poetical pseudonym, of Sa'di. It has been suggested that this name was taken from Sa'd II, son of Abū Bakr and grandson of Sa'd I, but this is improbable, for Sa'd II did not begin to reign until shortly after Sa'di, who was then sixty-seven years of age and had already written much, returned to Shīrāz from his travels, and he reigned for no more than twelve days. He had no opportunity of doing anything to earn Sa'di's gratitude, whereas his grandfather had been the patron of the poet's father. Sa'di began his studies in the famous Niẓāmiya College at Baghda, and continued his education by studying the mysticism of the Sūfīs under Shaikh 'Abd al-Kādir al-Djīlī (Djīlānī) (cf. the art.), with whom he made the pilgrimage to Mecca—a duty which he is said to have performed no less than fourteen times. Of his long life of 102 (lunar) years he spent the first thirty in study, the second thirty in travelling and the composition of poetry, the third thirty in religious seclusion and the completion and arrangement of his poems, and the last twelve in supplying wayfarers with food and water and in discourse on mysticism.

In the course of his travels he visited Asia Minor and India, and in both countries bore arms in dīhād against the misbelievers. He says of himself:

I have wandered afar in the ends of the earth,
I have consorted with all sorts and conditions of men;

In every corner have I found both pleasure and profit,

From every harvest have I gleaned a sheaf.

Towards the end of the thirteenth century the Martyr Prince Muḥammad Khān, governor of Mālān on behalf of his father, Ghiyāth al-Dīn Balban, invited Sa'di to visit India once more, and the poet was deterred only by his age from setting out on his travels again. Of his wit many stories are told. Khwādja Humām al-Dīn, a rich citizen of Tabriz and himself a poet, meeting him in the public baths, asked him whence he came, "From Shīrāz," said Sa'di. "It is strange that there should be more Shīrāzis than dogs in Tabriz," said the Khwādja. "It is not so at Shīrāz," replied Sa'di, "for there Tabrizis are less than dogs". The Khwādja left the bath but met Sa'di again in the street. "Do they recite the verses of Humām in Shīrāz?" he asked the traveller. "Yes," said Sa'di, looking at the handsome youth who was fanning the Khwādja, "especially this:

"Between me and my beloved Humām stands
as a veil;

It is time for me to draw this veil aside".

His wit betrayed him. "You are Sa'di," exclaimed the Khwādja. "Yes," was the reply; and the delighted Khwādja, having begged his pardon, took him home and feasted him royally.

Sa'di died at Shīrāz in September, 1292, at the great age of 102 lunar or nearly 99 solar years, and is buried in the environs of the city.

His best known works are the *Būstān* (Garden), written in 1257, and the *Gulistān* ("Rose-garden"), written in the following year, which are read wherever Persian literature is studied. The former is a collection of poems on ethical subjects and the latter is a collection of moral stories in prose,

plentifully interspersed with verse. He has also a *divān* or volume of *ghazals* (short odes), a number of *ḡazā'id* (long odes), and collections of poems known as *Tarīyāt* (Pleasuries), *Haṣṣyāt* (jest) and *Kāshīyāt* (obscenities). He is regarded as the master of the *ghazal*, or short ode. An unknown poet has written:

*There are three prophets in poetry,

Despite the saying: 'There shall be no prophet after me';

One in encomium, one in the *ḡazal*, and one in the *ghazal*;

They are Firdawsī, Anwarī and Sa'dī".

Bibliography: Dawlatshāh, *Tadhkirat al-Sha'arā'*, ed. E. G. Browne (1901); Lutf' al-Rib, *Āḡā Khān Adhar, Ataghāda*, MSS.; Hamd Allāh Mustawfī al-Kazwīnī, *Tarīkh-i Gulistan* (Gibb Memorial Series). For further details see beneath (T. W. HAIG).

Literary History. All MSS. of Sa'dī's works are based on the redaction of 'Alī ibn Aḥmad Abū Bakr of Bīstūn who flourished 50 years after Sa'dī's death. They are divided into a Persian-Indian and a Persian-Turkish family. On the first is based the Calcutta edition of the *Kulliyāt* in two volumes (1791 and 1795), containing also the preface of that redactor. Vol. I. of this edition begins with the seven so-called *Risāla's*, prose treatises of mystical and ethical contents. In the same volume follow *Gulistan*, *Būstān* and *Pand-nāma* (generally not considered as Sa'dī's own work; cf. Ethé, *Grundriss der iranischen Philologie*, II, 295; it is a *moṭahawwī* after the fashion of Aṭṭār's *Pand-nāma*). Vol. II. contains the *Divān*, comprising the Arabic and Persian *ḡazā'id* (lyrical, didactical and panegyric), the *Marāthī*, the *Mulamma'āt* and *Tarīyāt* and the four collections of odes. Finally the *Ṣāḥib-nāma*, *Muḥaṣṣāt*, *Khakīyāt*, *Mudhakkāt*, *Ruk'iyāt*, *Mufradāt*. All *Kulliyāt*, published since in Persia and India have about the same division.

Besides the many biographical works on Persian poets, Sa'dī's own works are valuable material to complete our knowledge of his life and the development of his literary production. Thus he must have composed a good deal of the *ḡazā'id* in later age, as they are addressed to personalities whom he had known only after his return to Shirāz. If the four groups of odes have been arranged after the different periods in Sa'dī's life, in which they have originated, the *Tarīyāt*, the *Bas'īr* and the *Khawāṭir* are all to be placed after the poet's return to his native town; they contain a few allusions to events and persons connected with his later life. On the other hand, the *ḡazā'id* appear to be a work of his youth. All this, however, is rather uncertain. The alphabetical arrangement according to the final letters of each poem makes chronology impossible; but some MSS. constitute an exception, e.g. the oldest known MS. described by Ethé under N^o. 1117 on p. 655-659 of his *Catalogue of the Persian Manuscripts in the Indian Office* (N^o. 876; cf. also p. II. of White King's Introduction to his edition of the *Tarīyāt*, Calcutta 1919); so a careful examination of the older arrangement might give some results. The *Ṣāḥib-nāma* (ed. and transl. by W. Bacher, *Sa'dī's Aphorismen und Sinngedichte*, Strassburg 1879) containing moralizing poems, was dedicated to the Ṣāḥib-Dīwān Shams al-Dīn Djuwainī and belongs equally to the last period of Sa'dī's life.

In the short stories of *Gulistan* and *Būstān* (also called *Sa'dī-nāma*) there occur many personal recollections of the author. In his monograph on Sa'dī, Massé has tried to restore a biography based on those informations. But he seems to have trusted Sa'dī's veracity too much. The truth of many of these stories has been doubted before (Barbier de Meynard, Rückert) and Sa'dī himself declares that whoever has been much about in the world, may lie a good deal. If we are not wholly to distrust the author, he must have lost his father in an early age, being old enough, however, to remember some of his wise lessons. The anecdote in the *Gulistan* about the poet's visit to *Kashgar*, when he was still very young, sounds rather improbable and has puzzled many orientalists; certainly the easiest way is to consider the whole story as fantastical (cf. Schaefer in *Der Islam*, xiv, 187). To the period of Sa'dī's youth must equally have belonged his sojourn in Syria as a prisoner of the Franks in Tripoli (Massé suggests of the siege of that town in 1221) and his ephemeral marriage with the daughter of a paternal friend who redeemed him from slavery. It is impossible to follow him closely during the period of his long journeys (± 1226-1255); it seems probable that he visited Central Asia, India, Syria, Egypt, Arabia (many of the short stories relate experiences in the desert on the way to or from Mecca), Abyssinia, Morocco. In India Sa'dī pretends to have passed through the well-known adventure in the temple at Sonantī, where he discovered the priest's trick in deceiving the people and afterwards killed him in order to escape his vengeance. This story too, however, has many intrinsic improbabilities (*Būstān*, ed. Graf, p. 388 *app.*). Sa'dī's second marriage in Yemen is also to be placed in this second period. In the last period of his life he was, as the *ḡazā'id* prove, in relation with the Atabak Abū Bakr ibn Sa'd ibn Zangī, on whose death he composed an elegy († 1260) and whom he has celebrated in the first pages of the *Būstān*. There is the Arabic *Marthiya* on the fall of Bagdad and in the same period his panegyrics on the Mongol conquerors and their satellites. The *Tarīyāt* are dedicated to the last Atabak of Fārs, Saldjūqshāh. There are also *ḡazā'id* dedicated to Anḡīzān, the Mongol governor who succeeded that prince, and also to Sa'dī's exalted patrons 'Aṭā Malik and Shams al-Dīn Djuwainī (an anthology of these panegyrics is to be found on p. 67-70 of the Persian introduction to the Gibb Fund edition of the *Īḡhān-Gushā*). As in Sa'dī's works there is no allusion whatever to the tragical death of both the brothers Djuwainī (1282 and 1283) Massé thinks that the poet must have died before or very shortly after these events; in that case the informations of the biographers, varying between 1291 and 1292 give too late a date. Now if, as most authors do, the year 580/1184 is adopted as the year of Sa'dī's birth (Browne, *Lit. Hist. of Persia*, II, 526), he may not yet have reached 100 (solar) years.

Sa'dī's tomb is outside Shirāz, a little farther off than that of Hāfi. The tombstone is not old, the original one having been destroyed by a fanatical *mudhakkāt*, as Sa'dī is generally believed to have been a Sunni. It is probable for this same reason that Sa'dī's tomb lies rather deserted, whereas many Shi'ites have chosen for the place

of their last repose the neighbourhood of Hāfīz (Browne, *A year amongst the Persians*, London 1893, p. 281). According to the colophons in the oldest MSS., the name of the author must have been Muḥarrir al-Dīn ibn Muḥliḥ al-Dīn 'Abd-Allāh (Rieu, *Catalogue of the Persian MSS. in the British Museum*, ii. 595).

Ethé (*Grundriss der Ir. Phil.*, ii. 292) counts Sa'di among the poets that first have combined the originally separated mystical and didactical tendencies in Persian poetry. With Sa'di the didactical, moralizing element is predominant; to this it is that he owes his great popularity.

There is no doubt that he was well versed in the "science" of mystics. Besides 'Abd al-Kādir al-Jīlānī, Shihāb al-Dīn Suhrawardī was his teacher in Baghdad (Būstān, ed. Graf, p. 150). According to an anecdote told by Afāki (transl. by Huart, i. 238-7), he even might have met with Djalāl al-Dīn al-Rūmī (cf. Būstān, p. 165 sqq.). For him as for other poets the often paradoxical mystical ideas must have been valuable literary material. The question whether Sa'di was himself susceptible of mystical feelings is probably to be answered in the negative, as his practical nature made him more inclined towards a moralizing attitude, in which he made mysticism only serve a higher moral conception of earthly life. In many instances he puts moderate common sense against exaggerated zeal for the life to come. In his Būstān the lofty mystical sentiments of the Naṭṭawī or the Manṣūf al-Tair should not be sought for. Sa'di often speaks of the Šūfī's, but his attitude towards them is always more that of a moralist than of a fellow-mystic. His practical mystical ideal is realised in the Šāhidnāma, the truly wise people who do not care for the outer appearances of this world, without, however, despising it wholly. For it is precisely the world's perishableness that makes it valuable as a rare ruby, and in many places Sa'di shows himself a good Muslim, when he finds in the variety and beauty of earthly existence a reason for great thankfulness towards the Creator. He preaches a moderate fatalism and disapproves of exaggeration in the religious life: "Don't be more pious than Muḥammad!"

As a moralist Sa'di gained much profit from the vicissitudes of life through which he had passed. His knowledge of the world gives to his ideas and opinions a cosmopolitan character, reached by no other Persian poet. It is due, probably, to this fact, together with the elegance of his style, that he has earned his great popularity in his own country and abroad, so that he has been compared with Horace, Rabelais and La Fontaine. Sa'di looks upon the world with sympathetic humour and is seldom satirical; and he can never enough exhort his readers to follow his moral counsels. Now these moral precepts, chiefly to be found in *Gulistan*, *Būstān* and *Pand-Nāma*, are far from being uniform. For common mortals the author cites in the *Pand-nāma* a number of virtues and vices; as the chief virtue he seems to regard "goodness" (*ṣalt*), great sympathy for our fellow-creatures without any egoistic view. He that obtains the qualification of good is really immortal. On the other hand Sa'di's social morals are sometimes quite different; here revengefulness is sometimes recommended instead of mercifulness, insincerity instead of veracity. Man is admonished

to guard by all means his independence from other people. Especially for princes several machiavellian precepts are given (the 2nd part of the 6th *riḍla* is a short treatise on politics, dedicated to Anḳānā), and for derwishes again other moral norms exist.

The different aspects of Sa'di's morality make it difficult to believe in his sincerity, the more so as his morality is considerably compromised by the obscenities uttered in some chapters of the *Gulistan* and in the *Khawāṣṣāt*, though, in an introduction to this collection, he tries to excuse himself in saying that he could not withdraw from an order given to him to compose these poems. However, with a Persian poet it is often difficult to separate what belongs to himself and what must be regarded as a concession to the taste of his patrons and of the public. The favour he has met with all through the eastern world should always be taken into serious consideration before judging too severely his character. In any case he has shown himself in all his humanity and he has amply satisfied the predilection for moralizing in literary form, which the Persians have had since pre-Islamic times.

Moreover, his elegant style, his ease of expression, the way in which he knows how to make attractive the most tedious moral maxims, in short his art, would have been enough to gain him the admiration of his countrymen. The *Khawāṣṣāt* are considered to be his most perfect compositions; the Arabic *Ḳāṣida's* are less appreciated by orientlists. Arabic and Persian lines follow alternately in his *Muḥammadiyat*, and in one of his poems he uses 16 different languages and dialects (Bacher in the *ZDMG.*, xxx. 89).

In Persia Sa'di's *Divān* is more read and appreciated than the *Būstān* and the *Gulistan* (Browne, *A year amongst the Persians*, p. 281). Still, nowadays, many Persians know one of both these works by heart and quite a number of Persian poets have followed Sa'di in writing similar works. They are enumerated by Ethé in the *Grundriss der Iranischen Philologie*, ii. 297. The most famous of the imitations of the *Gulistan* is Dāmī's [q. v.] *Bahārīstān*. But none of them has been able to surpass the originals in popularity.

Outside Persia Sa'di's influence has been great in Indian and in Turkish literature. After the Calcutta edition the poet's works have often been printed in India, without and with commentaries by Indian scholars. The *Gulistan* has been translated several times into Hindustānī, the best known being the translation of Afāki (1802). Garcin de Tassy's assertion that Sa'di must have been the first Hindustānī poet has been definitely refuted now (cf. Browne, *Literary History*, ii. 533). But a certain relation between Sa'di's way of composition, especially in the *Gulistan*, in which a prose story is everywhere followed by a short poem, and the old well known literary form of Indian tales, admits on the one hand of the supposition of Indian influences on Sa'di himself and may explain on the other hand his popularity in Hindustān.

Turkish translations of Sa'di's works were made at an early date. The *Būstān* was translated in 1354 by the learned Taftāzānī (Gibb, *History of Ott. Poetry*, i. 202) and there exists a translation of the *Gulistan*, made in 1391 by

Saif al-Sarāfi in the Turkish dialect of Egypt (MS. Leiden, N^o. 476 in Dory's *Catalogue*, I. 355; cf. also *Mithāṭ al-taḥṣīl al-maḥṣūl*, Sept.-Oct., 1331, p. 133). The Turkish poet Komāl Pāshā Zāde († 1534) imitated the *Gulistan* in his Persian *Nigāristān*. Sa'di belonged to the poets whose works were much studied during the early period of Ottoman literature. In a way he has even been of some influence on the development of modern literature in Turkey, as Ziyā Pāshā, in his autobiography, tells that it was only when he read the *Gulistan* that he discovered what language was (*Ghibb, Hist. of Ott. Poetry*, v. 53). In his *Kharāṭih* (ed. Constantinople 1291, i. p. 22 of the introduction) Ziyā Pāshā puts Sa'di above all other Persian poets: "When one reads the *Būstān*, then only does one understand what the world is like". He does not doubt of Sa'di's sincerity and admires in him the fact, that even in his panegyrics he is still courageous enough to remind the mighty of the earth of moral precepts. During the sixteenth century several other Turkish translations have appeared. Turkish scholars have also undertaken to write commentaries on *Būstān* and *Gulistan*; such are: Surūrī († 1561), Shām'ī, Sīdī (both at the end of the sixteenth century), Hawā'ī, al-Bursawī and others. In the sixteenth century some of these commentaries were printed.

The existing translations of the *Gulistan* and the *Būstān* and sometimes of other of Sa'di's works, in all modern languages, prove sufficiently the great renown he has obtained beyond the boundaries of Islām. First, the *Gulistan* became known through the French translation by André du Ryer (Paris 1634), followed by several editions in Latin (by Gentius, Amsterdam 1651), German (by Olearius, Hamburg 1654), Dutch (transl. from Olearius) and English (by Sullivan in 1774). The *Būstān* appeared later. In the eighteenth century Thomas Hyde is said to have made a translation of it. The oldest printed translation is in Dutch (Amsterdam 1688) by D. H. (Havert). So in Western European literature Sa'di became familiar as early as the eighteenth century; mention need only be made here to the works of Lafontaine, Voltaire and Goethe.

The latest monograph on Sa'di is Henri Masé's *Essai sur le poète Saadi* (Paris 1919), a dissertation for the doctorate of the Alger University. In his *Thèse Complémentaire*, called *Biographie de Saadi* (Paris 1919) Masé gives a very valuable bibliographical survey, to which reference may be made here. Since that date a new edition of Sa'di's odes has begun to appear: Sir Lucas White King, *The Odes of Sheikh Majlūh al-Dīn Sa'di Shīrāzī* Part I (*Tayyibāt*), Fasc. I. (1919), ii. (1920), iii. (1921), published at Calcutta in the Bibliotheca Indica, New Series, N^o. 1424.

(J. H. KRAMERS)

AL-SA'DI, 'ABD AL-RAḤMĀN b. 'ABD ALLĀH b. 'IMRĀN b. 'AMIR, the historian of the Songhai kingdom in the Sudan, belonged to an old family of scholars in Timbuktu where he was born on 1st Dhu'l-Hijja 11, 1004 (1596); here he received his education from Ahmad Bābā [q.v.]. On the conclusion of his studies he sought with his brothers a sphere of activity in Djenné [q.v.], the old commercial town which at that time rivalled Timbuktu as a commercial and intellectual centre. Here in 1036 (1626) he succeeded in obtaining the post of Imam of the Sankore Mosque,

i.e. of the mosque in the foreign quarter, having previously acted as deputy for his predecessor in the office. He extended his knowledge of the world at the end of 1039 (July 1630) by a journey to the Fulbe kingdom of Māsina north of Djenné on the left bank of the Niger, which at that time included the island of Djimbala in the Niger. It was the Kādi there who had invited him, but he received such an honourable reception from the Sultān himself and the notables of the kingdom, that he repeated his visit three years later. On this occasion he rendered diplomatic services to the Sultān by settling a feud between him and one of his vassals. He and his family, however, suffered a good deal from the tyranny of the Moroccan governors in Djenné. In 1044 (1634) one of his brothers was banished from his new home to Timbuktu and he had to go back there to intervene on his behalf. Two years later he himself was even dismissed from his office. On complaining to the Pasha in Timbuktu, the latter gave him this much satisfaction that he dismissed the Kādi who had been his enemy. But he gave up further claim to his office and preferred to live as a private individual and occasionally placed his knowledge at the disposal of the smaller vassals in the southern Songhai kingdom as secretary and teacher. In 1056 (1646), however, the Pasha of Timbuktu, Muḥammad b. Muḥammad b. 'Ojūmā, summoned him to be his Secretary of State, and he seems to have held this office under Muḥammad's successors also till his death. On several expeditions on which he had to accompany the Pasha, he became acquainted with the north and east of the Songhai kingdom which he did not hitherto know. He then decided to write a history of his native land which he entitled *Tārīkh al-Sūdān*. He introduced his work with the early history of the tribes of the Songhai, Melli and Tuareg, and of the towns of Djenné and Timbuktu. In 1053/54 Barth was able to make extracts from the smaller half of this history in Timbuktu and G. Ralfs published these in a translation in the ZDMG., ix. 518 sqq. He interspersed these remarks with numerous ethnographical digressions — introduced as 'Addat — which Barth omitted. In chapter x. he gives a survey of the scholars of Timbuktu as a supplement to Ahmad Bābā's *Dhail al-Dīnā*. The history proper begins with the establishment of Muslim emir by the Khārījī Sunnī 'Alī in the ninth (fifteenth) century. He then describes the role of the orthodox Askīyā dynasty and the conquest of the kingdom by the Moroccans and their dominion down to the death of the author. The style is much interspersed with colloquialisms and is faulty in other respects also. The date of completion of the chronicle is given by him as Monday, Dhu'l-Hijja 5, 1063 (Oct. 28, 1653). On the following day he added a list of officials as an appendix. In a further appendix he detailed happenings down to Dhu'l-Hijja 16, 1066 (March 14, 1656). He seems to have died soon afterwards. A continuation to his work, a history of the Moroccan governors in the Songhai kingdom entitled *Tadhkirat al-Nayyān*, was written in 1104 (1751) by an unnamed author, who was born in Timbuktu in 1112 (1700) and was a grandson of the Emir Muḥammad b. Sūwū.

(C. BROCKELMANN)

SA'DIANS (BANU SA'D), the name of the dynasty of Sharifs in Morocco which in 1544 (951) replaced the Wattāsid dynasty on the throne of Fās.

From the beginning of the fifteenth century the expeditions of the Portuguese and Spanish against the Muslim lands in Spain or North Africa had raised to a great pitch the fanaticism of the Berbers and of the Arabs who reacted violently under the leadership of holy men, sharifs [q. v.] and marabouts [q. v.].

In a country organised according to tribes or divided into numerous little states of a feudal character, among peoples whose only link of solidarity was the bond of religion and who were often at war with one another, the powerless rulers had had to submit to the Christian invaders. Then under the influence and the guidance of marabouts, knowing only Islam, acting in its name and not in that of the State which they ignored, centres of resistance were formed nearly along the whole length of the coast of North-west Africa. In this revolution those dynasties which had not tried, or had not been able, to direct the movement into regular channels were swept away; new powers, with the support of the religious party, in their place established themselves, notably the Turks in Algiers and the Sa'dian Sharifs or Banū Sa'd in al-Sūs (district in Southern Morocco). Chronicles and traditions are quite in agreement regarding the fortunes of the latter.

The first of the Banū Sa'd to come to power was a certain Muhammad surnamed al-Mahdī and al-Sā'in bi Amrī l-lāh. He practised magic, it appears. He had been put by Sidi 'Abdallāh U-mabrek, the most important holy man in al-Sūs, at the head of the tribes fighting against the Portuguese in this area. Some successes gained against the Christians and rather tactless pecuniary assistance given by the Wattāsid Sultān of Fās to the two sons of the sharif consolidated the latter's position. He took advantage of this to extend his power to the north of al-Sūs and had himself proclaimed sovereign in 1509 (915). He died at Afughāl in al-Hajā about 1517/18 (924).

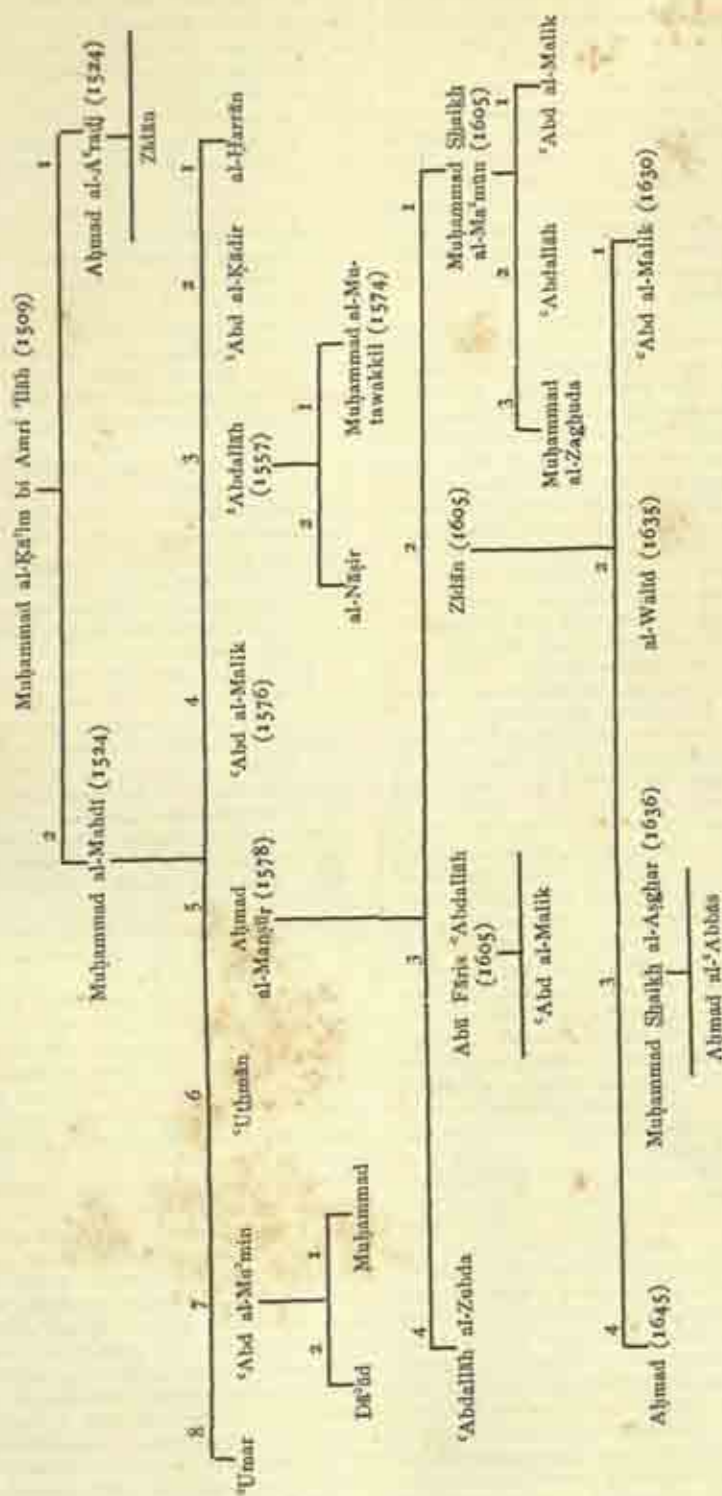

Ahmad al-A'raǧi and Muhammad (also surnamed al-Mahdī), his two sons, succeeded him. They fortified themselves first at Tarudant, capital of al-Sūs, on account of the inroads of the Christians who were masters of the coast to the south of Anfa (Casablanca); then they made an alliance against them with the governor of Marrākesch. The assassination of this governor enabled them to seize the town where Ahmad al-A'raǧi was installed as ruler. The activities of the two sharifs had been facilitated by the conflict of duties and the rivalries between the Portuguese agents Nunho Mascarenhas and Yahyā ben Tahfūfa; their task was rendered still more easy when the latter, taken by surprise and killed, was disposed of. Henceforth masters of the capital of Southern Morocco and strongly supported by the majority of the marabouts, they gave offence to Muhammad al-Boṭṭagāli, the Wattāsid Sultān of Fās, who laid

siege to them several times in Marrākesch but without success until he died in 1525 (971). Competition arose on the death of this ruler between three claimants to the throne from his family and the result was anarchy, civil war and progress by the Christians. The new Wattāsid Sultān Ahmad in order to have freedom of action against the latter treated with the Sharifs, abandoning to them the government of Marrākesch and of its territory. But they feeling strong enough broke the agreement. The Sultān took the field against them and was defeated at the battle of Bū Aḥba (July, 1536/942). Fighting between the various tribes became more and more frequent; the country threatened to sink into anarchy while the menace of invasion by the Christians was always hanging over it. Then the marabouts intervened to impose peace by dividing the kingdom between the two rival factions. This is what was done.

Rivalry then broke out between the two brother Sharifs. Muhammad al-Mahdī seized the lands of Ahmad al-A'raǧi and exiled him, then continued the struggle with the Sultān of Fās, whose capital he took for the first time (1550/957). The Wattāsids were interned at Tarudant; but one of them, the former claimant Bū Hassūn, a refugee first in Spain, then at Algiers, succeeded in procuring the intervention of the Turks. With their support he captured Fās and was proclaimed there. But the massacre of the Wattāsids at Tarudant and the assassination of Bū Hassūn left the Sharif Muhammad sole master of Morocco. He once more entered Fās where he was definitely proclaimed Sultān in 1554 (961). This prince, energetic, clever and adroit, and gifted with the qualities of an organiser, may be considered the real founder of the dynasty of the Banū Sa'd. He demanded from trade and from industrial monopolies the resources which war did not supply him in sufficient quantities. In exchange for his produce, England supplied him with arms. His successors followed his example in this respect. He also supported the policy of Spain against the Turks, which cost him his life, for they assassinated him in 1557 (965). His son 'Abd Allāh, called al-Ghalib, succeeded him, followed the same policy and tried to counteract the preponderating influence of the religious party. He died in 1574 (981). His son Muhammad al-Murawakkil had to fight for his throne against his two uncles, 'Abd al-Malik known as Mullāy Mullik, and Ahmad. It was a rare thing on the death of a Moroccan sovereign when the 'ulama' of Fās proclaimed as his successor the same person as the 'ulama' of Marrākesch. When one of the claimants was supported by the Turks, the other immediately sought the assistance of the Christians. This was a necessity imposed by the difficulty of obtaining military supplies. The Turks had another important reason for interfering in the affairs of Morocco; this was the claim of the Moroccan Sharifs to exclusive legitimacy in the government of Islam as sharifs descended from the Prophet and this meant a great deal to the Sultāns in Istanbul.

The Christians, pursuing their policy of occupying the coast, took advantage of the confusion to get ports ceded to them. Their lack of a Muslim religious policy enabled the religious party to exasperate more and more the inhabitants of various districts and to bring about a divorce between them and the sovereigns of the Maghrib.

GENEALOGY OF THE SADIYAN SULTANS¹⁾

a) The figures in brackets give the date of the first proclamation of the ruler.

The Arab tribes and the Berber tribes, never quite reconciled to one another, favoured sometimes one and sometimes the other pretender. Like the Christians, the Turks charged dearly for their services, and sometimes, to weaken their neighbours still more, lent their help to several competitors at the same time.

Mulāy Mulūk, supported by the Turks of Algiers, was proclaimed ruler of Morocco. But Muhammad al-Mutawakkil attacked him with Portuguese assistance. A famous battle took place at Wād Makhāsin (battle of the three kings) in which the king of Portugal, Don Sebastian, his ally Muhammad al-Mutawakkil and Mulāy Mulūk were all three killed. The ex-pretender Ahmad was then proclaimed sovereign of Morocco with the support of the Turks (1578 = 986).

The latter is known as Ahmad al-Manṣūr, or Ahmad al-Dhahabī. He kept on good terms with the Turks and took advantage of the respite offered him by the Portuguese and Spaniards, who were exhausted or occupied in Europe, to conquer the Sūdān. This was the most remarkable episode in the history of the dynasty. This ruler died of the plague in 1603 (1012). His three sons at once disputed the succession; the one, Muhammad Shaikh, known as al-Ma'mūn, was the candidate of Philip III; Zidān, proclaimed at Fās, was supported by the Turks while Abū Fāris was proclaimed at Marrākeṣh. The latter succeeded in defeating his rival of Fās, who took refuge with the Turks, then tried to reconquer Morocco from the south. But the people of Fās preferred to submit to al-Ma'mūn who was proclaimed in 1604 (1013). The assassination of Abū Fāris by 'Abd Allāh, son of al-Ma'mūn, disposed of one of the rivals but the struggle between the two surviving brothers continued. Zidān was proclaimed and dethroned three times in all.

The marabouts, to whom the Banū Sa'd had at first owed their elevation to the throne, took advantage of the situation to strengthen their personal power in their sphere of influence. Their attitude forced the Sultāns to take action against them. In 1610 (1018) the cession of Larache to the Spaniards by al-Ma'mūn became the signal for general risings. Piracy against the Christians developed at Tetuan and at Salé (q. v.). An adventurer, Abū Mahallī, seized Tafilalet, Dra'a and Marrākeṣh. He was threatening to occupy the whole of Morocco when he was killed in 1613 = 1021. In the north-west the town of Sīa and the surrounding country accepted the rule of a marabout, al-Ayāṣhī.

Sultān Zidān continued to reign, buffeted about by all these troubles, and died in 1627 = 1038. His three sons, 'Abd al-Malik, al-Walid and Muhammad Shaikh al-Aghar, were equally the playthings of Christians, Turks and marabouts for over nine years. The latter reigned at this time quite without restraint: a certain 'Alī Bū Domaīya was master of al-Sūs; Tafilalt was ruled by a creature of the Turks, Muhammad b. Ismā'il; the marabouts of the Zāwiya of Dila ruled Teda and the region of Fās; al-Ayāṣhī, champion of the holy war against the Christians, had added al-Gharb and al-Habāṣ to his territory. Muhammad Shaikh al-Aghar succeeded in getting himself proclaimed at al-Marrākeṣh in 1636 (1045) but he was confined to this one town of his. Even there Karīm al-Hādī, a kind of mayor of the palace, seized the

power on the death of the Sultān. He imprisoned Ahmad al-'Abbās, son and successor of the ruler Muhammad Shaikh, and put him to death (1654 = 1064). With the latter the Sa'dian dynasty disappeared, after lasting about a century, just at the time when that of the 'Alawī Sharīfs, originally of Tafilalt, began to establish themselves in the north of Morocco.

Order of succession:

1. al-Kā'im, proclaimed in 1509 in al-Sūs;
2. { Muhammad al-Mahdi, proclaimed with his brother in 1524;
3. { Ahmad al-'A'radī, proclaimed with his brother in 1524;
3. Muhammad al-Mahdi alone; he was proclaimed at Fās in 1554;
4. 'Abd Allāh al-Ghālibī, proclaimed in 1554;
5. al-Mutawakkil, proclaimed in 1574;
6. 'Abd al-Malik, also called Mulāy Mulūk, proclaimed in 1576;
7. Ahmad al-Manṣūr, proclaimed in 1578;
8. { Abū Fāris 'Abdallāh, proclaimed in 1605;
9. { Zidān
9. { Muhammad Shaikh al-Ma'mūn, proclaimed in 1605;
9. 'Abd al-Malik b. Zidān, proclaimed in 1630;
10. al-Walid, proclaimed in 1635;
11. Muhammad Shaikh al-Aghar, proclaimed in 1603. He died in 1654. His son, Ahmad al-'Abbās, never reigned but was assassinated in the same year; with him the line became extinct.

ṢADIḲĪ, the name given by Tipū Sultān of Mysore (1197—1213 = 1782—99) to a gold coin of the value of two pagodas, weighing 106 grains (6.86 grammes). The name is derived from the well-known epithet of Abū Bakr [cf. the art. *ṢADIḲ*], in accordance with Tipū's custom of naming his denominations after *khalfas* or *imāms*.

(J. ALIAN)

SA'DIYA or **DIHAWIYA**, an order of dervishes named after the founder SA'D AL-DIN AL-DIHAWI, i. e. of Dihā, "between the Hawrān and Damascus". His death-date is variously given as 700 and 736 A. H.; and the accounts which we have of him are clearly fabulous. According to the *Khawāṣṣ al-Aghar*, i. 34, his father was the Shaikh Yūnus al-Shalbānī, a pious man, whom in his youth he disobeyed, becoming a leader of banditti in the Hawrān; owing, however, to his father's prayers he was favoured with a vision which resulted in his conversion. The authority followed by Depont and Coppolani makes him practise severe asceticism, and visit various sanctuaries, including Mekka; after this he returned to Syria, and founded in Damascus the order which bears his name, but which is traced by a *silila* through

Djunaid, Sari Sakat and Ma'ruf al-Karhi to the inmates of the Prophet's house.

In the *Akhuṣṣat al-Aṭhar*, the author of which died in 1092 A.H., the Hanṣi Sa'd al-Dīn appear as a society (*ṣūfiya*) in Damascus, noted for their piety; there they held a service in the Umayyad Mosque after the Friday prayer, and they possessed a *ṣūfiya* in the district Kubaibūt, whence the descendants of the founder took the name Kubaibūt (i. 33 and ii. 208). The biography of Muhammad known as Ibn Sa'd al-Dīn, who became *shaikh* of the society in 986 A.H. (ibid., iv. 160), seems to suggest that the institution began with him; for it records how having begun life as a trader he was miraculously converted at Mekka. With him one of his brothers was associated, and the two divided the duties of the headship between them; presently domestic disputes arose, and this Muhammad became sole head of the society, in which capacity he acquired vast wealth, and became the most influential personage in Damascus. He died in 1030, and was succeeded by his son Sa'd al-Dīn, who died on pilgrimage in 1036.

In this account the Hanṣi Sa'd al-Dīn specialized in the cure of insanity. "On a scrap of paper they draw some lines anyhow, and the patient is cured thereby (i.e. by drinking the water in which the scrap has been immersed). In order to drink it he must abstain from everything spirituous; they then write an amulet which the patient is to use (wear on his person) after he has drunk the potion. The words which they signify by the lines and which they write on the amulet are the *basmala*".

At some time — possibly later than this period — the society spread to Egypt and Turkey; Depont and Coppolani give a long list of its meeting-places in Constantinople and the neighbourhood. They regard the Sa'diya as a branch of the Rifā'iya; but the authorities of J. P. Brown make of it an original order, and, indeed, second in the list. He states (p. 56) that the Sa'di's have twelve *ṭarṭas* in their cap, wear turbans of a yellowish colour and perform on foot. The cloth of the cap which covers the head is in six gores (p. 214); and they wear long hair. They are supposed to possess special powers over snakes.

In Lane's time the order was well represented in Egypt, and on the day preceding the night of the Mawlid practised the ceremony called *dāsa*, wherein the *shaikh* of the order rode on horseback over the backs of the dervishes, who lay flat on the ground with their faces downwards for the purpose. It was supposed that none of them suffered any harm in consequence. This ceremony was forbidden by the khedive Tawfik. After the *dāsa* there used to be an assembly wherein some of the dervishes ate live serpents; according to Lane, the serpents had first been deprived of their poisonous teeth or rendered incapable of biting; all that was eaten of the serpent was the head to the point about two inches further back where the thumb of the dervish pressed. By the time of Lane's second visit this practice had been forbidden by the *shaikh* of the order on the ground that such food was unlawful. The *dāsa* was then followed by a *dāḥir*, where in the formulae employed were *Allāhu ḥayy* and *Yā Dā'im*.

The *dāsa* resembles performances by Sūfis of a much earlier period, who were supposed to override natural laws in a variety of ways. Egyptian historians do not appear to allude to it, unless al-Djāharī have it in mind when he commends the Khawāṭirya system for not enforcing on its members more than they can bear (i. 294 ult.). It does not therefore seem possible at present to say when or whence it was introduced. The practice of snake-charming, whereby followers of the order are said to make their living still in Egypt, is attributed to the founder and explained by fables connected with his conversion.

Writers on Sūfism pay little attention to this order, though it is just mentioned in the *Djāmī al-Uṣūl*, without any specification of its doctrines or practices. The founder is mentioned neither in the *Tabaṣṣūt* of al-Shāṭirī, nor in the *Nafahāt al-Uṣṣ* of al-Djāmī, who suggests that one Sa'd al-Dīn al-Ḥamawī, d. 650 A.H., was the founder of a society. It would seem then that the society began with a medico-magical aim, and by process of development became a mystical order.

(D. S. MARGOLIOUTH)

SĀDJ, the teak tree, *tectona grandis*, a large tree belonging to the verbenaceae with broad lanceolate leaves, "like the shields of the Dailam". It is found principally in the drier parts of Further India, in Burma, Siam and Java and, according to Arabic sources, also in East Africa (Zandj). The dark coloured hard wood resists, as no other does, the effects of sea-water and has therefore from ancient times been the best wood for ship-building. Nor is it attacked by insects. The main markets for it were Basra and Egypt. Ibn al-Baitār (transl. Leclerc, ii.), p. 233, mentions the use in medicine of the powdered wood and of an oil obtained from the fruit.

SADJ is the name given to a peculiar mode of rhetoric in which at short intervals words occur which rhyme, though it is distinguished from poetry (*ṣa'ir*) by not being bound by a regular rhythm or metre. Probably this was the earliest mode of elevated expression practised by the Arabs before the development of the regular metres. There is ample evidence that it was this mode of expression practised by the Kahins [q. v.] of the times of Paganism for their oracles, though the examples cited in the *Sira* of Ibn Hishām and in the traditions can hardly have been handed down correctly. We can safely believe Ibn al-Kalbī that the Arabs remembered nothing of their ancient poetry except that which was composed very shortly before Islām (*Kitaḥ al-Aḡnām*, ed. Cairo 1332, p. 12, 3) and we must assume from this, that no very ancient Sadj has been preserved. I believe, however, that we are safe in allowing that the various Talhiyāt, or shouts uttered by pilgrims to the many shrines, as recorded by Ibn al-Kalbī (*Aḡnām*, p. 8) and elsewhere, are handed down correctly as they must have been in vivid memory at the beginning of Islām. Such Talhiyāt were, no

doubt, ancient ritual property of the tribes and go back to remoter antiquity than the Sadj^h speeches of Kuss b. Sa'ida and other rhetoricians of pre-Islamic times. We are told that Damsa b. Damsa, al-Ak'ra b. Hābis and others used to give their judgments in Sadj^h when they acted as judges (Djāhiz, *Bayān*, i. 113, a). Muhammad reproved a man who used Sadj^h by saying: "Do you speak Sadj^h like the Kāhins of Paganism?" (Djāhiz, *Bayān*, i. 112, a); he also prohibited it to be used in prayers (Bokhārī, ed. Juynboll, iv. 194, a). Yet the most striking of Sadj^h is the Qur'ān itself; especially the older Sura's are kept to the same tone as the specimens of the oracles of the Kāhins quoted by Ibn Hishām, as e. g. the oracles of Shakk and Saffi (*Sura*, p. 11 etc.). Later authors, Djāhiz, al-Kall and others delight in citing descriptions of weather, persons etc. in Sadj^h attributed as a rule to anonymous Bedouins. These quotations are probably in all cases inventions by philologists to enable them to explain the many difficult words, which could not have been accumulated as easily in a forged poem of regular metre. There was, however, from early time a predilection for this style of prose, which found its fullest development in the literature of the Makmāt of Badī' al-Zamān, Hariri and their imitators. The style unfortunately found its way into letter-writing, and while the earliest specimens of letters, both private and official, are remarkably free from Sadj^h, with progress of time its use increased to such an extent, that both private and official correspondence became conspicuous for the volume of rhymed sentences with very little meaning. It was considered the height of accomplishment in a secretary to write in Sadj^h. The style was called *Mansūdj* but the matter was the same. Sadj^h invaded other branches of literature, even the chronicles, of which conspicuous specimens are in Arabic the *Ta'rikh al-Yamīni* and 'Imād al-Dīn's writings and in Persian the history of Wazir. In both these works everything is sacrificed for the jingling rhymes. This exuberance of Sadj^h may be due to the bad taste of the Persians who from 'Abbāsid times increasingly took a larger share in Arabic letters; the disease seems to spread gradually towards the West and has become one of the main causes why so much of Muhammadan literature, whether Arabic, Persian, Turkish or any other language under their influence, does not appeal to European tastes.

(F. KRENKOW)

SADJĀH, Umm Sādir bint Aws b. Hikm b. Usāma, or bint al-Harith b. Suwaid b. 'Ukfa, prophetess and soothsayer, one of several prophets and tribal leaders who sprang up in Arabia shortly before and during the *rida*. The genealogy, which her history proves to be the true one, shows that she belonged to the Banū Tamīm. On her mother's side she was related to the Taghlib, a tribe which comprised many Christians. She was a Christian herself, or at least had learnt much concerning Christianity from her relatives. Next to nothing is known concerning the import of her revelations and doctrines; she delivered her messages from a *minbar*, in rhymed

prose, and was attended by a *mu'adhḥin* and a *ḥajjib*. Her name, or one of her names, for God was "the Lord of the clouds" (*rabb al-sāqāt*).

Sadjāh came to the fore in 11 A. H., after Muhammad's death. One account of her exploits describes her as a Taghlib apatart, who had arrived from Mesopotamia at the head of a band of followers belonging to Rabi'a, Taghlib, the Banū al-Namr, the Banū Iyād, the Banū Shaibān; she found the Tamīm divided, in consequence of the Prophet's death, by deep internal strife between apostates, Muslims and those who wavered between revolt and allegiance to Medina, and succeeded in converting by her revelations and uniting under her command both branches of Hanzalah (the Banū Mālik and the Banū Yarbū'), which she intended to lead against Medina. The extent of her influence on the Tamīm seems, however, to have been much greater than this version, intended to minimize their share in the *rida*, would have us believe. The prophetess was no outsider, she really belonged to the Tamīm, as the end of her career implies, and had gained, probably for some time before Muhammad's death, the support of her whole tribe, whose conversion to Islām had been mainly a matter of expediency, easily shaken off.

Sadjāh's forces began by attacking the Banū Ribāh, in obedience to one of her revelations, and were severely beaten. Repairing to al-Nibādī (in Yamāma) they suffered a second defeat at the hands of the Banū 'Amr, and Sadjāh had to promise that she would leave the territory of the Tamīm. Followed by the Yarbū', she decided to join the prophet Musailima, who still controlled most of Yamāma, in order to unite their fortunes or to restore her own. Their encounter happened at al-Amwāh or at Hadjr. Musailima was menaced by the Muslim army, and the neighbouring tribes threatened to shake off his authority, so that the arrival of a vanquished, ambitious and desperate colleague, accompanied by many armed followers, was a trying, indeed a dangerous visitation. There is no reliable account of the meeting; according to one version, the strange couple came to an understanding, recognized each other's mission and decided to unify their two religions and their worldly interests; they were actually married, and the prophetess stayed by Musailima to the hour of his tragic death. Al-Tahari preserves obscure and very probably fictitious details concerning this union, which must have been rather a political alliance than a lustful orgy; the wedding, according to these legends, was celebrated in the same walled garden where Musailima was to meet his death.

Other accounts of the meeting are that Musailima, after having married Sadjāh, cast her off, and that she returned to her people; a third version does not mention the marriage, and says that the prophet tried to persuade his rival and would-be ally to attack the Muslims, hoping thus to get rid of her; on her refusal he offered, if she consented to depart, half the year's crops of Yamāma; she declined to go unless he promised half of the next year's harvest as well, set off with the first part of the booty, and left her representatives with Musailima to wait for the rest, repairing to her kinsfolk. The second part of the ransom was never collected, as Musailima was vanquished and massacred by Khalid before the next harvest.

Whatever the outcome of Sadjāh's relations with

Muallima, her own career was either merged into his, or cut short by repulse, and we hear nothing more of her mission. According to all accounts, she went back to her native tribe, and lived obscurely amongst them. On Ibn al-Kalbi's authority we learn that she embraced Islam when her family decided to settle in Bagra, which had become the principal centre of the Tasim under the Umayyads, lived and died there a Muslim, and was buried with the customary prayers and ceremonies.

AL-SADJĀWANDĪ ABU 'L-FADL (according to others **ABU 'ABD ALLĀH OF ABU DĀ'FAR**) MUHAMMAD B. TAIFUR AL-AḤMADĀWĪ, reader of the *Qur'ān*, died about 560 = 1164/5. While he also occupied himself with *Qur'ān* exegesis and grammar, he is mainly known by his works on the recitation of the *Qur'ān*. At quite an early period a beginning was made with distinguishing different kinds of pauses in reciting the *Qur'ān* [see the article *ḲIRĀ'Ā*]. Al-Sadjāwandī further developed the system in his work on this subject entitled *Kitāb al-Waḥf wa'l-Ibtidā'*. He divided the possibilities of allowing a pause to intervene into 5 categories and in addition instituted as an abbreviation for each a letter of the alphabet: 1) *waḥf lāzim* (و), 2) *w. muṣṭaḥ* (ط), 3) *w. dī'is* (ذ), 4) *w. muḥṣanaw liwaḥf* (س), 5) *w. muḥṣanaw liwaḥf* (ق or د). His system was soon generally adopted in a somewhat extended form and therefore in the later eastern copies of the *Qur'ān* (except the Maghribi) we find pause marks, which are either placed according to his system or are at least dependent on it.

AL-SADJĀWANDĪ SIRĀJĪ AL-DĪN ABU ṬĀHIR MUHAMMAD B. MUHAMMAD B. 'ABD AL-RASHĪD, jurist, belonging to the Ḥanafī school and flourishing about the year 1200 A. D. His *Kitāb al-Farā'id*, known as *al-Farā'id al-Sirāḍiyya* or briefly *al-Sirāḍiyya*, which deals with the law of inheritance, is celebrated and widely used and regarded as the principal work on this field. The author himself was the first to write a commentary on it and since then it has been frequently edited and annotated by other scholars down to the present time, sometimes also in Turkish and Persian.

(R. PARET)

SADJDA, Prostration (see *SUNNĪ*). The word has almost the same value in practice as our "adoration". It is used as the title of two *sūra's* (xxxii and xli) which are distinguished from one another by the opening letters; the second is called *ḥ-m al-Sajda*, because it begins with the letters *ḥ-m*. The ideas and the subject in these two *sūra's* are analogous; the Prophet presents the revealed book, praises the pious who believe, give alms and perform the *ṣalāt*, threatens the impious and reveals the signs of God in nature. Nöldeke puts these two *sūra's* down to the third period; in the second the Prophet is said to have had in view the conversion of the Meccan notable 'Otba b. Rab'ā. *Sūra* xxxii was also called *al-Maḍāḡi* "couches" and *al-Djurn* "barren soil", *Sūra* xli *Fuṣilat*. "They believe only in our verses; when they are recited to them, they fall prostrate or rise from their couches calling upon their Lord". Pious readings and night prayers were already in use among the devout at the period when these *sūra's* were published.

Bibliography: The *Qur'ān* and its commentaries; Th. Nöldeke-Schwally, *Geschichte der Qurān*, Leipzig 1909. (CARRE DE VAUX).

SADJĀDA (A., plural *sadjjādāt*, *sadjjādāt*, *sawwājīd*), the carpet on which the *ṣalāt* is performed. The word is found neither in the *Qur'ān* nor in the canonical *Ḥadīth*; the article itself, however, was known at quite an early period, as may be seen from the traditions about to be mentioned. In the *Ḥadīth* we are often told how Muhammad and his followers performed the *ṣalāt* on the floor of the mosque in Medina after a heavy shower of rain with the result that their noses and heads came in contact with the mud (e. g. al-Bukhārī, *Aḥādīth*, bāb 135, 151; Muslim, *Sayām*, trad. 214—216, 218 etc.). This shows that at the time when such traditions arose the use of these carpets was not so general that people dated their origin as far back as the time of the Prophet. With this may be compared the fact that in a series of traditions the saying is put into Muhammad's mouth that it was his privilege in contrast with the other prophets that the earth was for him *matjīd wa-ṣakūr* (e. g. al-Bukhārī, *Tayammum*, Bāb 1; *Ṣalāt*, bāb 56, etc.). Al-Tirmidhī (*Ṣalāt*, bāb 130) also tells us that some *ṣaḥāba* prefer the *ṣalāt* on the bare earth and in modern Egypt and Morocco persons of the lower orders do not use these mats at all.

The canonical *Ḥadīth* gives us the following picture. Muhammad performs the *ṣalāt* on his own garment, protecting his arms against the heat of the soil during prostration with one of its sleeves, his knees with one end and his forehead with the *'imāma* or *ḥalawūṣ* (al-Bukhārī, *Ṣalāt*, bāb 22, 23; Muslim, *Matājīd*, trad. 191; Ahmad b. Ḥanbal, *Musnad*, i. 320). On the passage quoted from Muslim, al-Nawawī observes that, according to al-Shāfi'ī, it is forbidden to prostrate oneself on the garment one is wearing. Al-Bukhārī (*Ṣalāt*, bāb 22) tells us that Muhammad performed the *ṣalāt* on his quilt (*ṣawāḥ*).

The *Ḥaṭṭh* also informs us that the *ṣalāt* was performed on mats; e. g. al-Tirmidhī, *Ṣalāt*, bāb 131, where a *ḥiṣṣ* is mentioned (so also Ibn Māḍja, *Iḥkāmāt al-Ṣalamāt*, bāb 63; Aḥmad b. Ḥanbal, i. 232, 273; iii. 160, 171, 184, 212); in

the latter passage it is observed that this *ḥiṣṣ* was made out of palm-leaves, *ḥiṣṣ al-naḥl*. Al-Tirmidhī adds that most scholars permit the *ṣalāt* on *ṭunṣūn* or *ḥiṣṣ*. A similar mat of palm-leaves on which the *ṣalāt* was performed is called

Fig. 1
Turkish Sadjdjāda
1.72 × 1.27 M.
Turkey, 16th century¹⁾

¹⁾ Reproduced from F. Sarre and F. R. Martin, *Die Ausstellung von Meisterwerken Muhammedanischer Kunst in München 1910* (Munich, F. Bruckmann A.-G., 1912). Here the characteristic outlines are given only.

ṣaṭṭ (e. g. al-Bukhārī, *Ṣalāt*, bāb 20; Aḥmad b. Ḥanbal, iii. 52, 59, 130 sq., 145, 149, 164, 179, 184 sq., 190, 226, 291). This tradition is also found in Muslim, *Maṣāḥid*, trad. 266; al-Nawawī observes on this passage that the *fakih* generally declared the performance of the *ṣalāt* permitted on whatever grows out of the earth. It is, however, evident from Abū Dāwūd, *Ṣalāt*, bāb 91,

that at the end of the third (ninth) century dressed skins of animals were already being used (*farwa waṭṭuḡha*).

At the same time we frequently find it mentioned that Muḥammad performed the *ṣalāt* on a *ḥumra* (al-Bukhārī, *Ṣalāt*, bāb 21; Muslim, *Maṣāḥid*, trad. 270; al-Tirmidhī, *Ṣalāt*, bāb 129; Aḥmad b. Ḥanbal, i. 269, 308 sq., 320, 358;

il. 91 sq., 98; al-Nasā'ī, *Mustajjida*, bāb 43; Ibn Sa'd, I/II, 160). The distinction between *ḥumra* and *ḥajir* appears to have lain not in the material of which they were made but in the size. According to Muḥammad b. 'Abd Allāh al-'Alawī's marginal glosses to Ibn Māǧīa, *ḥumra*, bāb 63, 64, the *ḥumra* afforded just sufficient room for the

prostration, while the *ḥajir* was of the length of a man.

The word *sadjjāda* is found a century after the conclusion of the canonical Ḥadīth literature. Al-Djāwharī, *Ṣaḥāḥ*, s. v., explains *sadjjāda* to be synonymous with *ḥumra*. In his *Supplement*, Dozy quotes passages from the 1001 Nights

Fig. 2
Persian Sadjdjāda

and Ibn Baṭṭūta. The latter mentions among the customs of the inmates of a certain *zāwiya* in Cairo that the whole body went to the mosque on Friday, where a servant had laid his *sadjjāda* ready for each one (ed. Paris, I, 73; cf. 72). The same traveller tells us something similar regarding Mālli, where every-one sends his servant with his *sadjjāda* to the mosque to lay it ready on his place. He adds that they were made out of the leaves of a palm-like tree (IV, 422).

In modern Mekka every one in the great mosque performs the *ṣalāt* on a *sadjjāda*, usually a small carpet, just large enough for the *ṣalāt*. After use it is rolled up and carried off on the shoulder. The lower orders believe that it is not advisable to leave the *sadjjāda* unrolled after use as Iblīs would seize the opportunity to perform the *ṣalāt* on it. Well-to-do people have sometimes their *sadjjāda* kept by a servant of the mosque but even among them this is not at

all general. In place of a carpet a towel is sometimes used, for example the one which has been used for drying oneself after the *maḡḡ*. The lines woven in the carpet are not symmetrical but run to a point on one of the short sides which is

placed in the direction of the *kibla* [q. v.]; cf. below Lane's "niche" (this information has been given me orally by Prof. C. Snoeck Hargrunje).

In Morocco the common people do not make any use of the *S.*; the middle classes favour small

Fig. 3

felt carpets (*āḥḥa*) like saddle cushions, just large enough for performing the *sadjā*. They are especially used by the *ṣaḥḥa*, so that they have almost become one of their distinctive marks. They fold them and bear them under their arm in an ostentative way, wherever they go, and

sit down on them especially when visiting Christians. Certain *ṣaḥḥa* from Morocco, when travelling in Algeria, even refuse to sit down on anything besides their *āḥḥa*, a pretentiousness which hurts the feelings of people in Algeria. In the latter country the *S.* is very rarely used, except among

the heads of the *tarika's* and various *marabout's*. Here the *Sadjidjada's* usually consist of simple skins of goats or gazelles. The common people ascribe miraculous powers to these skins; in legends the *marabout's* are often represented as using them in order to have themselves transferred thereon to Mekka or to walk on the waves. Occasionally the pilgrims bring home from Mekka *sadjidjada's* analogous to those described above by Prof. Snouck Hurgronje; these rugs are nowadays often imported from Europe. The pilgrims do not seem to attach to them any particular value (this information has been given me by Prof. H. Basset).

According to Lane, *sadjidjada's* (carpets) are imported from Asia Minor into Egypt and used there only by the rich to perform the *salat* upon and also as saddle-covers. They are about the size of a wide hearth-rug. A "niche" is represented upon it, the point of which is turned towards the *qibla*. Persons of the lower orders often perform the *salat* upon the bare ground simply; and they seldom immediately wipe off the dust which adheres to the nose and forehead as a result of prostration (cf. the well-known traditions regarding the traces of the *sadjidjada*); but when a person has a cloak or any other garment, which he can decently take off, he spreads it upon the ground.

The usual practice in the Dutch Indies is described by Snouck Hurgronje. A number of long narrow mats and carpets are placed broadwise on the floor of the mosque before the beginning of the service. After the service these are rolled up and laid aside (*De Islam in Nederlandisch-Indië*, Batavia 1913, p. 10; *Verzamelde Geschriften*, iv/ii. 366). But it is usual here also to bring one's own mat to the mosque.

As Dr. J. H. Kramers tells me, the carpet which covers the floor of the Aya Sofya is divided up by patterns into separate *sadjidjada's*, but in performing the *salat* this separation is not observed.

In the chapel in the Scagliio in Constantinople, in which are preserved the relics of the Prophet, the alleged *sadjidjada* of Abū Bakr is preserved (d'Ohsson, *Traité de l'Empire Ottoman*, Paris 1787—1820, i. 267). In Barbier de Meynard, *Dict. Turco-français*, we find, s. v., a number of Turkish phrases in which the *sadjidjada* plays a part.

The *sadjidjada* has assumed special significance in the religious societies and in the Dervish orders. Among the latter — at least in Egypt — the word has become synonymous with order in the expression *Shaykh al-Sadjidjada*, which is applied to the head of an order in Egypt.

In the terminology of these societies, *sadjidjada* alternates with *Naq* (cf. above) and expressions borrowed from other languages. According to the hierarchic legend, Gabriel brought Adam a *sadjidjada* made out of the skins of the sheep of Paradise, on which he had to kneel during the *ghadd* ceremony. This *sadjidjada* *al-ghaddiya* was the one used by all succeeding generations in the same ceremony; Maḥammad, Abū Bakr, 'Umar, 'Uthmān and 'Alī are especially mentioned. From 'Alī it has been passed on to the *shaykhs* of the order down to the present day. The *Shaykh* therefore sits on this *sadjidjada* during the *ghadd* ceremony and the expression *shaykh al-farīd(a)* makes the *sadjidjada* in a certain sense the throne of the whole order. Before the beginning of the *ghadd* ceremony it is spread by the *naqib* whose duty

this is. The *Shaykh* sits down ceremonially after his seat, as it were, has been broken by its being spread out. The candidate on whose account the ceremony is being performed stands, on the other hand, on the *biḥḥ al-ḡam*. From the descriptions it is not always clear, whether by candidate is meant an ordinary novice or rather a *naqib*.

A whole series of mystical interpretations is associated with the *sadjidjada* or *biḥḥ*. Head, foot, etc. are ascribed to it as to a living animal; it has four letters, which are connected with the elements; references are found to the *sadjidjada* of the path of salvation and the *sadjidjada* of the *ṣūfī* profession is called the *sadjidjada* of the faith. Accounts are given of the material of which the *sadjidjada's* of various people were made or are made, as well as of their colour (cf. the picture in *Der Islam*, 1916, vi. 170).

(A. J. WENSINCK)

SADIJIDS, a family which takes its name from the founder of the dynasty, Abū 'I-Sādī, and which ruled in Adhakhaidjan under the nominal suzerainty of the 'Abbāsid Caliphs at the end of the third (ninth) century and the beginning of the fourth (tenth). It comprised five rulers:

1. Abū 'I-Sādī Dīwād b. Yūsuf Dīwād, a native of Oghruzan, a Turkish general in the service of the Caliph al-Mutawakkil, who was appointed to take charge of the road to Mecca in 242 (856), returned to Baghdad in 252 (866) and was then sent to recover the taxes in al-Sawād on behalf of Muḥammad b. 'Abdallāh b. Tāhir; he was then appointed governor of Aleppo and Kinnasrin under al-Mu'tazz in 254 (868) and of al-Ahwāz in 261 (874—875); in this capacity he wished to fight the Zangī, who, having defeated his son-in-law, 'Abd al-Rahmān, had seized al-Ahwāz. Having taken the side of Yūsuf b. Laith, the Saffarid, he lost his estates after the defeat of the latter by the ruler al-Muwaffak in 262 (875—876). He was then recalled to Baghdad, but died on the way at Qundal-Sāḥūr in 266 (879—880).

Dīwād in Persian means "given by the demon" and *Dīwād* "he who has the hands of a demon". The alternation of *ī* for *ā* which is sometimes found in the manuscripts indicates an old pronunciation *dīwād*, *dīwād*.

2. His son Muḥammad Afshin Abū 'Uḥād took Mecca from the lieutenant of the chief of the Zangī, Abū 'I-Mughira 'Isā b. Muḥammad al-Makhlūf in 266 (880). Three years later he attacked Dīdda and captured two ships filled with money and munitions from al-Makhlūf. He was given the governorship of Asbār, Tarīk al-Furāt and Raḥba. On the death of Ahmad b. Tulun [q. v.] in 270 (883—884) he tried to conquer Syria in alliance with Ishāk b. Kandalak. They were assisted in this enterprise by the army of the Caliph, which defeated the Egyptian forces at Shaizar, but was itself defeated as the result of an

ambuscade at the battle of the mills (*ṣawāḥib*). After a quarrel with Ishāk b. Kendaḡlīk, Muhammad turned towards Khumirawāh, defeated his former ally on the Euphrates and conquered Mawṣil. In 274 (888) he quarrelled with the Egyptians, lost a battle near Damascus in Muḥarram, 275 (May-June, 888), lost Hims, Aleppo and al-Rahla and retired to Takrit. He took the field again and defeated, before Mawṣil, Ishāk b. Kendaḡlīk, who was pursuing him.

In 276 (889-90) al-Muwaffak appointed him governor of Adharbaidjan. He then took Marāgha from 'Abdallāh b. Ḥasan al-Hawādḡhī (280-893) and was sent by the Caliph to carry gifts — a royal crown and other presents — to the Bagratid Sempad, king of Armenia. His brief rebellion against al-Mu'taḡid in 284 (897) ended in his prompt submission and cost him nothing. He took Kāza, which belonged to Sempad, as well as his capital Tovin. They then made peace. Muhammad died of the plague at Berda's in Rabi' I, 283 (March, 901).

3. Yūsuf, brother of Muhammad Afshā, after having forced his nephew Dīwād, son of N° 2, to break himself to the Caliph's court, entered into friendly relations with Sempad, and made an alliance with him; he then took the side of Kakeg Artāwūt, captured several fortresses, put Sempad to death who had surrendered to him, captured Rai, Karwin, Zandjan, Abhar from Muhammad b. 'Alī Sulṭān, governor for the Sāmānid Negr b. Ahmad. He defeated the troops sent against him by the Caliph in 305 (917-918). He was, however, forced to give up Rai. He defeated Mu'nis, who took refuge in Zandjan in 307 (919), but the latter defeated him before Ardabil, took him prisoner, treated him with consideration and brought him to Baghddād. He was set free in 310 (922) and was granted the governorship of Rai and Adharbaidjan. The Caliph appointed him to fight the Kartatians, but he was defeated and taken prisoner in the first battle, in spite of his valour. He was put to death with all the prisoners.

4. In Dhu 'l-Hijja, 315 (Feb., 928) Abu 'l-Muḥṣir Fath, son of Muhammad Afshā, was given his uncle's governorship and remained governor till his death; he was poisoned at Ardabil by one of his slaves in Sha'ban, 317 (Sept., 929).

5. His son Abu 'l-Faraj was a general of the Caliph and a friend of the first Amir al-Umara', Ibn Rāḡh.

(CL. HUERT)

ŞADR AẒAM (for *ṣadr-i-aẓam*), strictly "the greatest of the high dignitaries", a title which from the time of Sulaimān the Magnificent has been borne by the first minister or "grand

vizier" of the Ottoman empire, also called *ṣadr-i-āzā*, *ṣāhib-i-dawlat*, *darsh-i-akram*, *ṣadr-i-penāh*, *ṣadr-i-aẓam* (from the name of the legendary minister of Solomon), etc. (cf. below). Earlier he was called *wasir* (see *WAZIR*), then *wasir-i-sawar* (*aẓam*, *akbar*). After the suppression of the "viziers of the dome" (*ḡubbe wasirleri*) under Ahmad III, the *Ṣadr aẓam* were appointed by no fixed rule, at the Sultān's pleasure. The official chosen received and kept always by him a gold ring with the Sultān's seal. In his capacity of *ṣāhib-i-muḥr*, he was the plenipotentiary (*wasil-i-muḥṣir*) of the sovereign in civil and military matters and made appointments to all the military (*akhi-sayf*) and civil (*akhi-sulṭan*) offices. The legal officers (*qānūn*) were under the *Shāikh al-Islām* [q. v.], appointed, like the *Ṣadr aẓam*, by the Sultān himself.

The *Ṣadr aẓam* presided over the *Diwān*, held monthly audiences, received the principal officials twice a week, made rounds (*ḡor*) periodically and rendered assistance in case of fire. He had the right to eight guards of honour (*ḡāfir*), twelve led horses (*ḡadek*), a barge with thirteen pairs of rowers, with a green canopy. When he appeared in public the *ḡannā* shouted acclamations (*al-ḡāḡ*), the formula of which was Byzantine in origin. He had the privilege of being able to go to the Sultān personally at any hour of the day or night.

In case of war, the *Ṣadr aẓam* could become commander-in-chief — *Sardār-i-akram* (*efkhem*) — and carried with him the standard of the Prophet (*Sandḡah-i-ḡāfir*) [q. v.]. A deputy (*ḡā'im muḥṣir*) [q. v.] replaced him in the capital.

Like the Khedive of Egypt, the *Ṣadr aẓam* had the right to the honorary epithet of *darsh-i-fikhamatli*, or "Highness", besides the other epithets to which he was entitled: *ḡām*, *ḡā* "sublime" and *ḡāḡ*. Like the *ḡapudan paḡa*, before the reforms of Mahmūd II, he wore a white hat (*ḡalamī* for *ḡullamī*), shaped like a truncated pyramid with rounded corners, adorned with an oblique band of gold.

The office — *ṣadr-i-aẓama* (*ḡubra*) — was innocuous and ephemeral. The dismissed *Ṣadr aẓam* handed over his seal at an audience and went into exile, when he was allowed to live. Not being hereditary, the office was only exceptionally continued in the same family (the *Koprulu*).

After the constitution of 1908 the Grand Vizier became responsible to parliament; the Sultān continued to nominate the *Shāikh al-Islām* as well as the *Ṣadr aẓam* and it was the latter who chose his other colleagues. These two dignitaries, however, disappeared with the Sultān himself in 1922 (law of Angora of Nov. 1). The last *Ṣadr aẓam*, Dāmīd Ferid Paḡa, died at Nice on Oct. 6, 1923. The President of the Council is now called *Baḡh Wāḡh*, a title which Mahmūd II had tried to establish in 1838.

ŠADR AL-DĪN, MUHAMMAD B. ISHĀH, known as MULLĀ ŠADRĀ, a Persian theologian and philosopher of the Safawid period. He was the son of a governor of Fārs and owed his epithet to his superior merit; he is still called Akhūnd, "master". Born at Shirāz, he spent a long time in retirement among the mountains of Kūm, travelled in Persia and was a pupil, at Isfahān, of Šāikh Bahā' and of Amīr Muḥammad Bāqir Dāmād, after the instructions of Saliyid Abū 'l-Kāsim Firdirisi.

When Allāh-Wardkhān, governor of Fārs, had finished building the minaret erected by him in Shirāz, he asked Šadr, then at Kūm, to return to his native land and made him professor in his new foundation.

Mullā Šadr restored the teaching of Ibn Sīnā (Avicenna); to escape persecution from the *mudṭabid*, he concealed his doctrines by the use of the *šimās* under deliberately obscure expressions. Among his pupils were Muḥsin Fā'ī, 'Abd al-Razzāq and Kāzī Saliyid al-Kummi. He seven times made the pilgrimage to Mecca and died at Bagra in 1050 (1642) on his way back from the seventh.

A prolific writer, he wrote some twenty volumes, of which some are commentaries on different chapters of the Korān, a dissertation on authentic traditions, fifty treatises on theodicy, forty-four works on obscure points of doctrine, written in the mountains of Kūm, and four books of travels quoted by Riḍā-Kulī-Khān. The British Museum possesses the *Tūn* for *mudṭabihāt*, a polemic against the teachers of canon law and a defence of the dervishes, and *al-Wāridāt al-Ḥalīya* "the intuitions of the heart".

al-ŠAFĀ, a mound at Mecca which now barely rises above level of the ground. The meaning of the name is like that of the name of the eminence al-Marwa, which lies opposite to it: "the stone" or "the stones" (cf. al-Tabari, *Tafsīr* to Sara ii. 153).

As is well known, Muslims perform the *sa'y* between al-Šafā and al-Marwa in memory, as the legend relates (e.g. al-Bukhārī, *al-Anbiyā*, bāb 9), of the fact that Hājar ran backwards and forwards seven times between these two eminences to look for a spring for her thirsty son. — It is certain that cults were located at al-Šafā and al-Marwa even in the pagan period. According to most traditions there were two stone idols there, one on al-Šafā and Nā'ila on al-Marwa, which the pagan Arabs on their *sa'y* used to touch. On the origin of these images the following story is given in the commentary of Nisā'iri on Sūra ii. 153, and al-Shāfi'ī gives his approval to it: Iṣṭ and Nā'ila were guilty of indecent conduct in the Ka'ba and were therefore turned into stones, which were placed on the two pieces of raised ground al-Šafā and al-Marwa to be a warning to all. In course of time the origin of the stone

figures was forgotten and people began to pay them divine worship. — According to another tradition there were copper images there (cf. Snouck Hurgronje, *Het Mekkaansche Feest*, p. 26); according to a third story demons lived on the two hills who shrieked at night (given in al-Tabari, *Tafsīr*).

ŠAFAD, a town in Upper Galilee, 30 miles East of 'Akkā and N.E. of the Lake of Tiberias, about 1600 feet above sea level on a hill which al-Dimaghki calls Kan'an (so also Cuinet) and which is called Dībil 'Amīla in Yāqūt, iii. 399 (whose statements are otherwise wrong; on this see Gaudefroy-Demombynes, p. 23). It was only through the Crusades that it first attained importance, for before the 13th century it is not mentioned by any Arab geographer. But it must have already existed in the second century, as Sephath is found in the Jerusalem Talmud (Tract. Roḥe Hashaḡa, ii. 2; in Schwab's translation, vi. 75); it is probably also identical with Šaf in Josephus, *Jelium Judaeorum*, vol. II, ch. xx. § 6. The older Arabic orthography *Šafat* or *Šifat* agrees with this. Al-Kalkashandī gives etymological notes on both forms of the Arabic name.

Šafad is one of the places where the Crusaders built fortresses to defend the strip of coast conquered by them against the aims of Damascus and later against the Aiyūbids; with the fortress of Belvoir (= Šhafīk Amūn) it formed a point of support for the hinterland of 'Akkā. Its history is therefore closely associated with that of Akro. The citadel probably built about 1140 by the Crusaders was the special property of the Templars (al-Dāwīya); in 1157 King Baldwin of Jerusalem was forced to take refuge there when he was defeated by Nūr al-Dīn's troops as he returned from the town of Bānās. After Saladin's great victory over the Crusaders at Ḥaṭṭin (1187) he laid siege to Šafad and took personal direction of the operations next year, when he succeeded in capturing the town after five weeks' resistance on the 14th of Shawwāl, 584 (Dec. 6, 1188). Saladin's biographer, Ibn Shaddād, describes in great detail how Saladin unceasingly took part in the siege operations. The garrison went off to Tyre. This capture was considered very important by the Muslims as the town lay "in the midst of their lands" (Ibn al-Athīr). In 1219 or 1220 the fortress was razed to the ground by the Muslims as they feared that the Franks might capture it again and, indeed, in 1240 Šafad was actually ceded by al-Šallī Imā'īl, Sultān of Damascus, by treaty to the Templars (as was Šhafīk Arḍūn also) because Imā'īl thereby hoped to gain the Franks as allies against his cousin, the Egyptian Sultān. After the Khwarizms storm had swept over Galilee in 1244, the Mamlūk Sultān Balbars [q. v.] advanced against the fortress and took it after eleven days' siege in 1266 (Šahān 19, 664 = May 26, 1266, according to Ibn al-Athīr; the European sources put it some years later). The whole garrison was put to death in spite of the pledge given. Balbars also strengthened the defences and built a mosque there. 'Akkā next fell in 1291.

Under the Mamlûks Şafad remained an important centre. It was the capital of one of the large *mamlûka*'s or *niyâba*'s into which Syria was divided. The *niyâba* of Şafad comprised the whole of Galilee with 'Akka. The town itself was the seat of a *na'ib* and was a centre of literary life, as Ibn al-Nabâ al-Şafadî of several Arab authors shows, notably that of the biographer Khalîl b. Aḥak, who was born there in 696 (1296); the geographer al-Dimashqî is said to have died there in 1327 (Mehren, p. vi., infra). In this period there also flourished al-Uḥmîrî, chief *ḳāḍî* of the *mamlûka* of Şafad (d. 780 = 1378; cf. Brockelmann, *Gesch. Arab. Litt.*, II, 91), who wrote a *Tarîkh Şafad* now lost. Şafad was at the same time an important centre of Rabbinical learning.

The town gradually began to lose in importance. After surrendering to the Ottoman Sultan Selim I in 1516 without striking a blow along with other towns in Palestine, the old *niyâba*'s at first remained intact but later, in the XVIII century, the whole of Palestine belonged to the great pashalîk of Damascus. Şafad was the capital of a *sanjak* to which also belonged 'Akka and Tyre (Hadjî Khalîfa). During this period Şafad several times belonged to the sphere of influence of the Druse Amîr Fakhr al-Dîn of the Lebanon, who used it as a fortress to protect his possessions in Galilee. At Şafad in 1633 is also said to have taken place the battle in which 'Alî, the son of the Amîr, was killed.

When about 1750 'Akka again became important under Shaiḳh Zâhir, the strategic importance of Şafad also increased once more. Zâhir himself came from Şafad where his father, Shaiḳh 'Umîr al-Zaidânî, had been representative of the Amîr Bashîr; under his rule the town was almost completely destroyed by an earthquake (1759). Ahmad Dîzârî, who succeeded Zâhir in 'Akka in 1775, at the same time conquered Şafad, and Bonaparte before his unsuccessful siege of 'Akka had first to take Şafad (1799), where he entrusted the authority to a son of Zâhir. Dîzârî later revenged himself on the town by completely destroying the Jewish quarter.

The most important events of the XIX century were the earthquakes of 1819 and 1837 which wrought great damage. After the Turkish administrative reforms of 1830 Şafad became the capital of a *kaḍâ* in the *sanjak* of 'Akka in the wilâyet of Bairût. It is now within the mandated area of Palestine.

The population has varied greatly in course of time. In the XIX century it was a town of average size (Abu'l-Fida'). After the earthquake of 1759 it was an almost deserted village (Volney). The later figures vary very much, which is probably due to the fact that the figures for the town and the *kaḍâ* were not kept separate. The population of the town in 1900 may be put at 15,000, of whom about a third are Jews. In 1492 there were still about 10,000 Jews there. After this their numbers declined very much down to the middle of last century, when a great influx of Moroccan, Algerian and Persian Jews took place, which has been increased since 1880 by Zionist immigration. Şafad is also a place of pilgrimage for Jews. According to Hadjî Khalîfa (p. 568), when the Jewish tribes immigrated the tribe of Zabulon is said to have settled near Şafad. In the vicinity of the town there are now many Dunes (according to v. Oppenheim, 15,000 in the district of 'Akka

and Şafad); their immigration from the Lebanon had already begun in al-Dimashqî's time.

The town itself is built on three hills, of which the Jews inhabit the north. The Muhammadan part has four fair-sized mosques. In the valleys between the hills and on the slopes down to the lake of Tiberias lie fields and gardens belonging to the town, which yield rich crops of wheat, maize, olives, tobacco, cotton and many kinds of vegetables. The splendid view over the lake is generally admired. The ruins of the fortress lie high up the hill and are called al-*Ḳal'a* or al-*Ḳal'a*. Practically nothing is left of the castle of the Crusaders; of the more recent defences there are still to be seen only the foundations of a strong round tower, probably that which was built by Balbars (according to al-Dimashqî, while Conder and Kitchener consider it one of Zâhir's buildings). Below, close to the fort, is a well, of which al-Dimashqî gives a detailed description.

(J. H. KRAMER)

ŞAFADÎ, SALĪḤ AL-DĪN KHAḤIL b. AḤAK b. 'ABD ALLĪH ABU 'L-ŞAYḤ was born in 696 or 697 = 1296/97 (*Durar al-Kāmil*, MS. (B. M., Or. 3034) has about the year 694 A.H.). He was of Turkish descent and, according to his own statement, his father did not give him a good education and it was only when he was 20 years of age, that he began the pursuit of studies. He wrote a very nice hand as is proved by several autographs which have come down to us. He attended the lectures of the very best teachers of his time, among whom are named the grammarian Abū Ḥayyân and the poets Shihâb al-Dîn Maḥmūd, Ibn Sa'īyid al-Nas and Ibn Nubâta. Later he became an intimate friend of the renowned authors Shams al-Dîn al-Dihābi and Tādj al-Dîn al-Subkî. His first post was that of secretary in his native town

of Şafadî, then at Cairo, later he was secretary at Halab, al-Kahla and finally he was in charge of the treasury at Damascus. He was of pleasant manners but towards the end of his life became deaf. He died at Damascus on the 10th of Shawwâl 764 = 1362/63. He was a most prolific author and stated himself in his autobiography that his compositions would fill 500 volumes and that the amount he had written as secretary would come to at least double that quantity. His biographers content themselves with mentioning only the most important of his works, many of them being nearly worthless compilations of verse and prose from modern authors. Besides a prodigious quantity of verse in his own anthologies and works of contemporary and later authors, the following works have come down to us either complete or in part. All are practically compilations from earlier authors, which he very frequently states faithfully. 1) *Wāfi* *al-Wafayāt*, an enormous biographical dictionary is about 30 volumes, of which some are found in many libraries, though I doubt whether the complete work has been preserved. Some volumes are numbered, but volumes with the same contents have at times different numbers, from which it appears that the material of the work was divided into volumes of varying size by different scribes (for the contents of some volumes see Horowitz, *M.S.O.S. Ar.*, xlii, p. 45; while the newer MSS. in the British Museum contain: Or. 6587 'All, Or. 6645 Muhammadīn, 5320 other Muhammadīn). We find in the *Wāfi* many biographies for which we should look in vain in other works of a similar nature and a full index of the names of the persons of whom biographies are found in the known volumes, would form material for a volume of considerable size. The introduction to this work was published by Amar, *J. A.*, 1911-12, in vols. 17-18 and 19. The most exhaustive account of the *Wāfi*, based upon all known manuscripts, is by G. Gabrieli in *R.R.A.L.*, Series 5, vols. xx to xxv 199. From this it appears that the work is preserved practically complete, except for two gaps and the preserved parts contain over 14,000 biographies. 2) *ʿAyūn al-Aʿr wa ʿAʿwān al-Najr*, an extract from the preceding work in six volumes, containing biographies of contemporaries. This work has been largely extracted by Ibn Hajar for his *Durar al-Kināya*. MSS. are probably in the Escorial (Nº. 1717) and Berlin, while the volumes in the Aya Sofya (Nº. 2962-70) appear to be parts of the *Wāfi*. It is quoted in the printed edition (Cairo 1305) of the *Tabaḥṣiṭ al-Khiṣṣat al-Sūfiyya* of ʿAbd al-Rahmān al-Wāsiṭ under the title of *Taʿrīḥ al-ʿAyūn al-Aʿr*. 3) *Masālik al-Aḥqār fī Mamālik al-Amṣār*, a book on geography, a MS. of which is in the Sidiqiya library in Tunis. 4) *Turūḥ al-Awāṣif*, probably another extract from the *Wāfi*, also in MS. in the same library as the preceding. 5) *Tuḥfat Dharrat ʿl-ʾAlḥad*, an *Urjūʿ* on the rulers of Egypt to his own time, abbreviated from a work of Ibn ʿAsākir. 6) *Nukat al-Himyan fī ʾNukat al-Uyūn*, biographies of celebrated blind persons. This work has recently appeared in print in Egypt in a very careful edition, based upon 4 MSS. It was edited by Ahmad Zeki Paşa and dated 1911. After explaining that Şafadî was induced to write this book through finding a short account of blind persons of note in the *Kiṭāb al-Maʿarīf* of Ibn Kataba and a work of al-Djannī, he enlarges on the

etymology of blindness and its limits. The principal portion of the work is occupied by a large number of biographies arranged in alphabetical order, among which figure a number of valuable notices of men of all ages of Islām. 7) *Kiṭāb al-Shaʿar fī ʿUṣr*, biographies of persons who had lost one eye. 8) *Aḥsan al-Sawādī min al-Nāṣi wa ʿl-Kāfi*, containing letters addressed by him and to him, giving in many cases the dates. The first letter in MS. (Brit. Mus., Or. 1203) is dated 745 A.H. 9) *Munṣṣaʿat*, a collection of his own epistles. 10) *al-Taḥkīrat al-Salḥiya*, a collection of extracts from other works, interspersed with his own compositions. It is difficult to ascertain of how many volumes the work consisted; the good old MS. (India Office, Arab. 3799) contains vols. 48 and 49. From these it appears that each volume commenced with the exposition of some verses of the Qurʾān, then was followed by extracts of the most varying character. For example B. M., Or. 1353, the contents of which were given by Flügel, *Z.D.M.G.*, xvi, 538-544, contain the *Kiṭāb al-Iḥāʾ wa ʿl-Muṣawwāʿa* of Ibn Fāris; not used by Brünnow for his edition of that work, on fol. 53v-77v, examples of the poetry of al-Bākhārī on fol. 77v and following; MS. Brit. Mus., Or. 7301 (named on title-page *Kiṭāb al-Maḥāsin wa ʿl-ʾAḥād*), contains extracts from the medical work of ʿIsmāʿīl al-Dīn Ibrāhīm b. Maḥmūd al-Aḥqār entitled *Iḥṣāʾ al-Maʿāḍi wa ʿl-Diyūn* (fol. 35v) MS. India Office, Arab. 3799, contains in vol. 48 extracts from the autograph *Diwān* of Amīn al-Dīn ʿIsmāʿīl al-Kawwāl entitled *Nafʿ al-Waḥdī wa Rafʿ al-Waḥdī* (fol. 20v-26v), extract from the book *al-Taʿjīnāt ʿalā Ibn ʿIsmāʿīl* of Abū ʿAlī Ibn Fūrajḍja (fol. 71v), extract from the *Riḥāṣun* of al-Ṣāhib Ibn ʿAbbād (fol. 90v). Extracts of this work are found printed in the *Thamarāt al-Awāḥ* of Ibn Hūdja (Cairo 1304), vol. ii, 182, 183, 184 and 192. 11) *Diwān al-Fuḥḥāʾ wa Turjūmān al-Bulaghāʾ*, an anthology composed for Malik al-Ashraf. 12) *Lawʾat al-Shāḥi wa Damʾat al-Bāki*, life of a prodigal with poems to the boy he loved. This worthless composition has been printed repeatedly, first 1274, then 1280 in Tunis, later in Constantinople and Cairo, showing that the work is appreciated in many countries of Islām. 13) *al-Hawā al-Sarīḥ fī Mafāt Maḥb*, another worthless anthology containing a hundred poetical quotations by contemporary poets and the author himself upon pretty youths. 14) *Kaḥf al-Hāṭ fī Waḥf al-Khāl*, another small collection of poems containing words which have different meanings if vocalized differently. 15) *Ladhḥat al-Samʿ fī Sifat al-Damʿ*, a similar collection of verses of the author and contemporaries on tears in 37 chapters. 16) *Al-Raḥf al-Naṣīm wa ʿl-Zaghaf al-Bāṣim*, a similar collection of eratical extracts. 17) *Kaḥf al-Tuḥb ʿalā ʿl-Waḥf wa ʿl-Taḥḥib*, anthology of metaphorical verses. 18) *Raḥf al-Zulāt fī Waḥf al-Hilāl*, anthology of verses on the New Moon (vide Nº. 33). 19) *Raḥf al-Raḥīḥ fī Waḥf al-Harīḥ*, a makām on wine. 20) *Al-Ghāṭh al-Muḥḥiḥ fī Sharḥ Lāmīyat al-ʿAdām*, commentary on the poem of Tughraʾī. He explains first every word, then the rhetorical figure quoting many verses, principally by modern poets. The work has also the title *Ghāṭh al-ʿAdāb al-laḥḥi inṣāḥam fī Sharḥ Lāmīyat al-ʿAdām* (printed Cairo 1305 in two vols. 4vo). 21) *Kiṭāb al-Arab min Ghāṭh al-ʿAdāb*, extract of the preceding work

(printed in Cairo without date, but recently). 22) *Kitaḥ Taḥḥiḥ al-Sam' bi Inḥiḥ al-Dam*, printed in Cairo s. d.; perhaps similar or identical with N^o. 13, 23) *Nuḡrat al-Ṭaḥir 'ala 'l-Maḥal al-Sa'ir*, against the well-known work of Ibn al-Aṣḥr entitled *al-Maḥal al-Sa'ir*; cf. Hoogvliet, *Spec. Div. Script.* (Leiden 1839), p. 153. 24) *Ḍiḥn al-Ḍiḥn* ḥ 'l'm al-Baḍī, paranomasia consisting principally of the author's own verses (printed Constantinople 1299). 25) *Iḥḥirā' al-Kāfir*, explanation of obscure verses lexicographically and as to their rhetorical figure. 26) *Faḍl al-Kāḥim 'ani 'l-Tawriya wa'l-Jiḥād*, on metalepsis and the use of words which can be altered so as to give different meaning. 27) Commentary on the work of Ibn al-Arabī entitled *al-Shuḡrat al-Nu'māniya fī 'l-Duḥat al-Uḥmāniya*, prophecies about the Turkish dynasty. 28) *Taḥḥ al-Hamūma*, abbreviation of the commentary of Ibn 'Abdūn on the poem of Ibn Badrūn. 29) *Tamīm al-Murūn fī Sharḥ Riḍat Ibn Zaidūn*, commentary on the celebrated epistle of Ibn Zaidūn, no doubt inspired by the work of his master, Ibn Nabātā. 30) *Kiṭāb Ghawā'id al-Saḥāḥ*, a small work on the obscurities of the *Ṣaḥāḥ* of al-Dīhawharī (autograph in the Escorial, N^o. 192, dated 757 A. H.). 31) *Nuḡd al-Falāḥ fī Muḥṭaṭar al-Ṣaḥāḥ*, abbreviation of the *Ṣaḥāḥ*, omitting the evidentiary verses and correcting errors. This work he completed in Ramaḍān 757 A. H. 32) *Ḥaḍy al-Nawāhid 'alā mā fī 'l-Ṣaḥāḥ min al-Shawāhid*, explanation of the evidentiary verses quoted in the *Ṣaḥāḥ*. 33) al-Suyūṭī composed a work containing verses of Şafadī and his contemporaries on the new moon, which he extracted from the *Taḥḥira* of Şafadī and gave it the same title as N^o. 18; when he discovered this he re-named his book *Raḥḥ al-Laḥḥ fī Waḥḥ al-Hiḥl*. This book was printed in Constantinople in the *Tuḥfat al-Baḥḥ*, p. 66-78.

Bibliography: Ibn Ḥaḍjar, *Durur al-Kāmina*, B. M., Or. 3043, fol. 120v; Ibn Kāḍī Shuhba, *Tabaḥḥ*, B. M., Add. 23362, fol. 155; Subki, *Tabaḥḥ* (ed. Cairo), vi. 94-103; Khwāndamīr, *Ḥabīb al-Siyar* (ed. Bombay 1857), iii. part 2, p. 9; Amar, *J. A.*, series 10, vols. 17-19; Brockelmann, *Gesch. der arab. Lit.*, ii. 31-33; Hartmann, *Muḥallā*, p. 81; Wüstenfeld, *Die Geschichtschreiber der Araber*, p. 423; Hoogvliet, *Div. Script.* (Leiden 1839), p. 152-158; *Notice sur Khallīl*, *J. A.*, series 9, vol. 5 p. 392. Verses of Şafadī are quoted in nearly every anthology later than his own time; he is extensively cited in the *Ḥabīb al-Kumāl* of Nawāḥī and the *Ma'āhid al-Tamīl* of 'Abd al-Rahīm al-'Abbāsī.

24. AL-ḤABAN K. AḤI MUḤAMMAD 'ABD ALLAH AL-ḤASHIM AL-ŞAFADĪ appears from casual remarks in his work to have been an intimate courtier of the Egyptian Sultān al-Nāṣir b. Kālā'ūn. It has been impossible to find any biography in any of the accessible works dealing with the history of his time. He must have died early in the eighth century of the Hidjra as the last events recorded in his history are dealing with the year 711 = 1311/12 or perhaps as late as 714. From a statement fol. 62v Brit. Mus. it appears that he composed the history in the year 716. He probably had held earlier an appointment in the office of the waḥḥ for he tells (MS. Brit. Mus., fol. 69v) that in the year 694 he received instructions from the waḥḥ Ibn al-Khallīl to investigate a case of cannibalism during the famine which prevailed in Egypt

during that and the following year. He composed a short history of Egypt which in the Paris MS., N^o. 1706 has the title: *Nuḥḥat al-Maḥḥ wa'l-Maḥḥ fī Muḥṭaṭar Sirā man waḥḥiya Miṣr min al-Mulūk*, while in the other Paris MS., N^o. 1931, 22 it has the erroneous title of *Faḍl al-Miṣr*, yet the London MS. has another title from which it appears that probably the first is the correct one. The earlier part beginning with the natural and other advantages of Egypt gives a very succinct account of the earlier rulers consisting mainly of anecdotes, but the chief interest lies in the portion which deals with the Turkish Sultans; here he gives exact dates and facts which supplement our knowledge of the closing years of the 7th century of the Hidjra. Perhaps the account of the great flood in Baḥabak in 717 found in the London MS. may be by him, but it is not found in the other two copies. The MS. in the British Museum written for the Egyptian caliph al-Mutawakkil proceeds to give events down to 795, but from fol. 113v it contains only matter concerning the family of the owner of the manuscript, first a genealogy of al-Mutawakkil (fol. 113v) and then a long list of his children, first the boys then the girls, indicating in each case the date and hour of their birth, and in cases where they died before 794, the dates of their death. The last entry by the same hand but with different ink records the birth of a son, in 795 A. H., the 25th of Shaḥbān. The three MSS. all contain the same work in spite of their varying titles: Brit. Mus., Add. 23326; Paris 1706 and 1931, 22.

Bibliography: in the article.

(F. KERNOW)

ŞAFAR, name of the second month of the Muhammadan year, also called *Şal-ḥaḥir* or *Ş. al-muṣṭaḥḥ* because of its being considered to be unlucky (C. Snouck Hurgronje, *The Achehese*, i. 206; do., *Meḥa*, ii. 56). The Muhammadan Tigre-tribes pronounce the name Şafar, the Achehese Thapa. According to Wellhausen in the old-Arabian year, Şafar comprised a period of two months in which Muharram (which name, according to this scholar is a Muslim innovation) was included. As a matter of fact, tradition reports that the early Arabians called Muharram Şafar and considered an 'umra during the months of the Hidjra as a practice of an extremely reprehensible nature. They embodied this view in the following saying: *Iḥḥā bara'o 'l-dabar wa'afu 'l-faḥar wa' nṣalaḥḥa Şafar ḥallatī 'l-'umra li-man fī tamar*, i. e.: When the wounded backs of camels are healed and the vestiges [of the pilgrims] are obliterated and Şafar has passed, then the 'Umra is allowed for those who undertake it.

(A. J. WENSING)

ŞAFAWIDS, the most famous and glorious of the native dynasties of Persia since the introduction of Islam, which takes its name from Shaikh Saḥī al-Dīn Iḥḥā [q. v.], from whom its founder, Ismā'īl Şafawī [cf. Ismā'īl 1], was sixth in descent. The family had long been settled at Ardabīl [q. v.] as hereditary spiritual instructors of the people, and at

the end of the sixteenth century Ismā'īl, after the death of his two elder brothers, extended his authority by degrees over Shirwān, Ādharbāidjān, Trāḡ and the rest of Persia, "the ground having been assiduously prepared by widespread politico-religious propaganda". The Shī'a doctrine had always been popular in Persia, but Ismā'īl was the first ruler to make it the state religion, and to propagate it among the Turkish tribes of the north, whom he enlisted in his service and distinguished by giving them red hats, whence they were known as Kizil-bāsh (Red-heads). He virtually extinguished the Sunnī religion in Persia. He died on May 24, 1524, and was succeeded by his son, Tahmāsp I, who repeatedly expelled the Uzbegs from Khurāsān, waged a not entirely unsuccessful war against the 'Uthmānī Turks who, under Salīm I, had defeated his father, and helped Humāyūn to recover his Indian throne. On his death in 1576 the throne fell, after a contest, to his fourth son, Ismā'īl II, a worthless and debauched tyrant, during whose shameful reign the kingdom was a prey to intestine strife and foreign aggression, but on his death he was succeeded by his youngest son, Shāh 'Abbās I (1585—1628), justly entitled the Great, who restored Persia to her legitimate place in the Islāmic world. He inflicted on the Turks a defeat which deterred them from molesting his kingdom, he drove the Uzbegs and Turkmāns from Khurāsān, and he recovered Kāndahār from the emperor of India. He was just and tolerant, he imported an industrious colony of Armenians from Djulfa [q.v.] on the Araxes to Isfahān, where they built and inhabited the suburb of New Djulfa, he encouraged trade and intercourse with western nations, and he was a liberal patron of architecture. His grandson, Šāfi I, who succeeded him, and reigned for fourteen years, was a blood-thirsty tyrant who disgraced the throne of his ancestors and was devoid of either justice or humanity. His armies repelled the raids of the Turkmāns in Khurāsān, but in his reign Kāndahār was recovered by the emperor of Dillī. The Turks, encouraged by the disorders which his tyranny engendered, recovered Baghdād and even occupied Tabriz, but were compelled by the severity of the winter and the scarcity of supplies to withdraw from Ādharbāidjān. Šāfi recovered Erivān from the Turks, and died in 1642, when he was succeeded by his son, 'Abbās II [q.v.], then only ten years of age. 'Abbās recovered Kāndahār from Shāh Djahān of Dillī, and a movement of his troops against an Uzbeg chief on the Khurāsān frontier caused the Indian forces to evacuate Balkh. The relations of Persia with Turkey were greatly improved in his reign, and intercourse with the western powers was extended. He died on Oct. 26, 1666, and was succeeded by his elder son, Šāfi, who frustrated an attempt of the amirs to exclude him from the throne, and assumed the name of Sulaimān. He was an enlightened and tolerant monarch and welcomed the ambassadors of European powers, even of the Russians, whose habits disgusted him. His health was always poor, but he reigned for twenty-nine years, and on his death in 1694 was succeeded by his son, Sulṭān Husain, a weak prince who permitted ecclesiastics to conduct all affairs of state. Those who refused to conform to the state religion — that of the Shī'a — were persecuted, and this fatuous policy provoked the hostility of the Afghāns who held Kāndahār

for the King of Persia, so that in 1709 Mir Wais, governor of that province, proclaimed his independence. In 1722 Mahmūd, son of Mir Wais, invaded Persia and besieged Isfahān. Famine compelled the city to surrender, and Mahmūd deposed Sulṭān Husain but died soon afterwards. In 1729 Ashraf, the brother and successor of Mahmūd, was expelled from Persia, and Nādir Kuli [see the art. NĀDIR SHĀH] placed Tahmāsp III, of the Saffawī family, on the throne, but shortly afterwards deposed him as being unfit to reign, and caused his son, then only eight months old, to be proclaimed under the title of 'Abbās II. The child died soon afterwards and on Feb. 26, 1737, Nādir Shāh's assumption of the royal title extinguished the Saffawī dynasty.

AL-SAFFĀH [See ARU 'L-ABNĀS].

SAFFĀRIDS, a dynasty founded by Ya'qūb b. Laith al-Saffār which originated in Sadjistān and reigned in Persia for thirty-three years. Ya'qūb, who was a coppersmith (*saffār*) by trade abandoned his handicraft and became a brigand, but his chivalrous conduct in his predatory calling, attracted the favourable attention of Šālih b. Naṣr (or Naḍr), and he gave him the command of his troops. Ya'qūb rebelled against Dirham b. Naṣr. In 253 (867) he was master of the whole of Sīstān. Having thus established himself in Sīstān he captured Herāt, and Muhammad b. Tāhir b. Ahmad, governor of Khurāsān, attempted to divert his attention from this town by bestowing on him the government of Kirmān. In 253 (867), however, he recaptured Herāt and took some Tāhirids prisoner. He sent an embassy with magnificent presents to the Caliph al-Mu'tazz, tried to take possession of the province of Fārs, defeated the governor 'Alī b. al-Ḥassan and entered Shirāz, without injuring the population. Then he returned to Sadjistān without establishing his power in Fārs. — He then turned to the domain of the princes (*rūmlar*) of al-Rukhkhadj. In 256 (870) he conquered Balkh, Bāmiyān [q.v.] and Kābul. In 257 (871) Ya'qūb again tried to take possession of Fārs. In order to turn his attention from this province, al-Muwaffaq gave him Balkh, Tukharistān and Sind in fief. In 259 he marched against Naisābur, which he captured in Shawwāl. There he took Muhammad b. Tāhir prisoner. After an unsuccessful expedition to Tabaristān, he finally remained in possession of Khurāsān. The Caliph however, refused to acknowledge him. This induced him to conduct his army through Khurāsān against Baghdād, after having defeated the governor of Fārs. He was in his turn defeated at Dair al-'Aḳul, retired to Khurāsān and died at Djundī Shābur (Shawwāl 265 = June 879) where his tomb is still shown.

He was succeeded by his brother 'Amr [q.v.], whose descendants maintained themselves in Sīstān till 1163.

(T. W. HAIG)

AL-SAFFĀT, title of Sūra xxxvii. of the Qur'ān, after the first word wa'l-Saffāt.

SAFI, more accurately Asfi, ethnic Masfiwī, a port in Morocco on the Atlantic Ocean, a few miles south of Cape Cantin, at the top of a very open bay. Safi has about 21,000 inhabitants of whom 3500 are Jews and a thousand Europeans.

Safi does not seem to date back to any great age. Al-Bakrī (ixth century A.D.) mentions it without attributing any great importance to its al-idrīd in the next century says it is a fairly busy port but the roads are not at all safe. In the beginning of the thirteenth century, a ribāṭ arose there. But the importance of Safi really date; only from the coming of the Portuguese, who, continuing their progress along the Moroccan coast, settled there in 1507. There they established a stronghold which in 1510 resisted a vigorous attack; with the help of a local chief, Yahyā ben Tafūf, who seems to have been a personage of considerable importance, the Portuguese for several years made Safi the principal centre of their operations. They established a regular protectorate there, gradually winning over the neighbouring tribes and daily advancing their outposts and their razas further afield. They ultimately reached the very gates of Marrākush. But Portugal, with her hands full elsewhere, especially in the Indies, could not long sustain such an effort; on the other side too, the holy war movement gradually increased in force and the administration, in difficulties for funds, forced to exploit more and more the subdued country, became worse and worse. In 1516 the governor Lope de Barriga was taken prisoner; in 1517 Yahyā b. Tafūf was killed in an ambush. The attacks of the Shurfa became more and more serious and after 1534 the question began to be considered of evacuating Safi and Azemmour (which had been occupied in 1513), to concentrate the defence on Mazagan. They were forced to this solution of the problem in December 1541 after the loss of Agadir in March of that year. The evacuation was made in good order under the direction of Joāo de Castro.

The Sa'īd Shurfa having occupied Safi made it their principal port; as a matter of fact it is the nearest to Marrākush, which was their usual residence. Safi thus attained great importance in the xvth and xviith centuries; a considerable part of the Christian trade was centred there. When the 'Alawids seized the power and moved their capital to the towns of the north, Meknes or Fās, Safi became the busiest port and Safi lost a great deal. In the xvth century, however, Christian merchants were still numerous there; the representatives of France, it may be noted, lived there for several years. In the sixteenth century its decline became more marked. It is now a fairly busy little town from which are exported the agri-

cultural products of the rich country of the 'Abda, of which Safi is the centre. Of the ancient ribāṭ it has retained the name of one of its two quarters while the name of the other is commemorated in walls for the most part Portuguese.

(HENRI BASSET)

SAFI, FAKHR AL-DIN 'ALĪ b. AL-HUSAIN AL-WAK'IL AL-KASHIRI, with the *al-kashir* SAFI, son of the preacher and man of letters al-Husain al-Wak'īl al-Kashirī (d. 910 = 1504/5), a Persian author. From the preface to his work *Lafā'if al-Tawā'if* it appears that he was a prisoner in Herāt for a year and in 939 (1532/3) entered the service of Shāh Muḥammad, prince of Ghazni where he composed the *Lafā'if*. He must therefore have died after 1533; the exact date is not known any more than that of his birth.

WORKS: 1) a romantic poem, *Mahmūd u Ayyar*, as far as is known the oldest poetic version of the theme; 2) *Rashahāt-i-'Alm* 'l-Hayāt, a *taḥḥīr* of the Naḡhbandī Shaikh, ed. Tashkent 1529, finished in 919 (1513/4); a Turkish translation of it appeared at Constantinople in 1236, at Hüllā in 1256 (Ethé in the *Grundr. der Iran. Phil.*, ii. 365); 3) the above mentioned *Lafā'if al-Tawā'if*, also called *Lafā'if al-Zarā'if*, a narrative work found in a considerable number of manuscripts in European libraries, which contains in 14 *hābs* anecdotes regarding individuals of various classes of society (extracts in Schefer's *Christ. Pers.*, i. 106 *sqq.*).

Bibliography: Ethé in the *Grundr. der Iran. Phil.*, ii. 250, 332, 334, 365; Sachau, *Catalogue of the Persian... Manuscripts in the Bodleian Library*, i. 428 *sqq.*; Rieu, *Catalogue of the Persian Manuscripts in the British Museum*, p. 353, 757; do., *Supplement*, p. 69; Perisch, *Die persischen Handschriften der Herz. Bibl. zu Göttingen*, p. 121; do., *Verzeichnis der persischen Handschriften der Königlichen Bibliothek zu Berlin*, cf. Index iii. under 'Alī Ibn al-Husain; de Goeje, *Cat. Cod. Orient. Bibl. Acad. Lugd. Bat.*, v. 295. (V. F. BUCHNER)

SAFI AL-DIN (Shaikh), ancestor of the Saffarids [q.v.] in Persia, was born at Ardabil [q.v.] in 650 = 1252/3, the son of Khwāja Kamāl al-Dīn 'Arabshāh and Dawlati, said to be in the twenty-fifth line of descent from 'Alī and in the twentieth from Mūsā al-Kāsim, the seventh Imām (on his genealogy see E. G. Browne in the *J.R.A.S.*, 1921, p. 397 and *Silsilat al-Nasab-i Saffawiya*, Berlin 1924). He was the fifth of seven children and his father died when he was six years old. He is described as a serious youth who grew up without comrades and early devoted himself to religious exercises. As he found no one among the learned men of Ardabil who pleased him as

a teacher he went to Shiraz with the intention of attending the lectures of Shaikh Najib al-Din Burghush (d. 678 = 1279), but the latter died before he arrived there. He made the acquaintance of pious dervishes and devout men, including Shaikh Rukn al-Din al-Baidawi and Amir 'Ala' Allah, who finally referred him to Shaikh Zahid, i. e. Taj al-Din Ibrahim b. Rawshan Amir b. Babul b. Shaikh Buhār al-Kardī al-Sandjānī of Gilan, who was reported to live on the Caspian Sea. He is said to have spent four full years searching for him and ultimately discovered him in Hilyakirān in the Khānbalī district of Gilan. Shaikh Zahid gave him a kindly welcome and Safi al-Din remained 25 years with him until Zahid died at the age of 85. Safi al-Din then became his successor in Zahid's brotherhood until he in turn passed away, likewise aged 85, on Monday, Muharram 12, 735 = Sept. 12, 1334. Shortly before his death he had made the pilgrimage to Mekka and had previously designated his son Sadr al-Din as his successor. On his return he became ill, lay for twelve days in bed and then passed away. He had two wives, Bibi Fātima, daughter of Shaikh Zahid, and the daughter of Akhi Sulaimān of Gilkharān. The former was the mother of 1) Muhyi al-Din, who died in 724 = 1324, 2) Sadr al-Din (born April 27, 1305 = Shawwāl, 704, died 794 = 1392), Safi al-Din's successor and 3) Abū Sa'īd. The second wife bore him two sons, 'Alā' al-Din and Sharaf al-Din, as well as a daughter, who was given in marriage to Shaikh Shams al-Din, a son of Shaikh Zahid.

Safi al-Din was the founder of the Dervish order of the Safawis which later attained political control of Persia. The organisation and history of this brotherhood have not yet been thoroughly investigated. It is closely connected in its political and religious history with the dervish bodies which later appeared in Anatolia and became powerful there, like the Akhis and the Bektāshis [q. v.]. Its members later wore as a badge a twelve-pointed cap of scarlet wool (later called *shams-i haidar*; cf. *Islam*, xi, 83), from which comes the Turkish name *khalī-bāsh* "red head". Of the religious system of the order it is certain that its later point of view was that of the Shi'a, although it is said that Safi al-Din himself, the founder, was a Sunni (cf. E. G. Browne, *Persian Literature in Modern Times*, p. 43 sq., following the *Akshar al-Tawārīkh*). Safi al-Din received numerous adherents from Persia and especially from Anatolia (cf. *J. R. A. S.*, 1921, p. 403-4) and it is to him that the order owes its great prestige in Shi'a circles and its later great extension, which was ultimately to prove almost fatal to the Ottoman Empire.

Bibliography: The principal source is Ibn al-Bazzāz, *Safwat al-Safā'*, lith. Bombay 1329 = 1911; MSS. in the British Museum, Add. 11745 and in King's College, Cambridge (cf. E. G. Browne, *op. cit.*, p. 35); this work, of which Browne, *op. cit.*, p. 38 sq., gives an excellent survey, deals exclusively with Safi al-Din's influence and neglects almost entirely the merely biographical data of his career. The *Silsilat al-Nasab-i Safawiya*, extracts of which have been given by E. G. Browne in the *J. R. A. S.*, 1921, p. 395-418 (cf. thereon F. Babinger in the *Islam*, xii, 231 sqq.), and published by him in Persian at the Kavianī press in Berlin in 1924,

is also important; on it see the earlier article by von Khanikoff in the *Mitteilungen Asiatischer ... de St. Petersburg*, i, 850-853. On further Persian literature see P. Horn in the *Grundriss der iranischen Philologie*, II, Strassburg 1896/1904, p. 586 sq., and v. Khanikoff in the *Mitteilungen Asiatischer ...*, i, 543 sq. On Shaikh Safi al-Din cf. especially the very full account by E. G. Browne, *Persian Literature in Modern Times*, Cambridge 1924, p. 3-44; on his order, the Khilash, and their connections with Anatolian dervish orders see F. Babinger, *Scheich Bedr al-Din*, Leipzig and Berlin 1921, p. 78 sqq. (*Isi.*, xi, 78 sqq.), with the sources there quoted and also do., *Marino Sanuto's Tagebücher als Quelle zur Geschichte der Safawija in A Volume of Oriental Studies presented to Edward G. Browne*, Cambridge 1922, p. 28-50.

(FRANZ BABINGER)

SAFIYA BINT HUYAIY b. ARHTAR, Muhammad's eleventh wife, was born in Medina and belonged to the Jewish tribe of the Banu 'I-Nasir; her father and her uncle Abū Yāsir were among the Prophet's most bitter enemies. When their tribe was expelled from Medina in 4 A. H., Huyaiy b. Akhtab was one of those who settled in Khaibar, together with Kināna b. al-Rabi', to whom Safiya was married at the end of 6 or early in 7 A. H.; her age at this time was about 17. There is a tradition that she had formerly been the wife of Sallām b. Maḥkam, who had divorced her.

When Khaibar fell, in Safar 7, Safiya was captured in a fortress, al-Qamīs or Nizar, together with two of her cousins. In the division of the spoils she had been assigned, or actually given, to Dihya b. Khalifa al-Kalbi, but when Muhammad saw her he was struck by her beauty, and threw his mantle over her as a sign that he had chosen her for himself. He redeemed her from Dihya against seven heads of cattle, and induced her to embrace Islam. Her husband was condemned to a cruel death by Muhammad for having refused to give up the treasure of the Banu 'I-Nasir; the desire of marrying Safiya may have influenced the Prophet, for the nuptials were celebrated with unseemly haste, either in Khaibar itself or at al-Sabbā', some 8 miles from it, on the way back to Medina. Safiya's dowry consisted in her emancipation, and she assumed the veil (*hijāb*), thus establishing her position as a wife, which at the beginning appears to have been questioned.

In Medina Safiya received a cold welcome: 'Ā'isha and Muhammad's other wives showed their jealousy with slights upon her Jewish origin. She seems to have lived aloof from her surroundings, for we find no further mention of her in the years preceding Muhammad's death, except in an episode that shows how, during his last illness, she expressed her devotion to him, and was criticised by the other wives. With the Prophet's daughter Fātima she was, however, on good terms.

In 35 A. H. Safiya sided with 'Uthmān; while he was besieged in his house she made an unsuccessful attempt to reach him, and she used to bring him food and water by means of a plank placed between her dwelling and his. When 'Ā'isha asked her to be present at 'Uthmān's last interview with 'Alī, Talha and al-Zubair, which took place in her house, Safiya went, and tried to defend the unfortunate Caliph.

She died in 50 or 52, during Mu'awiya's caliphate, leaving a fortune of 100,000 dirham in land and goods, one third of which she bequeathed to her sister's son, who still followed the Jewish faith. Her dwelling in Medina was bought by Mu'awiya for 180,000 dirham.

In Cairo there is a xvii. century mosque dedicated to Sitt Safiya, which gives its name to the surrounding quarter.

AL-SAHĀBA. [See *ASHĀB*.]

SAHARA (AL-SĀḤARA), an African desert. *Sahra'* is the feminine of the adjective *asḥar*, 'of a fawn colour'. The word is applied by some writers to a combination of stony soil, steppes and sands (cf. al-Idrīsī, ed. de Goeje, p. 37 note), while the word *mudjibba* is more particularly applied to areas covered with moving sands and absolutely devoid of water (cf. Abu 'l-Fida', *Taḥsin al-Buldan*, ed. Reinaud and de Slane, p. 137; transl. Reinaud, ii. 190). Leo Africanus uses it as a synonym for desert in general (Schefer I, i. 5).

The Sahara lies between Barbary, Tripolitania, Cyrenaica and Marmarica in the north, the Sūdān in the south, the Atlantic in the west and the Nile valley in the east. Some geographers even extend it as far as the Red Sea, and thus link it up with the Arabian deserts. Its area, if we leave out Egypt, may be estimated at three million square miles, or a quarter of the total surface of Africa.

The Sahara, as a whole, may be regarded as an ancient 'plain' concealed in many parts by more recent geological formations. Its surface, far from being uniform, presents considerable variations of level. Some parts, in the vicinity of the Egyptian border, in the south of Tripolitania and in the south of Tunisia, are below the level of the sea; in other parts, however, there are high plateaux and mountain ranges, for the most part of volcanic origin, tower up (Tibesti, Air, Hoggar), some of whose summits are over 10,000 feet high (Tibesti). On the whole, we may say that low-lying areas predominate in the western Sahara and the heights in the eastern.

The desert character of the Sahara is primarily due to the climate of this part of Africa. Rains are very rare and irregular there; the extreme dryness of the air produces an intense evaporation, which reduces to a minimum the rising of springs to the surface. The great variations of temperature and violence of the winds result in the break up of the rocks and the denudation of the surface. The conditions of animal and vegetable life are, in consequence, extremely precarious. It is, however, right to make a distinction in this respect between the border zones and the desert strictly speaking. In the north, indeed, the fairly abundant rainfalls have allowed the development of a zone of steppes suitable for stock-rearing, of which the high plateaux of Algeria show the most perfect type; in the south a border of savannah and bush rolls almost without interruption from the Atlantic to the Nile basin, and forms the transitional link between the Sahara and the fertile regions of Equatorial Africa. This is the 'Sūdānese Sahara', in which the desert character lessens gradually as one goes southwards. The Sahara,

properly so called, occupies the whole area between these two zones and even in the north reaches to the Mediterranean in the region of Sidra and Marmarica. It presents very different aspects in its different parts. Sand-dunes cover enormous tracts (cf. the article 'AREG'), separated from each other by rocky plateaux (Hamada), bounded by steep slopes. In other parts we find river valleys, usually dried up, called *wādī* (wadi) or flat plains of a soil sometimes perfectly uniform (Reg) as in the Algerian Sahara, sometimes filled with pebbles which makes walking very difficult, as in the Libyan desert. The most desolate parts are the 'Tanenraft', absolutely sterile regions and totally without springs. On the other hand, wherever we find surface water and wherever sheets of subterranean waters are sufficiently near the surface to be reached by wells or irrigation channels, there have arisen centres of population and cultivation, known as 'oases', some isolated, others grouped like the islands of an archipelago: Fezzān, Kavar, Wādī Rir (*wādī Rirā*), Zibān, Tidikelt, Tuāt, Gurara, Tafilalet etc.

The Arab authors only give us fragmentary and often vague information regarding the Sahara. The only region that they know with any exactness is the northern zone, adjoining Ifrīkiya and the Maghrib, the zone in which Ibn Khaldūn (*Les Berbères*, ed. de Slane, i. 120; transl. de Slane, i. 190) includes Tafilalet, Tuāt, Gurara, Fezzān and even Ghadames. The Arabs, however, do not agree as to the bounds of the Sahara. Al-Bakrī, for example, says that the sands mark the beginning of the 'lands of the blacks' (*Majālīk*, Algiers 1911, p. 21; transl. de Slane, p. 49). Ibn Khaldūn, on the other hand, makes it clear that this country is separated from Barbary by a vast region of deserts, 'in which one is in danger of dying of thirst'; here and there also we find some notes on the parts of the deserts traversed by caravan routes (e.g. on the western Sahara; cf. the description of the desert called *Nīsar* or *Tīsar* by al-Idrīsī, *Yasr* by Abu 'l-Fida') or the accounts of commercial centres like Tadmakka, Audaghost (al-Bakrī, *op. cit.*, p. 339).

Leo Africanus gives a resumé of the data supplied by his predecessors. He identifies the Sahara with the Libya of the ancients (Bk. i. 5) and attempts a division into regions based on their populations. He distinguishes five different areas in the Sahara: (1) the desert of the Zenaga (زنقة), from the ocean to the salt beds of Tegaza; (2) the desert of Waurigha from the salt-beds of Tegaza at the Air in the east to the desert of Sidjilmassa in the north; (3) the desert of the Targa (تارغة = Tuareg), bounded in the west by Ighidi, in the north by Tuāt, Gurara and Mzab, in the south by the kingdom of Agades; (4) the desert of the Lamta bounded on the north by the deserts of Wargia and Ghadames, in the south by deserts which reach as far as Kano; (5) the desert of the Bardāwa lying between the desert of the Lamta in the west, the desert of Awdjila in the east, Fezzān in the north, Bornū in the south (Leo Africanus, Bk. vi.; transl. Schefer, iii. 267 *seq.*).

In spite of the sparsity of its resources, the Sahara has always been the home of man. The discovery on numerous places, at a great distance from one another, of wrought flints, pottery, rock carvings, etc. testify to the presence of man there

at a very remote epoch. The ancients gave these Saharan people the name of Ethiopians (Herodotus) or Libyans. They peopled the Sahara in the strict sense of the word, while Fezzān was occupied by the Garamantes, negroes, perhaps related to the present day Bornians. In the northern border zones, Berbers of a white stock lived; gradually, however, the negroes were pushed southwards and had to give way to the whites. According to E. Gantier (*Le Sahara*, p. 93 *seq.*) this ethnic change was the result of the introduction into North Africa in the Imperial period of the camel which supplied the Berbers with the indispensable means for the conquest of the Sahara. In any case, from this time onwards the Berbers never ceased to advance into the interior. When the Arabs came, the Zanāta were already settled in the oasis of the Wādī Rir, while the Sanhādja were leading a nomadic life to the south of the great Atlas as far as Senegal. In the fifth century A. D. the Almoravids [q. v.] ruled the whole of the western Sahara. Three centuries later the Berber tribes (Gadala, Lamtūna, Urziga, Maslifa, Lamta and Targa) formed from west to east a cordon stretching to the borders of the land of the negroes (Ibn Khaldūn, *Le Berbérie*, ed. de Slane, I. 21; transl. de Slane, p. 104). The advance continues in the centuries following. In the sixteenth century A. D. the Tuareg occupied the Air, in the seventeenth and eighteenth they settled in Adrār and reached the banks of the Niger.

Arab penetration followed the Berber penetration. In the first century A. D. the Arabs first arrived in Fezzān; during the period following, they found their way into the central Sahara and into the western Sahara, as missionaries and merchants. But it was the Hilāl invasion that brought in whole tribes, who, finding the Maghrib too small for them, overflowed into the desert, thrusting forward the Berber tribes and forcing them to go further south, so that by the time of Ibn Khaldūn, Arab tribes were occupying the border country north of the desert. Certain later happenings contributed to the diffusion of the Arab element, for example the expulsion of the Moors from Spain, which brought refugees even as far as Shingit in Adrār, and the conquest of the Sūdān by the Sa'diāns at the end of the sixteenth century A. D. The Arab expansion has gone on into our own times; witness, for example, the settlement in Bordj about 1820 of the Awlad Sulaimān (Uled Sliman), who came from the shores of the Gulf of Sidra. The existence of fairly active commercial relations between the two sides of the Sahara has always contributed to facilitate this infiltration. From the early centuries of the Hijra, caravan routes connected Fezzān with Tchad, Southern Tunisia with Nigeria, and the extreme Maghrib with the empire of Ghāna. In the seventh century A. D. Walata was in regular connection with Morocco and Tuāt, Kanem with Ifrīqiya. In the sixteenth century A. D. Timbuktu traded with Morocco and Tunisia; in the nineteenth the routes from Tripoli to Bornū and Wadai were still busy and Arab traders were settled at all the caravan stations.

This Arab and Berber penetration has, however, been checked from time to time by return offensives by the Sūdānese. At more than one period, indeed, negro empires have extended over the Sahara. The Soninke empire of Ghāna stretched

over all Mauritania; the Mande empire reached to Tuāt; the authority of the Sultāns of Kanem has been recognised around Wargla, that of the Askia of Gao even to beyond Timbuktu.

This ebb and flow of peoples has left its trace in the present ethnography of the Sahara. We find in it the elements of white and black, either pure or altered by mixture in different degrees. The first, numerically the most important, is represented by the Arabs and the Tuareg [q. v.]. In spite of the differences of origin and of language which distinguish them, they both present some features in common. They lead the same kind of life, a purely nomadic one, to which a kind of secular selection has wonderfully adapted them; as regards politics, they have not advanced beyond the rudimentary organisation into tribes and confederacies of tribes. Their geographical areas, however, are quite distinct. The Tuareg predominate in the Central Sahara from which they have advanced, gradually mixing more and more with black blood, as far as the bend of the Niger. The Arabs predominate on the frontiers of the Maghrib and especially in the western Sahara, which they have arabised, and where their intermarriage with the Berbers has given birth to a mixed population, the Moors. The families who have preserved their Arab descent almost intact and who bear, as a rule, the name of "Hassū", constitute an aristocracy among them, while the other sections of the population, with the exception of some groups of Sanhādja and Almoravid descent, are treated as an inferior caste (cf. the article MAURITANIA).

The black population also includes elements of various origins. The aboriginal population, gradually thrust back by the whites, seems to be represented at the present day only by the Tibu [q. v.], who, numbering barely 10,000 or 20, occupy Tibesti and the neighbouring regions (see the article VIRESTI). The vast majority consists of individuals of different origins (Hausa, Bornians, etc.), whose ancestors were settled in the Sahara as the result of the Sūdānese conquests, or who have been brought into the country as slaves. The intermarriage of these negroes among themselves and with Berbers seems to have given birth to a particular type, the "harratani" (plur.: *karratani*), among whom black blood predominates; they play a very important part in the economy of the Sahara, especially in the villages and oases of the Northern Sahara. In contrast to the essentially nomadic white, the black is a settler; he cultivates the oases, a work for which the whites are unfitted by their inclinations as well as their physiological organisation. The black tiller of the soil secures for the nomads the means of subsistence, without which they could not do, but he is kept by them, whether Arab or Berber, in a state of dependency and service.

If it has not opposed an insurmountable obstacle to the relations between the Mediterranean region and the Sūdān, the Sahara has been no more a barrier to the diffusion of Islām, the progress of which coincides with that of the white element in the desert. Introduced into Fezzān in the first century A. D., Islām was spread by the Arab traders, who frequented the caravan routes and commercial centres, and by the nomad Berbers, like the Lamta and the Lamtūna. The conquests of the Almoravids gained for Islām a vast

area in the western Sahara and up to the borders of the Sūdān. This Islām, quite superficial by the way, like that still professed by the Tuareg, allowed traces of previous beliefs and practices contradictory to Korānic law to go on; on the other hand, it met with centres of resistance like the Tuāt, where Judaeo-Berbers maintained themselves till the fifteenth century A. D. At this period the religious revival which began in North Africa had its repercussions in the Sahara. Marabouts and Shorān, coming for the most part from Morocco, appeared in all places of any importance, exterminated all who differed from them, preached the orthodox doctrine and themselves became founders of Marabout factions, whose members enjoyed great material and moral prestige. The activity of this religious brotherhoods became added to that of individuals, and is still felt at the present day. The western Sahara is under the influence of brotherhoods attached to the Kādīriya order and, in a smaller degree, to the Tijāniya; the eastern Sahara to that of the Sanūsiya.

(G. VVER)

SAHĀRANPŪR, a city of northern India, situated in 29° 57' N. and 77° 33' E., was founded about 1340, in the reign of Muhammad b. Tughlayk, and was named after a local Muhammadan saint, Shāh Haran Chishtī. The city and district suffered severely during the invasion of Timūr; and in 1526 Babur traversed them on his way to Panipat, and some local Mughal colonies trace their origin to his followers. Muslim influence gained much by the proselytizing zeal of 'Abd al-Kuddūs, who ruled the district until the reign of Akbar. In the reigns of Drahāngir and Shāh Drahān, Sahāranpūr was a favourite summer resort of the court, owing to the coolness of its climate and the abundance of game in its neighbourhood. Nur Drahān had a palace in the village of Nūrnagar, which perpetuates her name, and the royal hunting seat, Pādshāh Mahall, was built for Shāh Drahān. After the death of Aurangzib the district suffered severely from the incursions of the Sikhs, who massacred Hindūs and Muslīm indiscriminately, until, in 1716, they were temporarily crushed by the imperial authority. The upper Doab then passed into the hands of the Sayyids of Bārha, and on their fall in 1721 into those of several favourites. In 1754 Ahmad Shāh Durrānī conferred it on the Rohilla, Najīb Khān, as a reward for his services at the battle of Kōtila. Before his death, in 1770, it was overrun by Sikhs and Marāṭhās. His son Zāhib Khān revolted from Dillī, but was reconciled, and his son Ghulām Kādīr, who succeeded him in 1785, established a strong government and dealt firmly with the Sikhs. He was a coarse and brutal chief and in 1788 he blinded the emperor Shāh 'Alam and was justly mutilated and put to death by Sindhya. Sahāranpūr remained nominally in the hands of the Marāṭhās, but actually in those

of the Sikhs, until its conquest and occupation by the British after the fall of Allāgh and the battle of Dillī in 1803.

(T. W. HAIG)

ŠAHIB, the participial form of *shāh*, to be the companion of, meant originally to be on equal terms of friendship, and was especially used of all those who came into contact with Muḥammad, and died in the faith of Islām [cf. the art. *Aḥlāh*]. But also in Muslim literature it often has the common meaning of companion. Muḥammad calls himself *shāhibkhan* when he addresses his companions; and the Kaizer is called *Shāhib al-Kūn*, the governor of al-Baḥr *Shāhib al-Baḥr*. By 167—783/84 the Caliph al-Mahdī created an Inquisitor and gave to him the title of *Shāhib al-Zamānīka*. Still, for Government, the term *Hākim* was preferred. It is probable that the sacred association with the Prophet's Companions led to this preference.

The term *Shāhib* is used universally in India to-day to designate Europeans, and is a formal mark of respect. When applied to Indians of high station it is an added honour, e.g. Khān Shāhib.

Curiously enough the Arabic feminine form is seldom in use, and not in an honorific sense. In the Creed of Al-Ash'ari (Spitta, *Zur Geschichte Al-Ash'ari*, p. 133 144.) he says of God: "He has taken to Himself no companion (*shāhib*)". This use, however, is very exceptional. In India at present the feminine is obtained by prefixing *Madam*, with an elided *d*, and pronouncing *mad-zāhib*, and this is the form by which all European women are addressed.

On the use of *shāhib* in the Mekkan dialect, cf. Spoonck Hurgromje, *Mekkanische Sprichwörter*, No. 23.

(T. CROUTHER GORDON)

ŠAHIB KIRĀN, a title, meaning "Lord of the (auspicious) conjunction". *Kirān* means a conjunction of the planets, *Kirān al-aḥdām* (cf. the art. *SA'DĀN*) a conjunction of the two auspicious planets (Jupiter and Venus), and *Kirān al-mahram* a conjunction of the two inauspicious planets (Saturn and Mars). In the title the word refers, of course, to the former only. The Persian *ī* of the *īqāfa* is omitted, as in *Shāhib-dīl*, by *fakḥ-i-īqāfa*. The title was first assumed by the Amir Timūr, who is said to have been born under a fortunate conjunction, but with whom its assumption was, of course, an afterthought. After his death poets and flatterers occasionally applied it to lesser sovereigns, even to so insignificant a ruler as Burhān Nizām Shāh II, of Ahmadnagar, but it was officially assumed by Timūr's descendant, the emperor Shāh Drahān, who styled himself *Shāhib Kirān-i-Zamān*, "the second Lord of the Conjunction".

Shāhib Kirān was also, in Persia, where it has since been corrupted into *Kirān* or *Kirān*, the name of a coin of 1000 *dirāms*, the tenth part of a *rumāl*.

(T. W. HART)

ŞAHİH, sound, free from defect or blemish, is the name given to (a) a tradition whose chain of guarantors or transmitters is unassailable; and (b) the collections which contain nothing but *şahîh* traditions, namely those compiled by al-Bukhârî [q. v. l. 783] and Muslim b. al-Ḥajjâdjîdî.

(a) The *şahîh* tradition, according to al-Djurjânî (d. 816) embraces categories so wide apart as the *sunna* (supported by authorities resting on the prophet) and the *ford* (peculiar to one district or one reporter).

(b) The *Şahîh* of al-Bukhârî contains 7,397, or, according to other authorities, 7,295 traditions. These were selected by the author from the 600,000 *hadîth* current in his day and the 200,000 it is asserted that he memorized. A remarkable feature of his *Şahîh* is the chapter heading or *tarjama* which is often tendentious and sometimes misleading; e. g. when he prefaces a tradition which professes to record the equal efficacy of a pilgrimage to the mosques of Mecca, Medina and Jerusalem with the words 'Of the superiority of prayer in the mosques of Mecca and Medina'. (*Bûk Faḥl al-Şahîh*, ed. Krehl, i. 299).

The contents of Muslim's *Şahîh* are practically the same as al-Bukhârî's except that the *imâm*s differ considerably; and instead of the chapter headings so characteristic of al-Bukhârî, the author gives as a valuable preface in which he discusses the conditions which a tradition must fulfil before it can be regarded as authentic.

Both works (al-Bukhârî's more systematically) are planned to provide, where possible, apostolic *hadîth* on which to ground the existing laws and regulations of Islâm. So great waxed the reputation of al-Bukhârî's *Şahîh* that it was regarded as a charm against shipwreck and other calamities and the author's tomb became the resort of believers in distress.

(ALFRED GUILLAUME)

ŞAHİL is a reversed word, of the measure *fâ'il* instead of the measure *ma'f'ûl*, and its original meaning is 'abraded (by the sea)'. Hence, the shore of the sea or of a great river, a sea-shore, sea-coast, or sea-board; also a tract of cultivated land, with towns or villages, adjacent to a sea or great river, and the side of a valley.

(T. W. HART)

SÂHIR, *İHLÂK*, a notable modern Ottoman poet and author. Born in 1883 in Constantinople, the son of İsmâ'il Hakkî Paşa who died in Yemen, he early showed literary inclinations and a talent for declamation. Through his writings he

was very soon able to procure for himself a prominent position among Turkish men of letters. He acted as a teacher of French and of belles-lettres and was for a time employed in the Foreign Office. Later he acted chiefly as editor of various periodicals, e. g. the literary part of the *Şerret-i şûnûn*, the ladies' newspaper *İsmî* (the *Nowgay*), founded by him in 1909 but which expired after 7 numbers, the *Fedîr-i âlî*, the *Türk den*, the *Meşveret Muhiş*, the monthly *Bilgi* (knowledge), also founded by him (1913) — he was president of the *Türk Bilgi Dîrneyi* —, the *İktisâdîyet Meşmûrîy* (journal of national economy) (1916), etc. His undeniable flair for practical business is in remarkable contrast to his sensitive, elegiac, very tender style of poetry. He takes first place among the younger poets as regards perfection of language and depth of feeling. The euphony of his verse is fascinating. As a prose writer a simple and brilliant diction best fits him.

With a sure instinct he at once attached himself to the modern school of the *Şerret-i şûnûn* (*Tewfîk Fikret* — *Şakîlî Zîyâ*). He actively championed the simplification of the language. As regards prosody, however, he adhered strictly to the old classical form (*arûz*). That for a period he also wrote in the national metre which counts the syllables (*parmak kâzîbî*), obeying the national tendency, was only an interlude. His early period of extravagant and fantastic descriptions of nature was followed by a transition to psycho-analysis. His true sphere, in which he is considered a master, is woman and love, which he sings in an inexhaustible variety of ways. He celebrates them in inspired, indeed feverishly tender poems. For him 'the poem is a woman and woman a poem'. This praise of woman is done in a perfectly pure, morally noble and ideal way. Only reluctantly does he turn to other themes, although here also he has produced many fine poems. A certain tendency to the morbid, to *weltchmerz*, foreboding of death and longing for death is strongly marked in him. It is no wonder that many, while fully recognising the merits of his charming personality, cannot regard him as a poet such as New-Turkey needs in her period of transition.

With the constitution a somewhat more vigorous national tone entered his work. Since then he has been above all a champion of women's rights, for which he fights with tongue and pen. He was president of the *Fedîr-i âlî* (the coming dawn), Sturm und Drang club, which, comprising about 20 men of letters of the *Şerret-i şûnûn* circle, endeavoured to control the direction of development of Turkish literature but collapsed owing to internal dissensions after only seven months. Besides numerous poems and articles in the most varied papers and periodicals he has published the following books: a collection of poems entitled *Beyâz Kâğıtlar* ('White Shadows') (1325) and the collections of mingled prose and poetry entitled *Başkân* ('Crises') (1325) and *Siyâk* ('black') (1328), all in the series, so important for modern literature, called *Edîbîyât-ı İhtisâsî Kâvîb-Şâmîrî* (Nos. 13, 19 and 27); and a work entitled *Simûn*. His *İstambul İlmî mîlletî mîmârlarınca*, published anonymously in 1335, contains political and satirical verses.

(Th. Mentel.)

SAHL b. HÄRÜN, an Arab author and poet who flourished at the end of the second and beginning of the third century A. H. (= beginning of the ninth century A. D.). According to the *Fihrist*, he was of Persian descent and born in Dastmaisin, between Bagra and Wāqī. Al-Huṣri makes him come from Malsin, which is quite near it, and gives him also the kunya Abū 'Amr (on the margin of the *Idā*, II. 190). The name of his grandfather is variously given: Rāmnūy, Rāhyūn (both in the *Fihrist*) or Rāhiyūn (al-Djāhiz, *Kitaḥ al-Bayān*, I. 24; cf. also van Vloten's note to p. 10 of his edition of al-Djāhiz, *Kitaḥ al-Bukhārā*). Sahl later settled in Bagra from which he is said to have taken his *nisba* (al-Huṣri); the *Fihrist*, however, calls him al-Dastmaisi. Exact details of his life are lacking and we have to rely mainly on anecdotal references. He held high offices in the Chancellery at the Caliph's court. We find him already in the reign of Hārūn al-Raṣīd, secretary to the Barmecid Yahyā b. Khālid, whom he is said to have succeeded as *qāḍī al-dawwān* (Ibn Badrūn). Whether he retained this high office under al-Amin, we do not know, but under al-Ma'mūn he was again in great esteem although the latter had at first little regard for him. By revealing his Shu'ūbi predilections, he then gained the Caliph's favour. Along with other men of letters such as Sa'īd b. Hārūn and Salm (or Salmā, cf. *Fihrist*) he was engaged by al-Ma'mūn in his treasury or house of wisdom (*khizānat al-ḥikma*, *Dār al-ḥikma*).

Sahl b. Hārūn was a fanatical adherent of the Shu'ūbiya (q. v.); it was no doubt as such that he gained the favour of the Barmecid Yahyā, whom he praises in some much quoted lines for his absteniousness, just as the same sentiments later gained him favour with al-Ma'mūn (cf. the anecdote in al-Huṣri, *op. cit.*). Together with Ibn al-Muqaffa' and others, Sahl belongs to those authors who continued Persian tradition in Arabic literature. As an author, Sahl was popular in his day for two kinds of literary product. He wrote a *Kitaḥ Zā'la wa-'Afrā* (90 in the *Fihrist*; other sources give very varied spellings of these words); in this work he imitates the celebrated book of fables *Kalīla wa-Dimna* (q. v.) by making animals speak and also retaining its divisions into sections. Al-Huṣri (*op. cit.*) gives a few quotations from this book. Sahl was next famous for his praise of avarice and misers. The

only work of his that has survived is a *Kitaḥ al-Bukhārā*; it is incorporated in the *Idā* (III. 335 sq.) and forms the beginning of the *Kitaḥ al-Bukhārā* of Dhāhiz. In this *Kitaḥ* Sahl defends avarice or rather wise frugality and economy, the rational form of avarice, as al-Djāhiz says. It is dedicated to Sahl's nephews who had reproached him with some remarks he had made in praise of avarice. It is very probable that these remarks were made in the *Kitaḥ Zā'la wa-'Afrā*, as is suggested by the above mentioned passage in al-Huṣri. Sahl was (according to al-Djāhiz, *al-Bukhārā*, p. 114) with Abū Rahmān al-Thawri the first to devote a special book to avarice; this style of book was later imitated by several authors, e. g. by al-Djāhiz himself. Goldziher sees in his praise of avarice a Shu'ūbi attack on the national Arab virtue of generosity. He is also said to have written several *Rasā'il* on this subject and al-Huṣri thinks he wished to show his literary power thereby. An anecdote reports that the vizier al-Faḥm b. Sahl (q. v.), who had sent him by Sahl a treatise on avarice dedicated to him, replied that he had taken the lesson given him to heart; and therefore did not send him the expected reward.

The list of Sahl's other works is given in the *Fihrist*: al-Djāhiz (*Kitaḥ al-Bayān*, I. 24) mentions three: *Kitaḥ al-Ḥikma* (in the *Fihrist*: *K. al-Bayān*); *fi Ittibā' al-Ḥikma*, *K. al-Ma'ā'il* (perhaps the same as *K. Dimna al-Rasā'il* of the *Fihrist*) and *K. al-Maḥāsim wa 'l-Hudhaliya* (the same in the *Fihrist*). The greater part of his works presumably belonged to the domain of belles-lettres; the *Kitaḥ Tadhīr al-Mulā wa 'l-Siyāsa* mentioned in the last place in the *Fihrist* shows, however, that Sahl also dealt with political science. He was also esteemed as a poet, as some poems of his quoted by various authors show. According to the *Fihrist*, however, he did not leave more than 50 pages of poetry. Besides his reputation as a wit, he seems to have achieved fame as a connoisseur (anecdotes in Ibn Khallikān); indeed, in Arabic literature there is connection between the *Bukhārā* and the *Akhla*.

Sahl b. Hārūn found his greatest admirer and successor in his younger contemporary al-Djāhiz (q. v.) who even published several books under his name and in his *K. al-Bukhārā* followed him in taking avarice as his subject. He praises Sahl as a brilliant representative of all branches of literature (*K. al-Bayān*, loc. cit.); whether he was personally acquainted with him is a doubtful question. Sahl's name later became widely known through the *1001 Nights*.

(J. H. KRAMERS)

SAHL AL-TUSTARĪ, and MUHAMMAD SAHL R. 'ABDALLĀH R. YUNUS, a Sunni theologian and mystic, whose language was Arabic, born at Tustar (al-Ahwāz) in 203 (818) and died in exile at Rayā in 283 (896).

A pupil, through his master Ibn Sawwār, of strict Sunnīs like Thawrī and Abū 'Amr b. al-'Alā', Sahl was above all an ascetic of a very strict moral discipline. He was also a theologian with a vast store of intellectual knowledge.

Of his life, apparently quiet and solitary, only one detail is known: his exile to Rayā at the time of the revolt of the Zindī (about 261—274) when the 'ulama' of al-Ahwāz condemned his doctrinal treatise on the obligatory character of contrition (*tauba fard*).

Sahl wrote nothing, but his 'thousand sayings', collected and edited by his pupil, Muhammad Ibn Sallim (d. 297/909), presented sufficient dogmatic coherence to give rise to a theological school, the Sālimiyya [q. v.]. It is from Sahl that this school derives its characteristic: experimental introspection practicing the rites of worship and a technical semi-gnostic vocabulary tending to monism.

Sahl's argumentation is purely dialectic (*taḥḍīr*, *qāṭ*, *far'ī*) like that of the *mutakallimūn*; he does not yet argue in syllogisms in the Greek fashion as his old pupil Hallāj [q. v.] was to do after leaving him. In psycho-physics he teaches that man is composed of four elements (*hayāt, rūḥ, nūr, ḡayā*), that the *rūḥ* is superior to the *waḥī* (against the view of the Hellenisers) and that it survives after death (against the view of Muḥarrad).

In Qur'anic exegesis each verse has four meanings, literal (*ḥaṣr*), allegorical (*ṭāḥīn*), moral (*ḥaṣr*) and axiological (*muṭāṭā*); he admits the Imāmī theory of *ḥaṣr*. The examples of the prophets should be meditated upon in order that we may gradually attain their state of soul.

For Sahl, as for Ibn Karrām and al-Ash'arī, the 'Islamic community' comprises all believers, provided they turn towards the *qibla* (the Sunni view; opposed to that of the Mu'tazilīs and Imāmīs). The word 'faith' (*īmān*) signifies at once acquiescence with the *ḥaṣr* (law), conformity of conduct (*amāl*), identity of intention (*niyya*) and inner enjoyment of the real (*yafīn*).

The true worshipper of God ought first to obey the state and strictly observe the rites: 'to love is to extend obedience' (al-Tustarī, also, said '*ḥarīḍa wa' adāḥa*'). He is bound to produce actions, in imitation of the Prophet (semi-Mu'tazilī notion of *ikhtiyār*, opposed to the quietist *tanazzul* of Shāḥī and Ibn Karrām), but he ought continually to turn towards God (*Allāh ḥablat al-ḥayā*) with incessant contrition (*tauba fard* *fi* *ḥaṣr waḥī*). The analysis that Sahl makes of the stages of the voluntary act, derived from that of al-Muḥāsibī and adopted by al-Ghazālī, remains classic. In the supreme degree the ascetic 'expatriated' from the world ought to possess the essential reality of God (*yafīn*) beyond rites of worship (*ghayba* *bi* *l-maḥḥūḥ* 'an al-*ḥikr*); an adumbration of the Hallājī doctrine of mystic union.

In eschatology Sahl uses with discretion the semi-gnostic data of Imāmī origin; the 'column

of light' (*ʿamūd al-nūr*, 'all *muḥḥūḥ* *hikr*'), a kind of 'mass of primordial adoration', composed of all the souls of saints to be (as opposed to ordinary men, *adamiyyūn*), an adumbration of the *nūr muḥammadiyya* of the later mystics. The saints alone are predestined to possess *irr al-rubūḥiyya* or *irr al-ʿanā*, 'mystery of the sovereign personality', or 'divine right to say "I"'. This idea is an adumbration of the *hamsa ḥamsa* [q. v.]. From it Sahl deduced the probability of final rehabilitation for Satan; an idea later developed by Ibn al-Arabi and 'Abd al-Karīm Jīlī [q. v.].

The *ḥikr*-formula which Shāḥī Saḥāḥ ascribes to Sahl (*Saḥāḥ*, v. *Saḥāḥiyya*) is of modern origin.

Massignon, *Essai sur les origines . . . de la mystique musulmane*, Paris 1922, p. 264—70; *Id.*, *La position d'al-Hallāj*, Paris 1922, Index, s. v.

(L. Massignon)

AL-SAHM, the arrow. a. Geometrical term. If one erects a perpendicular \perp in the middle of a chord of an arc, which reaches to the arc, this is called *al-sahm*, the versed sine (*al-ḡaib al-ma'ḥūḥ*) of the arc ab ; the sine (*al-ḡaib al-muḥḥūḥ*), which corresponds to our sine, is $a \sin$ (see — in addition to many other passages — *Mafāḥiḥ al-ʿUlūm* (ed. v. Vloten), p. 205. The versed sine played a much more important part in the older mathematics from the Hīndus onwards than it does in modern mathematics (cf. e. g. A. von Braunmühl, *Geschichte der Trigonometrie*). Sine and versed sine are measured in the parts of the radius of the circle, the latter being taken as equal to 60 parts or = 1.

b. Astrological term: Ibn al-Kifī says that the expression *sahm al-ḡaib* (the arrow, the hitting of the secret of the future, see *ḥifā*, s. v. p. 327, 338, 410) is astrological. (E. WIDEMANN)

c. Astronomical term: *Surat al-Ramī*, constellation of Sagittarius, and also al-*Kawī*, bow of Sagittarius (cross-bow), a southern constellation of the ecliptic, which, according to Ptolemy and the Arabs, consists of 31 stars mainly of southern latitude, which are almost all of the 3rd to 6th degrees of magnitude. Ptolemy gives only star 24 of Sagittarius (Arabic: *rukbat al-yad al-yamīn*, elbow of the left arm) the magnitude 2—3, while al-Bīrūnī (*al-Kānūn al-Ma'ād*, Berl. MS. 275, fol. 205f) gives magnitude 2 for stars 24 and 23 (*ḥab al-yad al-yamīn* = knuckle of the left hand); of Sagittarius in Ulug Beg, however, except star 3 of Sagittarius (*ʿala l-ḡaib al-ḥanūl min al-ḥawī* = the one south of the bow), which, according to him, is 3—2 in magnitude, they are only of the 3rd or lower degrees of magnitude. This 20° Sagittarii is really of 1.9 magnitude (on *ʿUrūḥ al-rāmī* see C. A. Nallino, *Opus astronomicum*, II. 163). The following stars of Sagittarius are also noteworthy: *Naf al-sahm*

= point of the arrow, and the so-called "eye of the archer", *ʿayn al-ramī*, or, according to al-Bīrūnī (*op. cit.*), *al-Salṭib al-muḍāʾ* of *ʿayn al-ʿatn* = the nebulous double-star which is in the eye. Neither in al-Bīrūnī nor in Ulug-Beg is there any mention of ostriches (the ostrich going to drink and coming back from drinking) which are mentioned by L. Ideler (see below).

Among the Greeks Sagittarius was called *σagittēros*, among the Romans Sagittarius, Sagittifer and Arciteneus. There is no evidence that the ancient Egyptians or Babylonians knew of *al-ḥawz* as a bow-constellation. The bow-constellation of the latter was the bow-shaped-group of stars *αβγδ* Canis majoris + *αα* Puppis.

SAHNA, a little township in the Persian province of Kermānshāh on the great road between Kangāwūr and Bīstūn. The district of Sahnā contains about 28 villages inhabited by settled Turks belonging to the tribe of Khodābandū (of Hamadān). At Sahnā there are a few Abi-l-Jakḥ (see the article 'ABI-ILKŪ'), who are in touch with their spiritual superiors in Dinawar (see DINAWAR), a frontier district in the north. Sahnā must not be confused with Senne, the capital of the Persian province of Kurdistan, the former residence of the Waḥs of Anlīsān (q. v.). Quite near Sahnā on the steep bank of the stream are two funerary chambers carved out of the rock and dating in all probability from the Achaemenid period. A Sahnā (with S, not with Ṣ) near Anlīsān (q. v.) is mentioned by Yāqūt.

Flaudin, *Voyage en Perse*, Paris 1851, I, 413; Čirikov in the *Petersburg Journal* of 1848—1852, St. Petersburg 1875, was the first to give a description of the two tombs; Babino, *Kermānshāh KAM*, vol. xxxviii, March 1920, p. 1—40; E. Herzfeld, *Am Tor von Arsen*, Berlin 1920, p. 8 (detailed description of the principal tombs). (V. MINORSKY)

SAHNUN, 'ABD AL-SALĀM b. SA'ĪD b. ḤABIB AL-TANUGH, was nicknamed Sahnun after the name of a sprightly bird on account of his quick wit. His father Sa'īd had come as a soldier from Hims to Kairawān, where Sahnun was born in 160 = 776/77. Apparently his father was not rich but Sahnun enjoyed the teaching of the best scholars of his native city, especially al-Bahlūl b. Rāḥid (d. 183; Ibn Farḥūn, p. 104), and when Sahnun went to Tunis to pursue his studies there his teacher wrote a letter of recommendation to 'Alī b. Ziyād (d. 183) in consequence of which 'Alī, out of respect for al-Bahlūl, used to come to the lodgings of Sahnun to teach him what he had learned from Mālik. In the year 178, according to his son Muḥammad, he went to Egypt to study under the pupils of Mālik b. Anas and met there 'Abd al-Rahmān b. al-Kāsim, Ibn Wabb and Aḡḡlab, who were prominent followers of Mālik. This was the year before the death of

Mālik and Sahnun had brought with him from Kairawān the portions of the *Muwaffa'* of Mālik which Anas b. al-Furāt had heard under the master. When some questions arising out of the study of the *Muwaffa'* were discussed before 'Abd al-Rahmān b. al-Kāsim, Sahnun required further information and he was asked why he did not travel to hear Mālik himself. He replied that his poverty and lack of money alone prevented him. This association with 'Abd al-Rahmān was of far-reaching consequences for the spread of the Mālikī school of law in the West. Most authorities place the journey of Sahnun to the East in 188, but this is an evident error, as it is also stated that he went there during the life of Mālik, who died in 179 A. H. He later had the gratification of travelling further and performed the pilgrimage in company of 'Abd al-Rahmān, Aḡḡlab and Ibn Wabb riding on the camel behind the latter. Later he visited also al-Medina and Syria studying under the most prominent followers of Mālik. He returned to Kairawān in 191 and made it his calling to spread the doctrines of Mālik. Some of his biographers state that he was the first who introduced these doctrines into the West, but before him 'Alī b. Ziyād, al-Bahlūl and Asad b. al-Furāt had taught the *Muwaffa'* or at least parts of it. Sahnun worked out the doctrines in a large work, the *Mudawwana*, the basis of which was the text of Asad b. al-Furāt, which he commented by questioning 'Abd al-Rahmān b. al-Kāsim upon the most trivial points. Here the acumen of Ibn al-Kāsim and Sahnun come into prominence. Sahnun asks: "Is this point confirmed by tradition or the teaching of Mālik?" and Ibn al-Kāsim answers: "This was the teaching of Mālik" or "this is my own opinion" (*ḥadīth in'yī*). We see that great scope was given in the *Mudawwana* to rational judgment and no attempt is made to introduce genuine or forged traditions to affirm a point of law. In consequence the *Mudawwana* is quite a readable book in clear language and a safe guide to the genius of the compiler and his teacher. When Wabb, a foster-brother of Sahnun, died, Ibn Abi l-Jawād, who preceded Sahnun in the office of judge, said the prayers and Sahnun refused to say them after him because Ibn Abi l-Jawād was a Mu'tazilī. When the ruler Ziyādat Allāh (reigned 201—223) heard of this he commanded the governor of Kairawān to give him 500 stripes. His waṣī 'Alī b. Humaid hearing this stopped the messenger bearing the order and went to the amir to get the sentence revoked. He pointed out that al-Bahlūl had succumbed to a similar punishment (in 185) inflicted by order of the governor Muḥammad b. Muḥṭāṭil. Ziyādat Allāh then forgave him. During the short usurpation of Aḡḡlab b. al-Aḡḡlab (231—232) he introduced the inquisition about the creation of the Qur'ān and Sahnun fled from Kairawān to the hermitage of an ascetic named 'Abd al-Rahmān al-Kaṣīr Ziyād. Aḡḡlab sent a courtier named Ibn Sulṭān to arrest Sahnun, because he knew that the latter hated Sahnun, like most courtiers, on account of his severe criticism concerning the licentious life at Court. The malevolence of Aḡḡlab, however, made Ibn Sulṭān to lean towards Sahnun. He was apprehended and led captive to Kairawān, but when they were about a mile from the city they received news that Muḥammad b. al-Aḡḡlab had regained his

power and that Ahmad had been killed. This caused Sahnun to be liberated. One of the first acts of Muhammad b. al-Aghlab was to depose the Kāfi 'Abd Allāh Ibn Abī 'l-Djāwad. This act met with the approval of Sahnun, who exclaimed in the presence of bathi: "May God reward the amir for freeing the people of their oppressor." Muhammad now, in 233 A. H., offered the office of judge to Sahnun who for a whole year, refused to accept it but finally accepted it in Rabi' al-Thani 234. He said on that occasion to his daughter Khudija: "To-day thy father has been stilled without a knife". Others had proposed Sulaimān b. 'Imrān for the post, but he refused, saying that while Sahnun lived no one else was competent to fill the office. Sahnun accepted no presents or salary from the amir, but defrayed his expenses and those of his officials from the poll-tax imposed upon non-Muslims. To perform his duties as judge undisturbed he had a room built adjoining the mosque and admitted only the litigants and their witnesses. One of his first acts was also to exclude all heretical sects from the mosque, as there were many Šafīis, Ḥanbalīs and Mu'tazilīs at Kairawān; he was also the first to appoint a regular Imām for the mosque and the first who placed pledged property with trustworthy persons in the town, while up to his time pledges had been kept in the house of the judge. Sahnun as a judge treated all parties with the utmost courtesy and did his utmost to appease any fears of litigants and witnesses by telling them to say frankly what they knew. In answering legal questions he was very careful, as he believed that hasty replies led to more trouble than anything else. Biographers of later times know of many *ḥarāmāt* (blessings) accruing through his influence, which proves the veneration in which he was held. He died on Sunday the 6th or 7th of Rajab, 240 A. H. and his death in spite of his great age caused general consternation in Kairawān. Brockelmann in his *History of Arabic Literature* says that it was due to Asad b. al-Furāt and Ibn al-Kāsim that the doctrine of Mālik spread in the West, but, as already mentioned, the merit is principally due to the work of Sahnun in arranging and publishing the *Muwawwān*, which, though based upon the *Mawāṭṭa'* of Mālik, is a much more comprehensive work. Manuscripts are comparatively scarce, but the work has been printed in two editions in Cairo, one in 4 volumes 4^{to} printed 1324/5 and the other in 16 parts dated 1905/6 in 8^{vo}. There exist in private hands seven parts written on parchment in Kairawān about the year 400, which I have been able to consult and which, I hope, will find their way into a public library.

The work of Sahnun being too large for quick reference was abbreviated by Abū Muhammad 'Abd Allāh b. Abī Zaid (died 386 A. H.), whose work has been printed several times. I have also seen an early manuscript written before 400 A. H., in private ownership, entitled *Muḥṭaṣar al-Muwawwān*. This work contains also a few additions by Ibn Abī Zaid. Another abbreviation is by Abū Sa'īd Khālaf b. al-Kāsim al-Azdi al-Barādī, who was one of the principal pupils of Ibn Abī Zaid. He re-arranged the abbreviation in the order of the *Muwawwān* and omitted the additions of Ibn Abī Zaid. This work has found many commentators (Ibn Farḥūn, ed. Pāz, p. 115). Among the many commentaries written upon the

Muwawwān is one by Sahnun's son Muhammad, 2) by Abū 'l-Kāsim 'Abd al-Khalīq al-Sayrī, who died in Kairawān in 460. 3) By Abū Ishāq 'Abd al-Rahmān b. Abī 'Imrān al-Fāsi, who died in 443. 4) Abū 'l-Ḥasan 'Alī b. Muhammad al-Rabā'i, who died in Šīraz in 478. 5) Abū Muhammad 'Abd al-Ḥamid Ibn al-Sā'igh. 6) Abū 'l-Ḥasan 'Alī b. Muhammad al-Zarwāl al-Sughair, who died in 719. The latter's commentary consists of 12 volumes. Abū 'l-Walīd Muhammad b. Ahmad b. Rūḥd wrote an exposition of difficult passages of the *Muwawwān* entitled *al-Muḥaddamāt al-muwawwān*, which has been printed in Cairo (1325) in two vols. 4^{to}.

SAHYUN. [See ŠHYAWN.]

ŠA'IB, MİRZA MUHAMMAD 'ALĪ, whose *taḥṣīl* was ŠA'IB, a Persian poet, born about 1012 (1603) near Isfahān, hence called Isfahānī, though also called Tabrizi, because his father Mīrā 'Abd al-Rahīm came from Tabriz. Thū 'Abd al-Rahīm moved to 'Abdābād near Isfahān, where he was appointed *kāshgār* of the merchants of 'Abdābād. Ḥakīm Raknāy Kāshī and Ḥakīm Shīrī Isfahānī are mentioned as Ša'ib's masters in poetry. He spent a considerable time in India, where the governor of Kābul, Zafar Khān, became his patron and obtained his introduction to the court of Shāh Dīshān. He afterwards followed Zafar Khān to Kashmīr, whence he ultimately returned home to Persia. Shāh 'Abbās II gave him the title *Malik al-Shawar*. He died at Isfahān in 1080 (1677) but other dates are also given (see *Catalogue Baniqere*, iii. 148).

Ša'ib was one of the most prolific Persian poets of the later period; Oriental critics place him very high; according to them, he was the creator of a new style. His works are, in addition to a romantic poem, *Majmūd n Ayāz* (Kthē in the *Grande, de Iran, Phil.*, ii. 250), *kawā'id*, *ghazals* (in Persian and in Turki), *mathnawī's* and shorter

poema. On account of the great bulk of his *Divān* anthologies from it have been compiled: *Wāḍiḥa 'l-Hifā' Mirā' Sa'id* of Darwāsh 'Amillā al-Balkhī; *Mir'ātu 'l-Djamāl*; one author makes the remarkable assertion that these anthologies were compiled by the poet himself (*Col. Baniḥpur*, iii. 149). The *Divān* was published in Lucknow in 1292 A. H.

SA'ID b. AL-'ĀS b. SA'ID b. AL-'ĀS b. UMAIYA b. 'ABD SHAMS b. 'ABD MANĀF b. KURAYB, governor of Kūfa and Medina. At the death of Muḥammad, Sa'id was about nine years old; his father had fallen among the unbelievers at Badr. Sa'id was a member of one of the most prominent families of the Quraysh and was especially noted for his liberality and eloquence. He was held in high respect by 'Othmān and when the latter had decided to establish a definite text for the Kor'ān, Sa'id was nominated to the committee appointed for the purpose. In the year 29 (649/650) or 30 (650/651) 'Othmān appointed the young and inexperienced Sa'id to be governor of Kūfa in place of al-Walid b. 'Ukba who had made himself impossible. During his governorship he undertook expeditions against Tabariḥān and Djamān and suppressed unrest there but aroused unpopularity among the people of Kūfa by his aggressive demeanour. The Kūfāns complained, but without success, to the Caliph, but when Sa'id's attitude continued to give cause for discontent ten men of Kūfa, among them the respected and influential Malik al-Ash'ar, appeared before 'Othmān and demanded the dismissal of Sa'id, who was with the Caliph at the time. 'Othmān declined to pay heed to the complaint and ordered Sa'id to return to his post at once. But al-Ash'ar was not satisfied with this; he returned without delay to Kūfa and stirred up the easily roused inhabitants, and when Sa'id was on his way back to Kūfa, al-Ash'ar's emissaries met him with a strong force and compelled him to return to Medina at once. Al-Ash'ar then went into the mosque in Kūfa and proclaimed Abū Mithāb al-Ash'arī [q. v.] governor on his own initiative. After these present had taken the oath of fealty to the Caliph, al-Ash'ar agreed to be chosen as governor and 'Othmān confirmed the appointment. Sa'id had remained in Medina and when the rebels attacked the Caliph in his house Sa'id fought for him until he was himself severely wounded. When Talha, al-Zubair and 'A'isha left Mecca after the assassination of 'Othmān and went to Ḥajra to raise the troops there for their cause Sa'id at first went with them;

but when he reached Marr al-Zahrān or, according to another authority, Dhāt 'Irāq, he declined to accompany the others any further, because he did not believe in the honourable intentions of the two leaders of the enterprise, Talha and al-Zubair, and endeavoured to dissuade the others from the project. Marwān b. al-Hakam contradicted his assertions, but al-Maghira b. Shu'ba joined Sa'id, whereupon these two with a few others separated from the other members of the party. Sa'id then settled in Mecca and did not take part in the battle of the Camel nor in the battle of Siffin. During the reign of Mu'awiya he was governor of Medina alternately with Marwān b. al-Hakam. Marwān filled the office first; then came Sa'id's turn and when he was dismissed the former received the post again. But after a time he was again dismissed and Sa'id once more appointed his successor. Sa'id died on his estate in al-'Aḥq, according to the most usual statement in 59 (678/679), according to others, as early as 53 (672/673) or 57 (676/677) or 58 (677/678).

SA'ID b. AWS. [See **AW' ZAYD**.]

SA'ID b. MAS'ADA. [See **AL-AKHFAṢH**.]

SA'ID b. ZAYD b. AMR b. NUFAYL..... b. KA'BA b. LU'AYY, one of Muḥammad's earliest companions. His mother was Fāṭima bint Ba'ṭha b. Umayya of the clan of Khum'a. His *kunya* is Abū 'A'war or Abū Thawr. He was one of 'Umar b. al-Khaṭṭāb's cousins and at the same time his brother-in-law through his wife, who was 'Umar's sister, as well as through 'Umar's wife who was his sister. He assumed Islam before Muḥammad entered the house of Zaid b. al-Aḥkam and 'Umar's conversion is said to have taken place under the influence of Sa'id and his family.

His father, Zaid b. 'Amr, was one of the *ḥaṣif*'s; he was much interested in monotheism, refused to worship idols, warned his contemporaries against idolatry and confessed the "religion of Abraham" (cf. ZAYD b. AMR). It is said that he died in the year when the Ka'ba was rebuilt, an event in which also Muḥammad is said to have taken part.

Sa'id migrated with the Muslims to Medina, where Muḥammad allied him with Rāṣ b. Mafik al-Zurāḥī, or, according to others, with Ḥabā b. Ka' b.

When the rumour of the return of the Qurayshite caravan from Syria reached Medina, Sa'id, together with Talha b. 'Ubayd Allāh, was sent on scouting service. They met the caravan at al-Hawrā' and hurried back to Medina to report the news. But Muḥammad was already on the way to Badr and the battle took place without their taking part in it. They nevertheless obtained their portion from the booty. Sa'id was present at all the other *ma'z* and distinguished himself in the battle of Adḥūdāin (13 A. H.), where he was at the head of the cavalry, in the battle of Fijī (13 A. H.), where the infantry was under his command, and in the battle of the Yarmuk (15 A. H.).

At Umar's death Sa'id belonged to those who promoted Uthman's election as Caliph. Yet he was not content with his government, though he did not join the 'Alid party.

He died in 50 or 51 A.H. in 'Akk near Medua, where he was buried. It is said that he reached the age of over 70 years. According to others, he died as governor of al-Kufa under Mu'awiya.

Sa'id never played the first role in the Muslim community. He was honoured because of his early conversion and belongs to the ten who were promised Paradise (*ash-sha'ir al-mubashshirun*). Muhammad is sometimes (Ahmad b. Hanbal, *Musnad*, i. 187 ff.) represented as ascending mount Hira' or Uhud with some of his companions. As the mountain begins to tremble, he says: "Stand fast, oh mountain, for on thee walk a prophet, a *qadih* and witnesses." Then he proceeds to testify his companions, among whom Sa'id mentions himself in a veiled manner in some traditions. Some of the forms of this report remind us of Jesus' transfiguration on the mountain (Matthew 17).

Sa'id belonged to those whose curse (*du'a*) is efficacious. This is illustrated in the story of a woman who, being cursed by him, became blind and was drowned in a well into which she happened to fall because of her blindness.

Sa'id's *musnad*, i. e. the traditions handed down on his authority, is to be found in Ahmad b. Hanbal's *Musnad*, i. 187—190.

Bibliography: Ibn Sa'id, *Ta'rikh*, ed. Sachau, iii. 275—281; Ibn Hadjar, *Isaba*, s.v.; Ibn al-Athir, *Ud al-Ghata*, s.v.; Ibn Hisham, ed. Wüstenfeld, index; al-Jahiz, ed. de Goeje, *Indice*, s.v.; Caetani, *Annali dell' Islam*, Indices, s.v. (A. J. WENSING).

SA'ID PASHA, called KÜÇÜK (the "little"), not so much to indicate that he was particularly small in body as simply to distinguish him from numerous other Sa'id's, was with the reformer and organiser Ahmed Midhat Pasha the greatest statesman in Turkey of the last half century. He was born in 1254 (1838) in Erzurum and died in Constantinople on March 1, 1914; he was the son of 'Ali Naimî Efendi, at one time "controller of expenditure on the eastern frontier" and trusted adviser to the governor of the day, who had been for a period consul and later Turkish chargé d'affaires in Teheran (d. Oct. 4, 1853); Sa'id came from a pure Turkish family of Angora, the Sel's-side. He is buried in the cemetery in Elyûb near the Hazret-i Khâlid mosque. His twin brother Fehid died prematurely and his younger brother Mehmed Ferid at his death in 1882 was *Taht-ı Emlak Müdürü*.

Sa'id received his early education in Erzurum. When 16 he entered the civil service there, in which he was destined to have a brilliant career and pass through all stages up to the very highest office. Two years later he was moved to a post in the military administration of Asatolia, then came in the course of his duties to Constantinople, where his versatility procured him a post in the office of the Supreme Council. He accompanied the Inspector-General to Salonika, Monastir, Janina and Trikkala. He next became general-secretary for Janina, and then for Salonika, after which he filled successively the offices of Director of the Imperial Printing Press in Constantinople, Manager of the official newspaper, *Takvîm-i Vakiyyat*, General-Secretary to the Council of State, to the Ministry of Commerce, to the Grand Vizierate, to the

Ministry of Education and in 1875 Councillor of the Ministry of Commerce and Agriculture and Member of the Commission on reforms. From Sept. 1, 1876, to Jan. 10, 1878, he occupied the important and influential position of trust of First Secretary to 'Abd al-Hamid.

After acting for a short time as Wali of Angora and of Brussa (Khadwendigir) he became Grand Vizier in 1879, an office which he filled nine times in all, a record attained by no other Grand Vizier, although, as regards length of tenure of the office, many others have considerably exceeded his total period of 7 lunar years and 15 days. He was also at different times Minister of the Civil List, of the Interior, of Foreign Affairs and of Justice.

The list which he himself gives of his first seven periods of office as Grand Vizier, in his *Sadri-i Milliye Sa'id Pashanın şumârîsine neşir oluyû mektûblerin küstürîsine* (1908), a collection of his articles published in the *Tanin* and in the *Sabah*, contains a number of discrepancies in the dates which we shall endeavour to remedy here. The dates are not without importance for the history of the Young Turk movement.

Sa'id Pasha was Grand Vizier (after the introduction of the so-called Constitution of Midhat the title "First Minister" was used until Sa'id in 1882 again introduced the traditional title Grand Vizier, *Sadr-ı pâni* [q. v.]) as follows:

- 1) October, 1879—June, 1880;
- 2) September, 1880—May, 1882;
- 3) June, 1882—November, 1882;
- 4) December 2, 1882—September 25, 1885;
- 5) June 9, 1895—October 3, 1895;
- 6) November 18, 1901—January 15, 1903;
- 7) July 22, 1908—August 6, 1908: restoration of the Constitution;
- 8) October 4, 1911—December 30, 1911;
- 9) December 31, 1911—July 17, 1912.

Sa'id was a trustworthy guide to his country at a very difficult time, the period of continual endeavour to link up with modern European development, although his abilities as statesman and organiser could not obtain full scope in view of the special conditions of the times. He was a statesman of the old school, conservative, but quite friendly to reforms. To 'Abd al-Hamid he was a faithful and indispensable councillor and he seems to have brilliantly seconded him in his aim of gathering all power into his own hands and making the Yildiz the political centre of gravity to the exclusion of the Sublime Porte. At all events he is silent in his "Memoirs" regarding his activities as First Secretary to the Sultan, although the Young Turks for a time laid special emphasis on his work during this period. He seems also to have been not unconnected with the notorious document in defence of 'Abd al-Hamid's regime by Ahmed Midhat Efendi (*Uss-ı İnkilâb* and supplement *Zübde-i Hakaik*, 1877 and 1878). Except for Ahmed Vefik Pasha, Sa'id was the only real personality among the creatures of the Sultan and he was able to retain the respect and esteem of both friends and opponents.

In a way quite unusual in a Turkish statesman he laid stress on his pure Turkish blood and on a specifically Turkish patriotism. He sought as far as possible to limit the spread of foreign influence in Turkey although he was regarded as Anglophile and progressive. On Dec. 4, 1895 he had to seek refuge in the British Embassy at Constantinople to escape an order from the Sultan for his arrest,

until 'Abd al-Hamid gave a written guarantee of safety. He spent the next six years, however, in his *havas* in Nigbantash in a retirement which was practically confinement to the house until he was again summoned to power.

During his "English flight" he drew up his scheme for writing his reminiscences, although he could hardly expect to publish such a work during the regime of 'Abd al-Hamid.

In spite of many attacks by the court *camilla*, among whom he had many opponents, and the open enmity of Kamil Pasha, his great antagonist from 1886 to 1913, he had been able to make himself indispensable; in any situation of particular difficulty they always came back to him, who possessed an unusual degree of energy and an unflinching breadth of vision in matters of policy, in spite of his submissive disposition. He never prejudiced himself in the slightest but retired as soon as his own views became too much in contrast to those of the Sultan. As early as 1896 he had had the courage to demand an independent responsible ministry.

At the outbreak of the revolution of 1908 he was entrusted by 'Abd al-Hamid with the restoration of the constitution. But he retired as soon as the Young Turks demanded an entire change of system and complete breach with the past and handed over the Grand Vizierate to Kamil Pasha. But when the Italian campaign in Tripoli had to be settled and the Balkan War, which had taken so unexpectedly a tragic turn as a result of the destruction of the whole organization of state and army in Turkey by the doctrinaire Young Turks, seriously threatened the stability of the Empire, it was again Sa'id who was called upon to save what was still left to save. His power of adaptation was so great that he was now regarded as a Young-Turkish statesman.

In the first three sessions of the new parliament he was President of the Senate. In this capacity also he presided over the National Assembly in S. Stefano on April 22, 1909, which declared that the proceedings of the besieging army were in accordance with the wishes of the people, whereupon 'Abd al-Hamid was deposed on April 27, 1909.

When the Young-Turk party came to political power, he became President of the Council of State but later handed over this office to Khalil Bey and retained only the presidency of the Senate, which he had received after the assassination of Mahmud Shefkat Pasha in succession to the Albanian Ferid Pasha on June 11, 1913. He was still President when he died after a month's long illness at the age of 76.

Sa'id is probably the first Turkish statesman who left his memoirs, a work of the first historical importance. It was published in 3 volumes in Constantinople (1328) under the title *Sa'id Paşanın Kâğıratı*, but this does not seem to be complete. The circumstances of the time prevented these reminiscences being fully utilized; although biased in many directions, they form documentary material of inestimable value for contemporary history and were published to defend his policy, when he took refuge in publicity. Only Kamil Pasha, whom he exposed more than any other of his opponents (d. Nov. 14, 1913 at Larnaca in Cyprus), at once replied in his pamphlet *Kamil Paşanın A'yan ve Sa'id Paşaya Derslikleri*, 2nd ed., Constantinople 1328, and followed this up with his own

memoirs, *Sade-i sâhib Kamil Paşanın Kâğıratı*, Constantinople 1329; *Tarih-i ayyân-i Daulat-i 'aliye*, Zihni Pasha also replied ("Presentation of the Truth", Constantinople 1327).

(Th. MENZEL.)
SA'ID PASHA, Viceroy (Khedive) of Egypt from 1854 to 1863. Muhammad Sa'id, youngest son of Muhammad 'Ali Pasha, was born in 1822. His father had a very high opinion of this, his fourth, son whom he sent when only 19 to Constantinople to conduct negotiations regarding the tribute to be paid by Egypt.

Sa'id, who was francophil, was not on good terms with his nephew and predecessor, 'Abbas I [q.v.]. The latter had done everything possible to induce the Porte to alter the law of succession formulated by the Sultan's firman in favour of Muhammad 'Ali and to secure the succession in direct line for his own descendants by abolishing the law by which the eldest living descendant of the founder of the dynasty was always called to succeed to the throne. Sa'id would thus have been excluded but 'Abbas died before he could realize his project. By an intrigue, however, the death of 'Abbas was kept secret for a week and it was only then that Sa'id was able to enforce his claim to the throne (July, 1854).

Sa'id was a well intentioned prince and quite popular, although he had not the energy of his father, perhaps on account of his indifferent health. In November, 1856, he created a kind of Council of State, composed of princes of the blood, four generals and four high dignitaries. He relaxed the extreme centralisation of the administration instituted by Muhammad 'Ali and contributed considerably to relieve the economic position of the people by promulgating an agrarian law which granted all his subjects the right henceforth to own landed property and to dispose of it freely (1858). It was he who first attempted to abolish the trade in negro-slaves (visit to Khartum in 1857). In the reign of Sa'id as in that of his predecessor the policy of expansion southwards was not continued. The Sudan received certain privileges and prince Halim was appointed governor. Sa'id kept up the Egyptian contingent of 18,000 men which 'Abbas had sent to reinforce the Turkish army in the Crimean War and he also allowed a regiment of fallahin to take part in an expedition sent by Napoleon III to Mexico. By making it, however,

possible for the fallāḥ to obtain the rank of officer, he began the gradual diminution of the power of resistance of the Egyptian army.

In his reign the railway between Cairo and Suez was finished and a telegraph concession granted to the Eastern Telegraph Company. The Bank of Egypt was founded in 1854. The most important act of his reign was undoubtedly the concession which he granted to Ferdinand de Lesseps in 1856 to construct the Suez Canal. Although English diplomacy was able for two years to prevent the Sultane Porte from ratifying the concession, it was owing to the perseverance of the Khedive that the work could be begun in 1859, the necessary labour being supplied by levies raised by conscription from the fallāḥ. The town of Port Said situated at the northern exit of the canal is called after Sa'id Pasha.

Finally, it was in the reign of Sa'id that Egypt's foreign debt originated. The financial embarrassment resulting from the military help given to Turkey and from public works necessitated a loan of over £ 3,000,000 sterling from a London banking-house. This was the first step on the disastrous path later followed by Isma'il Pasha.

In 1860 Sa'id Pasha travelled to Europe; during his absence his place was taken by his heir presumptive Isma'il Pasha, his nephew. He died at Alexandria on Jan. 27, 1863, and was buried in that town.

(J. H. KRAMERS)

AL-SA'ID or **SA'ID** MUX, the Arabic name for Upper Egypt. The region thus named extends from the south of Cairo to the cataract of Assuan: at the present day the expression has no administrative significance and, indeed, has not had since the time of the Mamlūks. Besides, the political frontier of Egypt now extends to within reach of Wādī Halfā, thus including the whole of Lower Nubia. The expression, however, is still used, for it preserves a very marked geographical distinction, which contrasts the long narrow valley of the Nile above Cairo to the large fan-shaped area of alluvial deposits of Lower Egypt, in Arabic, the low country (*safal al-ard*). Indeed, the word *Sa'id* has always been limited in application to the cultivated regions bordering on the river, excluding the Faiyūm and the Oases of the Libyan Desert. This strip, about 600 miles long, extremely narrow in places (3 to 6 miles on an average), reduced to the bed of the river only at certain points between Edfu and Assuan, reaches its maximum breadth in the neighbourhood of Bani Su'f (15 miles). Upper Egypt is now divided into 8 *mudiriyyas* called, with one exception, after their chief towns: Gīsh (Djize), Bani Su'f, Faiyūm, Minya, Ayyū (to which are attached the Oases of Dakhle and Kharge), Gīrgā (chief town Sohāg), Kēnā and Assuan.

The Arabs after the conquest of Egypt retained

the division into pagarchies, which they called *ḥara's*, a transcription of the Greek *χώρα*. Upper Egypt corresponded to the duchies of Arcadia and the Thebaid, a memory of which is still retained in the division of the *Sa'id* into *al-'ala* (upper) and *adna* (lower); Yāqūt even makes three divisions: *Sa'id al-'ala* from Assuan to Akhmīm, an intermediate region stretching northwards as far as Bahasā and the *Sa'id adna* which stretched to Fūshā. As a matter of fact there were three Byzantine duchies, of which two were in the Thebaid, and the frontier between the latter lay south of Panopolis (Akhmīm).

If we compare the list of the *ḥara's* preserved by al-Makrizī with that of the pagarchies given by Hierocles, we find that the alterations are quite insignificant. In course of time certain towns fell into decay and gave place to younger ones; for example Philai which became supplanted by Assuan. An administrative redistribution took place under the Fāṭimids. They introduced a division into large provinces (*amāl*) which has survived in its main lines to the present day. The nine or ten provinces of the Fāṭimids, the Ayyūbids and the Mamlūks, corresponded to the eight *mudiriyyas* of to-day. The most notable differences were the following: the provinces of Atfihya and of Bīṣriya combined into one province from the Mamlūk period under the name of Atfihya have given place to the *mudiriya* of Bani Su'f. Minya has succeeded to Bahasā, now an insignificant town. The former districts of Akhmīm and Manfalūt (the latter intermittently) have gone to increase the province of Ayyū. In the south we still find the two mediaeval subdivisions but their capitals have been removed from Akhmīm and Kūs to Gīrgā and Kēnā. On account of the frequent Nubian invasions, Assuan down to the end of the Mamlūk period was considered as a *limos* (*ḥaḡḡ*) without administrative autonomy, being under the governor of the province of Kūs, whose authority extended eastwards as far as 'Aidāb. The Oases sometimes formed an independent province and sometimes were administered by officers who held them as *ikṣā'* (as part salary).

Although we find under the Fāṭimids the title *ḥakīm al-Sa'id al-'ala*, we cannot say with certainty that the reference is not to the governor of the province of Kūs, which was in the middle ages the most important in Upper Egypt. It is certain, on the other hand, that under the Mamlūks the various provincial governors were under a governor-general of Upper Egypt called at first *ḥakīm al-waḡḡ al-'ala*, then *na'ib al-waḡḡ al-'ala* when Barṣuk gave this official the rank of *na'ib al-saltana*. Al-Kalkandand gives the following account of the administration of Upper Egypt at the beginning of the 19th/20th century: two governors of different ranks shared the authority there; alongside of the *na'ib*, who administered the Nile valley, there was a *ḥakīm*, who governed the Faiyūm and the province of Bahasā, the latter having at its head a *ḥakīm*. Below the *na'ib*, who lived at Ayyū, there were three governors of the first class, at Akhmīm, Kūs and Assuan, and three of the second class, at Gīsh, Atfih and Manfalūt.

Under Turkish administration Upper Egypt comprised 24 *kāshlik*, a list of which is given as by Vansleben.

The population of Egypt has almost doubled in the last 35 years.

1882	6,818,000 inhabitants
1897	9,734,405 "
1907	11,287,359 "
1917	12,750,918 "

Although none of the great centres of population are in Upper Egypt, the figures for certain towns are quite high and a comparison with the figures for 1897 shows that the towns of the Sa'id have in general prospered in the last 20 years except in the extreme south: Asyūṭ 51,431 (compared with 42,000); Madīnat al-Faiyūm 44,000 (31,000); Minya 34,945 (20,400); Banī Suṭī 31,986 (15,000); Kēnā 23,357 (27,500); Sohāg 20,760 (14,000); Gīzāh 18,714 (16,820); Kūs 13,000 (14,200); Assuan 11,293 (13,000). The population was greater in the middle ages as we may deduce from the figures given for the deaths during the drought of 806 (1403); there were 17,000 deaths at Kūs, 11,000 at Asyūṭ, 15,000 at Hā, now a wretched little hamlet about 20 miles west of Kēnā.

The settled population of Upper Egypt is in the main autochthonous, whether converts to Islām or Jacobite Copts. The latter are especially numerous in the Sa'id, especially between Asyūṭ and Esne. Al-Kāshānī and al-Maḥrī give in detail the list of Arab tribes who were settled in Upper Egypt; the principal were the Balī, Djuḥīna, who penetrated right into Central Africa, and especially the Banū Hīlāl and Banū Sulaym, whose ultimate emigration into North Africa is celebrated in history. Their old names do not seem to have survived and the descendants of these tribes are now known by other names (*Fāwāsiya*, *Mu'aw*, *Banū Wūṭīl*, *Aḥwānī*). The Banū 'I-Kanz alone, an isolated branch of the Rabi'a, still exist in the Assuan region under the name of Kunūṣ. There is no longer any trace of the Berber tribes who accompanied the Fāṭimids into Egypt (Luwāṭa, Hawwāra). On the other hand, we still find in the southern part of Upper Egypt the nomadic Bedja who have often been identified with the ancient Blemmyes. Their principal subdivisions at the present day, the *ʿAḥāḍ* and the *Bīḡārīn*, lead a nomadic life in the Arabian desert from the latitude of Asyūṭ to beyond Nubia, leading a miserable existence on the products of their camels and goats.

The Bedja played an important role during the period of Arab domination, for they held the flourishing port of Aidiḥ where one embarked for Djidda, Yemen and the Indies. This town was linked by caravan routes with Assuan, Zaḥī and Kūs; this last road Kūs—Aidiḥ was the most frequented and assumed considerable importance during the Crusades from 460 to 660 (1068—1262), for it was the usual road for pilgrims. This road is now nothing but a memory. This is not the case with the Kēnā—al-Kaṣīr road, which is still in use at the present day; the starting point on the Nile used to be Kūs, which had taken the place of the ancient Coptos (Kēf). The Bedja country aroused the cupidity of the Egyptian government which under the Mamlūks succeeded in exploiting on its own account the gold mines of al-Allāḥī in Lower Nubia. Farther north in the desert between Kēf and Assuan (granite quarries) the Mamlūk sultān also worked an emerald mine. The valley of the Nile in the strict sense of the word, an alluvial formation, is an excellent soil for the growth of cereals: agricultural

development has been improved in recent years by the construction of the barrages of Assuan, Esne and Asyūṭ which allow more perfect use to be made of the waters of the Nile. Industry is almost non-existent here and here again we have a contrast with the prosperity in the middle ages. The looms (wool for clothes and carpets, cotton, silk and linen) were then extremely numerous; we may mention those of al-Ashmūnīn, Akhmīm, Asyūṭ and Bahnāsī.

Muḥammadian art is poorly represented in Upper Egypt: at Madīnat al-Faiyūm, Asyūṭ and Gīzā, however, we find mosques with a certain amount of character. We must also mention the mosques of al-Bāb and Bilāl, south of Assuan, built of unbaked bricks which have a minaret surmounted by a small dome — a fairly frequent type in this region even in the villages (e.g. Shanhūr, south of Kūs). The Fāṭimid minbars of Kūs and Bahnāsī should not be omitted. As to epigraphy, Asyūṭ, Kūs and Sohāg have preserved Kūfic inscriptions and we find Mamlūk decrees at Edfū, Minya, Madīnat al-Faiyūm, Asyūṭ, Sohāg, Kūs and Kūsīya. This is not the place to discuss the monuments of ancient Egypt: it is sufficient to say that the Arab authors describe the temples in their fashion and have localised here a series of legends. We may note, however, that they paid no attention to the buildings of Thebes-Carnac and that in compensation we have a fine description of the temple of Akhmīm, destroyed in the xvth century.

Dja'far Aḍwī, a writer of the viiith century A. H., composed a dictionary of famous men of Upper Egypt, preceded by a brief geographical summary, the *Taḥṣīl al-Sa'id* (publ. in Cairo 1333 = 1914); its interest is not great. In the domain of folklore, we may note the stories of Ibn al-Hawā at Assuan, of Abu 'I-Hadīdī at Luḡsor, of the princess of China at Gīzā, to which we may add the legend of the serpent of the Djabal Harīḥī.

Without going into details, the following is a rapid enumeration of the main historical facts relating to Upper Egypt. The conquest of Egypt by the Arabs became an established fact after the fall of Babylon and Alexandria. Al-Baladhuri mentions trentles made with certain towns of Middle Egypt. The Arabs seem to have taken no notice of the Faiyūm for some time and their advance towards this region must have been impeded by very heavy fighting which gave rise to the historical novel, the *Futūḥ al-Bahnāsī*. In 23 (644) there was an unsuccessful invasion of Nubia which was resumed in 27 (648) and concluded in 31 (652) by an advantageous treaty, which 'Umar ibn 'Abd al-'Azīz renewed in 100 (719). A census of the population was taken in 112 (730); the governor of Egypt, al-Walīd ibn Rīf'a, took charge of this in person and conducted a six months' tour of inspection of Upper Egypt as far as Assuan and we possess a papyrus containing his instructions. During the Umayyad period, the Sa'id seems to have enjoyed more peace than the Delta which was often agitated by risings; one is noted for 121 (739). It was in Upper Egypt that the Umayyad dynasty collapsed in the person of its last Caliph, Marwān. There was a rising of the Umayyad pretender Dihya ibn Mu'ab who became master of the whole of the Sa'id in 167 (784); he was defeated and put to death in 169 (785); Upper Egypt felt the consequences — though less than the

Delta — of the struggle between al-Amin and al-Ma'mun. There was a rising of the Bedja in 241 (855) and a successful expedition against them under Muhammad al-Kumt. Some years later 'Abdallāh al-Umari invaded the gold-mining area and ultimately declared himself independent there; he was put to death but the contingents of the Rabi'a which he had taken there remained amalgamated with the Bedja. In 256 (870) there was an unsuccessful rising led by Ibn al-Sufi at Enne and Akhmim. In 308 (920) a Fātimid invasion; fighting at al-Ashmunāin and Bahasā. The king of Nubia invaded the Oases in 339 (950), took Assuan in 345 (956) and in a third expedition in 353 (964) advanced as far as Akhmim. Towards the end of the 10th century, Abū Bakr rose against the Caliph al-Hakim. Order was disturbed after the great death in the reign of al-Mustansir: Badr al-Djāmāl set out in person for Upper Egypt to re-establish peace (inscriptions at Asyūṭ and Enne). Towards the end of the Fātimid period, several statesmen, like Tāli' ibn Ruzzik and Shāwar, served their apprenticeship to political life in Upper Egypt. It was against Shāwar, who was assisted by a body of Franks, that Shirkūh fought the battle of al-Bahsāin near al-Ashmunāin. This region continued to be much disturbed by Fātimid propaganda, which was kept up in the extreme south by the Banu 'l-Kanz. Saladin subjected them in 568 (1173) sending his brother Turān Shāh against them, who advanced as far as Ibrim. Other risings were crushed with great severity in 570 (1174) and in 572 (1176). There was a very serious rebellion in the whole of the land in 651 (1253), led by an important individual, the Sharif Hish al-Dīn Thā'ib, which was an episode in the struggle between the Arab tribes and the Mamlūk government. In 671 (1272) and in 674 (1275) Bahars intervened in the domestic affairs of Nubia and sent an army which reached Dongola, which was again occupied by a second expedition in 686 (1287). Upper Egypt in 701 (1302) suffered from the brigandage of the Arab tribes, which necessitated the despatch of a powerful force against them. They were suppressed in a most bloody fashion. During the anti-Christian movement of 721 (1321) churches were destroyed in the provinces of Atfih and Bahasā, at Minya, Asyūṭ, Kāz and Assuan. Violent disturbances are again mentioned in 815 (1412), mainly at Assuan, and again in 825 (1422). The reign of Kā'it-Bey was filled with risings by the Hawwāra tribe which it took three years to subdue (881—883 = 1476—1478). As to the events after the Turkish conquest and especially the rising of 'Alī Bey and the French occupation, information will be found in the European travellers and historians.

(G. WIET)

SAÏDA, a town in Algeria (department of Oran), 110 miles from Oran and 60 miles S. S. E. of Mascara, 2900 feet above sea-level, on the Wādī Saïda, a branch of the Habra, in a fertile and well-watered country, suitable for the cultivation of cereals and vines. Population: 12,232 inhabitants of whom 5,410 are Europeans. Saïda is the chief town of a mixed commune of 42,469 inhabitants of whom 39,500 are natives.

Owing to its position on the very edge of the high plateaux, Saïda has always been of considerable military importance. There was a Roman station here. 'Abd al-Kādir built a fortress here in order to control the nomad tribes of the district, but destroyed it on the approach of the French in 1841. In 1844 General Lamoricière, struck by the advantages of this position, built a stronghold 1½ miles north of the Saïda of 'Abd al-Kādir, around which the modern town has grown up. (G. YVER)

SAÏDĀ. [See SAÏDĀ].

SAIF b. DHĪ YAZAN, of the Himyarite royal line, played a part in Arabian history in the expulsion of the Abyssinians from South Arabia, where they had held sway since the time of Dhī Nawāsa. Native tradition records that he first sought assistance against the foreign yoke of the Abyssinians at the Byzantine court and later at the court of the Persian Khuraw. The latter, however, would not risk anything in an enterprise with such hopeless prospects; so he only gave Saif a number of criminals out of the jails under a leader named Wahriz to assist him. The Abyssinians under Masruk were defeated and driven out of the country by them and Saif's countrymen who rose against the foreign yoke, whereupon Saif was installed by the Persians as king. From this tradition and several Arabic poems relating to the story there results as a certain historical fact that Saif b. Dhī Yazan conquered the Abyssinians with the help of the Persian king Khuraw Anūshirwān, broke their rule over Yemen and held sway over the land of his ancestors under a Persian protectorate. His victory over the Abyssinians may be dated about 570 A.D. The victory over the Abyssinians is wrongly ascribed not to Saif himself but to his son Ma'dikarib.

That South Arabian history and with it the story of Saif b. Dhī Yazan was studied and transmitted among the Muslims from the beginning of the Islamic period onwards we know from several sources. It is, therefore, no wonder that Saif b. Dhī Yazan found a place in the Arab saga on account of his successful struggle with the Abyssinians, who in the period of Islam particularly became dangerous and lasting enemies to the new international movement starting in Arabia. In the romance which bears his name, the *Great Saif ibn Dhī Yazan*, the war between the Muslim Arabs and the pagan negroes and Abyssinians occupies considerable space. The king of the latter, whose conflict with Saif b. Dhī Yazan runs almost throughout the book and forms a considerable part of the subject matter, gives us a clue to the date of origin of the *Sira*. He is called Saif Ar'ad and corresponds to the Ethiopian king Saifa Ar'ad whom we know from history and who reigned in

Abyssinia from 1344-72. From this reference we may deduce with considerable certainty that the existing versions of the *Sira* date from about the 14th century, in any case not earlier than the end of the 13th century. The rest of the positive and negative data agree with this, while telling practically nothing separately and having only some value when taken cumulatively; among them are several clearly discernible borrowings from the cycle of the 1001 Nights. It does not, of course, follow that the whole romance arose at this time; isolated parts may very well have been composed and put into circulation earlier. The place of origin of the *Sira* is Egypt, to be more definite Cairo. This is clear from the many personal and place-names which all point to localisation mainly in Egypt and in part even presuppose an accurate knowledge of its topography. This statement is not invalidated by the occurrence of a few place-names from Damascus and its neighbourhood. As regards contents also, Egypt is the most satisfactory place of origin of the romance; the strong undercurrent of superstition and belief in the marvellous is perhaps also an indication of an African birthplace for the romance.

The contents of the book are in keeping with the fact that it was composed and related, if not by the people, at least for them. It is therefore easily explained why we find alongside the good Muslim general tendency so many ideas which are rather to be described as pagan, and which can only with difficulty and superficially be brought into harmony with Muslim principles. The new religion of Islam did not by any means penetrate so quickly or thoroughly among the masses as among the educated classes, whose intellectual sustenance was for the most part confined to a science and literature permeated to a great degree by Islam; among the masses the old beliefs and customs did not have any counterpoise great enough to have driven them out. As has already been mentioned, in the *Sira* Saif a great part is played by the war of the Muslim Arabs against the pagan Abyssinians and negroes. As it is assumed to be known by every one that the hero of the struggle, Saif b. Dhī Yazan, lived in the pre-Islamic period, he has first of all to be transformed into a warlike predecessor of Muhammad and a professing Muslim. The generally accepted possibility of obtaining a glimpse into the future by magic oracles, dreams etc., and by the guidance of pious *shaykhs* disposes of the difficulty. Saif, like his father Dhī Yazan before him, becomes convinced of the truth of Islam before Muhammad's coming and is won over to the new religion. In his struggle mainly directed against the Abyssinians and negroes the antagonism of race now gives place to that of religion. On his many wanderings and campaigns in the lands of men and *djinn*s he spreads by force the religion of Islam, often with the support of helpful spirits. As Muhammad has not yet appeared, in place of his name is the profession of faith we find that of Ibrahim, the *Khalīl-Allāh*. The campaigns thus are no longer waged for the satisfaction of the ambitions of Saif and the Arabs but with the object of gaining recognition for the unity of Allah and his "friendship" with Ibrahim. As soon as the quondam enemies satisfy this demand by repeating the profession of faith, they are accepted into the Muslim community. The superiority of the Semitic over the Hamitic

race is, of course, not thereby done away with. It is the South Arabians in particular and in them the alleged ancestors of the later Muslims of Egypt, who have the honourable task of preparing the way for the last and greatest prophet, while the Abyssinians and negroes either remain in their ancient paganism and thus show themselves unworthy of Islam or with their adoption of Islam play a passive rather than an active role in the religious movement. It is further remarkable that in the whole romance there is not the slightest trace of the Abyssinians professing Christianity. While the worship of Saturn is ascribed to them, the other non-Muslim religions are traced back to the worship of fire, of idols, rulers claiming divine worship, and of different animals (a ram, an ostrich, cows, bugs, hens). Many of these notions may have originated in the unlimited fancy of the narrators; but in part at least vague memories of the old Egyptian mythology may have crept in. The mention of fire-worship points to the old Persian religion. A knowledge of Christianity gleams through only in the mention of crosses, sometimes of stone, which are worshipped and at which oaths are taken. The motives of the *Sira* are not exhausted with the stories of the spread of Islam. The common people are also interested in profane history and in stories of events with as much action as possible. Thus in the romance we find stories of the origins of famous towns, places and buildings, of the bringing of the river Nile into Egypt etc. We further find an account of the many travels and adventures which Saif b. Dhī Yazan and his sons, paladins and spirits have to go through, of the love affairs of Saif and others which continually appear in new guise, of the splendid buildings, regions and men which are described to the hearers, and of much else. The imagination that is called upon to arouse the astonishment of the public becomes unbounded towards the end of the *Sira*, as the extraordinary is in the end no longer effective and must be surpassed again. Considerable space is further taken up — as already mentioned — by magic and superstition and all connected with it. Mentions is very often made of divination by sand to ascertain the unknown past, present and future. Purely magical also is the oft recurring idea that from the act of Saif's marriage with his first wife Shāma the destruction of the Abyssinians and negroes will result, and the latter therefore endeavour to prevent the marriage at any cost. Countless are the magic treasures mentioned in the course of the story; the possession of which assures wonderful powers or control over powerful spirits. Dangerous magicians form the greatest obstacles to the spread of Islam. Their power is not denied, only they are weaker than their colleagues on the Muslim side, and if this is not the case, al-Khidr, the helper of the Muslims in need, takes up the cause of those commended to his charge and overcomes the powerful magicians. When they are converted their activities do not cease, but they place all their skill and knowledge at the disposal of the new religion. Belief in spirits is exceedingly prominent in the *Sira*. Endless troops of *djinn*s of all classes fight for or against Islam. They are in much closer relationship with men than in the period after Muhammad's preaching and constitute a considerable if not the greatest part of Saif's followers. If we were to cut out of the *Sira* all the passages that deal with or are

connected with spirits or magic, we should have barely half of it left.

Taken all in all, the *Strat Saif b. Dhī Yazan* gives a faithful picture of the popular mind in Muslim Egypt at the end of the middle ages and forms therefore a valuable source for the history of Islam in its widest sense.

(R. PARET)

SAIF B. 'UMĀR AL-ASADĪ AL-TAMĪNĪ, an Arab historian, who, according to the *Fihrist* (ed. Flügel, i, 94), composed two books: *Kifā al-Futūḥ al-Kabir wa 'l-Ridda* and *Kifā al-Djāmil wa-Matīr 'Alga wa-'Alī*. Neither of these books has survived to our times. Al-Tabarī, however, was still able to use Saif as principal authority for the period of the *Ridda* and the early conquests (ed. de Goeje, i, 1794—1255) i.e. from 11—36 A.H. A fairly full discussion of Saif's value as a historian is given by Wellhausen, *Skizzen und Vorarbeiten*, vi, 3—7. He is not favourable to Saif. Although he impresses us by the wealth of his details, it is evident from a comparison of his data with those of other Arab historians and with the Christian chroniclers that his 'Iraq tradition is less reliable than that of the Hujjān. Caetani makes a critical use of the fragments of Saif in the course of his *Annali*, indices to vols. iii, iv, and v., s. v. Saif b. Umar.

Bibliography: see the references in the article; cf. also Brockelmann, *Gesch. der arab. Litt.*, i, 516.

SAIF AL-DAWLA, ABU 'L-HASAN 'ALĪ IBN HAMDĀN, the most important ruler of the Hammadid dynasty, lord of Aleppo, famous for his military activities, his struggle with the Greeks and the protection which he gave to scholars.

He was born in 303 (915/916) or perhaps in 301. He was the grandson of Ibn Hammad, who owned the fortress of Mardin and rebelled against the Caliph al-Mu'tadid in 281. His father Abu 'l-Haidja' in 302 received the governorship of Mawṣil and of Mesopotamia from the Caliph al-Muktadir; he fought against the Karmaṭians in 315 and saved Baghdad by having the bridge of al-Anbār destroyed. His power increased under al-Kāhir; he perished during the troubles in Baghdad in the course of which the Caliph was deposed.

Abu 'l-Hasan 'Alī at first owned Wasīṭ and the country round it; his eldest brother held Mawṣil. In 330, under al-Muttaḥi, these princes took part in the murder of Ibn Rā'ik, who was entitled Amir al-Umarā'; the Caliph then gave this rank to the prince of Mawṣil; he gave him the surname of Nāṣir al-Dawla and to his brother 'Alī that of Saif al-Dawla. Nāṣir al-Dawla only held the office of Amir al-Umarā' for thirteen months in Baghdad; he was dispossessed of it by the Turk Tug̃l. The situation of the Caliphate was then very precarious

and the empire divided into numerous factions. The Caliph, wishing to escape from the tutelage of Tug̃l, asked for the protection of the Hammadid princes. He took refuge with his harem and all his court at Mawṣil and went from there to al-Rakka in 332. Tug̃l begged him to return to his capital and made him many promises of loyalty. The Caliph consented against the advice of Saif al-Dawla; but hardly had he reached the neighbourhood of Baghdad than he was seized by Tug̃l, who deposed and blinded him in 333. The Caliph's stay with the Hammadid princes had cost them enormous sums.

The same year Saif al-Dawla took Aleppo from a lieutenant of al-Ikḥshid, who was ruler of Egypt. The latter sent against him an army commanded by Kāfir; Saif al-Dawla met this army near Ijima and then besieged but did not take Damascus. In the following year 334, al-Ikḥshid having died at Damascus, Kāfir, the negro eunuch, went back to Egypt. Saif al-Dawla seized the opportunity to attack Damascus again, which he captured. He then advanced on Egypt, took Kamla, but encountered the Egyptian forces, who defeated him on the Jordan. A peace was concluded between him and the Ikḥshidids; the Hammadid prince retained Aleppo and the Egyptians Damascus.

In 337, Saif al-Dawla carried war into the land of Rūm and from this date till his death, a period of nearly twenty years, never a year passed without his invading Greek territory or fighting some battle with the Greeks. He was defeated this year; the Byzantines took Mar'ash and massacred the inhabitants of Tarsūs. In 339 he advanced a considerable distance into the land of Rūm, captured several strongholds and great booty; but as he returned, the Greeks closed the passes against him and regained the baggage and prisoners they had lost. Saif al-Dawla, with a few companions, succeeded in escaping (al-Maṣṣa expedition). In 342, he took the field against the Praetorian-prefect Baros Focas, who had collected a large army which included Russians, Bulgars and Khazars, and defeated him outside Mar'ash. He captured Constantine, son of Focas, and brought him to Aleppo. The latter died in captivity. By Saif al-Dawla's orders the Christians gave him a magnificent funeral. In 343 Saif al-Dawla again defeated Focas near the castle of al-Hadath, which he rebuilt. This fortress was destroyed again three years later. In 347, the Greeks Basil and Yānīs, sons of Tsimitēs, captured Sumaisāt and inflicted a severe defeat on Saif al-Dawla near Aleppo. Seventeen hundred Muslim horsemen were taken captive to Constantinople.

In the same year, Saif al-Dawla arranged a peace between his brother, Nāṣir al-Dawla, and the Būyids who had taken Mawṣil. He guaranteed them the payment of an annual tribute and kept Mawṣil for his family along with Raḥba and Diyār Raḥ'a.

In 351, Nicephoros, now Praetorian-prefect, advanced on Aleppo with 200,000 men; a battle was fought near the town before the gate of the Jews, in which Saif al-Dawla was defeated. The town was captured, except the citadel, which held out, defended by Dailamites. The Greeks took 1,200 prisoners, whom they put to death at once, ravaged the country, plundered and destroyed the palace of Saif al-Dawla which lay outside the town; after a week they retired.

Next year Saif al-Dawla was paralysed in hand

and foot. Nevertheless he continued to fight the Greeks and defeated them, notably in the vicinity of Aleppo, to which they had returned in 353. In 355 he presided over an important exchange of prisoners on the banks of the Euphrates. He died at Aleppo in 356 of retention of the urine. His body was brought to Mayyāfārīqin and buried in the *turbe* of his mother outside the town. He had given orders for a brick made of soil that he had won in his campaigns to be placed under his head in his coffin.

Saif al-Dawla was a strong-minded prince, little liking advice, but brave, generous and eloquent; like other members of his family he was a poet. Abu 'l-Mahasin and Ibn Khallikān quote a delicate little poem on the rainbow by him, which gives a very high idea of his talents. He surrounded himself with poets and scholars. The most celebrated are the sceptical poet al-Mutanabbī, who was his panegyrist and afterwards that of Kāfir, and al-Fārābī, the great philosopher and musician, who died while accompanying him on a journey to Damascus. The author of the "Book of Songs" (*Kitāb al-Aghāni*) dedicated to him the autograph manuscript of this celebrated work.

SAIF AL-DAWLA. [See **DAWA** B. MANŠUR].

SAIF AL-DĪN AL-BĀKHARZĪ, ABU 'L-MĀ'ĀNĪ SHAHĪD SA'D AL-DĪN SA'D B. MUẒAFFAR AL-BĀKHARZĪ, a native of the Bākhara district between Nishāpūr and Herāt (Le Strange, *Lands of the Eastern Caliphate*, Cambridge 1905, p. 357). After having finished his studies, he joined the great Saif al-Nadīm al-Dīn Kūhrī at Khwāram. The latter after interrupting Saif's second retreat (*arba'in*) sent him to Bākhara as *khālifa*. Al-Bākhari occupies an important place among the *khālifa's* of Nadīm al-Dīn Kūhrī; he lived for a considerable time in Bākhara where he attained great fame and gathered round him a large number of disciples; he even took the surname of Shaikh 'Alam. The mother of the Mongol emperor Mangū Khān, Sirkhytay Ikki (or Sirkhokhstaitai Beigi, according to Blochet) (d. in Dhū 'l-Hijja, 649 = Febr.-March, 1252; see *Tārīkh-i Dīkhānqūshā*, ed. Gibb Mem. Series, ii. 256), had, during her son's reign, given 1,000 *kalāsh* of silver to build a *madrasa* at Bākhara and had entrusted its administration to Saif al-Dīn al-Bākhari (Howorth, *History of the Mongols*, London 1876, i. 188). This shows the fame of the Shaikh in his life-time, just as some anecdotes in the *Nafahāt al-Uns* testify that he was an object of veneration on the part of the great men and princes of his time. Well-known Saif's of the period, like Khwārdjā Gharīb and Hasan al-Bulghārī, showed him respect (al-Kāshif, *Nashabī 'Am al-Hayāt*, Turkish transl., p. 37-38). His mystic Persian quatrains are very popular among the dervishes. The death of the Shaikh,

according to the most probable tradition, took place in 658 (1259/60). His tomb is at Bākhara, at Fathābād, the place where his *takke* is situated. His poems are preserved in several manuscript collections: 31 of his quatrains have been published in the Z. D. M. G., 1905, lix. 345-354 by S. Khuda Bakhsh.

This monastery of the Shaikh in the suburb of Fathābād remained famous for centuries. His descendants there held the rank of *shaikh*. Ibn Baṭṭūṭa, who visited the *takke* in the viiith century A. H., found as Shaikh there Yahyā al-Bākhari, grandson of Saif al-Dīn, and relates that a repast was prepared for him at which the principal inhabitants of the town gathered together and Turkish and Persian songs were recited in addition to the recitation of the Korān and sermons. A Persian writer who visited Bākhara in 816 (1398/9) says that the tomb and the monastery of the Shaikh are half a *farṣakh* from the Kāshī gate (cf. the article *BUGHĀNĀ*) and face the east, and that the *takke* and the monument were built in 788 (1385) by order of Timūr and ornamented with tiles of precious faience; since then, however, these tiles have been torn off and sold. He adds that the descendants of the Shaikh are buried there along with the calligrapher Mīr 'Alī. The tradition of the Yasawī, according to which Saif al-Dīn al-Bākhari was a follower of Ahmad al-Yasawī, is contradicted by historical facts.

SAIF AL-DĪN GHĀZĪ. [See **GHĀZĪ**].

SAIFI, Mawlānā, of Bākhara, is also known as 'Arūḍī, "the Prosodist," from his work 'Arūḍ-i-Saifi. Little is known of his life, but he lived for many years at Herāt, at the courts of the Timūrids, Sulṭān Abū Sa'īd (1459-1469), great-grandson of Timūr and grandfather of Bābur, and Abū 'l-Ghāzī Sulṭān Husain Mīrā (1473-1506), great-grandson of Timūr's second son, 'Umar Shaikh Mīrā. As a poet he was of little consideration, and his poems are trivial. His fame rests on his work 'Arūḍ-i-Saifi, ed. Blochmann, Calcutta 1867 ("Saifi's Prosody"), also known as 'Arūḍ-i-Kāfiya (the amply sufficient Prosody) and *Mīzān al-Aḥkār* (the Measure of Poems), written, as he tells us, to supply the want of a work on an art which was a favourite subject of discussion between him and his friends. The poet Djāmī had already written on this subject, but Saifi's work is the fuller and more detailed of the two, and is one of the best works on Persian prosody which we have. Saifi died in 1504.

2. Saifi was also the *takhalluṣ* or pen-name of

a poet of Nishapur, the encomiast of Takash Khan, Khwarezm Shah.

Bibliography: Dawlatshah, *Tadhkirat al-Shu'ara'*, ed. E. G. Browne (London 1901); Lutf 'Ali b. Akh Khan, *Atiqhuda*, MSS.; Haddaji Khalifa, *Kashf al-Zunin*, ed. Fluegel, iii. 419; Rien, *Cat. of the Persian Manuscr. in the Brit. Museum*, ii. 525^b. (T. W. HAIG)

SAIHAN, one of the larger mountain rivers in the south-east of Asia Minor, the Saros of the ancients. It rises on the Kommas Daghi not far from Kaisariya (cf. Mehmed Edib, *Manatik al-Hadidi*, Istanbul 1232, p. 41; also al-Mas'udi in the *B.G.A.*, viii. 58, 7, 199, 183, 7, 199; "at the town of Saihan ... not far from Malatya"), enters the Cilician plain of Adana, which lies on its bank, whence it makes straight for the sea, receiving a number of tributaries on its way; it enters the sea by several mouths (the *Cepita Sari* of the ancients) below Tarsus. On the course of the river which remained for long uninvestigated see Tchihatcheff, *Asie Mineure*, i. 293-299, and C. Ritter, *Kleinasion*, ii. 133. The name Saihan is most probably, like the name of the neighbouring river Djahhan, an "arbitrary transference" (cf. Noideke in the *Z.D.M.G.*, xlv. 700), an assimilation to the Muslim names of the two Central Asian rivers Oxus and Jaxartes. The Saihan was considered one of the rivers of Paradise (cf. al-Mas'udi, ed. Paris, ii. 358 sq., *B.G.A.*, viii. 295; Yakkut, i. 179, ii. 82, iv. 558, 579; al-Isakhari, *B.A.G.*, i. 63, 64; Ibn Hawkal, *B.G.A.*, ii. 122; al-Baladhuri, ed. de Goeje, p. 165, 166, 168). Under the Umayyads it was one of the rivers on the frontier against the Byzantine empire, at which prisoners taken during the Arab wars of conquest were ransomed. There was a famous bridge over the Saihan between al-Mas'isa and Adana called *Djar al-Walid*, which dated from the time of Justinian and was renovated in 125 (743) and again in 225 (840) (cf. G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 131 sq.). See also the article **DIJAHAN**.

(F. BAHRINGER)

SAIHUN. [See **SIX DARYA**.]

SALMARA. [See **SEIMERE**.]

SAIN-KALA, a little town and district in southern Adharbaidjan, on the right bank of the Djaghata. In the south the boundary runs a little over the river Saruk, a tributary on the right bank of the Djaghata. In the north it is bounded by the district of Adjari, in the east by the province of Khamsa. The name is derived from the Mongol *saïn* = good.

Population: The Turkish Afghar tribe, of which a part had to emigrate to Urmia to make room for the Çardawri (Çardowli) tribe of Litr origin (the district of Çardawri on the Seimere) whom Fath 'Ali Shah brought from Shiraz at the beginning of the nineteenth century. The chief of the Çardowli lives at Mahmudjik and commands about 5,000 men. The town of Sain-Kala has 2,500-3,000 inhabitants and a small bazaar. In 1830 it was destroyed by a Kurdish invasion under Shaikh 'Ustadallah. Sain-Kala, formerly occupied by a Persian garrison, guarded the entrance to Adharbaidjan through the Djaghata valley. The caves of Kereftu with a Greek inscription described by Ker Porter (*Travels*, ii. 538-552; Ritter, ix. §16) as well as the site of Takhti Sulaiman (the ancient Gazaka; al-Shis of the Arabs; cf. Marquart, *Eruntahr*, p. 108) are in the territory of the Afghars of Sain-Kala. The lake of Camli Göl (near the village of Baderli) with a floating island is likewise well known. A section of the Afghars belong to the Ahli-Hakk sect (cf. the article 'ALI ILALI) the local chiefs of whom in Bent's time lived at Naran-baba and Gendjabad (cf. V. Minorsky, *Notes sur la secte des Ahli-Hakk*, (*R.M.M.*, 1920, xl.-xli. 19-97; reprint of the *R.M.M.*, 1922, p. 53, 76).

Another fortress of the same name on the river Abhar, east of Sulayniya, and mentioned in the fourteenth century by Mustawfi (see Le Strange, *The Lands of the East. Caliph.*, p. 222), should not be confused with this Sain-Kala.

Stahl in *Petermann's Mitteilungen*, 1905, p. 33 (with a map of the district and indications of its mineral wealth); Jackson, *Persia Past and Present*, p. 121 sq.

(V. MINORSKY)

SA'IR. [See **AL-SAR**.]

SA'UN (Sə'un, Səwun, Seyōn, Sēōn), a town in Hadramot in South Arabia on the side of the hill of the same name, four hours' ride from Shibām on the right bank of the Wadi Masfa. The town lies in the centre of luxurious vegetation;

far and wide one can see palm-groves and well-tilled fields with *qṣm* and wheat. The town is surrounded by a wall, is densely populated and has about 4,500 inhabitants. The streets are broad and clean. Within the town also there are fields and palm-groves, mainly the endowments of the mosques, of which there are said to be not less than 300 in the town. The most beautiful were built by families of the Saiyids after whom they are named; among them are the mosque of Ḥabīb 'Abdallāh Saḥkaf with a fine dome and a beautiful carefully whitewashed minaret, a cemetery and a garden of palms and dōm-trees surrounded by a wall. The mosque of Tāhā is kept in the same way and has also a garden. Of the other mosques the Maḡḡūr with its beautiful pierced minaret and the al-Riṣṣā of Ḥabīb 'Alī al-Ḥabībī Bā 'Alawī are worthy of mention. The saint is very hospitable and is said to feed no less than 6,000 persons once a year. He was the founder of a new centre of Muslim learning here which came to overshadow the old celebrated school of Tarīm. Contributions from all parts, especially from Java and India, came to the support of the school which 'Alī built at his own expense and maintained himself at first. It now enjoys great prestige far and near. The palace of the Sultān lies on an eminence surrounded by a wall with projecting *ḥāṭ'a* and flanked by round towers, while the roof is crowned by three watch-towers. Immediately adjoining it are the principal mosque and the bazaar.

SAIYID (A., plur. *Sā'id*), a prince, lord, chief, or owner; one who is eminent by means of his personal qualities, his possessions, or his birth. In this last sense it is used throughout the Muslim world almost exclusively of the descendants of Muḥammad (see the art. *SHARIF*). It occurs only twice in the *Qur'ān*, where it is used once (iii. 34) of John the Baptist, and once (xii. 25) of the husband of Zulaikha. By the Arabs it is applied not only to men, but to the *ghinn*, to animals, and to inanimate objects. A verse refers to "*ghinn*, who are aroused by night, summoning their chief (*sayid*)", the wild ass is called the *sayid* of his female, and al-Zuhayr calls the *Qur'ān Sayid al-Kalām*, "the paragon of speech". Of its application to non-Muslims the best known instance is Rodrigo Díaz, "el Cid Campeador". But for *Sā'id*, *Sā'id* etc. of the art. *SH*.

AL-SAIYID AL-HIMYARI, ABU ḤASHIM, IMĀ'IL B. MUḤAMMAD B. YAZID B. RAḤ'Ā B. MUḤARRIR (according to others Raḥ'ā Maḡarrigh), born in 105 (723) at Baṣra, an Arab poet, belonged to an *Riḥlī* [q. v.] family, but quite early in life he went over to the Shī'a "by the grace of God" as he prided himself. He became an adherent of

the Kaṣābiya sect [q. v.], but not only did he expect with them the return of their Imām, Muḥammad b. al-Ḥanafiya, but held the doctrine of metempsychosis etc. in both forms, belief in the *saḡ'a* (return in human form) and the *tanḥīn* (change into animal form). He even proclaimed himself the reincarnation of the Prophet Jonah. His attitude on religious and political questions forced him to move from Baṣra to Kūfa, but did not prevent him, after the rise of the 'Abbāsids, from offering them poetical tributes also: he enjoyed the favour of al-Manṣūr in particular. He also placed his art at the service of provincial governors, e.g. Abū Budayr of al-Ahwāz. Poetical talent was hereditary in his family; his grandfather Yaṣid had been drenched as a satirist, who had lashed the governor Ziyād with his lampoon. He himself was distinguished not only as a prolific composer (over 1,000 *ḥaṣids* by him are said to have been current among the Banū Ḥaṣim), but also for the gracefulness of his language. Like Abu 'l-'Aṭhiya, he avoided embellishing his poems with strange words, but aimed rather at being generally understood. With the latter and al-Baḥḥār, he is considered the most distinguished of the later poets, but the peculiarity of his political and religious views prevented the wider circulation of his poems, of which not even a *Diwan* has survived. He died in Wasī in 175 (789).

(BROCKELMANN)

AL-SĀK, the leg, the thigh, is used in several senses in Arab geometry: (1) *Sāk* means the perpendicular of a right-angled triangle; (2) the side of an equilateral triangle. Thus we find in al-Bīrūnī for example (*al-Kānūn al-Ma'ādī*, 3rd Maḡāla, Ch. 1): *mutḥallalū ḤBC*, *al-mutawāwī ṣḥat ḤB*, *HC*; (3) *Sāk* means the foot or the leg of a pair of compasses and is then synonymous with *riḡl* (foot). This is shown by the following text: "And you place the compass's "foot" on the line on the wall which is near the meridian and this span is the curve of the *inḥirāf*. Place this arc in the compasses in such a way that one of its legs stands in one and the other in the other end of the angle (arc) (Muh. Sibt al-Ma'rūdī († 1495 Cairo), *On the calculation of tables for the construction of Muḥarrifāt* (inclining sundials) (Oxford MS., Bodl. Or. II, No. 285, fol. 26, 70). (4) The Western Arab astronomer Abū 'l-Ḥasan 'Alī al-Marāḡhī († c. 1260 in Morocco) speaks in his *Djāmī al-Mabūdī wa 'l-Ghāyāt* (transl. by J. J. Sedillot and published by L. Am. Sedillot under the title: *Traité des instruments astronomiques des Arabes*, Paris 1834—35, p. 446) of a *Sāk al-Jarāda* (locust-leg) and means by this an hone-line traced in the plane by a cylinder, whose course in the plane has some resemblance to the shape of a locust's leg. (5) In names of constellations we also find the word *Sāk* used to name a star, in the leg of an animal (or man), e.g. *Sāk*

al-'Uṣṣ (α Boötis), *Sāk jāl* = Ophiuchus 20, *Sāk al-'ūd* (in Leo = Arcturus and Spica).

(C. SCHWY)

SAKĀLIBA, Slavs. The name *Sakāliba* (the singular forms are *saklab*, *saklabb* and *saklabb*, also with initial *s* instead of *j*) is usually applied by the Arab geographers of the Middle Ages to the peoples of various origins who lived in the lands adjoining the territory of the Khazars, between Constantinople and the land of the Bulgars. See the articles *BULGHAR*, *KHAZAR*, *SLAVS*.

The Slavs of al-Andalus. In Muslim Spain the word in its plural form is found very early as the generic name of the foreign private bodyguard of the Umayyad Caliphs of Cordova. Originally, it was applied to all the prisoners brought by German armies back from their expeditions against the Slavs and then sold by them to the Muslims of al-Andalus. But as early as the time of the traveller Ibn Hawqal, the name *Sakāliba* was given in Spain to all the foreign slaves enrolled in the army or appointed to various services in the royal palaces and harems. The geographer tells us that at the time he went through the Iberian Peninsula, the "Slavs" who were there did not come only from the shore of the Black Sea but also from Calabria, Lombardy, the country of the Franks and from Galicia. Indeed, it seems that they were largely supplied by the raids conducted by Maghribi and Andalusian pirates on the European shores of the Mediterranean. Those who were intended to guard the *harim* were the objects of a special trade in the hands of Jewish merchants who had important "manufactures d'eunuques", to use Dozy's expression, in France and particularly at Verdun. The majority of these prisoners were still young men when they arrived in Andalusia. They very soon began to speak Arabic and became Muslims.

Their number soon became very large. According to al-Maḳkarī, in the reign of 'Abd al-Rahmān III, successive censuses of them in the capital gave the figures 3,750, 6,087 and 13,750. In spite of their condition of servitude, we find them at this time holding a considerable position in society. Some attained wealth and even owned vast estates and had slaves of their own. They became cultured through contact with the brilliant Andalusian civilisation; among them were scholars of note, poets and bibliophiles and one of them — if we may believe Ibn al-Abbār and al-Maḳkarī —, Ḥabīb al-Sikāhī, composed in the reign of Hishām II, a whole book devoted to the merits of the literary Slavs of Andalusia; it was called *Kitāb al-istīḥār wa 'l-muḥallabāt alā man anḥara faḥḥil al-Sakāliba*.

Like the praetorians in the Roman empire and the 'Abid at a later date in the Morocco of the Sharif dynasties, the Slavs in Spain, in proportion as their numbers increased and they occupied a more important place in Andalusian society, came to play a predominating part in politics. It is in the reign of 'Abd al-Rahmān III that we first find them definitely occupying high civil offices in the state and even military commands. The Caliph used them to counterbalance and combat the influence which the Arab aristocracy had retained in his empire. He thus had no hesitation — in spite of the discontent in his court — in trusting to the Slav Naḍja in 939 the command of the expedition which he sent against the King of León — an expedition which, however, ended

disastrously in the catastrophes of Simancas and Alhandega and the pursuit of the Muslim army by the forces of Ramiro II and his allies of the kingdom of Navarre.

'Abd al-Rahmān III's successor, al-Hakam II, allowed the *Sakāliba* a no less important role in his empire and his indifference to their more and more arrogant or even insolent conduct did not fail to arouse the wonder of the chroniclers of the reign of this enlightened prince. At his death the Slavs felt themselves masters of the situation. According to the author of *al-Bayān al-Maghrib*, there were then in the palace over a thousand eunuchs and at Cordova a body of *Sakāliba* guards was entirely at the disposal of two very important individuals, Faṭḥ al-Niḥāmī, grand master of the wardrobe, and his assistant Ḥawdhār, grand jeweller and grand falconer. These two Slav eunuchs kept the death of al-Hakam secret and tried to prevent the proclamation of the heir-presumptive, who was still an infant; but they were opposed by the viziers al-Muḥaffi and Ibn Abī 'Āmir, whose popularity was only increased by punishing them.

Space will not allow me to trace in detail the part played by the Slavs during all the period of the decline of the Umayyad Caliphate of Spain; we find them taking part in all the plots hatched at Cordova, or in the rest of Andalusia, sometimes on the winning side, sometimes on the losing, but showing always the same spirit of initiative, the same ambition and the same despotism; we may mention from among them the eunuch Khairān who, at the beginning of the eleventh century A.D., was the leader of the Slav party in the capital.

After the end of the Caliphate of Cordova, the Arab historians are much less detailed regarding the political and social role of the Slavs in al-Andalus; but it is probable that the latter, having by now been Muslims for several generations, became absorbed in the rest of the population and lost, along with the memory of their foreign origin, the importance which they had been able to claim in the period of decline of the Umayyads of Spain.

(E. LEVI-PROVENÇAL)

SAKĀRYA (sometimes *Sakārya*), a river in Asia Minor. It rises near Bayt in the north-east of Aḥyūl Kara Hüdā. In its eastward course it enters the wilāyet of Angora through which it runs to a point above Çahmak after receiving on its left bank the Saiyid Ghāzī Sū and several other tributaries on the same side. It then turns northwards describing a curve round Siwri Hüdā. Here it receives on the right bank the Engürü Sūya from Angora and near this confluence the Pursak on the opposite bank. A little to the south of this point is the bridge of the Eski-Shehr-Angora rail-

way. Farther on, towards the north, the Sakarya receives on its right bank the Kirmir Şu and then taking a sudden turn it runs westwards to Lefke, traversing the willets of Kutahia and Khudawendigar. At Lefke the Sakarya is joined on the left by the Gök Şu from Bursa. After Lefke it turns sharply to the north, entering the sandjak of Izmid near Mekteş, having now run 250 miles. The most flourishing part of its course now begins, and we have fine crops of cotton, wheat, vegetables, besides vineyards and the rearing of silkworms. It now runs in a north-easterly direction through the kaşa's of Geiwe, Ada Bazar and Kanderi, to enter the Black Sea near İğdirli. The stretch of its course in the sandjak of Izmid is 70 miles; near Ada Bazar it receives the waters of the Mudirni Şu from Kastamuni on the right bank and of the Çarh Şu from lake Şabandja on the left, 1 1/4 miles north of Geiwe is a bridge of six arches built by Sültan Bayazid I and at Lefke Ewliya Çelebi (iii. 11) also mentions a fine bridge of wood. The train crosses the river four times between Izmid and Bilecik.

The Sakarya is the ancient Sangarius (see Pauly-Wissowa, *Real-Encyclopädie*, Ser. 2, I, col. 2269) it has changed its course since the Byzantine period, as is shown by the great bridge built by Justinian over it in 561, which is now two miles from Ada Bazar. This bridge is now called *Büyük Köprü* (in classical times *Pentagephyra* or *Pontogephyra*; see Ramsay, *The Historical Geography of Asia Minor*, London 1890, p. 214, 215), but at the present day the river no longer runs below its arches.

The Sakarya is not navigable; its lower course is only used for transporting to the Black Sea the wood from the thick forests of the neighbourhood. In prehistoric times the river ran westwards into the Sea of Marmora; the lake of Şabandja and the Gulf of Izmid mark the track of its ancient course. In 909 (1503) Sültan Salm I conceived the idea of reestablishing communication between the Sakarya, the lake (the level of which is above that of the river) and the gulf in order to bring more easily to his capital the wood required for the building of his fleet. Being convinced of the feasibility of the project by the report of experts, he gave orders for its execution but the opponents of the scheme were able to frustrate it by the argument of the *rişwet* (Hadjili Khalifa, *Djikkunnun*, Constantinople 1145, p. 660).

For a period, in the reign of Osman, the Sakarya formed the frontier of his territory on the west and south and for his conquests he had to cross the river (for example for the capture of Ak-Hisar in 1308; see 'Ashik Pashaide, *Ta'rik*, Constantinople 1332, p. 12, 24). Since then the Sakarya had not played an important part in Ottoman history until the famous battle on the Sakarya from Aug. 24, to Sept. 10, 1921, when the Greek army was defeated in a last great effort to reach Angora. By the counter-offensive of Sept. 10, the Greeks were thrown back to the west of the Sakarya and forced to take up the line Eski-Shehri-Afyon-Kara-Hisar. In August, 1922, the Turkish army was victorious for a second time near the Sakarya; this was the beginning of the Turkish offensive which ended in the complete reconquest of Anatolia.

AL-SAKINA is a loan-word borrowed from the Hebrew (*שְׁקִינָא*). There it signifies the presence of God, in the purely spiritual sense, sometimes made clear by a sign like fire, cloud, or light, which can be appreciated by the senses. Muhammad was apparently not quite clear regarding the true meaning of the word, when he says (Sura ii. 249) that the *sakina* along with some relics was in the sacred ark of the Israelites. Possibly he associated with this Hebrew loan-word conceptions from pagan demonology; many Kur'anic exegetists at any rate give here quite a djinn-like description of *sakina* (cf. al-Tabarī, *Tafsir*, ii. 385 sq.; it is noteworthy that on this point Wahb b. Munabbih relies on a Jewish source; he also confuses the ark of the covenant with the oracle of the 'Urim Wetummin). Where else the word is found in the Kur'an, it is generally explained by the commentators as the subjective condition of peace of soul and security (see the commentaries on ix. 26, 40, and xviii. 4, 18, 26). From this a secular meaning of the word gradually develops: *sakina* means the quality of calm and dignity in character (e.g. al-Bukhārī, *Bad' al-Khalq*, bāb 15) and then simply: to keep quiet, e.g. at the *ṣalāt* (al-Bukhārī, *Djum'a*, bāb 18) or at the *ifāda* (al-Bukhārī, *Ḥaḍḍ*, bāb 94). Besides this there is a change of meaning of the word in its religious use as the Jewish meaning of the word gradually penetrates into Islām. Thus the *sakina* is said to come benevolently down when the Kur'an is recited (al-Bukhārī, *Faḍl al-Kur'an*, bāb 11 and 15). As among the Jews the Ruah Haššodesh, which rests on the Prophets, gradually develops out of the *šēkinā*, so we find in Islāmic writers also *sakina* occasionally used with the meaning "Holy Ghost" (see Goldziher, p. 149 sq.).

Bibliography: A. Geiger, *Was hat Mohammed aus dem Judentume aufgenommen?*, Leipzig 1902, p. 53 sq.; I. Goldziher, *Über den Ausdruck "sakina" in den Abhandlungen zur arabischen Philologie*, Leiden 1896; the same in *R.H.R.* xxxviii. 1—13. (B. JOEL)

SAKIZ, the Turkish name of the island of Chios (corrupted from the Greek *αἶξ Χίος*) and at the same time the word for mastic (*μαστίκη*) which is only found on this island and is obtained in excellent quality from the *Pistacia Lentiscus* L. and was very popular in the East as a valuable drug in the middle ages and, indeed, still is in modern times. How old the form *sakiz* is, is shown by the occurrence of the word as an appellative in Kuman and Old Turkish (Houtsma, *Turkish-Arabische Glossar*, p. 37) and in Persian (Josephat Barbaro, *Viaggio in Persia* — Anno 1471 —, Venice 1543, p. 59: Syo è luogo molto nominato ne la Persia, & in tutte quelle parti & è chiamato Seghex, che vuol dir in nostro idioma mastico; Vullers, *Lexicon pers.-lat.*, s. v. sekiz). In Syriac also mastic is called *šiyā* i. e. Chios from its place of origin (Löw, *Aramäische Pflanzennamen*, p. 70). By the reverse process the Arabs have named the island from its best known product "mastic island" (*Djazarat al-Mašiki*; Abu 'l-Fida', *Taḥṣin al-Buldan*,

ed. Reinaud, ii/i. 268 and al-Dimashqi, ed. Mehren, p. 228, the first Arab geographers to mention it, know it only by this name.

In the middle ages Chios had attained very great importance as a station on the sea-route for pilgrims and merchants to eastern lands (Palestine, Syria and Egypt). On the decline of the Byzantine empire in the second half of the middle ages the rich island became exposed to the raids of the petty Seldjuk princes of the opposite coast of Asia Minor and in 1089 Trachas, father-in-law of Kilidj Arslan I and lord of Smyrna, which is not far away, succeeded in establishing a temporary footing there (Anna Comnena, *Alexias*, vii. Ch. 8). In 1303 the Emperor entrusted the Catalan mercenaries with the defence of the island against the raids of the Turks (Muntaner, *Chronik*, Ch. 203 and 206; Pachymeres, ed. Bonn, ii. 344, 345). A few years later — in 1307 or 1308 — and after the Genoese Benedetto Zaccaria had usurped rule over Chios (from 1304) 30 "Turkish" ships laid waste the island (Pachymeres ii. 510) and Martino Zaccaria, who had succeeded Benedetto Zaccaria in 1314, had much hard fighting with the Turks; in 1329 he was dispossessed by Andronicus III but by 1346 another Genoese, the Admiral Simone Vignosi had seized the island, which remained till 1566 under the rule of the Ghustiniani, the family of the Genoese "Manne" of Chios, as the legal successors of the conquerors called themselves. But in order to maintain their position the latter were forced to pay tribute to the local Turkish dynasts in Asia Minor and later to the Ottoman Sultans and occasionally to support them with their fleet. They paid the Aidsin-oghlu 500 ducats yearly and the same to the Sarukhan-oghlu of Magnesia. The first intercourse with the Ottomans was of a hostile nature: after the overthrow of the petty princes of Aidin, Sarukhan and Mentemhe, about the year 1397, Bayazid I stopped the export of corn from Asia Minor to the islands of the Archipelago and with 60 ships undertook a campaign against Chios and laid the island waste with fire and sword (Ducas, ch. xiii). After the capture of Smyrna by Timur (Dec., 1402) the Maoneses, like the Frankish lords of Lesbos, did not fail to pay homage to the conqueror (Sharaf al-Din 'Ali Yazidi, *Zafar-nama*, Calcutta edition ii. 482; Ducas, ch. xvii; *Historia del Gran Tamerlan*, Madrid 1782, p. 230). They repeatedly lent their galleys to Sultan Mehmed I and his successor Murad II for the defeat of Djansaid (1415 and 1421); the yearly tribute was fixed at 4,000 ducats. After the fall of Constantinople the Maoneses hastened to pay homage to Mehmed the Conqueror; the Sultan left them their autonomy but raised the tribute to 6,000 ducats and some years later, as the result of an encounter of the islanders with the admiral of Gallipoli, to 10,000 ducats, with 2,000 in addition to dignitaries of the Porte. The island was able to retain its independence for over 100 years but when it fell two years in arrears with the tribute, this omission and the fact that it served as an asylum for escaped Christian slaves was used as a pretext for sanctions. At Easter 1566 the Admiral Piale Pasha landed unnoticed on the island and took possession of it without a blow being struck. The churches in Castro were destroyed or turned into mosques and the Genoese dignitaries led away into a miserable captivity. It was said that the Greek population, dissatisfied

with Frankish rule, had called in the Turks. On the intercession of the French Ambassador, the exiles received permission to return a few years later and the island was granted a limited degree of self-government (Hadjji Khalifa, *Tuhfat al-Kibar*, p. 37th sq.; Leonclavius, *Annales*, p. 110 sq.; Gerlach, *Tage-Buch*, p. 50, 123; Zinkeisen, *Gesch. des Osm. Reichs*, ii. 900 sq.). Very serious consequences, especially for the Frankish inhabitants, followed the disastrous attempts of Virginio Orsino, Duca di Bracciano, who landed in April, 1599, with five Tuscan galleys in Castro, but had to begin an ignominious retreat a few hours later. The efforts of the French Ambassador de Brèves secured for the Catholics the preservation of their churches; the skulls of 400 soldiers whom the Tuscan admiral had left in the lurch on the mainland on his retreat, long adorned the battlements of the fort of Castro (Na'ma, *Turikh*, ed. 1280, i. 212; Sandys, *Traveller*, London 1658, p. 9 sq.; D[es] Hayes de] C[ourmenin], *Voyage de Levant en l'année 1621*, Paris 1632, p. 346 sq.; Sagredo, *Memorie storiche de Monarchi Ottomanni*, p. 766 sq.; v. Hammer, *Gesch. des Osm. Reichs*, iv. 297 sq.). In July, 1681, the harbour of Castro was the scene of an encounter between a French squadron and Tripolitanian corsairs, in which many buildings in the town and several mosques were destroyed by the fire of the ships' guns (Zinkeisen, *op. cit.*, v. 43; von Hammer, *op. cit.*, vi. 371 sq.).

During the great war of the allied Austrians and Venetians against Turkey at the end of the xviiith century, the town of Chios was temporarily occupied by the Venetians under Antonio Zeno; the fort of Castro capitulated after a short resistance on Sept. 21, 1694; but after a few months the Venetians were forced to retreat after the unfortunate naval battles at the Spaladore islands, 9 and 18 Feb., 1695. The Roman Catholic inhabitants were accused by the Orthodox of having brought about the foreign invasion and they lost what remained of their privileges; their churches were closed and handed over to the Greek Orthodox (Rashid, *Turikh*, i. 199th sq., 207th—209th; Rycant, *History of the Turks*, London 1700, p. 518, 525 sq.; Kantemir, *Gesch. d. Osmanischen Reichs*, Hamburg 1745, p. 646 sq., 661 sq.; Sathas, *Toupanourion 'Ellaδe*, Athens 1869, p. 401 sq., 414 sq.). But the island was far more seriously affected by the Greek war of independence. On March 22, 1822, Samiote irregulars landed on Chios and besieged the Turkish garrison in the fort of Castro; on April 11, the Kapudan Pasha Nasuh Zade 'Ali appeared with a strong fleet, relieved the besieged garrison, who had put up a heroic defence under the *Muhâziz* Wahid Pasha, and drove out the Samiotes. The defenceless island was terribly punished and, although only a few natives had joined the Samiotes, it was ravaged like an enemy country with fire and sword. Of the over 100,000 inhabitants which Chios numbered at the beginning of the century, 23,000 are said to have been massacred and 47,000 carried off into slavery. The responsibility for these excesses was assumed by Wahid Pasha in his report to the Sublime Porte; the Kapudan Pasha, who had in vain opposed them, was blown up by Kanaris in the night of 18/19 June before Çezhne with his flagship; Wahid Pasha was degraded and banished to Alaya (Djavidat, *Turikh*, xii. 40—48; K. Mendelssohn Bartholdy, *Geschichte Griechenlands*, Leipzig 1870, I. 250 sq.).

The prosperity of the island was destroyed and to this day it has not recovered from this catastrophe. Chios was visited by a severe earthquake on April 3 and 11, 1881; the number of dead was estimated at 3,000, that of the injured at 1,000 (S.B. Pr. Ab. W., 1881, p. 801 sqq.). As a result of the Balkan War the island was ceded to Greece in 1913.

Under Turkish rule Chios in the older period was under the jurisdiction of the Kapudan Pasha; later it formed a *sandjak* of the wilâyet of the archipelago (*Defter-i Bahr-i Sâhil*); in 1910 its population (almost exclusively Greek, a few Jews) was estimated at 80,000 souls.

The Chiotex have been famous from early times for their intelligence and enterprise; especially as merchants and bankers but also as physicians, apothecaries and skilled gardeners, they were scattered all over the Levant; of their scholars the learned Leon Allatius and the Hellenist Korais have attained a European reputation. The products of their industries (silks, the so-called *chiotex*, a cotton cloth) were much in demand; among the products of the soil we might mention mastic and southern fruits of all kinds.

(J. H. MORITZMANN)

AL-SAKKÂKÎ, ABU BAKR YUSUF b. ABÎ BAKR b. MUHAMMAD SIRÂDÎ al-DÎN al-KHAYRÎ was born in Transoxiana on the 2nd of Djamâd 1 555 A. H. He was originally a metal-worker and excelled in engraving dies, from which art he received his *laqab* al-Sakkâkî, and making intricate locks. One day he had made an inkstand furnished with a lock, the whole weighing no more than a *qirât*, which he presented to the ruler of his country, whose name is not mentioned by the biographer. He was suitably rewarded, but soon another man came to the audience and great honour was shown to him; this amused Sakkâkî, and upon enquiry, he was told that the man was a person of learning. Seeing that learning was in greater honour than handicraft he decided to become a scholar himself. His first studies were far from successful and his ill success made him lose heart and only when he saw how the perpetual dropping of water had made a hollow in a rock, did he take up his studies again. There is exceedingly little known of his life, the names of neither his teachers nor pupils are known, no doubt on account of the Mongol invasion of his native country towards the end of his life. He is reckoned among the Hanafî lawyers; two of his teachers in that branch, Sa'id al-Khayrî and Mahmûd b. Sa'id b. Mahmûd al-Harîrî, are mentioned and also one of his pupils, Naḥṣr b. Mahmûd al-Zahîdî, the author of a Hanafî law-book entitled *al-Kāya*. He died in the village of al-Kindî near the town of Almâligh (Almalîk of the geographers) in Ferghana in the year 626 A. H. As a Turk he is credited with some Turkish poetry, but his reputation rests upon his work in Arabic, the *"Miftâḥ al-Uṣṣ"*, which is the most comprehensive book on rhetoric written up to his time. In spite of its great reputation, manuscripts of the book are scarce, as it was early superseded by the abridgement and commentary of the third part of the work written by al-Karwîrî under the title of *Fakḥ al-Miftâḥ*, which has become the standard work on the subject and has in turn become the subject of numerous commentaries. Another reason why the *Miftâḥ al-Uṣṣ* became superseded is, no doubt, its very difficult language which at times is quite obscure on account of long sentences such as are unusual in Arabic, and which might point to Greek influence if such could be assumed. It may be that Sakkâkî had also studied the translations of Greek philosophical books, being a contemporary of the celebrated Naḥṣ al-Dîn al-Jûzî, and it is perhaps not without signifi-

case that, sparing as he is in mentioning any authorities, he frequently refers to statements of al-Rummānī who is reported to have indulged in philosophical theories on grammar. The book is fortunately accessible in two printed editions (Cairo 1317 in 4° and Cairo 1318 in 8°), which, though printed without points, so necessary for this work, enable us to study it. The original plan of the author was to divide the book into three principal sections: morphology, grammar and rhetoric, to which he has added other branches akin to the subject. The part dealing with morphology is preceded by a chapter on phonology, teaching theoretically the proper pronunciation of the Arabic sounds, while in the part dealing with exposition and rhetoric he embodies chapters on *Badi'*. Though he attempts to classify the subjects scientifically, his divisions vary both in their titles and in the enumeration. The first book is divided into three *Faṣl's*, while the second is divided into several *Faṣl's* and *Bāb's*, those towards the end not being numbered. The chief portion on Rhetoric is divided into *Kawn's* and these again into *Fann's*. The part dealing with *Bayān* or eloquence has two *Asl's* and five *Faṣl's* and again several unnumbered chapters. The third *Faṣl* on Metaphorical expressions is divided into six *Kawn's* and at the end some additional chapters not numbered. Here the author says, he ought to finish his book, but as what follows really belongs to the art of Rhetoric, he adds long expositions on *Itidlāl* or Reasoning by deduction and a lengthy account of the art of poetry, with the usual details of the metres etc. The work was too extensive and too badly arranged to serve as an easy hand-book; in consequence the abbreviation and commentary of al-Karwī under the title of *Talkhīṣ al-Miftāḥ* soon superseded this work and the latter with its many commentaries, especially those by al-Tafīṣānī entitled *al-Mufaṣṣṣat* and *al-Mukhtaṣar*, have held sway in Arabic literature till the present day. The *Miftāḥ al-Ṭilās* has been the subject of numerous commentaries; in addition to those named, among others one by Maḥmūd b. Maṣ'ūd al-Shīrāzī (died 726 A. H.), which deals with the third part only; another commentary on the third part is by al-Burdjānī, who completed it in 803 A. H.

Lit.*, i. 294; Mehren, *Rhetorik der Araber* (Vienna 1853).

(F. KERNKOW)

AL-SAKKĀKĪ, an Eastern Turkī poet, born in the last quarter of the eighth century, was celebrated in the first half of the ninth century at the court of the Tūmīdids in Transoxania. The only information regarding this poet of whom we know neither the date of birth nor of death, is found in the *Maḥallī al-Naf'is* of al-Nawā'ī. Al-Sakkākī was himself a native of Transoxania and achieved his fame in Samarkand. He is believed to be buried in the vicinity of this town. Al-Nawā'ī in the *Maḥallī* alleges that al-Sakkākī's poems do not justify his fame. In the introduction to his *Khaṭṭ-i Dawūdī*, the same author says that al-Sakkākī composed a complete *Divān* and is famous in Turkistan. On the other hand, in

his *Muḥakamat al-Lughatīn* he says that al-Sakkākī cannot be compared with the Persian poets, although he acknowledges his claims as one who spread Čaghatai literature, like Lāfī, for example, author of a Turkī *Divān* and a *Guruz Nauris*, also in Turkī. The uncertainty regarding his life and the period in which he lived has led several modern writers to confuse him with the famous scholar Abū Ya'qūb Yūsuf al-Sakkākī (see e.g. Naḍīb 'Aṣim and Mehmed 'Arif, *'Oṭmānī Tarīḫi*, Constantinople 1335, p. 275). In the British Museum is an incomplete copy of the *Divān* of al-Sakkākī; the *ḥaṣṣa's* which it contains and which are dedicated to the Tūmīdī Khalīf Salṭān (d. in 812/1408), to the great Sufī Khwāja Fāris (d. in 822/1418), to Ulugh Beg (814/1410—850/1445) and to the great Amir Arslān Khwāja Tarkhān, general of Ulugh Beg, apparently the principal patron of the poet and himself the author of several poems in Turkī which still survive (Naḍīb 'Aṣim, *Ḥikāt al-ḥaṣṣa's*, Constantinople 1334, p. 92—94), give us a fairly clear picture of the period and surroundings of the poet. In the various dictionaries of Čaghatai we find passages quoted from al-Sakkākī; in the MS. No. 4757 of the Aya Sofia written in Uigur characters, which contains, among other things, the *Ḥikāt al-ḥaṣṣa's*, there are three of his *ghazal's*. The poet, who had not yet been forgotten when al-Nawā'ī visited Samarkand (870—873 = 1465—1468), played an important part in the history of Čaghatai poetry in spite of the fact that he was not an artist of the power of Lāfī or Haidar al-Khwarizmi (cf. the art. TURKEY [language and literature]).

Mus.*, p. 284; Köprülü Zāde Fu'ād, *İlk Mutaṣawwifler*, Constantinople 1918, p. 198. (KÖPRÜLÜ ZADE FU'AD)

SAKKĀRA, an Egyptian village, 15 miles S. W. of Cairo, Lat. 29° 75', Long. 31° 13', situated near the left bank of the Nile halfway between Dīṭre and Dahshūt. It measured 700 faddān (according to Ibn al-Dīnār, *al-Thaḥṣa al-saniya*, p. 144; see also de Sacy, *Relation de l'Égypte*, p. 675) and its valuation (according to Ibn Duqmāḥ, *Khaṭṭ al-Intiqār*, Bulaq 1309, iv. 133) was 10,000 dīnārs. Pococke in his travels found it a rather poor village at the foot of the hills, with a mosque and a few clusters of date-palms. The name in Arabic means "falcon's nest"; but it is no doubt a corruption of the name of the old Egyptian god of death, Seker or Sokar (*Socharis*), "the confined one", who presided over the great cemetery on the Western Plateau. The extensive ruins (5 miles in length and 1 mile in width) of this famous necropolis exhibit every conceivable variety of sepulchral monument, notably tombs of the Ancient Empire (described by Mariette, *Revue Archéologique*, 2nd series, xix. 8 189).

Of the twenty odd pyramids of the Sakkāra group an outstanding one is the so-called Step Pyramid (*al-haram al-mudarradja*), which is in reality a transitional mastaba. This, which is regarded as the oldest extant monument of its kind, was designed, it is believed, by Imhotep ("Imouthes")

the prime minister of King Zoser of the third dynasty (H. R. Hall in *The Cambridge Ancient History* (1923), i. 276). It is 197 feet high, and is roughly constructed of small stones quarried in the neighbourhood, and having eleven successive layers of masonry with six steps with sloping sides. It is not oriented (Brugsch, *Egypt under the Pharaohs*, London 1891, p. 28 sq.). The interior is a congeries of chambers and branching passages, many of them the work of Arab tomb-robbars. One of such depredators named Ahmad al-Nadīdār ('The Carpenter'), c. 820 A. D., has left his name in red ink behind him on the walls of a neighbouring pyramid. The Pyramid of Pepi I is known locally as the Pyramid of Shaikh Abū Manṣūr, while the Pyramid of Teti is believed by the natives to be in the vicinity of the place of Joseph's incarceration, and for that reason is known as the 'Prison Pyramid'. Another tomb in the same pyramid field is named by the Arabs *Maṭṭab al-Fir'awn*, 'Pharaoh's Throne'.

Regarding the 'Prison of Joseph', there is a quotation in al-Makrīzī to the effect that it is at Būṣṭr (al-Sidr), whose pyramids 'Abd al-Laṭīf describes (see the art. *Ḥṣṣa*). But De Sacy (*op. cit.*, p. 206) considers that these include the pyramids of Sakkāra as known to us (De Sacy mistakenly writes the name as *Sakkara*; although he afterwards corrects this in a foot-note, *ibid.*, p. 675). This would agree with the textual addition (see de Sacy, p. 671, note 6) which states that Sakkāra is one of the dependences of Būṣṭr. The 'Prison of Joseph' was a regular place of pilgrimage. The Fakih Abū Ishāq al-Marwazī said: 'If a man comes from Iraq to visit it I shall not reproach him for undertaking the journey' (al-Makrīzī, p. 610). And there is a record in al-Masūhī's chronicle of the month of Rabi' al-Awwal, 415 A. H. (May 13—June 11, 1024) that the populace of Cairo thronged the streets with drums and trumpets demanding from the merchants money to take them to the 'Prison of Joseph'. On the merchants' refusing, the matter was laid before the Khalifa ('Alī ibn Ḥakīm bi-amrī 'l-Ilāh) who ordered the merchants to pay the customary annual sum for the purpose. Thereupon the processional march to the 'Prison of Joseph' took place led by the grand Kādī 'Izz al-Dawla (al-Makrīzī, *ibid.*, p. 610 sq.).

Near the Sakkāra pyramids are to be seen the remains of the celebrated Serapeum or Apis Mausoleum, where, in the rock-cut tombs below, the mummified carcasses of the sacred Apis-bulls worshipped at Memphis were enshrined in huge sarcophagi of Assuan granite. The chapels built above the vaults formed the Serapeum proper. Thither a wonderful *Dromos* or Avenue of Sphinxes led. Fresh excavations in 1911—12 revealed the remains of the early Coptic monastery of Apa Jeremias (see *Annales du Service des Antiquités de l'Égypte*, Cairo, register). The well-known wooden statue, in Billak, of the *Shaiḫ al-Balad* came from Sakkāra (see F. B. Zincke, *Egypt of the Pharaohs and of the Khedives*, London 1871, chap. ix.).

(J. WALKER)

SAKKIZ, a town and district in Persian Kurdistan, administered sometimes from Senne, sometimes from Tabriz and situated on the upper Djaghān east of Hāne. The inhabitants are Kurds (Mukri). In religion they are Shāfi'i Sunnīs; there are also adepts of the Nakshbandī Shāikh. The family of local Khāns is related to that of the Wālis of Ardilān. The town has 1200 houses, 2 mosques, a bazaar, etc. The district (with its dependency Mirede) comprises 360 villages. According to the census of 1296 A. H., there were 34,024 people in the district. The government taxes amounted to 6305 tumāns a year. Cf. 'Alī Akbar Wāḳ'ī-nigār, *Ḥadīqat-i Nāṣiriya* (manuscript history of Persian Kurdistan written in 1309 A. H.).

(V. MINORSKY)

SAKŠIN, a place on the Dnieper (according to Ibn Sa'īd, quoted in Abu 'l-Fida', *Taḥwīn al-Buldān*, ed. Reimund and de Slane, p. 205), also located on other rivers e.g. on the Jaik (cf. Dorn, *Caspia*, p. 116) and on the Volga (according to Westberg; cf. Marquart, *Ost-türkische Dialektstudien*, p. 56). It is situated in 67° E. Long. and 53° N. Lat.; a town ساکسین, without *ya'*, is said to exist in 162° 30' E. Long. and 40° 30' N. Lat., but this must be another place. East of Sakšin lies the town of سوس (v.l. سوسه)

which belongs to the territory of Sakšin (Abu 'l-Fida', *op. cit.*, p. 202). According to Yāqūt, *Mu'djam*, iv. 670, the fortress of Manḡushlāgh is between Khwārizm and Sakšin and the lands of the Rūs near the sea of Tabaristān (Caspian Sea). Further information is given in Hamdallāh Mustawfī (cf. *The Geographical Part of the Nushat al-Qulūb*, ed. G. Le Strange, Gibb Mem. Series, xxiii): Sakšin and Bulghār (this combination is frequent in other authors also) are in 32° = 750 farsangs distant from Mekka (text, p. 10; transl., p. 10); the eastern frontier of Irān, which begins in Sindh, runs to the frontier of Sakšin and Bulghār (p. 21 = 23 of the transl.); Khwārizm, Sakšin and Bulghār are east of the Caspian Sea (p. 239 and 231); Sakšin and Bulghār are two small towns in the sixth clime; much land belongs to them and they export furs (p. 259 and 252). Al-Yazdānī in Ibn Isfandiyyār (Gibb Mem. Series, ii. 33 sq.) says that in his time Amul was the market for the wares of Sakšin. Merchants from the Irāk, Syria, Khwārizm and India came to Amul to purchase there. The voyage by boat from Amul to Sakšin took three months but the return journey only one week because the former was up stream and the latter down. Ibn Isfandiyyār wrote probably at the beginning of the sixteenth century. We see that there is no agreement regarding the situation of the place: on the one hand it is said to be on the Dnieper and on the other east of the Caspian Sea; while Yāqūt seems to place it among the Rūs, al-Kāẓimī in *Āthār al-Bilād*, ed. Wüstenfeld, ii. 402 sq., calls it a town of the Khazars; he says it is large (contrary to Mustawfī), inhabited by 40 tribes of the Ghuzz, with a large number of strangers and merchants in addition. The climate is cold, the inhabitants are Muslims, for the most

part Hanafis, although there are also some Shāh'is. The houses are covered with roofs of pine-wood. The river of Sakšin is larger than the Tigris and rich in fish of a kind only found there, which are sold at the rate of 100 *wann* for a half *dīnār*; these fishes yield train-oil and isinglass. The currency there is lead, of which three Baghdad *wann* = 1 *dīnār*. Sheep cost $\frac{1}{2}$ *dīnār* each, rams $\frac{1}{4}$ (*farrūf*); there is also much fruit. Al-Qarnāṭ relates that the river is frozen in winter and can be crossed on foot. So far al-Kāzwinī's account of the place, an excerpt of which is given by al-Bākuwī, a geographer of the fifteenth century (quoted by d'Ohsson, *Hist. des Mongols*, i. 346, note 1); but al-Bākuwī adds that in his time the town no longer existed (*op. cit.*: "Socassin est à présent submergé; il n'en reste aucunes traces; mais près de là existe maintenant une autre ville, le Séral de Barca, résidence du souverain de cette contrée").

In the history of the Mongol period Sakšin is several times mentioned: conquered by Čingis Khān (*Tārīkh-i Ghalā, Gibb Mem. Series*, vol. xiv., part i. 572; cf. Yāqūt, *Mu'jam*, i. 255), it belonged to the territory of Tūghī, his eldest son (*Tārīkh-i Dīshkūnūshā, Gibb Mem. Series*, vol. xvi., part i. 31; *Tārīkh-i Ghalā*, i. 375). Ogolai shortly after his accession sent an army to Kipčak, Sakšin and Bulghār (*Tārīkh-i Dīshkūnūshā*, i. 150); the *Dīshkūnūshā* Sakšin was-Bulghār is mentioned as Khān's territory (*ibid.*, i. 205). The descendants of Khān Dārīkūh (d. 1626 A.D.; Abu 'l-Fidā, *op. cit.*, p. 205) afterwards lived there. We have already seen that it no longer existed in the fifteenth century. The "Séral of Barca", mentioned in al-Bākuwī in connection with it, is probably called after the reigning family. The combination *Sakšin-i Rūm* is found in a Persian poem, which the rebel Atsız sent to king Sandjar (*Tārīkh-i Ghalā*, i. 488).

The name Sakšin may — at least in European sources — also denote the inhabitants of the place. This is perhaps the case with the *Saxi* in Joannes de Plano Carpini, vii. 3, although the Mongols could not conquer them according to this writer, which is contradictory to the Persian sources. In the passage from a Russian Chronicle which is quoted by Dorn, *Caspia*, p. 21 in the note — here also there is a reference to the Mongol wars — we find *Sakšini* alongside of *Polowci* as the name of a people.

Bibliography (besides the Oriental sources already quoted): Ritter, *Erdkunde*, viii. 541; Ch. d'Ohsson, *Hist. des Mongols*, the Hague—Amsterdam 1834—1835, i. 346, 446, ii. 15, 113 (in the last two passages as the name of a people); d'Averac, *Relation des Mongols ou Tartares par le frère Jean du Plan de Carpin*, Paris 1838, p. 180 sq.; Dorn, *Caspia*, St. Petersburg 1875, p. 21, 116 sq.; Bretschneider, *Mittheilungen aus den russischen Archiven*, London 1888, i. 296, 300, 305; Hammer-Purgstall, *Geschichte der Goldenen Horde* etc., Pesth 1840, p. 7, 9, 15, 28, 89, 99; do., *Geschichte der Ilkane* etc., Darmstadt 1842, i. 419, ii. 246 sq. (V. F. BUCHNER).

SAL (r.), a year, a word also used by the Turks. It is normally the time that elapses between two successive passages of the vernal equinox by the sun, the astronomical year; but the word is also used to designate anniversaries of births, of arrivals, etc. Solar, lunar, astronomical and civil years are distinguished; the civil year is 365

days, the astronomical year 365 days, 5 hours, 49' (Handjery).

SĀL-NAME (r. and r.), literally: year-book, annual, almanac, calendar; the term *rū-nāme* from *rūn* "day" is also used; the Arabic word for calendar is *taqwīm*. The Turks make great use of tables whether annual or perpetual; the latter cover a period of 80 to 85 years; they are in the form of little rolls or tiny volumes usually written with great care and in ink of several colours. They give the year in the eras of Alexander, of Christ, of Diocletian and in the Djalālī era, the era of the Saldjūk Sultān Malik Shāh, the name of the year in the Turco-Mongol animal cycle, a horoscopic table, the Muslim, Jewish, Christian and Persian feasts, the correspondence with the Syrian months, astronomical and meteorological predictions, the dates at which the principal agricultural operations should be performed, as well as other operations. The *Mu'adhdhūn* use tables called *shij* or *taqwīm* to know the canonical hours and the new moons. M. d'Ohsson quotes a highly esteemed calendar from the xviiith century A.D. made in Turkey by Dārendawī which covered the period 1192—1277 A.H. *Sāl-nāme* is also the name of the official annuals (gazetteers) of the Ottoman Empire.

Bibliography: d'Ohsson, *Tableau Général de l'Empire Ottoman*, vol. ii., Paris 1788, p. 160—162; Carré de Vaux, *Notice sur un Calendrier turc*, in *A Volume of Oriental studies presented to Professor E. G. Browne*, Cambridge 1922. (CARRÉ DE VAUX).

SALĀ, in dialect *Slā* (ethnic *Saldūw*, dial. *Sāwī*), or, following the official French orthography commonly used, *Salé*, the English *Salé*, *Salah* or *Sallee*, is a town in Morocco on the Atlantic coast at the mouth of and on the north bank of the river Bū Ragrag. On the other bank just opposite stands Rabāt. The estuary of the river serves as the harbour of the two towns. *Salé*, the less important, has about 20,000 inhabitants of whom 2,000 are Jews.

The name is ancient, but the Punic *Sala* and the Roman *Sala Colonia* did not stand on the same site; the remains of the Roman *Sala* can still be seen near the modern *Shāla* (Chella), a few miles up the river and on the other bank. It is not till the Idrisid period (ixth century) that the new *Salā* (*Salé*) first appears, distinct from old *Sala* (Chella) then in ruins. At the beginning of the xiith century it was the capital of a little Ifridid kingdom, which fought with the Barghawāna [q.v.], heretics settled to the south of the Bū Ragrag. There was already at this time a *ribā* built against these heretics on the south bank, where Ribāt al-Fatā was afterwards built (Ibn Hawkal). In the middle of the xiith century, *Salā*, if we may believe al-Idrisi, was a fine and strong town with rich harbours, a harbour frequented by Spanish ships, which brought oil in exchange for foodstuffs; entrance into the river was already very difficult.

The building of Rabāt by the Almohads opposite *Salé* does not seem to have done much harm to the latter. It is from this period that the great mosque dates and *Salé* remained prosperous while Rabāt declined after the death of Ya'qūb al-Manṣūr. It fell into the power of the Marinids in 649/1251 and after several vicissitudes Ya'qūb b. 'Abd Allāh, a member of the reigning family of the Marinids, declared himself independent there. The

Christians from Spain entered it by surprise in 658/1260. The Sultan Abū Yūsuf Yūṣuf the Marinid drove them out again after a few days, closed its ramparts and built the Sea-Gate still visible to-day. The Marinid sovereigns on several occasions mobilised on the left bank of the Bū Raḡrāḡ the troops intended for the holy war, had an arsenal at Salé where ships were built, and heightened the town. We may specially note the beautiful madrasa built by Abū Ḥasan. A little later, Ibn al-Khaṭīb spent several years there and wrote of its charm.

In the course of the great wars waged by the Spaniards and Portuguese in the xvth and xvth centuries, Salé was one of the few points on the Moroccan coast where they could not gain a footing. In the beginning of the seventeenth century when expelled by the edicts of Philip III (1609) the Spanish Moors took Rabāt; Salé, slipping from the rule of the Sherifs, became independent under the Muḡāhid al-Ayāshī in 1627. It became his base for attacking al-Mamora (al-Madhiya) which was held by the Spaniards. Salé played a part in the feuds which divided the town and ḡasba of Rabāt, then fought unsuccessfully against one and the other, until when al-Ayāshī was killed and the three towns fell into the hands of the Marabouts of Dillā (1641). Salé recognised the authority of ḡhailān (1660) and after the defeat of the latter by al-Raḡhid became finally incorporated in the lands of the Filālī dynasty in 1666.

This disturbed century was also the age of piracy. The Corsairs of Salé were famous; but under the name of Salé at this period the Europeans comprised the three towns and the pirates in reality almost all came from the ḡasba of Rabāt and from Rabāt. These three towns, strange as it may appear, formed at the same time the principal commercial port of Morocco. Down to the end of the xvth century this was the usual route by which travellers and merchandise from Europe went to Fās and it was on several occasions the residence of diplomatic representatives of the Christian powers.

As compared with Rabāt, the administrative capital of Morocco, Salé is now a quiet little town where many scholars live. It is also a market for the tribes who live on the north bank of the Bū Raḡrāḡ.

SALADIN, AL-MALIK AL-NĀṢIR ṢALĤH AL-DĪN YŪṢUF I, was the son of the Amir Nāḡim al-Dīn Aiyūb (see Aiyūb), born in Takrit in 532 (1138). His father moved shortly — according to others a few years — after his birth to Syria and was

appointed governor of Ba'albek by Zangī [q.v.] and remained on there (with one third of the town and its appanages as a fief) after the Burid Atābeg Abāḡ [see BURIDS] had seized the town. Saladin and his brothers were brought up there. When 17 years old he came with his father to the court of Nūr al-Dīn when the latter had captured Damascus in 549 (1154) (on the occupation of Ba'albek and Damascus see the introduction to *Baalbek in islamischer Zeit* in vol. III. of *Baalbek, Ergebnisse der Ausgrabungen und Untersuchungen in den Jahren 1899—1905*, Berlin 1925). It is remarkable how little is known regarding Saladin's youth and education; he played no part at the court of Nūr al-Dīn; the Amir Ūṣama, who lived there, did not even know him, as we see from his biography. He first came into the public eye when in 559 (1164) "in spite of his reluctance" (as Abū Ṣhāma reports without giving any reasons) Shirkūh [q.v.] took him with him on his first campaign against Egypt. Shāwar, the vizier of the Caliph al-Āḡid [q.v.], had been displaced by a rival, Dirghām [q.v.], and had applied for assistance to Nūr al-Dīn, Atābeg of Syria. He promised the latter a third of the revenues of Egypt, while Dirghām had asked king Amaury I of Jerusalem for support and had promised him a vast tribute. Dirghām was defeated and slain before Amaury could give him any assistance, and Shāwar restored to the vizierate. As the latter did not fulfil his promises, Shirkūh, to gain his dues, ordered Saladin to occupy Bilbā's (see BILBĀS) and the district and collect the taxes there. Fierce fighting was the result. Shāwar, finding himself in a tight corner, called in king Amaury to help him, so that Shirkūh and Saladin were forced to entrench themselves in Bilbā's. The town was so well defended by the two that Shāwar and Amaury could not take it. While this was going on, Nūr al-Dīn captured the important fortress of Hārim and advanced on Bāniyās so that Amaury was now forced to retire to Syria in order to prevent Nūr al-Dīn from making further captures. He had agreed with Shirkūh that the latter should withdraw from Egypt and leave Shāwar in possession. Shirkūh arrived in Syria with Saladin in the beginning of 560 (towards the end of 1164) with his forces intact. The main result of the campaign was that it gave Nūr al-Dīn and his men a clear idea of Egypt, its wealth and relative strength. Shirkūh was attracted by the idea of conquering the land and settling there but Nūr al-Dīn did not wish to split up his forces in view of the war with the Crusaders. It was only three years later when Shāwar made a new alliance with Amaury that Shirkūh received orders to begin a second campaign against Egypt and again he took Saladin with him (October 1168) "in spite of his reluctance at first". His first objective was the occupation of the bank of the Nile; after overcoming the difficulties of the march and eluding the Franks he reached the south of Cairo and built a fortified camp near Djire; very soon afterwards, Amaury arrived with his troops and encamped opposite him at al-Fuṣṣāṭ. At the same time he concluded an agreement regarding subsidies with the Caliph himself. Amaury then attacked Shirkūh and forced him to retreat to Upper Egypt. At Babān he forced Shirkūh to make a stand and the latter, after some hesitation, gave battle on the advice of Saladin and some of the Amirs; he succeeded in beating Amaury, while

Saladin put to flight the Caliph's troops. Shirkūh was not in a position to follow up this victory; he retired with Saladin to Alexandria and left the latter there with half his army while he himself went to Upper Egypt to collect tribute. This was Saladin's first independent command. Amaury advanced on Alexandria with his own and the Egyptian forces, while the fleet of the Crusaders watched the coast. Saladin had difficulty in holding the town against the Franks, who put up huge siege artillery, and therefore called upon Shirkūh for assistance. The latter returned by forced marches and never pitched his camp until he was before Cairo. He then entered into negotiations with Amaury for peace which was concluded in the middle of Shawwāl, 562 (beginning of August, 1167); he bound himself to return to Syria with Saladin, prisoners were exchanged, Saladin was received hospitably in Amaury's camp and the Christians visited Alexandria. Both sides claimed the victory; Amaury left a garrison in Cairo as well as an office for the collection of his tribute. The fear of Nūr al-Dīn's successes may have been the main reason for the conclusion of the treaty. Amaury did not keep the peace. His advisers induced him to invade Egypt only 14 months later and his garrisons in Alexandria and Cairo advised him to take possession of Egypt definitely. He therefore advanced on Bilbā's, took the town on Muḥarram 29, 564 (Nov. 2, 1168) and had nearly all its inhabitants put to death. This act of barbarity estranged the Egyptians from him. He next marched against Cairo. To protect the town the vizier Shāwar had the suburb of al-Faṣṣā (cf. above I, § 17 *qq.*) set on fire. It is said to have burned for 54 days and the smoke which it raised prevented Amaury from besieging Cairo from an advantageous position. The Caliph had with all speed sent messengers for assistance to Nūr al-Dīn, while Shāwar negotiated with Amaury. Nūr al-Dīn sent Shirkūh and with him Saladin, who was still impressed by the sufferings during the siege of Alexandria and only with reluctance decided to go. He was supplied with men, horses and arms. Amaury sought in vain to intercept Shirkūh and on Rabī' II 1, 564 (Jan. 2, 1169) he began his retreat; a few days later Shirkūh appeared before Cairo and was hailed as a rescuer; Shāwar, however, remained hostile to him and plotted to take him and his Amirs prisoners on the occasion of a feast. When Shirkūh and his men learned of this treachery, Saladin decided to get rid of him. He seized Shāwar when riding in the vicinity of Cairo and had him executed. The Caliph, delighted at being freed from his tyrannical vizier, appointed Shirkūh his successor on Rabī' II 17, 564 (Jan. 18, 1169). But Shirkūh died only two months later and the Caliph, who thought that Saladin, owing to his good nature, would be a complacent servant, appointed him vizier with the title "al-Malik al-Nāṣir" (March, 26 = Jumādā II, 25). In a letter of congratulation Nūr al-Dīn recognised him as commander of the Syrian troops. Henceforth the greatness of Saladin is revealed. The power, that had become his through favourable circumstances, found a highly gifted man who knew how to use it. If he had hitherto hesitated to devote his life to warfare, so that Nūr al-Dīn had almost to force him to take part in the campaigns against Egypt, if he had hitherto cared for nothing so much as theological discussions and appeared in public as little as

possible, as we saw, and had even indulged in forbidden wine, all this either ceased (like wine-drinking) or (like the theological discussions) was only exercised as a pastime in hours of recreation. His path lay clearly marked before him; to secure power for himself and his family, to put down the Shī'a and to fight the Crusaders to the utmost. He was able to attain these aims to a great degree, because, quite apart from his own ability and valour, the ground was prepared for him. But for the previous work of Nūr al-Dīn, and the diplomatic ability of his father Aiyūb, but for the decline of the Fātimid Caliphs and the sluggishness of the Egyptian people, but for the internal feuds of the Crusaders, he could never have achieved the great successes of his life to the same extent, in view of the initial lack of unity among the Muslim rulers. He was a politician rather than a general, amenable to the advice of capable advisers, clever and fortunate in the choice of his colleagues, without ever allowing power to leave his own hands. Two men of learning, al-Kāfi al-Fāfi [q.v.] and later 'Imād al-Dīn al-Kātib al-Iṣfahānī [q.v.], both noted for the style and grace of their correspondence, conducted his cabinet as viziers and were in constant correspondence with the highest officials and with rulers who were Saladin's friends. The number of Saladin's letters and the fulness of the political reports contained in them is overwhelming. At a later date, from 584 (1188), the Kāfi Ibn Shaddād [q.v.], his biographer, entered his service as private secretary.

In Egypt, Saladin took a firm grasp of the reins of government and aroused the enmity of the black guards (Nubians and Abyssinians) who had been brought to Cairo as mercenaries, had risen to power under the weak Caliphs and filled influential positions at court and in the government. They were joined by all, who, being ardent Shī'is, were predisposed to be dissatisfied with Saladin as a Sunnī. The Caliph's major-domo sent to king Amaury for help; but as the messenger was captured, the plan fell through. The eunuch was executed and the Caliph's palace placed under the protection of men who could be relied upon. The negro guards thereupon mutinied in Cairo and Saladin to overcome them had their quarters burned down. They escaped to Djizra and were there wiped out by Saladin's troops. The Franks, who could not reconcile themselves to his rule, as they with good reason regarded it as a threat to Jerusalem, had sent envoys urgently begging for assistance to France, Germany, England, the Byzantine Emperor and the Pope and had succeeded in getting a fleet with troops sent from Constantinople and an auxiliary force from South Italy. The Byzantines and the Franks decided by mutual agreement to capture Damietta [q.v.] first and then to march on Cairo. Saladin sought assistance from Nūr al-Dīn, as he had to defend himself on one side against the Franks and Byzantines, on the other possibly against the always turbulent Egyptians. He also asked that the reinforcements should be sent under the command of his father, just as he had already called other members of his family to his side in Cairo. The successes of the Franks and Byzantines would perhaps have been greater if the siege had not been too far prolonged by the energy of the defectors. The Byzantine army began to suffer from shortness of commissariat and Amaury, doubting if he could gain a complete victory, preferred to

negotiate with Saladin and to conclude peace for a considerable sum of money. Envy and fear may have worked together upon him. In the meanwhile Nūr al-Dīn had invaded the Haurān [q.v.] and prepared himself against the counter-attacks of the Franks, but a terrible earthquake in the summer of 565 (1170) which wrought tremendous devastation in the Syrian cities forced Franks and Muslims alike to lay down their arms and take up the task of rebuilding the shattered cities. In the following year (566) Saladin made a raid into Palestine and advanced as far as Ramla and 'Asqālān [q.v.], then retired to Egypt to prepare for the taking of the port of Aila [q.v.] on the Red Sea and gradually to secure communications between Egypt and Palestine; in the same year he succeeded in taking Aila. In the next year (567) he fulfilled Nūr al-Dīn's desire by omitting the mention of the Fātimid Caliph in the Friday *salāt* and continuing to name the 'Abbāsid Caliph. Soon afterwards the Caliph al-'Ādīd died, whether of a natural death is uncertain; Christian writers say that he either committed suicide or was put to death by Saladin's brother, Tūrān Shāh, by the former's orders. Nūr al-Dīn is said to have been very pleased at the end of Fātimid rule. When the news of the extension of his territory was conveyed to the 'Abbāsid Caliph he sent robes of honour to Nūr al-Dīn but not those befitting the latter's position (as a suzerain), so that, although he did put them on, he immediately sent them on by the Caliph's envoy to Saladin.

The relations between Saladin and Nūr al-Dīn were soon to become clouded. Saladin in Cairo was too independent for him; his father and his brothers were with him so that Nūr al-Dīn had no hostages in his power. When Saladin wanted to take up his scheme for securing the communications between Egypt and Palestine, he proposed to Nūr al-Dīn to besiege Shawbak and Kerak [q.v.] and set out to do so; but when Nūr al-Dīn departed for Kerak Saladin was advised by his Amirs not to go to him as they feared for his safety. Taking their advice, he turned back and excused himself by pleading the unsettled condition of Egypt. Nūr al-Dīn was furious at this and collected troops against Saladin. When this became known at Saladin's court, a section of his Amirs advised him to fight, but his father, who feared the great prestige of Nūr al-Dīn, advised him to write a submissive letter so that tolerable conditions were once more restored. But their mutual mistrust was not overcome, so that the two cities mentioned (Kerak and Shawbak) were not captured, nor did Saladin at this time support his suzerain against the Crusaders to the best of his ability. In the next year Saladin went to Kerak, but withdrew again, pleading his father's illness, when Nūr al-Dīn approached. In this difficult situation Saladin resolved to create a position of security for himself and his family in a way which would satisfy Nūr al-Dīn. In 569 (1173/4) he sent his brother Tūrān Shāh against the sectarian 'Abd al-Nāṣir, who had taken possession of the Yemen. Tūrān Shāh succeeded in driving him out and conquering the Yemen. He had himself mentioned in the *khutba* as ruler next to the Caliph and sent messengers to Saladin, who in turn notified Nūr al-Dīn and the Caliph. Nevertheless Saladin's position was still threatened, especially as he had again to face a rising in the spring of this year. Nūr al-Dīn now decided to take the field against him, especially as it vexed

him that the strength of the Crusaders was increased because Saladin held back. He had already collected an army (see AL-MALIK AL-ḤATĪB, the Zangid) when he was attacked by a severe illness in Damascus and died in a few days on the 11th of Shawwāl (May 15). Saladin was thus relieved of a great anxiety and was now free to develop his power. He then recognised Nūr al-Dīn's eleven-year-old son al-Malik al-Ṣāliḥ Ismā'īl (see AL-MALIK AL-ḤATĪB, the Zangid) and devoted himself to fighting the Normans of Sicily, who had appeared before Alexandria with a strong fleet at the end of the year 569 (1173/4). They landed their crews but within three days they were defeated and for the most part killed with the help of troops sent to reinforce the strong garrison. Saladin captured enormous booty. King Amalric also had died shortly before, so that Saladin was left secure in possession of vast power and could devote himself entirely to the object of his life, the struggle with the Crusaders. He began by turning his attention to Syria, to which he was summoned by the Amirs in Damascus in 570 (1174). He found the position there unsatisfactory in as much as there was no single guiding will among the Muslims. He rightly considered it, as Nūr al-Dīn had done before him in a similar situation (see *supra*), absolutely necessary to gain the real power in Syria, even if for the time being it was as vassal of Ṣāliḥ Ismā'īl, whose guardian he endeavoured to become. Things went against him at first when he took the field against Ismā'īl's Amirs from whom he claimed to be going to liberate Ismā'īl. Aleppo itself resisted him as did Hamā, Hims and Ba'albek. Ismā'īl's uncle al-Ghāṣi came from Mesopotamia with a large army so that Saladin was ready to make a peace favourable to Ṣāliḥ Ismā'īl. As his conditions were not accepted, Saladin found himself forced to fight. He declared himself independent and dropped Ṣāliḥ Ismā'īl's name from the *khutba*. The decision was in his favour, for the enemy were completely defeated at Qarān Hamā. Saladin behaved with great moderation: he left Ṣāliḥ Ismā'īl, who seemed quite harmless to him, in possession of Aleppo and gave Hamā, Hims and Ba'albek, which surrendered to him without a blow, to relatives as fiefs. Then, in Dhū'l-Ḥiǧga, 570 = May, 1175) he was, at his own request, granted by the Caliph ruler (*bi'l-wilāya*) over Egypt, Nubia, the Yemen, the Maghrib from Egypt to Tripolis, Palestine and Central Syria and henceforth considered himself as *Ṣulṭān*, as Abu'l-Fida' expressly mentions, and was also regarded as such by his contemporaries. He did not, however, adopt the title as such; he calls himself *Ṣulṭān al-Islām wa'l-Madīnīn*. A last attempt by the Zangid party to overthrow Saladin ended after several battles and a third siege of Aleppo with a peace towards the end of 571 (end of June, 1176) by which Saladin was finally left in possession of the lands conquered by him. He next besieged in his citadel an ally of Ismā'īl's, the so-called Old Man of the Mountain, the Shaikh Sinān of the Assassins [q.v.] in Masyaf, who had sent his Assassins against him several times; but he could not take it as the fanatical Assassins defended it vigorously. He raised the siege and received from Sinān a promise that he would not attack him again. This danger also was thus disposed of and Saladin returned to Egypt.

He considered the building of the Citadel, which

he began in this year, a very important task in Cairo (see the art. CAIRO, i. 824 *app.*). In Dhū al-Ḥiǧǧa 1, 573 (November, 1177) he suddenly made a rapid march into Palestine and laid waste the country round Gaza and Ascalon. King Baldwin IV opposed him but had to withdraw in face of Saladin's apparent superiority. Saladin's troops thereupon dispersed to plunder the country while Baldwin collected the Templars and many Knights under the leadership of Raynald of Kerak and again appeared upon the scene. Saladin had first of all to collect his numerous forces. The armies met to the south of Ramla. The Knights distinguished themselves by great bravery so that Saladin suffered an annihilating defeat on the 11th of Dhū al-Ḥiǧǧa II, 573 (1177) in spite of his superiority. The victory was so surprising that the Crusaders ascribed it to a miracle. Saladin himself is said narrowly to have escaped capture; his nephew, other leaders and learned men of his retinue were taken prisoners. A great thanksgiving was held in Jerusalem in honour of the victory. One consequence of this defeat was that in the next year (574 = 1178) King Baldwin built a fortress at the Banat Ya'qūb bridge over the Jordan, which gave him control over the river Jordan and the plain as far as Bāniyās, without Saladin being able to prevent him. Saladin, who had in vain offered the king an indemnity of 100,000 dinars if he would leave off building, had to attack this fortress. He sent his ablest general, 'Isa al-Dīn Farākh-Shāh, his nephew, against Baldwin, who suffered a reverse at the end of 574 (May, 1179). A year later, Saladin succeeded in inflicting a severe defeat upon him at Maḍǧī 'Aylān on Muḥarram 2, 575 (June 10, 1179); a large number of distinguished Franks were captured. Two months later Saladin took the fortress at Jacob's Ford and levelled it to the ground. The next year brought no fighting on a large scale. In Muḥarram, 576 (June, 1180) Baldwin concluded a two years' truce with Saladin. Next year Nūr al-Dīn's son, Imā' al-Aleppo, died. His successor, in keeping with his dying wish, was his cousin 'Isa al-Dīn Mas'ūd, a capable soldier, who, however, exchanged Aleppo for Sinǧār with his brother Zangī II to obtain a consolidated dominion. In the meanwhile war had broken out between Saladin and the Franks as a result of the continued raids made by Raynald de Châtillon, prince of Kerak, on caravans going to Egypt. Zangī II, on the other hand, made peace with the Franks. Saladin, however, endeavoured to obtain sole control of the Muslim lands and used the next few years to conquer the rest of Syria (Aleppo), in Šafar, 579 (June, 1183), and to gain the suzerainty of Mesopotamia by occupying the most important towns and restoring them as fiefs. While there was no lasting peace with the Crusaders, fighting on a large scale was avoided by both sides and in the same year a four years' peace was concluded between Baldwin V, guardian of Raymond III of Tripoli, and Saladin. Soon afterwards Baldwin V died and his successor, Guy de Lusignan, ascended the throne in the following year in spite of Raymond's objections. Peace was again disturbed by Raynald de Châtillon, who from Kerak fell upon a large caravan and refused to give any satisfaction or compensation. Saladin was exceedingly angry and at the end of 582 (Feb., 1187) invaded the region of Kerak and

summoned his Egyptian troops to protect the pilgrims returning from Mecca, while his Syrian troops concentrated at Ḥārim. The Crusaders recognised the terrible danger. Guy made peace with Raymond, troops arrived from all sides so that Guy was able to collect an army of 20,000 men and take up a position in Šaffūriya. On Rabī' II 17, 583 (June 26, 1187) Saladin arrived south of Lake Genesareth and captured the town of Tiberias after six days' siege; the citadel alone held out. Raymond in vain warned the Crusaders against leaving their well sheltered position with its ample water supply during the frightful heat. His enemies, who believed that he had come to an arrangement with Saladin, advised the king to attack the Saljan. He ordered an advance to be made towards Tiberias and encamped the night at Ḥaṭṭīn [q. v.] where the army did not even find sufficient water. In spite of very great bravery the Crusaders were completely defeated, the king and a considerable number of his Knights captured. While Saladin gave the king a friendly reception, he slew with his own hand Raynald, the disturber of the peace, and had all the Templars and Knights of St. John executed by his Amīr and Kāfīs. Just as the battle of Qurūn Ḥamā had secured him rule over Syria, the decisive battle of Ḥaṭṭīn gave him Palestine with Jerusalem. The fortress of Tiberias, Nazareth, Samaria, Sidon, Beirut, Baṭṭīn, 'Akkā [q. v.], Ramla, Gaza and Hebron fell. He then advanced on Jerusalem and took Bethlehem, Bethania and the Mount of Olives in Rajab, 583 (Sept., 1187). Saladin first of all encamped to the west of the town, the inhabitants of which defended themselves bravely; but when he attacked the city from a more favourable position in the north and used the catapults and ballistas it had to capitulate at the end of the month. People of means were able to ransom themselves; those who could not pay were sold into slavery but several thousands were released on the intercession of Muslim and Christian persons of standing as were a large number of the poor by Saladin himself. Only a few sick people were allowed to stay as well as those who pledged themselves to pay a poll-tax. Everything associated with the Christian religion was destroyed, the Kubbāt al-Šakara (Dome of the Rock) and the Aḳṣā mosque were restored and hospitals and schools built in memory of the great event; numerous Ayyūbid princes increased the splendour of these days by their presence and their rich foundations. It may be said that the whole of Islām joined in celebrating the capture of Jerusalem, which had been so ardently desired. The consequence of this victory was that Saladin gained possession of the cities and fortresses still Christian by force or by capitulation; only Antioch, Tripoli, Tyre and a number of smaller towns and castles remained in possession of the Christians. The remainder of the year was unfortunate for Saladin; he made the mistake of giving his weak, overtaxed army no time to recuperate but went on to besiege Tyre. Here he suffered a severe reverse owing to the brave defence of the garrison and his mishaps at sea. 'Akkā was rebuilt and fortified for him after long consultations by his Amīr Karakūsh [q. v.], who had already proved his worth by building the citadel of Cairo. Saladin, after a futile attempt to take Kawkab, then went to Damascus and in Rabī' II, 584 (June, 1188) he summoned the

Muslim princes of Syria and Mesopotamia with their troops for a new campaign. In the course of the fighting that followed Lādhikya, Djabala [q. v.], Ṣāliyūn, Samrin and Burziya were captured and a seven months' truce was concluded with Bohemund III of Antioch. Saladin on the 1st of Ramaḍān of the same year returned to Damascus and dismissed his allies from Mesopotamia but kept his own forces under arms in order to conquer Ṣafad [q. v.], Kawkab, Kerak and Shawbak. This campaign was long but successful and ended on the 1st of Dhū l-Ka'da, 585 (Dec. 11, 1189) with the capture of all these places.

On learning of the capture of Jerusalem Gregory VIII proclaimed a Crusade and after his death Clement III continued his efforts. All hostilities between European rulers ceased and steps were taken to secure a rapprochement between Philip II of France and Richard I of England. The first reinforcement sent by the new Crusaders was a fleet despatched by William of Sicily, which relieved Tripolis and henceforth formed a support for the Palestine seaports. Gradually larger and smaller bodies set out from Europe for the Holy Land and all landed in Tyre. The Emperor Frederick I undertook a Crusade with numerous, well equipped troops; he went via Constantinople after he had in vain challenged Saladin to hand over Jerusalem. The Emperor Isaac of Constantinople, who had made an alliance with Saladin which proved ineffective, could not prevent his passage. The Franks, reinforced by the continued new arrivals, began the siege of 'Akkā on Raddjāb 14, 585 (Aug. 28, 1189), which is considered one of the greatest military operations of the Middle Ages. King Guy de Lusignan and the Count of Montferrat, who had been taken prisoners at the taking of Jerusalem, had been released by Saladin at the request of Queen Sibyl as early as Djumādā I, 584 (July, 1188) on pledging themselves not to fight again against him; after having been released from their oath by the patriarch, they began the siege of 'Akkā relying on the help of Frederick I of Germany, Richard I of England and Philip II of France and supported at first by continual arrivals of Crusaders from many countries of Europe. Saladin's energy was now revealed in its fullest development and in this several years' struggle the Crusaders learned to know and appreciate the great Sultan.

King Guy led the Franks up to 'Akkā after two months' preparations and Saladin arrived next day. The struggle for the city was waged by land and sea. The Crusaders had the advantage that the garrison was almost always cut off from the sea and suffered from lack of food. Besides, although the Crusaders at 'Akkā were joined by only very few German Knights owing to the death of Frederick I, they were given a decided superiority over the Saracens by the arrival of the army of Philip and more particularly that of Richard I and by the regular arrivals of ships with food and soldiers. They also had very fine siege artillery while the Muslims on their side had very clever artificers to make their fire-bombs. Saladin had the advantage of the single command, although his army was weakened by the long years of war so that even the relief of the garrison in 'Akkā could not be of much avail to him and his own army finally mutinied. The Crusaders were hampered by their quarrels with one another and the rivalries

of King Guy and the Count of Montferrat as well as those of Richard and Philip. The succeeding years were full of fighting by land and sea. Saladin in vain endeavoured to get new forces from the East through the intervention of the Caliph. On the 7th of Djumādā II, 587 (July 12, 1191) the garrison capitulated of its own accord without waiting for Saladin's decision. The fortress and all the prisoners in it were to be handed over and the garrison released on payment of 200,000 pieces of gold. When the money had not been paid at the end of a month, Richard had 3,000 prisoners put to death. This cruel deed, which was condemned by Christian chroniclers also, resulted in all the Christian prisoners in the hands of the Muslims being slaughtered. Richard soon afterwards captured Kaisūriya [q. v.] and fortified Jaffa, while Saladin destroyed the fortress of Ramla. Negotiations for peace henceforth went on almost without interruption between the two combatant parties; the principal agent in them was Saladin's brother, al-Malik al-Adil. The principal demands were the cession of Jerusalem and the surrender of the Holy Cross; Richard, who was full of romantic ideas, afterwards proposed that his sister should marry 'Adil, who was to rule over Jerusalem; he followed a policy of reconciliation which gradually led to peace. He knighted al-Malik al-Kāmil [q. v.], 'Adil's son. After several more battles peace was concluded on Shabān 23, 588 (Nov. 2, 1192). Lydda and Ramla were divided, Ascalon razed to the ground and the Crusaders allowed to make pilgrimage to the Holy Places unarmed. The main cause of the conclusion of peace on Richard's side was his illness and his desire to return to England, as well as the cessation of reinforcements from Europe. In spite of the exertions of the whole of Europe the greater part of Palestine had become Muslim under Saladin, except for the strip along the coast, and communication between Palestine and Egypt secured; Saladin was on friendly terms with Bohemund of Antioch. Saladin was able to enjoy peace during the few months that he still had to live; he strengthened Jerusalem, then went leisurely to Damascus, where he was welcomed with rejoicings by the people towards the end of Dhū l-Ka'da (end of November). He spent the winter there with his family; he fell ill in Safar, 589 (February, 1193) and died 14 days later at the age of 55. His eldest son received Damascus, his second Aleppo, another Egypt and his brother 'Adil North Arabia and Mesopotamia. The unity of his dominion disappeared within a few years after his death. It is not likely that, even if he had lived longer, he could have induced his family to come to an intelligent arrangement. During his lifetime, however, he hardly ever had to fight against one of his own family. His authority, based on his ability, kindness and piety, could not be assailed. Covetousness was remote from his character; twice — at the death of the Fatimid Caliph al-Adid and at the death of the Atabeg Nūr al-Dīn — he had an opportunity to acquire great wealth. He distributed the Caliph's treasures to his troops and retainers and did not touch Nūr al-Dīn's wealth but gave it to his son. He was fanatical against the Crusaders as a body but not as individuals and not against the subjected Christians of his empire, although when he came to the throne he at first enforced more strictly the regulations regarding dress for Christians and Jews. He followed

the same course as Nūr al-Dīn and may (see the art. *AYYUBIDS*) be claimed as a champion of the Sunnī reaction against Shī'ī (Persian) fashion in architecture, style and writing of official documents. In the last years of his reign the personal relations between Muslims and Christians were good; it appears that some Muslims were actually knighted by Richard, e.g. al-Malik al-Kāmil, son of al-Malik al-Adil. Saladin was beloved and respected by his people and with Sultān Balbars [q.v.] and Hārūn al-Rashīd [q.v.] is to this day the most popular figure in the East. In Europe he is considered the pattern of chivalry and, as a matter of fact, he never was unnecessarily cruel but was often magnanimous in releasing prisoners and bestowing gifts (e.g. the citadel of 'Aḍā to the young sister of al-Salīh Ismā'īl, several villages to Bohemund of Antioch after the peace with Richard I). The Arabs have with only one exception (a chapter in the romance of Balbars) not given Saladin a place in ballad or romance, whereas very soon after his death he touched the fancy of English minstrels in connection with Richard, although they depicted him in an unfavourable light; in the poetry of the French and Italians he is described more favourably. Modern novelists like Scott in his *Talisman* and Lessing in his *Nathan der Weise* have introduced him into their works; to the former he is a vigorous Oriental ruler while the latter depicts him with as fine feelings as a European. He was a friend of theological learning, a patron of scholars and a builder on a grand scale as he showed in the Citadel of Cairo and in the restoration of the buildings in Jerusalem.

The epigraphical materials concerning S. have been treated, in a detailed study by G. Wiet, *Les Inscriptions de Saladin* (Syria, iii, 307—328).

Bibliography: The still unprinted manuscript sources are quoted by Blochet in the introduction (p. 1—55) to his translation of al-Makrizī's *Sulūk* (period of the Ayyūbids, Paris 1908) in most commendable fashion; numerous extracts from the *Mufarrīj al-Karīb* of Ibn Wāsil and from the "History of the Patriarchs of Alexandria" are also given there in notes in French translation; the printed literature down to 1889 is given in Derenbourg, *Ousūma Ibn Mounqidh* in the P.E.O., xii/1, Paris 1889. — Contemporary Arabic and European sources are to be found in the *Recueil des historiens des Croisades. Historiens orientaux*, i.—v., Paris 1872—1906, and *Historiens occidentaux*, i.—vi., Paris 1844—1886, and in Reinand's *Extraits des historiens arabes relatifs aux guerres des Croisades* and in other parts of Michaud, *Bibliothèque des Croisades*, Paris 1829. — The best and most thorough utilisation of early sources is that of Röhrich in his *Geschichte des Königreichs Jerusalem*, Innsbruck 1898, where Röhrich's other works and many bibliographical references are also quoted. Cf. also van Berchem, *Notes sur les Croisades* in the *Journ. As.*, series 9, 1902, vol. xix, 385 sqq. Of bibliographical works in addition to Derenbourg's edition of the *Ousūma* there are the biographies by Ibn Khallikān and Bahā' al-Dīn Ibn Shaddād (both also in the *Recueil des hist. orient.*, vol. iii); the last named in English as *The Life of Saladin* by Behā' ad-Dīn, ed. by C. W. Wilson, London

1897; by Von Hammer-Purgstall in the *Gemälde-saal der Lebensbeschreibungen grosser muslimischer Herrscher*, vol. v., Leipzig 1838, now obsolete, and by Stanley Lane-Poole's brilliant and lucid *Saladin and the Fall of the Kingdom of Jerusalem in the Heroes of the Nations Series*, London 1898. On the siege of 'Akkā etc. see Kate Norgate, *Richard Lion-Heart*, London 1924, Index, s.v. *Acre* and *Saladin*. On the European legends relating to Saladin see Lane-Poole, *op. cit.*, ch. xxiii, 377 sqq., where the pertinent passage in the romance of Balbars as well as Scott's and Lessing's characters of Saladin are fully discussed (Lane Poole was not aware that the passage quoted by him belongs to the Balbars romance). On European legends of Saladin see Gaston Paris, *La Légende de Saladin* in the *Journal des Savants*, 1893, and the reprint; cf. also Röhrich in his *Geschichte des Königreichs Jerusalem*, p. 351, note 1. (SOBERNHEIM)

SALAF (A.) or **SALAM** (A.) is regarded by law as a permissible purchase (*bai*). The purchaser in this case has to pay the purchase money in advance while the seller, on the other hand, is only required to deliver the article purchased after the expiry of a definite period. That which is sold must be a thing which can be replaced, not simply mentioned by kind but accurately described in the contract. The place where delivery is to be made must also be exactly defined. According to the Shāfi' school it is not necessary to define the date of delivery expressly in the contract; if this has not been done, delivery can be demanded immediately. In the view of the other Fikḥ-schools, however, it is absolutely essential to state a short period at least for delivery. The *fuḥūḥ* in the *Ḥidāyā* usually called this kind of purchase *salām* but in the 'Irāq the name *salaf* was usual.

(TH. W. JUYNBOLL)

SALĀM (A.), verbal noun from *salama*, "to be well, uninjured", used as substantive in the meaning of "peace, health, salutation, greeting"; on the statements of the older Arab lexicographers see the *Lisān al-'Arab*, xv, 181—183, *passim*.

The word is of frequent occurrence in the *Qur'ān*, especially in the *Sūras*, which are attributed to the second and third Mekkan periods. The oldest passage that contains *salām* is *Sūra* xcvi, 5, where it is said of the *Lailat al-Qadr*: "It is peace until the coming of the dawn". *Salām* is also to be taken in this meaning in *Qur'ān* i, 33, xv, 46, xxi, 69, xl, 50. *Salām* means peace in this world as well as in the next. In the latter meaning we find it used in the expression *Dār al-Salām*, "the abode of bliss" for Paradise (*Sūra* 2, 26, vi, 127). In the Medina verse v, 18 which is addressed to the *Ahl al-Kita* we find the expression *Subḥ al-Salām*, the paths of bliss (cf. Isaiah, lix, 8; *Durūḥ Ḥādīd*).

But *salām* is most frequently used in the *Qur'ān* as a form of salutation. Thus in *Sūra* lvi, 90 (first Mekkan period) the people of the right hand are greeted by their companions in bliss with *Salām laha* "Peace be upon thee" (according to al-Baidāwī;

for other explanations see the *Lisān al-ʿArab*, xv. 184, s. 199; and the art. *ALLĀH*. *Salām* (Sūra xxxvi. 58, xiv. 28, x. 10, xxxiii. 43) or *Salām ʿalaikum* (xvi. 34, xxxix. 73, xlii. 24) is the greeting which is given the blessed in Paradise or on entering Paradise (cf. also xxv. 75); *Salāmūn salāmūn* in Sūra lvi. 25 (other reading *Salāmūn salāmūn*; cf. xix. 63) is presumably also intended as an auspicious exclamation (other interpretations in al-Baidāwī). Those on the Aʿraf [q. v.] call to the dwellers in Paradise *salām ʿalaikum* (vii. 44). *Salām* is also the greeting of the guests of Ibrāhīm and his reply (li. 25, xl. 72; cf. xv. 52). Ibrāhīm takes leave with *Salām ʿalaikum* (xix. 48) from his father, who threatens him. In Sūra xx. 49 Mūsā in his address to Firʿawn is made to use the expression *al-salām ʿala man ittahafa ʿl-Hudā* "peace be upon him who follows the right guidance". According to the first explanation in al-Baidāwī, *al-salām* here means the greeting of the angels and guardians of Paradise; but as these words are not at the beginning of the speech, an other interpretation prefers to consider it as an affirmative sentence and to take *salām* as "security from Allāh's wrath and punishment" (cf. al-Baidāwī on the passage and the *Lisān al-ʿArab*, xv. 183, s. 207). *Salām ʿalaikum* "peace be upon you" is found in Sūra vi. 54 at the beginning of the message which the Prophet has to deliver to the believers and in Sūra xxvii. 60 a *salām* is uttered over Allāh's chosen servants. As a benediction *salām* is also used repeatedly in Sūra xxxviii. where at the end of the mention of each prophet a *salām* is uttered over him (verses 77, 109, 120, 130, 181; cf. also xix. 15, 34). *Salām* may be used in an ironical sense in Sūra xliii. 89 at parting from the unbelievers and *salām ʿalaikum* in Sūra xxviii. 55 (other interpretations in al-Baidāwī). This might perhaps hold of *salāmūn*, Sūra xxv. 64, also, with which the servants of the Merciful reply to the ignorant (*ḡāfilūn*), but the commentators take it in the sense of *salāmūn* or *ḥarāmūn*. In Sūra lix. 23 (Medinese) *al-salām* occurs as one of the names of Allāh, which al-Baidāwī interprets as *maʿyār* used as *ʿiṣā* in the meaning of "the Faultless" (for other explanations cf. *Lisān al-ʿArab*, xv. 182, s. 199, s. 200). *Al-Salām* in the expressions *Dār al-Salām* and *Subul al-Salām* is therefore also interpreted as a name of Allāh (cf. al-Baidāwī on Sūra vi. 127, x. 26, v. 18; *Lisān al-ʿArab*, xv. 182, s. 207). The word has even been taken to mean Allāh in the formula *al-salām ʿalaikum* (Fakhr al-Dīn al-Rāzi), *Mafātīḥ al-Ḡhayb* on Sūra vi. 54, Cairo 1278, iii. 54, s. 19; *Lisān al-ʿArab*, xv. 182, s. 207). It is improbable that the greeting is intended in *al-ḥā ʿl-salāma* in Sūra iv. 96; another reading is *al-salamū* as in the similar expression in iv. 92, 93, xvi. 30, 89.

The denominative verb *salāma* is first found in the Medina chapters, namely Sūra xxxiii. 56, where it is recommended to utter *salāt* [q. v.] and *salām* over the Prophet, and in xxiv. 27, 61 (see below).

At quite an early period the view became established among the Muslims that the *salām* greeting was an Islamic institution. This is, however, only correct in so far as the Korʾān recommends the use of this greeting in a late Mekkan passage and in two Medina passages: in vi. 54 it is commanded to the Prophet: "If those come to you who believe in Our signs say: 'Peace be upon you' (*Salāmūn ʿalaikum*). Your Lord hath

laid down a law of mercy for himself"; and in xxiv. 27: "O ye believers, enter not into dwellings" which are not your own before ye have asked leave and said *salām* (*wa-tasallimū*) on its inhabitants etc.; similarly xxiv. 61: "If ye enter dwellings, say *salām* upon one another (*fasallimū*) etc. (cf. a similar prescription Matth., x. 12, Luk., x. 5); iv. 88, where the more general expression for greeting (*ḥayyā*) is used, is also referred to the *salām* salutation. But Goldziher has pointed out (*Z. D. M. G.*, xvi. 22 sq.) and quoted passages from poets in support of the view that *salām* was already in use as a greeting before Islam. The corresponding Hebrew and Aramaic expressions *Shālām ʿlāh*, *Shālām lāh* (*ḥayyā*), *Shālāmā ʿlāh*, which go back to Old Testament usage (cf. Judges, xix. 20, 2 Sam., xviii. 28, Dan., x. 19, 1 Chr., xii. 19), were also in use as greetings among the Jews and Christians (cf. Dalman, *Gramm. d. jüd.-paläst. Aramäisch*, Leipzig 1905, p. 244); according to *Talmud Yerushalmi, Shabʿat*, iv. 35b, *Shālām ʿlāh* was Israel's greeting. Cf. also Peahita Mt., x. 12, xvi. 49, Luk., x. 5, xxiv. 36, Joh., xx. 19, 21, 26, and Payne Smith, *The Syriac*, col. 4189 sq.). A very great number of Nabataean inscriptions further show the use of *sh-l-m* to express good wishes in North-west Arabia and the Sinai Peninsula (*C. I. S.*, II, *Inscriptiones Aemmanae*, i. N^o. 288 sqq., twice repeated in N^o. 244, 339, thrice repeated in N^o. 302) and the Arabic *sh-l-m* frequently occurs in the Safaitic inscriptions as a benedictive term. Cf. E. Littmann, *Zur Entzifferung der Safaitischen Inschriften*, Leipzig 1901, p. 47, 52 sq., 55, 56, 57, 59, 61, 64, 66, 67, 70; do., *Semitic Inscriptions*, New York-London 1905, Safaitic Inscriptions, N^o. 5, 8, 12, 15, 69, 128, 134.

If the line *salāmaka rabbānā fī hulli faḡḡā* quoted in the *Lisān al-ʿArab*, xv. 183, s. 207, were genuine and really by Umāyā b. Abī ʿl-Salt, one might perhaps conclude from it that there was a benedictory use of the *salām* formula in the morning service in certain monotheistic circles of North Arabia. Presumably the usage, influenced by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Lillibarski's suggestion (*Zeitschr. für Semitistik*, i. 85 sqq.) that *salām* reproduces the idea expressed by *εὐαγγέλιον* need not be discussed here but his explanation of *ʿlām* as the infinitive of a denominative verb *ʿalama* formed from *salām* - *εὐαγγέλιον* ("to enter into the state . . . of *salām*"), cannot be reconciled with such expressions frequent in the Korʾān as *ʿalama waḡḡahu li ʿlāh* - *ʿalama li-Rabb al-ʿālamīn* etc.

Muḥammad must have placed a high religious value on the *salām* formula as he considered it the greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A *salām*, like that in the *taḡḡahūd* (see below) or like the salutation of peace which closes the *ḡalāt* and has its parallel in the Jewish *ḡḡillā* (cf. E. Mittwoch, *Zur Entstehungsgeschichte des islam. Gebets u. Kultus* in the *Abd. Pr. Ak. W.*, ph.-h. Kl., 1913, N^o. 2, p. 18), may have been from the first an essential feature of the ritual of divine service. According to a tradition (al-Bukhārī, *al-Tarīḡḡūn*, bāb 3, *al-Adhān*, bāb 148, 150), originally they uttered the *salām* at the close of the *ḡalāt* on Allāh, on Djibrīl, Mikāʾīl and other angels. With the

remark that Allāh is himself the *salām* (cf. Korān, lix. 23) the Prophet disapproved of this and laid down what should be said in the *taḥḥahhud* (q.v.); the *salām* utterance belongs to it in the form given below. On varying traditions regarding the *taḥḥahhud* see al-Shāfiʿī, *Kit. al-Umm*, Cairo 1321, i. 103 sqq.; cf. also Goldziher, *Über die Eulogia* etc. in the *Z.D.M.G.*, i. 102).

In the ritual of the *ṣalāt* as legally prescribed the benediction on Allāh and the *salām* on the Prophet, on the worshipper and those present and on Allāh's pious servants precede the confession of faith in the *taḥḥahhud* (al-*salām*u 'alaika, *ayyuhā 'anabīyū, wa-rahmatu 'ilāhī wa-barakātuhū; al-salām*u 'alainā wa-'alā 'ibādī 'ilāhī 'l-ḥayyūn). Among the compulsory ceremonies of the *ṣalāt* there is also at the end of it the *taslīmāt al-ni'a*, the fuller form of which consists in the worshipper in a sitting position turning his head to right and left and saying each time al-*salām*u 'alaikum wa-rahmatu 'ilāhī. Cf. al-Bāḍi, *Ḥaḥḥiya 'alā sharḥ Ibn Kārim al-Ghazālī 'alā matn Abi Shudjā*, Cairo 1321, i. 168, 170.

The preference of the Korān for the *salām* formula and its liturgical use may have contributed considerably to the fact that it soon became considered an exclusively Muslim greeting (*taḥḥiyat al-islām*). As already mentioned above, the Korān prescribes the *salām* on the Prophet to follow the *ṣalīya*. Tradition reports that the latter endeavoured to introduce it. When 'Umar b. Waḥb was brought before him and gave him the pagan greeting (*an'imū ṣalāḥ*), the Prophet said: "Allāh has given us a better greeting than thine, namely al-*salām*, the greeting of the dwellers in Paradise (Ibn Hishām, ed. Wüstenfeld, p. 472 *infra* 21; al-Tabarī, ed. de Goeje, i. 1353, 10 sqq.). Those around him are also said to have been eager to introduce this greeting. Al-Wāḥidī relates that 'Urwa b. Mas'ūd, who immediately after his conversion wanted to convert his own townmen in Tā'if to Islām, called the attention of the Thaqif, who saluted in the heathen fashion, to the greeting of the dwellers in Paradise, al-*Salām* (Ibn Sa'd, al-*Tabaḥḥāt*, v. 369; Sprenger, *Das Leben . . . des Moḥammad*, iii. 482; Goldziher, *Muh. Stud.*, i. 264). According to Ibn Ishāq, al-Mughira b. Shu'ba instructed the deputation to Muḥammad from the Thaqif how they were to salute the Prophet, but they would only use the greeting of the Djahiliya (Ibn Hishām, p. 916, 5 sqq.; al-Tabarī, i. 1290, 9 sqq.; Sprenger, *op. cit.*, iii. 485; Goldziher, *loc. cit.*). The Jews are said to have distorted this greeting with respect to Muḥammad to al-*ṣām* 'alaika "death to you", whereupon the Prophet answered wa-'alaikum "and to you" (al-Bukhārī, al-*Istīḥḥān*, bāb 22; al-Adab, b. 38; *Lisān al-'Arab*, xv. 206). According to Ibn Sa'd (*op. cit.*, iv/l. 163, 13), Abū Dharr was the first to greet the Prophet with the Muslim greeting. In the same author (*op. cit.*, iv/l. 82, 2) we find *salām* 'alaikum at the beginning of a letter from Mu'āwiya to Abū Mūsā al-Ash'arī.

The expressions which could be used were *salām* or *salām* 'alaikum (-ka) or al-*salām* 'alaikum. Umm Aiman is said to have used simply (al-)*salām* to the Prophet (Ibn Sa'd, *op. cit.*, viii. 163, 7 sq. 9 sq.). In the Korān the use of *salām* 'alaikum preponderates. Fakhr al-Dīn al-Rāzī endeavours to explain that the indefinite form is preferable and expresses the conception of perfect greeting (*op. cit.*, ii. 500, 33 sqq., iii. 512, 11 sqq.). Following

him al-Shāfiʿī is said to have preferred *salām*u 'alaika in the *taḥḥahhud* (*op. cit.*, iii. 512, 33); but the Shāfiʿī school also allows the definite form here (al-Bāḍi, *op. cit.*, i. 168; *Lisān al-'Arab*, xv. 182, 13 sq.). The formula al-*salām* 'alaikum was, however, much used as a greeting. This undetermined form is expressly prescribed in the *taslīmāt* (Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 501, 5; al-Bāḍi, *op. cit.*, i. 170; *Lisān al-'Arab*, xv. 182, 13 sqq.). As a return greeting wa-'alaikum al-*salām* became usual (for further details on this inversion see Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 500, 33 sqq., iii. 512, 21 sqq.). According to Ibn Sa'd (*op. cit.*, iv/l. 115, 19 sq.), 'Abd Allāh b. 'Umar replied with *salām* 'alaikum.

According to some traditions, Muḥammad had described the expression 'alaika 'al-*salām* as the salutation to the dead and insisted on being greeted with al-*salām* 'alaika (al-Tabarī, iii. 2395; Ibn al-Athīr, al-*Nihāya fi Ḥaḥḥiyat al-Ḥadīth wa'l-Aḥbar*, Cairo 1311, ii. 176 below). The first named form of the greeting is actually found in elegiac verses (*op. cit.*, ii. 177; *Lisān al-'Arab*, xv. 182). But there are also traditions in which the Prophet greets the dead in the cemetery with an expression beginning with (al-)*salām* (al-Tabarī, iii. 2402, 10 sqq.; Ibn al-Athīr and *Lisān al-'Arab*, *loc. cit.*). 'Abd Allāh b. 'Umar also on returning from a journey is said to have saluted the graves of the Prophet, of Abū Bakr and of his father with al-*salām* 'alaika (Ibn Sa'd, *op. cit.*, iv/l. 115, 5 sqq.).

The *salām* formula was very early extended by the addition of the words wa-rahmatu 'ilāhī or wa-rahmatu 'ilāhī wa-barakātuhū. The first extension became used in the *taslīmāt* and the second in the *taḥḥahhud* (cf. above). Applying the Korānic commandment (iv. 88: "when ye are saluted with a salutation, salute the person with a better than his or at least return it") it is recommended (*sunna*) in the return greeting to add the wish of blessing and benediction or occasionally, when replying to a simple *salām*, only the former (cf. al-Bukhārī, al-*Istīḥḥān*, bāb 16, 18, 19). If anyone is saluted with the threefold formula, he must reply with the same (Fakhr al-Dīn al-Rāzī on Sūra iv. 88, *op. cit.*, ii. 502, 14 sqq.). According to Lane (*Manners and Customs*, i. 229, note), the threefold formula was very common as a return greeting in Egypt; cf. also Nallino, *L'Arabo parlato in Egitto*, Milan 1913, p. 121. In Mekka it is comparatively rarely used; the reply usual there is wa-'alaikum al-*salām* wa-rahma (wa-rahmatu 'ilāhī or wa-l-ḥayyūn); cf. Snouck Hurgronje, *Mekkanische Sprichwörter u. Redensarten*, The Hague 1886, p. 118. Landberg (*Études sur les dialectes de l'Arabie méridionale*, ii. 788, note) thinks that the longer form recalls the priest's blessing in Num., vi. 24-26. The application of 'alaikum to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i. e. the person; Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 501, 19 sqq.; cf. iii. 513, 17 sqq.).

At the conclusion of a letter the expression wa-l-*salām* ('alaika, -hum) is often used, e.g. Ibn Sa'd, *op. cit.*, i/l. 27, 17, 28, 2, 3, 29, 17, 21. Al-Ḥariri (*Durrat al-Ghawwār*, ed. Thorbecke, p. 208, 9 sqq.) disapproves of the use here of the indefinite form (*salām*), which, according to the more correct use, should only be used at the beginning. — *Wa-l-salām* has occasionally the meaning of "and that is the end of it" (cf. Snouck Hurgronje, *op. cit.*, p. 92).

In keeping with Kor'an xx. 48, it became usual to use the form *al-salām* 'alā man ittaba'a 'l-hudā to non-Muslims when necessary (cf. Fakhr al-Din al-Rāzi, *op. cit.*, ii. 501, *sq.*, iv. 706, *sq.*). It is found, for example, in letters ascribed to Muḥammad (al-Bukhārī, *al-ṣiṭṭah*, bāb 24; Ibn Sa'd, *op. cit.*, i/ii. 28, *sq.*; cf. line 6 there at the beginning of the letter: *salām* 'alā man ḥawana). Papyri of the year 91 (710) bear early testimony to its use (Papyri Schott-Reinhardt, i. ed. by C. H. Becker, Heidelberg 1906, i. N^o. 29, li. 40 *sq.*, iii. 87 *sq.*, x. 11, xi. 7, xviii. 9). A letter from Muḥammad to the Jews of Maḥnā concludes, however, with *wa 'l-salām* (Ibn Sa'd, *op. cit.*, i/ii. 28, *sq.*); similarly a letter to the Christians in Allā (*ibid.*, p. 29, *sq.*). In Hadith also a tendency is noticeable not to deny the *salām* greeting, at least as a reply, to unbelievers and the *Ahl al-Kiṭāb* (cf. al-Tabarī, *al-Taṣṭiṣ*, v. 111 *sq.*; Fakhr al-Din al-Rāzi, *loc. cit.*).

On the rules and limitations regarding salutation cf. the article *TASLĪM*.

Salām means also a *salawāt* litany, which is pronounced from the minarets every Friday about half an hour before the beginning of the midday service before the *ṣalāt*. This part of the liturgy is repeated inside the mosque before the beginning of the regular ceremonies by several people with good voices standing on a *ḍikka* (Goldziher, *Über die Enzyklen*, etc. in the *Z.D.M.G.*, l. 103 *sq.*; cf. Lane, *op. cit.*, i. 117). The same name is given to the benedictions on the Prophet which are sung during the month of Ramaḍān about half an hour after midnight from the minarets (Lane, *op. cit.*, ii. 264).

The auspicious formula *'alāhi 'l-salām*, which, according to the strictly orthodox opinion, like the *ḥayyā*, should only follow the names of Prophets, but was more freely used in the earlier literature (cf. also al-Bukhārī, *al-ṣiṭṭah*, bāb 43: *Faṭīma 'alāhi 'l-salām*), was used by the Shī'a without limitation of 'Alī and his descendants also (Goldziher, *op. cit.*, *Z.D.M.G.*, l. 121 *sq.*; Fakhr al-Din al-Rāzi, *op. cit.*, iii. 511 *sq.*).

The Sanni's of British India make a magical use of the so-called seven *salām's* which refer to Sūra xxxvi. 58, xxxvii. 77, 109, 120, 130; xxxix. 73; xvii. 5. In the morning of the festival of Akhīr-i Chāḥr-ghamba (see *XXIII*) they write the seven *salām's* or have them written with saffron-water, ink, or rosewater on the leaf of a mango-tree or a sacred fig-tree, or of a plantain. They then wash off the writing in water and drink it in the hope that they may enjoy peace and happiness (Djāfar Sharrīf—Herklots, *Islam in India or the Qānūn-i Islām*, new ed. by W. Crooke, London 1921, p. 186 *sq.*).

On coins *salām* (sometimes abbreviated to *s*) means 'of full weight, complete' (cf. J. G. Stickel, *Das grosse Orient. Münzabinet zu Jena (Hands. d. Morgenl. Münzkunde)*, Leipzig 1845, l. 43 *sq.*; O. Cöndrington, *A Manual of Muslim Numismatics*, London 1904, p. 10).

Bibliography: In addition to that mentioned in the article: Ibn 'Abd Rabbihī, *al-'Iḍ al-farīd*, Balāḥ 1293, l. 276 *sq.*; Lane, *op. cit.*, i. 298 *sq.*; Landberg, *Études sur les dialectes de l'Arabie méridionale*, Leiden 1905—1913, ii. 776—781, 786—789. (C. VAN ARENDONK).

SALAMA B. RADJĀ, governor of Egypt from Ibn 'I-Hiddja 161 (August 30 to September 27, 778) until Muharram 162 (October 778).

Bibliography: al-Tabarī, ed. de Goeje, iii. 492, 493; Ibn al-Aṭhīr, *Kāmil*, vi. 38, 39; *Corpus Papyrologum Raineri*, iii. Series Arabica, ed. A. Grohmann, i/ii. 119, 120. (A. GROHMANN).

SALĀMA B. DJANDAL, a poet of pre-Islamic times, was a member of the clan al-Ḥārith, which belonged to the large division Sa'd al-Far of the tribe Tamīm. He is numbered among the excellent poets of the Dīshīliya of whom only few poems are preserved. He must have flourished during the second half of the sixth century of our era, as the most prominent event in his life recorded is about his brother Aḥmar (sometimes misspelled Aḥmad). When 'Amr b. Kulthūm, the chief of the tribe of Taghlib, made his raid south, Aḥmar was made a prisoner by 'Amr, but released without ransom upon the petition of Salāma (*Diwān* of 'Amr, Introduction to poem N^o. 2; *Aghāni*, ix. 183, 18). Whether there is an error on the part of Arab tradition is not certain, but in the *Diwān* of Salāma we are told in the notes on poem N^o. 8 (edition Cheikh) the same thing happened to Aḥmar with a certain Sa'ḥa b. Maḥmūd b. 'Amr b. Marḥad. The latter probably belonged to the Kaia clan of 'Amr who resided as allies (*ḥulafā'*) among the tribe of Shaibān, or he may have belonged to the celebrated Yamanite family of Marḥad. In his longest poem Salāma refers to the death of al-Nu'mān, king of al-Hira, who was trampled to death by elephants at the order of the Persian king Farwēs (*Diwān*, N^o. 3, v. 39; *Arma'yāt*, N^o. 53, v. 39). Further the *Naf'ā'is* of Djarir and Farazdaq give two poems by Salāma, not in the *Diwān*, in which he celebrates the victory of Dīādū, in which the clan of Mīnqar, also a division of Sa'd al-Far, defeated the tribe of Bakr b. Wā'il. These two events place the life-time of Salāma towards the end of the sixth century. The time of his death cannot be fixed; he did not live to the time of Islām and none of his descendants appear to be named in the biographies of early Muslims.

Cheikh is mistaken when he assumes that Salāma is identical with the renowned chief Salāma b. Djandal b. Nahshal, the latter being of the clan Nahshal b. Dārim and related to Muḍjahid, the ancestor of the poet al-Farazdaq. Salāma is reputed to excel in the description of horses. His collected poems have come down to us in two old manuscripts, which were edited by Cheikh in 1920. This *Diwān* contains only nine poems or fragments of such, 135 verses in all, to which the editor has added a further 36 verses collected from various sources and to which I can add only one verse quoted in the *Kiṭāb al-'Ala* (ed. Baghdad), p. 108. We have no reason to doubt the genuineness of most of the verses. The poet speaks in them of departed youth which unfortunately is no guide to his age, as such statements belong to the ordinary phraseology of such poems. That he mentions Allāh (N^o. 1, v. 12) I should not take as a sign of later interpolation, as I believe that before Muḥammad some form of monotheism through the influence of Christianity and Judaism was widespread in Arabia, though the form al-ilāh is probably the correct form in earlier times. He mentions swords of Bayrā and al-Madā'in, which are seldom or never mentioned in verses of later times, as swords were no longer obtained from there. That he mentions writing or even inkstands and parchment (N^o.

3; v. 2) is not at all strange as these things were more widely known than is generally admitted. His poetry has otherwise the stamp of what is called Bedouin poetry, a rather unfortunate designation as it gives a wrong impression (cf. the art. *ḤĀ'IN*). The text of the *Diwān* is a combination of the Baṣrian (Aṣma'i) and the Kūfic (Abū 'Amr al-Shāhīn) school, of whom the latter will generally be found more reliable, but unfortunately the recensions are not kept apart in this case to discern any differences. It would be wrong to assume that they collected the poems; their work was the commenting of the text which they found handed down by earlier scholars. The edition by Cl. Huart (*J. A.*, 1910) is superseded by that of Cheikh (Beyrouth 1920), which contains all that is known about Salāma.

Bibliography: *Mufaḍḍalīyāt*, ed. Lyall, N° 22, text and translation; ed. Cairo, I. 54; ed. Thorbecke, N° 20; *Aṣma'iyyāt*, ed. Ahlwardt, N° 53; Muḥammad b. Sallām, ed. Heil (Leiden 1916), p. 36; *Nabā'id*, ed. Bevan, p. 147—148; Ibn Kūaliba, *Kiṣāb al-Shi'r*, ed. de Goeje, p. 147; *Poètes Chrétiens*, ed. Cheikh, p. 486—491. Verses of Salāma are cited in most books dealing with ancient Arabic poetry e.g. in the *Liḥā al-'Arab* 40 times.

(F. KRENKOW)

SALAMANCA, the capital of the Spanish province of Salamanca, on the right bank of the river Tormes, 172 miles by rail N.W. of Madrid, with a population of 25,690 (1900). In the Roman period the city was constituted a military station, being the ninth on the Via Lata, which was the great highway of Spain, running from Merida to Saragossa. Trajan built a magnificent bridge there, the original piers of which still exist. Like the rest of Spain the city suffered from the Gothic invasion.

It was a greater change for the city, when Muṣā, the governor of Africa, appeared with 18,000 picked men in Southern Spain (712), and began a methodical campaign in the Peninsula. Capturing Seville, Carmona and Merida, he covered the road that many a Roman legion had tramped before him, until he came before Salamanca. The city, which once had all the dignity and defiance of a Roman fort, offered but a poor resistance to the Muslim warriors. But although the district was now in the hands of foreigners, the inhabitants found their masters not impossible tyrants. If they paid their tax, and followed their faith, without unduly propagating it, their lives and their property were safe. Indeed, they soon found that a new intellectual life had come to the city, and they had to bow before the classical and oriental learning of the invaders. It is by no mere chance that Salamanca boasts of the oldest and largest university in Spain. Its foundations were laid by the unpromising pioneers of Islam.

Ibn al-Athīr states that in May 757 A.D. (24 A.H.) King Alfonso opened an attack on the Moors, and drove them out of Salamanca, but this does not seem to have been anything more than a predatory raid. The city, however, was never a Muslim possession in the sense that Cordova or Seville was. It certainly was considered an admirable piece of work of Ibn Abī 'Amr, when in Sept. 977 he succeeded in capturing the suburbs of the city from the Christians, for he was rewarded with the title of *Dhū l-Wizāratayn* and a

princely salary. So the fate of Salamanca wavered from decade to decade, until finally through internal disunion, and the more determined hostility of the Spanish Christians, Moorish pride and power were swept from the city in 1055, never more to be re-instated.

The University, founded officially in 1220 by Alfonso IX of Leon, was in itself sufficient to give distinction to Salamanca, through all the succeeding centuries, until the great battle of 1812, when Wellington settled the fate of the French in the Peninsula.

SALAMIYA, a small town in Syria in the district east of the Orontes, about twenty-five miles S. E. of Hamā and thirty-five (a day's journey) N. E. of Hims (for the exact situation cf. Kiepert's map in Oppenheim, *Vom Mittelmeer zum Persischen Golf*, I, and part II. 401). It lies in a fertile plain 1500 feet above sea level, south of the Djabal al-A'la and on the margin of the Syrian steppe. The older and more correct pronunciation was Salamiya (al-Jāḥirī, *B. G. A.*, I. 61; Ibn al-Fakīh, *B. G. A.*, v. 110) but the form Salamiya is also found very early (al-Muḥaddad, *B. G. A.*, III. 190; Ibn Khordādhbeh, *B. G. A.*, VI. 76, 98) and it is now the form almost universally in use (cf. also Yāqūt, *Muḥḥan*, ed. Wüstenfeld, III. 123, and Littmann, *Semitic Inscriptions*, p. 169 sq.). The *nishā* from the name is Salami. The town seems to be the ancient Salamias or Salaminias, which flourished in the Christian period, but the references of the classical authors to this place are uncertain. Yāqūt (III. 123) gives a popular etymology. The town, he says, was originally called *Salām-mī'a*, after the hundred surviving inhabitants of the destroyed town of al-Ma'tāfika.

The situation of the town was important as an outpost of Syria, where main routes from the steppe (Palmyra) and 'Irāq joined; but it was never of any great military importance. It was conquered by the Arabs in the year 15 A. H. and became one of the towns of the Djund of Hims; it was only after 1500 in the Mamlūk period that it was placed in the district of Hamā for administrative purposes. In the second century of the Hijra, after the victory of the 'Abbāsids, the descendants of the 'Abbāsīd Ṣāliḥ b. 'Alī b. 'Abd Allāh b. 'Abbās settled in Salamiya. The town is said to be most indebted to Ṣāliḥ's son, 'Abd Allāh, who rebuilt it and made arrangements for the irrigation of the neighbourhood. This 'Abd Allāh was held in high esteem by his cousins, the Caliphs. He married the sister of al-Mahdi and became governor of the 'Irāq. This Caliph visited him in Salamiya and was astonished at 'Abd Allāh's dwelling there (al-Tabarī, III. 500). There are also other references to the fact that many 'Hāshimīs lived in Salamiya.

Almost nothing has survived of this period. There is the foundation inscription of a mosque

on a stone (not *in situ*) at the entrance to the citadel. It is probable that this inscription is dated 150 (767) and that it belonged to a mosque founded by those Hashimites, which may have been destroyed about 290 (902/3) by the Karnamejians. Still another inscription dating from an 'Abbasid has been found in the citadel; according to Littmann's probable suggestion, it belongs with two other inscriptions to the period from 280 (893) (or, for another view, see M. Hartmann in the *Z.D.P.V.*, xiv, 55). The fact that Salamiya was the centre of an important branch of the Hashimites and the isolated position of the town perhaps account for the fact that about 250 (864) it became the secret centre of Isma'ili propaganda. It is difficult to ascertain who was the first Grand Master of the Isma'iliya to settle in Salamiya; in any case it does not seem to have been so early as 'Abd Allah b. Maimun himself (as de Sacy, *Exposé de la Religion des Druses*, Paris 1838, Introd., p. 71, 166 supposes), for the latter, as de Goeje (*Mémoires sur les Carmathes du Bahrein*, Leiden 1886, p. 19) makes probable, was probably never in Salamiya. The first leader to be sent here was apparently Husain b. 'Abd Allah b. Maimun (de Goeje, *op. cit.*, p. 21), whose son, Sa'id 'Ubad Allah, destined to become the first Fatimid Caliph, was born in Salamiya in 259 or 260 (873/4) (Ibn Khallikan, *Wafayat al-A'yan*, ed. Wustenfeld, No. 365); according to a blessed statement in Ibn al-Athir (viii, 22), 'Ubad Allah was the son of a smith in Salamiya whose widow afterwards married Husain. When Husain died about 270 (883/4) his brother Ahmad b. 'Abd Allah b. Maimun, also known as Ibn Shalaghlagh, became Grand Master and guardian of his nephew 'Ubad Allah, till his death (about 280=893/4). 'Ubad Allah continued to reside in Salamiya till 289 (902) when he set out on his successful journey to North Africa (de Goeje, *op. cit.*, p. 64). In the next year the town was practically wiped out by the Karnamejians from Iraq under their leader Husain, who had assumed the title of Mahdi. Of all towns in Syria, Salamiya, as home of the former companions in faith and later bitter enemies of the Karnamejians, was treated the worst (de Goeje, *op. cit.*, p. 50). Soon afterwards, however, the Syrian towns were reconquered by the Caliph. It is not impossible that the quadrangular citadel in the centre of the town goes back to the Isma'ili period; according to van Berchem, it belongs to an early period architecturally.

In the fourth (xth) century, Salamiya must have been in an area inhabited by Beduins (Saif al-Dawla's campaign; cf. Hartmann in the *Z.D.P.V.*, xlii, 175, 176). At the end of the fifth (xith) century, it was included in the possessions of the brigand chief Khalaf b. Mula'ib (M. Hartmann reads Mula'ib), who acknowledged Fatimid suzerainty. There is evidence of this in an inscription in Kufic characters on the door beam of the mosque of 481 (1088). According to Ibn al-Athir (x, 184), Khalaf took Salamiya in 476 (1083); he was then already master of Hims. But in 485 he lost Hims and the lands that went with it to the Seldjuk Tugush, brother of Malik Shah. In the inscription Khalaf says that he has erected a *maghad* on the tomb of Abu 'I-Hasan 'Ali b. Djarir, whose servant (*amir*) he calls himself (Khalaf is very fully dealt with by M. Hartmann, *Z.D.P.V.*, xxiv, 58-65).

During the Crusades Salamiya is never mentioned

as a fortress but frequently as a meeting-place for the Muslim armies. Politically it has always shared the fate of Hims [q.v.]. Thus it passed to Ridwan, son of Tutush, in 496 (1102/3). In 532 (1137/8) the Atabeg Zangi, who was then besieging Hims, set out from Salamiya on his campaign against the Greeks at Sbeitar (Ibn al-Athir, xi, 36 sq.) and in 570 (1174/75) Saladin obtained the town together with Hims and Hamā from the Amir Fakhr al-Din al-Za'farani (Ibn al-Athir, xi, 276). In 626 (1229) we find al-Malik al-Kamil in Salamiya as a starting point for Iraq; the lord of Hamā came there to submit to him. Two years later, al-Kamil gave the town to Asad al-Din Shirkuh, who rebuilt the fortress of Shumaimish north of it on one of the peaks of the Djabal al-A'la (Ibn al-Athir, xii, 318, 329) which had been destroyed by the earthquake of 1157 (Kamil al-Din, *Histoire d'Alep*, transl. Blochet, Paris 1900, p. 21).

In 1299, the Egyptian army was defeated at Salamiya by the Mongols under Ghazna; the battle was followed by the brief Mongol occupation of the city of Damascus.

In the eighth (xivth) century, Salamiya was part of the important frontier lands (called al-Sharqiya) of the *mamlaka* of Damascus. Abu 'I-Fida', in whose territory as lord of Hamā the town lay during the Mamluk period, mentions an aqueduct between Salamiya and Hamā. In 726 (1326) he went with his troops to clear out this channel (autobiography of Abu 'I-Fida' in the *Rec. des Hist. des Crois.*, *Hist. Orient.*, i, 168, 185). This aqueduct no longer exists. Perhaps it is the same as is mentioned by al-Dimashqi (p. 207) as in existence between Hims and Salamiya and built by the 'Abbasid 'Abd Allah b. Salih. At this time Yāqūt (iii, 123) speaks of seven prayer-niches near Salamiya below which some *isbān* were buried; he also mentions the tomb of al-Nu'mān b. Bashir, the companion of the Prophet.

Under Turkish rule, the town ceased to be of importance. In the middle of the nineteenth century it was entirely deserted, probably on account of the lack of adequate protection against the Beduins. But an Isma'ili Shaikh from the Nusairi mountains settled there and succeeded in settling the place with his followers. The Shaikh, whom van Berchem met in 1895, was a young man who traced his descent from 'Abd Allah b. Maimun. These Isma'ilis in a short time made the town very prosperous, which induced the Turkish government (in 1892) to create a special *kaḍā* of Salamiya in the sandjak of Hamā in the wilāyet of Bairūt. The population of the *kaḍā* is given by Cuiet (1896) as 53,084, of whom the smaller half are Muslims and the larger Christians. The town itself is said by the same authority to have 6,000 inhabitants, in addition to the Druses (by whom he probably means the Isma'iliya). The irrigation is excellent; the crops of the district consist mainly of corn and legumes.

On the fortress of Shumaimish see van Berchem and Fatio, *Voyage en Syrie*, I, 171, 173.

(J. H. KRAMERS)

SALÄMLİK (A.-T.) (Turkish pronunciation: Selamlık).

1) Reception-room in Turkish houses of the upper classes, derived from *salām*, greeting, welcome. In the general plan of this type of house (*hane*) there is an ante-room or court behind the main door, at one side of which a stair-case leads up to the *selamlık*, *mā-bān* [q. v.] and to the corridor (*sofa*), which together form the part of the house allotted to the males. On the other side of the court is the entrance to the harem [q. v.]; there also is the swivel-box (*delab*) through which the women communicate with the harem kitchen. Although *Selamlık* originally meant only the room in which the guests are welcomed, the word has come to receive the wider general meaning of the whole of the men's apartments as opposed to the harem or haremlik. It thus coincides more or less with the *ἀνδρῶν* or *ἀνδρῶν* of the Greeks. Barbier de Meynard, *Dict. Turc-Français*, Paris 1886, mentions a room called *Harem-selamlık* which is situated between the two parts of the house and cannot be entered by strangers; it is therefore probably another name for the *mā-bān*.

In Turkish houses of the lower classes it seems that strangers were not admitted at all (Hans Dierschwan's *Tagebuch*, ed. Babinger, 1923, p. 134); there was therefore no *selamlık* there.

In northern Mesopotamia where wood is scarce the rooms of the houses are hollowed out of sandstone and a kind of dome of stone and clay put over them. Moltke, *Briefe aus der Türkei*, Berlin 1893, p. 242, describes this type of house where one of these domed rooms is *selamlık*, another *harem*, another a stable, etc.

Bibliography: d'Ohsson, *Tableau de l'Empire Ottoman*, II. 199 17.; Charles White, *Three Years in Constantinople, Domestic Manners of the Turks*, 3 vols., London 1845, iii. 173—175.

2) A ceremony in Constantinople on the occasion of the ceremonial visit of the Sultān to a mosque for the Friday service.

That the Ottoman Sultāns were accustomed to pay a ceremonial visit to a mosque on Friday is often mentioned by travellers. Every Friday they

visited one or other of the so-called Sultān's mosques (*ḡawāmiḡ-i Salāṭin*) where they had their boxes or stalls. While at an earlier period the high officers of state used to accompany the Sultān, etiquette since the time of Ibrāhīm I has only expected the court officials to go. The streets through which the procession went were usually guarded by Janissaries and the reception in the mosque by the Aga of the Janissaries and the administrator of the mosque was very ceremonious. In winter it was usually the Aya Sofya, as the mosque nearest the palace, that was visited.

D'Ohsson assumes a connection between the Sultān's visit to the mosque and his dignity of *Imām* in his capacity as caliph at the *palātū 'l-ḡum'a* but adds that the Sultān never himself appears as *Imām*. This view is quite in agreement with d'Ohsson's ideas on the caliphate, but perhaps this ceremonial visit to the mosque should rather be regarded as an imitation of similar ceremonies at the Imperial Byzantine court.

Down to the beginning of the nineteenth century the Sultān always appeared on horseback on this occasion (picture of the year 1788 in Jouannin and van Gaver, *Turquie*, Paris 1840). Only a very few Sultāns omitted the ceremony, as their non-appearance would have aroused resentment among the populace. From the time of Mahmūd II it was the custom for the Sultān to drive in a carriage (cf. von Moltke, *Briefe aus der Türkei*, Berlin 1893, p. 122).

The name *selamlık* for this ceremony seems only to date from the second half of the sixteenth century. The word has presumably nothing to do with the meaning "reception room" but is rather to be connected with the expression *selam dermaḡ* "to present arms"; it belongs therefore to military terminology. Ahmad Wāḡik Pāshā in his *Lehce-i 'Othmāni* (1306 = 1889) paraphrases it as *bināḡ ḡum'a āḡayl*.

The ceremony became particularly important in the reign of 'Abd al-Ḥamīd II. The Sultān was surrounded by a brilliant body-guard, of which his faithful Albanians in their costly uniforms formed the centre, along with the Estoghrul regiment mounted on white horses. From the time he lived in the Yıldız palace the *Selamlık* was usually held in the Ḥamidiye mosque. Formal audiences were held after it, to which great political importance was attached, while the display of pomp and splendour was intended to impress the foreigners invited. The holding of the ceremony was announced on each occasion in the official gazette *Taḡzīm-i Wāḡā*.

It became less important after the reign of 'Abd al-Ḥamīd and after the abolition of the sultanate by the General National Assembly in November, 1922, in Angora. 'Abd al-Majīd, who now retained only the dignity of Caliph, retained the *selamlık* ceremony, which fact is of significance for the character given to it since d'Ohsson's day. The last *selamlık* took place on Febr. 29, 1924 (1342) in the mosque of Dolma Baghçe and was little more than a parody of its former splendour. There was not even music and the carriage was drawn by only two horses (the *Wāḡan* newspaper of March 1, 1924).

(J. H. KRAMERS)

SĀLĀR (s.), commander. From the older Pahlavi *sardār* there arose as early as the Sāsānid period the form *sālār* with the well-known change of *rd* to *l* and compensatory lengthening of the *a* (cf. *Grundr. d. Iran. Phil.*, i. 267, 274). The synonymous word in modern Persian (*sardār*) is not a survival of the ancient *sardār*, but is a modern formation; indeed, the elements from which the ancient word was composed still exist in the modern language. The old Armenian took over the Pahlavi *sālār* in the form *salār*; the form *sardār* which would give **sardar* in Armenian is not found in the latter language. A latter, probably modern Persian loan-word in Armenian is (*spā*) *salār* with *l* instead of *t*. On this and on other late Armenian forms cf. Hübschmann, *Armen. Gramm.*, i. 235 and 239. In the first of these two references the Pahlavi combinations of the word are also given. On the etymology cf. also Horn, *Grundriss der neuop. Etymologie*, p. 153; Hübschmann, *Perische Studien*, p. 72; Junker, *Die Frakung i Pahlavik* (1912), p. 37 and 79.

The term which is primarily military (cf. *spāh-sālār*, commander of an army; *sālār-i dījān*) is transferred to several court offices, e. g. *sālār-i khwān* (and *khwān-sālār*), Steward; *sālār-i kār*, Marshal; *ākhūn-sālār*, Master of Horse. We need not trouble here with what else the native Persian lexicographers say about the word (cf. Vullers, *Lex.*, s. v.); it may be noted, however, that expressions like *ākhūn sālār* for "king" belong to the language of poetry and the meaning "old" (*kāhūn* = *sāl-ākhwārā*) (which, as far as I know, has not yet been found anywhere) is perhaps based on an incorrect etymology which connects the word with *sāl* (year). (V. F. BÜCHNER)

SĀLĀR DJANG is the title by which Mir Turāb 'Alī, a Sayyid of Persian descent and one of the greatest of modern Indian statesmen, was best known. He was born at Haidarābād in the Dakan on January 2, 1829, and, his father having died not long after his birth, was educated by his uncle, Nawwāh Sirājī al-Mulk, Minister of the Haidarābād State. He received an administrative appointment in 1848, at the age of 19, and on his uncle's death in 1853 succeeded him as Minister of the State. He was engaged in reforming the administration until 1857, the year of the Sepoy mutiny, when the Nizām, Nāṣir al-Dawla, died and was succeeded by his son Afḡal al-Dawla. The news of the seizure of Dillī by the mutineers greatly excited the populace, and the British Residency was attacked by a turbulent mob, aided by some irregular troops, but throughout the darkest days of the rebellion Sālār Djang not only remained true to the British, but strengthened the hands of his master and suppressed disorder. The services of the State were recognized by the rendition of three of the districts assigned in 1853 on account of debts due to the Company, and by the cession of the territory of the rebellious Rājā of Shorāpūr. In 1860 and again in 1867 plots to estrange the great Minister from his master and to ensure his dismissal were frustrated by two successive British Residents, and Sālār Djang remained in office. In 1868 an attempt was made to assassinate him but the assassin was arrested and executed, despite Sālār Djang's efforts to obtain a commutation of the sentence. On the death of Afḡal al-Dawla in 1869 Sālār Djang became one of the two co-regents of

the State during the minority of his son and successor, Mir Maḥbūb 'Alī Khān, and on January 5, 1871, he was invested at Calcutta with the insignia of the G. C. S. I. In November, 1875, he and other nobles represented the young Nizām at Bombay on the occasion of the visit of H. R. H. the Prince of Wales to India, and in April, 1876, he visited England and was presented to Queen Victoria. He received the honorary degree of D. C. L. from the University of Oxford and the Freedom of the City of London. In January, 1883, he was engaged in making preparations for the contemplated visit of the Nizām to Europe, but on February 7, after entertaining Duke John of Mecklenburg-Schwerin, who was visiting Haidarābād, on the Mir 'Alam Lake, he was attacked by cholera, and died on the following morning, regretted by all. Though always known by his first title, Sālār Djang, he bore the higher titles *Shujā' al-Dawla* and *Mukhtār al-Mulk*.

(T. W. HAIG)

ṢALĀT, the usual name in Arabic for the ritual prayer or divine service. The translation "prayer" simply is not accurate; the Arabic word *ṣalāṭ* corresponds to the conception prayer (Snouck Hurgronje has several times drawn attention to this distinction; *Vergrader Geschiedenis*, i. 213 sq., ii. 90, iv. 56, 63 sq., etc.). The word does not seem to occur in the pre-Korānic literature. Muḥammad took it, like the ceremony, from the Jews and Christians in Arabia. In many Kūfic copies of the Korān and often in later literature also in connection with the sacred book it is written *ṣalwa*. It is very often assumed that this orthography represents a dialectic pronunciation (Nöldeke, *Geschichte des Qurān*, p. 255; Wright-de Goeje, *Arabic Grammar*, i. 12 A; Brockelmann, *Arabisches Grammatik*, p. 7). The writing of a *wāw* in place of the *ālif* which one would expect is found, it is true, in several other words belonging to the language of the Korān; but with the exception of *rubā* (ربو) only in the termination *āt* (or *at*), so frequent in Aramaic. The view that in forms like *ṣalwa*, *ṣalwa*, etc. Aramaic influence has been at work should therefore always be borne in mind (Fränkel, *De vocabulis in antiquis Arabum carminibus et in Corano peregrinis*, p. 21).

The etymology of the Aramaic word *ṣlōṣā* is quite transparent. The root *ṣ-l-ṣ* in Aramaic means to bow, to bend, to stretch. The substantive *ṣlōṣā* is the *nomen actionis* from this and means the act of bowing, etc. It is used in several Aramaic dialects for ritual prayer, although it can also mean spontaneous individual prayer, which in Syriac at least is usually called *ḥōṣā*. Muḥammad took over the word *ṣalāt* in this sense from his neighbours and the Muslim *ṣalāt* shows in its composition a great similarity to the Jewish and Christian services, as will be shown in greater detail below. — The verb *ṣallā* is a denominative derived from the substantive *ṣalāt* with the meaning "to perform the ṣalāt".

Gabriel came down five times in one day and performed the ṣalāt in Muḥammad's presence and the latter on each occasion imitated the angel (al-Bukhārī, *Mawāḥiṭ*, bāb 1; Muslim, *Mawāḥiṭ*, trad. 166, 167; Abū Dā'ūd, *Ṣalāt*, bāb 2; al-Tirmidhī, *Mawāḥiṭ*, bāb 1; al-Nasā'ī, *Mawāḥiṭ*, bāb 1, 10, 17; Ibn Mājjā, *Ṣalāt*, bāb 1; al-Dārimī, *Ṣalāt*, bāb 2; Malik, *Ḥuḍūd*, trad. 1; etc.). This idea cannot, however, survive literary and historical criticism. In a short but searching study Houtsma has come to the following conclusions (*Iets over den dagelijkschen gebed der Mohammedanen in the Theologisch Tijdschrift*, 1890, xxiv. 127 199). How the Mekkan practice was regulated is seen from Sūra al. 116: "And hold the ṣalāt at the two ends of the day as well as at the ends (?) of the night". With this Sūra xvii. 80 agrees, where a morning ṣalāt, a ṣalāt when the sun declines and the night ṣalāt (*ṣalāt al-layl*) are prescribed; cf. Sūra xiv. 57, where the *ṣalāt al-fajr* and the *ṣalāt al-'iḥṣā'* are mentioned. Then we find appearing suddenly in the Medina Sūra iii. 239 the "middle ṣalāt" (*al-wuṣṭā*). This must therefore have been added in Medina to the two usual ṣalāts and probably after the example of the Jews, who also performed their *ṣhallos* three times a day.

We thus arrive at three daily ṣalāts in Muḥammad's life-time. The question how the number five came to be fixed upon is answered by Houtsma, who says that the two midday ṣalāts (*ṣubr* and *'aṣr*) and the two evening ṣalāts (*maḡrib* and *'iḥṣā'*) are duplications of the *wuṣṭā* and *'iḥṣā'* respectively, duplications which are easily explained from the lack of accurate means of defining the times for the ṣalāt as in Muḥammad's life-time (cf. E. Miltwoch, *Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, Abh. Pr. Ak. W., 1913, No. 2, p. 10 199). Goldziher, on the contrary (*Islamismus et Persisme in the R.H.R.*, 1901, xliii. 15), assumes Persian influence in settling the number at five. Caetani called attention to the fact that the number five was not yet firmly established in 'Umar II's time (*Annali, Introduction*, § 219 note, with reference to Goldziher, *Mus. Studien*, ii. 20, 29). Thereon it should be noted that 'Umar's admonition to "Urwa to be careful was not concerned with the number five but with the exact fixing of times. The latter, as a matter of fact, is also a subject of discussion in canonical Tradition, which deserves a separate investigation. When the theory of the five obligatory daily ṣalāts became firmly established cannot be exactly settled as yet. According to Ibn 'Abbās, Muḥammad "combined" in Medina several ṣalāts, e.g. the *ṣubr* and *'aṣr* ṣalāt on the one hand and the *maḡrib* and *'iḥṣā'* ṣalāt on the other, without his being on a journey or threatened by danger (Muslim, *Muṣṣaf*, trad. 49). Asked for Muḥammad's presumed reason, Ibn 'Abbās replied that he did not wish to expose any members of his community to (the danger of) sinning (by overburdening them) (*ibid.*, trad. 50; cf. 54, 55). In another version of the same ḥadīth we read: "We were wont in Muḥammad's life-time to combine ṣalāts in twos (*ibid.*, trad. 58). Al-Nawawī's commentary on the passages quoted (ed. Cairo 1282 A. H., ii. 196 29) is instructive for the difficulties which these traditions prepared for the 'Ulamā' and how they were able to overcome them. To us, such traditions are an indication that the

number of daily ṣalāts had not yet been fixed at five in Muḥammad's lifetime.

In the canonical Ḥadīth the number five is found in numerous traditions. In the schools of law there is no difference of opinion on this point. We shall therefore have to place the origin of this theory before the end of the seventh century.

The five compulsory ṣalāts are named as follows, according to the time of day at which they are observed (see the article *Ṣalāt*): *Ṣalāt al-Ṣubr*, often also called *Ṣalāt al-Fajr*; *Ṣalāt al-Zuhr*; *Ṣalāt al-'Aṣr*; *Ṣalāt al-Maḡrib*; *Ṣalāt al-'iḥṣā'*, often also called *Ṣalāt al-'Atama*, but the latter name is often condemned as unfit (Muslim, *Mawāḥiṭ*, trad. 228, 229; Abū Dā'ūd, *Ḥuḍūd*, bāb 78; al-Nasā'ī, *Mawāḥiṭ*, bāb 23; etc.).

II

Every Muslim who has attained his majority and is *compos mentis* is bound to observe the five daily ṣalāts (*al-maḥṭūba*, in contrast to the voluntary ṣalāts, which are called *nāfla* or *ṣalāt al-taṭawwū'*). The obligation is suspended for the sick. Ṣalāts omitted must be made up (*ḥaḍr*). The theories of the Shāfi' school on this point are given in al-Nawawī's commentary on Muslim, *Muṣṣaf*, trad. 309—316 (ii. 178 199). According to the strict theory (which in Islām has in very many cases little or nothing to do with practice), any one who deliberately omits the ṣalāt because he does not recognise it as a legal duty is to be regarded as *kāfir*. Even deliberate neglect without any such theoretical basis makes him liable to the death penalty (cf. *KATL*) (see al-Nawawī, *Minḥāḥ al-Talīb*, ed. v. d. Berg, i. 202; cf. Abū Ishāq al-Shirāzī, *K. al-Tanīh fī 'l-Fiqh*, ed. Juybol, p. 15).

Several preliminary conditions must be fulfilled for the performance of a valid ṣalāt.

The requisite ritual purity must be restored, if necessary, by *wuḍū'* (q. v.), *ghusl* (q. v.) or *taḥannum* (q. v.). The dress worn should fulfil the legal regulations which aim at the "covering of the privy parts" (*sitr al-'awra*). This means that in men the body must be covered from the navel to the knees, in free women the whole body except the face and hands. The latter regulation is remarkable, because it is in striking contrast to the popular European opinion regarding the compulsory veiling of Muslim women (cf. Snouck Hurgronje, *Twee populaire dwalingen in the Verspreide Geschieden*, i. 295 199). In the Ḥadīth the question of dress, like so many others, has not yet reached a uniform formulation. Sometimes only the covering of the privy parts is mentioned (e.g. al-Bukhārī, *Ṣalāt*, bāb 10), and sometimes the saying is ascribed to Muḥammad that the shoulders also should be covered (e.g. Muslim, *Ṣalāt*, trad. 175); sometimes the use of the scanty *jamāda* is expressly mentioned in this connection (e.g. Ahmad b. Hanbal, *Musnad*, iii. 322 etc.) and at the same time we are told that the ṣalāt in one *ḥawṣ* is permitted or even quite common (e.g. Abū Dā'ūd, *Ṣalāt*, bāb 77, 80—82); on the other hand it is said that one who owns two *ḥawṣ* should put them on at the ṣalāt (e.g. Abū Dā'ūd, *Ṣalāt*, bāb 82; Ahmad b. Hanbal, ii. 148).

The ṣalāt need not be held in a mosque but may be celebrated in a dwelling-house and any other place; the authority given for this is the saying of Muḥammad that he was granted

the privilege that for him the earth was *maṣṣid wa-ṣabūr* (e.g. al-Bukhārī, *Ṣalāt*, bāb 56). Tombs are excepted (e.g. Muslim, *Ṣalāt al-Muṣṣirīn*, trad. 208, 209) and unclean places, like slaughter-places etc. (e.g. al-Tirmidhī, *Mawāḥiṣ al-Ṣalāt*, bāb 147).

The place where the ṣalāt is performed is marked off in some way from the surrounding area by a *sutra*; on this cf. the article *SUTRA*. A *ṣaḥif* [q. v.] is used as a rule. Attention has also to be paid to the direction of Mekka; cf. the article *KIBLA*.

The ṣalāt proper consists of the following elements, our description of which is based on the Shāfi'i practice.

The *niya* (= intention, q. v.) is pronounced aloud or in a low voice, with an announcement of the ṣalāt which one intends to perform: it corresponds to the Jewish *šamwānā* (cf. Mittwoch, *op. cit.*, p. 16; A. J. Wensinck, *De intentie in recht, ethiek en mystiek der semitische volken in de V. M. A. W.*, series 5, vol. iv.). Then are pronounced the words *Allāhu akbar*, the *takbīrat al-ihṛām*, which begins the consecrated state (cf. the article *ḤAJJ*). Mittwoch has compared this formula with the benedictions of the Jewish *šfila* (*op. cit.*, p. 16 sq.). The ṣalāt is performed standing. Mittwoch points out that the Jewish *šfila* is called *amīlā* (*op. cit.*, p. 16). It is *sunnā* to utter a *du'a* or a *ta'awwuz* after the *takbīra* (see *Minhāḡ*, i. 78). Then follows the recitation which usually consists of the *fātiḥa*. In the Ḥadīth the importance of this *ḥir'a* is expressed in the maxim: *lā ṣalāt ḥimān lam yaḥṣa' bi-fātiḥati 'l-kitāb* (e.g. al-Bukhārī, *Adhūn*, bāb 95; Muslim, *Ṣalāt*, trad. 34—36, 42). In a congregational ṣalāt it is the custom for only the *fātiḥa* to be recited along with the *imām*; if the latter begins with the second *ḥir'a*, those present have to listen (cf. *Minhāḡ*, i. 80). In the Ḥadīth are numerous statements as to whether recitation should be loud or low; e.g. al-Bukhārī, *Kuṣūf*, bāb 19; Abū Dā'ūd, *Tahāra*, bāb 89; al-Nasā'ī, *Istisḥā*, bāb 27—29, 80, 81 etc.; cf. al-Bukhārī, *Adhūn*, bāb 96, 97, 108; Muslim, *Ṣalāt*, trad. 47—49; al-Nasā'ī, *Istisḥā*, bāb 27, 28, 80 etc.

Next comes the *rukū'* which consists in bending the back till the palms of the hands are on a level with the knees (the Jewish *ker'a*; see Mittwoch, *op. cit.*, p. 17 sq.; cf. also the pictures of the various attitudes in the ṣalāt in Lane's *Manners and Customs* in the chapter on *Religion and Laws* and in Juynboll, *Handbuch*, p. 76). The upright position is then resumed (*ʿitdāl*); as soon as the head is raised after the *rukū'*, the hands are uplifted and the worshipper pronounces the words: "Allāh hears him who praises him." This is found quite early, even in Ḥadīth (e.g. al-Bukhārī, *Adhūn*, bāb 52, 74, 82; Muslim, *Ṣalāt*, trad. 25, 28, 55, 62—64 etc.).

There have been differences of opinion regarding the raising of the hands in *ṣalāt* and *du'a*. Some say that Muḥammad used to lift up his hands at the ṣalāt (e.g. al-Bukhārī, *Adhūn*, bāb 83—86; Muslim, *Ṣalāt*, trad. 21—26; Abū Dā'ūd, *Ṣalāt*, bāb 114—126; al-Nasā'ī, *Istisḥā*, bāb 1—6, 85—87; Ahmad b. Hanbal, i. 93, 255, 289 etc.). Importance is attached (as may be seen in the passages just quoted) to giving the height to which it is permitted to raise the hands. Besides raising the hands the spreading out of them also occurs (al-Bukhārī, *Adhūn*, bāb 130). It is also evident from

the passages of Ḥadīth quoted that the raising of the hands took place not only after the *rukū'* but also in other parts of the ṣalāt. This ritual gesture was made with special preference at the ṣalāt for rain (e.g. al-Bukhārī, *Ḍiyū'a*, bāb 34, 35; Muslim, *Istisḥā*, trad. 5—7; Ahmad b. Hanbal, iii. 104, 153, 181 etc.). Occasionally the *raf' al-yadain* is declared permitted for no *du'a* except the *istisḥā* (e.g. al-Nasā'ī, *Kiyām al-Lail*, bāb 52; Ahmad b. Hanbal, ii. 243). What value was given this rite may be seen, for example, from the fact that Muḥammad is made to perform the *waḥḥ* before raising the hands in the *du'a* (al-Bukhārī, *Maḡhāz*, bāb 55). This all becomes quite clear when we reflect that the raising of the hands is as it were a measure of coercion used by man towards the Deity, as Goldziher has shown in his *Zauber-elemente im islamischen Geiste* (*Nödlke-Festschrift*, i. 320). The *Sunna* further associates with the *rukū'* the *ḥuṣūl* [q. v.], which in parts falls into the same category as the raising of the hands, as Goldziher has also shown in the essay just mentioned.

The next "pillar" of the ṣalāt in order is the prostration (*sujūd*), which was also one of the rites of the Jewish (Mittwoch, *op. cit.*, p. 17 sq., *hishḡawwā*) and of the Christian service (Wensinck, *Muḥammad in de Joden te Medina*, p. 104 sq.); for further details see the article *SUJŪD*. Next the worshipper assumes the half-kneeling, half-sitting position, which in Arabic terminology is usually called *qūlūs* (cf. Juynboll, *op. cit.*, p. 76, fig. 7). Then comes another *sujūd*.

The ceremonies from the recitation of the *fātiḥa* to the second *sujūd* inclusive constitute a *rak'a*. It is to be noted that in the Ḥadīth literature at least this terminology still varies a good deal. Sometimes *rak'a* seems to be used in the same sense as *ṣaḥif*, sometimes (and this is the regular usage later) *rak'a* is the more comprehensive term, applied to the middle part just described of the whole *ṣalāt*. Only the history of the Muslim ritual, which has still to be written, will make clear the exact state of affairs. The most usual (in Ḥadīth also) terminology gives the number of *rak'a*s for each ṣalāt, viz. for the *ṣalāt al-faḍr*, 2; for the *ṣalāt al-ḡaḥr*, 4; for the *ṣalāt al-'aṣr*, 4; for the *ṣalāt al-maḡrib*, 3; for the *ṣalāt al-'iṣḡā*, 4. Muslim tradition even says that the ṣalāt originally consisted of two *rak'a*s, that this number was retained for the ṣalāt on journeys, but four was fixed for the normal ṣalāt (e.g. al-Bukhārī, *Ṣalāt*, bāb 1; Muslim, *Ṣalāt al-Muṣṣirīn*, trad. 1—3, etc.). Mittwoch (*op. cit.*, p. 18 sq.) assumes Jewish influence on the original choice of two *rak'a*s.

The statement that this or that ṣalāt consists of so many *rak'a*s means that the introductory rites which precede the first *ḥir'a* and those which follow the second *sujūd* (see below) need only occur once in the ṣalāt in question while, on the other hand, the ceremonies in between are repeated so many times.

The rites which follow the second *sujūd* are the *taḡakkud*, the profession of faith, which is pronounced sitting. That the rule just mentioned for the repetition of certain parts of the ṣalāt only developed gradually is evident from a tradition which ascribes to Muḥammad the pronouncement that the *taḡakkud* should be repeated at every two *rak'a*s (Ahmad b. Hanbal, i. 211).

Then comes the ṣalāt on the prophet which

It is clear that at first Muhammad had not the material available in ample measure for the ritual. The texts which were recited and sung in the solemn litanies of the Christians and Jews in their services were lacking to him. This fact may still be deduced from the celebrated tradition regarding the revelation of Sūra xvi., according to the common view, the first that was revealed to him. To the command of the angel urging him to recite he replied: "I have nothing to recite". The divine part of this dialogue, which so troubled Muhammad, is then said to have at once become the first text for recitation, and it was followed by others with longer or shorter passages.

Although the salāt is nowhere described or exactly regulated in the Korān, it can be assumed that its characteristic features have not changed in the course of development of the worship. The indications in the Korān of its various component parts lead us to believe this. The standing position is everywhere presupposed in the salāt, alternating with inclinations (*rukūʿ*) and prostrations (*sujūd*). How closely the salāt was bound up even in the Mekkan period with the recitation of the Korān is seen from the fact that in Sūra xvii. 80 the morning salāt is called *Korān al-Faḍr*. On the other hand we find the recitation of the Korān by itself also associated with prostration (Sūra lxxiv. 21).

That at this period praises already constituted a very considerable part of the salāt is clear from Korānic passages like Sūra xx. 130 and xxiv. 41, where *taḥmīd* and *tasbeḥ* are mentioned in the closest connection with the salāt.

From the mention of the *salāt* and the verb *ṣallā* in the oldest Sūra's (e.g. lxxv. 31, lxx. 23, cvii. 5, lxxiv. 44, cviii. 2) it may be further seen that we can assert that this rite was an accompaniment of Islām from the earliest times and that Caetan's sceptical reflexions and hypotheses do not give sufficient weight to the Korānic evidence (cf. *Annali, Introduzione*, 219 note — in part in connection with similar views of Grimme). How much Muhammad disturbed the Mekkan with his new religion may be seen from Sūra xvii. 110, where he is recommended by Allāh not to perform the salāt too loudly, which is interpreted by tradition — and, no doubt, rightly — to mean that his unbelieving fellow-citizens molested him for holding his services too noisily. This is in agreement with the fact that in the period during which Muhammad is continually advised to imitate the example of the earlier prophets and model himself on their patience, attention is regularly called to their also having summoned those around them to hold the salāt (e.g. Sūra xxi. 73, xix. 32, xiv. 40, xix. 56, xx. 132).

In the Korān the salāt is very frequently mentioned along with the *ṣawm*; the two are obviously considered the manifestations of piety most loved by Allāh (e.g. Sūra ii. 77, 104, 172, 277, iv. 79, 160, v. 15, 60 etc.). In Sūra ii. 42, 148 the believers are exhorted to seek help in *ṣalāt* and *ṣawm*. *Ṣawm* [q.v.] is interpreted in this connection as fasting. There is further in the Korān no trace so far of the five "pillars" which later attained such an important position. The *ṣalāt* is an expression of humility (Sūra xliii. 2) which latter was considered throughout the Hellenistic world as the attitude of the deity most befitting man. Punctual observance (*muḥāfaẓa*) of the salāt is

repeatedly enjoined (vi. 92, xliii. 9, lxx. 34; cf. lxx. 22) and neglect (*ṣakw*) is censured (cvii. 5). In Sūra iv. 104 a similar injunction is given the following justification: "for the salāt is a *ḥudūd* *muḥḥḥ*" i.e. "a regulated ordinance of religion". It is blamed in the Munāḥḥūn [q.v.] that they perform the salāt without real and with eye-service only (Sūra iv. 141). The limitation and later interdiction of the use of wine owed its origin to the fact that over-indulgence disturbed order at divine service (Sūra iv. 46).

As has already been observed, we may assume that the essential features of the later salāt were in existence from the very beginning. We know only very little about peculiarities of the salāt and its accompanying phenomena in the oldest period of Islām. A ritual ablution (cf. the articles *ḡhusl*, *ṭahara*, *wuḍūʿ*) before the salāt is prescribed in Sūra v. 8; the *nidaʾ* for the salāt is mentioned in v. 63 and in lxii. 9 for the Friday salāt. A special salāt in case of imminent danger is described in Sūra iv. 103 (see below under *Salāt al-Khawf*). Praises of Muhammad and the *Tasbeḥ* form the conclusion of the later salāt. This practice can be justified by Sūra xxxiii. 56, where it is written: "Allāh and his angels bless the Prophet; ye who believe, bless him and bring him salutations of peace". The Friday salāt is mentioned in lxii. 9 in the words: "O believers, when the call to the salāt occurs on Fridays, haste ye to the invocation (*dhikr*) of Allāh and quit trafficking. This is better for ye when ye know."

In these circumstances it is intelligible that Muhammad laid great stress on those who showed themselves ready to adopt Islām being at once initiated into the practice of the salāt. Tradition thus reports that he sent Aḥmad b. Zurāra or Muṣāb b. Umair to the Medinese for this express purpose and that the latter was the first to hold the Friday service with them (see A. J. Wensinck, *Muhammad in de Joden te Medina*, p. 111 sqq., and C. H. Becker in *Der Islam*, iii. 378 sq.). In Muhammad's messages to the tribes of Arabia the salāt is frequently inculcated as a Muslim duty (see J. Sperber, *Die Schreiben Muhammads an die Stämme Arabiens* in the *M.S.O.S. Ar.*, xix., reprint, p. 16, 19, 38, 58, 77 etc.). According to Muslim tradition, the establishment of the number five in the daily salāt dates back to the beginnings of Islām. It is connected with Muhammad's ascension to heaven (see the article *isrāʾ*). When Muhammad is taken up to the highest heaven fifty salāts daily are imposed on his community by Allāh. Muhammad leaves the presence of Allāh with this commission; on his way back he meets Mūsā who asks him what Allāh has imposed on his community. When Mūsā hears the orders he says: "Return to thy Lord for the community is not able to bear this." Allāh then alters the fifty to twenty-five. On his way back Muhammad tells Mūsā of the alteration and receives the same reply. The same processes are repeated until finally the number remains at five (al-Bukhārī, *Ṣalāt*, bāb 1; Muslim, *Imān*, trad. 259, 263; al-Tirmidhī, *Mawāḥiṣ al-Ṣalāt*, bāb 45; al-Nasāʾī, *Ṣalāt*, bāb 1; Ibn Māǧja, *Ḥama*, bāb 194; Aḥmad b. Ḥanbal, i. 315 (ter), iii. 148 sq., 161; cf. Ibn Saʿd, i. 143 etc.). The scene bears some similarity to Genesis, xviii. 23 sqq., where Abraham's intercession for Sodom and Gomorra is described. — On the other hand, in a widely disseminated tradition we are told that

consists of eulogies in which occurs the much discussed formula *Ṣallā 'lāhū 'alaik wa-sallama*. These formulae are pronounced sitting. The worshipper remains seated for the concluding ceremony, the *salām* or *ṭaḥiyyat al-ṭahīl*, which ends the consecrated state. The fullest version of it is, according to al-Nawawī (*op. cit.*, p. 91 sq.): *al-salām 'alaikum wa-rahmatu 'llāh*; but it may also be abbreviated. It is pronounced twice, once looking to the right and a second time to the left. It is considered a salutation to the believers; but it is also referred to the guardian angels present (cf. *Sūra* xvii. 80). On analogies in the Jewish service see Mittwoch, *op. cit.*, p. 18.

The different ceremonies of the *ṣalāt* are classified according to their importance or their obligatory or sunna character. Al-Nawawī (*op. cit.*, p. 74 sqq.) numbers the following among the *arkān al-ṣalāt*: *niyya*, *takbīrat al-iḥrām*, *qiyām*, *qir'ān*, *rukū'*, *ṣittāḥ*, *ruḥūḍ*, *qiyūḍ*, *ḥuḍūḍ*, *ṭaḥiyyat*, *ḥuḍūḍ*, *al-ṣalāt 'ala 'l-Nabī*, *salām* and (13) the correct order of succession (*ṭarīq*). The other ceremonies — some of which are mentioned above — are considered sunna by him. Cf. Abū Ishāq al-Shīrāzī, *Tanbīh*, p. 25.

It is the many sunna ceremonies which, according as they are abbreviated or carried through in great detail, give each *ṣalāt* its peculiar character and in particular affect its length. This is true especially of the eulogies interspersed (see Mas'ūḍī Muhammad 'Alī, *The Holy Qur'ān*, 2nd ed., Lahore 1920, p. 11) and of the *qir'ān*; for the recitation of the *fātiha* may be followed by the recitation of further chapters from the *Korān*. The *Ḥadīth* has much to say on this subject. It appears that the great zeal of many imāms in this respect has often been a burden to the faithful. Complaints on the subject are said to have been made to Muḥammad and he is said to have readily admitted their justice. "Reflect", he is said to have warned the imāms, "that there are weak and old men among you" (e.g. al-Bukhārī, *Ḥim*, bāb 28; Muslim, *Ṣalāt*, trad. 179-190; Abū Dā'ūd, *Ṣalāt*, bāb 122, 123 etc.). We even find him quoted as describing the imām concerned as a *fattān* (tempter) (e.g. al-Bukhārī, *Adhān*, bāb 60; Ahmad b. Ḥanbal, iii. 308). Praise is also given to Muḥammad because no one went through the *ṣalāt* more completely and in a shorter time than he did (Ahmad b. Ḥanbal, iii. 279, 282 and many other passages).

It is natural that the correct order of the ceremonies in the *ṣalāt* is considered one of its pillars by the faḥīḥa. But we are justified in supposing that there was still considerable variation in this long after Muḥammad's death. Such unintentional deviations from the usual number and order of the ceremonies are discussed in the *Fikḥ* and *Ḥadīth* — the *infant terrible* of the *Fikḥ* — supplies the historical background for them. Both say that these unintentional deviations in minor points are made good by the performance of additional *rukū'a*s or *saḥḥa*s. With what painful accuracy the *Fikḥ* deals with this subject may be seen, for example, from al-Nawawī (*op. cit.*, p. 90 sqq.). *Ḥadīth*, on the other hand, is content, as a rule, to say that Muḥammad, who was later also credited with such deviations, in these cases used to perform two additional *saḥḥa*s, which are called *saḥḥat al-ṭaḥīl* (e.g. Muslim, *Masāḥid*, trad. 85; Ahmad b. Ḥanbal, iii. 12, 37, 42;

al-Bukhārī, *Ṣalāt*, bāb 88; *Sahw*, bāb 4 etc.). Al-Bukhārī in the heading to bāb 32 of the chapter *Ṣalāt* preserves the memory of less minutely regulated conditions.

The *Fikḥ* also defines quite minutely what actions and contingent states of body destroy the validity of the *ṣalāt* (al-Nawawī, *op. cit.*, p. 103 sqq.; Abū Ishāq al-Shīrāzī, p. 28 sq.). The *Ḥadīth* records that at first the believers used to talk freely with each other during the *ṣalāt* and greeted Muḥammad and one another, but that the Prophet put an end to this licence (al-Bukhārī, *al-Amāl fī 'l-Ṣalāt*, bāb 2-4). The old state of affairs is strikingly illuminated in the oft told story of how Muḥammad performed the *ṣalāt* with Zainab's little daughter hanging round his neck; when he came to the *ruḥūḍ* he, it is said, put down the child and took her up again when he arose (e.g. al-Bukhārī, *Ṣalāt*, bāb 106; Muslim, *Masāḥid*, trad. 41-44; al-Nasā'ī, *Masāḥid*, bāb 19). In another tradition it is related how Ḥasan and Ḥusain jumped on Muḥammad's back during his *ruḥūḍ* (e.g. Ahmad b. Ḥanbal, ii. 513). These were the good old days which the faḥīḥa clearly did not wish back again.

III

Besides the five daily *ṣalāts* there are some that are not compulsory; al-Ghazālī divides them into three categories: *sunna*, *mustahabb* and *taḥawwūf* (*Iḥyā'*, Cairo 1302, i. 174); some of them may have come into use after Muḥammad's death and were therefore never given legal force, others had already fallen somewhat into desuetude in Muḥammad's lifetime.

The latter is true of the night-*ṣalāt* (*ṣalāt al-layl*). This name is the most usual in the *Ḥadīth*, while in the *Korān taḥaḍḍiḍ* (*Sūra* xvii. 80) is used. The etymology (the "waking") of this word suggests a close connection with the Christian vigils and especially with the custom of keeping awake (Syriac *shaharā*), which was much cultivated among ascetics and mystics of Western Asia. We have quite a minute knowledge of this rite from Syriac ascetic literature; in it the keeping awake is in itself a very meritorious work; it is usually combined with the reading of scripture, meditation and ritual prayer. We must imagine the *taḥaḍḍiḍ* to have been something similar. In the description of the nightly exercises in the *Lailat al-Kubr*, and in the nights of Ramaḍān in general, the name *qiyām* is preferably used, which shows that great value was put upon standing and waking in themselves.

That such nightly exercises were zealously carried through in the oldest Muslim community is clear from the *Ḥadīth*. For further details see the article *TAḤAḌḌIḌ*. Here we shall only say that even in Muḥammad's lifetime these exercises have been deprived of their obligatory character (Abū Dā'ūd, *Tafawwūḍ*, bāb 17, 26; al-Nasā'ī, *Qiyām al-Layl*, bāb 2; al-Dārimī, *Ṣalāt*, bāb 165).

The night-*ṣalāt* is closely connected with the *wir*. This word means "uneven" and the rite really consists in the addition of one *rukū'a* to the even number of *rukū'a*s in the night-*ṣalāt*. For further information see the article *WIR*. How varying the practice was in the oldest community with regard to the daily *ṣalāts* may be seen from the statements regarding the *ṣalāt al-duḥā*, the only one in the forenoon. In Ahmad b. Ḥanbal,

i. 147, the time is fixed in the following way: Muhammad used to perform the *ṣalāt* when the sun had risen the same distance from its starting point as it is distant from its place of setting at the *ṣalāt al-ṣuḥr*. Some make Muhammad recommend the *ṣalāt al-ṣuḥr* (al-Nasā'ī, *Ḥiṣṣat al-Lail*, bāb 28; *Siyām*, bāb 81; al-Dārimī, *Ṣalāt*, bāb 151; Ahmad b. Hanbal, ii. 175, 265 bis, 271, etc.) and perform it regularly (Ahmad b. Hanbal, i. 89, ii. 38); it is even said that it was *farīḍa* for him and *ṣunna* for the Muslims (do., i. 231, 232, 317 bis). Others again say that Muhammad only performed this *ṣalāt* once or that the authority in question only saw him do it once (al-Bukhārī, *Adhān*, bāb 41; Muslim, *Ṣalāt al-Muṣṣirīn*, trad. 80, 81; Abū Dā'ūd, *Taḥaḥḥud*, bāb 12; Ahmad b. Hanbal, iii. 156); or that Muhammad only performed it on returning from a journey (Muslim, *Ṣalāt al-Muṣṣirīn*, trad. 75, 76). Such statements are supported by the traditions which say that the great authorities like Abū Bakr, 'Umar and Ibn 'Umar did not perform the *ṣalāt al-ṣuḥr* (al-Bukhārī, *Tahajjud*, bāb 31; al-Dārimī, *Ṣalāt*, bāb 152). The last named goes so far as to call it a *bid'a* (= innovation; a strong word) (Muslim, *Ḥaḍīṣ*, trad. 220; Ahmad b. Hanbal, ii. 128 sq., 155).

The *ṣalāts* before and after the obligatory ones, usually consisting of two *rak'as*, are very numerous. Before and after the *Ṣalāt al-fajr*: al-Bukhārī, *Adhān*, bāb 15; Abū Dā'ūd, *Taḥaḥḥud*, bāb 6. Before and after the *Ṣalāt al-ẓuhr*: al-Bukhārī, *Tahajjud*, bāb 25; Muslim, *Ṣalāt al-Muṣṣirīn*, trad. 105, 106. Before and after the *Ṣalāt al-ʿaṣr*, but care should be taken to avoid coinciding with the sunset (see the article *al-ḥaṣr*): Abū Dā'ūd, *Taḥaḥḥud*, bāb 8; al-Bukhārī, *Mawāḥiṭ*, bāb 53; cf. *Maḥāṣin*, bāb 69. Before and after the *Ṣalāt al-Maghrib*: al-Bukhārī, *Tahajjud*, bāb 35, 25 (six *Rak'as* after the *Ṣalāt al-Maghrib*: al-Tirmidhī, *Mawāḥiṭ*, bāb 203). After the *Ṣalāt al-ʿiṣā*: al-Bukhārī, *Tahajjud*, bāb 25. But it is reported even of Muhammad that he did not observe all these voluntary *ṣalāts* every day; the number is usually fixed at 16 or 12 (Ahmad b. Hanbal, i. 111, 142, 143, 146, 147 sq.). In addition there are such *ṣalāts* on different days of the week and month (see al-Gharālī, *Iḥyā'*, i. 174 sqq. in bāb 7 of the chapter *Ṣalāt*) and on different occasions, such as on entering a mosque, returning from a journey (al-Bukhārī, *Ṣalāt*, bāb 60; Muslim, *Muṣṣirīn*, trad. 74).

IV

One may perform the daily *ṣalāt* by oneself; but it is recommended to perform it with the community (on differences of opinion on this question see al-Nawawī, *op. cit.*, i. 126 sq.). In any case, according to al-Nawawī, there is no obligation on women; it is even not recommended for them. In the *Ḥadīth* the advantages of the congregational *ṣalāt* are strongly emphasised (e.g. al-Bukhārī, *Adhān*, bāb 29—31, 34; Muslim, *Maṣāḥib*, trad. 245—259, 271—282; al-Nasā'ī, *ʿAlimna*, bāb 42, 45, 48—50, 52). The mosque is at the same time recommended as the place of assembly, although not obligatory, nor does the validity depend on a certain number of participants being present. In Abū Ishāq al-Shirāzī (*Tanbīh*, p. 31; cf. Ibn Māḍja, *Iḥyā'*, bāb 5) it is said that two persons can hold a *ḡamā'a*. Very often *ṣalāts* performed by three individuals are described (e.g. Muslim, *Maṣāḥib*, trad. 269).

One is recommended to go quietly to the *ṣalāt* (al-Bukhārī, *Adhān*, bāb 20, 21, 23; Muslim, *Maṣāḥib*, trad. 151—155). It is also considered particularly meritorious to take one's place some time before the commencement of the *ṣalāt* and to wait some time after its conclusion (Ahmad b. Hanbal, ii. 266, 277, 289 sq., 301). If anyone comes so late that he can only take part in one *rak'a* he has nevertheless "achieved the *ṣalāt*" (al-Bukhārī, *Maṣāḥib*, bāb 29; Muslim, *Maṣāḥib*, trad. 161—165 etc.; the opposite view is held by Mālik, *Wuḥūṭ*, trad. 15). Even if one enters the mosque after already performing the *ṣalāt* concerned by oneself, one should take part in the *ṣalāt* with the congregation (Abū Dā'ūd, *Ṣalāt*, bāb 36; al-Tirmidhī, *Mawāḥiṭ*, bāb 49). The opposite view, however, has also its supporters (Abū Dā'ūd, *Ṣalāt*, bāb 57). The frequently mentioned rule is that one should make up in private for what one has missed in the *ḡamā'a* (Ahmad b. Hanbal, ii. 237, 238, 239, 270, etc.).

The worshippers arrange themselves in rows (*ṣaff*) on the closed and good order of which much stress is laid (al-Bukhārī, *Adhān*, bāb 71, 72, 74—76, 114; Muslim, *Ṣalāt*, trad. 122—128; Abū Dā'ūd, bāb 93—100; Ahmad b. Hanbal, iii. 3, 112 sq., 114, 122, etc.). The places in the front row have special advantages (al-Bukhārī, *Adhān*, bāb 9, 73; Muslim, *Ṣalāt*, trad. 129—132); within this row again the places on the right of the *imām* are especially recommended (Ibn Māḍja, *Iḥyā'*, bāb 34). This, however, is true only of men; women are advised to take their places in the last row (Ahmad b. Hanbal, ii. 247, 336, 354, 370). The *ṣalāt al-ḡamā'a* is conducted by an *imām* who takes up a position before the front row, or, if there are only two individuals present besides him, between the two or so that one is on his right and the other behind him (Abū Dā'ūd, *Ṣalāt*, bāb 98; al-Nasā'ī, *Taḥṣīṣ*, bāb 1; Ahmad b. Hanbal, i. 451).

It is laid down that one should copy the *imām* exactly (al-Bukhārī, *Adhān*, bāb 51—53, 74, 82 etc.). Anyone who neglects this rule exposes himself to punishment from God (Ahmad b. Hanbal, ii. 425; Mālik, *Nida'*, bāb 57).

Mittwoch (*op. cit.*, p. 22; cf. thereon Becker in *Der Islam*, iii. 386 sqq.) has pointed out that the *imām* corresponds to the *shelish ha-qibla* at the Jewish service. At the latter as in Islam the duties can be carried through by any member of the community qualified to do so. In Muhammad's lifetime the position in Medina was that it only happened exceptionally that the Prophet did not conduct the *ṣalāt*. During his last illness and also on other occasions when he was absent Abū Bakr is said to have usually represented him. The *Ḥadīth* loves to expand itself on this point; in this we have probably to consider many things as reflections of the events after Muhammad's death. The conducting of the *ṣalāt* was then of tremendous importance as is clear from the manifold meanings of the word *imām*. The leader of the *ḡamā'a* in the mosque of the Prophet was naturally also the leader of the community in political matters. Gradually there came about a separation of the functions but the Caliph and the leader of the smallest village *ḡamā'a* alike retain the title of *imām*.

While the *imām* — at least in the days of the early Caliphs — was appointed to the mosque

of the Prophet, in the provinces an alternation in the exercise of the duties was more to be expected. In the canonical Hadith we look in vain for a regular usage in the provinces. Perhaps it may be concluded from this that in the first century of the Hijra no regular usage had yet developed. If a number of persons assemble for the *ḡamā'a*, sometimes it is said that the oldest (al-Bukhārī, *Adhān*, bāb 17, 18, 35, 49, 140; *Ḍiḥād*, bāb 42; al-Nasā'ī, *Adhān*, bāb 7 etc.), sometimes the one with the best knowledge of the Korān should conduct the ṣalāt (Muslim, *Masājid*, trad. 289—291; al-Nasā'ī, *Adhān*, bāb 8; Ahmad b. Hanbal, iii, 24, 34, 36 etc.). Slaves and freedmen could perform the duties (al-Bukhārī, *Adhān*, bāb 54). In a Zaidi tradition there is even a mention of women as Imām (*"Corpus Juris" di Zaid ibn 'Alī*, ed. Griffini, N° 189). The question behind whom one may perform the ṣalāt is also discussed in the Fikh books and in the collections of traditions (al-Nawawī, *op. cit.*, p. 131 *sqq.*; al-Bukhārī, *Adhān*, bāb 56; Abū Dā'ūd, *Ṣalāt*, bāb 63).

The responsibility of the Imām (Ahmad b. Hanbal, ii, 232, 284, 377 *sq.*, etc.) as well as his heavenly reward are laid stress upon (Abū Dā'ūd, *Ṣalāt*, bāb 58; Ibn Mādjā, *Iḥṣā*, bāb 47). One should retire if some one is there who has greater authority in religious matters (al-Nasā'ī, *A'imma*, bāb 3, 6). No one should thrust himself on the people (Abū Dā'ūd, *Ṣalāt*, bāb 62; al-Tirmidhī, *Mawāḥiṭ*, bāb 149). The Imām is not to be a stranger but a local man (Abū Dā'ūd, *Ṣalāt*, bāb 65; al-Tirmidhī, *Mawāḥiṭ*, bāb 147; Mālik, *Ṣalāt al-ḡamā'a*, bāb 15).

The direction of the *ijmā'a* gradually developed into a more or less definite office. In Egypt the Imām is often a small tradesman or a school-master (Lane, *Manners and Customs*, p. 96 *sq.*). In the larger mosques there are two imāms appointed who are paid out of the funds of the mosque. In Mekka we find the most distinguished scholars and quite insignificant individuals alike acting as Imām (Snouck Hurgronje, *Mekka*, ii, 234, note). In the Dutch East Indies the duties are often performed by the *paṅḡulu*, who also holds juridical offices (cf. Snouck Hurgronje, *Veraprijsde Geschiedenis*, ii, 116 *sq.*, 177; *De Atjehers*, i, 89). See further the article *MASJID*.

Besides the five daily ṣalāts there are special services to be held by the community on certain occasions. The first place among these is occupied by the Friday ṣalāt; for a description of which see the article *ḤUM'Ā*. For the ṣalāt on the two feasts see the article *ĪD*, for the ṣalāt for rain see *ISTISKĀ* and for the *Ṣalāt al-Kusuf* see *KUSUF*. Here we shall only say that much ancient and popular matter has survived in these divine services.

Of quite another kind, i.e. special or short forms of the true Muslim ṣalāt, is the ṣalāt on journeys, which consists of two *rak'as*. The jurists naturally devote much attention to the question of what is meant by a journey. Another alleviation on journeys consists in the combination of two or more ṣalāts into one (*ḡamā'*). The Hadith has much information on the subject (e.g. al-Bukhārī, *Takfir al-Ṣalāt*, bāb 6, 13—19; Muslim, *Ṣalāt al-Musāfirin*, trad. 42—58 etc.). As mentioned in section I, it is said that Muhammad combined several ṣalāts in Medina; on the significance of such statements cf. what is

said there and also al-Nawawī, *op. cit.*, p. 159 *sq.*

A special ṣalāt, already described in the Korān, is that which is held when danger threatens from the enemy (Sūra iv, 102—104). The deviation from the usual ritual consists mainly in the fact that the believers are arranged in two rows of which one keeps watch with weapon in hand during the *suḡūd* of the other; they repeat this in turn until all have performed the *suḡūd*. The *ḡashshud* is then recited by them all together. If the enemy is to be expected from another direction than that of the *qibla*, the ritual is modified as conditions demand (for further information see e.g. al-Nawawī, *op. cit.*, p. 181 *sqq.*). In this case also the ṣalāt may be abbreviated (Muslim, *Ṣalāt al-Musāfirin*, trad. 4, 5; al-Nasā'ī, *Ṣalāt al-ḡhawf*, bāb 4, 7, 23, 24, 26, 27). There is even mention of a *Ṣalāt al-ḡhawf* of only one *rak'a* (Ahmad b. Hanbal, i, 237, 243).

In conclusion we must here deal briefly with the ṣalāt for the dead (*al-ṣalāt 'ala 'l-mayyit*, *ṣalāt al-djinnā*). It is a common duty (*farḡ al-ḡibaya*) which can only be omitted in exceptional cases (cf. Snouck Hurgronje, *Veraprijsde Geschiedenis*, i, 138, note 3). In some traditions the ṣalāt is ordered for every dead Muslim (Ibn Mādjā, *Djannā'is*, bāb 31; al-Nasā'ī, *Djannā'is*, bāb 37). In the Hadith (al-Bukhārī, *Djannā'is*, bāb 23, 85; *Tafsiṭ*, Sūra 9, bāb 12, 13; Muslim, *Faḡḡil al-Ṣaḡāba*, trad. 25 etc.) it is related how Muhammad held the ṣalāt for the dead 'Abd Allāh b. Ubāy, the arch-munāfiḡ, and was reproved by 'Umar for doing so. Therefore Sūra ix, 85 was revealed: "and never perform the ṣalāt for one of them who dies and stand not at his grave, for they are unbelievers against Allāh and His Messenger and they die as *fāsiḡ*" (on the legal definition of the conception of *fāsiḡ* see Snouck Hurgronje, *Veraprijsde Geschiedenis*, ii, 97).

In the Hadith it is further related that Muhammad omitted the ṣalāt in cases where the deceased had committed suicide (Muslim, *Djannā'is*, trad. 107; Abū Dā'ūd, *Kharāḡi*, bāb 46). Al-Nawawī, *op. cit.*, p. 225, says, however, that no exception was made in this case. The Hadith also tells us that Muhammad refused to hold this ṣalāt unless the debts of the deceased had already been paid (al-Bukhārī, *Hawāḡāt*, bāb 3; Abū Dā'ūd, *Buyū'*, bāb 9; Ahmad b. Hanbal, ii, 290, 399). In law therefore the mourners are recommended to settle this matter quickly (al-Nawawī, i, 221). In the Hadith we find contradictory statements regarding the question whether Muhammad held the *ṣalāt al-djinnā* on behalf of those who had been legally executed (Abū Dā'ūd, *Djannā'is*, bāb 47; al-Nasā'ī, *Djannā'is*, bāb 63, 64). We shall hardly be wrong if we suppose that this ṣalāt also retained certain pre-Muhammadan customs (cf. A. J. Wensinck, *Some Semitic Rites of Mourning and Religion in the Veraprijsde Geschiedenis*, vol. xviii, N° 1, Chap. 2 and 3). According to Abū Ishāḡ al-Shirāḡī (ed. Juybolil, p. 47 *sq.*), the following is the order of the ṣalāt for the dead: the Imām stands at the top of the bier in the case of a man, at the bottom in the case of a woman (this is the old tradition; cf. al-Bukhārī, *Djannā'is*, bāb 63; Muslim, *Djannā'is*, trad. 87, 88 etc.); he pronounces the *niyya* and utters four *takbīr's* with hands raised; at the first he recites the *fatḡha*, at the second he utters the eulogy on Muhammad, at the third he pronounces the *du'a'*

for the dead man, at the fourth a *duʿāʾ* for those who take part in the service; the two *taʿlīmāt* conclude the ceremony.

Difference of opinion prevails regarding the place where the *ṣalāt al-djānāz* should be held. There are indications that in the ancient Medina the *muṣallā* [q. v.] was used, for example in the case of the service for Naḍjāshī [q. v.], who died in Abyssinia (al-Bukhārī, *Ḍjānāz*, bāb 4; Muslim, *Ḍjānāz*, trad. 63, 64). In Ibn Saʿd, *Iṣṭi*, 14, it is said that the *ṣalāt* was held by Muḥammad in the home of the deceased. People therefore thought it an innovation when the body of Saʿd b. Abī Waqqās was brought into the mosque at the request, it is said, of ʿAʿisha or of the widows of the Prophet. ʿAʿisha is said to have replied to the complaints that were made: "How short is the memory of the people. Muḥammad was indeed wont to hold this *ṣalāt* in the mosque" (Muslim, *Ḍjānāz*, trad. 99—101). Muslim's commentator, al-Nawawī, gives on this passage (as al-Zurkānī does on Mālik, *Ḍjānāz*, trad. 22) the points of view of the different schools with reference to the legal category in which they place the holding of this *ṣalāt* in the mosque (on the question cf. also *Semitic Rites of Mourning and Religion*, p. 2—4). In any case it is the custom in various parts of the Muslim world to-day to perform this *ṣalāt* in a mosque (Lane, *Manners and Customs*, p. 526; Snouck Hurgronje, *Mekka*, ii. 189). In Atjeh, on the other hand, as is usually also the case on Java, it takes place in the front part of the enclosure before the house of the deceased (Snouck Hurgronje, *The Achehese*, i. 423; do., *Verspr. Geschr.*, iv. 1. 242). This is at least permitted by the law although not recommended (it depends on the *madhhab*).

The body is not necessarily present at the *ṣalāt*. In Mekka it is the custom to hold the *ṣalāt al-djānāz* for residents who have died away from home (*Mekka*, ii. 189). Justification may be claimed for this practice in the widespread tradition according to which Muḥammad held a service in Medina for the dead Naḍjāshī (cf. above).

V

The question of the significance of the *ṣalāt* is usually approached in a one-sided fashion by European critics. They like, it must be admitted, to follow Ranke in placing a high value on the *ṣalāt* as a disciplinary measure and certainly it is difficult to appreciate this too highly. A considerable part of the life of the community must have centred in and around the *ṣalāt* in Medina in Muḥammad's life-time and through it the transformation of the old Arab mind into the Muslim must have taken place. The same phenomenon was afterwards repeated in the provinces of the Caliphate. The *ṣalāt* must have been one of the most effective formative elements in the communities.

The European, on the other hand, usually forms his judgment of the *ṣalāt* from his own point of view; the Protestant misses the intensification, the Roman Catholic the imposing ceremonial.

Both attitudes are wrong from scientific standpoint. Whoever wishes to gain a clear idea of the significance of the *ṣalāt* must ask the question: "what does it mean to the Muslim?"

This question may be partly answered by observing the enthusiasm for the *ṣalāt* displayed by Muslims in different countries. The results of such

observations almost everywhere go to suggest that there are few Muslims who regularly observe the five daily *ṣalāts* (Lane, *op. cit.*, p. 84; Snouck Hurgronje, *Verspr. Geschr.*, iv. 1. 8, 16). In the Dutch East Indies the Achehese so prominent in the *Djihad* [q. v.] only take part in small numbers in the congregational *ṣalāt*; in Banten (Java), in Palembang (Sumatra) and in isolated parts of the Archipelago on the other hand we find it much more religiously observed (Snouck Hurgronje, *Verspr. Geschr.*, iv. 1. 343 sq.; *De Atjehers*, i. 89 sq.).

Lane's remarks regarding the *ṣalāt* in Egypt (*Manners and Customs*, p. 98) are important: "The utmost solemnity and decorum are observed in the public worship of the Muslims. Their looks and behaviour in the mosque are not those of enthusiastic devotion, but of calm and modest piety. Never are they guilty of a designedly irregular word or action during their prayers. The pride and fanaticism which they exhibit in common life, in intercourse with persons of their own or of a different faith, seem to be dropped on their entering the mosque, and they appear wholly absorbed in the adoration of their Creator — humble and downcast, yet without affected humility or a forced expression of countenance".

A rich source for the study of the significance of the *ṣalāt* in the religious life is to be found in the literature. For the first two centuries it is mainly the Ḥadīth that we have to use. In the enumeration of the five pillars of Islām the *ṣalāt* always appears in the second place (al-Bukhārī, *Imān*, bāb 2; Muslim, *Imān*, trad. 19—22; in passing it may be noted that the first pillar is variously given). In the so frequently recurring story of the untutored Beduin who suddenly asks Muḥammad the question: "How shall I be saved?" the latter answers with a list of the duties imposed by Islām upon the believers, viz.: five *ṣalāts* daily, fasting in Ramaḍān and *zakāt* (al-Bukhārī, *Imān*, bāb 34; Muslim, *Imān*, trad. 8). In other traditions also, which enumerate the obligations of a Muslim, as, for example, in the commission given to Muʿādh b. Dīḡāl when he was sent by Muḥammad to Yemen, we find mentioned besides the *ṭawḥīd* or the service of Allāh the five *ṣalāts* and the *zakāt* (e.g. al-Bukhārī, *Zakāt*, bāb 1; Muslim, *Imān*, trad. 29—31). Here the ḥajj and the fasting in Ramaḍān are omitted. In the scale of the most meritorious works the *ṣalāt* often appears in the first place (al-Bukhārī, *Mawāḍiʿ*, bāb 5; cf. Ibn Māǧja, *Taḥḍira*, bāb 4; al-Darīmī, *Waḡḍ*, bāb 2). The strict observation of the five daily *ṣalāts* secures admission into Paradise (al-Nasāʾī, *Iḥṣān*, bāb 6; Mālik, *Ṣalāt al-Lail*, trad. 14 etc.). The omission of the *ṣalāt* is a bridge to unbelief and heathenism: "between man and polytheism and unbelief lies the neglect of the *ṣalāt*" (Muslim, *Imān*, trad. 134; cf. al-Nasāʾī, *Ṣalāt*, bāb 8).

The cleansing power of the *ṣalāt* is allegorically described in Tradition: "The *ṣalāt* is like a stream of sweet water which flows past the door of each one of ye; into it he plunges five times a day; do ye think that anything remains of his uncleanness after that?" (Mālik, *Kaṣr al-Ṣalāt fī ʿi-Saḡar*, bāb 91; cf. Aḥmad b. Ḥanbal, i. 71 sq., 177, ii. 375, 426, 441, iii. 305, 317 etc.). It is described without allegory in the equally well-known tradition: "an obligatory *ṣalāt* is a cleansing for the sins which are committed between it and the

following one" (*op. cit.*, ii. 229; as is well known grievous sins are usually excluded from the cleansing effect of pious exercises (*op. cit.*, ii. 359).

We have just quoted the tradition according to which the observation of the daily ṣalāt secures entrance into Paradise. The following utterance goes still further: "He who knows that the ṣalāt is a compulsory duty will enter Paradise" (*op. cit.*, i. 60). At the final reckoning on the Day of Resurrection the more or less faithful observance of the ṣalāt will be a consideration of the first importance: "The first thing to be dealt with is the ṣalāt; if this point is in order, the man has attained bliss; if not then he is lost (cf. al-Nasāʾī, *Ṣalāt*, bāb 9; al-Tirmidhī, *Mawāḥiṣ*, bāb 188; Ahmad b. Hanbal, i. 161 sq., 171, ii. 290 etc.).

The ṣalāt should be performed devoutly with concentrated attention. It is often related how Muḥammad put away one of his garments because figures woven on it distracted his attention at the ṣalāt (al-Bukhārī, *Ṣalāt*, bāb 14; al-Nasāʾī, *Ḥikma*, bāb 20; cf. bāb 12).

That the ṣalāt does not, as is sometimes said, imply only the performance of a duty but that the heart is in it too is seen from the following tradition: Muḥammad said: "Of worldly things women and perfume are dearest to me and the ṣalāt is the comfort of my eyes" (Ahmad b. Hanbal, iii. 128 bis, 285). Weeping at the ṣalāt is also sometimes mentioned (Abū Daʿūd, *Ṣalāt*, bāb 156; al-Nasāʾī, *Sakaw*, bāb 18; Ahmad b. Hanbal, iii. 188, iv. 25 bis, cf. 26).

By far the most significant characteristic of the ṣalāt is the one which we find in two different settings, namely that the ṣalāt is intimate conversation with Allāh. On the one hand it is found in the Ḥadīth, in which spitting in the direction of the *Ḥibla* during the ṣalāt is forbidden, the reason given being that the ṣalāt is intimate conversation with Allāh (al-Bukhārī, *Ṣalāt*, bāb 39; *Mawāḥiṣ*, bāb 8; Muslim, *Mawāḥiṣ*, trad. 54; Ahmad b. Hanbal, ii. 34 sq., 144, iii. 176, 188, 199 sq., 234, 273, 278, 291 etc.). On the other hand we find it expressed in the following form: "If one of ye performs the ṣalāt he is in confidential converse with his Lord; at that time he ought to know exactly what he says in this way with his Lord; therefore no one should drown the voice of another at the recitation" (Ahmad b. Hanbal, ii. 36, 67, 129). An illustration to this utterance is given in the following *Ḥadīth quṣṣa*: Allāh says: "I have divided the ṣalāt into two halves between Myself and My servant, one of which belongs to Me while the other is for My servant and My servant obtains what he asks". The Messenger of God said: "recite! when the servant says: 'Praise be to Allāh, the Lord of the Worlds!', Allāh says: 'My servant hath praised Me'; when the servant says: 'to the Merciful and Compassionate', Allāh says: 'My servant hath glorified Me'; when the servant says: 'to the Lord of the Day of Judgment', Allāh says: 'My servant hath praised Me'; when my servant says: 'Thee do we serve and Thee do we beseech for help', Allāh says: 'this verse is between Me and My servant and he receives what he has prayed for'; when the servant says: 'lead us the right way, the way of those whom Thou favourest, with whom Thou art not angry and who do not err', Allāh says: 'This belongs to My servant

and he receives what he has prayed for" (Ahmad b. Hanbal, ii. 460).

That the ṣalāt was also used as a means of healing is not remarkable in view of similar phenomena in other religions (Ibn Maḥjā, *Ṭibb*, bāb 10; Ahmad b. Hanbal, ii. 390, 403). At the same time we may mention the *Ṣalāt al-Ḥajja*, which is observed to secure the attainment of some ardently desired object (al-Tirmidhī, *Witr*, bāb 17), and the *Ṣalāt al-Istikhāra* [see *ISTIKHĀRA*] before a more or less important decision (al-Bukhārī, *Tahdīd*, bāb 25; Abū Daʿūd, *Witr*, bāb 31; al-Tirmidhī, *Witr*, bāb 18; Ahmad b. Hanbal, iii. 344 etc.).

The description of the ṣalāt as *muṣāḥaba* is characteristic of the meditative tendency found even in the oldest Islām (on this see especially L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922); it has certainly been one of the main avenues by which mysticism entered Islām from without.

One of the oldest Muslim mystics, al-Muḥāsibī (d. 243 = 857), wrote a treatise on the significance of the ṣalāt (cf. Massignon, *op. cit.*, p. 259, note 1) and the philosopher al-Tirmidhī (d. 285 = 898) expounded the mystical side of the ṣalāt in 42 aphorisms (quoted in Massignon, *op. cit.*, p. 259). Among the more modern mystics the ṣalāt gives place in importance to *Ḍikr* and *Wird*. Al-Kushairī does not devote a separate chapter to it in his *Risāla*. In al-Hudjwiri it appears as especially suitable for novices, who are to recognise in it to some extent a reflection of the whole mystic way. To them the *ṭahāra* represents the conversion, the *ḥibla* the dependence on spiritual leadership, the recitation of the *shāhīd*, the *rukūʿ* humility, the prostration self-knowledge, the *ṭahakkud* the *muṣ*, the *ṭaslim* renunciation of the world. Of the real mystics everyone sees something different in the ṣalāt: to one it is a means to *ḥuḡūr* with God, to another to *ghaiba* (al-Hudjwiri, *Kaṣf al-Mahjūb*, transl. Nicholson, *Ghīb Mem. Ser.*, xvii. 301 sq.). Al-Hudjwiri, however, also emphasises the affection of various Ṣūfis for the ṣalāt.

Of the philosophers, Ibn Sīnā (Avicenna) is only to be mentioned here, who wrote a short treatise on the ṣalāt (*Fi 'l-Kaṣf 'an māliyat al-Ṣalāt wa-bilma Taḥrīr al-Ḥimā al-Ḥadīth*, Cairo 1335 (1917), p. 2-14). According to him, the essence of the ṣalāt is the recognition of God in His existence and necessity of it. It is esoteric or esoteric according to the character of the believer who performs it. The law-giver knew that not all men can ascend the steps of the spirit. Such men therefore require corporal discipline and compulsory mortification, to keep their natural impulses in check. This is the esoteric side of the ṣalāt. Its true esoteric significance is the *muṣāḥaba* al-*Ḥaqq* with pure heart and a soul which is liberated and purified from desires (*anām*). Ibn Sīnā then proceeds to deal with the saying that a man at prayer is in intimate converse with his Lord (see above). This can, he says, only happen outside of the material world. Those who are in this state of mind are spiritually in the presence of God and they gaze upon the deity (*al-Ilāh*) in a real vision. The ṣalāt is therefore a real *muṣāḥaba* and a pure worship, i.e. the real divine love and spiritual vision.

Al-Ghazālī's chapter *Ṣalāt* has in the *Iḥyā'* in the *Raʿ al-Ḥadīth* a position between *Ṭahāra*

and *Zakāt* (as in the *Fiqh*). As with the other *'ibādāt* it should be observed in this case also with what painful accuracy he describes the legal regulations (ed. Cairo 1302, I, 140 *sqq.*) and how on the other hand he raises the *salāt* to an ethico-mystical level which sufficiently meets all the demands of intensification. After what has been said above in II and III, we need only briefly survey here the latter side of his exposition. The inward *ma'ānāt* which bring the life of the *salāt* to perfection are the six following: the presence of the heart (*ḥuḍūr al-qalb*), understanding, respect (*ta'zim*), reverence (*ḥabiba*), hope and humility (*ḥayā*).

Particularly significant are his remarks on the presence of the heart (p. 145). The *ṣābiḥ* demand the presence of the heart only at the *takbīr*; according to the *Fuḥūḥ al-mutaṣawwiriyyūn* and the *'Ulamā' al-Aḥbira*, on the other hand, the heart should be present at the whole *salāt*. But only very few succeed in achieving this. The ideal *salāt* is that of Ḥatīm al-Aḡamū, who said: "When the time for the *salāt* arrives, I perform a copious *wuḍū'* and go to the place where I want to perform the *salāt*. There I sit till my limbs are rested, then I stand up, the *Ka'ba* straight in front of me, the *qibla* under my feet, Paradise on my right, Hell on my left and the Angel of Death behind me; and I think that this *salāt* is my last. I then stand wavering between hope and fear, join in the *Takbīr* and *Tahkīm*, recite with *Tartīl*, perform the *Rukū'* in submission and the *Sujūd* in humility, sit on my left thigh, spread out the upper part of the left foot and fix the right one on the great toe and accompany this with *Iḥtīq*. Then I do not know whether my *salāt* has been graciously accepted by Allāh or not (p. 139, 7 *sqq.*).

Al-Ghazālī lays down his ethical point of view in the sentence: If his *salāt* does not restrain a man from evil and wrong-doing, he only obtains estrangement from God by it (cf. *Sūra* xvi. 9).

In the chapter on "the useful remedies for securing the *ḥuḍūr al-qalb*" distracting thoughts are given as the principal obstacles which divert attention at the *salāt*. These enemies are to be overcome by fighting their causes. These are of two kinds, external and internal. The external causes of distraction (*ḡafla*, in the Syriac mystics *fehā*) come from the organs of sense. One therefore ought to prevent these from being distracted. The *muta'abbidūn* therefore perform the *salāt* in a dark cell with only sufficient room for the *sujūd*. Ibn 'Umar is said not to have allowed a single object in this cell. The internal causes of distraction exercise a much stronger effect. They have their root in earthly cares, thoughts and occupations. But desires have the most powerful influence. They are to be fought by meditation on the future world. All preparations for the *salāt* and all its parts should be connected with the *Aḥbira*. At the *niḥāya* one should think of the *niḥāya* on the Day of the Resurrection. At the covering of the *'awra* one should enquire whether there is no internal *'awra* etc.

The highest goal of the *salāt* is complete absorption in the Deity by humiliating oneself. Sufyān al-Thawrī is reputed to have said: "If a man does not know humility, his *salāt* is invalid". This is laid down in two special sections (*Buyān Iḥtirāq al-Khushū' wa-Huḍūr al-Qalb*, p. 145 *sq.*, and *Iḥkāmāt wa-Aḥbār fī Salāt al-*

Khaṣṣa, p. 157 *sq.*). In the latter he shows by several examples how much the great leaders used to be absorbed in their *salāt*.

(A. J. WENSINGER)

SALGHURIDS, one of the dynasties known as *Atābaks*, or *Regents*, which arose on the ruins of the empire of the *Saldjūks*. Salghur was the chief of a band of *Turkmāns* who migrated into *Khurāsān* and attached themselves to *Tughril Beg* [q. v.], the first of the Great *Saldjūks*. *Būrās* [q. v.], one of Salghur's descendants, was killed in battle by *Salṭān Ghiyāth al-Dīn Mas'ūd*, the fourth of the *Saldjūk* kings of *Irāk* and *Kurdistan*, and his nephew, *Sunkur b. Mawdūd*, rose against the *Saldjūk* and in 1148 established his independence in *Fārs*, where he founded a dynasty which ruled for more than 120 years but seldom enjoyed complete sovereignty, being tributary first to the *Saldjūks* of *Irāk*, then to the *Shāhs* of *Khwarizm*, and lastly to the *Mongols*. *Sunkur* died in 1161 and was succeeded by his brother, *Zangī b. Mawdūd*, who was molested at the beginning of his reign by his cousins, the *Atābaks* of *Syria*, who claimed the throne of *Fārs*. After overcoming them he did homage to *Arslān b. Tughril I*, *Saldjūk* of *Irāk*, who confirmed him as ruler of *Fārs*. On his death in 1175 he was succeeded by his elder son, *Takla*, who remained tributary to the *Saldjūks* of *Irāk* and reigned for twenty years. On his death in 1194 the throne was claimed both by his cousin *Tughril*, the son of *Sunkur*, founder of the dynasty, and by his younger brother, *Sa'd b. Zangī* [q. v.]. *Tughril* first gained possession of the capital and assumed the royal title, but *Sa'd* maintained the contest for eight years, during which period the kingdom was devastated and depopulated. In 1203 *Sa'd* captured *Tughril* and ascended the throne. During the early part of his reign he was occupied in restoring prosperity to his country, which had been wasted by famine and pestilence. Meanwhile the *Saldjūks* of *Irāk* had been overcome by the *Shāhs* of *Khwarizm*, who in 1194 had annexed their country. *Sa'd* attacked *Alā al-Dīn Muḥammad Khwarizm Shāh*, but was defeated and taken prisoner by him, and as a condition of his release was obliged to cede *Isfahār* and *Ushkumwān*, and to agree to pay the tribute which had formerly been paid to the *Saldjūks*. He is famous as the ruler from whom the great poet *Sa'di* took his *takhalluṣ* or pen-name. He reigned for twenty-eight years, and on his death in 1231 [but cf. *SA'D B. ZANGI*] he was succeeded by his son *Abū Bakr*, who had attempted to usurp the throne during his father's captivity and had been for this offence condemned to imprisonment, from which he was released at the instance of *Djalāl al-Dīn Mangobartī*, *Shāh* of *Khwarizm*. He extended the boundaries of his kingdom, but was obliged to pay homage and tribute first to *Ogotai Khān*, supreme *Khān* of the *Mongols* as son and successor of *Cingis Khān*, and afterwards, in 1256, to *Hulagū*, the *Mongol* *Il-Khān* of *Persia*. *Ogotai Khān* conferred on him the title of *Kutluḡ Khān*. *Abū Bakr* died in 1260, and was succeeded by his son, *Sa'd II*, who reigned for no more than twelve days, when he died and was succeeded by his infant son, *Muḥammad*, whose nominal reign was ended by his death in October, 1262. The child was succeeded by his cousin, *Muḥammad Shāh*, son of *Salghur*, the younger son of *Sa'd I*. *Muḥammad Shāh* was overthrown and put to death on July 18, 1263, and

(ADOLF GROHMANN)

AL-SALIB (A., plural *Salib*, *Sulṭān*), the cross. This general meaning occurs in several special applications, e.g. to the *maim* branded in the skin of camels in the form of a cross etc. In the sense of the chief Christian symbol the word may have been taken over from Aramaic where it has the same form. It does not occur in the *Qurʾān*. In *Hadīth* it is used in eschatological descriptions. *ʾIṣ* (Jesus) will reappear in the last days, combat the Antichrist (al-Dajjāl), kill the wise and break the cross into pieces (al-Bukhārī, *Anbiyāʾ*, bāb 49; Muslim, *Imān*, Trad. 242, 243; Ibn Māǧā, *Fitan*, bāb 33; Ahmad Ibn Hanbal, *Musnad*, II, 240, 272 etc.). On Doomsday all religious communities will appear before Allāh with their symbols or idols. The Christians will follow the cross and, on their confession that they did worship the Maṣṣīh Ibn Maryam, be thrown into Hell (al-Bukhārī, *Tawḥīd*, bāb 24).

Further al-Bukhārī speaks of a *ṭhawb muqallab*, a garment or cloth into which the form of the cross was woven, and which ʿAṣṣa removed on Muhammad's order, because it distracted his attention from the *ṣalāt* (*Salāt*, bāb 15).

Lexicographers call the cross the *ḥilb* of the Christians; apparently they were acquainted with the Christian custom of praying before the crucifix.

In ʿUmar's treaties with the inhabitants of several towns of Palestine a special *amān* for their churches and crosses was granted them (al-Ṭabarī, I, 2405 sq.). A document belonging to a late period of tradition and of doubtful authenticity prohibits the public use of the cross as a Christian symbol (Hamaker, *Incerti auctoris liber de expugnatione Memphidis et Alexandriae*, Leiden 1825, translation, p. 137; cf. Caetani, *Annali dell' Islam*, Anno 17, § 174 sq.).

In the debate between Christian and Muslim doctors at the court of al-Ma'mūn the Christian worship of the cross is one of the controversial points between the combatants (cf. A. Guillaume, *A Debate between Christian and Muslim Doctors in the Centenary Supplement to the J.R.A.S.*, October 1924, p. 242).

In the battle of Hattin in 583 (1187) the Muslims captured the *Ṣalīb al-palānī* "the cross of the crucifixion", a cross in which a piece of the true cross was incorporated (*Historiens des Croisades, Historiens orientaux*, I, 685). See further the articles *Ṭāḥ* and *NAṢṬĀḤ*. In Christian Arabic literature the Christian legends concerning the cross, its recovery etc. have found their place. The verb *ṣalaba* denotes the Oriental form of crucifixion as a capital punishment.

On the diminutive form *Ṣalīb* cf. this article. *Bibliography*: The lexica A. v.; L. Caetani, *Annali dell' Islam*, Anno 17, § 174 sq., vol. III, 957 sq.; W. Muir, *The Caliphate, its Rise, Decline and Fall*, new ed. by T. H.

(A. J. WESSINK)

ŠALIH, a prophet who was sent to the Arab people *Thamūd*. He is, as usual, depicted as a sign and a warning in the style of Muhammad; he demanded that his countrymen should turn to him and pray to Allāh alone (Sūra 7, 71, 11, 64, 26, 141); he called their attention to the benefits received from God (7, 70, 51, 43) and prided himself on seeking for no reward from them (26, 141). But they rejected him abruptly, called him bewitched (26, 133), a man like themselves, who could make no claim to revelations (54, 24); they could not surrender the religion of their fathers (11, 65) and scorned the idea of a day of judgment (69, 4). His appearance produced a schism in the people (27, 46) for only the weak believed in him, while the strong scoffed at him (7, 73). The only new feature was that they had placed their hope in him before he irritated them by his preaching (11, 64), which, if based on some corresponding incident, would be an interesting contribution to the history of Muhammad. Then follows the special story of this prophet. Allāh sent them as a sign a she-camel (17, 61) and Šalih begged them to allow it to feed unharmed and to share water with it (7, 71, 26, 155, 54, 28). But they lamed it and killed it (7, 75, 11, 65, 26, 137) through the hand of a particularly godless individual among them (91, 20, 54, 29) and scornfully asked Šalih to inflict the threatened punishment (7, 75). He told them to hide three days in their houses (11, 68); then a tremendous storm broke out (11, 70, 51, 44); according to 7, 76 an earthquake; cf. also 54, 31, 69, 5) and on the following morning they lay dead in their houses. In the later Muslim stories of prophets these brief features are elaborated in various ways.

This story has a certain amount of foundation in fact in as much as the *Thamūd*, according to 7, 73 the successors of the ʿĀdīs, were an ancient Arab tribe known also from other sources (see the art. *THAMŪD*). The dwellings which the *Thamūd* had hewn out of the rocks (89, 8, 7, 70, 26, 140), often mentioned in the texts, the remains of which were still visible (29, 32), are undoubtedly the tombs, containing remains of human bones, hewn in the rocks of al-ʿŪla (see *AL-ʿŪLA*), which has led Philippe Berger to the further supposition that the word *kafrā* (tomb) found in the inscriptions there may have been explained as *kufr* (unbelief). But whence Muhammad got the name Šalih and the story of the camel cannot be ascertained. It is further remarkable that the stories of Šalih and Hūd [q. v.] are in contradiction to the usual teaching of Muhammad in the Mekkan period to the effect that no prophet had been sent to the Arabs before him (28, 46, 32, 3, 34, 43, 36, 3). The stories of these two prophets are found in the earliest Mekkan Sūras e.g. 53, 31 sq., 85, 11 sq., 89, 4, 91, 11 sq., and frequently recur in the following sections; on the other hand they disappear in the Medina revelations except for the brief enumeration in 9, 71.

AL-MALIK AL-SĀLIH 'IMĀD AL-DIN ISMĀ'IL, son of Sultān al-Malik al-ʿAdil Abū Bakr, son of Aiyūb, was born in the year 598 (1202). He is not mentioned in connection with the division of the lands which his father made among his brothers. He is mentioned for the first time in 623 (1226) as a partisan of his brother al-Malik al-Muʿazzam Isā; he is described as lord of Boḡrā. After Muʿazzam's death he attached himself to his son al-Malik al-Nāṣir Dāʿūd, by whose side we often find him fighting. He was with him in the battle at Damascus in 626 (1229) and when Dāʿūd was forced to capitulate, he was left in possession of his fief Boḡrā. In the next year, we find him in the service of his brother al-Malik al-Aḡraf Mūsā, who sent him to the siege of Baʿalbek, which he was to take from al-Malik al-Aḡdjad Bahrām Shāh; Ismāʿil forced the latter to surrender after a long siege. On the death of his brother Mūsā in 635 (1237), he inherited Damascus and he began to play a more important if afterwards despicable part. As he had good reason to fear his brother al-Malik al-Kāmil, Sultān of Egypt, he concluded an alliance with the Aiyūbid princes of Syria (except with the prince of Hamā). He then prepared to stand a siege as he had already news of the advance of al-Kāmil and his nephew Dāʿūd. His resistance availed him little; he had soon to surrender Damascus and received in compensation Baʿalbek and al-Bikāʾ, while Boḡrā also remained to him.

The remaining part of his life is so closely associated with the careers of his nephews al-Malik al-Sāliḥ Nadjm al-Din Aiyūb and Sultān al-Malik al-Nāṣir Yūsuf II, that the reader may be referred to their biographies. Ismāʿil was killed in Cairo in the year 648 (1250) when fighting with Sultān Yūsuf in the battle of ʿAbbāsa against the Egyptians. He repeatedly allied himself with the Khwārisms and the Franks out of selfish ambition and love of power to the detriment of his subjects and fellow-Muslims.

Bibliography: See the article AL-MALIK AL-SĀLIḥ NADJIM AL-DIN AIYUB. (SOBERNHEIM).

AL-MALIK AL-SĀLIḥ 'IMĀD AL-DIN ISMĀ'IL, son of Sultān Muḥammad al-Nāṣir [q.v.] of the line of Kalāʾūn, was chosen Sultān at the age of 17 after the deposition of his brother Ahmad (743 = 1342) whose cruelty had aroused the fury of the Amīrs. He was considered a virtuous and pious young man, but later fell under the destructive influence of his harem. After making new appointments to the principal administrative posts in the provinces, his next task was to put an end to the intrigues of his brother Ramadān, who was soon captured and executed. He then proceeded to fight his brother Ahmad in Kerak, which cost great efforts and expenditure in troops. He tried to gain the Beduins of the neighbourhood to his side to make it difficult for Ahmad to get supplies, but the latter's watchfulness foiled the attempt. On the other hand Ismāʿil feared he would lose support as even his vizier was in secret negotiation with Ahmad. In the beginning of 744 (1344) he appointed another Amīr vizier and sent an expedition to Kerak, by

which he finally captured the town and took the citadel also, when reinforcements arrived in the beginning of 745. Ahmad was taken prisoner. A few days later he was strangled in prison. The struggle with Ahmad had occupied all Ismāʿil's time and means, so that he had neglected everything else. He is a typical example of the decline of Oriental dynasties. His time and strength were entirely absorbed in wars against his brothers and in excesses. As a result of the great expenditure at court, the revenues of the state declined and often the requisite money was not available for necessary military expeditions. His weakness was taken advantage of by the regular enemies of the Mamlūk kingdom, the Amīr of Meḡka and of the Yemen, the dynasts of Asia Minor and the Beduin chiefs of Northern Syria, who rebelled against the governors in their lands under the Sultān's suzerainty. On the other hand the authority of the Caliph and of the Sultān remained unbroken in the remoter East and in India. Muḥammad b. Taghlak of Dehli sent the Caliph an embassy to ask for investiture and declared himself vassal of the Sultān; he also asked for some people learned in the law to be sent to him to enable his subjects to become better acquainted with the principles of Islām. His requests were readily acceded to. Sultān Ismāʿil was so deeply affected by the struggle with Ahmad and his execution that he could not recover; he died in 746 (1345) after two months' illness when still only 20.

Bibliography: Well, *Geschichte d. Chalifen*, iv. 452—461; *al-Manhal al-Safī*, Paris MS. Ar. 2068—2073 under AL-MALIK AL-SĀLIḥ ISMĀ'IL. (SOBERNHEIM)

AL-MALIK AL-SĀLIḥ NADJIM AL-DIN AIYUB, the eldest son of al-Malik al-Kāmil Muḥammad, son of al-Malik al-ʿAdil Abū Bakr, son of Aiyūb, was born in 603 (1207). His father designated him successor in 625 (1228) and made him his representative in Egypt, while he was away on his campaigns in Syria. At this time (Rabīʿ I, 626 = February, 1229) al-Kāmil ceded Jerusalem to the Emperor Frederick for ten years. The relations between Aiyūb and his father were disturbed in 628 (1231) by the slanders of one of al-Kāmil's wives who wanted to get the succession in Egypt for her son al-ʿAdil Abū Bakr. She accused Aiyūb in a letter of trying for the throne while his father was still alive, as he had enlisted over 1,000 Mamlūks of his own. Al-Kāmil, secured by the peace with the Emperor, returned to Cairo to take the reins of power into his own hands again. In 629 (1232) political conditions (the advance of the Tatars and of the Khwārisms up to the frontiers of the Empire) caused him to go to Syria and he gave the command of the army to Aiyūb in order to get him out of Egypt in this way.

Al-Kāmil achieved his object on this campaign of getting Mesopotamia into his own hands, as a strong bulwark against the Tatars and Khwārisms, and granted his son Aiyūb Ḥiṣn Kalāʾa as a fief and later, in 633 (1236), the towns of al-Ruhā (Edessa) and Harrān conquered by him in addition.

Aiyūb's position with regard to the Tatars and Khwārisms cannot have been an easy one. He allied himself with the latter and took them into his service with the permission of al-Kāmil. In 635 (1238) he received Sindjār and Naḡḡḡn in addition to his other territory. So long as al-Kāmil was alive, Aiyūb was master of the east and no one dared attack him. This state of

affairs was altered, however, when al-Kāmil died in the same year (635) in Damascus, which his brother al-Malik al-Šālih Ismā'il had ceded to him two months before in return for Ba'albek and Boṣrā. Al-Malik al-ʿAdil II was recognised in Cairo as al-Kāmil's successor and al-Malik al-Djāwād Yūnus appointed governor of Damascus in his name. Aiyūb received the news of his father's death while he was besieging Raḥba; he at once raised the siege, but met with opposition from the Khwārizmīs who were in his service. Enraged at the thought of their booty escaping them, they were going to seize him and he had to take to flight. The Sultān of Rūm, Ghiyāth al-Dīn, also tried to capture him, besieged ʿAmid and divided the towns which Aiyūb possessed between Syrian and Mesopotamian princes even before he had captured them. Lu'lu', the ruler of Moṣul, was also hostile to Aiyūb. He besieged him in Sindjār, where he had taken refuge. In this perilous position, Aiyūb was saved by the intervention of his highly esteemed Kādī, who regained for him the help of the Khwārizmīs. This made it possible for him to relieve Sindjār and inflict a terrible defeat on Badr al-Dīn Lu'lu'. Next he raised the siege of ʿAmid and routed the Sultān of Rūm. Mesopotamia was now secured to him. In the next year (636) he was invited by al-Malik al-Djāwād, governor of Damascus, to exchange Damascus for Sindjār, Raḥka and ʿAna, as the latter did not feel his position safe from Sultān al-ʿAdil of Egypt. Aiyūb handed over his eastern possessions to his son al-Mu'azzam Tūrān Shāh, while he granted the Khwārizmīs Harrān, al-Ruḥā and the province of Djazira. He then accepted the invitation, went with his army to Palestine and occupied Damascus.

Sultān al-ʿAdil and Prince Dā'ūd of Kerak decided to take the field against him. But a number of the Amīrs abandoned the Sultān, whose love of pleasure had made him unpopular, and decided to join Aiyūb. Dā'ūd himself offered his support on condition that he was given Damascus. When Aiyūb refused, he returned to al-ʿAdil. The Caliph, continually threatened by the Tatars and Khwārizmīs, had a lively interest in the maintenance of peace and the strengthening of Aiyūbid power generally, but he sent an envoy to Aiyūb in vain to negotiate a peace. In 637 (1240) Aiyūb left Damascus with 5,000 men and went to Nāblūs to prepare for his advance on Egypt there. He had also endeavoured to secure the support of his uncle, Ismā'il, who pretended to agree but deceived him by false messages (see Sobernheim, *Bauftick zu islamischer Zeit*, p. 9 of the reprint, and the account in al-Maḥḥāzī, transl. Blochet, p. 445, and Abu 'l-Fida' under the year 637). But Ismā'il made a secret agreement with the prince of Hims and by promises tempted Aiyūb's troops to desert him and come to him in Damascus. Finally Aiyūb was left almost alone. In the meanwhile Dā'ūd of Kerak had again quarrelled with Sultān al-ʿAdil and had begun negotiations with Aiyūb. But when he learned that Aiyūb was almost alone in Nāblūs, he went thither with his army, took him prisoner and sent him to Kerak. He treated him well and refused to hand him over to his brother al-ʿAdil. In the meanwhile the treaty between al-Kāmil and Frederick II regarding the occupation of Jerusalem had expired. Dā'ūd felt himself strong enough to take the city by force from the Franks, who would not

hand Jerusalem over voluntarily. After a twenty-one days' siege, he succeeded in taking it in Jumādā I, 620 (Feb. 2, 1222); he destroyed its fortifications, which the Franks had rebuilt during the last months of their occupation.

Aiyūb's fortunes now began to turn. When, in spite of long negotiations between Dā'ūd, Ismā'il and al-ʿAdil, no alliance was achieved, an agreement was made between Aiyūb and Dā'ūd through the intermediary of the prince of Hamā. Aiyūb was released in Ramaḍān of the same year and went with Dā'ūd to Jerusalem, where they concluded a treaty. Aiyūb was to receive Egypt, Dā'ūd Syria and the eastern provinces. The combination of the two princes naturally caused al-ʿAdil great anxiety. He persuaded Ismā'il of Damascus to take the field against the two allies, while he himself went with an army to Bilbā'is. A section of the Mamlūka, the Ashrafīya (called after al-ʿAdil's uncle, al-Ashraf Mūsā), were dissatisfied, deposed him and sent him as a prisoner to the citadel of Cairo; after some hesitation they offered the crown to Aiyūb, with the request that he should come at once to Bilbā'is. Aiyūb and Dā'ūd went at once to Egypt and everywhere received a hearty welcome from the Amīrs. After Aiyūb had occupied Cairo, he was recognised as ruler in the Friday *khutba* and later confirmed by the Caliph in a diploma. Al-ʿAdil was kept prisoner in the citadel and not put to death till 645 (1247) when he declined to move to the fortress of Shawbak, as the Sultān ordered. Aiyūb was now secure in the possession of Egypt. In the East (Mesopotamia) his son Tūrān Shāh guarded his interests. The third member, Damascus, was still lacking to give him practically the empire of Saladin once more.

He therefore did not hand over to the unreliable Dā'ūd the lands between Egypt and Syria which he had occupied, nor Shawbak and Jerusalem, but declared the treaty of Jerusalem had been extorted from him. He avoided an open breach, however, by promising him Damascus as an independent possession when they would have conquered it together. In the next year (638=1240) Aiyūb busied himself securing the foundations of his rule in Egypt. He put down the rebellious Beduins in Upper Egypt, had the Amīrs whom he could not trust arrested one after the other and gave their fiefs to his own Mamlūks; it was then that he began the buildings on the present Nile (Baḥr) island of Rōḍā (which was then still a peninsula): his palace and the barracks for his Mamlūks called Baḥrīs, who gave their name to the first Mamlūk dynasty (see the art. BAḤRĪ).

In the same year fighting broke out between Aiyūb and his enemies. Dā'ūd realised that he would never get any increase of territory from him and Ismā'il rightly felt himself threatened when Aiyūb sought to gain possession of Damascus. In the East Lu'lu', prince of Moṣul, was reinforced and had taken ʿAmid from Aiyūb's son, Tūrān Shāh, so that the latter now had only Hims Kaifa and Ka'at al-Haiḥam. Ismā'il and Dā'ūd concluded an alliance with the Franks, in which they ceded them Tiberias, Shaḥīf Arnūn and Safed, and allowed them to purchase arms in Damascus. Relations between the Muslim and Christian leaders became so close that they did many things for each other. Thus the Franks handed over the prince al-Djāwād, who had taken refuge with them, for a sum of

money, to Ismā'il, who at once put him to death. Dā'ūd and Ismā'il in their turn warned the Franks of a mutiny of Muslim prisoners in Shakīf Aṭnūn, so that they moved the prisoners to Akkā and put them to death there. The Franks and Ismā'il's troops now marched together against Aiyūb. The armies met between Ḡhazza and Ascalon. But when the Muslim troops went over to Aiyūb, the Franks were defeated and lost many prisoners, who were employed in the building operations on the island of Rōḍa in Cairo. The prisoners, however, were liberated by the peace concluded in the same year, which was a very favourable one for the Franks. They were allowed to retain their possessions in Palestine and Syria.

While in the next few years, Aiyūb kept out of Syria, fighting on a small scale went on with great cruelty between Dā'ūd and the Franks. In 641 (1243) negotiations were going on between Aiyūb and Ismā'il; Aiyūb's son, al-Malik al-Mughīth, was to be liberated from his imprisonment by Ismā'il and Aiyūb was to be recognised as sovereign in the Friday prayer. But when Ismā'il learned that Aiyūb was secretly stirring up the Khwārizmīs against him, the negotiations fell through and before the end of the year Ismā'il and Dā'ūd had made a close alliance with the Franks and ceded to them large tracts of Palestine with Jerusalem and the holy Muslim places there. Dā'ūd, that most ardent enemy of the Christians, had to see the mass read in the Sakhra and hear bells rung in the Akṣā mosque. Aiyūb summoned the Khwārizmīs to help him against these allies and they came next year (642), temporarily occupying Jerusalem and wreaking frightful devastation. Aiyūb sent an army from Cairo to support the Khwārizmīs. Ismā'il in turn sent troops to the Franks who joined forces with them. The hostile armies met at Ḡhazza in a terrible battle, in which the Khwārizmīs and Egyptians won a decisive victory. The Khwārizmī booty was countless. As a result of this victory, the Egyptian troops were able to conquer Jerusalem and Palestine again, and they remained in Muslim hands down to 1018. Dā'ūd could only retain Kerak, al-Salt and Adlūn. The Egyptian troops besieged Damascus, which held out for a long time. Ismā'il did not capitulate till next year (643 = 1245), surrendered Damascus and limited himself to Ba'albek, Bosrā and their dependencies. In view of these successes the Khwārizmīs expected high pay and as this was not to their satisfaction they entered the service of Ismā'il and Dā'ūd and laid siege to Damascus on their behalf, which was defended by one of Aiyūb's generals and still held out at the beginning of 644 (1246). To put an end to the Khwārizmī terror, the princes of Aleppo and Hims, who had so far shown little sympathy for Aiyūb, sent their troops against the Khwārizmīs. They were thereby forced to raise the siege and to go to meet the Aleppo troops. In the battle of Kaṣab the Khwārizmīs were severely beaten; one of their leaders was killed and another put to flight. Ismā'il sought refuge in Aleppo and enjoyed the protection of the ruler there, Yūsuf II, but lost Ba'albek to Aiyūb; his sons and wives were taken prisoner to Cairo.

Dā'ūd also was deprived of all his possessions except Kerak and likewise sought refuge in Aleppo. He appointed his youngest son his deputy. The ruler of Aleppo cherished a continual distrust of Aiyūb. He tried to secure himself against any further

advance of the latter by getting prince al-Aṣḥraf to hand over Hims to him in 646 (1248) after a two months' siege.

Aiyūb, full of wrath, went to Damascus to fight Yūsuf II and sent one of his generals to Hims to recapture the town from al-Aṣḥraf. On his arrival in Damascus he heard of the arrival of the Crusaders, whom Louis IX had led against Damietta. This induced him to conclude a peace at once with Yūsuf through the intermediary of the Caliph. Although he was very ill, he set off in a litter and soon arrived in Aṣḥmunān. He could not prevent the landing of the Crusaders and the capture of Damietta, as the discipline of his army had become slack through his illness. The Beduin tribe of Kinṣūn, to whom was entrusted the guarding of the district, fled like cowards, because they thought they had been abandoned by the Sultan's troops.

Shortly before his death Aiyūb heard with joy that the older sons of Dā'ūd, who, dissatisfied with the transference of authority in Kerak to their younger brother, had attacked and taken prisoner the latter, were handing over the government of Kerak to him in exchange. He at once sent one of his Amirs thither with troops to take over the fortress. Aiyūb died on Shabān 15, 647 (Nov. 23, 1249); on his successor and the result of the Crusade see the art. *SHALJAR AL-DURR*. He was a skilful politician but no general; at least he hardly ever led his troops in person. His great ambition was to found an empire like Saladin and al-Kāmil, which should consist of Egypt, Palestine, Syria and Mesopotamia. By the end of his life he had achieved a considerable part of this, but the independent principality of Aleppo and the principality of Moṣul were not under his influence. He strengthened his position by the formation of a corps of Mamlūks, a measure of expediency for the moment, but which, as often in similar cases, brought about the ultimate fall of his dynasty (see the art. *SHALJAR AL-DURR*). He himself kept his Amirs and officials firmly in control; they never dared speak unasked in his presence. He took a great interest, indeed an extravagant pleasure, in building. His palaces on the Nile peninsula Rōḍa, in Kaṣab and his madrasa were famous in their day. He founded the town of Sālīhiya as a frontier-fortress in Egypt.

Bibliography: Weil, *Geschichte der Croisades*, vol. iii.; also the literature of the Crusades quoted under SALADIN. (M. SÖRKENHEIM)

AL-MALIK AL-SĀLĪH NUR AL-DĪN ISMĀ'IL of the line of Zangī, son of the Atābeg of Aleppo and Damascus, Nūr al-Dīn [q.v.], son of Zangī, succeeded his father on the throne in 569 (1173) at the age of eleven. A few weeks previously his circumcision had been celebrated with great ceremony and alms for the poor on a particularly large scale. His name was mentioned in the Friday prayer and put on the coins without opposition from the Amirs in Damascus and Aleppo or from Saladin [q.v.]. Only his cousin Saif al-Dīn al-Ḡhāṣī of Moṣul, who was about to come to Nūr al-Dīn with troops which the latter intended to use against Saladin, seized the opportunity to occupy with his army the towns in the Dḡazira belonging to Nūr al-Dīn. The Franks likewise thought it a suitable occasion and advanced on the fortress of Bāniyās. In this difficult situation the Amirs had either to appeal to Saladin for help or come to terms with the enemy. They did the latter, left

Salaf al-Dīn al-Ghāzī in possession of his conquests and made it clear to the Franks that they would only be unnecessarily irritating Saladin, who had suppressed the rising in Egypt and had no longer cause to fear Nūr al-Dīn. The Franks received an indemnity in addition and then retired. By the alliance with al-Ghāzī the centre of the administration was transferred to Aleppo and Ismā'il brought there in security; the regency and the government were taken over by capable men. The Amirs of Damascus, whose influence was thus lessened, called in Saladin; the latter, enraged at the weakness shown in face of the Franks and at the surrender to al-Ghāzī, wrote Ismā'il a letter full of reproaches for not having asked his assistance. Just as earlier it had to be Nūr al-Dīn's endeavour to gain possession of Damascus in place of the weak Bīrid Abak (see the art. *Bīrid*), so now it became absolutely necessary for Saladin to have the real power in his own hands. Formally he continued to profess himself Ismā'il's faithful liegeman. When he reached Damascus the citadel was not handed over to him; Raihān, one of Ismā'il's eunuchs, only surrendered it after several months' negotiations when Saladin again declared himself Ismā'il's faithful servant. No arrangement was come to between Saladin and Ismā'il; on the contrary the Aleppo government was secretly negotiating with the Franks. Saladin resolved to take the offensive. He captured Hamā and Hims and in Djumādī II, 570 (end of 1174) proceeded to besiege Aleppo. But al-Ghāzī had asked Gümüştikin as Ismā'il's ally for assistance. The latter sent troops which, united with the Aleppo force, advanced on Hamā and threatened Saladin from the rear. Ismā'il, who cannot be denied the possession of a certain natural ability, conjured the people to defend him, the orphan, to the utmost as an act of gratitude for the benefactions of his father. Moved by his appeal the citizens of Aleppo defended the town by sorties and held out on this occasion and later ones also; indeed, the people of Aleppo were unique in Syria in frequently showing a feeling of independence and a certain pride in their citizenship. The commander of Aleppo, Gümüştikin, was as unscrupulous in the struggle with Saladin as he was brave; he had even asked Sinān, the chief of the Assassins [q.v.], to send his notorious murderers against Saladin. But they did not succeed in murdering Saladin and they suffered death for their attempt. Gümüştikin had also gone so far as to release Count Raymond of Tripoli, who was a prisoner in Aleppo, and induced him to attack Hims. In this dangerous situation Saladin declared himself ready to hand over Hims and Hamā on condition that he was allowed to retain Damascus, as governor for Ismā'il. This offer was foolishly not accepted as al-Ghāzī was relying on getting the help of his brother Imād al-Dīn Zangī II. But the latter did not join in as he was on friendly terms with Saladin. Saladin's army met their opponents at Hamā and he gained a decisive victory which settled the fate of Syria. For a second time he besieged Aleppo, which he invested more tightly on this occasion, and forced Ismā'il to make peace in Shawwāl, 570 (1175). He retained Hamā, Hims, Damascus and several of the larger towns. Ismā'il was left only with Aleppo. This victory was of great importance because Saladin declared himself independent of Ismā'il and omitted Ismā'il's name from the Friday prayer and from the coins.

Soon afterwards an envoy from the 'Abbāsīd Caliph al-Mustafī arrived in Hamā and presented Saladin with the diploma of Sultanate (al-Saltana) over Egypt and Syria in addition to the usual robes of honour. In the next year (571) there was fighting between Saladin and the Zangid princes after the conclusion of which Saladin again laid siege to Aleppo in Dhu 'l-Hiddja of the same year. But the garrison and the civilian population defended themselves so bravely that he had to withdraw and definitely conclude peace at the beginning of the year 572 (July, 1175). The conditions of the earlier treaty were confirmed. Soon afterwards, at the request of his young sister, Ismā'il was ceded the castle of 'Aziz by Saladin.

Henceforth there was peace between Saladin and Ismā'il. The latter is even said by one authority to have intended to help Ismā'il to attain greater power again but was dissuaded by his Mamlūks from this. Ismā'il seems to have been really satisfied with the secure possession of Aleppo. Of military enterprises there is further to be recorded an expedition against the territory of Djabal Summak (west of Aleppo; see Yāqūt, *Mu'jam*, ed. Wüstenfeld, II, 21) in 572 (1175), the inhabitants of which wanted to join Sinān, the "Old Man of the Mountain", and the siege of Hārim, which he had to take from Gümüştikin, whom he had for long been unable to trust. Gümüştikin was convicted of having brought his treasure out of Aleppo and of having carried on negotiations with the Franks regarding the surrender of Hārim. Ismā'il thereupon had him seized and soon afterwards put to death in 573 (1176). But the Franks held by their treaty with Gümüştikin, advanced on Hārim in 574 and reduced the town to great straits. Ismā'il sent it reinforcements on the appeal of its citizens and finally induced the Franks to withdraw on payment of an indemnity and by threatening to surrender the town to Saladin. He then had the town transferred to himself and appointed a governor. In 576 Ismā'il became very ill and designated 'Izz al-Dīn Mas'ūd, prince of Moḡul, as his successor, as he was unmarried and without direct descendants (and al-Ghāzī had died shortly before), because he thought him capable of withstanding Saladin. In the following year (577=1180) Ismā'il died. At his accession he was so young that he could not have been blamed for having lost his lands. How far he was responsible for the particularist policy by alliances with the Franks, cannot be decided. He kept possession of Aleppo with a strong hand. He seems from childhood to have been popular with his subjects and he was always bravely defended by them and his death was honestly lamented.

AL-MALIK AL-SĀLIH ṢALĀH AL-DĪN ḤAKIM, son of Malik al-Aḡraf Shā'bān (see the art. SHĀ'BĀN) of the line of Sulṭān Kalā'ūn, succeeded to the sultanate on the death of his brother 'Alī as a boy of 6 in 783 (1381). Some months later he

was deposed on Ramaḡān 19, 784 (Nov. 26, 1382) by the Atabeg Barḡūk, as the kingdom required a man and not a boy on the throne. Ḥādīdī was sent back to the harem and Barḡūk, as had been arranged before, was appointed Sulṭān (on the events down to the restoration and second deposition of Sulṭān Ḥādīdī see the art. BARḠŪK). In 791 (1389) Ḥādīdī, who was now 13, was once more installed as Sulṭān but badly treated and not allowed to interfere in the government by his Atabeg Velboghā. It is related how he appointed his tailor court-tailor and gave him a robe of honour. The latter was robbed of his robe of honour, then beaten and imprisoned and only with difficulty liberated by one of the great Amirs. The Sulṭān was very angry at Velboghā's shameful treatment of him; even his father's old Mamlūks and the eunuchs and chamberlains were removed from him. He was relieved when Minṭāḡh (see the art. BARḠŪK) came into power again and allowed him more liberty. When Minṭāḡh afterwards began the campaign against Barḡūk in Syria, he took the Caliph and the Sulṭān with him to show the righteousness of his war against the rebel. This step was to prove to his disadvantage. While Barḡūk was beaten in the decisive encounter, he captured the insufficiently defended tent with the Caliph, the Sulṭān and the Qādī. Success was therefore on his side and in addition he was victorious in a second battle. He hastened with his important prisoners to Cairo where in the meanwhile one of his supporters, the Amir Buṭā, had seized the citadel and had him named as Sulṭān in the Friday prayer. Ḥādīdī was deposed by the Caliph by Barḡūk's orders. He was allotted an abode in the citadel but was honourably treated by Barḡūk who frequently visited him. In later years Barḡūk gave up these visits as Ḥādīdī, who was of a cruel disposition, ill-treated his slave-girls and had music performed and songs sung to drown their cries. He also took to drink and heaped insults on Barḡūk when he visited him. The family of the great Kalī'ūn ended with this unworthy scion.

(M. SOBERNHUM)

AL-MALIK AL-ŠĀLIH ŠĀLIH AL-DIN ŠĀLIH, son of Sulṭān Muḥammad al-Nāḡir of the line of Kalī'ūn, was chosen Sulṭān when 14 years old in place of his brother Ḥammān as a result of quarrels among the Mamlūks in 752 (1357). The feuds between the Amirs did not cease in his reign; the eternal quarrel between the governors of the Syrian provinces and the dignitaries of the court in Cairo was also an important factor. When on his campaign in Syria he had succeeded by his prestige in withdrawing their supporters from the rebels and defeating them, the quarrelling among the cliques in Cairo broke out again. His addiction to pleasure prevented him from conducting the government himself to prevent the predominance of anyone Amir with his followers. He thus fell a victim to the intrigues of the Amirs; he was deposed in 755 (1354) and his brother Ḥammān recalled to the throne.

(SOBERNHUM)

ŠĀLIH B. 'ALĪ B. 'ABD ALLĪH B. 'ABDĀS AL-'ABDĀS was born in Sawād or in the highlands of al-Baḡdād in the year 92 (710/11), he, along with Abū 'Awn 'Abd al-Malik b. Yariṣ al-Ḥusaynī, commanded the expeditionary force sent to Egypt in pursuit of the last Umayyad Caliph Marwān b. al-Hakam and on Muḥarram 1, 133 (Aug. 9, 750) was appointed governor of this province. On Shu'abūn 1, 133 (March 4, 751) he was recalled from Egypt and given the governorship of Palestine after installing his companion-in-arms Abū 'Awn as his successor in Egypt. But by Rabi' I 5, 136 (Sept. 753) he was again given the governorship of Egypt along with the control of the finances of the country and was further appointed governor of Iḥṣkiya so that the whole of the Maghrib was united under his rule. On Rabi' II 5, 136 (Oct. 8, 753) he entered Egypt but had to return to Palestine within a year and half on Ramaḡān 4 of the following year (Feb. 21, 755) as a result of a rebellion in Egypt and again handed over the governorship of Egypt and the financial control of the country to Abū 'Awn. He had next to exchange Palestine for Syria (141=758/9). He undertook two campaigns against the Byzantines and died at Kinnasrīn or at 'Ala Uṭāḡh at the age of 58 after appointing his son al-Faḍl governor of Hima.

The name Šāliḥ is found on two glass measurement-stamps in the Fouquet collection in P. Cassin's *Catalogue des pièces de verre des époques byzantine et arabe de la collection Fouquet*, M.M.A.F., 1895, vi. 370, N^o. 140, 141, and on copper coins of Ḥalab of the year 146 (763/4), and 148 (765/6) in H. Nitzsch, *Katalog der orientalischen Münzen in den Kgl. Museen zu Berlin*, i. 328, N^o. 2083/84, and p. 329, N^o. 2086; cf. also Isma'īl Ḥalīb, *Musāḥhar-i ḥadīth-i islāmīyā Catalogue*, p. 284, N^o. 769, 770; S. Lane-Poole, *Brit. Mus., Cat. Orient. coins*, 1200, ix. 94.

(ADOLF GROHMANN)

ŠĀLIH B. MIRDĀS ABU 'ALĪ ABAD AL-DAWLA — see his genealogy in his biography in Ibn Ḥalīkīn, transl. by de Slane, Paris 1842, i. 631 — was one of the most important Beduin chiefs of the Near East in the fifth century A.H. His tribe was the Kilābi, who migrated under his leadership northwards from the ḥaḡk to Aleppo in the beginning of the fourth century and gained him this principality (see the art. HALAB). We know little of his character and private life but he seems to have been a brave and resolute man. He is mentioned for the first time in 390 (1008) as the ally of the otherwise unknown Ibn Muḥkam, when the latter appealed to him for help in defending Raḡḡa which he had captured. The alliance was not a close nor a loyal one. After a certain amount of friction, a reconciliation took place between the two leaders in which Šāliḥ married Ibn

Muḥkam's daughter. He continued to have his residence in Hilla, as Ibn al-Athīr expressly mentions. In spite of the family links which united them, the friendship with Ibn Muḥkam did not last. In the same year Šalīh had his father-in-law murdered, seized Raḥba and administered it in the name of the Fātimid Caliph in Cairo whom he recognised as his overlord in the Friday prayer. In the next year (400 = 1009) he was involved in the affairs of Aleppo for the first time (see the art. HAMDĀNĪS). Manṣūr Murād al-Dawla, son of the Hamdānīd Mamūk Lu'ā', was ruling there but his position was challenged by the pretender Abū 'I-Hijāz, grandson of Saif al-Dawla. The latter had taken the Kilābis into his service but they had gone over to Manṣūr who had promised them large tracts of land. In consequence it was easy for Manṣūr to beat the Hamdānīd. But when the Kilābis became pressing in their demands for their reward and invaded and plundered his lands, he had recourse to an old stratagem. He invited the Kilābi chiefs to a feast to discuss the matter, fell upon them and killed some and took the others prisoners. The story that 1,000 Kilābis were killed on this occasion in addition to the chiefs may be an exaggeration. Šalīh had so far to humiliate himself as to declare his wife to be divorced in favour of Manṣūr. For three years he languished in chains. It was not till 405 (1014) that he succeeded in escaping, in chains, as some say, or, as others report, after sawing them through with a file that had been smuggled unto him. After lying in concealment for some time he gradually collected the Kilābis around him again and attacked Manṣūr. The latter was defeated, captured and put into the same chains, the story goes, as he had bound Šalīh with. He was then released on certain conditions and handed over 5,000 dinārs, 70 pounds of silver and 500 robes, but did not fulfil the condition that he should pay the Kilābis half the revenues of Aleppo for the year 405 and marry Šalīh to his daughter. The Kilābis then laid siege to Aleppo and Manṣūr, who could not trust Faṭḥ, the commander of the citadel, fled to the Byzantines in 406 (1015). Faṭḥ came to terms with Šalīh and delivered Aleppo over to 'Alī b. Ahmad al-Adami, the Fātimid governor of Apamea. The Caliph, angry at the flight of Manṣūr, recognised 'Alī as governor, lauded Faṭḥ and Šalīh to whom he gave the honorary title of Asad al-Dawla and granted him the promised half of a year's revenue of Aleppo. (On the governors of Aleppo to the year 406—411 see above, p. 229 sq.). The rule of the Fātimids with their continually changing governors aroused the discontent of the Beduin tribes, who combined against Fātimid authority in 414 (1024) (see above ii. 229 sq.). Šalīh conquered Aleppo, Hims, Ba'albek and Sidon in the next two years and his authority stretched to beyond Anah on the Euphrates. When the power of the Fātimids increased again, the Caliph Zāhir sent a new army in 420 (1029) under Anuṣṭukīn al-Dizbarī against whom Šalīh took the field. He fell in the battle of Ukhuwāna on the Jordan; his son Nuṣr (see the art. SHĪR AL-DĀWLA) escaped with a portion of the army and retained rule over Aleppo. Šalīh's importance lies in the fact that he led his tribe from Mesopotamia to Aleppo and gave them permanent settlements there.

Bibliography: Kamāl al-Dīn 'Umar b. al-Adām, *Zuhdat al-Halab fi Tārīkh Halab*, St.

Petersburg, Arabic MS. of the Asiatic Museum 522, Paris 1666, of which the part dealing with the Mirdāsids has been edited by J. J. Müller, *Historia Mirdasidarum*, Bonn 1830; Ibn al-Athīr, *Kamil*, ed. Tornberg, ix. 148, 159 sq.; Ibn Khallikān, transl. by de Slane, Paris 1842, i. 631; cf. also the articles HAMDĀNĪS, above, p. 247 sqq. and HALAB, p. 227 sqq. (M. SOERENHUIS).

ŠALĪH b. ʿARIF. We know very little definitely about this individual, the prophet of the Barghawāta of Tāmasnā (the western coast of Morocco) and the founder of their heresy, or at least it was he to whom it was attributed. According to the information transmitted by al-Bakrī and which later writers simply reproduce, ʿArif b. Shamaʿūn b. Yaʿqūb b. Ishāq was one of the companions of Maṣāra, promoter of the Khārījī insurrection in the Maghrib in the eighth century A. D. and the leader of a section of the Zenāta and of the Zūghā; then he was recognised as their chief by the people of the Tāmasnā among whom he settled. His son Šalīh succeeded him, declaring himself to be the prophet — the *Šalīh al-mu'minin* of the Korān — sent to complete the mission of Muḥammad. He elaborated his doctrine, which he kept secret, then set out for the East leaving his power in the hands of his son al-Yās and saying that he would return under his seventh successor. Al-Yās in his turn kept this teaching secret and was succeeded by his son Yūnos who preached it and spread it by force of arms in the course of the third century A. H. in the lands now comprised in western Morocco, but the chronology is extremely vague. The descendants of Šalīh b. ʿArif continued to reign over the Barghawāta down to the period of their defeat by the Ifrānīs of Salé (beginning of the xth century), then by the Almoravids (end of the xth century) and lastly by the Almohads (middle of the xth century). — According to other traditions, hostile to the Barghawāta, Šalīh was of Jewish origin and born at Barchīn in Spain, whence the name Barghawāta given to his followers. But these traditions are of no value. It may be asked if this enigmatic figure Šalīh is really the author of the heresy of the Barghawāta or rather if Yūnos, who spread it, did not, in order to give it more prestige, place it to the credit of his grandfather who had mysteriously disappeared and whose return was predicted. This would be quite in keeping with the psychology of the Berbers. An account of the teaching of Šalīh b. ʿArif will be found in the article BARGHAWĀTA.

Bibliography: The only really important Muslim source is al-Bakrī, *Description de l'Afrique Septentrionale*, ed. de Slane, Algiers 1857, p. 134—141; cf. also René Basset, *Recherches sur la religion des Berbères*, Paris 1910, p. 48—51. The remainder of the Bibliography will be found in the article BARGHAWĀTA.

(HENRI BASSET)

ŠALĪH. Arab historians and genealogists are unanimous in stating that the tribe or clan Šalīh were the first Arabs who founded a kingdom in Syria, though the three princes mentioned by them appear not to be named on inscriptions or by Greek and Syrian authors. There is also doubt as regards their affiliation with other tribes; some reckon them to Ghassān, while others say they were a branch of Qudā'a. Their first ruler is named al-Nu'mān b. 'Amr b. Mālik who was succeeded by his son Mālik after whom followed the latter's

his class. One night, after a drinking party at court, Uwais sent a slave with a candle in a golden basin to light him home. The next morning the king sent for the basin and received a verse in reply:

"Last night the candle was consumed, and in my lamentation

I too shall be consumed, if the king demands the basin".

The poet was allowed to keep the basin.

As a reward for an ode which he wrote in answer to the odes of Khawāja Zahir Fāryābī, Salmān received two villages in the Rai district and some land in the neighbourhood of Sāwa, his native town, in Sayrghāl, and in his old age he retired from court and lived in peace on his estate.

Uwais, who ruled over Irāk and Ādharbāidjān, died in 1374 and Salmān emerged from his retirement and mourned for some time over his patron's grave, chanting an elegy which he had composed on him. Salmān himself died at an advanced age in 775 (1376).

[Salmān wrote both epical and lyrical poetry. There exist of him two *Mathnawīs*, viz. *Firāsh-nāma*, composed in 761 (1359) on demand of his patron Sultān Uwais, and *Djāmshīd u Kāwār-shīr*, an imitation of *Kāwār u Shīrīn*, written in 763 (1362). His lyrical works contain *Ghazals*, *Rubā'is*, *Kifās*, and the *ganz* in which he excelled, *Kāfidas*. In this latter kind of poetry, notable in the artificial *Kāfida* (*Kāfida-i majnūn*) he surpassed even his greatest predecessor Dhu 'l-Fikar of Shirwān. Of poetical figures, Salmān cultivates especially the *Tawghīf*, i. e. the incorporation of a smaller poem into a longer one (cf. Ibn Kālī, *Mu'jam*, Gibb Mem. Ser. x., p. 362 sqq.). Many of the *Kāfidas* are reflexes of historical events of the time, Salmān's *Ghazals* could not, in the eyes of Persian critics, win the renown of his *Kāfidas*.

A lithographed Bombay edition of his *Kulliyāt* is mentioned by Browne, *Hist. of Persian Lit. under Tartar Dominion*, p. 261].

(copious references to Persian and European literature on Salmān); Ethé in *Grundriss d. iran. Philologie*, ii. 248, 251, 254, 270, 303 sq. (T. W. HAIG).

SALMĀN AL-FĀRISĪ, a companion of the Prophet and one of the most popular figures of Muslim legend. According to one tradition, the most complete version of which among the many that exist goes back to Muḥammad b. Ishāq, he was the son of a *dāghān* of the Persian village of Dāy (or Dāyān; cf. Yāqūt, ii. 170) near Isfahān. According to other stories, he belonged to the vicinity of Rāmihmurz and his Iranian name was

Māhbeh (Māybeh) or Rūbeh (cf. Justi, *Iran. Namenbuch*, p. 217, 277). Attracted by Christianity while still a boy he left his father's house to follow a Christian monk and having changed his teachers several times arrived in Syria; from there he went right down to the Wādī 'l-Karā in Central Arabia seeking the Prophet who was to restore the religion of Ibrāhīm, the imminence of whose coming had been predicted to him by his last teacher on his deathbed. Betrayed by Kalbi Beduins, who were acting as his guides through the desert, and sold as a slave to a Jew, he had occasion to go to Yathrib where soon after his arrival the *hijra* of Muḥammad took place. Recognising in the latter the marks of the prophet which the monk had described to him, Salmān became a Muslim and purchased his liberty from his Jewish master, after being miraculously aided by Muḥammad himself to raise the sum necessary to pay his ransom.

The name of Salmān is associated with the siege of Medina by the Mekkans for it was he who on this occasion advised the digging of the ditch (*Khandaq*) by means of which the Muslims defended themselves from the enemy. But, as Horowitz (see the *Bibliography*) has shown, the earliest accounts of the *yawm al-khandaq* make no mention of Salmān's intervention, the story of which was probably invented in order to attribute to a Persian the introduction of a system of defence the name of which is of Persian origin. The other references to the career of Salmān (his part in the conquest of the Irāk and of Fars, his governorship of al-Madīna etc.) are equally devoid of authority and almost all date from the historian Saif b. 'Umar, the bias of whose work is well known. Indeed, the fame of Salmān is almost entirely due to his Persian nationality: he is the prototype of the converted Persians (just as the Abyssinians and the Greeks are represented by Bilāl [q. v., i. 718] and Ṣuhayb respectively), who played such a part in the development of Islām; as such he has become the national hero of Muslim Persia and one of the favourite personages of the *Shi'arūbiya* (cf. Goldziher, *Mus. Studien*, i. 117, 136, 153, 212). What explains the majority of the traditions relative to Salmān is the fact that the Prophet foretells to him that the Persians will form the better part of the Muslim community; he declares him member of his own family (*ahl al-bait*); his annuity is equal to that assigned to Hasan and to Husain, the grandsons of the Prophet etc. In reality, the historical personality of Salmān is of the vaguest and it is with difficulty that one can even admit that his legend is based on the actual fact of the conversion of a Medina slave of Persian origin.

The figure of Salmān has had an extraordinary development. Not only does he appear as one of the founders of Sūfism along with the *Aḥl al-Suffa* (*Kitāb al-Luma'*, ed. Nicholson, p. 134—135) but the alleged site of his tomb very early became a centre of worship (at latest in the 10th century A.H.; cf. Ya'qūbī, *Kitāb al-Buldan* in the *Bibliotheca Geographorum Arabicorum*, vii. 321); it is still pointed out in the vicinity of the ancient al-Madīna, at the place called after him Selmān Pāk ("Salmān the Pure") near the former Asbāndur suburb. His sepulchral mosque, which was seen in its older form by Pietro della Valle in 1617 (*Viaggi*, ed. Gancia, Brighton 1843, i. 394), was renovated by Sultān Murād IV (1623—1640) and

recently restored (in 1322 = 1904—1905) (Hersfeld-Sarre, *Archäol. Reise im Euphrates- und Tigrisgebiet*, II, 262, note 1, based on information given by the learned Mesopotamian journalist Kāḡim al-Dūdjalī; and cf. *ibid.*, p. 51 [topographical sketch] and p. 58). It is the object of numerous pilgrimages, especially on the part of Shī'īs who do not fail to visit it in returning from Kerbelā (cf. Aubin, *La Perse d'aujourd'hui*, Paris 1908, p. 426—428). Other traditions locate the tomb of Salmān in the vicinity of Isfahān, where there is evidence of his cult in the vith century (Yāqūt, II, 170), and elsewhere (for Lydda in Palestine cf. Clermont-Ganneau, *Études d'archéologie orientale*, II, 108).

Salmān plays a remarkable part in the development of the *futuwa* and the workmen's corporations. He is venerated as a patron of barbers, whence comes the tradition, unknown in ancient collections of tradition, which makes him the Prophet's barber (H. Thorming, *Studien zu East Madad et-Taufiq*, Diss. Kiel 1913, p. 33—37 and 85—90 = *Beiträge zur Kenntnis des islamischen Vereinswesens*, *Türkische Bibliothek*, vol. 16; Goldziher, *Abhandl.*, *z. arab. Philol.*, II, Ixvi, Lxxvii.). He is also one of the principal links in the mystic chain (*silsila*) in various religious orders (Depont and Coppolani, *Les Confréries musulmanes*, p. 91). The veneration accorded to Salmān among the Sunnis is naturally exceeded among the Shī'īs: not only do they attribute to him a mass of *badith's* in honour of 'Alī and his family but among the extremist sects he is placed immediately after 'Alī in the series of divine emanations. The Nuṣairiyya make him the third member of the trinity formed by the three mystic letters A ('Alī), M (Muḥammad) and S (Salmān), of which he forms the gate (636) (cf. Dassauid, *La Religion des Nuṣairis*, p. 62; Goldziher, *A. R. W.*, xii, 88).

The death of Salmān is placed in 35 or 36 A.H., a statement which has no value except to indicate that the historian's tradition had no note of his activity after the accession of 'Alī (end of 35 A.H.). Like many other individuals, said to have embraced Islām after long experiences of other religions, he is credited with an extraordinary longevity: 200, 300, 350 and even 553 years (Goldziher, *Abhandl.*, II, lxxvi.).

Horowitz in the *Isl.*, 1922, xii, 178—183. (G. LEVI DELLA VIDA)

SĀLMĀS, a district in the province of Adharbāydjān in Persia, to the north-west of the Lake of Urmīyah and having an area of 25 miles (N. to S.) by 40 (E. to W.). To the south the chain

of the Awghān (Afghān)-dagh with its pass Wer'gewiz (6,150 feet high) separates Salmās from the district of Urmīyah (Urmī); the eastern portion of the Awghān-dagh forms the lofty promontory of Kāra-bāgh (q.v.) which runs out into the Lake; at the end of it is the fortress of Güwerčīn-Kā'a. In the west the Harṭwīl range (in Turkish Ara'ul) separates Salmās from the Turkish district of Albak; the pass of Khānāsūr is 7,900 feet high. To the north Salmās marches with Khol; in the north-east with the district of Günel ("exposed to the sun"; former administrative name Arwanak-wa-Anzāb) which lies on the north bank of the lake and has Tasudj as its capital. Salmās consists of the fertile plain watered by the Zola-Čai and of the mountainous districts of Čahrīk, Shīnetāl and Shepīrān.

The region of Salmās has been inhabited since very early times to judge by the remains of Khaldic (Vannic) buildings. Later it formed part of the province of Persarmenia belonging sometimes to Atropatene and sometimes to Armenia. Faustus Byzantinus includes the region of Salmās in the province of Kortēk'. Constantine Porphyrogenetos mentions *Σαλμας* alongside of *Χαρ* (now Khol).

Al-Muḥaddas describes Salmās as a fine town with good markets and a stone mosque; the population in the fourth (xth) century was of Kurd origin. In Yāqūt's time the town was in ruins; among natives of the place he mentions Mūsā b. 'Amrān, a learned man who died in 380. According to Ḥamd Allāh Mustawfī, the city wall, 8,000 paces in circumference, was rebuilt by the vizier Khādja Tādī al-Dīn 'Alī Shāh in the reign of Ghāzān. The taxes of Salmās in the viith (xivth) century amounted to 39,000 dinārs. At the present day there is no town named Salmās. The passages in the Muslim writers must refer to the hamlet known as Kuhna Shahr ("the old town") in the north-west of the district on the road from Albak and Kōtūr. There are at Kuhna Shahr about 1,000 families of Shī'īs who speak the Azeri dialect of Turkish, 100 Armenian families and a Jewish colony, always the sign of an old established settlement in Persia. The fact that the tower of Mīr-Khāfīn is situated near Kuhna Shahr is equally significant.

The modern capital is Dilmān (written Dilmāḡān), the name of which seems to indicate some connection with the Dailamīs of Gilān (cf. the art. DAILAM) some of whose little forts are at Shahrī-sūr etc. (cf. Yāqūt, s.v. Dailamastān). There are at Dilmān 1,400 houses (in 1852 only 300) and 8,000 inhabitants (almost all Shī'īs). The town advantageously situated at the intersection of the routes in the centre of the plain is surrounded by walls of earth and has 5 gates. It has 11 mosques (those of Aghā, of the Shaikh al-Islām, of Hādījī 'Alī Rīdā, Hādījī Sādīk Aghā, Kānī, Shālī, etc.) and a *tekkiye* of dervishes founded by Rawshan Efendi (whose seal bore the date 1251 A.H.; cf. Véliamīnoff Zernoff, *Scheref-Nāmah*, 1860, I, 18).

The plain of Salmās about 1850 (Čirikow) had 51 villages with 3,310 houses. Their number towards 1900 had risen to 108 with a population of over 50,000 of whom 63.20% were Shī'īs, 13% Sunnis, 22.5% Christians and 1.3% Jews. Alongside of purely Muslim villages or those with a mixed population, there were Christian villages of fair size: Armenians (Kā'a-sar, Haftuwān, Peryādīk) or Syrians (Khosrowa, Patāvur, etc.). The Catholic (Chaldaean) Syrians were found mainly at Khosrowa, a prosperous hamlet of 500 houses with

2 churches (one built in 1844), the see of a bishop and of a Lazarist mission. As early as 1281 a bishop of Salmās was present at the *synodus* of the Nestorian patriarch Mar Yalabaha (Avesmani, ii. 456) at Baghdad. The inhabitants of Khawrowa were converted to Catholicism in the course of the eighteenth century. Among the Muslims of Salmās there are a few Leks, who came originally from southern Kurdistan but claim to have come to Salmās from Isfahan. The representatives of the different races and religions agreed very well together and were only disturbed by the invasions of Kurds who came down from the mountains to plunder in the plains. The exports and imports of Salmās before the war amounted to a million gold roubles. The exports consisted of wax, almonds, skins and cattle. The Russo-Turkish fighting and the period of trouble that followed the war from 1918 onwards have seriously affected the prosperity of Salmās.

Čahrik, the administrative centre of the mountainous region inhabited by the Kurds, is a little fortress built on a rock rising up in the centre of the gorge of the Zala-Čai (see the photograph in E. G. Browne, *Nagharā 'l-Rūd*, 1910). In 1828 Čahrik was occupied by the Russians. In 1848 the Bāh [q.v.] was imprisoned there before his execution at Tabriz. At this date the governor of Čahrik was Yalyāš Khān, brother-in-law of Muḥammad Shāh. After the assassination of his son Timūr Khān, Čahrik was occupied by the 'Awdol Kurds. This clan belongs to the great tribe of Šekakkīk, which occupies both sides of the Persian-Turkish frontier here. According to the 'Awdol, their ancestors came from Diyār Bakr to Urmīya towards the middle of the xviiith century. The tomb of their chief Ism'īl Aghā (on the Nārū Čai) is dated 1231 (1816). His son, 'Alī Khān, seized Čahrik in 1864. The son of 'Alī Khān, Dī'fūr Aghā, a bold bandit, was put to death at Tabriz in 1905 by order of the governor-general. His younger brother Ism'īl (known as Simko) played a considerable part in the troubled politics of these marches. In 1918 the Nestorian patriarch was assassinated at Kūna Shahr in an encounter provoked by Simko's men. In 1922 a Persian military force drove Simko back into Turkey.

Among the antiquities of Salmās there should be noted: 1) the Khaldic (Urmian) buildings discovered by Ker Porter (*Travels*, ii. 60) on the hill of Zūfūr Kāl'a near the village of Tamar; 2) a bas-relief (Sassanian) on the rock of Pir Čū'āh, representing Galerius, Nares and Tiridates (Ker Porter, *ibid.*; Flandin and Coste, iv. Pl. 204—205) or, according to another explanation, Ardashir I Šāpūr and his son Šāpūr (Jackson, *Persia Past and Present*, p. 81; Sarre, *Iran. Führer*, p. 246); 3) The fortress of Güwērtin Kāl'a ('fortress of the pigeons') on the rocks, sometimes forming a peninsula and sometimes on island in the lake of Urmīyah. Some parts of G.-F. may date from the Khaldic period. N. Khanykoff in 1852 discovered there a fragment of a Muslim inscription of a certain Abū Nāsir Hussain Bahādur Khān (the newspaper *Kāshān*, Tiflis 1852, N° 22, 23); 4) The brick tower near Kūna Shahr. Its inscription dated about 700 (732) and deciphered by Max van Berchem attributes its erection to Mīr Khātūn, daughter of Arghūn Aka. The last named is known as governor of Khorāsān in the time of Hūlākū and Abūka (cf. Lehmann-Haupt, *Mate-*

rialien zur ältesten Gesch. Armeniens, Abh. G. W. Göt., New Series, ix. 158—159; photograph in Lehmann-Haupt, *Armenien einst und jetzt*, p. 320).

SALSABİL is the name of a fountain in Paradise, mentioned only once in the Korān, in Sūra lxxvi. 18. The passage runs: "And there shall they (the just) be given to drink of the cup tempered with ginger, from the fount therein whose name is Salsabil".

Grammarians differ as to the derivation of the word. Some refer it to the triliteral root *s-b-l* while others derive it from a quinqueliteral root of which it is, except in its own feminine form, the sole derivative. Some explain it as meaning "that which slips or steals (*yanallu*) into the throat", as though the only radical letters were *s* and *l*. The derivation from *sal-sabilan* as in the comment *sal-rabbah-sabilan illā hādhihi 'l-āim* is condemned as erroneous. The word is explained as meaning "easy" or "smooth" (as a beverage), "in which is no roughness", "easy of entrance into the throat", and is applied as an epithet to milk, water and wine, but in the Korān it is understood to refer to wine, which will be lawful to Muslims in Paradise.

Some grammarians take it to be the proper name of the fountain, and therefore imperfectly declined, without *tanwīn*, but it is given *tanwīn* in the verse quoted in order that it may conform with

سلسبیل, but others understand it as an epithet

applied to the fountain, and therefore perfectly declined, with *tanwīn*. That the conception of the word as of a proper name was popular in the Muslim community, appears from a tradition in Muslim, *Ḥaṣṣ*, N° 37, where it is said that the fountain in Paradise from which the faithful will drink is called Salsabil.

SALŪK (in al-Ḥamdānī: Khariṣat Salūk), an ancient city in South Arabia in the district of Khālid in the Yemen on the site of which the village of Ḥabil al-Riyyaba stood in al-Ḥamdānī's time. In the ruins of the great city of Salūk there were found slag-heaps, lumps of gold and silver as well as ornaments and coins. It was celebrated for the splendid double meshed mail-shirts which were manufactured in it. There was also a fine breed of dog specially suited for hunting gazelles (*salūḥ*), which was said to be the result of a cross between dogs and jackals, which came from this place. To this day, as I am informed by Alois Mühl, there is a saying among the Shīmanar Beduins:

Hu drūhī, lā lāl wa-lā slūhī "He is a bastard, not a dog and not a Salūki (hound)".

SALUL. There are two tribes of this name, one South Arabian and a branch of Khuzā'a, the other North Arabian and reckoned to the federation of tribes known by the collective name of Hawāzin. Both tribes appear to have been in little estimation and I am in doubt whether the two are not really identical as some members are at times reckoned either to Khuzā'a or Hawāzin.

1) The branch of Khuzā'a had immigrated into the Hijāz at an early date, Arab genealogists giving the time as after the break of the dam at Ma'rib, and became custodians of the Ka'ba. A member of the tribe, Abū Ghabshān al-Muhtariḡ b. Halāl b. Salūl, sold the key of the temple to Kuway b. Kināna, through whom the custodianship came down to the tribe of Quraysh, for a skin of wine. This tribe was divided into three principal branches: Hubshiya, 'Adi and Ilimis, the last of which was probably very small as no notable persons belonging to this clan are mentioned. Hubshiya was divided into several families, namely: Halāl, Kumair, Dāir, Kulāib and Ghādira. To the first belonged al-Muhtariḡ mentioned above and Kurs b. 'Alkama who followed the Prophet on his flight from Mekka to al-Medina as far as the cave where he lost trace of him, when he found a spider-web over the entrance of the cave. He lived to the time of Mu'āwiya and it was through his knowledge of the topography of the country that the limits of the Holy Territory were fixed, which have been retained to this day. Of the family of Kumair was Kaḥḥab b. Dhū'alb, who was born in the life-time of the Prophet and died in Syria in 86 A. H., and Malik b. al-Haitham b. 'Awf, one of the principal emissaries of the 'Abbāsids and friend of Abū Muslim, who left him in charge of the army when he went to see the Caliph al-Manṣūr and was murdered.

2) The tribe descended from Hawāzin was named after their maternal ancestor Salūl, daughter of Dhūhī b. Shalbān, the ancestor in the male line being Murra b. Sa'ā'a b. Mu'āwiya b. Bakr b. Hawāzin. They were settled to the East of Mekka. They were divided into ten clans: 'Amr, Duḥai'a, Nahār, Suhāim, Ghādira, Udayl, Dhābir, Mu'āwiya, Ljānī and Duḥaiy. Of the clan Ghādira were Imrān b. Ḥusayn, a companion of the Prophet who was sent by 'Umar I as judge to al-Baṣra, and the poet Kuthayyir 'Asa [q.v.]. To the clan 'Amr belonged the poets 'Abd Allāh b. Hammām and al-'Uḡair. In comparing the genealogies of the various members

of the tribe Salūl not inconsiderable divergences are encountered, Ghādira e.g. occurring in both, from which it seems safe to infer that, though the general membership was known the affiliation was more than uncertain in most cases, which the ingenuity of the genealogists has not been able to bring into one common scheme. The chief difficulty was, no doubt, that Salūl was the name of a woman, not of a man, in spite of the "lun" of the genealogists and we have a case of a matriarchy, not uncommon in the genealogies of Arab tribes.

SALUR is the name of one of the tribes of the Oghuz which traces its name and origin to the eldest son of Daḡh Khān, one of the six sons of Oghuz Khān; in the texts the orthography

سَلَوَر (It occurs in a Persian *Oghuz-nāma* in manuscript in my private library) or سَلُور (*Divān luḡāt al-Turk: Ta'riḡh-i Guzda*) is rarely found; the commonest is سَلَوَر or سَلُور. As in the case of many other Turkish tribes the historical data regarding their ethnology are very scanty and confused. This much is, however, certain for their early history that from the earliest times they shared the fortunes of the other Oghuz tribes, since they came from the lands of Il and of Iḡgh Göl on the banks of the Salḡūn [q.v.] and then migrated into Transoxania, Khwāzīm and Khorāṣān, and finally, at the conquest of Asia Minor, a part of the tribe settled in Eastern Anatolia (for the details see Köprülü Zāde Fu'ād, *Turkiye ta'riḡhi*, Constantinople 1923, I, chap. 5). It was from them that the Salḡuri dynasty [q.v.] arose after the fall of the Seldjūk empire (*Ta'riḡh-i Guzda*, Gibb Memorial Series, xv/1, p. 503); the royal poet Kaḡī Burhān al-Dīn [q.v.] was also a descendant of the Salur ('Asī b. Ardashīr Astārābādī, *Basm-a Raam*, MS. of the Aya Sofia, No. 3465). Seeing that, according to the translation of the *Salḡūn-nāma*, the Salur, who had come into Asia Minor, were in the army of Bahrām Shāh, prince of Er-sindjān, of the family of Mengūcek (Houtsma, *Revue* etc., III, 37), we may conclude that the Salur played an important part in the history of the Seldjūks of Asia Minor along with the Kaḡī Bāyandur and Bayāt tribes (see the Index to vol. IV, of the *Revue* and J. Marquart, *Über das Volkstum der Komnenen*, p. 189 in the *Abh. G. W.*, new series, vol. XIII, No. 1, Berlin 1914). According to a Persian manuscript of the *Oghuz-nāma* in my private library, the Karamān-Oghlu [q.v.] belonged to the Karamān branch of the Salur. It is very probable that the villages bearing the name Karamān in Adharbāidjān in the Caucasus were originally founded by the Salur. Among the solid bodies of Turkomen that we find in these regions in the 15th century A.D. (al-Nasā'ī *Histoire du Sultan Djelāl ad-Din Munkshirī*, transl. Haudas, Paris 1895, p. 264, 374, 383) there were certainly these

Karamān. After a large part of the Salur had migrated westwards, as a result of Seldjūq policy, which aimed at dispersing the Oghuz tribes in different directions, those who had remained at Marw and Sarakhs played a part in later history under the general name of Turkomans. In the opinion of several scholars a certain number of these Salur went between 1380 and 1424, via Samarqand, Turfan and Sou Tchou, to Si Ning where they settled and became the present Salar of Kan-Su (it still remains to be ascertained whence and when these latter emigrated). The Salur, reduced in number and in strength by these two emigrations, became gradually weakened by their fighting with the other nomad Turkomans and particularly by their continual incursions into Persian territory; they finally ceased to be of any importance as a result of the great losses sustained against 'Abū Mirzā, son of Faṭṭā 'Alī Shāh, during the latter's expedition to Sarakhs in 1831.

Present state of the Salur. The Salur regard themselves as the oldest and noblest of the Turkomans who live clustered round Sarakhs and scattered along the Russo-Persian frontier near Hari-Rūd. They are divided into three groups: Alavaḥ, Karamān and Anabeleghi; these groups have their subdivisions. Evnewit gives the following divisions:

Yalowaḥ: 1) Ordouhōjja, 2) Daz, 3) Bek-Sakar. Karamān: 1) Jugroudjihli, 2) Bek-Gheren, 3) Alain.

Kirahē Agha: 1) Kirahē Aga, 2) Bech Ourouk (all these names after the orthography of the *R. M. M.*, lvi. 60, 67).

These subdivisions are again divided into clans. Their numbers are variously estimated. Dubeux puts the number of the Salur around Sarakhs at 2,000 tents, Petronchewitch at 3,000, Vámbéry at 5,700 (which is an exaggeration). Recently J. Castagné has put it at 3,000 tents.

The number of Muslim Salur in the originally Tibetan district of Kan-Su is put at 70,000 (according to Grenard, 50,000). They dwell on the right bank of the Yellow River in an area stretching from Ourouanvou to T'ao-Hō with the little town of Sin-Hoa-Ting or Salar as its centre; on the left bank they occupy some villages on a rather dangerous and mountainous road between Si-Ning and Hō-Tcheou. These Turks are readily distinguished by their physical type from the other Muslims of Kan-Su; they have retained their Turkish language. Grenard has published materials concerning their dialect and has drawn certain conclusions from it regarding the origin and time of emigration of the Salur but these materials are neither sufficient nor reliable. The Salur are Hanafī Sunnīs; they have always been Nakshbandīs and the *dhikr dhikr* is common among them. They despise the Chinese and as a rule are brigands.

SĀM (Shem) is regularly given first among the sons of Nūḥ and in the *Ḥijāz al-Anbiyā'* of al-Tha'labī is expressly mentioned as Nūḥ's first-born. Only one isolated tradition in al-Taḥart (ed. de Goeje, i. 196) gives the order Yafith, Hām, Sām, in agreement with a Jewish tradition in the Babylonian Talmud, *Sanhedrin*, fol. 69b (cf., however, on this the statements in the *Al al-Tawarīḥ* of al-Taḥart, *op. cit.*, p. 223). Sām is the favourite son of Nūḥ. He not only shares the paternal blessing with Yafith (cf. *Genesis*, ix. 27) but his dying father also appoints him his successor and gives him special tasks. His preference is transmitted to his descendants; they enjoy special beauty and prophecy is innate in them. Sām's wife, Ṣalīb (Ṣulāib), was descended, like the wives of Nūḥ's other sons, from Ḥāim b. Adam and bore him four sons, whose names can readily be identified with those in *Genesis*, x. 22; whether Sām's fifth son, Aram, had the same mother is uncertain. The Arabs are regularly said to be Sām's descendants, frequently the Persians and Romans in addition, sometimes also the Jews. When Nūḥ divided the earth among his sons, he allotted 'the centre' to Sām, i. e. the region between the Nile, Euphrates-Tigris and Oxus-Jaxartes. Sām himself lived in Mekka.

SĀM MİRZĀ, a Persian poet, son of Shāh Ismā'il I, born in 923 (1517). Was installed by his father as governor of Khorāsān under the guardianship of Dürmish Khān in the town of Herāt after it had been relieved from the siege by the Uzbeks in 938 (1531). He rebelled in 969 (1561) against his brother Shāh Tahmāsp I and was thrown into prison and then put to death on the accession of Ismā'il II in 984 (1576—77). Besides a few verses that have been preserved, he was the compiler of the *Tadhkira-i Sāmī*, an anthology of contemporary poetry, a continuation of Dawlat-Shāh, written in 957 (1550).

SAMĀ' (de Sacy's *simā'*, *Grammaire Arabe*, i. 347, is quite false; cf. Fleischer, *Klein Schr.*, i., p. 260) is an infinitive, like *amā'* and *simā'*, of

the root *s-m-* and means "hearing", often passing into the thing heard, like music and hearing music; also, like *istimaʿ*, "listening" (Lane, *Lexicon*, pp. 1427^b, 1429^b; *Lisan*, p. 26 sq.); it does not occur in the *Qurʾān* but it belongs to old Arabic even in the meaning, "a singing or musical performance" (Lane, p. 1617^b under *naghār* and references there). In lexicology and grammar it means, with *samʿi*, what is received on authority, as opposed to *ḥisrī* "analogical" (de Sacy, *loc. cit.*, and Lane, p. 1429^b). In theology it, and *samʿ*, are opposed, in the same sense, to *ʿaql*, "reason" (Goldziher, *Die Fichtungen der isl. Koranauslegung*, p. 136 sq., 166). But its principal technical use is undoubtedly in Sūfism, in which it means the listening to music, singing, chanting and measured recitation in order to produce religious emotion and ecstasy (*waḥd*) and also such performances by voice or instrument. To this on all its sides al-Ḥazālī has devoted a Book of the *ḥyāʾ*, the viiith in the Sections of Customs, vol. vi., p. 454-end in ed. with commentary, *Ḥayāt al-sūfī*; cf. *ḤAYĀLĪ* above. It has been translated with commentary and analysis by D. B. Macdonald in *J.R.A.S.*, for 1901, 2, and is the *locus classicus* in Islām for the whole subject of the attaining and controlling of religious emotion by such means, on its legal, psychological, theological and esthetic sides. Al-Ḥazālī considers it both as an advanced mystic and experienced ecstatic and as an orthodox Ashʿarite and Shāfiʿite, and this Book by its subject forms the kernel of his *ḥyāʾ*. Al-Hudjwiri, an earlier Persian writer and a theologically more advanced mystic — although still holding to his professed orthodoxy — has given to the same subject a chapter of his *Kaṭṭāf al-maḥḥūb*; see the translation (Gibb Memorial Series, vol. xvii.) by R. A. Nicholson, p. 393—420; see also, *Mystics of Islam and Studies in Islamic Mysticism* by the same author, both by index; Massignon, *La Passion d'al-Hallaj*, by index and especially p. 780, 795 sq. Al-Kushairī has also given a section to this in his *Risāla*, ed. with commentaries of al-ʿArūfī and Zakariyā (Bulak 1920), iv., p. 122—146; cf. on this passage R. Hartmann, *Al-Kushairī's Darstellung des Sūfismus*, p. 134—148. There are two vivid descriptions of seances by Rifāʿite darwishes for *samāʿ* in Ibn Baṭṭūṭa's *Travels*, Paris ed., ii., p. 5—7.

Bibliography: has been given above.

(D. B. MACDONALD)

SAMAD. [See ALLĀH, I. 303*].

AL-SAMAK, fishes. There are numerous kinds, some so long that one cannot see both ends at the same time — a ship had once to wait four months till one of these monsters had passed — but others are so small that one can hardly see them. They breathe water through the covers of their gills and do not require air in order to live: air is injurious to them all except flying-fish. They are very voracious on account of the coldness of their temperament and because in them the stomach is very near the mouth. Like snakes they have great strength in their movements, because they have not to distribute their nourishment over many limbs. Many fishes pair; others are produced from sand and slime or decaying matter. According to al-Djāhiz, there are migratory fish, which one only finds at certain periods of the year, like migratory birds. Al-Karwini gives 79 names of fishes and 130 names of birds for Lake

Menzaleh in his *Adjāʾib al-Makhlūqāt* (ii. 119). The eating of fish is permitted by law, in whatever way they may have perished or been killed but they must not be roasted or eaten alive. Fishes are considered to be cold and moist and therefore good for people of a hot temperament and they fatten the thin. Freshwater fish have many bones but have a fine flavour; fishes which live on mud are forbidden. If a drunk man smells fish, he becomes sober. Eating fish makes one thirsty. Al-Rāzi deals very fully with the cooking of fish and their wholesomeness. Wonderful tales are given in the 1001 Nights and are also told by al-Damiri.

Bibliography: al-Karwini, *Adjāʾib al-Makhlūqāt*, ed. Wüstenfeld, I. 137; transl. by H. Ethé, p. 282; al-Damiri, *Ḥayāt al-Ḥayawān*, Cairo 1275, ii. 32 sqq., transl. by Jayakar, ii. 66 sq.; Ibn al-Baitār, transl. by Leclerc, ii. 285, (J. RUSKA)

AL-SAMAKATĀN, Pisces; the more accurate name for the last sign of the Zodiac which is usually called al-Ḥūt, the fish. It consists of 38 stars of which 34 belong to the constellation and four lie outside of it (*ḥāṣṣat al-jawāz*). The two fishes are, according to the usual view, connected by a band twisted between their tails, *ḥabṣat al-ḥayāt*. This is called *al-Raḥāʾ* or is described as a thread, *ḥabṣ*, which connects the two fishes in its windings (*alā taʾrīf*).

Bibliography: al-Karwini, *Adjāʾib al-Makhlūqāt*, ed. Wüstenfeld, I. 38; transl. H. Ethé, p. 79; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, p. 202 sqq. (J. RUSKA)

SĀMĀNIDS, a Persian dynasty, descended from a certain Sāmānkhudāt. The genealogy down to Ismāʿīl, the first really independent prince, is as follows:

Sāmānkhudāt, who traced his family back to the celebrated Bahrām Čubin, that is to a noble

family of Ray (Ibn al-Athir, ed. Tornberg, vii. 192). was, as his name shows, lord of the village of Sāmān (in the district of Balkh; cf. Hamza al-Isfahānī, ed. Gottwaldt, p. 237; Barbier de Meynard, *Dict. géog. . . . de la Perse*, p. 297). When Sāmānkhudāt had to flee from Balkh, he sought refuge with Asad b. 'Abd Allāh al-Kāsi, governor of Khurāsān (cf. the art. ASAD, i. 475). The latter helped him against his enemies; Sāmānkhudāt then adopted Islām. He called his son after his protector, Asad (Narshakhi in Schefer, *Descr. . . . de Boukhara*, p. 57 sq.). The further stories of Sāmānkhudāt given in the *Ta'rikh-i Guzida* (apud Schefer, *o.c.*, p. 99 sq.) are obviously legendary. The story that his ambition was aroused at the recital of a certain verse was only later transferred to him from another connection (Gibb Mem. Ser., xi. 26, 123 sq.). The *Ta'rikh-i Guzida* also says that Sāmānkhudāt gained possession of Aghnā.

Asad b. Sāmānkhudāt had four sons, who seem to have played a part in the political history of the eastern Caliphate even in the time of al-Rashid. The future Caliph al-Ma'mūn is said to have ordered the sons of Asad to assist the commander-in-chief Harthama against the rebel Rāfi' b. Laith and the Sāmānids were able to arrange an agreement between Harthama and Rāfi' (Narshakhi, p. 74). In any case, when al-Ma'mūn succeeded his father, he commanded Ghassān b. 'Abād, whom he appointed governor of Khurāsān, to give the sons of Asad posts in the administration (Narshakhi, p. 75; cf. Ibn al-Athir, vii. 192; Hamza al-Isfahānī, p. 237). In 204 (819) Ghassān appointed Nūh b. Asad to Samarkand, Ahmad to Farghāna, Yahyā to al-Shāh and Ughrāsana and Ilyās to Herāt. When later, Tāhir b. al-Husain became governor of Khurāsān, he confirmed these appointments. The Sāmānids were thus a kind of sub-governors of the Tāhirids. An older source, Hamza al-Isfahānī, only briefly states that Nūh spent some years at the court of al-Ma'mūn and that the latter then appointed him over Mā warā' al-Nahr *min jibāl al-Tāhiriya* (237). The first of the brothers to die was Ilyās; his death took place in the reign of 'Abd Allāh b. Tāhir. The latter allowed Ilyās's son Muhammad to succeed his father in Herāt (Ibn al-Athir, vii. 193).

But this branch of the family is of less importance than the line of Ahmad from which the Sāmānid dynasty was descended. When Nūh, who seems to have been a loyal servant of the Tāhirids — he had aided 'Abd Allāh b. Tāhir at the instigation of the Caliph al-Ma'tasim to entrap in infamous fashion al-Hasan b. al-Afshin, son of the famous general of the Turks who had fallen from favour (al-Tabari, iii. 1307 sq.) — had died without heirs, Tāhir b. 'Abd Allāh gave his governorship in Transoxania to the brothers Yahyā and Ahmad. Ahmad is praised in later sources for his unselfishness and other fine qualities (Ibn al-Athir, vii. 192) in the fashion usual among eastern historians, when dealing with the founder of a dynasty. Ahmad was succeeded in the governorship of Transoxania by the eldest of his seven sons, Naṣr (we hear no more of Yahyā; perhaps he died before Ahmad; Hamza al-Isfahānī only knows of Ahmad as successor to Nūh). From 261 (874/75) onwards Naṣr can be regarded as an independent prince; in that year he was granted Transoxania as a fief direct from the Caliph (al-Tabari, iii. 1889; cf. Ibn al-Athir, vii. 193); the star of the Tāhirids was on

the wane and danger threatened from the Saffarids. But just as it appears from the words of Ibn al-Athir that he regards Naṣr after the grant of 261 as a *de facto* autonomous ruler dependent only on the 'Abbāsid government, so Hamza (p. 237) seems to consider Ismā'il the first actual prince (*fakānat wilāyat man taqaddama Ismā'il min jibāl al-Tāhir*). In the same year, 261, Naṣr appointed his brother Ismā'il Wālī of Bukhārā. In this region anarchy reigned; an army sent by Naṣr against the Saffarid Ya'qūb b. al-Laith had murdered its leader and gone to Bukhārā, where the soldiery, after Naṣr's *nā'ib* Ahmad b. 'Umar had retired before them, appointed and deposed rulers as they pleased (so Ibn al-Athir). Narshakhi (p. 76) speaks of an invasion of the Khwārizm (Rāfi' II, 260 = 874) when great devastation was wrought in Bukhārā. The leader of the Khwārizm, Husain b. Tāhir al-Tā'i, was soon forced to take to flight, but the disturbances went on as before. Then the Faḡhī Abū 'Abd Allāh b. Abi Haḡḡ appealed to Naṣr to send a governor to restore order. He sent Ismā'il; according to Narshakhi, by the first Friday of the month of Ramaḡān, 260 (June 26, 874), the name of Ya'qūb b. Laith was replaced in the *ḡaḡḡ* in Bukhārā by that of Naṣr. The Sāmānid soon rendered harmless, although by perfidious means, the Khāridjī Husain b. Muḡammad, whom Ismā'il encountered in Bukhārā. Ismā'il cleared the robbers out of Bukhārā, defeated Husain b. Tāhir of Khwārizm and forced the turbulent Bukhārā aristocracy to obedience. He further sought to strengthen his position by an alliance with Rāfi' b. Harthama, lord of Khurāsān. The latter also handed over to him the administration of Khurāsān (Ibn al-Athir vii. 193). This must have been shortly before the outbreak of war between Ismā'il and Naṣr (272 = 885/886) for it was only in 271 that Muḡammad b. Tāhir was appointed governor of Khurāsān by the Caliph al-Mu'tamid in place of 'Amr b. al-Laith, whereupon Muḡammad installed Rāfi' b. Harthama as his deputy there (Ibn al-Athir, vii. 290). The power of the Sāmānids was by then so well established that these events in Khurāsān did not affect their position in the least. Ismā'il's treaty with Rāfi' b. Harthama was an offensive alliance against Naṣr. In the first war, which broke out in 272 (Narshakhi gives as the cause that Ismā'il had not paid the annual tribute promptly; Ibn al-Athir speaks in general terms of intrigues), Rāfi' did not distinguish himself as an ally. Hamwaih b. 'Alī, a general of Ismā'il's, seems to have induced him to work for a rapprochement between Naṣr and Ismā'il rather than for a vigorous campaign (Ibn al-Athir, vii. 194). Peace was soon concluded between the two brothers. The war was renewed in 275 (888) and ended in favour of Ismā'il. The latter captured Naṣr, but was politic enough to send him back to Samarkand with the honours befitting his suzerain. There Naṣr reigned till his death in 279 (892) (al-Tabari, iii. 2133) while Ismā'il remained as his brother's *nā'ib* in Bukhārā, until he succeeded him on the throne. Ismā'il is regarded the first proper ruler (*amir*) of the dynasty. The list is as follows:

Ismā'il b. Ahmad	279—295 (892—907)
Ahmad b. Ismā'il	295—301 (907—913)
Naṣr b. Ahmad	301—331 (913—943)
Nūh I b. Naṣr	331—343 (943—954)
'Abd al-Malik I b. Nūh	343—350 (954—961)
Manṣūr I b. Nūh	350—365 (961—976)

Nūh II b. Maṣṣūr . . . 365—387 (976—997)
 Maṣṣūr II b. Nūh . . . 387—389 (997—999)
 'Abd al-Malik II b. Nūh . . . 389 (999)

By the time Ismā'il (cf. above, ii. 545 *sq.*) died, he had considerably extended his kingdom, in addition to Transoxiana and Khurāsān, which had come to him after the overthrow of the Saffarid 'Amr (see the above article). He was, so far as we can judge, one of the ablest rulers of his dynasty, energetic but unscrupulous. His loyalty to the 'Abbāsids is, however, commemorated (Narshakhi, p. 90) and, indeed, the Sāmānids always professed, outwardly at least, this sentiment, if 'Uthbī is right when he says that only the princes of this dynasty bore the title *waṣī amirī 'l-mu'minin* (in Schefer, *Description*, p. 160). Anecdotes of Ismā'il's piety and philanthropy are given in Ibn al-Athīr, vii. 194 *sq.*, viii. 4 *sq.*

Under the second prince, Aḥmad, there already appears a factor, which contributed not a little to the decline of the dynasty, namely the mutinous and ambitious spirit of the notables. Even at his accession Aḥmad was forced to put his uncle Ishāk in prison; another noble, Hārī al-Kabrī, who had considerable sums in his keeping, fled to Baghdad. The new Amīr seems in other respects to have been of a resolute character. Ibn al-Athīr (viii. 89) attributes to him a sound judgment and the knowledge of men indispensable in a king. Narshakhi emphasises his justice; it is only in a later compilation that we find him unfavourably criticised (in Schefer, *Description*, p. 98). In 298 (910/911) Aḥmad's general, al-Ḥusain b. 'Alī, conquered Sīstān; among the leaders of this expedition was Simjūr al-Dawānī, the ancestor of the powerful family that held the governorship of Khurāsān under the Sāmānids. Sīstān was at that time in the hands of a Saffarid, al-Mu'addal b. 'Alī b. Laith. The latter was defeated and sent to Baghdad along with a former *ghulām* of 'Amr b. al-Laith, who was taken prisoner in Fārs. But the conquest of the country was not final. In 300 (912/13) a rebellion broke out, stirred up by the Khāridjī Muḥammad b. Hurmuz in favour of a Saffarid pretender, 'Amr b. Ya'qūb b. Muḥammad b. 'Amr b. al-Laith. Al-Ḥusain b. 'Alī again conquered Sīstān for the Sāmānids, but further troubles broke out after Aḥmad's death. In 301 (913/914) the governor of Tabaristān was driven out by an 'Alid; shortly after the receipt of this news Aḥmad was murdered by some of his *ghulām*'s (Ibn al-Athīr, viii. 46, 52, 58).

In this we may see the hand of those notables who, for one reason or another, were tired of the strong hand of the Amīr. Significant also are the words which are put in the mouth of Aḥmad's son Naṣr (Ibn al-Athīr, viii. 58). That Aḥmad, as later compilations report, showed so much favour to learned men that the *ghulām*'s became jealous is probably an invention (Schefer, *Description*, p. 92, cf. 101).

The detailed histories of the succeeding rulers will be found in the articles on them ('ABD AL-MALIK, MAṢṢŪR, NAṢR, NŪH). The following is a general account of the dynasty, the capital of which was Bukhārā from the time of Ismā'il. The kingdom of the Sāmānids, which grew out of a subordinate governorship in Transoxania, comprised in the period of its greatest extent Sīstān, Kirman, Djurdjān, Ray and Tabaristān, in addition to

Transoxania and Khurāsān. The reign of Naṣr b. Aḥmad, the patron of Rūdākī, marks the zenith of the dynasty (301—331), not so much on account of the imposing personality of the ruler (in this respect he was far inferior to Ismā'il) as on account of the fact that after his death the decline of the kingdom begins to make itself apparent. The same factors, as had proved fatal to older Iranian dynasties, the turbulence of the notables (in this case the military aristocracy) and the danger from the northern nomads, the Turkish tribes, increased in strength when powerful figures like Ismā'il and Aḥmad no longer sat on the throne and finally brought about the catastrophe. No sooner was Aḥmad dead than his uncle Ishāk contested the throne with his son Naṣr; Nūh I had to defend his throne against his relative Ibrāhīm b. Aḥmad. From the reign of the last-named prince dates the rise of Alptegin, who later seized Ghazna, when he had been removed by Maṣṣūr I from the governorship of Khurāsān and replaced by Abu 'l-Ḥusain Simjūr, and became the founder of the Ghaznawid dynasty (cf. the article ALPTEGIN). The war, waged with little success against the Buyids and ended in the reign of Maṣṣūr I, contributed as little to increase the prestige of the dynasty at home or abroad. Things did not improve under Nūh II. He tried in vain to put down the rebellious governor of Sīstān, Khalaf b. Aḥmad. Abu 'l-Ḥusain Simjūr, whom he had relieved from the governorship of Khurāsān and sent against Khalaf, made common cause with the latter. This was the beginning of a series of troubles which did not cease with the death of Abu 'l-Ḥusain; his son, Abu 'Alī Simjūr, was an equally faithless subject, who finally incited the Turkish prince Boghrā Khān [q. v.] against the Sāmānid kingdom. The Turks, who had not only been defeated by Ismā'il but had had the war carried into their own territory (al-Jahiz, iii. 2138, 2249), now came to the front again. The days of Ismā'il were past, however. Nūh's armies were defeated — one of his generals played the traitor — and he himself had to flee. Only the premature death of the Turkish leader enabled the Sāmānid to return to his capital in a short time again. Fa'ik, the general, who was said to have allowed himself deliberately to be beaten by the Turks, made an alliance with Abū 'Alī Simjūr, with the object of driving Nūh from the throne. The Amīr, who could not trust the nobles, appealed for assistance to the Ghaznawids, who agreed to help him. Nūh's two opponents were forced to seek refuge with the Buyid Fakhr al-Dawla. The governorship of Khurāsān was given by Nūh to the Ghaznawid Subuktegin; the latter and his son Maḥmūd received in addition the titles Naṣr al-Dīn and Saif al-Dawla (384=994). The war with the rebels continued till Abū 'Alī met his death and Fa'ik escaped to the Turkish ruler Naṣr b. 'Alī Ilek Khān (cf. above, ii. 465 *sq.*). War with the Turks did not result on this occasion; it was agreed that Fa'ik should receive the governorship of Samarkand. The brief reign of Maṣṣūr II was similar in its course. Ilek Khān, with whom some members of the military aristocracy had made an arrangement, conquered Bukhārā and drove out Maṣṣūr. With the help of Fa'ik, Maṣṣūr was soon able to return. A quarrel broke out between Abu 'l-Kāsim Simjūr and Bektūzīn over the governorship of Khurāsān; Maḥmūd of Ghazna also intervened, but the definite conquest of Khurāsān by

the Gharnawids did not yet take place. Manṣūr was deposed by Fāṭik and Bektūzin and blinded. His brother, 'Abd al-Malik, was put upon the throne. Maḥmūd now intervened. He drove 'Abd al-Malik out of Khurāsān and conquered it. On these events and occupation of Transoxania in the same year 389 (999) by Illek Khān, when 'Abd al-Malik was taken prisoner, cf. above, i. 50^a. Here the dynasty ends; on the fate of one member of the family, who was carried off by the Turks, Ismā'il b. Nūḥ al-Muntaṣir, see above, ii. 546^a.

More important than the political history of the Sāmānids, which is very similar to that of other Oriental dynasties, is another aspect of their rule which can only be briefly touched on here. Not only did learning flourish under the aegis of this house (one thinks, for example, of Ḥafāmī, the translator of al-Ṭabarī's chronicle; cf. above, i. 613 *sq.*) but it is from this epoch that modern Persian literature takes its rise. It is sufficient to recall a name like Rūdaki; Firdawsī also began writing in the Sāmānid period. It may be mentioned as a curiosity that one of these rulers himself, Manṣūr II, has left poetical fragments (cf. 'Awfi, *Zuhāb*, ed. Browne, i. 23).

Tornberg, Index of proper names; al-Gardīzī, *Zain al-Aḥbār* (cf. ii. 137; extracts in Barthold, *Turkestan*, not available to me); *Description topographique et historique de Boukhara par Moh. Nersisakhy*, ed. by C. Schefer, Paris 1892 (contains Narsakhī's *Ta'riḥ-i Buḡārā* in an abbreviated Persian version with a continuation and the history of the Sāmānids from al-Kāẓimī's *Ta'riḥ-i Gushā*, a Persian translation of the sections relating to the Sāmānids in 'Uthbī's *Ta'riḥ-i Yamīnī*, which found its way into a later compilation, etc.); Deffrémery, *Histoire des Samanides par Mirkhond*, Paris 1845. (V. F. BÜCHNER)

SAMARITANS. The Samaritans were in all probability the very first nation to come under the sway of the Arabic conquest and under the domination of Islām, a domination which lasted uninterrupted for centuries. Slender as the contact had been between the dwellers in Nāblus and the Western World throughout the period of Roman and Byzantine rule, they were now entirely cut off from any further intercourse and became practically an isolated island in the sea of Arabic civilisation. It is of symptomatic interest to follow up the now all-embracing influence and to draw some conclusions pertinent to the problem of the character and depth of the influence which one culture is alleged to have exercised upon the other. We have on the one hand the rise of a new culture from the desert and on the other an apparently stagnant literary life which is now stirred, and we have therefore every reason, as it seems, to anticipate some traces of such an influence. This is a point of no mean importance as it has almost become a dogma to assume that whatever parallel is found in two literatures of which one is Arabic, the priority and originality belong to the Arabic whilst the other does nothing but borrow. It is forgotten, however, that the Arabs were the last of the eastern nations to appear on the horizon of civilisation and culture; they were the last and did not originate much at the beginning. On

the contrary, they were simply the heirs of hoary civilisations; true they were eager to enter upon that rich inheritance and quickly added to it. But the way in which they succeeded in adopting and assimilating the older civilisations is a proof of similar adaptability in any earlier period, however scanty the literary data may be. Still the desire of ascribing to the Arabs all initiative and originality has greatly obscured or impeded such investigations; the syncretistic character of the Kor'an alone should suffice to prove this adaptability. No one doubts the multiple origin of Muḥammad's sources of information and Jewish and Christian influences have been freely recognised. The greater familiarity with these literatures favoured such conclusions, whilst one might say that complete ignorance of matters Samaritan favoured the prejudice on behalf of the Arabs. Insufficient knowledge of Samaritan traditions and literature prevented the suggestion of any possible influence from that quarter. Added to this was the aforementioned assumption that if anything were found in the Samaritan similar or akin to Islāmic tradition and practice, the Samaritan must have borrowed from the former. Recent investigations of the remnants of Samaritan literature, however, have shown that this literature represents a tradition which is at least a thousand years older than Muḥammad and which contains writings going back to the first centuries before and after the Christian Era. The Samaritans are characterised by complete fossilisation and a fixed determination not to change or alter anything. No difference of importance can be discovered between the teaching and practice of the first centuries and those of relatively modern times; their whole strength rested in this immutability and in their imperviousness to outer influences. Continuity of life in one spot and continuity of worship warrant the assumption of reliability of tradition, and if, as will be seen, a strong similarity will be detected between Arabs and Samaritans in some important points, the presumption is justified that the Samaritan tradition is the older and the Muḥammadan the later, these having borrowed it from the Samaritans.

The numbers of the Samaritans in olden times and the position which they occupied have been greatly underrated. They were the representatives of the Northern Tribes and were scattered in large numbers throughout the Babylonian and Persian Empires and moreover were always found side by side with the Jews. By their doctrinal opposition to the Jews they formed as it were a bridge between the latter and other heterodox movements. Sufficiently Jewish by their strict adherence to the Law of Moses, they yet rejected the Prophets and withheld their allegiance from the house of David. They were the first to accuse the Jews of tampering with the Holy Scriptures, an accusation which was afterwards taken up by Christian, Muḥammadan and Gnostic sects. For the Samaritans to have changed a single jot or tittle of their dogma, to have modified their form of prayer, or to have introduced new angelological views and tenets was a sheer impossibility; only a new sect separating itself from the older stem could have ventured upon such changes thereby justifying the separation.

There were indeed sects among the Samaritans but as far as can be ascertained from the information which can be gleaned from Samaritan Chronicles they belong to a period centuries older

than the date of Islam and have nothing in common with it. One cannot, therefore, insist too strongly, that generally speaking and for the older period, the Samaritans owe nothing to Islam and that the indebtedness lies rather with the latter.

The conquest of Palestine by the Arabs must have been hailed with joy by the Samaritans; it freed them from the vindictive and tyrannical persecution of the Byzantine rulers and the Church. The darkest period for the Samaritans was from the time of Hadrian, who, as stated by them, destroyed their literature, down to the period when the Arabs put an end to the Christian domination. The relation between the new rulers and the Samaritans seems to have been one of friendly intercourse; freedom of faith and liberty of action were granted to them on the strength of documents purporting to have emanated from Muhammad himself and corroborated by 'Ali b. Abi Talib.

The very words of these documents are given by Abu 'l-Fath in his Arabic-Samaritan chronicle, the genuineness of which has never been disputed. In any case they seem to have been a source of protection to the Samaritans for many centuries. It was only the fanatical intervention of some of the local governors which caused some temporary loss and trouble. On the whole the relations remained friendly, for besides the documents the Samaritans also belonged to the "tolerated" religions. There is a story related by Abu 'l-Fath in connection with the granting of these documents. According to him, three wise men, astrologers, had seen that Muhammad would arise and would succeed. One was a Jew, one was a Christian and one was a Samaritan. All three went to Muhammad to foretell his future greatness. He was much impressed, accepted their prognostications gratefully and was able to induce the Jew and the Christian to embrace his faith. The Jew was the famous Ka'b al-Ahbar and the Christian Ab Samiya. The Samaritan, however, refused to embrace the new faith and was able to impress Muhammad more than the others by telling him that he had a blemish between the shoulders, like that of a leprous man. Out of gratitude for the prophecy, Muhammad granted liberty of life and freedom of conscience to the Samaritans. This document, written by Muhammad, was corroborated by 'Ali b. Abi Talib. The name of the Samaritan was Sasata (?), who afterwards assumed the name of Qabasa, being the ancestor of the family of Qabasi on whom more later on. These three persons typically represent the three faiths which contributed to the shaping of Islam.

How much did the Samaritans contribute? The claim now put forward on behalf of the Samaritans is a novel one and only a few points will be selected where a proof of Samaritan origin can be advanced. This proof consists of showing that the Samaritan dogmas or principles rest directly on a sentence found in the Pentateuch. Their contribution may sound exaggerated but it will not be found so when carefully investigated.

I start with the well-known Muhammadan proclamation of faith: *"La ilaha illa 'llah"*: "There is no God but Allah". This corresponds as closely as religious doctrines will allow to the Samaritan formula repeated over and over again by Markah and his contemporaries, 'Auram Dara and Nana: *"Lil elah illa elah"* (or, according to their pronunciation, *add*) "There is no God but one." To

the Samaritan as well as to the Jew, the Unity of God was the fundamental principle as was also the case with Muhammad who proclaimed Allah as the real God in contradistinction to the heathen gods. The name of Allah was the chief element and decisive factor of the new faith and had therefore to be chosen instead of Ehad. The above mentioned Samaritan writers belong to the third or fourth centuries, two or three centuries before Islam. There cannot be any question of interpolation, as the formula appears so frequently and is so interwoven with the contents that it forms an integral part of the poems. It is also found in the "Prayer of Joshua", which is unquestionably one of the oldest Samaritan hymns and which stands in close connection with that ancient Samaritan Book of Joshua of which so little is known and to which reference will be made later on. The Samaritans assume the origin to be known and the occasion when these prayers were uttered. But whatever the date may be which can be assigned to it, there cannot be any doubt that the Prayer of Joshua must be older than Markah and probably only a little less old than the *Enqira* or Opening Prayer.

We also have in the *Enqira* the proclamation: "there is no God but one", and the reference to the Biblical passage upon which it principally rests (Deut. iv. 39), where the Samaritan adds at the end *milebade* meaning "none else beside him", i.e. there is no God but that one.

Further the very first word of the Kor'an is *Bismillah*, "in the name of God". A special value has been attached to this formula and it has been used by Muhammadans for all and every religious function. In fact every religious action begins with it. It is not an invocation of God direct but a call on His most powerful and efficacious Name. This is part of Jewish and Samaritan mysticism and lies at the root of most of the magical speculations and conjurations of the ancient world. Only through Jewish or Christian, but more especially Samaritan influences could Muhammad have obtained that knowledge, and then used this formula as he did, placing it at the very beginning of the Kor'an. The Samaritans derive it from Deut. xxxii. 3, where they read: *Ki behem Adomai elah*, "For I call on the name of the Lord". — The Samaritan reading *behem* instead of *elam*, as the Jews read, approximates this form to the Arabic *bismillah* — and this phrase occurs over and over again during prayer and in fact proceeds every other portion, even the *Enqira*. Markah has devoted a special portion of his Commentary to it and Qabasi has written a special treatise (see below).

Now as it stands in the Arabic, it is quite abrupt; it has no end and no connection with the form of invocation. What does it mean? "In the name of God the All-merciful." There is no verb to complete the sentence and it is not sufficient to appeal merely to the imagination.

It becomes intelligible, however, if compared with the parallel Samaritan invocation "In the name of God we begin and finish", or, according to the variant: "In the name of God we begin and prosper". This form is the one constantly in use among the Samaritans; it stands at the head of the *Azarta* which contains the collection of the most ancient prayers and hymns, it stands at the head of the ancient phylactery and is at every beginning. In time this formula in its entirety

became abbreviated through its constant use and reached Muhammad in this form, in which the second part was so well known and understood that it was omitted. But it is really the beginning of a formula without the completion of which it has no real meaning. And even so, it rests upon a theory new to the Muhammadan world, i.e. the mystic nature of the Name of God.

I do not wish to discuss here the other words, the attribute "All-merciful", which corresponds to the Samaritan duplication of the same word in order to express the superlative: *Rahum Rahumim*, just like the Arabic. Let us rather turn to the *Fātiha* itself, also a kind of succinct Confession of Faith. We do not find any such confession standing at the head of prayers or of any religious liturgical books among Jews or Christians; a comparison with the Christian Paternoster misses the point. It has nothing in common with it, either in form or in contents. But if we turn to the Samaritan we find precisely the same practice. Reference has already been made to that Opening Prayer called by the Samaritans *Enqira*. It is a more elaborate Confession of Faith, a prayer for Divine Protection which is said silently. It contains the principal doctrines of the Samaritans and begins with the words: *Amadi kamekha al fatah rahamkha*, "I stand before Thee at the gate of Thy mercy". *Fatah* = *Fātiha*, Opening or Gate, and thus the very word "*fatah*" stares us in the face. Standing by itself it might be looked upon as a mere coincidence, but taking it together with the other declarations in the *Enqira* and the fact that it occupies the same prominent position as has been assigned to the *Fātiha*, this must be something more than mere coincidence.

In the *Enqira* there is also the *qibla* or turning in prayer to the Sacred Mountain. True the direction towards the Sanctuary was also known among the Jews. Daniel (iv. 16) turns three times towards Jerusalem when bending his knees in prayer. With the Samaritans, however, it is a fundamental dogma forming part of their religious practice, in as much as the worship on Mt. Garizim was the principal difference between them and the Jews. Muhammad may have borrowed this practice from the Samaritans; like them he invested it with a special religious character more stringent than the Jews. He also changed the direction when he broke with the Jews showing thereby the importance he attached to the *qibla*.

If *sajjada*, hence *masjid*, are words borrowed by the Arabs to designate worship, i.e. divine worship, then, though this word is Aramaic, still none the less curiously, the Jews have refrained from making any technical use of it for any liturgical purpose, nor does it seem to have obtained the same general acceptance in Syriac. In the Samaritan, on the contrary, it is in the *Enqira* and is the standing technical expression for "Divine worship", and occurs over and over again in almost every hymn and prayer.

Of a far greater importance is the parallelism between Muhammad and Moses in the conception of the Samaritans. He is the Only Prophet and is venerated in a manner approaching apotheosis. The most important attribute assigned to Moses is that of the Only Prophet, Faithful Prophet, the Messenger chosen by God to perform the miracles and wonders; moreover, there is none like him, nor will there be until the End of Days.

Such a designation is unknown in Jewish literature, where Moses is always known as Moshe Rabbenu, i.e. Moses our Teacher or Master. *Ha-nabi kam-naman* or *ka-hallah* is the standing phrase among the Samaritans and rests among others on the statements often found in the Bible where the words "prophet", "sent" and "sending" occur in connection with Moses. The close parallelism between this title given to Moses and the corresponding *Kasul Allah* attributed to Muhammad can be followed down to minute details, but this is not the place for such an investigation.

Special attention must still be drawn to one point of extreme value. It is the declaration found in the *Fātiha* in the belief in a Day of Requital and Punishment. The Samaritans derived it from the words in the song of Moses (Deut. xxxii. 35) where they read "On the day of Vengeance and Reward" (*ayem*) instead of the Massoretic reading "To me belongs vengeance and reward" (*ti*). The Samaritans ascribe great eschatological importance to this song. This reading is moreover corroborated by the Septuagint and is thus of very high antiquity. The "Day of Judgment", no doubt, plays a very great role in Jewish and Christian Eschatology, but, as far as the Jews are concerned, it has never been introduced in any formal principle of faith nor is it found in the liturgy, whilst with the Samaritans it has assumed a capital importance, so much that it forms part of the *Enqira*. Mention may also be made of the curious parallel that both Muhammad and the Samaritan recognise practically four angels only who form the celestial hierarchy; the names are somewhat different (Gabriel occurring in both) but there is the coincidence that they are limited to four. Jewish and Christian angelology was ever so much richer at the time of Muhammad.

In view of what has been said before I am giving here a slightly abbreviated translation of the *Enqira*, particularly of the portion affected by this investigation:

"I stand before Thee at the gate of Thy mercy, O Lord my God and God of my fathers, to recite Thy praises and Thy numerous greatnesses according to this my strength. I, the poor and weak one, I know this day and I have taken it to my heart that Thou art the Lord God in the heavens above and in the earth beneath and there is none else beside Him. . . . Blessed be Thy holy name for ever. There is no God but One. O Lord, we will not worship any one but Thee for ever, and we will believe only in Thee for ever and in Moses, Thy Prophet, and in Thy Writing of Truth and in the place of Thy worship, Mount Garizim, Bethel, the mountain of rest and inheritance and of the *shékina* (sanctuary), and in the Day of Punishment and Reward. *Ehye asher Ehye*. The Lord is our God, the Lord is One alone. How great is His goodness and mercy. I stand in Thy hands. I pray for Thy mercy and loving kindness, and I speak: "O my Lord!" with my heart and with my soul."

If we now compare the first part of the *Fātiha* we shall find that it runs as follows: "Praise be to God, the Lord of all creatures, the most Merciful, the King of the day of judgment. Thee do we worship and of Thee do we beg assistance." The parallelism between these two forms of prayer is so striking that one must be dependent upon the other. In both the same fundamental dogmas

are proclaimed and in language they are similar to one another. There cannot be any question which of these two is the more ancient and therefore the original. The Samaritans did not wait one thousand years and more in order to formulate their prayer and Confession of Faith; moreover, it rests in every detail upon the words of Scripture to which distinct reference is made. Again almost every one of these principles is found repeated over and over again in Markah and in the most ancient prayers and hymns in the Samaritan liturgy. Not so with Muhammad, who had to have recourse to other older forms which he used as patterns and so worded that neither Jew, Christian nor Samaritan could take umbrage at them; at the same time these new principles enunciated by Muhammad marked a definite break with the pagan beliefs of his contemporaries.

No less important is the parallelism between the Arabic Mahdi and the Samaritan Taheb. According to Ibn Khaldūn, "the whole body of Muslims throughout the centuries have held that at the end of the age a man of the family of the Prophet must appear who will strengthen religion and make justice manifest. The Muslims will follow him and he will gain possession of the Muslim kingdoms and be called al-Mahdi" (Guillaume, *Traditions of Islam*, Oxford 1924, p. 89 sq.). So far Ibn Khaldūn; the rest, which is evidently borrowed from Jewish and Christian legends about the Messiah and the Antichrist, belongs to a later period of tradition. As it stands, the agreement between the Mahdi and the Taheb is absolute: in both cases he is either the Prophet Redivivus or the descendant of Muhammad or of Moses or the tribe of Levi. He is the Restorer who will bring the people back to the old faith and old glory and who will cause the faith to triumph. It is a different type from that of the Jewish Messiah or the Christian Jesus and he does not descend from heaven. He is human born and probably in both cases will live only for a short time.

Another point, the significance of which cannot be overestimated, is the fact that Muhammad seems to know the Pentateuch and the Psalms only; he does not know any of the prophetic or historical writings. If he had obtained his information from the Jews, this ignorance would be very surprising indeed, but if he had it from the Samaritans, it would be quite natural. A knowledge of the Psalms may have come to him from Jews or Christians, although it must not be forgotten that the Samaritans also have hymns and psalms of their own. Again among the Biblical personages Adam, Noah and Abraham are counted as prophets. No such position is assigned to them, at any rate, nor to the first two, by the Jews, whilst to the Samaritans Adam and Noah are High Priests and in more than one old treatise Adam is considered as a Prophet who foretells the future Deluge and to whom is entrusted the secret of the calendar.

Among the ceremonies the peculiar forms of washing and ablutions which are obligatory before prayer are common to Muhammadans and Samaritans and in the practice of prayer, in the prostrations and in peculiar attitudes etc., Samaritans and Muhammadans again show so much similarity that a close connection between them cannot be denied. We must realise that an Arab who wished to become a Muslim had to change entirely his

mode of life and faith; he had to give up all his heathen practices and adopt not only new principles but also new ceremonies and forms of prayer. To him everything was new. With the Samaritan, however, all his ceremonies were the heritage of a long past; to them the slightest change meant giving up his faith and forfeiting the claim to which his people have clung with so much tenacity as being the true keepers of the faith. Any deviation from tradition meant annihilation, nor was there any reason why they should have done so considering they have never been forced to abandon their ancient faith; on the contrary, they were treated with every possible tolerance and even the virulent persecution of the Church had not been able to affect their adherence to the old faith and practice. The Jews offer an example in point; they have lived for a far larger number of centuries in Christian environment; however, every attempt has been made to induce them to forsake the religion of their fathers and when blandishments had no effect they were subjected to cruel persecution. They mixed freely to with the world around them and yet not a single trace of Christian influence can be detected in Jewish religious practices and in their ceremonies and principles. How much less could this, therefore, be the case with the Samaritans who were left to themselves and who show, indeed, no perceptible change in their principles and ceremonies as far as can be ascertained in their literary tradition.

Reference may be made to one more point, I mean the mysterious words or complex of letters at the beginning of many a Sūra. I venture to believe that the parallel practice of the Samaritans will offer a satisfactory solution. The Samaritans denote the single sections of the Law (*ḥiṭṭa*) by taking out from the contents a single word which is sufficiently characteristic to denote the whole section. Thus these words become catch-words and are used as headings in the Arabic translation and especially in the extremely ancient phylacteries and amulets. There are also special lists drawn up of these single words (so in my code). In the phylactery this process of abbreviation has been carried one step further; there the catch-words have been reduced to single letters, not necessarily the initial letter, but very often a medial or final letter which has been chosen for the purpose. This discovery of mine has enabled me to recognise the same practice in the Greek Magical Papyri and the Latin conjurations, thus solving a problem which has baffled scholars for many a century. But besides the magical application, its principal value was to serve as a mnemotechnic sign to assist the reader in remembering the section in question. This therefore is probably the meaning of those words and letters which are found at the heads of the Sūras; they are either catch-words picked out of the context or are a combination of letters taken from such catch-words and placed at the head, as in the case of the Samaritan *ḥiṭṭa*.

More space has been devoted here to the consideration of these points than might perhaps be warranted for a brief survey of the Samaritan literature and the relation in which the Samaritans stood to the new religion rising as late as the seventh century. No one can gainsay the importance henceforth to be attached to the value of the comparative study of Samaritan traditions and Muslim

principles of faith. The subject has hitherto not yet been touched upon by anyone, and I venture to think that a new field of research has been opened up; I submit that the further study of the Samaritan material as soon as it is made more accessible will strengthen the results here tentatively offered for the first time. But I do not hesitate to say that a comparison of Samaritan and Muhammadan religious principles will show that the Samaritans have exercised a deep influence upon the moulding of Muhammad's religious system and upon the shaping of Islam. Far from being influenced by Muhammad, the Samaritans were those who exercised the influence upon Muhammad.

The situation, however, changed with the final victory of Islam. I do not wish it to be understood that even after that period the Arabic literature had any decisive influence upon Samaritan faith and practice. True the Arabic conquest was not only a political domination, but was a religious conquest as well. A new form of faith was forcibly imposed upon the conquered peoples with the grudging exception of the few so-called "tolerated" religions. A new Holy Book was substituted for the others cherished and venerated by the other nations. Arabic thus became the language of the Sacred Script, and, of course, not only were Sūras of the Korān, the Liturgical lessons, recited in Arabic, but prayers and hymns were now composed in that language exclusively and the people forced to learn it. It became the new language common to all the peoples under the Arab sway and the only means of intercourse, with the result that it gradually superseded all the other vernaculars among the nations being also the Jews and Samaritans.

In a way Islam proved a greater danger to the latter than Christianity or Mazdaism. There was much similarity in dogma and practice and above all there was the pure monotheism common to them. It was natural that they should feel attracted to it, and through being treated with great tolerance and forbearance would not hesitate to exchange their old vernacular, Aramaic, for Arabic. Thus the Samaritans gradually gave up the Aramaic dialect which they spoke and learned to speak Arabic and later on used it for their writing. It must be mentioned that the vernacular spoken by the Samaritans was invariably Aramaic and not Greek; there is no trace of Greek in old Samaritan traditions. Jews and Samaritans had long before discarded any use of that language. All the ancient literary monuments of the Samaritans were written in that peculiar Aramaic which is characteristically their own. The only exception was the Biblical Lessons which they read on Sabbath and Festivals and also recited on special occasions; to these were also added the Florilegia or anthologies called *Ḥaṭṭ* which consisted of Biblical verses strung together according to a special system for liturgical purposes. On the contrary all the prayers, poems and hymns were written in that popular Aramaic dialect. They also translated the Pentateuch into this same popular language and the *Targum* therefore takes its place as one of the oldest writings.

The question arises: when was this language displaced by the Arabic? Here the parallelism with the Jews and especially Jewish sects who developed under almost similar conditions will prove helpful. As far as can be ascertained, it

must have taken at least two or more centuries before the people had so far forgotten the old Aramaic as to use Arabic freely and to introduce it into the literature of the Divine Service. Very little, if anything, can be traced back before the ninth century. It seems that dissenting sects, just like the Karaites among the Jews, were among the first to break with the old language and practice, although 'Anan still uses Aramaic for his writings. With the Samaritans it was a natural sequence of events which forced them to abandon Samaritan Aramaic for the Arabic language. The knowledge of the former was fast dying out. As its use was primarily for liturgical purposes, it seems most likely that the first things to be translated were the prayers and hymns. They were all in Samaritan, as mentioned before, and it is obvious that the first duty would be to make the people understand their own prayers; the translation of the Bible must have come much later as there was no pressing necessity for this; Hebrew was and is the sacred language and to this very day the Biblical Lessons are read in Hebrew; the *Targum* sufficed to interpret it to the worshippers. According to information obtained by me from the Samaritans, its use was continued in the *Kināḡa* down to the end of the seventeenth century. The man appointed to that post was called the *Ḥaṭṭawī* and the last one died about that time. Since then the recital of the *Targum* has ceased. It must be noted, however, that its place has not been taken by an Arabic translation. A careful examination of the *Targum* enables us to realise the growing influence of Arabic. As remarked before, the knowledge of the Samaritan language was fast disappearing; it was limited to the small circle of the learned and this has remained so down to this very day. There are still a number of priests who are conversant with the old Samaritan, but the rest know Arabic only. In time the *Targum* became merely a religious tradition to which they adhered with their usual tenacity, for it had lost its meaning for the people. Slowly some of the expressions became obsolete even to the better instructed, and so we see a gradual change until it is entirely discarded. Arabic glosses were introduced to explain archaic words, and later on these glosses became part of the text. Through being in constant use, they were so much changed and altered that after the publication of the *Targum* they were classed as ancient so-called Kuthan words, remnants of the pre-exilic period. It was the merit of S. Kohn to have exploded that fallacy and to have recognised in them corrupt Arabic words. Later on a complete translation into Arabic was made. There is a serious difficulty in determining the date of the translation and the name of the author, nay whether there were not two translations which have been ascribed to two men of the same name Abū Sa'īd, but too little is so far known about the different recensions to allow of a definite conclusion.

But before trying to answer this question it is necessary to ascertain the dates of the translation of the prayers in the *Kināḡa* or *Ḍaṭṭur*, as the "collection" of the oldest hymns and prayers is called. It contains unquestionably the old stock which has been handed down from ancient times and is used in the prayers all the year round. A comparison of the text found in the old manuscript Cod. Br. Mus. Or. 5034 of the middle of the thirteenth century and the latest copies from the middle

and end of the last century written by the late High Priest Jacob son of Aaron shows no appreciable difference. Without exception, the Arabic is written in Samaritan script in all the books used for divine worship. They use the Arabic alphabet for profane writings alone and it is only in quite modern times that they have begun to write the translation of the Bible in Arabic characters to face the Hebrew text. In these translations we do not find classical Arabic but mostly the Palestinian dialect; moreover, they very seldom use diacritical points to differentiate between similar letters of the Arabic alphabet. For a detailed survey of the literature of the Samaritans the reader is referred to the separate article on this subject accompanying this fasciculus.

It must be emphatically stated that practically none of these books have hitherto been published with the exception of the Arabic translation of the Pentateuch (Gen.-Lev.) (Kuenen, *Specimen*, Leiden 1851—1854), the chronicle of Abu 'l-Fath by Wilmer (Gotha 1865), the Book of Joshua by Jaynboll (Leiden 1848), and a few grammatical fragments by Nöldeke in the *G.G.N.*, Nos. 17, 20. Continuing to publish them in Arabic would reduce to a large extent the number of those who are specially interested in the traditions of the Samaritans, whilst publishing them, as anticipated by me, in their Hebrew-Samaritan version, would at once make them accessible to a far larger circle of scholars interested in these studies. Besides this I have also obtained through my correspondence lists of books extant and as far as possible such information as they could give of a biographical character. The latter, however, is extremely confused and contradictory. Under these circumstances my reference to bibliography can only be very brief inasmuch as copies of most of these writings still extant and accessible are in my possession (they are now being acquired by the British Museum). Mr. D. S. Sassoon also has acquired from the Samaritans a considerable number of valuable manuscripts, modern copies of the same books, and at the same time also the old copies of works of the afore mentioned Menadja, Shams al-Din and al-Askari, which were up to quite recently in the possession of the Samaritans. Steinschneider has given full references to all the other Samaritan manuscripts in the European libraries. Further reference should be made now to the articles of A. Cowley in the *Jewish Encyclopaedia*, x. 676 sq., who gives most ample references and also to his *Samaritan Liturgy* (Oxford 1909), especially the Introduction, in vol. II. 17 sq.; W. G. Moulton in *Hasting's Encyclopaedia of Religion and Ethics*, xi. 161 sq.; Montgomery in *The Samaritans* (Philadelphia 1907), gives a brief sketch. Articles on the Samaritans and their literature in other encyclopaedias which have since appeared are more or less out of date and add nothing more to our knowledge.

(M. GASTER)

SAMARKAND, with Bukhārā (q.v.), the principal town of Transoxiana (Sogdiana, Soghd (q.v.), *Mā warā' al-Nahr*), in modern times capital of the province of the same name in Russian Turkestan, on the south bank of the river Soghd (Wādī 'l-Soghd, Zarafshān) in a situation described by Oriental as well as Russian and European travellers as a veritable Paradise. The town — the second part of the name of which contains the Eastern Iranian word for "town", *kand*, frequent

in Eastern Iranian place-names (cf. Buddh.-Soghdian *knd-*, Christ-Soghd. *kath*, *kantā*), while the first part has not yet been satisfactorily explained (cf. the attempts by Tomaschek, *Centralasiatische Studien*, I. 133 sqq.) — is first found in the accounts of Alexander's campaigns in the east as Maracanda, *Μαρακανδα*. Arrian (iii. 30) calls it *Βακτριανή*; *Ερζιμανών* *χώρας*. Alexander occupied it several times during the fighting with Spitamenes and, according to Strabo (xi. 11, 4), razed it to the ground (while Arab legend makes him founder of the city). Under the Diadochi — after the partition of 323 —, as the capital of Sogdiana, it belonged to the satrapy of Bactria and was lost to the Seleucids with Bactria when Diodotus declared himself independent and the Graeco-Bactrian kingdom was founded during the reign of Antiochus II Theos; henceforth it was exposed to the attacks of the northern barbarians. From this time down to the Muslim conquest it remained historically and economically separated from Irān, although cultural intercourse with Western lands continued. (On the settlement of Manichaeans in Samarkand cf. J. Marquart, *W. Z. A. M.*, xii. 163 sq.; the attempts made by E. West to refer Ctn and Chistān in the *Bundahishn* and *Bahmanyast* to Samarkand are very unsatisfactory.) The only positive information is given by Chinese Imperial historians and travellers (of which the former are unfortunately for the most part only available in obsolete translations). From the Han period the kingdom of K'ang-Ku is mentioned, whose chief territory, K'ang, is definitely identified in the Tang Annals with Sa-mo-kian = Samarkand (cf. the passages in C. Ritter, *Erdbunde*, vii. 2 657 sqq.). According to the Annals of the Wei, compiled in 437 A.D. (cf. F. Hirth in J. Marquart, *Die Chronologie der alttürkischen Inschriften*, p. 65 sq.), the Cao-wu dynasty related to the Yü-ei (Küshān) had been reigning here since before the Christian era. Hsüan-tsung visited Sa-mo-kian in 630 A.D. and briefly describes it (St. Julien, *Mémoires sur les contrées Occidentales*, i. [1857], p. 18 sq.; S. Deal, *Sa-yu-ki, Buddhist Records*, i. [1884], p. 32 sq., with valuable bibliographical note on p. 101).

The Arabs, who did not begin to penetrate systematically into Transoxiana till the appointment of Kutāiba b. Muslim as governor of Khurāsān, found Samarkand ruled by the Tarkhān (Chin. To-ho-en). With regard to the statement in al-Birūnī, *Āthār*, ed. Sachau, p. 101, = (cf. Ibn Khordādhbih, *B. A. G.*, vi. 40, 3), that the native rulers of Samarkand bore the well-known (Turkish) title *tarkhān* (*targan* in the Orkhon inscriptions), we are forced to see in this appellation a title and not a name as might appear from the Arabic sources. The reference is to a representative of one of the local Turkish dynasties, which in the last centuries before Islām had disposed of Ephthalite rule in Transoxiana.

In 91 (709) the Tarkhān made peace with Kutāiba on paying tribute and handing over hostages (al-Tabarī, ii. 1204), but was soon deposed by his subjects who were angered thereby. His place was taken by the Khshēdh Ghurak, Chin. U-le-kia (al-Tabarī, ii. 1229), who was forced by Kutāiba to capitulate in 93 (712) after a long siege of the town (*op. cit.*, p. 1247). He was left on the throne but an Arab governor was put in the town with a strong garrison; along with Bukhārā the town became a base for the further conquest and

Islamisation of the land, which was frequently shaken by the risings which, provoked by the chicaneries of the governors, disturbed Transoxiana in the last decades of the Umayyads. (On the Arab legend which connects Samarkand with the legendary Hunyar kings and makes it destroyed by Shīmar on his campaign against China — Shīmar-kand = Shīmar destroyed [it] — and rebuilt by Iskandar cf. J. Marquart, *Erānshahr*, 1901, p. 26¹, where to the references in Yāqūt should be added al-Tabarī, i. 890 *agg.*, al-Kazwīnī, *Ajhar*, ed. Wüstenfeld, p. 360 etc. The legend ought to be systematically investigated).

The 'Abbāsīd Ma'mūn in 204 (819) gave the governorship of Transoxiana, especially Samarkand, to the sons of Asad b. Sāmān and henceforth it remains — unaffected by the risings of the Tahirids and Saffarids — in the hands of the house of Sāmān till Ismā'il b. Ahmad destroyed the power of the Saffarids in 287 (900) and founded the Sāmānīd kingdom, which meant a century of greatest prosperity for Transoxiana, such as it was only to see once again 500 years later with Timūr and his immediate successors. The capital was, it is true, moved to Bukhārā but Samarkand retained first place as a centre of commerce and culture, especially in the popular estimation of the Muslim world.

It is to this period that the descriptions by al-Isfahārī, Ibn Hawkal and al-Maqdisī refer. They show that Samarkand had the typical tripartite formation of Irānīan towns (cf. Barthold, i. 810^b): citadel (*kūhandīz*, arabicized *kūhandīz* or translated *kal'a*), the town proper (*shahrīstān*, *shāhristān*, *madīna*) and suburbs (*radd*). The three parts are here given in their order from south to north. The citadel lies south of the town on an elevated site; it contains the administrative offices (*Dār al-Imāra*) and the prison (*habs*). The town itself, of which the houses are built of clay and wood (cf. E. Herzfeld, *Islam*, xl. 162, and E. Diez, *Persien*, i. [Kultur in der Erde, vol. xx., Hagen-Darmstadt 1923], p. 20), is also on a hill. A deep ditch (*kān-dāz*) has been dug around it to obtain the material for the surrounding earthen wall. The whole town is supplied with running water which is brought from the south to the central square of the town called *Ka'at al-Tāz* by an aqueduct, a lead-covered artificial channel (or system of lead pipes?), running underground. It seems to date from the pre-Muhammadan period as its supervision, as is expressly stated, was in the hands of Zoroastrians, who were exempted from the poll-tax for this duty. This aqueduct makes possible the irrigation of the extensive and luxurious gardens in the town. The town has four main gates; to the east the *Bāb al-Say* — a memorial of the ancient connection with China due to the silk trade —, to the north the *Bāb Bukhārā*, to the west the *Bāb al-Naw-bakht* — which name, as in Bukhārā and Balkh, points to a (Buddhist?) monastery — and to the south the *Bāb al-Kabir* or *Bāb Kīshīk* (*Bāb* stands for the Persian *Darvāza*). The lower lying suburbs adjoin the town, stretching towards the river Soghd and surrounded by a wall with 8 gates. In them lay the majority of the bazaars, caravanserais and warehouses, which were rare in the city itself. The government offices of the Sāmānīds and the Friday mosque were in the city itself. The great period of building in Samarkand only begins with Timūr.

Among native products — as Bābur tells us — the paper of Samarkand, the manufacture of which had been introduced from China, was specially famous. The most celebrated sanctuary of the town, also specially mentioned by Bābur and still held in high honour, is the tomb-mosque of Kāsim b. 'Alī who is said to have converted the city to Islām in the time of 'Uthmān (cf. I. Goldziher, *Verlesungen über den Islam*, p. 218). Among the famous men of Samarkand of the period one at least must be mentioned, the theologian Abū Maṣ'ūr al-Māturīdī (d. in Samarkand in 333 = 944; Māturīdī or Maturīdī is a quarter of Samarkand; cf. al-Sam'ānī, *Ansāb*, fol. 498a) who exerted a decisive influence on the dogmatic development of Eastern Sunnī Islām.

After the fall of the Sāmānīds, Samarkand was ruled by the Karakhanīds (Ilek-Khāns; q. v., ii. 465 *yy.*). In 495 (1102) the Karakhanīd Arslān Khān Maḥammad owned the suzerainty of the Seljūq Sandjar (q. v.). His descendants remained in power when forty years later, after the great victory of the Karakhanīds over Sandjar at Kaṭwān in 536 (1141) the Gūrkhāns became masters of Transoxiana. About 1170 Benjamin of Tudela visited the town and found 50,000 Jews in it (M. N. Adler, *The Itinerary of Benjamin of Tudela*, London 1907, p. 59). The Gūrkhāns were overthrown in 606 (1209) by the Khwārizmshāh Maḥammad b. Takash. The latter's terrible opponent, Čingiz Khān (q. v.), laid siege to Samarkand only a few months after he had crossed the Jaxartes, on his way from Bukhārā which he had completely destroyed. Fortunately for the city it surrendered in Rabi' I, 617 (May, 1220). Although the city was plundered and many of its inhabitants were deported, a number of its citizens were allowed to remain under a Mongol governor. For the next 150 years it was but a shadow of its former self. Ibn Battūta (iii. 52 *agg.*) about 1350 found a few inhabited houses among the ruins.

The revival of the town's prosperity began when Timūr after about 771 (1369) became supreme in Transoxiana and chose Samarkand as the capital of his continually increasing kingdom, and began to adorn it with all splendour. In 808 (1405) the Spanish envoy Ruy Gonzales de Clavijo visited it in its new glory (cf. the Spanish-Russian edition of his itinerary by I. Srennevskiy in the *Sbornik sd. Russk. Jaz.*, 1881, xxviii. 325 *agg.*, etc., with a valuable French Index). He gives Cimesquiente as the native name of the town, which he explains as *aldeia gruesa* 'large (lit. thick) village'; in this we have an echo of a Turkish corruption of the name of the town based on a popular etymology which connects it with *sāmīk* 'thick'. Timūr's grandson Ulugh Beg (d. 853 = 1449) embellished the city with his palace Čihil Sutān and built his famous astrological observatory there; on him cf. W. Barthold, *Ulugh Beg i ego vremya* (Russ. Abad. Nauk., 1918). A very full description of the city in Timūr's day, which may be justly described as classical, is given by the memoirs of Bābur (*Bābur-nāma*, ed. Iminski, p. 55 *agg.*; ed. Beveridge, p. 54^b *agg.*; transl. Pavet de Courteille, i. 96 *agg.*; transl. Beveridge, p. 74–86), who captured Samarkand for the first time in 903 (1497) and held it for some months. In 906 (1500) it was occupied by his rival, the Özbek Khān Shāibānī. After his death, Bābur in alliance with the Šāfawīd Ismā'il Shāh succeeded

in 916 (1510) in once more victoriously invading Transoxiana and occupying Samarkand, but by the next year he found himself forced to withdraw completely to his Indian kingdom and leave the field to the Ōzbegs. Under the latter, Samarkand was only the nominal capital and fell completely behind Bukhārā.

A new era began with the Russian advance across the Sīr-Darya. On Nov. 14, 1868, General Kauffmann entered the old Tīmūrid capital which was now finally lost to the Amir of Bukhārā, Muṣaffar al-Dīn (1860—1885). Since 1871 a new Russian town has arisen in the west of the city, which has been linked up to the Transcaspian railway. In 1882 the citadel was restored. In 1900 the population was about 58,000. We have no reliable information regarding changes since 1917. Unfortunately there is also a complete lack of historically accurate and complete descriptions of the architectural monuments (cf. W. Barthold, *Die geogr. u. hist. Erforschung d. Orients*, p. 173, 179) so that we cannot give any list of them here.

AL-SAMARKANDĪ. [See NĪẖĀDĪ ARṢUL.]

SĀMARRĀ. I. Historical Topography.

Sāmarrā, which is now a mere village, lies on the east bank of the Tigris half way between Takrit and Baghdād.

The original form of the name is probably Irānīan. The following etymologies have been proposed: Sām-rāh, Sā'i-Amorra, and Sā-morra, the last two meaning the place of payment of

tribute. On the coins of the Caliph Sāmarrā is written *Surra man ra'ā*, i. e. "delighted is he who sees (it)".

Sāmarrā was founded in 221 (836) in the reign of al-Mu'tasim by one of his Turkish generals, Ashnās, two parasangs south of the village of Karḥ-Fairūz. The Caliph, perpetually threatened in Baghdād by the mulattoes of his Turkish and Berber mercenaries, sought to settle in a less threatened capital.

Between 221 (836) and 276 (889) seven 'Abbasid Caliphs lived in Sāmarrā. The references in the historians of the Caliphate and in the Arab geographers, Ya'qūt and Vāḡūt, enable us to reconstitute with sufficient exactitude the development of this ephemeral capital during the fifty years of its existence. Built on the eastern bank of the Tigris at a corner where it turns to the south-east, Sāmarrā lay between the villages of Karḥ-Fairūz (or Karḥ Bādjaddā) to the north and Maṣra to the south-east. Two canals — one, the Qanāt Kīrawī, leaving the Tigris above Karḥ-Fairūz, near Dūr, ran to the south-east to rejoin a second canal, the Yaḥūdī, which, leaving the Tigris below Maṣra, ran E. N. E. — thus isolated Sāmarrā and its eastern suburb into a kind of island. On the west bank of the Tigris opposite Sāmarrā lay several castles cut off by a canal parallel to the Tigris, the Ishāqī Canal, entering the Tigris below Maṣra, a little above Balkuwārā.

The town of Sāmarrā proper lay on the east bank; its principal streets were the Sarīḡa Street which ran past the police office and the prison leading to the quarter which bore the name of the vizier Ḥasan b. Sahl; then came the street of Abū Aḥmad b. Raḡīd leading towards the village of Irāḡhiya built on the Kīrawī Canal; this village, which at first bore the name of a Turkish chief, was later called Muḥammadiya. Five other principal streets (*ḡharī*; this term applied to a main street is the same as has been revived in modern times for the streets of Cairo) are recorded: al-Ḥair, Barghamush Turkī (Turkish quarter), Sāliḥ (leading to the military camps or *askar*), al-Ḥair al-Djaddī and al-Khalidj. The historians give us numerous details regarding the important buildings in the vicinity of Sāmarrā, beginning with certain buildings in existence before the capital of the Caliphs was moved thither: the eight Christian monasteries, of which the principal were the Dair Tawāwīs or "monastery of the peacocks", the Dair Mār Mārī and the Dair Abī 'l-Sufra. But the most famous buildings were the palaces. Al-Mu'tasim, who lived at first in Sāmarrā itself, had built there the palace called al-Djawsaḡ; the Caliph Wāṭṭik built there the castle called Ḥārūnī after him. The Caliph al-Mutawakkil, who lived at first in the Ḥārūnī, built or enlarged twenty-four other palaces of which the best known are the Balkuwārā, 'Arūs, Mukḥar and Waḥid. Nine months before his death he was planning a new town to the north half way between Karḥ-Fairūz and Dūr; this town was called Dīḡfariya after his praenomen. The historians, who record many details of the luxury of the palaces of al-Mutawakkil, say that he brought from Persia to use as timber the sacred cypress venerated by the Mazdaeans at Kishmar. Other historians, noting that nothing remains of the splendid buildings of al-Mutawakkil, see in this so swift destruction a punishment from heaven, as retribution for his having ordered the destruction

of the tomb of Husain at Kербелā in 236 A. H. After the death of al-Mutawakkil, Muntasir brought the court to Sāmarrā itself again and took up his abode in the palace of Djawāq. Mu'tamid, the last Caliph to live at Sāmarrā, built the palace of Ma'shūk on the east bank (255 A. H.).

Since the tenth century A. H. the majority of these buildings have fallen into ruins. The great mosque of Sāmarrā alone survived, which stood near the military camps, whence the name 'Askar Sāmarrā' frequently given to this part of the town. The piety of the Shī'a very early located beside the great mosque the site of two tombs of their Imāms — the tomb of their eleventh Imām, Abū Muḥammad Ḥasan called al-'Askarī because he died in Sāmarrā in 260, and the "cave" (*jiḍāb*) in which his youthful successor, Abū 'l-Kāsim Muḥammad al-Mahdī, disappeared in 264 (878). We know that for a thousand years past, the Shī'a pilgrims have been visiting this cave of Sāmarrā, believing that al-Mahdī will re-appear there at the end of time. Al-Sam'āni gives a list of individuals who bore the *nisba* Sāmarrī or Sammurī. Another *nisba* also refers to Sāmarrā, namely Karkhī, applied to men born in Karkh-Fairūz.

SĀMARRĀ. II. Architecture

Sāmarrā is at the present day a vast area of ruins lying on the left bank of the Tigris about sixty miles north of Baghdad. These ruins cover the site of one of the richest and most prosperous cities of the 'Abbāsid period, the building of which cost vast sums.

It was begun in 838 in the reign of the Caliph al-Mu'tasim, son of Ḥārūn al-Rashīd, reached its zenith under Dīfār al-Mutawakkil (847—861) and died with him.

Sāmarrā's brilliant but ephemeral existence gives these ruins a special interest for the student of the origins of Muslim art. Unfortunately, for centuries past, the Arabs have been using the ruins as a quarry for building material, and have hastened the work of time, and in the end nothing has been left standing. Nevertheless, excavations recently undertaken have recovered sufficient information regarding the main lines of construction and decoration to give a very clear idea of the beauty of the Muslim civilization which was then shedding its lustre over the world, and was given expression in this 'Abbāsid city of the 10th century.

The most remarkable remains still standing are:

To the south of the old town on the bank of the Tigris, the great mosque built by al-Mutawakkil with the magnificent palace of the Caliph (*Balkuwāra*) near it on the north. Opposite on the right bank of the Tigris, and built a little later, is a strong castle (*Kayr al-'Ashīk*) the imposing ruins of which are still visible. About half a mile south of this castle is a sepulchral monument (*Jubbāt al-'ulabīgiya*).

Near the ruins of the caliph's city survives a modern Sāmarrā with a golden dome, which commands the desert. It contains some venerated Shī'a sanctuaries.

The great mosque of al-Mutawakkil was built between 846 and 852. It is an immense rectangle with high walls of baked bricks, fortified with round towers. Within it on the south is the principal chamber (*ḥaram*) with twenty-five naves orientated towards the Kibla and three other smaller chambers on the other sides. All these naves, which were over thirty feet high, were supported by marble columns. The *mihrāb* was also flanked by two pairs of marble columns and the prayer-niche was probably covered with valuable carved wood. The four chambers opened on to a large court, the centre of which was occupied by a fine fountain. Outside, against the north wall of the mosque, rose the minaret (*maṭariya*), a kind of huge tower of Babel on a base 100 feet square. Around it outside wound a spiral stairway. This tower was visible more than a day's journey away.

The ruins of Balkuwāra, the Caliph's palace, cover a vast rectangle over a thousand yards each way. On the west front there still stand three arches built of brick (*al-ḥamaf*), the only remains which are now to be found. This palace was built by al-Mutawakkil for the prince al-Mahdī bishāh.

These three arches, facing the river, audience chamber and guest chambers (*ḥuṣn*), open widely out on the valley. Terraces and fountains descend like cascades from them. Behind them are three inner courts which are succeeded by rooms in the form of a cross: throne rooms, numerous smaller rooms and private apartments with luxurious baths. On the east was a large rectangular garden with water-falls surrounded by walls with pilasters on to which open richly adorned little pavilions. To the north was a large creek with stairways of access, with caves and docks cut out in it. Finally behind all this was an agglomeration of houses sheltering the harem, others for the courtiers, a little mosque, and large barracks etc. for the caliph's guard and his cavalry.

The various and diverse elements which constituted the whole of this immense palace were harmoniously arranged. They formed a beautiful composition conceived on a vast scale in the form of \perp of which the long axis perpendicular on the river terminated in the three vaulted rooms of the façade, richly ornamented with sculpture and mosaic.

The general composition of this palace is, however, of a type well known in the tradition of Iranian architecture. Around the Caliph's palace were sumptuous and richly decorated residences. The richest as well as the most modest homes of the city are almost all built on the same plan. Built on the ground floor only they consist of a series of inner courts with fountains into which open the *ḥuṣn* and the living rooms. This type has been perpetuated in certain parts of the east down to our day. The decoration of the interior is an important feature. High carved panels and very probably a decorative frieze always ornamented the public rooms and sometimes all the rooms in the house. The courtyards also were sometimes ornamented but the outer walls were never decorated.

The ornamental carving of the palaces and houses of Sāmarrā is of the same technical skill and gives a high idea of the development of the art at this period. Elaborate panels run

all round the rooms at a height of three feet. Above them are ornamental alcoves (Pers. *takia*). The frames of the doors and the embrasures of the windows are ornamented. The ceilings are adorned with cornices and friezes. The majority of these decorations are in plaster finely designed and executed, sometimes set off with paintings.

The designs are of very different types; some simple, with large veins somewhat coarse in workmanship. Others are more finely chiselled in the flat without relief, others again, accentuating the relief, treat the principal motif in round bosses.

Some of these decorations were carved out of the mass *in situ*, others were cast in a mould on a bed of matting (especially motives continually repeated), and then fixed to the wall. The forms of the designs are very varied. Some are very simple and severe, in straight lines without arabesques. These are the ones found most frequently at Sāmarrā and which are, so to speak, the prototype. Others, on the contrary, often inspired by the fauna or flora, are more elaborate and richer; conventionalised flowers occupy the centre of geometrical figures repeated again and again and connected by ribands, beadings which come to a stop or intertwine, taking the shape of a vase, a lyre or a cornucopiae. Others again more filled with movement unfold in arabesques around bunches of grapes and vine branches.

It has been proposed to make a rigorous classification of the ornamental designs at Sāmarrā into three distinct categories: Style I: Coptic character; Style II: Iranian character; Style III: Mesopotamian character. A classification as methodical as this with labels of origin seems to us dangerous, premature and a source of error. One impression that can be retained from a study of the ruins of Sāmarrā, the discovery of which is valuable for the history of Oriental art, is that several artistic influences met together in this part of Asia without conflicting or seeking predominance. It was a centre that attracted numerous artists from all parts of the globe, drawn thither by the wealth of the court of the 'Abbasid Caliphs and the protection they afforded. Sāmarrā was to be the crucible into which Hellenic, Syro-Coptic and Indo-Persian art were fused together and a new art, Muslim art, was produced.

AL-SAMAW'AL b. 'ĀDIYĀ, more accurately AL-SAMAW'AL b. GHARĪB b. 'ĀDIYĀ, a Jewish-Arab poet, whose residence was in the strong castle of al-Ablak [q.v.] near Taimā. Being a contemporary of Imru' al-Kais [q.v.] he must have flourished about the middle of the sixth century A.D. One of his grandsons is said to have adopted

Isām and to have lived into the Caliphate of Mu'awiya when he was then very old. Except his name there is hardly a trace in tradition of his being a Jew; it is not even certain that he was of Jewish descent.

All the poems ascribed to al-Samaw'al have been collected by Cheikho in his edition of the *Diwān*. Of the few pieces said to have been composed by him a considerable part cannot be considered genuine, including those which most readily suggest that they were written by a Jew. The few remaining *kasida's*, the genuineness of which there is no reason to doubt, contain no indication of the fact, which is not, however, to be doubted, that al-Samaw'al professed the Jewish religion. They much rather breathe the spirit of the old Arab poetry and show in form and matter clearly that he, like his co-religionists, had become in external matters assimilated to the surrounding Arabs and in poetry followed Arabic forms. Poems have also been handed down that are attributed to a son and a grandson of al-Samaw'al.

Al-Samaw'al owes his fame less to his poetry than to his devotion in fulfilling his pledges to his guest Imru' al-Kais, which has become proverbial ('more faithful than al-Samaw'al'). After Imru' al-Kais b. Hudjr — the story seems quite reliable in its main facts — had been leading an unsettled life of adventure in his fight to avenge his father and had lost most of his followers while fleeing before al-Mundhir, king of al-Hira, he sought refuge in al-Samaw'al's castle and was hospitably received with his few followers. When, some time later, he went to the court of Byzantium he left his daughter and his cousin with al-Samaw'al along with his valuable armour and the remains of his paternal inheritance, and asked him to guard them. During the absence of Imru' al-Kais, al-Samaw'al was besieged in his castle by an army, which had presumably been sent by al-Mundhir, because he would not obey the demand to hand over the property of his guest. By chance it happened that the leader of the hostile army captured a son of al-Samaw'al and threatened to kill him if Imru' al-Kais's property was not handed over. As al-Samaw'al steadily refused to betray his trust he had to see his son die before his eyes. The besiegers then withdrew without achieving their purpose.

SAMBAS, a Malay kingdom on the island of Borneo in the N. W. of the Dutch residency of "Westerafdeeling van Borneo". In the west and north-west from Cape Dato to the mouth of the river Duri it is washed by the China Sea, in the S. and S. E. it is bounded by the districts of Mampawa, Landak and Sanggan (the Duri river forms the boundary for part of the way), in the E. and N. E. by Sarawak (British North Borneo); some of the islands off the coast also belong to it. The country is mountainous, especially on the eastern frontier; the ground slopes gradually to the W. and N.; the coastlands are almost everywhere low, flat and swampy, but not infertile. Of the rivers the largest is the Great Sambas; Sambas, the Sultan's capital, lies on the Little Sambas. At the end of 1913 the number of inhabitants had risen to 123,600 of whom 26,000 were Dyaks, 67,000 Malays and 30,000 Chinese; the two first classes are under the Sultan (at present Muhammad 'Alī Saif al-Dīn) who, very much dependent on the Dutch officials, rules the land with his four ministers (*wazir*). The Chinese are direct subjects of the Dutch government. It should be noted that the term Malays does not signify a single ethnic group; the deciding factor here is the Muslim religion: as soon as the heathen Dyaks become converts to Islam, they are counted as Malays and the fairly numerous Javanese and Buginese are also usually counted as Malays. The steady advance of Islam is no more to be ascribed here than elsewhere in the Malay Archipelago to definite missionary activity but primarily to the many marriages of Malays with Dyak women and further to the fact that the social position of the Muhammadans is better than that of the still unconverted natives. The Dyaks are no longer nomads and live on good terms with the rest of the population; they are engaged in the collection of jungle products and carry on a primitive agriculture, mainly on dry fields. The agriculture of the Malays on the coast is also of little importance. The Chinese form the most industrious part of the population; their methods are on a much higher level in every way: they grow rice on well tilled, wet fields and grow other produce also for export. Their position in W. Borneo was for long a very peculiar one. The first immigrants into Sambas (about 1760) were gold-diggers and their number increased so rapidly that they soon formed an important element in the population. They organised themselves into numerous societies and even managed to attain a certain political autonomy; it was only in the latter half of the sixteenth century that the Dutch government succeeded in breaking up these societies. Gold-washing no longer pays and the majority of the Chinese now live by trade and agriculture.

We have no reliable data regarding the early history of the land and the beginnings of the spread of Islam; the kingdom was probably founded by Malays from Djohore; about the middle of the sixteenth century it was subject to the Javanese kingdom of Matjapahit. In the early years of the sixteenth century, about the time when the Dutch East India Company concluded its first commercial treaty with Sambas (1609), the kingdom was under a Malay chief, Ratu Sapodak (Pangéran Ratu), who recognised the suzerainty of Djohore. Ratu Sapodak had only two daughters and after his death he was

succeeded by his son-in-law and nephew Ratu Anom Kusuma Yuda. The latter had only a brief reign; he was soon driven from the throne by his brother-in-law, Radin Sulaimān, a son of a chief of Brunei (Radja Tengah) and of a sister of the Sultan of Sukadana. After his accession Radin Sulaimān took the name of Sultan Muhammad Saif al-Dīn. He was the founder of the present reigning house.

(W. H. RASMEY)

AL-SAMHŪDĪ, NŪR AL-DĪN ABU 'L-ḤASAN 'ALĪ B. 'AND ALLĀH B. AHMAD, a descendant of al-Ḥasan b. 'Alī, according to the genealogy traced by Ibn Fahd, was born in Samhūd in Upper Egypt (al-Sa'id) in the month of Šafar, 844 A. H., where his father was a noted lawyer. The latter took him for the first time to Cairo in the year 853, but he visited the city later on several occasions both alone and in the company of his father, to enable him to pursue his studies under the most renowned men of his time, and the Šafī saint al-'Irāqī invested him with the Šafī mantle. In the year 860 he made the pilgrimage for the first time and settled in al-Madīna. He had first a cell near the mosque of the Prophet, but through intrigues he was compelled to leave it and he then hired a house near the Bāb al-Rahma, known as the house of Tamīm al-Dārī. He had noticed at the time of his arrival that the mosque of the Prophet had not been put into proper repair since it had been burnt in the year 654, and in the long interval of over 200 years it had been patched in a very unsatisfactory manner. He wrote a treatise in which he urged the proper reconstruction, based upon researches which he had made with reference to the original state of the building. In the year 886 he went to Mekka to perform the pilgrimage again and during his absence his valuable library, which appears to have been stored in the cell near the mosque, was involved in the fire which destroyed the mosque. Discouraged he now went back to Egypt and paid a visit to his aged mother who died ten days after his arrival in Samhūd.

After her funeral he went to Cairo and was admitted to the circle of the Sultan al-Ashraf Ḥā'ib-bey [q.v.] from whom he received a salary and a nucleus of valuable books to replenish the libraries in al-Madīna, he being entrusted with the charge of them. After visiting Jerusalem he returned to al-Madīna towards the end of the year 890. He found that the house of Tamīm al-Dārī was for sale and bought it and put it into proper repair. Here he married several wives, but later gave them up and contented himself with concubines to have more time to devote to the welfare of the people

and their instruction. He died on Thursday the 18th of Dhu 'l-Ḥiǧda, 911 A.H., and was buried in the Baǧī' (cf. the art. BAǦĪ' AL-ḤARAKAD) cemetery between the grave of Saiyid Ibrāhīm and the Imām Mālik.

Among his numerous works composed during his residence in al-Madīna the principal one is his History of the City. He had originally composed it upon a large scale under the title *al-Itisāf bi-Abkhār Dār al-Muǧfa*. At the request of a patron he had made an abbreviation of this book to which he gave the title: *Wafā' al-Wafā'*. This abbreviation he had completed on the 24th of Djumādā II, 886, and had it with him in Mecca when his library in al-Madīna was destroyed by the fire. This fortunately saved the chief contents of the work. Later he made a further edition condensed from the abbreviation, which he finished, according to some manuscripts and the printed editions (Bulāḡ 1285 and Mecca 1316), in the year 893 and called *Ḳulūǧat al-Wafā'*. This work has become our principal source of information for the history and the topography of the city and the rituals for the visit of the grave of the Prophet. In addition he composed a number of other works of which nine are enumerated by Brockelmann in his *G.A.L.*, to which Arab biographers add several more which may have been lost. They comprise books on grammar, tradition, theology, law and the rituals of pilgrimage. Special mention is made of his collection of *Fatwa's* in one volume collected by himself on all branches of legal knowledge. They appear to contain the arid discussions which form the favourite theme of Arabic authors of his time.

Bibliography: *Al-Samūd al-Bahīr*, Brit. Mus. Add. 16,648, fol. 193; editions of the *Ḳulūǧat al-Wafā'*, Bulāḡ 1285 and Mecca 1316; Wüstenfeld, *Geschichte der Stadt Medina nach Samhūdī*, Göttingen 1860 (an abbreviated translation of the *Ḳulūǧa*); Wüstenfeld, *Die Geschichtschreiber der Araber und ihre Werke*, p. 507; Brockelmann, *Geschichte der arabischen Literatur*, II. 173.

(F. KRENKOW)

SĀMĪ, SHAMS AL-DIN, SĀMĪ BEY FRĀSHĒRĪ, a Turkish author and lexicographer, born at Frāshēr in Albania on June 1, 1850, of an old Muslim Albanian family whose ancestors are said to have been granted this place as a fief by Sultān Mehmed II. He was educated in the Greek lycée at Janina, at the same time receiving instruction from private tutors in Turkish, Persian and Arabic. He then came to Constantinople, where he devoted himself to journalism and founded the daily paper *Sabāḥ* about 1875. He began his literary career about the same time and attached himself to the new school founded by Kemal and Shīnāsī. From this period dates his novel *Tu'arḥuḥ al-Tu'at wa-Fitnat*, which contains an indictment of the Turkish marriage system (1872), and the dramas *Beḥ* (the scene is laid in Albania, produced in 1874), *Sidī Yahyā* (1875) and *Kāwē*. The production of this last piece, which describes the Persian revolution against the tyrant Dāhḥāk, resulted in his being banished for two years to Tripoli in North Africa.

After his return he devoted himself almost entirely to his famous lexicographical works. These are the *Ḳāmūs-i Frānḡusī* (French-Turkish, 1882, and Turkish-French, 1885), the six-volume encyclopaedia *Ḳāmūs al-'Alīm* (1889—1898) and the *Ḳāmūs-i Turkī* in two parts (1899 and 1900).

Although in his latter years he suffered a good

deal in body and in spirit, his great industry never left him till his death. He died in Constantinople on June 18, 1904. He had spent the greater part of his life in his study. In the last years of his life he looked 75, although only 54.

In the literary field Sāmi could not claim a place beside his contemporaries 'Abd al-Ḥakḡ Ḥimīd, Ekrem Bey, etc. Besides the newspapers themselves, we have as evidence of his journalistic work a series of pamphlets which appeared in the *Djib Kütübkhānest* and are in part taken from his newspaper articles (*Medeniyet-i İslūmiye*, *Kadınlar*, *Emḡal*, etc.). He also made several translations from the French (*Sifiller*, *Shāfirān Yādkārleri*, etc.). He also published select poems of Bāḡī and an edition with commentary of the poems ascribed to 'Alī b. Abī Ṭalīb. But his greatest merit lies in his great work in lexicography and philology. This includes several school-books on Turkish and Arabic grammar, and an unfinished Arabic dictionary of which he speaks in the preface to his *Ḳāmūs-i Turkī*.

This last work is important in several respects. In the first place the order is strictly alphabetical and the arrangement of the different meanings clear and lucid; it is a great advance on previous lexicographical work by Turks, even on Ahmed Wefīḡ Pasha's *Lehte-i 'Oḡmānī*. Secondly the choice of the words included is of importance in so far as it represents a compromise between the different views prevailing in his time on the development of Turkish. Sāmi himself urged a far-reaching Turkish purism (as is evident from his contribution in the introduction to Mehmed Emin's *Türkī Şāfirler* of 1898) and he would have liked to replace most Arabic and Persian words by Turkish words that had fallen into disuse. He adopted of the latter those whose revival seemed indispensable, but by the adoption of a great mass of Arabic and Persian material he made great concessions to the literary language. His dictionary is therefore a true picture of the educated Turkish of his time. Sāmi, however, does not seem to have had any traceable influence on the development of Turkish.

Among his unpublished material, of which the unfinished Arabic dictionary has already been mentioned, there are also comprehensive studies on the *Ḳudatḡa Hittī* and on the Orḡhūn inscriptions, as well as works on Persian and Eastern Turki.

He also worked at Albanian. He produced an Albanian alphabet and a grammar. He left poems in this language and a book on the future of Albania. His drama *Beḥ*, already mentioned, also shows his love for the land of his birth.

On Sāmi Bey's brother Na'īm Frāshērī (1846—1900) who was a great Albanian poet cf. Babinger in *Isl.*, 1921, xi. 99.

Bibliography: Biography of Sāmi by Is-mā'il Ḥakḡī in the '*Oḡmānī meḡhāzīrī üdeball*' series; Paul Horn, *Geschichte der türkischen Moderne*, Leipzig 1909, p. 38; *Revue d'Orient et de Hongrie*, Budapest Jan. 20, 1902. The unprinted and unfinished works of Sāmi are in the possession of his family to whose kind information the writer is indebted for some of the above-mentioned facts. (J. H. KRAMERS)

AL-SĀMĪRA. [See SAMARITANS].

AL-SĀMĪRĪ, 'the Samaritan', is the name in *Qur'an*, xx. 87, 90, 96, of the man who tempted

the Israelites to the sin of the golden calf. This sin is twice mentioned in the Qur'ān. The first narrative, Sūra vii. 146—153, tells of the sin of Israel and Aaron as in Exodus, xxxiii., but with the elaboration that the calf cast out of metal laved. The second version, Sūra xx. 35—97, which is shown to be later by its additions and was considered by Muslim tradition also to belong to the Medina period (Nöldeke-Schwally, *Geschichte des Qur'ān*, p. 124, 125), makes al-Sāmīri the tempter of Israel. At al-Sāmīri's bidding they cast their ornaments into the fire and he made out of them the lowing calf, which was worshipped by the people although Aaron advised them not to. When challenged by Moses, al-Sāmīri justified himself by saying that he saw what the others did not see, the footsteps of the messenger (according to Muslim tradition: the tracks of the hoof of Gabriel's horse). Moses then announced his punishment to him: "so long as thou livest, thou shalt call out to those that meet thee *la mīlāsā* 'touch me not'".

Abraham Geiger thought that Muḥammad had perhaps confused al-Sāmīri with Sammael, the prince of the demons. Geiger quoted *Firḥi Rabbi Eliezer*, xlv., where, according to one view, Sammael lured concealed in the calf to lead the Israelites astray. In reality this feature in the *Firḥi Rabbi Eliezer* is imitated from the Muslim legend and the otherwise unknown proper name al-Sāmīri replaced by the name Sammael of somewhat similar sound. S. Fraenkel (*Z. D. M. G.*, lvi. 72) derives the story of al-Sāmīri in the Qur'ān from a lost Jewish *midrash* which aimed at diverting the grave sin of making the golden calf from Aaron to a Samaritan.

The figure of al-Sāmīri was first put into its true light by Goldziher (see below). Goldziher explains him as the representative of Samaritanism through the story of the Samaritan secession. We have already evidence of this secession in Sirach, l. 25, and the Gospels Luke, ix. 52; John, iv. 9. Goldziher collects Jewish, Christian and Muslim references, which show that the Samaritans considered contact with those not of their stock as impurity. What Muḥammad or rather his presumed Jewish source knew as a ritual principle of the Samaritans is put back into earlier times and explained as a punishment of al-Sāmīri for having incited the Israelites to make and worship the calf.

Goldziher's convincing arguments can be reinforced by the early Muslim interpretation of the Qur'ān. Al-Tabarī himself following an earlier tradition sees in al-Sāmīri a prominent Israelite of the Samaritan tribe; as a punishment for his sin Moses forbade the Israelites to have social or commercial relations with him and "this has remained the case". Similarly al-Zamakḥshārī: al-Sāmīri belonged to a Jewish tribe called Sāmīra whose religion differed somewhat from the Jewish. Al-Sāmīri was forbidden to have social and commercial intercourse with men; it is said that his people still observe the prohibition. Al-Tha'labī similarly concludes his very full story of the golden calf.

Al-Sāmīri thus is the representative of Samaritanism, which keeps apart from non-Samaritans. In a segregation of this kind — as in the Jewish laws regarding eating (Qur'ān, iv. 158) — Muḥammad sees a divine punishment. What has al-Sāmīri (= the Samaritans) to atone for? For the sin of the golden calf.

Fraenkel, *Der Sāmīri*, in the *Z. D. M. G.*, 1902, lvi. 73; I. Goldziher, *La Méduse*, in the *Revue Africaine*, No. 268, Algiers 1908, p. 23, 28. (BRUNHARD HELLER)

SAMMĀ, the name of a Rājput clan in Sind. As the hold of the Ghaznavid kings on Sind relaxed, the Sammās, a Rājput tribe converted to Islām, established their rule in that country in 1053, and made Tūr their capital. They persecuted the Sammās, a rival Rājput tribe which adhered to Hinduism, and drove many of them to take refuge in Kāṭh, where, in 1320, they ousted the Cāvada prince who had protected them and seized his throne. This branch of the Sammās, known as Djādeja or the children of Djāda, is still represented by the Rāo of Kāṭh and the Djam of Navanagar. The Sammās who remained in Sind accepted Islām, and after the Sammās had been overthrown by the troops of 'Ala' al-Dīn Khiljī of Dihli founded, in 1333, a dynasty which ruled Sind for nearly two centuries, with its capital at Thatha. The ruler, like the head of the branch which acquired the state of Navanagar, assumed the title of Djam, a word of doubtful signification which Abu 'l-Faḍl, Firḥi and other Muslim historians derive, on insufficient grounds, from the name of the semi-mythical Persian king Djamshīd.

Unar, the Hindu name of the first Djam, suggests recent conversion to Islām. His brother and successor, Djūnā, took Bakhar in Upper Sind, which had hitherto been included in the imperial dominions, and harboured a rebel who was fleeing from Gujjarāt before Muḥammad b. Taghlaḥ of Dihli. Muḥammad invaded Sind but died on the banks of the Indus in March, 1351, before he had had time to punish Djūnā. His cousin, Firūz Shāh, succeeded to the command of an army disorganised by its leader's death, and with difficulty extricated it from Sind, from which it retreated, menaced and harassed both by the Sindis and by their allies, the Mughals. Firūz attempted, eight years later, to avenge his discomfiture but again failed and saved a portion of his army only by a disastrous retreat into Gujjarāt. Returning in the following year he defeated the Sammās and carried the Djam, Djūnā, and his nephew, Bābaniya, prisoners to Dihli, but permitted Djūnā's son and another nephew, Tamāṣī, to govern the province as his tributaries. Later in the reign Tamāṣī rebelled and Djūnā was sent from Dihli to reduce him to obedience, and sent him to Dihli. After the accession of Taghlaḥ II in 1388 Bābaniya was permitted to return to Sind, but died on the way thither. He was succeeded by his brother, Tamāṣī, and after his reign the succession appears to have been as follows: — (1) Ṣāḥib al-Dīn, (2) Nizām al-Dīn, (3) 'Alī Shīr, (4) Karan, (5) Faṭh Khan, (6) Taghlaḥ, (7) Kāidan, (8) Sandjar, (9) Nizām al-Dīn II, known as Djam Nanda, (10) Firūz.

"The history of the Sammās after their accession to power is of interest by reason of the ability with which they held their own in several campaigns against the forces of the imperial government, and by reason also of the conversion

of large numbers of the people from Hinduism to Islam". The disintegration of the empire of Dhill after Timur's invasion restored independence to Sind, and the Sammāns reigned thenceforward untrammelled by allegiance to any higher power. The greatest of them was Nūṣr al-Dīn II, known as Dīn Nanda, who died in 1509 after a reign of forty-seven years. The line ended with his son and successor, Firūz, who in 1520 was defeated by Shāh Beg Arghūn, ruler of Kandahār, who founded the Arghūn dynasty in Sind.

The Sammān tribe now numbers over 800,000 in Sind.

AL-SĀMIT. [See AL-NĀṬIQ.]

AL-SAMN (A.), butter made from cows', goats' and ewes' milk, more especially cooked or melted butter, cleansed from impurities and preserved by the addition of salt, for example. Fresh butter and cream are called *ṣahā*. These are used not only in the kitchen but also in medicine, externally and internally; — externally for wounds, abscesses and boils, internally as an antidote against snake-bite and poisons, against retention of the urine, etc.

SAMOS, an island in the Aegean Sea; the Turkish name is Samsān-adası, "the Island of Sesame", for which Samsān-adası was written at an earlier period (Bihishtī, *Inshā* [MS. No. 260 of the Berlin Library], f. 193; Kātib Celebi, *Tuhfat al-Kihār*; Samsān in Tavernier, *Les six Voyages*, i. 359), while the Arab geographers give the Greek name in the forms Sāmū, Sām (al-Idrīsī, *Geographie*, ed. Jaubert, ii. 127, 303), Sāmis (Yā-kūt, *Muḍīḥ*, i. 21) or Shāmis (Abu 'l-Fida', ed. Reinaud, p. 192, 193). In the middle ages Samos was repeatedly raided by the Arabs in their incursions into the Aegean Sea, notably in the years 889 and 911. It was only with the expulsion of the Arabs from Crete about the middle of the tenth century that Byzantine rule was restored over Samos and the other islands of the archipelago. Later the island was exposed to the raids of the Seldjūqs and their vassals. Trachas, lord of Smyrna, captured the island about the year 1090 and kept it for some time (Anna Comnena, *Alexias*, ix. Ch. 1); in the sixteenth century it was ravaged by the Aidin-oghlu Umur Beg (Ducas, Ch. vii). From the end of the sixteenth century it belonged to the Genoese Maons of Chios (cf. the art. SAKIZ). Friendly relations were maintained with the people of the adjoining mainland. It is, for example, related that at Timur's invasion numerous Turks fled thither (Buondelmonte, ed. Sinner, Ch. 54) and the fanatic Būrkhānī Murtāzā, who provoked a communistic rising on the Erythraean peninsula about 1420, maintained communication with the monks of Chios and Samos. After the fall of the Byzantine empire, Mehmed the Conqueror granted Samos to the Genoese of Chios, but they were not able to hold it and therefore induced the greater part of the population to migrate to Chios in 1476. Probably as a result of this, Mehmed II in 884 (1479) had Samos

occupied by the Beg of Bighā; to repopulate the deserted island the new colonists were promised freedom from the state imposts (*azāḥīr-i ḥudūdīyye*) (Bihishtī, *Tārīkh*, f. 209^b of the Brit. Mus. MS.; cf. Sa'd al-Din, f. 567 *sqq.*). Later, probably after the peace with Venice in the reign of Bāyazīd II in 1502, the Genoese seem to have regained control of the island; at least, Belon, who travelled in the Archipelago soon after 1547, expressly states that it belonged to the "seigneurie de Chio" (*Les observations de plusieurs singularitez etc.*, Paris 1555, p. 84^a); but a few years later they evacuated it for a second time and left it to its fate (Boschini, *L'Archipelago*, Venetia 1558, p. 72). The islanders used to retire into the impenetrable mountains of the interior before the corsair raids, where they led the lives of savages. The Kapudan Pasha Kılıdī 'Alī Pasha, on one of his voyages in the Archipelago, was then attracted by the abandoned island and had it given to him by the Sultan in 1562. He endowed the great mosque built by him in Top-Khāne on the Bosporus with the revenues from the taxation of the island. — A Turkish voivod usually called Aghā governed the island; a kādī or nāib exercised judicial authority; they lived in Chora, the principal place on the island, where also the titular of the then newly founded (Greek orthodox) bishopric of Samos took up his residence. Except for these two officials and their subordinates there were no Turks on the island. But even under Turkish rule the Samiotes continued for long to suffer from the raids of pirates of all nations, Maltese, Frank, Algerian and Tripolitan, who, like their contemporaries, the filibusterers and buccanniers in the West Indies, and the Pamphylian pirates conquered by Pompey, made this part of the Mediterranean unsafe for a century. Samos, which had neither fortresses nor a permanent garrison, was invaded and repeatedly occupied for some time by the Venetians in the wars between the Sublime Porte and Venice in the sixteenth century. The occupation by the Russian fleet lasted for several years, 1771—1774. The Samiotes played a prominent part in the Greek war of liberation; at the end of the war they passed again under Turkish rule, but through the intervention of the Western powers they obtained complete autonomy under a Christian governor appointed by the Sultan (Bey, Greek *kyevan*, which was usually translated Fürst, prince), and were placed under the protectorate of France, Great Britain and Russia. They were also allowed a flag of their own. Like the other vassal states of the Sublime Porte, Samos paid an annual tribute, which was at first 400,000 piastres but was later reduced to 300,000. 101,000 of this went to pay the dues to the waḳf endowment of Kılıdī 'Alī. The first Bey of Samos, Stefan Vogorides, was appointed in the beginning of Djumādā I, 1249 (middle of September, 1833), and filled this post till the beginning of September, 1851. After him down till 1913 no less than 18 "princes", who with few exceptions belonged to Fanariot families, ruled the island of Polykrates. In 1913 Samos was united with Greece by the Treaty of London, which ended the Balkan war.

In modern times Vathy has replaced Chora as the seat of the Government; the number of the settled population was in 1912 about 50,000.

ŠAMŠAM al-DAWLA, AND KĀLĪJĀR al-MARWĀN, a Bāylā. After the death of the Bāylā ruler 'Aḍad al-Dawla in Shawwāl, 372 (March, 983), his son Abū Kālījār was recognised as Amir al-Umarā' under the name Šamšam al-Dawla. The latter then gave his two brothers Abū 'I-Husain Ahmad and Abū Tāhir Firzā Shāh the province of Fārs as a fief and ordered them to go there at once. But when they arrived in Arrāḡjān the fourth brother, Šaraf al-Dawla, had anticipated them and already taken possession of Fārs so that they had to retire to al-Ahwāz. As Šaraf al-Dawla would not recognise the suzerainty of Šamšam al-Dawla, the latter sent an army against him under Abū 'I-Husain b. Dānqas, who met the enemy at Karkūb, between Wāsiṭ and al-Baḡra, led by Abū 'I-A'azz Dubāis b. 'Affī al-Asādī. Abū 'I-Husain was taken prisoner and his army put to flight (Rabī' I, 373 = Aug./Sept., 983) whereupon Šaraf al-Dawla granted his brother Abū 'I-Husain rule over al-Ahwāz. At the same time Šamšam al-Dawla had to fight with the Kurdish chief Bādū, the ancestor of the Marwānids. The latter had invaded Diyār Bakr, where he had seized several towns like Mayyāfīrīkīn and Nasībīn after the death of 'Aḍad al-Dawla. Šamšam al-Dawla's troops were defeated, and al-Mawwīl also passed into Bādū's hands; but when in Šafar, 374 (July, 984), he endeavoured to take Baghdād also he was defeated and had to give up al-Mawwīl. He was, however, allowed to retain Diyār Bakr and the half of Tūr 'Abdīn. In 375 (985/986) the Dailamī general Asfar b. Kurdawān rebelled against Šamšam al-Dawla in Baghdād and at first declared for Šaraf al-Dawla; but he next decided — by arrangement with the troops who were devoted to him — to make Abū Naṣr b. 'Aḍad al-Dawla, then only fifteen years old and later appointed Amir al-Umarā' with the name Bahā' al-Dawla [q. v.], governor of al-'Irāq in place of his brother Šaraf al-Dawla. But Asfar was defeated and Bahā' al-Dawla taken prisoner. Šaraf al-Dawla then left Fārs to go to al-Ahwāz and there told his brother Abū 'I-Husain that he wanted to liberate Bahā' al-Dawla; but Abū 'I-Husain did not trust him and began to collect troops. The latter, however, went over to Šaraf al-Dawla and there was no-

thing left for Abū 'I-Husain to do but join his uncle Fakhr al-Dawla [q. v.]; but as the latter did not find him absolutely reliable, he was imprisoned and afterwards put to death. To preserve peace, Šamšam al-Dawla wrote to Šaraf al-Dawla and, as he was satisfied with the governorship of Baghdād and ready to release Bahā' al-Dawla and to have Šaraf al-Dawla mentioned first in the *ḡhazis* in the 'Irāq, the latter agreed to his proposal. When in 376 (986/7) Šamšam al-Dawla came to Šaraf al-Dawla, he was at first very kindly welcomed, but then seized and imprisoned in a citadel near Šīrās. According to the usual statement, Šaraf al-Dawla afterwards had him blinded. In the meanwhile disturbances broke out in Baghdād between the Dailamīs who supported Šamšam al-Dawla and the followers of Šaraf al-Dawla, the Turks, and only after quiet was restored did the Caliph al-Tā'ī recognise the latter as Amir al-Umarā'. On the latter's death at the beginning of Djumādā II, 379 (Sept., 989), Bahā' al-Dawla succeeded to this office. Šamšam al-Dawla was then liberated but had first to fight with his nephew, Abū 'Alī b. Šaraf al-Dawla, and after his assassination with Bahā' al-Dawla [q. v.]. In 383 (993/994) — or, according to another statement, probably due to a corrupt text, as early as 380 (990/991) — Bakhtiyār's [q. v.] sons, who had been interned in a castle in Fārs after Šaraf al-Dawla's death, succeeded with the help of the Dailamī garrison in gaining their liberty and gathering a large following. When Šamšam al-Dawla heard of this he sent an army under Abū 'Alī b. Ustāḡh Hormuz against them. The latter besieged them in the fortress in which they had taken refuge; they had to surrender and were brought to Šamšam al-Dawla, who had two of them executed and the other four imprisoned. In the same year hostilities again broke out between Šamšam al-Dawla and Bahā' al-Dawla and after several years' fighting victory was inclining more and more to the side of the former, when he was assassinated in Dhu 'l-Hiǧǧa, 388 (end of 998), at the age of thirty-five years and seven months. Cf. also the article AND KĀLĪJĀR.

ŠAMŠAM al-DAWLA, SHĀHNAWĀR KHĀN SHAMID KH*AFI AWRANGĀBĀD, an Indian statesman and historian. His early name was 'Abd al-Razzāq Husaini and he belonged to a Saiyid family which had migrated to India from Kh*af in Khurāsān in the time of Akbar and attained high honour there. He was born in Lahore on Ramaḍān 28, 1111 (March 20, 1700) and while still young moved to Awrangābād [q. v.] where he was appointed *Dewan* of Berār by the first independent Nizām of the Deccan, Asaf Dīsh [q. v.; see also the article BĀIDĀRĀBĀD]. In 1155 (1742) he was involved in the rising attempted by Naṣir Dīsh, son of Asaf Dīsh, against his father and dismissed from office after its failure. The next five years he devoted to retirement to his great historical work, the *Ma'athir al-Umarā'*. Shortly before the end of his reign, Asaf Dīsh

pardoned him in 1160 (1747) and restored him to his former office, which he continued to hold under the next two rulers, Nāṣir Dījān and Šahāṭ Dījān. After the accession of Bāskat Dījān in 1170 (1756) the French party which had been opposed by Šamšām al-Dawla succeeded in bringing about his fall; he was killed on Ramaḍān 3, 1171 (May 12, 1758) by soldiers of the French General Bussy. According to another, unreliable, story, the General shot him with his own hand.

The *Maʿāthir al-Umaraʾ*, a biographical dictionary arranged alphabetically, according to the initial letters of the names discussed, of all the more important statesmen under the Indian Moghuls from Akbar to the author's day — Elliot calls it "the Peerage of the Moghal Empire" — exists in two recensions of both of which many copies exist. The original, which was unfinished and even in the completed part not quite ready for publication, disappeared at the murder of the author and the destruction of his house, and was only found after twelve months' search by the friend and for several years secretary of the author, Ghulām 'Alī Āzād Balgrāmī (famous as the author of two *taẓkhiras* of poets, *Khaṣṣana-i 'Amira* and *Sawā-i Āzād*; cf. H. Ethé in the *Grundriss der Iran. Philol.*, II, 215), although not complete. He gave it a preface, wrote a biography of Šamšām al-Dawla (see the *Bibl.*) and added several articles. This recension contains 261 biographies.

It was much extended and republished by the author's son, 'Abd al-Hayy Khān († 1196 = 1781; for his numerous titles see Morley, *op. cit.*, p. 104; cf. the *Bibl.*), who in twelve years' labour continued the work of his father to the year 1194 (1790) when he concluded his labours; he took the first recension as a foundation, added other parts of the original which had since been found and additions which he compiled from the 30 historical works mentioned in his preface. His own first draft is preserved in the India Office MS. N^o. 2424 (Ethé's *Catalogue*, N^o. 627). This second edition contains an editor's preface, the preface by Šamšām al-Dawla and Ghulām 'Alī, the latter's biography of Šamšām al-Dawla, an index of the articles and the latter themselves, as well as a short biography of the editor. It contains 731 biographies and is one of the most valuable sources for the history of the Moghul rule in India.

Šamšām al-Dawla also composed a collection of biographies of poets entitled *Bahār-i Šāh-i Subhān*.

Elliot, *History of India*, VIII, 1877, p. 187 sqq.

(H. H. SCHAEDEK)

ŠAMŠĀM AL-SALTĀNA, NAJAF KULI KHĀN, a Bakhtiārī chief born about 1846. He belonged to the great division of Haft-Lang which he governed in 1903—1905 as Il-begī and later as Il-Khān. He was the son of the Husain Kuli Khān, killed by order of prince Zill al-Saltān — the famous governor-general of Iṣfahān — and grandson of Dījār Kuli Khān. Šamšām owes his fame to the part he played in the nationalist revolutionary movement in Persia.

Rebelling against the incapable administration of the governor Iḥbāl al-Dawla, Šamšām al-Saltān at the head of 1,000 Bakhtiārīs occupied Iṣfahān on Jan. 5, 1909, and convoked the provincial committee (*sandjuman*). Jointly with his brother Sardār-i As'ad, who had come back from Europe, Šamšām telegraphed to the government (May 3) that he intended to advance on the capital. He carried out his plan but allowed the protagonists of the revolution, Sardār-i As'ad and Sipahdār-i A'zam, leader of the forces collected at Rasht, to have all the credit.

When in the summer of 1911 the news of the return of Muḥammad 'Alī Shāh reached Tihān, Šamšām entered the Sipahdār's cabinet as minister of war and military governor of the capital (July 5). On July 26 he himself formed a new cabinet; three days later the Majlis put a price on the head of Muḥammad 'Alī Shāh. In August the Bakhtiārīs with the active help of the Armenian revolutionary Yefrem Khān inflicted a defeat on Sardār-i As'ad, the principal supporter of the fallen Shāh. In September they disposed of the rebellion led by the turbulent prince Sālār al-Dawla. Šamšām at first gave wholehearted assistance to Mr. Morgan Shuster, the American adviser who, entrusted with the reform of the Persian finances, had warmly supported the nationalist movement but very soon a quarrel broke out between them as a result of energetic action taken by Mr. Shuster (the episode of 'Alā' al-Dawla). On October 29 Russia demanded satisfaction for the intervention of Mr. Shuster's gendarmes in the affairs of Prince Shu'ā' al-Saltān who claimed to be a protégé of Russia. As a result on Nov. 11 Wuthūk al-Dawla, minister of foreign affairs, expressed to the Russian legation the government's apologies but on Nov. 16 Russia presented an ultimatum demanding the dismissal of Mr. Shuster. The cabinet, which after a quarrel with Yefrem Khān had again made its peace with him, showed conciliatory tendencies. On Dec. 9 Wuthūk al-Dawla formed a new cabinet which two days later accepted the ultimatum. Mr. Shuster was replaced by a Belgian (M. Mornard) and left Persia.

In the summer of 1918 Šamšām was again called upon to take the reins of government. As a repercussion of events in Russia the new cabinet, which had a nationalist character, at its meeting of July 27 abrogated all the treaties with Russia and all concessions granted to Russians. This measure, which affected the interests of foreigners in general, accelerated the fall of the cabinet and its replacement by that of Wuthūk al-Dawla, which signed the Anglo-Persian convention of Aug. 9, 1919.

Šamšām is noted for his impulsive character but Mr. Morgan Shuster in his book reproaches this chiefdom with a lack of constancy.

AL-ŞAMSAMA, the sword of the Arab warrior-poet 'Amr b. Ma'dikarib al-Zuhaidi (cf. above, i. 336^a) celebrated for the temper and cutting power of its blade. Like a number of the best Arab swords, its origin was traced back to Southern Arabia and a fabulous antiquity was ascribed to it. 'Amr himself in a verse often quoted (Ibn Duraid, p. 311; *Ihd* [ed. 1293], i. 46, li. 70; Ibn Badrūn, p. 84; *Taḍj al-Arūs*, vi. 229) says that it had once belonged to Ibn Dhi Kaifan "of the people of 'Ad" (this member of an actual Himyar clan [cf. Hartmann, *Die arabische Frage*, p. 331, 613] is identified with one of the last Himyar kings of the family of Dhū Ḍjadan; but very probably the poet only means to allude to the great age of his weapon).

The history and fortunes of al-Şamsama are rather involved; even in the poet's lifetime it came into the hands of a member of the Umayyad family, Khalid b. Sa'id b. al-'Asī, the companion of the Prophet. The way in which he got possession of it is recorded with several variants by Ibn al-Kalbi (in al-Balādhuri), Abū 'Ubayda (in the *Aghāni*), al-Zuhri (in Ibn Hishām; see *Bibl.*), Saif b. 'Umar (in al-Tabari). According to the last-named, Khalid won it in battle after routing 'Amr b. Ma'dikarib who was taking part in the revolt against Islām raised by the false prophet al-Aswad al-'Aml (cf. above, i. 502^b); according to the three first, 'Amr himself gave it to Khalid as a ransom for his sister (or wife) Raihana, who was a prisoner of the Muslims. 'Amr composed a poem on the occasion, of which several verses are frequently quoted in the Arab sources (Ibn Duraid, p. 49; *Lisān*, xv. 240, etc.). The tradition (al-Tibrizī in *Hamāsa*, ed. Freytag, p. 397, 12-13) which says that 'Amr gave it to the Caliph 'Umar is quite denied by authority.

After the death of Khalid b. Sa'id at the battle of Mardī al-Suffar during the conquest of Syria (14 A. H.) al-Şamsama passed to his nephew Sa'id b. al-'Asī b. Sa'id b. al-'Asī, who lost it while defending the Caliph 'Uthmān when the latter was besieged in his house at Medina (35 A. H.). It was found by a Bedouin of the tribe of Ḍjuhaina with whom it was discovered in the reign of Mu'āwiyā. Restored to its former owner, it passed from one member to another of the family of the Banu 'I-'Asī, until one of them, Aiyūb b. Abī Aiyūb, great-grandson of the son of Sa'id, sold it to the Caliph al-Mahdi (158-169 A. H.) for about 80,000 dirhams. Henceforth al-Şamsama was kept as a precious relic in the treasury of the 'Abbāsids and its fame continued to increase; poets like Abū 'I-Hawā al-Himyari (*Dijāzī, Ḥayawān*, v. 30) and Salm al-Khāfir sang its praises.

From different sources we learn of its existence in the caliphates of al-Hādī (169-170 A. H.), Harūn al-Rashīd (170-193), al-Wāṭṭik (227-232), and al-Mutawakkil (232-247), after which there is no longer any mention of it. The anecdotes recorded regarding the excellence of the famous sword during the period when it was in the hands of these Caliphs have little chance of being authentic; a description which has a certain appearance of reality is the one given in al-Tabari,

iii. 1348, 4-5, in connection with the story of al-Wāṭṭik's using it to execute with his own hand in 231 A. H. Ahmad b. Nāṣir al-Kharrāṭī, who was accused of having conspired against the Caliph and of having maintained that the Qur'ān was not created, contrary to the view laid down by al-Ma'mūn: "It was a blade with a hilt at its end; three nails driven into it attached the blade to the hilt". It is apparent then that the famous al-Şamsama had nothing of value about it except its great age.

As to the name al-Şamsama, it is simply an epithet referring to the fine quality of the blade (the "cleaver") like *muṣammim*, which has the same significance. Al-Şamsama is often used as a common noun, e.g. by al-Farazdaq (*Nahṣ*, p. 385, 4) and by 'Amr b. Ma'dikarib himself (*Hamāsa* of al-Buḥārī, p. 83, ed. Cheikh, N° 237); *Amāl* of al-Ḳālī, iii. 154, 10), as well as by Muslim b. al-Walīd (ed. de Goeje, vi. 18) in a verse which Schwarzlose (see the *Bibl.*) wrongly thought to refer to 'Amr's sword, while the weapon given by Harūn al-Rashīd to his general Yazīd b. Maryād referred to in the verse is the sword of the Prophet, Dhū 'I-Fakr (cf. above, i. 959), as is evident from verse 25 of the same poem and the note by Ibn Khallikān, iii. 299 (ed. 1299) = ii. 284 (ed. 1319) = N° 830 Wüstenfeld.

H., § 282); Schwarzlose, *Die Waffen der alten Araber*, Leipzig 1886, p. 36, 93-96, 129, 192-194. (G. LEVI DELLA VIDA)

ŞAMSUN, a harbour on the north coast of Asia Minor, the ancient Amisus, also called Amisos by the Byzantines and later, after the conquest by the Saldjūks, Sampson (Akropolites, Bonn ed., p. 14; also Schiltberger, ed. Langmantel, p. 14 [transl. Hakluyt Society, p. 12], who says it was founded by the Samson of the Bible), the Simliss of western seafarers and the Şamsūn of the Arabs, was taken from the Byzantines by KILĠĠ Arslan II (1156-1192) (Niketas Choniates, Bonn edition, p. 689, 699); three centuries before (860) it had been laid waste by the Arabs on one of their raids into Byzantine territory (Theophanes contin., Bonn ed., p. 179). Under the Saldjūks and their successors, Şamsun with Sinope conducted the trade with the Crimea and from the time of Mas'ūd II (631-646 A. H.) was a mint of the Saldjūks and later of the Ilkhāns (Ahmad Tawhīd, *Makūbāt-i kadime-i islāmiyya Katātūghī*, iv., N° 704, 705; Mehemmed Mubārak, *ibid.*, vol. iii. under the coins of Ghāzān Mahmūd, Khudābende Mehemmed and Abū Sa'id Bahādur), which suggests a considerable commercial activity. About this time also we find Şamsun first mentioned by the eastern geographers as a "famous harbour" (Abū 'I-Fida', *Taḍwīn al-Bulḍān*, ed. Reinaud, i. 32 sq., 215, 392; al-Dimashqī, ed. Mehren, p. 146; Ḥamd Allāh

Mustawfi, *Nuṣṣat al-Kuṭub*, ed. Le Strange, p. 96). Alongside of the Muslim Şamsün there was at the beginning of the thirteenth century an independent Greek enclave (Fallmerayer, *Geschichte des Kaiserthums von Trapezunt*, p. 56 sqq.), the so-called "Christian Şamsün" (*K'āṣir Şamsūni*), and formed, as in Smyrna (see the art. 12312, ii. 267), with the Muslim settlement a double town. Both parts were enclosed by walls and only a stone's throw (Ibn 'Arabshāh, *Adrā'id al-maṣṣūr fī Ahḥākir Timūr*, Cairo 1285, p. 141) or "half a bowshot" (Schiltberger, p. 16, Hekl. Soc. ed. p. 13) apart. In the early years of the sixteenth century the Genoese established themselves in Christian Şamsün and held it for over a century (Heyd, *Histoire du Commerce du Levant*, i. 553 sqq., ii. 359 sq., 373); about the year 1425 the last Frankish inhabitants set the town on fire and sailed off in their ships, whereupon the Ottomans entered it (Neshri in Leunclavius, *Hist. Musulm.*, col. 475; wrongly in Heyd, *op. cit.*, ii. 359).

After the withdrawal of the İkhāns Muslim Şamsün was in possession of the İsfandiār-oghlu of Kaşamlıni (q. v.) and was taken from them in 795 or 797 A. H. by Bāyazid I (Schiltberger, p. 14 sqq.; Neshri, in the *Z. D. M. G.*, xv. 343 = Leunclavius, *op. cit.*, col. 336; Sa'd al-Din, i. 135 sq.; cf. *Tawārīkh-i Alī 'Oṭmān*, ed. Giese, p. 34); in 1404 the town still belonged to Mir Sulaimān Çelebi, the son of Bāyazid I (Clavijo, p. 82); it was then again occupied by the İsfandiār-oghlu (the date 822 A. H. is given) (Leunclavius, *Hist. Musulm.*, col. 474; Sa'd al-Din, i. 287 sqq.; cf. Ibn 'Arabshāh, *op. cit.*) but shortly afterwards ceded without a fight to Sültān Mehmed II (*Tawārīkh-i Alī 'Oṭmān*, ed. Giese, p. 53 = Leunclavius, *op. cit.*, col. 464; 'Ashik Paşa Zāde, p. 89 sq.; Neshri, Sa'd al-Din, *op. cit.*). Şamsün since then has been under the Turks and became the capital of the sanjak of Djanik, which formerly belonged to the eyalet of Siwās but in modern times has been incorporated in the wilāyet of Trebizond. The harbour still retained with Sinope and Trebizond some importance for trade with the Crimea, had a shipyard of its own, and in the sixteenth century was again fortified as a defence against the attacks of the Don Cossacks. Local trade was limited to the manufacture and export of hemp ropes etc. and of the popular *nārānk* (pomegranate syrup). After the cessation of the Crimea to Russia in the eighteenth century the town began to decline and in 1806 it suffered considerable damage during the fighting between the rival Derbents, the Çapan-oghlu and the family of Djanikli 'Ali Paşa. It was only with the opening of steam navigation in the Black Sea and the development of tobacco-growing in the adjoining district of Rafra that the town received an unexpected revival of prosperity. Many Greeks and Armenians came to it from the interior, especially from Kaşāriye and Karamān, and Europeans also including many Hellenes settled here, to engage in the export of local products (tobacco, corn and hides). The old parts of the town which were avoided on account of endemic malaria were burned in 1286 (1869) and replaced by modern buildings. New quarters and suburbs also arose on a more healthy site, for example the suburb of Qādi-Köy inhabited exclusively by Hellenes. The town which at the beginning of the sixteenth century had only 400 houses with a purely Turkish population of

2,000 had a century later over 20,000 inhabitants (10,000 Turks, 8,000 Greeks and Hellenes, 2,000 Armenians) and was the most important commercial town next to Trebizond on the north coast of Asia Minor. We have no more recent information.

AL-SAMT, direction, point of the compass, a term in frequent use in Arab astronomy applied to the length of the arc (angular distance) made by any straight line drawn in the horizon through the position of the observer with respect to the line from east to west. As a circle of altitude of the heavens cuts the horizon along a straight line, such sections in their deviation from the east-west line give the direction by which the altitude is characterised. On vertical walls on which the so-called inclined sundials (*munḥarīfāt*) are marked as well as in turning the face towards Mekka (*qibla*) the definition of *al-samt* is of importance. This is one of the problems of spherical astronomy, which the Arabs were able to solve in quite a number of ways.

The plural of *al-samt* is *al-sumūt*. For this we can quote references from the language of one of the greatest Muslim astronomers, namely Ibn Yūnus († 1009 in Cairo). The title of Chap. xxiv. of his famous Hākimī Tables, for example, is: *Fī ḥḥrāḥ al-ḥaṣṣat Niṣf al-Naḥār li 'l-ḥirāḥ al-ḥaṣṣat min al-ḥirāḥ al-ḥaṣṣat* (Oxford, MS. Hunt. 331, fol. 43'). As will be noticed the adjective *ma'lūma* is in the feminine singular, in keeping with the rules of Arabic grammar. An inexperienced translator of Arabic astronomical texts might very well take a plural like this (*sumūt*) for a singular and translate *al-sumūt* by "direction" instead of "directions". According to Nallino in *R.S.O.*, viii., p. 390 sqq. *sumūt* is a dialectical form of *simūt*. By contraction in Spanish and French *al-simūt* became *azimut* and in this form and with singular meaning the word has passed into western languages so that we now speak of the azimuth of an altitude of the sun or of a wall etc.

The expression *sumūt* (or *sumt*) *al-ra's* means the direction of the head. Later in Europe the qualification *al-ra's* was dropped so that in the French and Spanish spelling only the word *sumt* remained.

Through errors in copying this became *amit*, just as Latin translators of the *astronomy* of al-Farghānī (Alfragani) made *Hemis* and then *Hemis* out of *Him*, *Hem* = Emesa.

Since, as already mentioned, the Arabs measured the azimuth from the east-west line, the meridian (*ḥaṣṣ al-nahār*) came with them to be an azimuth of 90°. Its definition is a necessity for finding one's position so that it is never omitted in any Arabic *siḥf* and even has *ṣawāḥ* specially devoted to it (the writings on this subject by Ibn al-Haitham, *Mémoire sur l'azimut* and *Mémoire sur la détermination de la méridienne avec la dernière exactitude*; cf. F. Woepcke, *L'algèbre d'Omar Alkhaṣṣānī*, Paris 1851, p. 74 and 75, are probably no longer extant).

The arithmetical relation between altitude of the sun and azimuth (when the geographical latitude of the place and the declination of the sun are known) is given in the azimuth-tables (*Djāmil al-azimūt*) which were calculated by various Arab astronomers for the latitude of their homes; cf. e.g. Ibn Yūnus, *Kitāb al-Samt wa 'l-Zill li 'bn Yūnus maḥṣūl dāḥiqatan dāḥiqatan*, MS. Escor., 924.

SAMUEL. [See *ṢAMŪ'IL*.]

SAMŪM, the name of a hot wind in several Arabic speaking countries. The word occurs in three passages of the *Qur'an*, where it is, however, not especially applied to the wind. *Sūra* 25, 27 it is said that the *Djānn* were created from the fire of *Samūm*. *Sūra* 52, 22 the punishment of the *Samūm* is mentioned; and according to *Sūra* 50, 21 the "people of the left" were dwelling in *Samūm wa-Hamīm*. Apparently Muḥammad applies the term to infernal heat.

The *Hadīth* uses the word in the same sense; yet the meaning "hot wind" is here coming to the front. It is said that Hell takes breath two times a year: "its taking breath in summer is *Samūm*". (Tirmidhī, *Djāhannam*, bāb 9; cf. Ibn Maḥjā, *Zuhd*, bāb 38). In *Pokhārī* we find reference to the opinion that the hot air during the day is called *ḥarūr*, whereas it is called *samūm* at night (*Ḥaṣṣ al-ḥaṣṣ*, bāb 4).

In nearly every traveller's book the *samūm* (*simām*) is mentioned in the sense of the suffocating wind which is also often called *sirocco*. From the innumerable references a few may be picked out. C. M. Doughty mentions it in the neighbourhood of Madā'in Ṣāliḥ as "a droughty southern wind" against which the Beduins "covered their faces, to the eyes, with a lap of the kerchief". He again mentions it between Madā'in and Makkah and tells us that according to the Beduins weak camels may be suffocated by it

(*Travels in Arabia Deserta*, Cambridge, 1888, I. 100, 188).

In Mekka the north, north-east and eastwind are called *samūm*. When it blows it makes the impression as if it came from a huge fire through the intermediary of gigantic bellows (Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, No. 76). The season in which the sun enters the constellation of the Virgin (August) has an extremely bad reputation in Mekka, because in this time *ḥām*, *wamūd*, *samūm* and *ayyās* blow alternately (*loc. cit.*).

Concerning Egypt, Lane says (*Manners and Customs*, Introduction): "Egypt is also subject particularly during spring and summer, to the hot wind called the "Samoom", which is still more oppressive than the khamseen winds, but of much shorter duration, seldom lasting longer than a quarter of an hour or twenty minutes. It generally proceeds from the south-east, and carries with it clouds of dust and sand".

Concerning Kaṣr-i Shitrīn [q. v.] Ḥamd Allāh Mustawfī (*Nuḥat al-Kulūb*, transl. Le Strange, Gibb Memorial Fund, vol. xxxii., p. 50) says: "Its climate is unwholesome for in the hot season at most times the (hot) Simum blows".

Maṣ'ūdī, *Murūj al-Dhahab*, ed. Paris, III. 320 sq. has a legendary report concerning the *Djānn* which according to the verse from the *Qur'an* mentioned above, were created from the fire of the *simūm* (translated by R. Basset, *Mille et un contes, récits & légendes arabes*, Paris 1924, I. 57).

See also A. Muḥil, *Reisen in Arabia Petraea* (Vienna 1907—1908), III. 19.

(A. J. WESSING)

ŠAN, now ŠAN AL-HAḤJĀR, a little village in lower Egypt, in the province of Sharḥiyya in the district of al-'Arīṣ to the south of Lake Manzala on the Baḥr al-Mu'īz (or Muwis), the ancient Tanitic arm. The Arabic name corresponds to the Hebrew Šo'an, the Greek Τάσις and the Coptic Djani.

This town, which was the capital of the dynasty of the Shepherd Kings, had been long in ruins by the time of the Arab conquest. The ancient town, notably the temples, had fallen to pieces and no Arab author mentions them; their remains nevertheless still form the most considerable group of ruins in the Delta. A single text recalls its fame in quoting Šan among the Towns of the Magicians.

A passage in the Chronicle of John of Nikiu (transl. Zotenberg, p. 340) shows that in the seventh century it was a little town, since the same governor administered Kharbata (Farbat = modern Harbat), Šan, Bastā, Balā (= Tārābiya = Copt. *Ṭarabīya*) and Sanḥār. This district really comprised five contiguous pagarchies, *Φαράβου*, *Τάσις*, *Βαστάρου*, *Ἀραβίας* and *Ἰψαυετ*.

The Arab *ḥara*, founded on the pagarchy of *Tāsi*, was called after two places, Šan and Iblīl; the latter, which is found in Coptic in the form

ⲉⲃⲗⲓⲁ, cannot, however, be exactly located. The *ḥara* of Šan and Iblīl contained 46 villages (40 in al-Dimashq) stretching to the north-east up to the Syrian frontier, and included besides Sanḥār (Hephaisos) the towns of al-Faramā (Peluse) and al-'Arīṣ (Rhincolura). The southern boundary ran north of a line Harbat — Fakūs, although

the latter formed part of the *būra* of Tūrahīya. The *būra* of Tūmahī (Tūmahī al-Amīd) bordered it on the west and on the north the *būra* of Şan and Ihlil ended on the banks of the Buhairat Tinnis (Lake Manzala).

We have almost no historical information regarding the town, which had been the see of a Coptic bishop (there is no mention later than the fifth century A.D.). We only know that bodies of the tribes of Khushain, Lakhm and Djudhām settled in this region. The geographer Yāqūt gives no details and one is surprised not to find it mentioned in the censuses of Ibn Mammūn, Ibn Duqmāq and Ibn al-Dīnā, although in quoting the old lists of *būra*'s, al-Kalkashandī says it is unknown. The notice by 'Alī Pāshā Mubārak is simply a translation of an article by Quatremère. It is not known at what period Şan received the surname of al-*Ḥadjār* (Şan 'of the stones'), which is found in Egypt attached to several places near which there are important ruins, e.g. Bahbāṭ al-Ḥadjār (Tæum), Sa' al-Ḥadjār (Salo).

(G. Wiet)

SAN STEFANO, in Turkish Aya Stefanos, a little town on the sea of Marmora, twelve miles west of Constantinople. It probably takes its name from an old church (according to von Hammer) but it is not certain whether San Stefano is the ancient Hagios Stephanos, which was one of the places which Mehmed the Conqueror occupied before the investment of Constantinople (Ducas, ed. Bekker, Bonn 1834, p. 258, speaks of the *πύργος τῶν ἁγίων Στεφάνου ἐν πολλῶν*). The Crusaders landed in its neighbourhood on June 23, 1203, before the Latin conquest of Constantinople. San Stefano lay off the great road from Constantinople to Adrianople, which passed through Küçük Çekmedje (Ponte Picolo) 2½ miles to the east of it and has never been of any strategic or economic importance. Ewiyā Çelebi does not mention it. Since the beginning of the nineteenth century wealthy inhabitants of the capital have been building country-houses here so that it has now become a pleasure resort for the citizens of Constantinople, easily reached by railway. The population itself is entirely Greek and numbers about 2000 souls.

The town acquired a place in history by the preliminary peace of San Stefano which was signed there on March 3, 1878, between Turkey (represented by Şafvet Pasha and Sa'd-ullāh Pasha) and Russia (represented by Count Ignatieff and Nelidoff), a truce having previously been agreed upon at Adrianople on the previous January 31.

The Russian headquarters were in San Stefano on this occasion; the house where the treaty was signed has been destroyed by an earthquake. The conditions of peace (text in *Nouvelles Recueil Général de Traité*, 2nd Series, iii. 246—256) were

very harsh for Turkey on account of the great area of territory which was given to the newly formed principality of Bulgaria and the huge indemnity demanded by Russia. The Berlin Congress, summoned on the initiative of England, considerably ameliorated the conditions of the preliminary peace and annulled the latter. Peace with Russia was finally concluded in Constantinople on Feb. 8, 1879.

In 1909 San Stefano was again in the public eye after the Turkish counter-revolution of March, which ultimately led to the deposition of 'Abd-Ḥamīd. On April 19 of this year the first constitutionalist troops hurriedly appeared here from Salonica. Immediately the deputies of the committee '*Ittihad-ı Terakki*' went to San Stefano and constituted the national assembly in the Yacht Club under the presidency of Abu 'l-Diyā Tewfīk Bey, who was succeeded as president by Ahmed Rīfā on April 21. Next day the whole senate joined the assembly which placed all power in the hands of the army. Mahmūd Şewket Pasha became commander-in-chief and on April 24 Constantinople was entirely in the hands of the constitutionalists. During these events the whole Turkish fleet appeared before San Stefano to submit to the army.

ŞAN'A, the capital of Yaman, lies on the eastern Sarāt in a mountain valley which is open to the west as far as the chain which belongs to the Djabal 'Aihān, while immediately to the east the town is overshadowed by the Djabal Nuḥum which rises 1600 feet above it. Its situation is 15° 23' N. Lat. and 44° 12' E. Long. As the town is 7200 feet above sea-level the climate is temperate, particularly as in summer regular winds blow through the day. In winter the temperature falls to zero at night which brings ice, which, however, disappears again with day. In spring and in mid-summer, especially July, it rains a great deal. Very dry summers are a rare but disastrous exception. Two streams run under cover through Şan'a to the Wādī 'l-Kharīd. They are only full after rain. A regular supply of good water is provided by an aqueduct from the Nuḥum. The soil of the plateau is of volcanic origin but earthquakes are very rare (e.g. one in 657 = 1259) and those insignificant. Lava forms the building material of the better houses while the humbler, and even the city wall, are built of mud. The scanty wood supply of the plateau, little *tamarisks* (*talpa*), *dawm*-trees is only of importance as a supply of fuel for the market in Şan'a. Thin transparent sheets of marble are still used, as they once were on the citadel of Ghumdān, as windows in the upper-class houses. The industries for which the town was noted in the middle ages, like the smelting of silver and the manufacture of the once famous Yaman cloths have declined considerably. The short curved Yaman swords generally worn, with hose hilts adorned with silver, are still made there. Large well kept gardens are also found within the formerly more thickly populated town. All the fruits of the temperate zone are cultivated: apricots, peaches, apples, quinces, wine-grapes and fragrant herbs. The

Turks have also acclimated all kinds of vegetables including the potato. The date-palm is only ornamental at this high level. Coffee is grown, notably on the slopes of the Nuḡum.

The present town, the population of which is estimated at 18,000, has three quarters. The Arab quarter stretches from the citadel at the foot of the Nuḡum westwards until it joins up with the once separate suburb Bir al-Aḡḡab with fine gardens and the official buildings and public offices. About 5,000 Jews live away to the west in the crowded Ka' al-Yahūd. Outside the south wall lie the barracks and close to the north wall the tiny town of Shu'ub. Of the dozen gates only four are usually opened. The chief mosque with two minarets, the so-called 'little Ka'ba', probably the old 'Ka'ba' (see below), is almost in the centre of the Arab town, which still contains many palaces built by various ruling families that have succeeded one another here. The most important of these is the residence of the Imāma, Bustān al-Mutawakkil, in the north-west of the Arab town. Among public buildings San'a' has a large hospital, a dispensary, about 12 baths, 3 schools, including a technical school and a printing-press.

The routes for traffic are very difficult through the mountainous country. The descent towards the Red Sea is made towards Hudaida. With a view to safety the roads generally lead round the tops of the valleys, for example the Wādī Ṣunfur with its gentle descent. The road, for example, at Kaḥn Wa'l (Deer-Horn) south of the Djabal Ḥaḡḡir Naḡi Shu'ub rises to about 9,000 feet and then descends to about 5,000, climbing through the passes of the coffee-growing range of Ḥarāz at Manāḡḡa to a height of 7,200 feet again and drops down to the Tihāma just outside of Bāḡil. It takes the regular Turkish post, carried by riding camels in the Sarāt, 21½ to 3 days to cover the distance from San'a' to Hudaida, which is about 100 miles as the crow flies. This route has also a telegraph line which links up with the Syrian-Arabian system. The road to the site of the ancient Ma'rib [q.v.], which is 75 miles E. N. E. in a straight line, and from the region of which salt is still brought to San'a', begins by going round either north or south the outer spurs lying east of the town and then descends to the Djawf through the Wādī Dhāna with its plentiful water-supply. For the road from north to south via Yarim, the ruins of Zafar, Djanad and al-Hūḡa to 'Adan and via Ṣa'da, Bisha and Turaba to Mekka see above, i. 368 *sq.* But the pilgrim and commercial traffic to Mekka instead of following this route through the mountain along, begins by striking straight across in the direction of the Wādī Surūd, and from al-Mahḡam, about 25 miles N. of Hudaida, onwards and then uses the Tihāma road running northwards from 'Adan via Zabid.

Although San'a' is a very ancient town, no mention of it has as yet been found in the Minaean and Sabaean inscriptions so far studied, and there is just a possibility that it is mentioned in the Hīmyar period if the *Ṣa'u* mentioned in the inscription Glaser 424, line 13, is our San'a'; this inscription would date from the middle of the first century A.D. If the king of Saba' and Dhū Raldān in line 3, Ilḡharḡ Yaḡḡib, who wins a victory at or over *Ṣa'u*, can be identified with the Elīzar of the *Periplus maris Erythraei*, § 26 (see E. Glaser, *Die Abessinier in Arabien und Afrika*, 1895,

p. 117 *sqq.*; M. Hartmann, *Der islamische Orient*, 1909, ii. 150 *sqq.*). Legend and poetry have more to tell us, inspired by the vast ruins of the castle of Ghumḡān [q.v.]. Shem was the builder of the town and castle and Azāl their ancient name. As this latter was possibly only taken at a later date by Jews and Muslims from Genesis, x. 27, the suggestion that in San'a' we have the Uzal of the Bible is as uncertain as Sprenger's explanation (*Die alte Geographie Arabiens*, 1875, § 294) of San'a' as the *Menambis basilium* of Ptolemy, *Geogr.* book vi., chap. vii., § 38, or Glaser's assertion (*op. cit.*, p. 122, and *Skizze d. Gesch. u. Geogr. Arabiens*, ii. [1890], p. 310, 427) that the old name was Tufīḡ and that the present name has been brought from the region of Ma'rib.

It was only when with the Abyssinian invasion Yaman became involved in the struggle for world supremacy between Rome and Persia that San'a' is definitely known to have assumed the prominent part which it henceforth played down to the present day in Upper Yaman and with occasional interruptions in the whole of Yaman. Only a few of the events of these fourteen centuries, in which the history of Yaman is reflected in the story of this single town, can be briefly given. About 530 A.D. after the overthrow of the Jewish king Dhū Nuwās, who is said to have persecuted the Christians in San'a' also, Abrahā arose and after disposing of his Abyssinian rival Arḡāḡ made the town the seat of the Abyssinian viceroy. He enriched the town with the Christian cathedral, the Ka'la or Kulala (*ekklesia*). The materials are said to have been brought from the ruins of Ma'rib and the workmen and the mosaics to have been sent by the Byzantine emperor. Summoned by the old Yamanī ruling family of Dhū Yazan, Wahraz, Khusrāw I Anūsharwan's general, about 570 drove the son and second successor of Abrahā, Masrūḡ, from the town and established there at first a system of joint administration with the Dhū Yazan, then Persian rule alone, which was, it is recorded, in the hands of his son, grandson and great-grandson after him. In the year 10 (631), according to some stories two years earlier, the fifth governor, Bāḡḡān, adopted Islām. In the same year 10, Muḡāḡḡir b. Abī Umāya b. al-Mughīra was sent to San'a' to collect the taxes for the Yaman. In the following year the town was for three months in the hands of the anti-prophet 'Abhala b. Ka'b al-Aswad, who entrenched himself in Ghumḡān. On the death of Muḡammad, his rising became merged in the general struggle for the independence of the Yaman, the principal champion of which was again one of the Dhū Yazan, 'Amr b. Ma'dī Karīb. The Medina government found most support with the arabicised Persian nobles, the Abnā' [q.v.]. In 11 (632), Fairūḡ the Dailamī, with the help of al-Muḡāḡḡir, was able to restore Muslim supremacy in San'a' and Upper Yaman. It was probably in this fierce fighting that the fortress of Ghumḡān was destroyed, which, according to the legend, must have been rebuilt once before in the Hīmyar period by 'Amr b. Abī Sharrḡ b. Yaḡḡab, who is known from inscriptions. After the conquest comparative quiet prevailed, particularly as the leaders in Medina dealt gently and tactfully with the notables in and near San'a'. Ya'īḡ b. Munya whom 'Umar I appointed successor to al-Muḡāḡḡir was still in this office on the accession of 'Alī. The latter dismissed him and appointed

'Ubad Allah b. 'Abbas as, at least so al-Ya'kūbī, ii. 208 *sq.*, tells us, Ṭalḥa refused to be moved to the provincial office to San'a', but with al-Zuhair seized all the taxes of the Yaman, which Ya'fā had taken with him from San'a' to Mekka. But 'Ubad Allah or his successor was driven from San'a' by Hus b. Ayyāṣ by order of Mu'awiya I, according to some versions as early as 40 (660), that is even before the assassination of 'Alī.

There are proverbial sayings such as 'father than San'a'' or 'everyone, even the shepherd on the hills of San'a'' (al-Tabarī, i. 2752; iii. 2472). When the centre of Islām was removed to Syria and then to the 'Irāq, Upper Yaman appeared even more remote, and its history was in keeping with this. Three forces were resisting the Caliphate, fighting one another, or in certain cases supporting one another: native princes, ambitious governors and leaders of sects, who taught their views far from the capital and endeavoured to put them into practice by founding states; even the arch-heretic 'Abd Allāh b. Sabā [q.v.] is described as 'one of the men of San'a''. Although lack of notice is no proof of quiet in this remote town, the Umayyads seem to have had a firm grip of San'a'. Even when the Umayyad Caliphate was breaking up, the general Ibn 'Aṭīya was able in 130 (747-748) to send to Marwān II from San'a' the head of 'Abd Allāh b. Ḥamza, who had set himself up there as Khāridjī caliph. The situation soon became more difficult under the 'Abbāsids. Homage was not paid to al-Hādī at all. Under Ḥārūn al-Raḥīd, his fifth governor, Ḥammīd al-Barbātī, only succeeded after a nine years' struggle in bringing the rebel Ḥamdānīd al-Haiṣam b. 'Abd al-Maḥdīd a prisoner from al-Sarāt to San'a'. At this time, about 188 (803), the town was almost in ruins. Things became no better at the beginning of the third century when the 'Alid Ibrāhīm b. Mūsā b. Dja'far al-Djazzār (the 'butcher') ruled from San'a' to Mekka, half as an adventurer for his own hand and half as an official governor. The attitude of his opponent, the Wālī Ḥamdawāh b. Māhān, was no less ambiguous. In the end the government had to resort to Turkish praetorian generals. Not later than 256 (869) the Ya'furids of the tribe of the Hīwālī became masters of San'a' by a compromise, it is true, by the terms of which Muḥammad b. Ya'fur gave the caliph al-Mu'tamid mention in the *ḥuṣṣa* and paid tribute to the Ziyādis at Zabīd. Even their rule was often interrupted in the town itself. On the accession of Muḥammad's son, Ibrāhīm, in 279 (892) his palace was set on fire by citizens of the rival tribe of Shihāb and the Abnā', who were usually at enmity with the latter. Two bodies of Shī'īs then attacked San'a'; from the north, from Sa'da, the Zaidī Yahyā b. al-Ḥusain who occupied the town for the first time for four or five months in 288 (901); from the south, with the fortress of al-Mudhakkhira (see above, i. 369a) as his base, the Ḳarmāṭian 'Alī b. al-Faḍl controlled the town at the beginning of 293 (905) at first for two or three months from its castle. In the never-ending struggle between Ya'furids, Zaidīs, Ḳarmāṭians, mutinous clients of the Ya'furids of the family of Ṭarīf, 'Abbāsīd governors and generals, San'a' was taken no less than twenty times in the twelve years from the first entry of Yahyā to the end of the century (913 A.D.); it three times surrendered after negotiations, and was besieged unsuccessfully some

five more times. According to al-Mas'ūdī, ii. 55, San'a' had a quieter and brilliant period after the death of the Ḳarmāṭian, under the Ya'furid As'ad b. Ibrāhīm, from 303-332 (915-943). On his death family dissensions brought back the old turmoil. The Zaidī Mukhtār, grandson of Yahyā, took the town in 345 (956) but was murdered in the same year. The streets and quarters of the town became a battlefield for the feuds of the two tribal groups of Khawāṭin and Ḥamdān. Behind the chief of the latter, al-Dahhāk, was the now restored power of the Ziyādis of Zabīd. But in 377 (987) or 379 (989) the last important Ya'furid of San'a', 'Abd Allāh b. Kaḥṭān, was once more able to exact retribution and destroy Zabīd. 'Abd Allāh had been able to secure the support of the still numerous Ḳarmāṭians and officially recognised the caliphate of the Fāṭimids. The Sulāṭīds followed the same policy; the first of them, 'Alī b. Muḥammad, as Fāṭimid *adā'* made San'a' his headquarters about 453 (1061) and after half a century put an end to the unrest which had been increased by the fact that the Zaidī Imāms, who penetrated among the hostile tribes from Sa'da from time to time, quarrelled among themselves. When Queen Saliyda Ḥurra moved the seat of government to Djabla in Lower Yaman, her relations, the Yāmid, held the town for her for another decade or so, until in 492 (1098) Ḥatīm b. al-Ghāshīm made himself independent there. His dynasty, the Ḥamdānīds, reigned till the invasion of the Yaman by Salāḍīn's brother Turānshāh in 569 (1174), interrupted in the usual way by family quarrels, by another Yāmid interregnum, and especially by the Zaidī Imām of Sa'da and Naḡrān, Aḥmad b. Sulaimān al-Mutawakkil.

But even the fifty-five years of Ayyūbīd rule showed that San'a' could not be held firmly by a distant power. The Ḥamdānīd 'Alī al-Waḥīd b. Ḥatīm, who had established himself in the mountain fortress of Bīrīsh about two hours to the east of San'a', in 583 (1187) destroyed the city walls, the castle and the greater part of the town of San'a'. In 595 (1199) and again in 611 (1214) we find the Imām 'Abd Allāh al-Manṣūr holding the town for a brief period. The suzerainty of the Rastīlids [q.v.] of Ṭa'izz over San'a' began in 626 (1229) at first with vigour. The governors, usually princes or Kurd officers, visited the town and the sultāns themselves often came also. It was at first rarely and only for brief periods captured by the Imāms e.g. in 648 (1250) or 671 (1271). It was not till a century later that Zaidī power was again restored. The Imām Salāḥ b. 'Alī was not only able to make himself secure in San'a' but repeatedly to attack Zabīd, 'Adan and Ṭa'izz from it in the years 777-793 (1375-1391). His successors were able to ward off successfully the new Ṭāhirīd kings of lower Yaman; the first of these, 'Amr b. Ṭāhir b. Mu'awwada was only able to enter the town temporarily in 861 (1456). In 913 (1507) the Kurd al-Ḥusain, admiral of the second-last Mamlūk Sultān Kānsūh [q.v.] al-Ghūrī, took the town to which the latter sent the Mekkan Sharīf Barakāt II b. Muḥammad b. Barakāt I as Wālī in 922 (1516); but in the very next year it was regained by the Imām Yahyā Sharaf al-Dīn. When the Ottomans put an end to the Mamlūk dynasty they had to fight to gain the Mamlūk possessions. In 953 (1546) Özdemir Pāshā entered San'a'; in 1038 (1628) Ḥaidar Pāshā capitulated to the Imām Muḥammad

of the Ḥāsimi line which held the town till 1087 (1676). Then followed a period of fighting among rival Imāms; the native notables, the Bedouin tribes and the never completely exterminated Karīmians thereby gained considerable freedom of action and foreign powers also seized opportunities for intervention. Devastating Bedouin invasions in 1233 (1818) were repeated in 1251 (1835), which induced the Imām al-Nāṣir in 1253 (1836–1837) to negotiate for the sale of the town to the Egyptian Pāshā Meḥmed 'Alī. The Turkish general Kibrīslī Tawfīk Pāshā was admitted to the town by the Imām in 1265 (1849). His troops were massacred within two days and next year the Imām was deposed by the Mekkan Sharif Muḥammad b. 'Awn who intervened. He appointed a rival Imām who was, however, not able to protect the town; in 1267 (1851) and 1269 (1853) the town was again invaded. During the Ottoman reconquest by Muḥtār Pāshā, Šan'ā' was taken by storm in 1288 (1871) and made the capital of the wilāyet of Yaman and headquarters of the viiith Ottoman Army Corps. But the Zaidīs were not disposed of. In the spring of 1905 the Ottomans had to vacate the town and the country round before the Imām Maḥmūd Yahyā b. Ḥamīd al-Dīn. Although they regained it in the autumn, it took fully five years to secure a rather parlous restoration of the Turkish position. After the Great War Maḥmūd Yahyā was recognised as Lord of Šan'ā' and Yaman by the Treaty of Sèvres on Aug. 10, 1920.

In spite of its remoteness and its turbulent history, Šan'ā' has been able to make its contributions to Muslim learning. It was here that 'Abd b. Šarīya, by his historical tales, laid the foundation for the fame which induced Mu'āwiyā I to summon him to his court. His younger colleague Waḥb b. Munabbih, who died in Šan'ā', was also celebrated by his fellow-citizens as their first authority on the Qur'ān. In the second century Šan'ā' was visited by many collectors of traditions, including Aḥmad b. Ḥanbal and Yahyā b. Ma'in, who studied with 'Abd al-Razzāk b. Hammām b. Nāfi', who died in Šan'ā' in 211 (827). Šan'ā' is also noted as the place of birth and death of the poet, grammarian and historian, but above all genealogist and geographer, al-Ḥamdānī [q.v.]. Of the Imāms of Šan'ā' very many of them have done something to increase the bulk at least of literature; this very fact provoked the other factions to a similar activity. Christians survived for a long time among the various groups of Muslims and the Jews, or they may have settled again there at the time of the greatest expansion of the Nestorian Church; thus, for example, about 225 (840) Thomas of Margā (*The Book of Governors*, ed. Budge, i. 238) mentions Mār Petrus as contemporary bishop of Yaman and Šan'ā'.

The first European to reach Šan'ā' was the Italian Barthema as a prisoner in 1508. The first explorer whose goal was either Šan'ā' or to reach the country of Ma'rib from it, was Carsten Niebuhr in 1763. While the yield of inscriptions from Šan'ā' and vicinity has been slight, valuable collections of manuscripts were obtained there by Glaser, Landberg, Caprotti and Borchardt.

Bibliography: Šan'ā' is often dealt with by Arab geographers and travellers. In addition to Yāqūt we may mention as valuable for economic details also al-Muḥaddasī (*B. G. A.*, iii.),

Ibn Khordādhbih (*Ibid.*, iv.), Ibn Ḥawqal (*Ibid.*, ii.), Naṣīr-i Khusrāw (ed. Schefer, 1881); Ibn Baṭṭūṭa, ed. SANAD. [See 188Xb].

SANĀ'Ī, ABU 'L-MARJID MAḤMŪD b. ĀDAM, of Ḡharāf, was one of the most famous poets at the court of the later Ḥamāvid kings, where his contemporaries were Saiyid Ḥasan, 'Uṭmān Muḥtārī, 'Alī Faḥr and Maḥmūd Warrāk. He gained his livelihood as a court poet by writing verses in praise of the king and of the leading men in the state, but one day, overhearing a well-known eccentric of Ḡharāf drink confusion to "the wretched Sanā'ī, who spent his time in composing mendacious verses in praise of the great and would be obliged to remain silent when asked, at the Day of Judgement, what he had done for God", he was overcome with remorse and left Ḡharāf for Marw, where he led the religious life as a disciple of the Shaikh Abū Ya'qūb Yūsuf. This occurred in the reign of Ibrāhīm (1059–1099), the eleventh king of the Ḥamāvid dynasty.

Besides a *Diwān*, containing 30,000 verses, Sanā'ī wrote the *Ḥadīqat al-Ḥakīqa*, a didactic poem on morals and religion, of which the doctors of the law at Ḡharāf disapproved so strongly that they sent it to Baghdad, with a view to its condemnation by the leading jurists and theologians of Islām, but were disappointed by a decision which pronounced the book to be orthodox. After this Sanā'ī returned to Ḡharāf, but continued to lead the religious life. [Besides the *Ḥadīqat* Sanā'ī has left six more *Mathnawī's*, viz. *Tarīḥ al-Tahīq*, *Ḡharībūna*, *Sair al-Ḥād ilā 'l-Ma'ād*, *Karūna*, *Ṭibḥūna* and *Aḥlūna*. The *Ḥadīqat*

was commented upon by 'Abd al-Laṭīf b. 'Abd Allāh al-Abbāsī, who wrote in the time of the Mughal Emperor Shāh Jihān].

It is said that Bahrām (1118—1152), the fifteenth king of the Gharnawid dynasty, offered his sister in marriage to Sanā'i, who begged that he might be excused, as he sought neither wealth nor worldly rank. As the year of his death 526 (1131) as well as 576 (1181) is given; the latter is, however, very improbable.

(T. W. HART)

SANĀM (A., plur. *anām*) is explained in the dictionaries and the commentaries of the Qur'ān as meaning "an object which is worshipped besides God", and it is as a rule distinguished from the word *waṭhan* (plur. *awṭhān*) as being a thing having shape and made of stone, wood or metal, while the latter is almost synonymous with "picture or painting". This is also the explanation given by Ibn al-Kalbi in his *Kiṭāb al-Aṣṇām*. The Arabic dictionaries state further that it is a word of foreign origin, derived from the word *ghanam*, but do not know the language from which it is borrowed. According to the European philologists, it is etymologically identical with Hebrew *selem* "image". A deity named S-l-m occurs in the Aramaic inscription of Tadmūr. Cf. further J. Hehn in *Festschrift-Sachau*, Berlin 1915, p. 36 sqq. The word occurs five times in the Qur'ān (vi. 74; vii. 134; xiv. 38; xxi. 58 and xxvi. 71) and is frequently mentioned in traditions, though not as often as the word *Waṭhan*. From the description of the idols worshipped by the pre-Islamic Arabs, enumerated by Ibn al-Kalbi, the word *Sanām* appears to apply to objects of very varying character. Some were actual sculptures like Hubal, Isāf and Nā'ila; so were the other idols set up round the Ka'ba. Muḥammad when he entered Mekka as victor is stated to have struck them in the eyes with the end of his bow before he had them dragged down and destroyed by fire. Others were trees like al-'Uzā and many were mere stones like al-Lāt. Stones are well-known as objects of worship by the Semites in general and the traditionist al-Dīrīmī states early in the first chapter of his *Muṭamad* that in the time of paganism

the Arabs, whenever they found a stone remarkable for its shape, colour or size, set it up as an object of worship. These stones called *Nuṣub* (plur. *Anṣab*) had libations poured over them and were circumambulated as a special act of worship. There can be no doubt that the Black Stone in the Ka'ba is but a survival of this stone-worship. Ibn al-Kalbi states that the Arabs were not content with setting up stones for idols, but even took such stones with them on their journeys. The word *Sanām*, however, does not mean a "god"; it always appears to have a derogatory meaning. For this reason it is found only very rarely in verses ascribed to poets of the time of paganism. The passages are so few which I have found that I can enumerate them; the verses are by Zaid b. 'Amr b. Nufail (Ibn al-Kalbi, *Kiṭāb al-Aṣṇām*, p. 22, 2 = Ibn Hishām, *Sira*, p. 145, 10), Raḥīd b. 'Abd Allāh al-Sulamī (*Aṣṇām*, p. 31, 10 = *Khiṣṣna*, iii. 245, 22), and most instructive of all is the verse of 'Abd b. al-'Ahrā (*Divān*, ed. Lyall, II, verse 6 = *Aṣṇām*, p. 63, 4): "And they took in exchange for their god Yaḥyā an idol". In the poetry after Islām the word is used by al-Kuṭābī (*Divān*, ed. Barth, 23, verse 25) and Ibn Kays al-Rakayyāt (ed. Rhodokanakis, 61, verse 27) in the ordinary meaning of "idol, Götze". The numerous names of Arabic idols with all that can be traced about them in ancient Arabic literature are found in the works named in the bibliography. In the Qur'ān are named as idols of the post Wadd, Suwā', Yaghūth, Ya'ūq and Naṣr. The chief idols still worshipped in the Hijāz at the time of the Prophet were al-'Uzā, al-Lāt, Manāt, which were female godheads, and Hubal, who seems to have been the chief male idol; his statue was of red granite.

The enumeration of the names of the idols does not really belong to this article as the proper name for them is probably covered by the word *Nuṣub*. As deities the various idols had special attendants (*Sādān*, plur. *Sadāna*), whose office was in most cases hereditary and who accepted sacrifices brought by the worshippers, performed the sacrifice and smeared the idol with the blood of the victim. The worship was not continuous, but appears to have been once or twice a year at the beginning of autumn and spring. Then the worshippers in their circumambulation would touch or kiss the idol, the object being to derive from the godhead some of its latent powers. These festivals of worship were the cause of the peculiar Semitic custom of pilgrimages to venerated deities. Though the gods had their special places and were particular to certain tribes, other tribes would come to them from great distances during the so-called Holy Months when warfare was suspended. In this way long before Islām the various Arab tribes maintained continual communications. Growing Islām was from the very beginning intent upon the destruction of all traces of pagan idolatry and was so successful that the antiquarians of the second and third century of the Hijra could glean only very scanty details. Some of the idols were made use of for other purposes, as for example, the idol Dhū 'l-Khalaga, a white piece of marble on which a kind of crown was carved and which was worshipped at Tabāla, a place on the road from Mekka to Yaman, was in the time of Ibn al-Kalbi (about 200 A. H.) used as a stepping-stone under the door of the mosque at Tabāla. Other stones which had been worshipped as idols were actually used as

corner-stones of the Ka'ba and as such we must consider also the Maḥām Ibrāhīm.

(F. KERNOW)

SANĀR (P., a corruption of *sad anār*), the name given in the reign of Faṭḥ 'Alī Shāh of Persia (1212—1250 = 1797—1834) to a silver coin, the half 'abbās or mahmūdī; it weighed 36 grains (2.34 grammes). With its multiples it was abolished at Faṭḥ 'Alī's reform of the currency in the thirtieth year of his reign.

(J. ALLAN)

SANDĀBIL, said to be the capital of China. The name and description of the town in Yāqūt (*Mu'jam*, iii. 451, 5) and Zakariyā al-Ḳazwīnī (*'Adīb al-Maḥallāt*, ii. 30 sq.) are taken from the undoubtedly fraudulent story of his travels by Abū Dulaf Miṣ'ar b. Muḥalbil (see the art. *MIṢ'AR*), who claims to have accompanied an embassy of the Chinese king Kāin b. al-Shāhī to the Sāmānīd Naṣr b. Aḥmad († 331 = 943) from Kharāsān back to China. J. Marquart (*Ostasiatische Streifzüge*, Leipzig 1903, p. 84 sq., esp. p. 89) endeavours to show that Sandābil and Kan-tou (cf. the art. *KAN-SU*) are identical and that we have to see in the sender of the embassy "not a prince of one of the short-lived dynasties after the fall of the T'ang dynasty but the Khagan of the Uigurs of Kan-tou". This Khagan is said "to have felt threatened by the steadily increasing power of the Kitān", and "to have sought support and an alliance from the powerful Sāmānīd". On the question of the origin of the name Sandābil for Kan-tou, Marquart only gives the suggestion made to him by de Goeje that Abū Dulaf confused Kan-tou with Čing-taṣu (in Marco Polo *Sindufu*), well known as the capital of the province of Szechwan, where a separate dynasty actually did rule at that time. According to Marquart, "the latter town must be considered to have been the starting point of the return journey", which is obviously impossible as the return journey is described as being made by sea. So long as Abū Dulaf's story is not confirmed from any other source, the question will remain unsettled what relation his story of his journey and the alleged reason for it bears to historical facts. Nowhere is there the slightest mention of embassies from China to Kharāsān or vice versa nor of the matrimonial alliance said to have been arranged (Yāqūt, iii. 45, 2).

(W. BARTHOLO)

SANDAL, Sandalwood. According to al-Nawairī, numerous varieties are distinguished. The majority, especially the white, yellow and red kinds, are used for the manufacture of fragrant powders on account of their pleasant smell; they are also used in medicine, while other varieties again are used by turners and furniture-makers or for the manufacture of chessmen, etc. At the present day the *pterocarpus* imported from Southern Asia, the

islands of the Malay Archipelago and Africa is used for fine furniture and the waste as dye-woods.

SANDJAK (r., 1) flag, standard, banner (Arabic *ḥudūd*), especially of a large size (more important than the *Ayraf*, Ar. *āya* or 'alam) and suitable for fixing in the ground or hoisted permanently on a monument or a ship; 2) (nautical term) ensign; pennant (*ihindjī sandjak*), starboard; 3) formerly a military *ḥef* or *ḥāḥ* of a certain extent in the Ottoman empire; 4) a Turkish administrative and territorial division; 5) (in the expression *sandjak tiken-i* or *diken-i*, from the Turkish translation of *türkân-i ḥāḥ*, p. 88, 23) a synonym of *sinjan tiken-i* (on this plant see Barbier de Meynard [ii. 101], who gives it as a Persian word).

As al-Kalkashandī pointed out in the xvth century (*Sabḥ al-aḥḍā*, v. 458), *sandjak* comes from the verb *sandj-maḥ* (not *sandjī-maḥ*, as in the author already quoted) which means "to sting, prick, plant, stick a weapon or pointed object in the body of an enemy or in the ground (cf. Sāmī-Bey, *Kamūs-i Türkî*). The form *sandjak* found in Čaghatai (Boudagov) and even in an old Serbian loanword (Miklosich, *Die türkischen Elemente in den südost-europäischen Sprachen*, Vienna 1884, ii. 50) corresponds to the verb *sant* of the Orkhon inscriptions (v. Thomsen, p. 42; Radloff, p. 132). Cf. also F. W. K. Müller, *Uigurica*, ii. 78, 30 and 86, 48. In Kirghiz the form used is *ṣandj* (Radloff, *Wörterbuch*, iv. 949) and in Uriankhay *ṣandj* and *ṣandj* (Katanov, *Opis islovedenja*, p. 429 and 779, with the meaning "to prick, stab, erect, fix"). Maḥmūd al-Kāshgharī (xiith cent.), *Divān Luḡat al-Turk*, ii. 171, 180, 182 and iii. 310, also gives (iii. 108) *sandj ḡhan* equivalent to *sandjan* (*sinjan*) already quoted, which is a Turkish participle used as the name of a prickly plant.

The word *sandjak* belongs to a family of derivatives which all contain the idea of "point" and mean (the word itself sometimes): *harpoon*, *fork*, *piercing pain*, *colic*. Such are *ṣandj*, *sandjīk*, *sandjī*, *ṣandj* (Tobolsk), *ṣandjī* (Kirghiz), *sandjīk*, *sandj* (whence *sandj-maḥ* in Othmanli). We may add on the authority of Abū 'l-Fidā' and the Turk-Arab glossary published by Houtama, Leiden 1894, p. 80 and p. 29 of the Arabic text, the proper name *Sandjar*, glossed *ṣafan*, in preference to the usually accepted etymology from *Sindjar*, the name of his place of birth (cf. *Recueil des Historiens des Croisades*, i. 1872; cf. Index under *Sindjar*).

Sandjīk has passed into a certain number of other languages; more recently into the Balkan languages (cf. the work by Miklosich quoted above and Saineanu, *Infuenta Orientalia*) and earlier into Arabic (cf. Dozy, *Suppl.*; cf. also W. Marçais, *Le dialecte arabe de Tlemcen*, Paris 1902, p. 270, 99) and into Persian where, according to the *Burhān-i ḥāḥ*, it means or meant a "flag, a large metal pin intended to keep on the head a kind of hood worn by women"; "a kind of girdle". In Modern Persian *sandjak* (sic) simply means "pin" (in opposition to "needle") (cf. Nicolas,

Dictionnaire français-persan, under the word "pin"). Freytag took *sandjak* for a Persian word and the Turks still keep the orthography which it has in Persian (*s-n-dj-k*) while they write the verb *sandj* with a *şad*. We may note that in Persian *dirafz* "flag" also means "point" (cf. Vulliamy), whence the Ottoman word *dirawîş* (cf. Hind-oghlu s.v. "pointe" and "poignon"). The *Buchārā-i šāfi* gives us a variant of *sandjak* in the form *sandjāq*. If it is not a corruption due to the Persian, we have here another example of a Turkish word preserved through its use in Persian. The word *sandj-ak* is very well explained with the help of the Turkish suffix *-ak* (*-ik*) which makes a passive participle from transitive verbs. *Sandjāq* then would mean "sharpened, fixed". The suffix *ak*, with its tendency to designate place-names (which very well fits a flag "fixed" or able to be fixed) seems to have been in use very early.

The etymological details which are given above without excluding the explanation of *sandjak* by "lance with a pennon" (it is that of al-Kāshgharī who uses the word *ramş*) make very probable the explanation as "flag with a staff sharpened at the foot". Independently of this peculiarity it is difficult to say what was the exact form of the primitive Turkish *sandjak*; did they have a horse's tail (or the tail of a yak of which von Hammer speaks in his definition, *Hist. de l'Empire Ottoman*, xvii. 257) or were they always flags? Were they like the *şalşak* (or *şalşak* mentioned by Ibn Khaldūn (for the references see Dozy, *Supplément*, under the word *şalşak*; it has become *şalşak* by an error in Djewdet Paşa and Ahmed Râim, quoted below in the *Bibliography*)! The meaning of these terms may be more indefinite than we think and varied a great deal with time and place. The word *şalşak* [q.v.] which it was allowed to take in the meaning "horse's tail", meant, according to al-Kāshgharī, not only a "flag of silk or orange brocade" but also "drum", another symbol of sovereignty (i. 169; iii. 92). Ibn Khaldūn confuses the flag with the "parasol" of the prince or *şīr*, better *šār* (Persian pronounced *šār* (al-Kāshgharī, i. 340), then *šār* "tent", by the Turks who have preferred these words to their old *šāra* "silk parasol of the Turkish Khaghans" (al-Kāshgharī, ii. 149, 15 and iii. 45, 15; cf. the Ottoman *şāra* "a place in the sun" and a passage in Rabghuzi in Radloff, *Wörterbuch*, iv. 59 under *şāra*!).

Whatever its primitive form was, the *sandjak* appears among the Seldjūks as an insignium of royalty. In the Turkish text of Ibn Bihl (ed. Houtsma, *Recueil*, vol. iii.) the word *sandjak* is always found in connection with the title Sultān (*Sultān-ih sandjak*). This standard is mentioned (p. 135—136, 144, 169, 170, 289 and 357) à propos of different sieges of strong places on the walls of which it was placed after capitulation. Sometimes (p. 135—136) it is the besieged themselves who, ready to surrender and no doubt seeing in this banner a guarantee of protection against pillaging, asked for a *sandjak* to be sent. It is not, however, necessary that the Sultān himself should be present and the historian (p. 357) shows us the *beylerbeyi* setting out on an expedition with the standard of the sovereign.

For a long time the neighbouring princes and vassals of the Seldjūks respected their privilege but the Atabeg of Moḡul, Saif al-Dīn al-Ghāzi, son

of 'Imād al-Dīn al-Zangī (d. Nov., 1149), was the first of the *aṭab al-aṭraf* to have a *sandjak* carried unfurled over his head (Ibn al-Aṭir, *Hist. des Atabek de Mossoul, Recueil des hist. or. des Croisades*, vol. ii., part 2, p. 167).

The Aiyūbids followed the example of their predecessors.

In 1198 the Sultān of Egypt, al-Malik al-'Aṣir, conferred on his nephew al-Malik al-Mu'izzam 'Isā when he became prince of Damascus "the *sandjak* and the *limā* to display throughout the world" (*Kitāb al-Kawāṭin, Rec. des Hist. des Croisades*, v. 117). In 1250 Albak the Turkoman, married to an Aiyūbid princess and proclaimed Sultān of Egypt, took part in a procession in which the royal banners were unfurled for him (*al-sandjak al-sultāniyya*; cf. Abu 'l-Fidā', *Annales*, ed. Reiske, iv. 516 of the Arabic text and 515 of the Latin translation). Among the Mamlūks, a distinction was made between the *sandjakdār* "royal standard-bearer" and the ordinary *alamdār* (Gandefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, p. xvii); afterwards, in Turkish Algeria this distinction disappeared; cf. *Mélanges René Basset*, ii. 35 (under the press).

At the end of the Seldjūk empire in Asia Minor the *sandjak* became one of the insignia of investiture of new sovereigns, notably of the first Ottoman Sultān. In 1280 after the capture of Karadja Hissār by 'Othmān, Sultān 'Alā' al-Dīn II to celebrate this conquest sent him by the hands of Ak Timur, 'Othmān's nephew, a *sandjak* "with its accessories" (*sandjak yaraghi*), as 'Ashk Paşa Zade tells us (ed. Constantinople 1332, p. 8 iv.); Negiri prefers another version (cf. Noldeke, *Z. D. M. G.*, 1859, xiii. 207—209). 'Ashk Paşa Zade mentions in this connection that 'Othmān thus became *sandjak-beyi* and we know that it was from this time that the *ḥanṣa* was read in his name (for the first time at Karadja Hissār by Dursun Fakih). According to the same authority, the *sandjak* was made of cloth of Philadelphia or Ala Shehir (p. 56).

When they became independent in their turn, the Ottoman princes appointed *sandjak-beyi* in larger and larger numbers and the *sandjak*, somewhat diminished in splendour, became identified with the territory over which it floated; it appears henceforth as the name of a political division partaking both of the nature of the military fief and of the administrative representative of the central authority. The *sandjak* generally carried with it a *dirlik* (for *dirlik*, "life, livelihood, fief") or, more accurately, a *ḥāṣṣ* (a name given to a *dirlik* of an annual revenue of over 100,000 aspers). Above were the larger *ḥāṣṣ*'s of the *beylerbeyi* or governors-general of the provinces; below the smaller fiefs, the *siyāmet*, *amār* and *ḥāṣṣ*, to give them in their order of importance. Sometimes the Sultān granted a *sandjak* to their children (d'Herbelot, *Bibl. Orient.*, p. 755; this is what was called a *sandjak-ā ḥāṣṣ*, Selānikī, p. 286) or to a *beylerbeyi* or retired vizier (for examples see Na'ima, ii. 23, iii. 336 and passim). The *sandjak-bey* or *amir-limā* who had a right to a horse's tail were not in principal the owners of their districts; they had the "possession" or *teqarruf* of them, and were their *mütearrif*. This term used from the xviith century (Na'ima, ii. 23, 9, 179, 11 and passim) was destined to become a rank in the administrative service (cf. below).

Sometimes the *sandjak-beyi* was only an official

appointed and given an annual salary (*uḥṣa*), which meant that his *sandjak* was awarded by *ṣāliḥiyya*. This was the case with all the *sandjak*'s of the remoter *eyālet*'s of Asia, like Baghdad, Bagra, Yemen, Habesh, Lahsa and Egypt, and for three *sandjak*'s (maritime) in each of the *eyālet*'s of the archipelago and of Cyprus (Hādidi Khalifa, *Tahsil il-Kibār*, f. 67). At the beginning of the sixteenth century there were 290 *sandjak*'s divided among 25 *eyālet*'s.

In case of mobilisation, the *sandjak-bey*s became military officer (*mir āḥṣā*) and presented themselves at the appointed place of assembly (e.g. the plain of Iaakli in Rumelia) with the troops collected by their vassals or subjects. The maritime *sandjak*'s were bound to equip a ship and make war by sea (*deryā-ya eḥṣā*), sometimes at the same time as by land (*ḥarā-ya eḥṣā*). The word *sandjak* passed into the sea-faring language of the Turks and Arabs with considerable variations of meaning which can be found in the various dictionaries, notably that of 'Alī Selyidi, *Reṣmīl-i kizām-i 'Oṭmāni*, Constantinople 1325, p. 55 I (cf. for Arabic Ben Cheneb, *Mots turcs*, p. 48; Brunot, *Notes sur le vocab. mar. de Kabat*, Paris 1920, p. 80; see also J.A., Jan.-March, 1922, p. 109). By an archaism which has survived in administrative language the word *sandjak* has continued to be used in the sense of "symbol of investiture" for a *ḥayriyya* for example (Wāṣif, *Tārīkh*, ed. of 1219, l. 81, copy of a firmān of 1175 A.H.) without taking account of the general meaning of "flag".

According to Mouradji d'Ohsson, who does not give his authority, it was Murād III (1574-1595) who ordered the division of the empire into *eyālet*'s and *ḥiṣṣa*'s (*Tableau général de l'Empire Ottoman*, vii. (1824) p. 276-277; cf. von Hammer, *Hist. de l'Emp. Ott.*, vii. 288-289, 46). Neither Pözewi nor Selānikī mention these reforms.

Sulṭān Mahmūd II, having just after the destruction of the Janissaries (1826) suppressed the feudal military organisation, which died a natural death in 1837, the *sandjak* or *ḥiṣṣa* or *müctarriḥlik* definitely acquired the meaning of an administrative subdivision pure and simple. The *müctarriḥ*, governor of the *sandjak*, was henceforth a civil official, distinct from the *mir āḥṣā* who now became the modern "general of brigade".

The division into *sandjak*'s or *ḥiṣṣa*'s was maintained by the law of the *vilāyet*'s (the former *eyālet*'s) of Nov. 8, 1864 (the administration of the *sandjak*'s is dealt with in Chapters iv. and v., articles 29-37) and by that of Jan. 21, 1871 (Administration of the *sandjak*'s, articles 35-42 and 90).

The government of the Grand National Assembly abolished the *sandjak* or *ḥiṣṣa* by the fundamental law of Jan. 20, 1921, called *teşkilat-ı idāriyye*, of which article 10 runs: "Turkey is divided, in accordance with geographical necessities or economic relations, into *vilāyet*'s and the *vilāyet*'s into *ḥāḍḍa*'s. The latter are divided into *nāhiya*'s". In practice this arrangement was carried out by turning the old *sandjak*'s into *vilāyet*'s.

SANDJAK SHARIF (r. "illustrious banner"), the standard of the Prophet preserved in Constantinople. It is 12 feet long, surmounted by a silver cube containing a copy of the Kur'an said to have been written by the Caliph 'Uthmān himself. It is covered with another flag attributed to the Caliph 'Umar and with 40 covers of taffeta, the whole being in a case of green cloth; in the centre of all these covers is a little copy of the Kur'an attributed to 'Umar and a silver key of the Ka'ba presented by the Sharif of Mekka to Selīm I.

This standard brought from Egypt by this Sulṭān in 923 (1517) was at first deposited in Damascus to accompany the caravan to Mekka; then, in the reign of Sulṭān Murād III, in 1003 (1594) the Grand Vizier Kodja Sinān Paḥa to settle the continual mutinies in the army had it brought via Gallipoli escorted by 1,000 Janissaries of the Syrian garrisons to the camp in Hungary where it made a great sensation among the troops. Taken to the capital it left again next year. Finally in 1005 (1597) Sulṭān Muḥammad III going to war had this banner carried in front of him, under the care of 300 amīrs at the head of whom marched the Naḥḥ al-Aḥrāf and the Molla of Calata.

Since then the banner has never left the Serail except when the Sulṭān or Grand Vizier commanded an army in person. A tent was reserved for it; it was mounted on a staff of ebony wood ornamented with circles and with silver rings to which the standard was attached. At the end of the campaign it was taken from its fastenings and enclosed in a richly decorated box with many ceremonies, prayers and the burning of incense of aloes and ambergris. It was kept in the palace in a kind of chapel containing other relics of the Prophet such as the *Kāfirka* Sharif [q.v.]. Since the xviiith century 40 officers from the corps of the *Harām-ḥāḍḍi* have been on guard over it with the title of *Sandjak-dār*.

On Dhū 'l-Kāda 18, 1182 (March 29, 1769), the Sulṭān Muṣṭafā III having sent the standard to the Grand Vizier Muḥammad Paḥa with great pomp, the ceremony provoked massacres in which there were Christian victims and even Europeans of high rank. The Austrian internuncio, M. de Brognard, only escaped with difficulty from the fury of the fanatics. On Dhū 'l-Kāda 9, 1241 (June 15, 1826), the Janissaries having mutinied, Sulṭān Mahmūd II took the *sandjak sharif* in person and gave it to his defenders who planted it on the pulpit of the mosque of Sulṭān Ahmad III. This move contributed remarkably to the success of the reformer Sulṭān's enterprise.

SANDJĀN RĀY (or **SUNJĀN RĀY**; cf. Rieu, I. 230; iii. 908), author of a general history of India up to the early part of the reign of Aurangzeb [q. v.], entitled *Kābulāt al-Tawārīkh*. Nothing is known of his life except the few facts that he mentions himself and the remarks added by transcribers of his book. In his preface (lith. ed., p. 6, 12) he tells us that from his youth upwards he had followed "the profession of drafting letters i. e. of a *Munshi*" under administrative and revenue officials; he was born at Butāla in the Pandjāb (p. 71, 20); he had visited Kābul (p. 86), possibly Thatta (p. 60, 6), and the Pindjāw Gardens at the foot of the Himalayas (p. 35, 16). He based his *Kābulāt* on a number of Persian historical works, which he enumerates, and having revised it two or three times completed it, after two years' labour, in the 40th year of Aurangzeb's reign, 1107 (1695). But the narrative ends with the events of 1068 (1658). His copyists tell us that he was a *Khatrī* (Bhandārī or Dhīr), and one states that he was proficient in Hindi, Persian and Sanskrit (Rieu, i. 230, where the passage cited is obviously corrupt); there is, however, no other evidence of the author's knowledge of Sanskrit. The work claims to be only an "abridgement of histories", but is of special interest as being written by a Hindu; it contains a valuable section on geography, the author being particularly well-informed about the Pandjāb.

Much of the *Kābulāt* was incorporated in their own works by the authors of the *Siyar al-Muta'akhkhirin* (Elliot, viii. 194) and the *Akhbar-i Mahabbat* (id., viii. 376). The *Arā'ih-i Mahall* by Afāqs [q. v.] is an adaptation of it in Urdu.

(MUHAMMAD SHAY')
(MUHAMMAD SHAY')

SANDJĀR b. MALIK SHĀH NAṢIR AL-DĪN (afterwards MU'IZZ AL-DĪN) ABU 'L-HĀTITH, a Saljūq Sulṭān. According to the usual statement, he was born on Raddjāb 25, 479 (Nov. 5, 1086), according to some, however, two years earlier, on Raddjāb 25, 477 (Nov. 27, 1084). His muhammalian name was Ahmad; on the name Sandjār, see p. 148b. After the assassination of his uncle Arslān Arghūn [q. v.] in 490 (Dec. 1096), the young Sandjār was appointed governor of Khurāsān by his brother Barkiyārūk [q. v.]. Some time afterwards, however, the third brother, Muhammad, rebelled against Barkiyārūk; in Raddjāb, 493 (May—June, 1100), the latter was defeated and had to retire to Khurāsān. In the meanwhile Sandjār had taken the side of Muhammad, who was his brother on his mother's side also and when Barkiyārūk made an alliance with the Amir Dādū, who ruled Tabaristān, Djurdjān and a part of Khurāsān, Sandjār took the field against the combination and inflicted a severe defeat on them. In the events that followed, Sandjār stood loyally by his brother Muhammad. During the war between Barkiyārūk and Muhammad, Badr Khān, lord of Samarkand, tried to take advantage of the absence of Sandjār to extend his rule over Khurāsān, having come to an understanding with one of Sandjār's amirs named Kundoqdī, but was captured and put to death in 495 (1101/1102), whereupon Sandjār appointed his sister's son Muhammad Arslān Khān b. Sulaimān b. Boghrā Khān as prince of Samarkand and the provinces on the Djalīn. Sandjār also came into conflict with the Ghaznawid Arslān Shāh b. Mas'ūd [q. v.]. The latter captured Ghazna (510 = 1117) and installed Bahram-shāh (see the art. GHAZNAWIDS) as Sulṭān under Saljūq suzerainty. After the death of Sulṭān Muhammad on Dhu 'l-Hijja 24, 511 (April 18, 1118), the sulṭānate was to go to his son Mahmūd, in accordance with his testamentary instructions; but neither Mahmūd's brother Mas'ūd, lord of al-Mawwīl and Aghar-baidjān, nor Sandjār were satisfied with this arrangement. Mahmūd was able without much difficulty to come to an arrangement with Mas'ūd but it was more difficult to satisfy Sandjār. The latter left Khurāsān with a large army and on Djumādā I 2, 513 (Aug. 11, 1119), a battle was fought near Sāwa. Victory at first inclined to the side of Mahmūd, but as his troops were thrown into confusion by Sandjār's elephants, the battle ended in the complete rout of the former. After long negotiations an agreement was reached by which Mahmūd was recognised as governor of the 'Irāk with the exception of al-Raiy, but Sandjār's name was to be mentioned first in the *khutba*. When Muhammad Arslān Khān of Samarkand became crippled he handed over the government to his son Naṣr Khān. The latter was soon afterwards murdered, whereupon his father appealed for assistance to Sandjār. Before the Sulṭān arrived in Samarkand a brother of Naṣr Khān's had succeeded in putting down the rebellion, whereupon Arslān Khān sent to Sandjār and endeavoured to persuade him to go back. But this aroused the anger of Sandjār, who at the same time suspected Arslān Khān of having designs on his life so that he laid siege to Arslān Khān in the fortress in which he had taken refuge. When Arslān Khān was forced to surrender in Rabi' I, 524 (Febr./March, 1130), Sandjār gave him his life but appointed the Amir Husain (or Hasan) Tegin and on his death soon after Mahmūd b. Muhammad Khān b. Sulaimān prince of Samarkand. In Shawwāl, 525 (Sept., 1131), Sulṭān Mahmūd died. According to his last will, his son Dā'ūd was to succeed him, but his two uncles, Saljūq and Mas'ūd, also set up as claimants.

In Djumādā I, 526 (March/April, 1132), the contesting parties agreed that Mas'ūd should be recognised as Sulṭān and Saljūq as heir apparent, while the administration of the 'Irāk was to be left to the Caliph al-Mustashīd. But Sandjār was not at all satisfied with this arrangement. On the contrary he proclaimed Taghril b. Muhammad, who was with him in Khurāsān, as Mahmūd's successor and made an alliance with 'Imād al-Dīn Zankī, whom he appointed governor of Baghdad, and Dubais b. Sadāka [q. v.], who received the principality of al-Hilla. War was now inevitable. On Raddjāb 8, 526 (May 25, 1132), Mas'ūd was defeated by Sandjār at Dinawar, whereupon the latter retreated to Khurāsān. In Dhu 'l-Kāda, 529 (Aug./Sept., 1135), he set out against Ghazna because Bahram-shāh was endeavouring to make himself independent. But this affair was settled without bloodshed. Bahram-shāh submitted and

was pardoned. Sandjar also became involved in a long struggle with Atis b. Muhammad [q. v.], lord of Kh̄arizm. The Kara-Khitai also endeavoured to take the town of Samarkand whereupon Sandjar crossed the Djaḥān at the head of a large army. On Safar 5, 536 (Sept. 9, 1141), however, he was defeated and had to take to flight, thus losing the whole of Transoxania. On Sandjar's struggle with the Gh̄birid Husain see the art. *ḤASHANBŌZ* and *GHŌRĪK*. In 548 (1153) the Gh̄uz [q. v.] also rose. Sandjar took the field against them but was defeated and taken prisoner and only obtained his release in Ramaḍān, 551 (Oct./Nov., 1156). He died on Rabi' I 26, 552 (May 8, 1157). After the death of this clear-sighted and vigorous ruler the Saljūq empire began rapidly to approach its dissolution.

(K. V. ZETTERSTEN).

SANHĀDJA (Ibn Khaldūn tells us that the pronunciation of the word approaches *Zanūga*; both forms are still known. On the other hand we know that the *Sanhādja* have given their name to the Senegal which bordered on their territory). The *Sanhādja* are one of the branches or one of the great confederations of the Berber people. According to the theories of the western Muhammadan genealogists, they are descended by *Sanhādja* from Bernes b. Berr like the Ketāma of Little Kabylia and the Maḥmūda of the extreme Maghrib. No criterion, linguistic or other, has so far been able to justify this grouping. We do not know what was the kind of life led by the *Sanhādja* in ancient times and where they lived. In the course of the middle ages their name frequently appears; they were very numerous; their territory extended all over both Maghrib and the Sahara. Among them were great nomads (some still are to this day, notably the Tuḥfeg of Hoggar) and settled tribes, of whom it is not possible to assert that they previously led a nomadic life; such are the Telkātā. The *Sanhādja* are contrasted with the other great group, that of *Zenāta* [q. v.] who in the latter part of the middle ages succeeded in supplanting them. The *Sanhādja* reached their zenith in the first half of the middle ages or more exactly in the xth—xvth centuries (ivth—vith A. H.). This is the period when those whom Ibn Khaldūn considers *Sanhādja* of the first and second race appear in the light of history. We must, of course, use the term race with very great reservations. In any case it should be observed that several times the *Sanhādja* of one of the groups, wishing to secure the help of the *Sanhādja* of another group, appealed to the sense of solidarity due to common origin.

The first race, that of the Telkātā, in the tenth century occupied that part of the Central Maghrib which now corresponds to the department of Constantine without the Kabylia. The settled tribes and especially the descendants of the Banū Ziri

founded or ruled over centres of which the chief was Ashir [q. v.] in the south of Algeria. Supporting the policy of the Fātimids of Kairawān they fought during the whole of the tenth century against their neighbours in the west, the *Zenāta*, clients of the Umayyads of Cordova. They moved their action to the east as a result of the departure of the Fātimids to Egypt. The family of Zirids ruled in the name of the Fātimids at Kairawān. A split led to the foundation of the kingdom of the Hammūlids of al-Kal'a [q. v.]. Much weakened from the second half of the eleventh century onwards these two kingdoms disappeared in the middle of the twelfth, when the Almohad thrust into eastern Barbary was made. A little group of *Sanhādja* bearing the name survived into our times in the south-east of Algeria.

The second race of *Sanhādja* is represented by the great nomads who occupied in the xth—xvth centuries the desert between the meridian of Tripoli and the ocean. The more important tribes were the "carriers of *ghāna*", Lamāna and Masāla, who played a considerable part in the religious and political history of Barbary and Spain under the name of Almoravids [q. v.]. Al-Bakri gives us curious details regarding their style of life in the desert, their food and their tactics. The Tuḥfeg form part of this group.

Certain less powerful groups located in the Sā and the adjoining valleys of the Moroccan Atlas belonged to the same *Sanhādja* stock. These are the Lamā and Gazāla nomads and the settled Haḥkūra. The latter joined the Almohad movement.

Finally a third stock of *Sanhādja* is said to have lived scattered in the extreme Maghrib around El-Kear, in the plains of the Shāwīya in the region of Tizi and in the Rif. The *Sanhādja* Boṭṭulja and Uryāghol have remained in the last named place to the present day. The name *Sanhādja* is still borne by one of the two *leff* into which the tribes of Northern Morocco are divided.

Bibliography: Ibn Khaldūn, *Histoire des Berbères*, text i. 194, transl. ii. 1 sqq.; al-Bakri, ed. Algiers 1911, p. 164 sqq., transl. 1913, p. 310 sqq.; al-Iḍrī, *Deur. de l'Afrique et de l'Espagne*, ed. Dozy and de Goeje, p. 57—59, transl. p. 66—69; Fouquet, *Les Berbères*, Paris 1875; G. SANTA MARIA DE ALGARVE, or St. Mary of the West, in Arabic *Shantamariyat al-Gharb* (to distinguish it from Santa Maria of the East, in Arabic *Shantamariyat al-Sharq* or *Shantamariyat Ibn Ruḥin*, the modern Albarracín, a town in the province of Teruel in Spain; cf. above, i. 250 sq.), formerly a Muslim town in the south-western part of al-Andalus of which the Portuguese have preserved the Arabic name *Algarve* = *al-Gharb* (cf. above, i. 256b). *Shantamariyat al-Gharb* is usually identified with Faro, a little Portuguese sea-port to the north-west of Cape St. Marie, on the railway from Lisbon to the frontier station of Villareal de São Antonio, 35 miles from the latter. The Arabic ethnic from the name of the town is *Shantamar* (cf. under this name the article on al-'Ajam al-Shantamar).

In the Muslim period, Santa Maria de Algarve belonged to the province of which Silves (Ar. *Shilb*) was the capital. It was a little town of slight importance till the Umayyad Sulaimān al-Musta'īn Billāh entrusted the government to a

man of obscure birth, Abū 'Uthmān Sa'īd b. Hārūn, a native of Mérida, about 407 (1016). The latter in his new residence set up as an independent prince and reigned till his death in 434 or 435 (1042–1043). His son Muhammad succeeded him and took the honorific title of al-Mu'tasim, but in 444 (1052) he was deposed by the 'Abdīd Abū 'Amr al-Mu'tasim who annexed the little principality of Santa Maria to the kingdom of Seville. But during the brief period of its independence the two princes who reigned there embellished the town and gave it numerous fine buildings, if we may believe the descriptions by al-Idrīsī, Yaḥyā and al-Kazwī; it had a cathedral-mosque and other places of worship and a church containing very beautiful columns.

Santa Maria de Algarve from the xiith century shared the lot of Seville and with the conquest of Algarve by Sancho II in 1249–1253 it passed finally to the Portuguese.

(E. LÉVI-PROVENÇAL.)

SANTAREM, in Arabic Shantarim (ethnic: Shantarim), a town in Portugal in the region of the Estremadura, 41 miles N. N. E. of Lisbon, 350 feet above sea-level on the slope of a hill on the right bank of the Tagus. This town, the ancient Scalabis or Praesidium Iulium of the Romans, takes its name from St. Irene (Santa Irene) who was martyred in 653 and thrown into the river at Thomar 30 miles further up the river; her body stopped before Santarem and the name of the saint became that of the place. All the geographers of Muslim Spain give Santarem as the chief place in the district. According to al-Idrīsī, its citadel on the heights was impregnable; the rest of the town stretched along the Tagus.

Conquered at the same time as the south-west of the Peninsula, it occasionally rebelled against the authority of the Umayyad Caliphs and it was for this reason that it was taken by the Kā'id al-Mu'ad b. al-Yās by order of al-Nāṣir in 316 (928). A few years later, in 327 (938), the town was the scene of the rising by Umayya b. Ishāq against the Caliph 'Abd al-Rahmān III who had just dismissed Umayya's brother al-Mu'ad from the office of vizier which he held. The rebel made an alliance with the king of Leon, Ramiro II, but Santarem was taken from him by the Caliph's men. At the end of the following century the town and its territory became part of the independent kingdom founded by the Afāsids (cf. above, i. 178 sq.) of Badajoz at the same time as Évora and Lisbon. On the fall of this dynasty in 485 (1092/93), Santarem was taken by Alfonso V of Castile, but

recaptured by the Almoravid general Str. b. Abī Bakr b. Tāshīn in 504 (1111), along with Badajoz and the district of Algarve. Its capture was announced to the Almoravid sovereign 'Alī b. Yūsuf in a letter from the celebrated secretary to the court, Ibn 'Abdūn (cf. above, ii. 354 sq.) the text of which has been preserved for us by the historian al-Marrākushī. Santarem remained in the hands of the Muslims till the fall of the Almoravids and was definitely taken by the first king of Portugal, Afonso Henriques in 542 (1147) with other Portuguese cities: Lisbon, Cintra, Alcaet do Sal and Évora.

In 580 (1184) after a raid made by the Christian garrison of Santarem into Ajarufe and the defeat of a Muslim army sent from Seville to retake the lost territory, the Almoḥad Sulṭān Abū Ya'qūb Yūsuf b. 'Abd al-Mu'min decided to lead a force in person against Portugal and made great preparations with this end in view. Leaving Marrākush at the beginning of the year, he went over to Gibraltar, Algeciras and Seville; thence he marched on Santarem, then very strongly fortified and defended by a numerous garrison. The siege of the town dragged on and as the Almoḥad Sulṭān was wounded, probably from a bolt from a crossbow, and died from his wound on Rabi' II 18, 580 (July 28, 1184), the siege was raised. After that date no further Muslim attempts to retake the town are noted by the historians. Among celebrated Muslims born in Santarem may be mentioned the famous historian Abū 'l-Ḥasan 'Alī Ibn Bassām born in 542 (1147/48), author of a work entitled *al-Dhakhira* (on him see F. Pons Boigues, *Essays bibliographiques sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898, p. 208 sq., No. 171) and the poet Abū Muḥammad 'Abd Allāh b. Muḥammad b. Šāra al-Bakrī al-Shantarīnī, d. at Almeria in 517 (1123–24) (cf. Ibn Khallikān, *Wafayāt al-A'yān*, Cairo, p. 331–332).

(E. LÉVI-PROVENÇAL.)

AL-SANUSI, ABU 'ABD ALLAH MUHAMMAD (for Muhammad) b. YUSUF b. 'UMAR b. SHU'AIN, a learned Ash'ari theologian of Tlemcen, where he was born and died at the age of about 63 on Sunday, Jumādā II 18, 895 (May 9, 1490); his epitaph, however, gives neither day of the week nor day of the month.

He studied Muslim lore as well as mathematics and astronomy in his native town with such teachers as his father Abū Ya'qūb Yūsuf, his full brother 'Alī al-Tallūn, Abū 'Abd Allāh al-Habbāk, Abū 'I-Hasan al-Kalāsīdī, the famous Ibn Marīk, Kāsim al-Ukhānī, etc. He is said to have gone to Algiers where he studied under 'Abd al-Rahmān al-Thālibī. The scholars of the Maghrib, in whose eyes he was the reviver of Islām at the beginning of the 15th century A.H., all agree in praising his merit, his learning, especially theological, his fear of God and his zeal.

Among his disciples may be mentioned Ibn al-Hādīd al-Yabdarī, Ibn al-'Albās al-Saghīr, Ibn Sa'īd, Abū 'I-Kāsim al-Zawāwī. His works, some of which have acquired great authority in North Africa, are:

1°. *ʿAḥdāt ahl al-tawḥīd al-mukhrījāt min ṭulūmat al-ḥaḥl wa-rīḡāt al-taḥlīd* or *al-ʿAḥdāt al-kubrā*; 2°. *ʿUmdat ahl al-tawḥīd wa 'l-taḥlīd*, commentary on the preceding, publ. with it at Cairo in 1317; 3°. *ʿAḥdāt ahl al-tawḥīd al-qushrā* or *Umm al-barāhīn* and, more briefly, *al-Sanūsiya*, published several times in Cairo and Fās, transl. into German by Ph. Wolff, *El Senusi's Begriffs-entwicklung d. mohammedanischen Glaubensbekenntnisse*, *ar. u. deutsch mit Anm.*, Leipzig 1848; into French by Luciani, *Petit traité de théologie musulmane*, Algiers 1896; Delphin, *La philosophie du Cheikh Senousi d'après son opus de la trad. de la Senousia*, in the *Revue Afr.*, 1898, xlii, No. 231; 4°. Commentary on the *Umm al-barāhīn*, Algiers, Bibl. Nat., No. 653-662, etc.; 5°. *al-ʿAḥdāt al-musāwī* or *al-Sanūsiya al-musāwī*, and 6°. his commentary, Algiers, Bibl. Nat., No. 632 (7°), Tunis 1387-1393; 7°. *al-Minhāj al-ḥadīd fī sharḥ kīfāyat al-murīd*, commentary on the didactic poem *al-Kāfī fī 'ilm al-tawḥīd* (the text of which was published in Tunis in 1311) of Abū 'I-Abbās Ahmad b. 'Abd Allāh al-Djazzārī, Brit. Mus., No. 628, 901, 1617 (3°), Paris, No. 1268, Bibl. Khéd., li. 35, Bodl., i. 66, 67, Fās, No. 1571, 1575, 1579, my MS.; 8°. *Sughra 'l-qushrā* and 9°. his commentary publ. in Cairo in 1304, 1322; 10°. *al-Muḥaḍimāt*, publ. on the margin of the preceding with the commentary of al-Bannānī; Luciani, *Les Prolegomènes théologiques de Senousi*, Algiers 1908; 11°. Commentary of the *Muḥaḍimāt*, Algiers, No. 632 (8°), 638 etc.; 12°. *al-Muḥarrik al-mutawḥḥ fī sharḥ farā'id al-hawf*, Algiers, No. 1450 (2°), *J. A.*, 1854, i. 175; 13°. *Muḥḥṭaṭ fī 'ilm al-manāḥik*, and 14°. his commentary, published with glosses by Ibrāhīm al-Badīrī, Cairo 1321; 15°. *Sharḥ muḥmil ḥamūl al-ḥamūl*, commentary on the *Ṣaḥīḥ* of Muslim, Cairo, on the margin of the commentary of al-Ubbī; 16°. *Nuṣrat al-faḥr*, Bibl. Khéd., ii. 172, Tlemcen (madrasa), No. 81, Algiers (Great Mosque), No. 88 (27°); 17°. *Sharḥ aḥmūd Allāh al-ḥamūd*, Tunis, No. 1434(5); 18°. *Kitāb al-ḥaḥḥ*, Bibl. Khéd., vii. 620; 19°. *al-Muḥjarrahāt*, publ. on the margin of *Muḥjarrahāt al-Dīrī*, Dīrī, 1279, Cairo 1316; 20°. *al-Tibb al-Nabawī*, Brit. Mus., 460, 461, Leiden, 1375, Bibl. Khéd., vii. 145; 21°. *Ḥaṣṣa*, Brit. Mus., 119 (2); 22°. *ʿUmdat al-hawī*

ʿalāh *sharḥ* *ḥaḥḥ* *al-ḥamūd* *fī 'ilm al-ḥaḥḥ* by al-Habbāk, Algiers, 1458 (2); 23°. *Sharḥ wāḥīd al-ḥamūd* by al-Hawḍī, Fās, No. 1583, 1585; 24°. *Salawāt*, Bibl. Khéd., vii. 168; 25°. *Sharḥ ṣaḥīḥ* (recession of al-Bīkātī), Algiers, 1307(3), 1382(1); 26°. *Sharḥ Ṣaḥīḥ al-Bīkātī*, unfinished (my MS.).

AL-SANUSI, SIDI MUHAMMAD b. 'ALĪ AL-SANUSI AL-MUḤAḤHĪ AL-HABANĪ AL-IDRĪSĪ, born in 1206 (1791) at Turūh near Mostaganem (Algeria) in a clan of the Khattābīya (Ulad Sīdī Yūsuf) of Zayyānī Herber stock, and died in 1276 (1859) at Dīghabūb (Cyrenaica), the founder of the celebrated modern military brotherhood of the Sanūsiya (the "Senousi").

Taught at first by Abū Rās (d. 1823) and Belgandaz (d. 1829) in his native country he went to live at Fes from 1821 to 1828 where he studied Qur'anic exegesis, tradition, the principles of law and jurisprudence. He then performed the pilgrimage, going via Southern Tunisia and Cairo to Mekka where he lived from 1830 to 1843 (except for a sojourn in Sahia); there in 1837 he founded the first ḥawīya of his order on the Abū Ḥabās.

Returning to the west he could not stay in Cairo but settled in Cyrenaica, where he founded first the ḥawīya of Rafā'a, then of al-Hādī near Derna (Dj. Akhdar), then Temessa, lastly Dīghabūb (1855), which he peopled with liberated slaves. There he died and was buried.

He had two sons: S. Muhammad al-Mahdī (born 1844, d. 1901 at Guro), his successor, and S. Muhammad al-Sharīf (b. 1846, d. 1896). The elder left two sons: S. Muhammad Hīrī (b. 1883, given an estate in the west in 1909; Amir under Italian protection from 1916 to 1923) and S. al-Rīdī. The younger had six sons, S. Ahmad Sharīf (b. 1880; head of the brotherhood from 1901 to 1925; he took the side of Germany, went to Turkey and since 1921 has been conducting a pan-Islamic campaign from Angora), S. Muhammad al-'Abīd (given an estate in the south, in Fezzan, since 1909, he directed the Saharan rising against France in 1916-1918), S. 'Alī al-Khattābī, S. Saīd al-Dīn (president of the Italian Parliament of Cyrenaica in 1921), S. al-Hādī and S. al-Rīdī.

The headquarters of the order after having been at Dīghabūb (1855-1895) were transferred to Kufra (1895), Guro (1899), then back to Kufra

(1902), while the number of *ṣūfiyā's* rose from 22 in 1859 to 100 (1884).

Sidi Muḥammad b. 'Alī al-Sanūsī left, in addition to instructions regarding initiation into his order (types of *ṣūf*; *ṣūf*: *ṣūf* *Laff*, repeated a thousand times), four works; one on the *ṣūf*, one on a harmony between the Qur'an and the Ḥadīth (established without taking account of the *ṣūf* of any of the four rites; although the author calls himself a Mālikī, he postulates *ṣūf* and two on mysticism, *Fahrasa*, the enumeration of his "chains of support" (canonical; 150, of whom 64 were mystics) guaranteeing the orthodoxy of his order, and *Saḥāb al-ma'īn fī 'l-ṣūf al-arḥān* containing the *ḥikr* formulae of the "forty" previous orders (see *TARĪḤA*) of which his order was to give the quintessence. This last work is the most curious. Although the statements in it are represented as received by oral initiatory transmission, they are, he confesses, taken from the *Riḥla* of Ḥasan 'Uḍḍaimī, 1113 (1702), imitated by S. Murṭaḍā Zabīdī, in his *Ḥikr al-djāmūn*; the chapter on the *ḥikr* of the Ḥallāḍiyya is found verbatim for word in the *Adḥ al-ḥikr* of Abū Sa'īd Kādīrī, written in India in 1097 (1686) (MS. Calcutta 1280, cf. the Catalogue by Ivanov) which betrays a common source, probably the *ṣūf* of the Ḥamadī Shīnāwī (d. 1028 = 1619).

His claims to the juridical *ṣūf* were dismissed at Cairo in 1843 by the learned Mālikī Muḥammad 'Alī ḥā (ṭakfir); the followers of al-Sanūsī do not observe the Mālikī *ṭakfir*.

Initiated into mysticism at Mostaganem (Kādirīya) and at Fes (Tidjānīya, Taibīya), al-Sanūsī's ideas took definite shape at Mekka, under the influence of his teacher Ḥamad b. Idrīs al-Fāṣī (d. 1837 at Sahla), founder of the Kādirīya-Idrīsīya, the ancestor of the present ruling dynasty of 'Asr and teacher of two other founders of modern brotherhoods (Rashīdīya and Amrighaniya).

Bibliography: For the order see the standard works of H. Duveyrier (1884), Rinn, *Marabouts et Kérouans*, 1884, p. 481—515. On the founder and his family: Muḥammad ben-Osmane el Hachnāchī, *Voyages au pays des Sennoussis*, Paris 1912; A. Le Chatelier, *Les confréries musulmanes du Hedjaz*, Paris 1887, p. 257—258; E. Insabato, *Rassegna contemporanea*, vii, Rome 1913; E. Gracie in *Der Isl.*, Berlin, iii, 141—150, 312—313; D. B. Macdonald in the *Encyclopaedia of Religion and Ethics*, s. v. SANUSI, p. 194—196.

SAR (v.) "head, extremity of anything", figuratively "idea". From the meaning "head" comes that of "chief" (Lat. *caput*), especially in derivatives. *Sar-i 'asker* (vulg. *ser-asker*) is among the Ottomans "commander-in-chief", "minister of war", transformed by the Arabs of Tunisia into *Sārī-asker*. *Sar-dār* (q. v.; English transl. *Sirdar*), "general"; *sardār* is the plaited frock coat worn by Persians of the upper classes and by most of the officials (*R. M. M.*, 1914, xxviii, 225, note 2; Brietoux, *Au pays du Lion et du Sélel*, p. 360). *Sar-dās*, "he who risks his head", a name given to the Persian soldiers since the reforms of Fatḥ 'Alī Shāh (Polak, *Persien*, Leipzig 1865, i, 40). *Sarkār*, "superintendent, surveyor", more frequently used simply as a polite form of address = "Sir", "Monsieur", a title given to the official tax collector in the Euphrates region (*R. M. M.*,

1911, xiv, 256). *Sar-kātib*, "chief secretary". *Sar-dān goldī* (Turkish), "he who has renounced his head", a franc-tireur, forlorn hope, marching in the vanguard (Barbier de Meynard, *Dictionnaire turc*, II, 77). *Sar-lamḥa*, illuminated frontispiece of a Persian manuscript. *Sar-andās*, a little rug of felt which is placed on the woollen carpet at one end of the room (Chodzko, *Popular Poetry of Persia*, London 1862, p. 99 note).

(CL. HUARY)

SĀRĀ. [See ISLĀHIM].

SARĀ. [See SERĀY].

SARACENS. The earliest certain mention of this name is found in the work composed by Dioscorides of Anazarbos about the middle of the first century A. D. entitled *περὶ ὕλης ἰατρικῆς*, i. ch. 67 (l. 60 of Wellmann's edition, Leipzig 1909—1914) who describes the resin of bdellium (*mukl*) as a product of a "Saracenic tree" (*ἰσάριον ἀπὸ δάσους Σαρακενῶν*) and adds that it is imported through Petra and is of a quality inferior to Indian bdellium (on this cf. Bretz, *Botanische Forschungen des Alexandererzes*, p. 282 1904). The most recent editor has, against the evidence of all the manuscripts, not only altered the native name *madlakon* given by Dioscorides, which is vouched for by the Hebrew *madlak*, into *madlakon* but also *Σαρακενῶν* into *Ἀραβίων*. In the contemporary *Hist. Nat.* of Pliny the Elder, vi. § 157, ed. Dellefien, the Araceni are mentioned among the Arab tribes of the interior whose lands bordered on the Nabataeans, along with better known names like Taveni (Tayy) and Tamudaei (Thamūd); it is natural to find the Saraceni in these. Ptolemy (middle of the second century A. D.), v. ch. 17, § 3, mentions the district of Sarakeni in Arabia Petraea and locates it west of the "Black Mountains" (*ὄρη τὰ καλοῦμεθα μέλαινα*) which, according to him, stretched from the Gulf of Fasan to Judaea "besides Egypt" (*παρὰ τὴν Αἴγυπτον*). On the other hand in vi. ch. 7, § 21 he mentions the Saraceni as a people in the interior of Arabia Felix; according to him, the Skenites and the *Ὀσάιροι* (= 'Ad; var. *Ὀσάιροι*) inhabit the heights towards the north and south of them the Saraceni and the Thamudaei (Thamūd). According to Stephanus Byzantinus, s. v., Saraka is "a district (*χώρα*) beyond the Nabataeans; its inhabitants are called *Σαρακενῶν*"; under *Ταυνοί* i. e. Tayy the same author says that they live south of the Saraceni, giving as authority the Arabian histories of Clippianus and Uranios. If Uranios, Stephen's authority, to whom the statement regarding Saraka must also go back, belongs to the period of the last Diadochi, as von Darnowski (*A. R.*, xi, 239 1904) endeavours to prove, this would be the oldest reference to the Saraceni. In any case, relying on the passages quoted we must seek the original home of the Saraceni on the Sinai Peninsula towards the Egyptian frontier and in the vicinity of the Nabataeans, and B. Moritz has recognised their descendants in the little Beduin tribe of Sawārke, who live at the present day along the coast between Pelusium and Ghazza. These Saraceni in the narrower sense may still be referred to in the letter preserved in Eusebius, *Hist. Eccl.*, vi. 42, of the contemporary Dionysius, Bishop of Alexandria, regarding the Christian persecutions in Egypt in the first year of Trajan Decius (240/250): many Christians took refuge in the "Arabian Mountains", where they were sold

by the Saracen barbarians as slaves. In the different versions of the Christian *Δακτυλογράφη* 245, which is based on the Mosiac genealogies and dates from the third century, in the *Liber Generationis Mundi* and in the *Barbarus Scaliger* (*Mon. Germ. Hist.*, vol. ix. of the *Auctores antiquissimi*, p. 107), in the *Chronicon Paschale* (p. 45, ed. Dindorf), in the *Anchoratus* of Epiphanius (p. 113, ed. Holl), the Saraceni and Taiceni are mentioned as people of some importance. In the tractate of Bardasanes *K'pāh d' Nāmāl d' Agēn-wāh* (ed. Cureton, p. 16 of the Syriac text = p. 24 of the translation), which is placed in the beginning of the third century, the Tayōye and Sarākōye, for which the translation of Eusebius gives *Tacel* and *Sapacevel*, are the representatives of the independent nomadic Arab tribes; it seems that about the middle of the third century A. D. the tribe of the Saraceni, hitherto little known, came to the front among the smaller tribes, incorporated them and disturbed the Roman frontier. In the ecclesiastical historians of the fourth century, Eusebius and Hieronymus, the Saraceni are identified with the Ishmaelites of the Bible: they live outside of the province of Arabia in the desert, at Kadesh, in the district of Faran or Midian where Mount Horeb lies, to the east of the Red Sea; they were first of all called Ishmaelites and later Hagarenes and finally Saraceni (Eusebius in the *Onomasticon* composed before 336 under Γαβριλ, Κυδάρ, Μαλδία and Φαζά; Hieronymus in *Eus., Chron.*, ed. Schoene, li. 13: Ismahel, a quā Ismahelitarum gentes, qui postea Hagareni et ad postremum Saraceni dicti = *Chron. Pasch.*, 94, 15; do., on *Jes.*, xlii. 11, ix. 7, Ec., xxvii.; Epiphanius, *Panarion Haer.*, iv. 1, § 7: Ismahel founds Faran in the desert; from him are descended the tribes of the Hagarenes, also called Ishmaelites, who are now called Saraceni). Henceforth the name Saraceni is extended to the other Arab tribes also; the profane historians of the fourth, fifth and sixth centuries (Zosimos, Rufius Festus, the Panegyrici, Julianus, Ammianus Marcellinus, the *Scriptores Historiae Augustae*, who, according to modern research, wrote at the beginning of the fifth century, the *Notitia Dignitatum*, Priscus, Malchus, Nonnosus, Eunapius, Menander Protiktor, Procopius) and Socrates and Sozomenos among ecclesiastical historians avoid the Biblical names and prefer to use the term Saraceni and only occasionally "Arabes", Evagrius exclusively *Σαρακηνά* (cf. Ammianus Marcellinus, xlii. 15, 2: *Scenitae Arabes quos Saracenos nunc appellamus*, and xxiii. 6, 13: *Scenitae Arabes quos Saracenos posteritas appellavit*, word for word also in Malchus, *Fragm. Hist. Graec.*, iv. 112). The names Saraceni *Assanitae* (i. e. Qhassānids) should be noted in Ammianus and Saraceni *Thamudem* in the *Not. Dign. Or.*, Ch. 28. Finally, the Arabs in the north, in Mesopotamia and on the Persian frontier became known as Saraceni (Marcianus Heracl., *Periplus*, Ch. i. § 17: *Espositio totius mundi et gentium*, ch. 20; frequent in Julianus, Ammianus, Procopius, Menander Protiktor etc.).

After the foundation of the Arabian Empire by the successors of the Prophet, the Byzantines call Saraceni all the Muslim peoples subject to the Caliphs, and this name survived into the late Middle Ages even after the decline of the Caliphate of Baghdad, as is shown by the anecdote given by Ibn Battuta (ed. Defrémery and Sanguinetti,

li. 441), who was greeted in Constantinople by the Emperor as "Sarakeni", that is Muslim. The Saldjūqs and Turks, on the other hand, are called Persians or Hagarenes. The name Saraceni was transmitted by the Byzantines to Western lands through the Crusades and has survived to the present day as the name of the Arab peoples and the products of Eastern lands, as the dictionaries of the Romance amply show.

In striking contrast to the wide distribution of the name Saraceni in the west is the fact that the Arabs themselves do not know the name, either for a small tribe or as a collective name for the North-Arabian tribes. The derivation from *sarafa* "to rob" (as early as Joseph Scaliger) or *sharāf* "east" (Relandus) or even from *sharīk*, as Sprenger suggested, are all to be rejected; besides, the spelling *sarīk* in the Palestinian Talmud and in the Targum Yerushalmi as well as among the Syrians points to *sarāf* as the root, provided that this form is not based on *Sapacevel*, Saracenus. H. Winckler (*Altorient. Forschungen*, li. 1, Ser. I. 74-76) thought he had discovered the word *sharāka* in the meaning "desert-dwellers" in two passages in Sargon's Annals and derived the name Saraceni from this. Hieronymus says in his commentary on Ezekiel: *Agateni qui nunc Saraceni appellantur falso sibi assumpserunt nomen Sarac ut de ingenua et domina videantur generati*; Sozomenos (*Hist. Eccl.*, vi. Ch. 38), Synkellos (ed. Bonn, i. 187) and others have repeated this interpretation of the name; it is once more dish up to the credulous reader as late as the xviiith century in a modern version in the *Travels* of Macarius of Antioch (ed. Balfour, li. 169).

The descriptions given in various late classical authors of the manners and customs of the pre-Islamic Saraceni, e. g. in Ammianus, Sozomenos, Hieronymus (*Vita Malchi*), Procopius, Gazarius, Priscianus and Procopius of Caesarea ought to be collected and annotated.

Gott.*, New Series, xvii/ji. 92; O. L. Z., 1912, p. 206 (E. Nestle) and 310 (F. Perles); *Philologus*, li. 737 (Th. Noldeke).

(J. H. MORDTMANS)

SARAGOSSA, a town in Spain, capital of the modern province of this name and formerly capital of the kingdom of Aragon, on the right bank of the Ebro 600 feet above sea-level in the centre of a well watered and flourishing region (la Huerta). The modern Spanish name *Zaragoza* corresponds to the Latin *Caesara Augusta*, a name given in 728 A. D. C. to the military colony founded by Augustus on the site of the ancient Salduba of the Iberians. The name of the town passed into Arabic in the form *Sarakusta* (*nishā*: *Sarakust*) probably through the Gothic form *Cesara-gosta*. From the time it was taken by the Muslims until it was regained by the Christians, Saragossa was one of the great cities of the Muslim empire of al-Andalus; its geographical situation gained it the title of "Upper March" (*al-thagh al-ʿala*) of Arab Spain. In the time of al-Idrisi (middle of the twelfth century) it was densely populated; it was known as the "white city" (*al-madīnat al-bayḍā*) from the colour of its ramparts built of blocks of tufa. The fruits of its gardens were

reckoned among the best in al-Andalus. The capes of beaver skin made there were famous throughout the Muhammadan world.

Saragossa fell into the hands of the conquering Arabs in 94=712/3 soon after Toledo. Mūsā b. Nu'ayr, having been rejoined by Ṭāriq, left this last town and advanced on Saragossa which he took at the same time as the villages and *castillos* which surrounded it. According to Isidore of Beja, it was sacked and its inhabitants treated with the utmost cruelty. It was already a Muslim metropolis when, under the emirate of Yūsuf b. 'Abd al-Rahmān al-Fihri, al-Ṣamāl b. Hātim [q.v.] was appointed governor in 132 (749). He was soon besieged there by Arab rebels and had to abandon the place to one of them. Throughout the second half of the second century A.H., Saragossa saw successive revolts within its walls, which the historians have recorded for us. This is how it came to be in the hands of the local chief al-Husain b. Yahyā al-Kharrādī when the army of Charlemagne besieged it in 778. The Emperor was suddenly summoned away to the banks of the Rhine; he raised the siege and soon afterwards in the pass of Roncevaux, where the Basques had prepared an ambush for him, suffered the fearful disaster the memory of which is immortalised in the *Chanson de Roland*. Two years later, in 164 (780), the Umayyad 'Abd al-Rahmān I marched on Saragossa and captured it. But it was not long before it slipped from the power of the Caliphs and in 175 (791) Hishām had again to besiege it and take it again through his general 'Ubayd Allāh b. 'Uthmān. Again in 181 (797) a rebel declared himself independent there and successive Caliphs had regularly to send expeditions to the Upper March of their empire to suppress rebellions — with more or less success.

At the same time (end of the eighth century) a Saragossa family, the Banū Kasi, attained great power in Aragon. They had adopted Islām; one of its members, Mūsā son of Fortunio, son-in-law of the first king of Pampeluna, Iñigo Arista, declared for the Caliph Hishām and surrendered Saragossa to him. Later, in the middle of the ninth century, the head of the family, Mūsā II, was governor of Tudela and commanded the armies of 'Abd al-Rahmān II which raided the frontiers of France. He helped this ruler to drive off the Normans who had landed in Portugal and in 852, the year of accession of the Caliph Muḥammad, he had in his power all the Upper March, with Saragossa, Tudela and Huesca. He lived like a monarch, exchanged presents with Christian kings, for example Charles the Bald of France. But he was defeated in 860 by the King of Leon, Ordoño I, and killed two years later by his son-in-law, the governor of Guadalajara. On his death the Banū Kasi cast off the authority of the Caliph of Cordova and the latter, Muḥammad, to counteract them allied himself with the Tudjibids.

This Arab family, settled in Aragon since the conquest, had its tribal rights recognised and its chief, 'Abd al-Rahmān al-Tudjibī, was officially appointed its head. In 888 on the accession of Sulṭān 'Abd Allāh, the latter learning that a plot was being hatched against him in Saragossa commissioned the son of the Tudjibid chief, Muḥammad b. 'Abd al-Rahmān, surnamed al-Anḡar (the "one-eyed") to put the governor of the town to death. The latter did so in 890 and became a by no means too dutiful vassal of the Caliph. He

finally destroyed the last Banū Kasi, whose chief, Muḥammad b. Lope, was killed in 898 below Saragossa. Al-Anḡar died in 924. His son Hishām who succeeded him gave his name to all the family and died in 930. His sons, the Banū Hishām, were well treated by the Caliph 'Abd al-Rahmān III but one of them, Muḥammad, rebelled against him in 934, joined the king of Leon, Ramiro II, and after a pretended submission to the Caliph leagued against him the whole of the north of Spain, including the kingdom of Navarre. 'Abd al-Rahmān set out to overthrow him; he seized Calatayud and then besieged him in Saragossa; Muḥammad b. Hishām capitulated, the Caliph pardoned him and kept him in his governorship. His son Yahyā was general of 'Abd al-Rahmān III and of al-Hakam II in Spain and in Africa and governor of Saragossa from 975.

Later, in the reign of the ḥājjīb al-Mansūr b. Abī 'Āmir, a Tudjibid governor of Saragossa, 'Abd al-Rahmān b. Muṭarrif b. Muḥammad b. Hishām, hatched a plot against him which was discovered and the conspirator executed in 989.

On the fall of the Umayyads a grandson of the preceding, Yahyā, became governor of the Upper March and had a son al-Mundhir, who after fighting with the Slavs against the Berbers of Spain proclaimed himself king and made an alliance with the Counts of Barcelona and Castile. Under his reign peace reigned in Saragossa. The town became flourishing and populous. The glories of his court were celebrated by poets like Ibn Darrīdj al-Kastālī. Al-Mundhir reigned till 1025.

His son Yahyā who succeeded with the title of al-Muza'far died soon after his accession and was succeeded by his son al-Mundhir II, Mu'izz al-Dawla (420/1029). The latter was killed ten years later by one of his relatives, the general 'Abd Allāh b. al-Hakam, because he refused to recognise the Caliph Hishām II. This 'Abd Allāh tried to seize the authority but rebellion broke out among the people of Saragossa; and the independent governor of Larida, Abū Ayyūb Sulaimān b. Muḥammad b. Hūd arrived quickly to restore order in the city and seized the throne of the principality.

He took the title of al-Musta'in and was the founder of the kingdom of the Banū Hūd (cf. the article Hūd) with Saragossa as capital and ruling the districts of Larida, Tudela and Calatayud. He died in 438 (1046—1047). Son succeeded father as follows: Aḥmad al-Mukṭadir Saif al-Dawla till 474 (1081); Yūsuf al-Mu'tamin till 478 (1085); Aḥmad al-Musta'in II killed in 503 (1110) at the battle of Valtierra won by the Christians. His son 'Abd al-Malik 'Imād al-Dawla reigned in his turn till the final capture of Saragossa by the Christians of Sobrarbe on Ramaḍān 4, 512 (Dec. 19, 1118); he took refuge in Ruada. Unfortunately we have very little detailed information regarding the reigns of these princes and the dates given for them by the historians are not always in agreement. Nine years before it fell into the hands of the Christians, Saragossa had been taken by the Almoravids for Sulṭān 'Alī b. Yūsuf on Dhū l-Ka'da 1, 503 (May 31, 1110).

At the present day very little survives of the Muslim period in Saragossa, which must undoubtedly have been several times rebuilt in the course of these centuries as a result of the strenuous and heroic sieges it had to endure. The "Sec" or

cathedral is built on the site of the former Great Mosque and there can still be seen on the north-eastern façade an ornamentation of bricks and squares of enamelled faience (*azulejos*) which probably dates from the Arab epoch. According to a tradition recorded by certain chroniclers and geographers, this mosque-cathedral was founded by the *ṭābi* [q. v.] Ḥanash b. 'Abd Allāh al-Ṣan'ānī who died in 100 (718/719); he was buried with one of his companions opposite the *mihrāb*. The mosque was enlarged in 242 (856), in the reign of the Umayyad Caliph Muḥammad b. 'Abd al-Raḥmān b. al-Ḥakam.

At the present day the most important Arab monument in Saragossa is the palace which bears the name of Aljaferia (no doubt the Arabic al-Djāfariya, from a Djāfar or Ibn Djāfar, whose memory does not seem to have been preserved outside of popular tradition). This palace which has undergone many and far-reaching alterations and was partly destroyed in 1809 is now used as a barracks; it lies as the western end of the town. Of the part dating from the Muslim period there only remains a little oratory 25 yards square with a very pretty dome 45 feet high. It was supported by marble pillars with remarkable capitals, to judge from those that still exist. The *mihrāb* is adorned with a decoration in carved stucco, on a blue ground. Close to the oratory a little tower 80 feet high (called the "troubador's cell") is most probably of the same date. It is probable that the Muhammadan ruins of Aljaferia date from the dynasty of the Banū Ḥūd whose palaces were numerous in Saragossa (we only know the name of one of them, *Dār al-Surūr* ["house of joy"], built by al-Muḥtadī b. Ḥūd). The Aljaferia deserves to be subject of a monograph, for it is a memorial of a period of transition from the beautiful age of the Caliphate of Cordova to the century of the Alhambra.

Among famous Muslims born in Saragossa may be mentioned the great traditionist Abū 'Alī Ḥasan b. Muḥammad b. Fierro b. Ḥayyūn al-Sadaṭī, known as Ibn Suḥkura, born in 452 (1060) and died "a martyr" at the battle of Cutanda in 514 (1120). It was to his pupils that Ibn al-Abbār in the following century devoted an encyclopaedia (*mu'jam*) published by F. Codera in vol. iv. of his *Bibliotheca Arabico-Hispanica* (cf. the references in the *J.A.*, 1923, col. 223 and note 1).

SARĀI, capital of the Golden Horde; cf. the articles *ḡiḡāḡ* and *MOGOLIA*. The name is in Persian *sarāi* = palace; nevertheless it is frequently written *ṣarāi* in Arabic works. On its foundation by Batu and the name Sarāi Berke see above, i. 653^a and 709^a. The geographers and historians speak only of one town of this name but on the coins we find a New-Sarāi (*Sarāi al-Djādīd*) mentioned: the earliest coin struck in New-Sarāi is dated 710 A.H. The only historical reference to New-Sarāi so far known is the mention of the death of the Khān Özbeg (the date given is 742 A.H.) in New-Sarāi in Shams al-Dīn al-Shudjā'ī al-Misrī and quoting him in Ibn Kāṣī Shuhbā (text in Tiesenhausen, *Shemānīk matnīyeh, otvoryashchaya k istorii volstov Ordū*, p. 254 and 445). Two ruined sites on the Akhtuba, which branches off from the Volga, are regarded as the ruins of Sarāi, now called Tazew and Selitrennoye or Selitrenny Gorodok. Which of the two was the capital of the Golden Horde and when, whether there were one or two Sarāi's (that is whether New-Sarāi was a new part of the town or a town built on another site) are questions often disputed since the xviiith century by scholars and not yet decided even now. The sources are obscure and contradictory on many points; thus the distance given by Abū 'l-Fidā' (and many others) between the mouth of the Volga and Sarāi (2 days' journey) suits Selitrennoye; on the other hand Abū 'l-Fidā' says in the same passage (ed. Reimund, p. 217) that the town is built in a plain (*fi mustaw min al-arḍ*) which is only true of Tazew (Selitrennoye is built on hills). The same information is found in Ibn Baṭṭūṭa (ed. Desferrery and Sanguinetti, iv. 477: *fi bastin min al-arḍ*); the description by Shihāb al-Dīn al-'Umārī, according to which there was a pond in the middle of the town, also fits Tazew (text by Tiesenhausen, p. 220). The excavations conducted for a series of years (1843-1851) by A. Tereshchenko in and around Tazew show there are certainly the remains of a large town there. It is on the results of these excavations that the view first expressed by Grigoryev as long ago as 1845 is based that the ruins of Sarāi can only be

at Tzarew; and at most at Selitrennoye we have the town built by Išān and later supplanted by the Sarāi of Berke. Under the influence of Grigoryev's pamphlet Solow'yev in his *History of Russia* (edition of the Society "Obšč. Pol'ta", i. 841) located Sarāi at Tzarew and not at Selitrennoye, as Karamzin (vol. iv., note 74; German edition, Riga 1823, iv., note 53, p. 263) had done. The ruins at Selitrennoye have so far been only superficially examined; they occupy almost as large an area as the ruins of Tzarew (both sites are 8 miles long, the ruins of Tzarew $2\frac{1}{2}$ miles broad and at Selitrennoye 2 miles broad) but the finds made there are much less important. The view expressed by G. Sablukov in 1844 (*Očerki selitrennoyego isstoyaniya Kiplakikago tairtwa*, repr. by N. Katanov, Kazan 1895, p. 28) that Selitrennoye is Old-Sarāi and Tzarew New-Sarāi was revived by D. Kobeko (*Zap.*, iv. 267—277) and more recently by T. Balloz (*Starši i Novši Sarāi, stolitāi Zolotoi Ordī*, Kazan 1923); on the other hand A. Spitsin (*Zap.*, xi. 287—290) locates Old-Sarāi at Tzarew and New-Sarāi at Selitrennoye. According to the narrative of a merchant given in Abu 'l-Fida', p. 36, there was a village called Eskei-Yurt ("Old Settlement") on the Akhtaba below Sarāi; this may very well refer to Selitrennoye. The finds of coins show that Selitrennoye was perhaps inhabited before Tzarew and certainly continued to be inhabited much later.

Sarāi was destroyed in 1395 by Tīmūr; the skeletons found by Tereshchenko without heads, hands or feet etc. must be regarded as dating from this destruction. Perhaps the settlement at Selitrennoye again became of more importance as a result. In 1472, Sarāi was ravaged by Russian freebooters from Niarka and is said to have been destroyed in 1480 by a Russian force in combination with a Tatar force from the Crimea. About 1554 at the time of the conquest of Astrakhan by the Russians (cf. above, i. 494b) the towns at Tzarew and Selitrennoye were both already in ruins.

Berl.*, xx. 74—81. (W. BARTHOLO)

SARAJEVO. [See SERAJEVO].

SARAKHS, an old town between Mawhād and Marw, where the frontier between modern Persia and Russia turns from E. to S., on the lower course of the Harirūd, which is at this part filled with water for part of the year only and then disappears in the oasis of Tadjān north of Sarakhs. Between the town and Marw lies a part of the desert of Karakūm [q. v.] which belongs to the area of the Teke-Turkomans. The Arab-Persian geographers ascribe the foundation of the town to Kai-Kāwūs, Afrāsiyāb or Dhu 'l-Karnain. The soil is considered good but, as a result of the drought, is devoted to pasture only and there are few settlements in the neighbourhood. Camel-rearing was the principal industry of the inhabitants and the weaving of veils, ribbons etc. was for

a long time prosperous. The town consists of houses of mud or brick without any important public buildings. It was the birth-place of al-Faḍl b. Saḥl, the famous vizier of the Caliph al-Ma'mūn, who is said not to have adopted Islam until 805/806 A.D. and was one of the most influential representatives of the Persian genius. He was murdered in his bath in Sarakhs in 818/819 A.D.; his brother al-Ḥasan died there in 850/851. The physician and mathematician Aḥmad b. al-Taiyib, a pupil of al-Kindī, later the confidant of the Caliph al-Mu'tadid, was also born in Sarakhs.

AL-SARAKHSI, SHAMS AL-A'IMMA ABU BAKR MUHAMMAD B. AḤMAD B. ABĪ SAḤL, the most important Hanafī lawyer of the fifth century in Mā warā' al-Nahr. Little is known of his life. Probably born in Sarakhs, he studied under 'Abd al-'Azīz al-Ḥalwānī († 448 = 1056) in Bukhārā. He then came to the court of the Karakhanids in Uzdjand. There he was thrown into prison by the Khakān Ḥasan, probably because he alone of all the 'Ulamā' stigmatised as illegal the conduct of the ruler when he married his manumitted *umm walad's* without observing the 'idda. Here he languished for over ten years and dictated to his pupils, who sat before his prison, his most important works, the *Mabṣūṭ* (14 vols.), the *Uṣūl al-Fiqh* (2 vols.) and the *Sharḥ al-Siyar al-Kabīr* (in 4 vols., printed at Haidarābād in 1335—1336), entirely from memory without using a book. Parts of the *Mabṣūṭ* are dated from the prison in the years 466 (1073) and 477 (1084). When he had reached the fourth part of the *Siyar* he was released. He completed this work at the court of the Amīr Ḥasan in Marghānān in Djumādā I of the year 480 (Aug. 1087) and died in 483 (1090). His pupils were: Durhān al-A'imma 'Abd al-'Azīz b. 'Umar b. Māza, the father of al-Sadr al-Shahīd († 536 = 1141), Maḥmūd b. 'Abd al-'Azīz al-Uzdjandī, the grandfather of Kaḥḥān († 592 = 1196), 'Uṭmān b. 'Alī al-Baikandī († 552 = 1157) etc. His *Kitaḥ al-Mabṣūṭ* (vols. 1—30, Cairo 1324—1331) is one of the most comprehensive of the earlier Fiqh-books. It is remarkable for the way in which the author works out general legal principles. Besides the works already mentioned he wrote commentaries on the *Muḥṣaṣṣar* of al-Ṭahāwī († 521 = 933), the *Kitaḥ al-Hiyāl* of al-Khawāṣṣī († 261 = 875; printed in the *Mabṣūṭ*, vol. 30), the *Kitaḥ al-Kash* of al-Shaibānī (printed in the *Mabṣūṭ*, vol. 30) and on numerous other works of al-Shaibānī. His books are still very common in the east; his *Siyar*, for example, is in almost every library.

SARANDIB. [See CEYLON].

SARĀT, the mountains which run along the western side of the Arabian plateau. Al-Hamdānī, the greatest authority on the Arabian peninsula among the Arab geographers, says that the terminus of the range, which divides the highlands (Nadīd) from the plain (Ghawr, Tihāma) and was therefore also called Hūdīd by the Arabs, are the extreme south of the Yaman and Syria; al-Aṣma'ī makes it stretch to the Armenian mountains. This mountain chain, which al-Hamdānī already knew not to be a single range, but a succession of hills immediately adjoining one another, is, according to the old records, four days' journey in breadth on an average, varying by a day or part of a day here and there. In his description, al-Hamdānī distinguishes the main ridge (ṣāḥr), then the lofty part, not belonging to the main ridge itself (aṣḥā 'l-Sarāt) and the western spurs (awṣaf, ghawr, aṣḥā 'l-Sarāt). The average height of this great range, which the Arabs regarded as created by God to be a backbone for the earth, according to a story recorded by Sa'īd b. al-Musayyib, is 8,500 feet. In the north-west the greatest elevation is the Djabal Dībāgh (7,200 feet), in the south-west there is a series of peaks which reach 10,000 feet, and, as in the case of the Djabal Nabī Shu'ayb, occasionally snow-covered in winter (10,800 feet), the highest peak in the Sarāt forming part of the huge Maṣīna'a massif, even surpasses it. The whole range consists of sedimentary rocks with a substratum of granite and gneiss and numerous volcanic cones between which often stretch wide plains strewn with black lava, which are called *ḥarra* in the northern part of the Arabian peninsula and *ṣaḥr* in South Arabia. To the west the range falls sharply down to the Tihāma, which is a plain sloping from a height of 2,300 feet to sea-level, out of which rise recent volcanic upheavals in the form of peaks. On the east the hills slope gently down to the Persian Gulf. The Sarāt as a whole does not show any marked uniformity of direction but is cut up into large and smaller ranges which intersect in all directions. It is in general treeless and uninviting in appearance with black rocky ravines, ridges, peaks and pinnacles, round and sharp or jagged, showing all possible forms but always bare. There are mountain villages away high up on almost inaccessible heights which consist of stone houses of two to five stories, sometimes square and sometimes round, and form self-contained often quaint citadels, surrounded by yawning gulfs on all sides. Breakneck paths and bridle paths often hardly traceable on the rock lead up to the narrow gates which open into the villages; there are well cultivated fields on the slopes and in the valleys, laboriously erected terraces along the slope sink like steps down the valley. The valuable soil is kept in place by a wall built of large stones, rarely bound with mud and always without lime, and protected from being swept away. The rain-water is fully utilised for these plots and runs from the upper terraces to the lower ones. On these fields, which are protected from the great heat of the sun by shade-giving trees, the best coffee in the world is grown, and grapes and sugar-cane also flourish here. The long chain of the Sarāt is interrupted occasionally by broad plains. For example, the plain of Saḥr runs 15 miles to the south and about 7 miles to the north; the southern tongue of this plain runs after a short interruption through the Naḥīl al-Yaṣalāh into the broad plain

of Ḥamāz, the most fertile part of the Yaman and the richest in water.

The Sarāt owes its origin to those great volcanic convulsions which caused the young tertiary Erythraean subsidences, and created the great fault on which the Arabian desert sank with its hitherto undisturbed horizontal deposits. Weathering, wind-erosion, and erosion by running water then tried their strength on the steep western slope of the tableland which was transformed into a mountain system of erosion or highlands, which can be divided into an inner and an outer system of valleys and is furrowed with numerous valleys which on the western slopes run from east and north-east to west, on the south side run consistently from north to south and south-east and cut the highlands into separate tongue-like peninsulas which are again cut up by smaller valleys, the origin of which probably is also as old as the pluvial period. These side valleys have transformed the Sarāt peninsulas into hills of erosion or chains of hills, which has contributed to the very varied forms of the hills, which in part owe their existence to volcanic forces also, like the necks which often occur.

In summer the western slope of the Sarāt shows very slight variations of temperature; the heat is tropical and rises from 88° F. in June to 99° F. in August; in the winter it reaches a more endurable maximum of 77° F. At night, however, the temperature sinks to 36°—27° F., and in the high mountains in the winter to 23° F. so that the mountain tops are frequently covered with snow. From the middle of June to the end of September is the rainy period. The spring rains fall in April; thunderstorms are not uncommon in the main rainy season and in the winter months water freezes on the higher slopes, especially with a strong east wind, even when the thermometer is several degrees above freezing-point. A further peculiarity of the climate of the Sarāt are the Tihāma fogs which come in summer down to the bottom of the valleys, which the Arabs call *umma* or *subḥānīnī*, and only disappear after the temperature has reached its maximum so that they bring their own mitigation with them, which is exceedingly beneficial to vegetation. The climate of the eastern slopes of the Sarāt is extremely dry in contrast to the very moist climate of the western Sarāt. In Saḥr the relative humidity sinks to 20%. Here also the rainy season falls into two parts (March, and July—September). Throughout the whole year it is possible to sow and reap, which is true not only of cereals but also of vegetables and fruit, which are ready at every season in some one of the numerous sorts. The vine, for example, flourishes all over the mountains of Arabia, although only in the river-valleys. The eastern slope of the Sarāt has an almost European character with respect to agriculture although the good soil is limited to the artificial terraces, which are also artificially irrigated. The valleys which have a perennial water-supply show that incredible wealth in fruit and cereals which was described so enthusiastically by al-Hamdānī. The occurrence of tamarisks, acacias and mimosa is characteristic of the desert-like eastern slopes of the Sarāt, but in addition to the *yāḥ*-tree we also find date-palms, numerous varieties of fruit-trees and the cotton plant as well as a great variety of medicinal and garden plants, among which the aromatic are especially important on the classic soil of Arabia Felix. The celebrated frankincense

tree now only yields resin in a few parts of the Yaman; on the other hand cactus-like euphorbias, balsam trees, 'Aden shrub, Dōm palma, tamarinds, rāk and a variety of resin- and gum-yielding trees, acanthaceae and sweet scented plants and shrubs are widely disseminated. Besides the most valuable cultivated shrub in Arabia, the coffee-plant already mentioned, the vine, the date-palm and countless varieties of fruit, there also grow in the Sarfī region rye, wheat, oats, barley, maize, sugar-cane, tobacco, *ḥūt* [q. v.], potatoes, cabbage, beans and figs. But these fruits of the earth do not drop into the countryman's lap; on the contrary, they are often won from the soil only after a hard fight. Only thousands of years of labour have made this remarkable district, which has landscapes rivaling the Alps in splendour, what it is to-day economically.

(ADOLF GROHMANN)

AL-SARĀTĀN (the crab), Cancer, in astronomy the name for the northernmost constellation in the ecliptic which the sun enters at the beginning of summer. The *ḡarāt al-sarātān* (Greek: *Kapnikos*, Latin: Cancer) with the Arabs (exactly according to the *Almagest* of Ptolemy) consists of nine stars with an additional four outside the actual figure of the crab. Even the brightest stars in the constellation are only of the fourth magnitude: four of them form a smooth upright curve, the two outer being on the pincers (*al-sabūn al-ḡanābīl* and *al-sabūn al-ḡimālī*) while the two central ones, forming the eyes of the crab, are called the little asses (*al-himārūn*, *aitūl*, *aitūl*); between them is a group of stars, the Beehive (*al-ma'laf*, *trapezoid*), looking like a little cloud to the naked eye but showing about 40 stars when seen through a telescope. In the centre of an opposite curve on the hind-legs of the crab is the celebrated and much studied multiple star ϵ Canceri.

With the entry of the sun into the head of Cancer it reaches its greatest (northern) declination which is equal to the obliquity of the ecliptic E (Arabic: *al-ma' al-aḡam*). But this figure (now = $23^{\circ} 27'$) is not a constant magnitude; it alters with time within moderate limits. Astronomical

calculation has shown that it can be found from the formula

$$E = 23^{\circ} 27' 8''.26 - 46''.845 T - 0''.0059 T^2 + 0''.00181 T^3$$

where T is reckoned in units of 100 tropic years and from the initial year 1900.0. Thus, for example, for the year 1000 A.D. $E = 23^{\circ} 34' 8''.07$ (cf. S. Newcomb, *Elements of the four Inner Planets and the fundamental Constants of Astronomy*, Washington 1895, p. 196). This variation in E , which from a present diminution will again pass into an increase, was well known to the Arab astronomers. The Fātimid astronomer Ibn Yūnus († Cairo 1009) has given us in his *al-Zīj al-kabīr al-ḥakīmī* (MS. Leiden 1057, Chap. xi, f. 222) a historical account of the measurements of the obliquity of the ecliptic by the Arabs, from which the following is taken. According to Ptolemy, Eratosthenes and Hipparchus had estimated the obliquity of the ecliptic at $\frac{1}{2}$ of the circumference = $23^{\circ} 51' 20''$, "and I do not know of any observation for the greatest declination between Ptolemy and the authors of the tested tables (*al-ḡibāb al-mumtāḥan*) except this one which was made in the year 16. of the Hījra (i.e. after 776 A.D.) and its observer mentions that the greatest declination is $23^{\circ} 31'$." Al-Ma'mūn's astronomers from their observations at al-Shammāsiya (a quarter and gate in Baghdad) found that $E = 23^{\circ} 33'$ and the same figure is given by Muḥ. b. Mūsā al-Kh̄wārizmī in his *Zīj* and Muḥ. b. Kaṭīr al-Faḡhānī in his book "On the Use of the Astrolabe". The astronomers Kh̄alīd b. 'Abd al-Malik al-Marwarrūdhī, Abū 'l-Sanād b. Tayyib 'Alī and 'Alī b. 'Isā al-Aḡṣṣalābī etc. of Damascus who took observations after the death of Yahyā b. Abī Manṣūr with the instrument that al-Ma'mūn ordered them to use when he took the field against the Byzantines, mention that they had found $E = 23^{\circ} 33' 52''$. Their measurement was made in the year 201 of the era of Yazdadjird (832/33 A.D.). The sons of Mūsā b. Shākir say that they had ascertained E to be $23^{\circ} 35'$ in the year 237 of the same era (868/69) at the gate of the round wall of Baghdad. In the tables of *al-Taḡwīm* (restoration) Ahmad b. 'Abd Allāh Habash gives the following two values for the obliquity of the ecliptic: $23^{\circ} 35'$ and $23^{\circ} 33'$, "but there must only be one". In 243 A.H. (226 Yazdadjird = 857/58 A.D.) al-Mihānī fixed E at $23^{\circ} 35' 30''$. "And Abū 'l-Ḥasan Thābit b. Qurra said: I have found old methods of observation before Ptolemy, which show that the greatest declination is $23^{\circ} 35'$, and Muḥ. b. Djabr b. Sinān al-Battānī says that from his own measurements he has found it to be $23^{\circ} 35'$ ". The Shāfi' al-Fāḡīl Abū 'l-Kāsim 'Alī b. al-Ḥusayn Muḥ. b. Abī 'Isā, who is known as Ibn al-'Alam and Abū 'l-Ḥasan al-Sūfī 'Abd al-Rahmān b. 'Umar, found the value of E to be $23^{\circ} 34' 2''$ and $23^{\circ} 34' 45''$. Ibn Yūnus then gives his own calculation of the obliquity of the ecliptic to which he had devoted great care and found $E = 23^{\circ} 35'$. It may be further noted that al-Bīrūnī also took $E = 23^{\circ} 35'$ (*al-Kānūn al-Ma'ādī*, Berl. MS. Or. 8° 275, fol. 85r), Ibn al-Shāḡir about 765 (1363/64) $E = 23^{\circ} 31'$ and Ulugh Beg in 1437 A.D. at Samarkand $E = 23^{\circ} 30' 17''$.

As the extreme daily orbit that the sun can describe in the heavens (in northern latitudes the longest day), the day of entry into Cancer (*al-*

Saratān al-awwal) as well as into the Arims and Capricorn is an auspicious one. Therefore the representation of these three regions and their division into hours (*sā'a*) on the face of a sundial is of special importance. The symbol of Cancer (and of Arims) is a conic section, the exact shape of which depends on the latitude of the place and the position of the dial.

The name Cancer (*Kapriokos*) no doubt dates from Greek times. According to L. Ideler (see below), the name Lernaean is also found, because he (the crab), according to the fable, crawled out of the swamp of Lerna to injure Hercules in the foot when he was fighting with the Lernaean Hydra. The name "Crab" is found on the famous circle of the Zodiac at Dendera (Egypt) which, however, dates from the late Egyptian period and must certainly have been made under Greek influence. In Babylonian the constellation (without β Cancri) was called (Mull) AL-LUL = Kakkab Littu, which probably is the name of an animal, but hardly crab. In the later texts of the Seleucid period instead of AL = LUL we always find the ideogram for carpenter (cf. F. Kugler, *Sternkunde und Sternbilder in Babel*, Münster 1913, p. 6, 54, 209, 210).

Bibliography: L. Ideler, *Über den Ursprung und die Bedeutung der Sternnamen*, Berlin 1809, p. 158 sqq.; F. W. V. Lach, *Anleitung zur Kenntniss der Sternnamen*, Leipzig 1796, p. 75, where Persian, Turkish and Syrian names for "Cancer" are also given. The passage in Yünus on the definition of the obliquity of the ecliptic is translated in C. Schuy, *Die Bestimmung der geographischen Breite eines Ortes durch Beobachtung der Meridianhöhe der Sonne oder mittels der Kenntnis zweier anderen Sonnenhöhen und den zugehörigen Azimuten nach dem arabischen Text der Hukimilischen Tafeln des Ibn Yünus (Annalen der Hydrographie und maritimen Meteorologie, Hamburg 1922, p. 10 sqq.)*. A table of the observations on E made in earlier centuries is given in C. A. Nallino, *Al-Battānī wa al-Battānī Ōpasi Astronomicum*, Milan 1903, i, 160; for the gnomonic representation of Cancer, Arims and Sagittarius, cf. C. Schuy, *Gnomonik der Araber*, Berlin 1923, p. 26 and du., *Sonnenwahrheiten der spätarabischen Astronomie*, in *Isis*, N^o. 18 (1924), p. 354.

(C. Schuy)

AL-SARATĀN (A.), the crab; the name is applied to the fresh water crab as well as to the sea-crabs, *saratān nabri* and *bāhri*. Al-Damiri describes the crab as follows: "It can run very quickly, has two jaws, claws and several teeth and a back as hard as stone; one might think that it had neither head nor tail. Its two eyes are placed on its shoulders, its mouth is in its chest and its jaws are sideways. It has eight legs and walks on one side. It breathes both air and water. It casts off its skin six times a year. It builds itself a hole with two doors, one opening into water and the other on to dry land. When it casts off its skin, it closes the door which is on the water side from fear of fishes of prey and opens the land door so that the wind may reach it and dry the new skin". Al-Kazwini gives a similar account of the animal among beasts of the sea. The uses in magic and medicine are innumerable.

Cancer is also called *al-saratān* (after the

Greek). According to the *Kālmū*, it is a tumor of black gall, at first no bigger than an almond; as it grows, red and green veins appear on it like crabs' feet. The disease is incurable and at best its course can only be prolonged; it attacks both men and animals.

SARĀY. [See SARĀY].

SARDĀR is a Persian word (see SAR), the etymological meaning of which is "holding", or "possessing the head", i.e. the first place, its current meaning being a chief or leader and hence a military commander. It has been borrowed in this sense by the Turks, who, however, sometimes derive it in error from *sir-dār* ("the keeper of a secret"). Through Turkish it has reached Arabic, and in a letter written in 1581 by "one of the princes of the Arabs (of Yaman)" occurs the phrase "*wa-ʿayyana sardār*" "*ala l-ʿarḍi*" ("and he appointed a commander over the troops") on which Rutgers comments "Vocabulum *sardār*, quod Persice originis est, *duxem exercitus* significat". The abstract substantive *sardāriyyat* in the sense of the post or office of commander of an army also occurs; and it was doubtless owing to the familiarity of the Arabic-speaking people of Egypt with the borrowed word that it was selected as the official title of the British commander-in-chief of the Egyptian and Sudanese armies. In Persia the word was until recently much used as a component part of honorific titles, such as *Sardār-i Zafar* and *Sardār-i Džang*. In India it is used generally of the (Indian) commissioned officers of the army as a class. *Sardār log* means "the (Indian) officers of a corps or regiment". It was formerly applied to the head of a set of palanquin-bearers, and it is still applied to the valet or body-servant of a European in northern India, as the chief of his household servants. *Sardār Bahādur* is a title of honour attached to the first class of the Order of British India, an order confined to Indian commissioned officers of the army.

SARDINIA (in Arabic sources SARDĀNIYA, SARDĀNIYA), an island in the Mediterranean Sea, lies $7\frac{1}{2}$ miles South of Corsica and 138 miles South West of the Italian Civita Vecchia, and has an area of 9,187 square miles. It is mountainous, and has a peak as high as 6,016 feet. Throughout the 160 miles of its length and the 68 of its breadth it consists chiefly of ranges of granitic rock or high plateaux. These ranges of dark hills convey an appearance of wildness to the island and make it anything but attractive, which probably accounts for its comparatively uneventful history.

The Nuraghi or circular towers, of which 6,000 have been traced on the island, bear unmistakable evidence that the island was well inhabited in the Bronze Age, but it is only when we come to the Phoenician period that we have definite information regarding the island. These invaders certainly did

conquer the island at about 500—480 B.C., and they were the first of a succession of overlords, who made the island contribute to their granaries. The Roman occupation bore more heavily on the Sardinians; as they had no free city on the island, they were compelled to supply much of the corn for Rome, and they were obliged to contribute a money tax. Little wonder that there was an insurrection of 80,000 slaves in 181 B.C. The island was useful to the Romans, moreover, as a place of exile. We read that in 355 A.D. Constantius banished 3 bishops to Sardinia, one of whom was Lucifer of Calaria. In 440 the Vandals prepared to attack the place, seeing, as they did, that it gave food supplies to the Empire, and in 476 the island had to be ceded to them. A governor of German nationality was installed to discharge all relevant duties both military and civil. Justinian finally recovered the prize for Byzantium, until the 10th century.

Ibn 'Abd al-Hakam in his *Futūḥ Miṣr wa 'l-Maghrib wa 'l-Andalus* seems to put it beyond question that Sardinia was invaded at the same time as Spain, c. 92 A.H. He says that the Sardinians used their harbour to trick the Arabs out of plundering their valuables, and this seems not at all unlikely. That the Arabs made one of their usual raids on the island is certain, but they did not prolong their stay there. They paid another visit in A.H. 98 and 118 and carried through the same programme, but they never even attempted to maintain themselves in the place, nor is it hard to understand that such a place would little appeal to those who were born to the desert and the heat. In 130 A.H., however, they went a step further, and imposed a tribute on the island, which they succeeded in extracting from the enfeebled people. Meantime in 725 A.D. Luitprand, fearing these repeated raids, obtained the body of Saint Augustine, and succeeded in removing it out of danger to Pavia. This great treasure of the Church had lain at Cagliari since the 6th century. Once again before the 8th century was ended Sardinia suffered another plunder at the hands of the Arabs (143 A.H.). The Saracens never used the island for purposes of grain-producing, as had the previous conquerors, but in 227 A.H., when they made their daring attack on Rome, they used Sardinia as their rendezvous, before making the final onslaught on the capital. Not even in the 10th century A.D. did Sardinia cease to be the quarry of the Arabs, for we read that, when 'Ubad Allāh the Mahdi was plundering Genoa, in 332/3 A.H., he did not forget to take what plunder he could from Sardinia. The last mention of Arab influence in the island is when Muḥammad of Denia, in Spain, subjugated it in 393 A.H. Never again were the formidable raiders of the Mediterranean Sea to strike terror into the inhabitants of Sardinia, and it seems strange that in exchange for all their plunder the Arabs gave neither culture nor trade, religion nor art, as a recompense and a memorial of their presence.

Pisan supremacy followed that of the Arabs, and this again was succeeded by that of Aragon. In modern times the island has changed hands several times, having been Spanish and French and Austrian. Its ties, however, are all with the present possessors, and Italy seems to be inaugurating a new regime.

(T. CROUTHER GORDON)

SARĀKAT ISLAM (*sarākat*, Javanese pronunciation of the Arabic *ṣārīka*, a brotherhood or guild), a political combination of Muhammadan Indonesians formed in Sarakata (Java), which has played an important part in the history of the development of the native population of the Dutch East Indies and in Dutch colonial policy in the last fifteen years. Its object was to secure for the native element a more prominent position socially, politically and economically, at the same time retaining Islam, which is the natural bond that links together the very diverse elements of a great part of the native population of the Dutch Indies. The leaders of the Sarākat Islam would not, however, themselves subscribe to this, but would give other definitions and estimates of its objects according to local conditions, if indeed they give any reply at all when asked about the objects of their organisation.

Early History. While the position of the masses of the Javanese natives as regards their own rulers had from the earliest times been characterised by extreme subservience, during the nineteenth century the independence of both the people and their lords became more and more limited by the gradually increasing influence of the Dutch. The national pride with which they looked back on a past in which the whole Indian Archipelago was under a Javanese hegemony was more and more supplanted by a feeling of dependence and inferiority to foreigners (Dutch, Arab or Chinese), of whom the Dutch in particular and later on the Chinese only rarely concealed the slight estimation in which they held the natives. When about the end of last century a few progressives among the *priyayi*'s (aristocracy) of Java for the first time wished to give their sons a European education, they did, it is true, receive support from a few Dutchmen, but a considerable majority of the officials offered marked resistance to this innovation, and the few who made the experiment found it made very difficult for them to find a place in society in keeping with their newly acquired qualifications. Nevertheless, a small body of educated Javanese was gradually formed, and naturally it was they who least appreciated foreign tutelage. Then came the events in the Far East and their reaction on the situation in the Dutch Indies. Even before the Russo-Japanese war (1904—1905) the Japanese had been granted equality with the Europeans in the Dutch East Indies. After the foundation of the Chinese Republic in 1911, Chinese warships visited Java and Chinese officials came to enquire into the position of their compatriots; the Chinese in the Dutch Indies were granted (from 1908) the Dutch-Chinese schools which they had desired for some years, the restrictions on their freedom of movement were abolished (1910) and more satisfactory arrangements were made for the administration of justice (1912). The Arabs also

shared the advantage of the new legal position of the Oriental foreigners, but the position of the Javanese remained the same.

In 1908 the League of Young Javanese *Budi Utama* ("noble endeavour") was founded by students of the Dokter-djawa (native medical) school in Batavia, the first modest attempt to obtain from the authorities the fulfilment of some of their desires by organisation, particularly more and better education. The father of the movement, which was regarded with suspicion not only by the Dutch but also by many conservative Javanese, was the "Dokter-djawa" Wahidin — Sudira-Usada. Such adherents as this first Javanese organisation found belonged to the higher classes of Javanese society; the masses did not join it, but they also began gradually to desire a reorganisation of social conditions and for a number of reasons.

a. Their social position was thoroughly unsatisfactory. In contrast to the foreign Orientals the Indonesians had to pay marks of homage to their European or native masters (*hormat*, Ar. *ḥurmat*). It is true that the central government repeatedly ameliorated these *hormat* but the practice for the most part continued. The administration of the law very much favoured Europeans; detention for examination, applied not only to accused persons but for convenience often to witnesses also, was an evil which had not yet been entirely abolished; trial and punishment by the police were not always just and were imposed only on natives; the security of private property was often very slight; cases occurred in which a man preferred to say nothing about a robbery of his possessions rather than bring down upon his head the unpleasant efforts of the authorities. The few rights were not equal to the hardships of forced labour and the frequent ill-treatment of the native workers in European businesses. Education was very insufficient. In addition, as a result of the progressive development in China, the attitude of many Chinese, especially newcomers, to the Javanese became so presumptuous that the latter felt deeply hurt; excesses against the Chinese showed how deeply.

b. Their economic position had gone from bad to worse. The free development of native industry was much restricted when about 1830 the plantation system (Dutch "Cultuurstelsel") especially for coffee, was introduced, which became a misfortune for the native population; when in 1877 the system was abolished, it had brought the Dutch government 832 million gulden — 21% of the State expenses (the so-called Indian Surplus). In the period that followed, the middle classes and the peasants were more and more deprived of their economic independence by the keen competition of European industries and plantations, while the retail trade had long been mainly in the hands of Chinese and Arabs. With however much tenacity they endeavoured to resist foreign competition, the decline was considerable, especially after the mainly native batik industry (turnover about 10 million gulden yearly; a short account of the native industry in *Koloniale Verslag van 1920*, col. 7) was forced to use imported aniline dyes and textiles in place of the indigenous raw material (full details of this economic decay in *Onderzoek naar de mindere welvaart der inlanders*

walking of Java en Madoera, Report of the Commission, Batavia 1905—1914, 32 vols. folio).

c. In the third place may be mentioned the fear of conversion to Christianity, although this factor had only been in operation a very short time and the movement among the Muslim population aroused by the activity of the Christian missionaries was quite different both in time and place. But the fact that Christian propaganda was more active, and found open approval with some members of the Dutch parliament, and that a warning had been issued from Mecca against it, was used by the leaders of the SarĀkat Islam to arouse the masses in a way which would result in their joining the SarĀkat Islam.

A comparatively unimportant incident is said to have brought about the foundation of the SarĀkat Islam in 1910 (there are no reliable accounts of the first years). A case of dishonest practice on the part of a Chinese *hongai* (company) in Lawéyan (Nglawéyan), a village near Surakarta, where very well-to-do Javanese merchants lived and where competition between them and the Chinese was unusually keen, is said to have aroused such bitterness among the cheated Javanese that the latter combined to bring about a boycott of Chinese goods. Out of this grew the SarĀkat Islam, the organisation of which was perhaps modelled on the SarĀkat Dagang Islam of Buitenzorg, which had been founded some years earlier by a Javanese and some Arab merchants. The name SarĀkat Dagang Islam was at any rate also used in Surakarta. The Surakarta S. I., however, developed quite independently.

The S. I. did not long adhere strictly to its original aims. The movement spread with astonishing rapidity after the boycott of Chinese goods had been successful. The huge increase in membership cannot be explained simply from the hatred of the Chinese, natural at the time, but is rather due to the fact that the Javanese who longed for greater freedom and less tutelage thought that, after the successes won over the Chinese, the new union might assist them to a higher position as regards other foreigners also, i.e. this combination under a Muslim banner — in orthodox Lawéyan the union of the Muslims as such was natural — after it had once given proof that a victory for the Javanese was not an absolute impossibility, filled a gap generally felt in the circumstances described above in a, b, c, and could also bring within its ranks many people who had nothing to do with the boycott of the Chinese. Much more important than the details of its earliest history is the fact that this combination was able to rise and spread so rapidly, just as in the years following it was not single incidents and activities but the development of its aims that attracted attention to it. There is now a great difference between the origin and development of the S. I., which is due to the fact that it was born from the higher needs of the Javanese people, but developed under the deciding influence of external circumstance; — viz. the outbreak of the Great War in 1914, the Russian Revolution of 1917, the world economic crisis after the war, and collapse that necessarily followed in Europe. Ideas were brought into the SarĀkat Islam from outside which were foreign to the Javanese people, who only demanded the fulfilment of modest requests and the satisfaction of local requirements.

The result was a great internal weakness which ended in the Sarekat Islam losing the great influence it had as quickly as it had gained it.

The history of the Sarekat Islam may be divided into three periods:

a. Up to the first national congress.

b. The zenith of the national congresses.

c. The decline of the Sarekat Islam before the rise of the radical Sarekat Rayat.

a. In the first period one can hardly talk of one homogenous Sarekat Islam. Under the leadership of the vigorous and able Radèn Usman Saiyid Tjakra Aminata, an inspiring orator, who soon, however, became dazzled by his own unbounded ambition, the movement spread beyond its home, especially in Eastern Java; in Surabaya the Sarekat Islam newspaper *Utusan Hindia* (Indian Messenger) was founded in December, 1912, which was edited by Tjakra and long continued to be the most important organ of the S.I. Branches were later founded in Semarang, Tjiribon, Bandung and Batavia. Admission was made very easy; the curiosity of the masses, the suggestive effect of the ceremonial secret oath, and the rapidly increasing popularity of the Sarekat Islam brought it more and more new members. In the period of first enthusiasm the statutes adopted at the official foundation on Nov. 9, 1911 (the members were to promote a brotherly feeling for one another, to give assistance to Muslims, to work for the social elevation and economic advancement of the people by all legitimate means), were fairly generally observed. Soon, however, each local S. I. began to work only for its own local ends, and according to the views of local leaders. There were some which served the material interests of the people, e.g. by forming co-operative associations to strengthen the Javanese power of competition, others endeavoured by their intervention to dispose of the abuses to which the Javanese were exposed from officials and European employers, others again (e.g. the S. I. Batavia, which soon had 12,000 members) preached more accurate fulfilment of the duties of Islam. Expression was given to the desire for an improvement in the position of native women; an S. I. for children (*Sutaria Mulya*) was even founded.

The successes of the S. I. in the economic field were but short-lived. The co-operative societies disappeared as soon as the first ardour of the members had cooled off; all economic activities suffered for the lack of financial training among the Javanese; S. I. funds were not seldom selfishly spent by the leaders of the movement. In the field of social progress the S. I. could certainly be credited with a general improvement of the relations between foreigners and Javanese to the benefit of the latter, although many gains were lost afterwards in the general decline of the movement. Interest in their religion was kept active by the leaders probably because they feared apathy. The bond of religion was to avert this evil. Before the National Congresses the S. I. took very little part in politics.

The first contact of the S. I. with the Dutch government seems to have been the temporary suppression of the Surakarta S. I. as a result of excesses against the Chinese (Aug., 1912). On Sept. 14, 1912, Tjakra presented a petition which asked the central government to recognise the

Sarekat Islam. He received its decision on June 30, 1913. The government had long hesitated over its reply. Recognition of the, in themselves quite innocent, statutes involved to some extent a possible change in administration and in the colonial policy hitherto followed, which was based on the principle of the dependence of the native subjects. The leaders of the S. I. had shown themselves too weak to prevent the outrages against the Chinese; practice might very soon be in great contrast to their fine promises. An official recognition of the statutes which would give the S. I. a legal standing would be regarded by the simple populace as complete approval of all the activities of the S. I. or at least would be interpreted to mean that by its leaders. In a discussion between the Governor-General and a deputation of the S. I. on March 29, 1912, the former emphasised his personal sympathy with the S. I. but pointed out dangerous weaknesses which stood in the way of approval of the petition presented, such as, for example, the bad management of financial business (which has always been a weak point). Finally the edict of June 30 refused the S. I. the desired recognition on practical grounds, but called the attention of the petitioner to the fact that requests for recognition and legitimisation by local S. I.'s would perhaps not be refused; these local associations would also be able to combine to form a legitimate central committee of representatives of the local sections. The local S. I.'s were to be responsible, to standardise their formulae of oaths and to draw these up in such a way that they would be regarded as harmless by the government. The S. I. was therefore organised in accordance with these instructions.

The attitude of the officials in the provinces proved in general much more hostile to the Sarekat Islam than that of the Government in Batavia. This difference between the Government and some of its officials may have sown the seeds or been one of the most important causes of the native population's distrust of the Government, which was soon to appear. The frequent complaints of counter-measures by local officials, some of whom at first, in spite of the official recognition, even went so far as to suppress local S. I.'s, found sharper and sharper expression at the later congresses. The European population at this time was almost wholly against the Sarekat Islam. A certain nervousness overcame them at times, especially when hostilities with the Chinese had taken place. The tone of the European press was at first in general contemptuous, later hostile; this brought about an increasingly vigorous reaction in the native press, which was growing very rapidly. The Chinese, of course, were hostile to the S. I.; the Arabs at first were on good terms with it and even had a considerable share in its early development; but when in the beginning of 1913 it was decided that only exceptionally could non-Indonesians be admitted to membership of the S. I., and particularly after the development of the S. I. on progressive lines began to hurt their conservatism, they withdrew. The relations between S. I. and *Budi Utama* were good although infrequent; representatives were sent from both to their congresses, etc.

b. In the period that followed, the political element became very prominent in the Sarekat Islam and relations with the other political parties and movements became closer. The influence

of the growing European radicalism made itself more and more felt; European parties like the I. S. D. V. (Dutch Indies Social Democratic party) endeavoured to gain the S. I. to their side. The official trend of the S. I. became more radical year by year, but within the movement arose strong counter-currents. Tjakra was the representative of the legal, national-democratic movement; Sema'un became the leader of the growing left minority. This young man, an ardent follower of the I. S. D. V., made his first public appearance at the first national congress where he advocated "pêrsèi" (Dutch *verzet*, "resistance") to the government but was hardly able to attract the attention of his audience; yet his speech was notable enough, for he was the only one who had the courage to point to the weak points in the national movement, e.g. the lack of energy. In contrast to the aristocratic Tjakra, he was a simple man of the people, whose work was distinguished by an unselfishness and an honesty unusual among Javanese. By the second congress we find him acting as president of the S. I.-Samarang, where European radicalism had the greatest following, while at the third congress he had become a member of the C. S. I. (Central Sarekat Islam). Tjakra had only very reluctantly admitted him to it but he was afraid that this man, who promised more to the people than he did and had more understanding of their needs, would try to gain control of the business and he thought that he would more easily be able to keep him in check as a member of the C. S. I. In order not to lose his popularity, however, he moved more and more from his original attitude with the result that the opposition of the conservative wing increased. The struggle between Tjakra and Sema'un governed the development of the S. I. for the next few years. With great skill Tjakra was repeatedly able to avert a split within the Sarekat Islam but finally circumstances became too strong for him, and when, at the sixth congress, the S. I. was forced to a choice and in Tjakra's absence drove Sema'un out of the party, it was too late for the S. I.

A few details regarding the national congresses, where the different opinions and tendencies were able to find clear expression, may now be given.

The first national congress was held in Bandung on June 17-24, 1916. Shortly before (March, 18), the C. S. I. had received official recognition and an attempt to make the west Javanese and Sumatran S. I. branches independent of the C. S. I. had failed. An idea of the extent of the S. I. may be gleaned from the following figures: There were representatives of 52 Javanese branches (representing 273,377 members), 15 Sumatran (c. 76,000), 7 Borneo (5,574), while Celebes and Bali each had one branch. In an enthralling speech in which he dealt with the most important questions of the day, Tjakra emphasised the value of the name "national congress"; the S. I. was to set itself a new goal: the laud was to raise itself to be a nation, the S. I. was to co-operate in obtaining self-government for the Dutch Indies soon, or the native elements would be granted greater influence in questions of administration; but he gave praise to the central government which had now really abandoned the old policy and was going to take the first step on the path of "policy and association" (cf. Soenck-Hergroenje, *Verf. Geschr.*, iv/ji, 291-306) with the promise that a council composed of European,

native and foreign Oriental members would be given to the Governor-General. — There was a great deal talked of here and in subsequent congresses which the great majority of the delegates did not understand. Statements such as that the "Qur'an is a work of the greatest importance for socialism", that the Prophet (according to a contributor to the *Hindustan Review*) is "the father of socialism, the precursor of democracy", show on what lines propagandists of European parties endeavoured to gain adherents for their teaching. Perhaps the most important work of the congress was the discussion of the 86 proposals made by the local S. I.'s, which usually referred to local complaints and were published with Tjakra's opinion in the *Utusan Hindia* of June 15-16, 1916. From these motions we see what expectations the simple country people hoped to realise through the S. I.; the desire for greater personal freedom and independence was continually expressed at this and following conferences; it was not the confused political ideas of a few leaders that attracted the masses to the S. I. but the hope of achieving their desires through this powerful organization; this explains why they later left the S. I.'s so readily, when Sema'un's party promised to further native interests more than the S. I. had done.

The second national congress (Batavia, Oct. 20-27, 1917; 281 motions from local branches) dealt with the question what attitude the S. I. should adopt to the coming "Volksraad" (on the organization etc. of the Volksraad see *Kebudayaan Studien*, Vol. I, Oct. 1917, *Extra Politiek Nummer*, p. 169 *seq.*); the share that was to be given in it to Indonesians did not satisfy them, still less did the continued postponement of its opening. The congress laid down a declaration of principles which explains the political goal of the C. S. I.: testimony is given to the superiority of Islam but absolute neutrality is demanded from the authorities; in view of the consideration that the majority of the native population lives under a state of wretchedness, the C. S. I. will always combat any supremacy of "sinful capitalism" (cf. *Kel. Studien*, *op. cit.*, p. 35 *seq.*; in this volume is also given the programme of work of the S. I. with notes and an elucidation of the political situation at this time, details of the programmes of the political parties of the day given by their own leaders).

The results of the unrest in Europe were clearly seen at the third national congress (Surabaya, Sept. 20-Oct. 6, 1918). The new situation created by the opening of the Volksraad on May 18, 1918 (Tjakra and one other leader were the representatives of the S. I.), and the ameliorations still desired were rigorously discussed. But the unrest which had taken possession of the native society was particularly discussed. Economic difficulties and the results of very successful preaching of the coming war against "sinful capitalism" increased the bitterness; disastrous results were soon to be seen. The great strike at the end of 1917 and the outbreaks of the mob in Kudus and Demak at the end of 1918 formed the beginning of a social struggle, which went on with intervals to the end of 1924, whose result for the present could hardly be in doubt in view of the weak economic position of the native population and the lack of that energy which alone could remove this fundamental evil. The organization of the Javanese into *Plevisitasien Ka'm Tani* (agricultural unions) and *P. K. Surab* (industrial unions) had been in existence for some

years and expanded very much in the next few years. Their activities, which in recent years seem to have been supported by the Bolsheviks, cannot be further discussed here, nor all their relations with the S. I. and the later S. Ra'ayat (see below). At Christmas 1919 they were centralised by Sasrakardana in the R. S. V. (revolutionary socialist committee of the trade unions), which split at the end of 1920 into a moderate committee in Djokyakarta and a communistic under Sēma'un in Sēmarang; these combined again after Sēma'un's adventurous journey to Russia to the Trades Union Congress at Madiun in Sept., 1922. Their activity has been by no means confined to questions relating to the working classes but has extended to the whole field of politics.

The period between the third and the fourth congress was a time of great unrest. Soon after the third congress the revolution in Europe caused the formation of the so-called "radical concentration" (Nov. 16, 1918) of different parties in the Volksraad including the S. I. Here their leaders explained the new development of the S. I. and defended the necessity of going farther than was laid down in the statutes (Nov. 14, Dec. 5; cf. *Handelingen van den Volksraad, 1918-1919*, p. 175-185, 518-525); the government, which continued to regard the course of affairs as a healthy development of native society (*Koloniaal Verslag van 1919*, p. 4-13), nevertheless sharply criticised the attitude of the C. S. I. to extremist movements (Dec. 2; cf. *Handelingen etc.*, p. 432-434) especially the assertion of the C. S. I. that they could not assume responsibility for disturbances by local S. I.'s if the government did not meet their repeatedly expressed wishes more quickly; the C. S. I. was to settle the conduct of the movement, not the branches; the government, however, again declared once more their readiness to co-operate with the C. S. I. on the lines of their statutes. — An incident which proved fatal for the S. I. was the discovery of a secret revolutionary organisation (the so-called section B of the S. I.) in the Preanger (S. W. Java), as a result of investigations into a case of armed resistance to the authorities in the *dés* of Tjimurrah near Garut (July 4-7, 1919; cf. the synopsis of the report of the government commissioner G. A. J. Hazen in the *Handelingen van den Volksraad, Tweede gewone Zitting, 1919, Bijlagen, Onderwerp 10*, p. 2-21). The relation of this section B to the C. S. I. and S. I. is by no means clear (cf. *Handelingen der Staten-Generaal, 1919-1920, Tweede Kamer, Dec. 22*, p. 1158^b; Blumberger in the *Encyclopaedie van Ned-Indië, Suppl.*, p. 15^b; *Kolon. Verslag van 1922*, p. 6). Tjakra denied that either the C. S. I. or the local S. I.'s had anything to do with the section B (cf. also *Handelingen der St.-G. etc.*, p. 1153^b; *Hand. v. d. Volksraad, 1919-1920*, p. 90-92, 94, 96, 106-110, 114, 211). In any case the government decided to grant no further legal recognitions unless the oaths were taken out of the statutes, etc.; as they thought (probably rightly) that within the S. I. an anti-Dutch movement had become predominant (*Kol. Versl. van 1920*, chap. B, p. 5), they withdrew from the S. I. the moral support which they had afforded it in recent years against the local authorities. — In other respects also the Sarekat Islam soon met with many great difficulties which crippled its external

activities and forced it to work to strengthen itself internally.

The fourth national congress (Surabaya, Oct. 26-Nov. 2, 1919) was mainly devoted to the discussion of the coming R. S. V. (see above) and the relation of the S. I. to it and can be passed over here.

The difficulties increased. The fifth national congress was postponed on account of a sharp criticism of the financial and political management of the C. S. I. (by the communist Darsana in the *Sinar Hindia* of Oct. 6-9, 1920; cf. *Kol. Verslag van 1921*, col. 6; *Kol. Verslag van 1922*, col. 9). The branches demanded an account of the money entrusted by them to the C. S. I. The first secretary of the C. S. I. was arrested in Nov., 1920, and sentenced on account of the branch B affair. The situation became more and more confused owing to the increasing activity of the other unions.

The fifth congress which was finally held at Djokyakarta from March 2-6, 1921, was Tjakra's last attempt to keep the control of the whole Javanese popular movement in the hands of the C. S. I. by a compromise between the very diverse movements and the postponement of the most difficult questions for which no solution could be found. The compromise was embodied in a new programme of principles in which (a) the fatal influence of European capital, which had, it was said, made slaves of the native population, was exposed, (b) Islam — which, by the way, demands a popular government, workmen's councils, a division of the soil and the means of production, makes work compulsory and prohibits anyone becoming rich through the work of another — was adopted as a basis and (c) the readiness of the S. I. to international co-operation within the limits placed by Islam and with maintenance of its independence was emphasised. The difficult questions of "party discipline" was postponed (whether a member of the S. I. could be also a member of another political party), which question the C. S. I. wished to answer in the negative and the left wing closely allied with the communist party in the affirmative. Since a and c were wanted by the communists, and they were no doubt willing to take b along with the rest, their claim that communism was now victorious in the S. I. was intelligible. It is also easy to understand that the struggle within the S. I. was soon renewed, because the C. S. I. would not allow this interpretation of the compromise (cf. *Uraan Hindia* of March 26, 1921). The breach followed at the sixth national congress (Surabaya, Oct. 6-10, 1921). Tjakra was not present; he had been arrested in August, 1921 (because he was thought to have committed perjury in the section B affair; but he was released in April, 1922, and pronounced not guilty in Aug., 1922). The deputy-chairman was not able to avert the decision; the principle of party discipline was approved by a majority of the congress and Sēma'un and his followers left the S. I. (Oct. 8, 1921); soon afterwards (Christmas, 1921) they formed themselves into a *Persatuan S. I.* or *S. I. Merah* (Red S. I.) with headquarters at Sēmarang.

c. After this decision the S. I. lost ground rapidly. The fidelity of its members disappeared before the attractions of the radical party. After

the release of Tjakra he resumed his propaganda for the S. I. but with scant success. He had lost much of his earlier influence and he no longer represented the S. I. in the new Volksraad. He now followed a moderately progressive policy. The seventh national congress was held in the conservative centre of Madiun (Febr. 17-20, 1923). Tjakra again took up cultural and religious questions; in recent years Muslim affairs had been left to special unions, e.g. to the Muhammadiyah. Tjakra now became president of the first pan-Islamic congress (Tjerebon, Nov. 1, 1922) which had been organized on the model of the "All India Muslim League". A lively interest in questions of international Islam was displayed; a telegram of homage was sent to Mustafa Kemal Pasha; the Javanese attitude to the caliphate question was discussed. In the Volksraad the S. I. attached itself to the second radical bloc, which was formed on account of the legislative proposals for the revision of the Dutch Indies Constitution. But its activity remained very limited.

In contrast to the decline of the S. I. was the rise of the radical S. I. Its leader, Sams'un, entered into relations with the Russian Soviet government in Moscow. His activity in the trade unions has already been mentioned above. His arrest was the cause of the great railway strike of May 8, 1923. Deported from the Dutch Indies he went to Holland, where he was made a member of the committee of the communist party as "representative of the Indonesian popular movement". At the end of 1924 he was in China, with which country his party maintained active communication, especially after Sun Yat Sen's adoption of Bolshevism. On May 4, 1923, the radical S. I. and the P. K. I. (Indian communist party) held a joint congress in Bandung. The red S. I. was on this occasion given the name of Sarĕkat Ra'yat (Union of the People). Propaganda was conducted in close co-operation with the P. K. I. The S. R. was to be a preparatory school for the P. K. I. and only trained pupils were to be admitted to the P. K. I. Courses for S. R. leaders seem to produce brilliant propagandists in spite of the astounding ignorance which the newspapers talk of (p. with truth). The S. R. takes no account of religion; it is "netraal kepada Allah" (neutral to Allah). The leaders in the towns are often hostile to religion, but in the country they are Muslims; there seems to be group of religious communists. The S. R. was continually fought by the authorities. Meetings were forbidden, breaches of the law relating to the free and public speaking were punished, communistic books etc. confiscated, inconvenient members of the party rendered harmless by detention for examination. Since Aug. 31, 1924, the campaign against them has been intensified. One result has been a milder attitude towards the moderate unions (S. I. etc.). Nothing definite can yet be stated about the results of this campaign.

The branches of the S. I. outside Java are far from being as important as the Javanese. The conditions were different, the soil much less suitable for the seed sown by the S. I. Since 1914 branches of the S. I. have been formed in the most important centres which in general have produced a more active interest in the religious life. Locally there were occasional excesses. But the enthusiasm soon cooled down. Representatives were sent to the national congresses in Java, who made

known to the congress the local complaints of the district they represented. Later there was sometimes the same conflict between S. I. and S. R. but to a far less degree than in Java. — The first S. I. outside Java seems to have been the S. I. Palembang, founded Nov. 14, 1913, by Javanese. The influence of the S. I. varied greatly according to local conditions. In Atjeh the situation was difficult about 1921 because the S. I. (often secretly organised) seems to have pursued anti-Dutch propaganda. In Djambi the S. I. played a part in the disturbances of the years 1916 and later; in Minangkabau the pan-Sumatran tendency was stronger than the Javanese influence of the S. I. The action of the S. I. in the islands of Ternate and Ambon was important; radical tendencies were strongly represented on the latter island. Finally we must not omit to mention that the development of the youthful S. I. was watched with the greatest interest from Mekka. In the years 1910 and onwards there was a certain amount of anxiety here because the Dutch government was credited with the intention of making the *hajj* impossible for their Indonesian subjects, and, of course, on the pilgrimage of the "Hajawa" the Mekkan depend a great deal for their livelihood (Sunnuck Hurgonje, *Mekka*, II, ch. 4). There seems to have been a correspondence between the Mekkan "Ulama" and the Muslim authorities in Indonesia regarding the activity of Christian Missions; special prayers are even said to have been offered in the Holy Mosque for the Muslims of Indonesia. There was therefore much interest in the S. I. At the end of 1913 a pamphlet on the S. I. appeared in Mekka in Arabic and was afterwards translated into Malay. A Mekka branch of the S. I. was founded (probably for the Indonesians living there) of the activities of which nothing further is known to the writer. This is probably the only branch of the S. I. outside of the Dutch East Indies.

To sum up we may say that the S. I. has played an important part in the development of the relations between Holland and the Dutch Indies, and that its history is important for the history of the revival of Islam and of the awakening of Eastern Asia. The S. I. is the first great independent expression of a want that had been felt among the Indonesians for several decades, their desire for greater freedom and more independence. Their leaders guided it into a radical, perhaps also national, direction, but the masses never understood their theories and gave most support to the movement which best met local requirements. In the fifteen years of the existence of the S. I. there has been externally a tremendous change in Javanese society, the causes of which are also to be sought in events during and after the World War; development internally began especially through the influence of the S. I. but naturally will progress much more slowly. The further development of the popular movement among the Javanese, which is in itself important as a sign of the times, will also depend on many external factors; the degree of capability among the European authorities to adapt their policy to the slowly changing situation may be particularly decisive for the future character of the popular movement.

I., although written rather earlier: *Politique Musulmane de la Hollande*, Paris 1911, and *Verspr. Geschr.*, iv/ii, 227—316. (C. C. BENO)

SARF is defined by the jurists as a contract of sale (*ba'f*) in which the goods to be exchanged are of precious metal (*thaman*). *Sarf* is primarily money-changing, but also includes any exchange of gold and silver. As the name shows — *sarf* is *majdar* of a verbum denominativum from *sarf* or *sarfā* — the business of money-changing is of Aramaic origin (cf. Fraenkel, *Die aram. Fremdwörter im Arab.*, p. 182 *agg.*; Lambert in the *R. E. J.*, 1906, ii, 29). The expression *sarf* seems to have been first naturalised in Islam about the end of the first century A. H. With this is connected the fact that Mālik b. Anas in the *Muwatta'* and with him the Mālikites make a sharp

distinction between money-changing (*sarf*) and the exchange of gold for gold or silver for silver (*murāṭala* by weight, *mukāṭala* by measure or number), which the other law-schools do not do; only in al-Shāfi' (*Kitāb al-Umm*, iii, 30) is a similar term, *murāṭala*, once found. The legal principles relating to *sarf*, which are closely connected with the laws relating to usury, are based on the Ḥadīth, while the Qur'an has nothing on the subject. They are the following:

1) With the same kind of material (*djins*), the exchange can only be made with an equal quantity (*amūṭan*) even if the articles are different in quality and workmanship. With unlike materials (gold for silver) this rule does not hold. Coins debased more than half are treated as merchandise (as in the Talmudic law; cf. Lambert, *op. cit.*, p. 32 *sq.*) and can be exchanged with a surplus (*mutafāṣṣim*). A recompense for the making up of bullion into ornaments etc. is therefore prohibited as usury, while modern authorities recognise the value of the labour and do not consider the sale as *sarf* (Benali Fekar, p. 80).

2) Ownership in the goods must pass on either side before the contracting parties separate (*al-taḥāwuf ḥabl al-tafarruf*). A cash payment is therefore necessary (*naḥḍ*), to the exclusion of all credit (which has passed into Turkish legislation; see below). Among the Ḥanafis, for example, a silver vessel, only part of the purchase price of which is paid, is common property, while among the Mālikis and Shāfi'is such a sale is quite invalid (*bāṭil*). There are also differences of opinion regarding the settlement of a debt. In general the rule is that the combination of a *sarf* with another legal matter in one agreement is not permitted.

3) The object to be exchanged cannot be disposed of before the ownership is acquired.

4) No option can be reserved (*khayār al-ikharf*); on the other hand *khayār al-'aib* is allowed in case of defects and *khayār al-'uṣṣ* in purchase of bullion (e.g. ornaments).

The jurists have also evolved subterfuges which make a profit possible in money-changing (al-Kudūri and al-Ḥalabi at the end of the *Ḥab*; *Mudawwana*, viii, 126 *sq.*; Sachau, *Mus. Ruht*, p. 281). The money-changers condemned by the 'Ulamā — usually Jews — have been organised into gilds since the middle ages (Mez, *Renaissance des Islāms*, p. 449; Young, *Corps de droit ottoman*, title 67, art. 6 *sqq.*). In modern Muslim states there are special laws relating to money-changing (for Turkey cf. Young, *op. cit.*; of the year 1281 = 1861). Cf. the art. *AMM*.

SĀRĪ (formerly SĀRĪ; J. Marquart, *Erānlahr*, p. 135; Arab. SĀRĪYA), a town in Persia, the

former capital of Tabaristān (Māzandaran), 8 miles from the Caspian Sea, 20 from Amul. Its foundation is attributed to Tās, son of Nādhār, general of the mythical king Kāshkuraw, because there is a place there called Tāsā. Farlūr is said to have taken refuge there; the castle which he built could be seen at a place called Lūman Dān. The town itself was built in the time of Farrukhān the Great, *Isfahānī* of Tabaristān (end of the seventh century) by Ilav, one of his nobles, on the site of the village of Awhar. Sarī has several times been the capital of Tabaristān, — under the Tahirids (820–872) and the 'Alid Husayn b. Zaid (254/868) and Muhammad b. Zaid (270/884). The great mosque begun by the Amir Yahya b. Yahya in the reign of the 'Abbasid Caliph Harun al-Rashid was finished by Muzār b. Šarīn (d. 224 = 839). A building is pointed out called Segunbadhān "the three cupolas", said to be the tomb of the three sons of Farīdūn, Imdj, Salim and Tur.

The district is not fertile and the climate unhealthy. Silk is the principal product. Under the Tahirids, the canton of Sarī (which extended as far as Tammūshā) had a revenue of 1,300,000 dirhams.

Dorn, St. Petersburg 1850, i. 28–29; Ibn Isfandiyyār, *Hist. of Tabaristan*, transl. Brovne, Leiden 1905, p. 16, 29, 152; al-Makaddasī, *B. G. A.*, iii. 359; Ibn Hawqal, *B. G. A.*, ii. 271–272; Yāqūt, *Muğam*, ed. Wüstenfeld, i. 354, 409 = Barbier de Maynard, *Dict. de la Perse*, p. 295, 583; Le Strange, *The Lands of the Eastern Caliphate*, p. 370, 375. (C. L. HEART)

SARĪ, the "swift metre", so named because of its swiftness of execution and swiftness of appeal to taste (Freytag, *Darstellung der arabischen Verskunst*, p. 137), is the ninth in the prosody of the Arabs. It is the first of the six metres of the fourth circle, which is called "the intricate" (*al-āṣrat al-muḥṭabih*) on account of its metrical intricacy (Palmer, *Arabic Grammar*, London 1874, p. 346–349). The paradigm is: *mustaf'ilun, mustaf'ilun, mustaf'ilun* (b), which is rarely, if ever, found. According to the native system, the *arṣ* is of four kinds and has seven varieties (De Sacy, *Traité de la Prosodie des Arabes*, Paris 1831, p. 25).

But the normal form is: *mustaf'ilun, mustaf'ilun, fā'ilun*.

— — — — —

Maḥ or *fa'lan* (—) is often used in the *qarā'*; and, more rarely, *maḥ* or *fa'lan* (—) in both *arṣ* and *qarā'*, although not so commonly in the latter. A further variety employed by later poets is the introduction of an extra syllable to the *qarā'*, thus *fā'ilāna* (— — —).

Bibliography: Refer to the works under article 'ARṢ.

AL-SARĪ b. AL-HAKAM b. YUSUF AL-BALĪGH, held the office of governor and financial controller of Egypt from Ramaḥān 1, 200 (April 3, 816). On Rabi' 1, 201 (Sept. 27, 816) the troops openly mutinied against him and al-Ma'mūn was forced to remove al-Sarī from his post and replace

him by Sulaymān b. Ghālib; al-Sarī was put in prison and Sulaymān entered upon his office on Tuesday, Rabi' 1, 201 (Sept. 30, 816), but was removed from office as early as Sha'bān 1 (Feb. 22, 817) as the result of a repeated revolt of the troops, and al-Sarī again appointed by al-Ma'mūn. The news of his appointment reached Egypt on Sha'bān 12 (March 4, 817); al-Sarī was released from prison and entered al-Fustāt on the same day. He held office till his death on Jumādī 1 30, 202 (Nov. 11, 818). That al-Sarī played a prominent part in Egypt even before his appointment as governor is evident also from his mention in the *poes* of a *ḥirz* intended for the Ka'ba of the year 197 (812/13). His name is also found on gold and copper coins of Egypt; see W. Tuschhausen, *Münzen des Kalifates Orientales*, p. 188, N^o. 2700 (Mitt. 200 A. H.), p. 193, N^o. 2737 (200 and 202 A. H.), H. (ABDOL GHOSSEMEH)

AL-SARĪ b. MAHĀN, better known as AḤD 'L-SARĪTĀ, a kind of *zān* who became a brigand as a result of a murder, and then entered the service of Vazīd b. Maryād al-Shāhīn in Armenia who used him and his thirty horsemen to fight the Kharranīs (cf. the art. KHARRANĪYA). He commanded the advance-guard of Harthama's army in the civil war between al-Amin and al-Ma'mūn; remaining in the service of this general he was given the title of *amīr*. Permitted to go on pilgrimage to Mecca he distributed to his soldiers the 20,000 dirhams that Harthama had given him and got money for himself by holding to ransom the governors he met on his way, defeated the troops sent against him and entered the desert. Reaching Rakka, he there met the 'Alid Muḥammad b. Ibrāhīm Ibn Tabāṭabā' whose side he took, went down the Euphrates by boat while his chief went by land; they reached Kūfa on Jumādī II 10, 199 (Jan. 26, 815). To get rid of Ibn Tabāṭabā' whose authority was greater than his and who had prevented him from taking the treasure of Zuhair b. al-Musayyib, he poisoned him (Radjab 1 (= Febr. 15) and replaced him by another 'Alid, Maḥammad b. Maḥmūd b. Zaid, while retaining effective control in his own hands. He struck dirhams at Kūfa (Z.D.M.G., xiii. 707) and sent troops to seize Hama and Wāsi. He appointed governors at Mecca and Medina.

Harthama, who was on his way to Khuzistan, sent troops to al-Ma'mūn who defeated Abu 'l-Sarī's army (Shawwāl = May/June). Besieged in Kūfa and feeling that his men were losing heart, he fled at the head of 300 horsemen (Maḥarram 16, 200 = Aug. 26, 815), made for Sūsa, fought

al-Hasan b. 'Alī al-Ma'mūn's troops, was defeated and wounded, whereupon his force melted away. He tried to reach his home at Ra's al-Ain but was overtaken at Djalūla by Hammūd al-Kundaghīsh who made him prisoner and brought him to al-Hasan b. Sahl, al-Ma'mūn's vizier, then to Nahrāwān, who had him beheaded (Rahf. I, 10 = Oct. 18, 815); his body was hung on a gibbet on the bridge of Baghdad. His rebellion had lasted ten months.

SARİ AL-SAKĀTĪ, ABU 'L-HASAN SARİ B. MUḤALLIS, a Sūfī mystic, died at Baghdad on Ramaḍān 28, 257 (870) or 253 (867) aged 78 (or 98). He was the uncle of Djunaid (q.v.), teacher of Nūrī, Kharrā and Khair Nāsūfī, and figures at a later period in the classic *imāla* of the *shirka* of the Sūfīs between Ma'rūf Karḡhī (q.v.) and Djunaid. The latter was actually his pupil and had himself buried in Sarī's tomb which still exists at Shūnīz (cf. L. Maassignon, *Mission en Mésopotamie*, Cairo 1912, ii. 105). But Ma'rūf can hardly have been the direct teacher of Sarī.

Sarī is said to be equivalent to *'Isā* either as synonymous with *Reff* or by an accommodating interpretation of Kurān xix. 24; *Saḥḥī* means a dealer in old iron and old clothes.

As regards doctrine, Sarī was the pupil of al-Mulḥasibī (q.v.); he insists on the reality of a reciprocal love uniting God to man (*ḥubb*); he maintains that a true lover ought no longer to suffer any physical pain and says that at the last judgement the *mushabbih* will have a place of honour above the three communities (of Moses, Jesus and Muḥammad). Sarī was attacked by Ibn Hanbal for having admitted that the letters of the text of the Kurān were created and for having neglected asceticism in the matter of food.

Bibliography: Ibn al-Djawī, *Talīb al-Itis*, Cairo 1340, p. 180, 197; Farīd al-Dīn 'Aṭṭār, *Tadhkirat*, ed. Nicholson, I. 274-284; al-Djāmī, *Nafahāt al-Uns*, ed. Lees, p. 59-60; Ma'mūn 'Alī Shāh, *Tarīq al-Haḥīq*, lith. ed. Thirān, ii. 166-173. (L. MASSIGNON)

SARİ ABD ALLĀH EFENDİ, Ottoman poet and man of letters, was the son of Saliyid Muḥammad, a prince of the Maghrib who had fled to Constantinople in the reign of Sultān Ahmad I, and had married the daughter of Muḥammad Paṣha, brother of the Grand Vizier Khallī Paṣha. He was brought up by the latter, who had entrusted his education to Shaikh Mahmūd of Sencarī, accompanied him as *tadhkirat* ("editor") when during his second viceroyalty he was given the command of the troops in the Persian campaign, was appointed *ra'is al-kutub* in 1037 (1627/28) in place of Muḥammad Efendi who had just died and was dismissed at the same time as his patron. On the latter's death he was appointed *ra'is* of the imperial *maktab* in 1047 (1637/38), accompanied Murād IV to Baghdad and then became *ra'is al-kutub* for the second time. He filled other offices till 1065 (1655) when he retired from public life; he died in 1071 (1660/61). He wrote a commentary in Turkish on the first volume of the *Mathnawī* of Djalāl al-Dīn al-Rūmī, and composed

several original works, some moral like the *Nafahāt al-Mulūk* and the *Thamara al-Kulub* and others mystical like the *Durra*, the *Djauhara* and the *Marīb al-'Ushshāq*, and a collection of 141 official documents entitled *Dustur al-Ḥukmā*, as well as verses and songs under the *tashtak* of 'Abdī. His tomb is in the cemetery of Mīl-tepe outside the Top-Kapu (Gate of St. Romanus) at Constantinople (Gib., *Ottoman Poetry*, iv. 79).

(CL. HUART)

SARİ KÜRZ, also SARİ KERİZ, an Ottoman jurist and military judge. His proper name was Nūr al-Dīn and he was born in the district of Karanī, his father's name being Yūsuf. After studying under famous teachers, including Kodja Sīnūn Paṣha, he entered upon a legal career, becoming professor (*muderris*), later "guardian" (*şahin*) and finally in 917 (1511/1512) *kādi* of Sтамбуl. Sultān Bāyazīd II employed him on various affairs of state, for example on a mission to Prince Selim (cf. J. von Hammer, *Gesch. des osmanischen Reiches*, ii. 353, and *Die osm. Chronik des Rustem Pascha*, ed. by L. Forrer, Leipzig 1923, p. 28 sq.; also G.O.R., ii. 371). In 919 (1513/1514) in the reign of Selim I he was appointed military judge (*kādi-asker*) of Anatolia and in 921 (1515/1516) of Rumelia. Next year he was dismissed and became again "guardian", about 926 (1619/1620) he became *kādi* of Sтамбуl for a second time (cf. Leunclavius, *Hist. Musulm.*, p. 613, 30, and F. Giese, *An. Chr.*, p. 130, 23). In 928 (1521/1522; according to other sources 929 = 1522/1523) he died in Sтамбуl where he was buried in a mosque which he had built. He lived not far from the *medjid* which bears his name (cf. *Hadīqat al-Djauāmi*, i. 133 sq.; G.O.R., ix. 72, N° 280); one quarter of Sтамбуl is still called *Sarı gazel* after him (a *ghalaf-i mezhār*, which has arisen from Sarī Kür which came in time to be misunderstood, on the name see Sirrī Paṣha, *Ghalafat-i mezhār*, Sтамбуl, second ed., s.v. *Sarı gazel*, and J. H. Mühlmann in *Der Islam*, xiv. 155). On his son Mehmed cf. 'Aṭṭār, suppl. to the *Shāḥī*, p. 265; on his son-in-law Sīnūn al-Dīn Yūsuf of Soma, famous as a commentator, cf. Hādīdī Khālīf, *Fahāḥī*, i. 309; *Hadīqat al-Djauāmi*, i. 134; *Safīllī 'Oṭmānī*, iii. 108.

Sarī Kürz wrote on Fikḥ and left a number of works, a list of which is given in Hādīdī Khālīf, *Kashf al-Zuhūr*, ed. Flügel, under N° 7119.

Bibliography: Taḥkīmīyāde, *Shāḥī* *al-Nu'māniya*, Turk. transl. by al-Medīdī, p. 314 sq., Sтамбуl 1269; *Safīllī 'Oṭmānī*, ix. 581; Sāmi, *Kāmus al-'Alām*, p. 2816 sq. (on the forms of the name). (FRANZ RANISER)

SARİ ŞALTİK DEDE, a Turkish dervish and Bektāshī saint. He was a contemporary of Hādīdī Bektāshī (q.v.) in whose legendary biography (cf. his widely spread *Ṣūḥayḥ-nāma*) he plays an important rôle and of whom he is said to have been a disciple, and came, like many dervishes of Anatolia at that time, from Buhārā. His real name is said to have been Mehmed (Mehmed Buhārī in Ewliyā Celālī, *Siyāset-nāma*, ii. 134, 2-3). Practically nothing is known of his life and career. According to the *Oṭmānī* in the extract in Seyyid Loḡmān, in 662 (1263/64) he led a

large body of people (10,000—12,000), said to have been Anatolian Turkomans, who settled on the western coast of the Black Sea in Dobruja-Tartary, especially around Baba Dağı. The reason for this migration is unknown; it is perhaps connected with the advance of Hülügü (cf. *Der Islam*, xi. 24). Apart from the *Oghuznâme* (cf. J. W. Lagus, *Seld Lecmani az ileri Turcice qui Oghuznâme inscribitur excerpta*, Helsingfors 1854, and G. Flügel, *Die arab., pers. und türk. Handschriften Wiener Hofbibl.*, ii. 225) there are no contemporary reports and the possible Byzantine sources are also silent (e.g. Pachymetres, Nicephoros Greg., Georg. Akropolita; cf., however, J. J. W. Lagus, *op. cit.*, p. 30 sqq.). It seems, however, that older accounts once existed but have now been lost. For example, according to Ewliya Çelebi (q.v.), Vazîrî-oghlu Mahmud Çelebi (d. 854 = 1450) wrote a *risâla* on Şarî Şaltık and Ken'an Paşa, some time governor of Oczakow, composed a *Şaltıkname* of 40 *kur'ân* (cf. Ewliya, *op. cit.*, iii. 366, and thereon Vas. Dumiř, Smirnov, *Očerki istorii tureckoj literatury* in Korsh, *Vostochnaja istorija literatury*, St. Petersburg 1891, where extracts are given from a *Şaltıkname*). Ewliya, who seems to have had access to one of these sources now lost, says that Şarî Şaltık lived in Arpa Çukuru, Siwâ and Tokat before he migrated to Bessarabia. There he is described as *indian*, which would be in accordance with Ewliya's statement elsewhere (i. 659): "purifier (*şâkir*) from the *İzîk*". The earliest notice of Şarî Şaltık is given by Ibn Battûta (ii. 416) who visited about a generation after his death his sanctuary at "Baba Şaltık" (the site of which, however, cannot even approximately be defined) and very briefly tells of the saint's miracles (*manâşih*). The fact that Ibn Battûta is obviously not able to give anything reliable about Şarî Şaltık who died barely 50 years before raises legitimate doubts regarding either the Arab traveller's statements or the historicalness of the saint. The fact is that traits and miracles are ascribed to him which are reported of Byzantine saints, and that Şarî Şaltık is confused with Byzantine saints. The legend given by Ewliya of Şarî Şaltık is remarkable and probably isolated. According to it, the wonder-worker gave his disciples the order to bury his body after his death in 6 or 7 coffins in remote towns of infidel lands, "so that ignorance where the body really is will produce everywhere a pilgrimage of Muslims and from the pilgrimage will result the incorporation of these lands into the kingdom of Islâm" (cf. J. von Hammer, *G. O. R.*, viii. 354 sq., following Ewliya Çelebi, *op. cit.*, iii. 133 sq.). According to Ewliya, coffins were therefore taken to Baba Eskiin, Baba Dağı, Kaliakra, Boreu (Rumania) and even to Danzig. The conversion of the Lipka Tatars to Islâm is ascribed to Şarî Şaltık. Christian saints are repeatedly identified with the Turkish saint and still more numerous are the places in the Balkans associated with the latter. In Kaliakra (Kilghra) Şarî Şaltık appears as a dragon-slayer, who liberates an imprisoned Christian princess (cf. Ewliya, ii. 137 sq.; C. J. Jireček, *Das Fürstentum Bulgarien*, Vienna 1890, p. 556; J. v. Hammer, *Kumeli und Bosna*, Vienna 1812, p. 27; *Archäol.-epigraphische Mitteilungen*, 1886, x. 188 sq.; *Z. D. M. G.*, 1922, lxxvi. 155), and Ewliya himself brings Şarî Şaltık into connection with St. Nicolas (Sveti Nikola; cf. *op. cit.*, ii. 137). There are other

sanctuaries or tombs of Şarî Şaltık in Kroja (cf. *Wissenschaftl. Mitteilungen aus Bosnien*, vii. 60; Ippen, *Statur*, p. 71 sqq.; A. Degrand, *Souvenirs de la Haute-Albanie*, Paris 1901, p. 223 sqq., 236 sqq.), in Adrianople (Ewliya, iii. 481 sq.), Corfu, where he is associated with St. Spyridon (Spiridion) (cf. *Saint Bey Frangheri* [an Albanian], *Kamias al-A'lam*, p. 2916), in Hagay at Montar (cf. *Şâkir Sikiñe, Derouhlosterek is eunt srok Bosniadon* in the *Terdan*, Budapest 1918, p. 605 sqq.; lacking in Ewliya (vi. 474, so probably a legend of later invention)), in Chass, a place between Kroja and Djakova, where his alleged tomb is shown (cf. F. W. Hasluck, in the *Annual of the British School at Athens*, xxi. 122, note 3), in the Greek monastery of St. Naum (Sveti Naum) on the south shore of Lake Ohrida (cf. *Saint Bey Frangheri, op. cit.*). Şarî Şaltık once becomes St. George, also Elias, then St. Simeon and finally "Kara Koojolar" (i. cf. Ewliya, *Trevel*, ed. J. von Hammer, i. 161), not in the Stambul printed text and he thus becomes one of the most remarkable features in the mingling of Muslim and Christian beliefs. The principal sanctuary of Şarî Şaltık is, however, at Baba Dağı (cf. Ibn Battûta, *op. cit.*; Ewliya, iii. 368 sq.). It was built by Salîm Bâysâd II, the *Walt*, as a place of pilgrimage to which Salîm Sulaimân afterwards made a pilgrimage (cf. *Histoire de la campagne de Mohács par Kemal Pakza Zâhî*, ed. M. Pavet de Courteille, Paris 1859, p. 80 sqq., 177; J. v. Hammer, *G. O. R.*, iii. 202). Şarî Şaltık finally appears as *Pir* at the gird of *Bağdâdîler*, the makers of *hwa* (millet-spirit) (cf. Ewliya, i. 659, where Şarî Şaltık is described as disciple (*şâkife*) of Ahmed Yenewi). Whether Şarî Şaltık is AL Jala, *Reuill de notices et récits bouddes*, St. Petersburg 1860, p. 94 sqq., is identical with our Şarî Şaltık need not be discussed here. In later Ottoman literature, Şarî Şaltık occasionally plays a part, for example in the *Kamias "fiver"* of Newâzide 'Atî (d. 1044 = 1634; cf. J. von Hammer, *Gesch. der osmanischen Dichtkunst*, iii. 281). The half historical, half legendary figure of Şarî Şaltık Dede demands a thorough investigation. One thing is certain, that it is closely connected with the Bektâşî movement, in the region of expansion of which in the Balkans Şarî Şaltık enjoys the greatest esteem. So long as the history of the 'Alid sectarians ('*Alawî*) in south-eastern Europe is as obscure as at present, only vague statements can be made regarding Şarî Şaltık Dede.

SAR-I PUL, "the head of the bridge", called by Arab geographers Ra's al-Kantara, is a town of Alghân Turkistân situated in 36° 20' N. Lat. and 65°

40° E. Long. on the Ab-i Safid from the bridge over which it takes its name. It is not to be confused with a village near Samarqand or a quarter of Nishāpur, both of the same name, each of which is historically as important as the Afghan town. Between the northern spurs of the Paropamisus and the sands to the south of the Oxus, is a fertile tract well watered by streams from the mountains, but proverbially unhealthy, lay four Uzbek Khānates or petty principalities, Akka, Shīrbaghān, Maimana and Sar-i pul with Andkhud (Andkhud), the independence of which has been destroyed by the Durāni and Bārakal Amirs of Afghanistan. Of these principalities Sar-i pul was the last to succumb to the ruler of Kābul. In 1865 the troops stationed there revolted against the Amir Shīr 'Alī, but the mutiny was suppressed by 'Abd al-Rahmān Khān, who eventually succeeded as Amir, not long afterwards Sar-i pul lost the last vestiges of its independence, but the former geographical and political divisions of the principalities are preserved and their Uzbek inhabitants are exempt from liability to military service.

Bibliography: Yāqūt, *Mu'djam al-Buldān*, ed. Wüstenfeld; Sharaf al-Din 'Alī Yazdī, *Zafar-Nāma*, Bibliotheca Indica Series of A. S. B., Calcutta 1883; H. Keane, *Asia*, ed. Temple, London 1882. (F. W. HAIN)

SĀRIK (A.) "thief". Muslim legal theory distinguishes between *al-sirka al-qasghā* (theft) and *al-sirka al-kubra* (highway robbery or brigandage).

1) Theft (*sirka*) is punished by cutting off the hand, according to Sūra v. 42. This was an innovation of the Prophet's; but, according to the *Amal* literature, this had already been introduced in the days of paganism by Walid b. Mughira (Nöldeke-Schwally, *Gesch. d. Qorān*, I. 230). This method of punishment may be of Persian origin (cf. *Lettre de Tancor*, ed. Darmesteter in the *J. A.*, 1894, Series 9, iii. 220 sq., 525 sq.; *Sad Dar* 64.5 = *Sacred books of the East*, xxiv. 327). In pre-Muhammadan Arabia theft from a fellow-tribesman or from a guest was alone considered despicable, but no punishment was prescribed for it; the person had himself to see how he could regain his property (Jacob, *Bedaienten* 2, p. 217 sq.; cf. Burckhardt, *Bemerkungen über die Bedaienten*, Weimar 1831, p. 127 sqq., 261 sqq.). In the beginning of the first century A. H. the right or left hand was cut off; there was no fixed rule. The Qur'ān leaves the point obscure and one tradition says that Abū Bakr ordered the left hand to be cut off (*Muwatta'*, *Sirka*, bāb 4; al-Shāfi', *Kitāb al-Umm*, vi. 117). Cf. the variant of Sūra v. 42: *amimnahum*, transmitted by Ibn Mas'ūd.

According to the teaching of the Fuḳahā, the thief's right hand is cut off (for a second crime the left foot, then the left hand, then the right foot) and at the wrist, the stump is held to hot oil or fire to stop the bleeding. The Hanafis and Zaidis, however, put the culprit into prison at his third crime, which the Shāfi'is and Mālikis only do after his fifth. The Shī'is inflict imprisonment for the third offence and death for the fourth. The punishment was inflicted in public; the thief was frequently led round the town seated backwards on an ass with the limb cut off hung round his neck (cf. Ibn Mādja, *Hudūd*, bāb 22; Reucher, *Stellen über den Inhalt von 1001 Nacht*, in *Jel.*, 1919, ix. 68 sqq.). Punishment could not be inflicted in cases of pregnancy, severe illness or

when the weather was very cold or very hot. It is a *ḥadd* punishment, as a right of God (*ḥaqq Allāh*) is violated by theft. But at the beginning of the second century A. H. mutilation is still contrasted with the *ḥadd* punishment (al-Mas'ūdī, *Murūj*, vi. 28). But as the rights of the owner are also injured (*ḥaqq ṣalam*) the thief is bound to make reparation. If the article stolen has disappeared, he is kept under arrest (not so according to Abū Hanīfa). The Caliph 'Umar is said always to have condemned the thief to return double the value (cf. Roman law: Justinian, *Instit.*, 4, i. 5).

The jurists define theft for which the *ḥadd* punishment is prescribed as the clandestine removal of legally recognised property (*mal*) in the safe keeping (*ḥira*) of another of a definite minimum value (*niṣāb*; among the Hanafis and Zaidis ten dirhams, among the Mālikis, Shāfi'is and Shī'is 1/2 dinār or 3 dirhams) to which the thief has no right of ownership; it is so distinguished from usurpation (*ghaṣb*) and confiscation (*ḥāyāna*). By *ḥira* is meant guarding by a watchman or by the nature of the place (e.g. a private home). Thus theft from a building accessible to the public (e.g. shops by day, baths) is not liable to the *ḥadd* punishment. This is further only applied to one who 1) has attained his majority (*baligh*, q.v.), 2) is *compus mentis* (*ʿāqil*) and 3) has the intention (*niya*) of stealing (*anims furandi*), i.e. is not acting under compulsion (*mukhtār*). No distinction is made between free-man or slave, male or female. The punishment is not applied in case of theft between husband and wife and near relatives nor in the case of a slave robbing his master or a guest his host. Views are divided on the question of the punishment of the *dhimmi* and the alien (*mushrik*) with the *ḥadd*; and on the punishment of accomplices and accessories; in any case the total divided among them must reach the *niṣāb* for each of the thieves. It is not theft to take articles of trifling value (wood, water, wild game) and things which quickly go to waste (fresh fruit, meat and milk), or articles in which the *ḥarf* does not recognise private ownership or things which are not legitimate articles of commerce (*mal*), like freeborn children, wine, pigs, dogs, chess-sets, musical instruments, golden crosses — the theft of a full grown slave is considered *ghaṣb* — or articles in which the thief already has a share (booty, state treasure, *wohlf*, common good to the value of the share), also copies of the Qur'ān and books (except account-books) as it is assumed the thief only desires to obtain the contents. The conception of literary theft is unknown to the Fiqh.

The charge can be made by the owner and legitimate possessor (or depository) but not by a second thief. The legal inquiry has to be conducted in the presence of the person robbed. For proof two male witnesses are necessary or a confession (*iḥrār*, q.v.) which can, however, be withdrawn. It is recommended to plead not guilty if at all possible (cf. the art. *ADHĀN*). If the thief, however, has given back the article stolen before the charge is made, he is immune from punishment. (cf. Sūra v. 43).

2) Highway robbery or robbery with violence (*mugharaba*, *ḥa' al-fariḥ*) occurs when anyone who can be dangerous to travellers falls upon them and robs them when distant from any possible help.

or when someone enters a house, armed, with the intention of robbing (cf. Roman Law: Justinian, *Novellae*, 134, Ch. 13). The Šārī's consider any armed attack even in inhabited places as highway robbery. The same regulations hold regarding the person and the object as above, especially the *niṣāb*. On the authority of *Sūra* v. 37 sq., the culprit is liable to the following *ḥadd* punishments. If a man has committed a robbery which is practically a theft to be punished with *ḥadd* his right hand and left foot are cut off (the next time, the left hand and the right foot). If, however, he has robbed and killed, he is put to death in keeping with right of reprisal (*ḥiṣṣ*) and his body publicly exposed for three days on a cross or in some other way. The punishment of death is here considered a *ḥukm Allāh*; the payment of blood-money (*diya*) is therefore out of the question. If the criminal repents, however, before he is taken, the *ḥadd* punishment is omitted; but the claim of the person robbed of the article for compensation and the tallo remain. All accomplices are punished in the same way; if one of them cannot be held responsible for his actions, the *ḥadd* punishment cannot be inflicted on any.

All these laws hold only for the *ḥadd* punishment which the judge can only inflict when all conditions are fulfilled. In all other cases the thief is punished with *ta'zir* [q.v.] and condemned to restore the article or to make reparation. It is the same with the thief who comes secretly but goes away openly (*mukhtalif*) or the robber who falls upon someone and robs him at a place where help is available (*munṭahib*). Special laws were therefore frequently passed in Muslim states to supplement the *ḥarā'a*, in Turkey, for example, by Mehmed II (*Mitteilungen zur Osm. Gesch.*, i. [1921], p. 21, 35), Sulaimān II (v. Hammer, *Staatsverfassung*, i. 147 sq.), Mehmed IV and 'Abd al-Majid. These laws endeavour more and more to replace the *ḥadd* punishment by fines and corporal punishment. The Turkish criminal code of 1858 still only recognises fines and imprisonment for theft although the *ḥarā'a* was not officially abolished thereby (cf. the art. *MURKILĀ*). The code of punishment laid down in the *ḥarā'a* still at the present day holds only in Persia and Afghanistan and the Yemen.

SARIRA. [See ZĀRAG.]

SĀRLIYA, the name of a sect in Northern Mesopotamia to the south of Moṣul. This sect is also a kind of tribe called Soris and lives in six villages, four of which lie on the right bank and two on the left of the Great Zab, not far from its junction with the Tigris. The principal village, where the chief lives, is called Warnak, and lies on the right bank; the largest village on the left bank is Sefiye.

The Sarlis, like the other sects found in Mesopotamia (*Yazdis*, *Shalaks*, *Bāḡjāns*), are very uncommunicative with regard to their belief and religious practices, so that the other inhabitants of the country attribute abominable rites to them and allege that they have a kind of secret language of their own. In *al-Mashriq*, 1902, v. 577 sqq., Père Anastase gives some notes on the Soris (and also on the sects of Bāḡjāns and the Shalaks) which he obtained from an individual in Moṣul. According to him, their language is a mixture of Kurdish, Persian and Turkish. As to religion, they are monotheists, believing in certain prophets, in paradise and hell. They neither fast nor pray. They believe that their chief has the power to sell territory in paradise. For this purpose he visits all the villages at harvest time, and every Sarli is allowed to purchase as much *ḥiṣṣ* as he can pay for; the price of a *ḥiṣṣ* is never less than a quarter of a medijiyi. Credit is not granted. The chief gives a receipt which shows how much *ḥiṣṣ* an individual has acquired. This receipt is put in the pocket of the dead man so that he can present it to Ridwān, the guardian of Paradise. The Sarlis have also a feast-day once in every lunar year which consists in the consumption of a repast at which the chief presides, and to which every one contributes a cock boiled with rice or wheat. After this meal, called *ahlat al-mohabbah*, the lights are said to be extinguished and orgies of promiscuity take place. The head of the community is succeeded at his death by his unmarried son; he is forbidden to shave his beard or his monache. The Sarlis are polygamous. They are said to have a sacred book written in Persian.

These statements should be taken with considerable reserve. The Sarlis themselves say that they are simply Kurds and belonged originally to the Kāke Kurds who have some villages near Kirkuk. But the Kāke Kurds also have a mysterious reputation. A characteristic feature noticed in one of the Sarli villages (Sefiye) is an ornament with triangular holes in the walls of the principal buildings of the village.

The Sarlis have the reputation of being good farmers. Their anthropological type is the same as that of the Kurds, as Père Anastase points out. It is only their religious beliefs that have been influenced by ultra-Šarī'a and ancient Persian ideas. Like the Yazdis they have Muslim names; their present chief is called Tāha Koča or Mulla Tāha.

Bibliography: W. R. Hay, *Two Years in Kurdistan*, London 1921, p. 93, 94; Père Anastase's article is entitled *Tafsihat al-adhḥān fī ta'rif thāliṭhi adyān*; Calvet, *La Turquie d'Asie*, Paris 1894. (J. H. KRAMERS)

SARPUL-I ZOHĀB ("bridgehead of Zohāb"), a place on the way to Zagros on the great Baghdad-Kirmānshāh road, taking its name from the stone bridge of two arches over the river Alwand, a tributary on the left bank of the

who had retained their Iranian language, cf. in the *Tarikh-i Sādrakhi*, ed. Pautusov (Kazan 1885), p. 193; *Sartiya wa Tajikiya*, p. 209; *Karpatiya Sartiya wa Tajikiya*, p. 279; *Utiya wa Subgiya wa Sartiya wa Tajikiya*. The same usage has been adopted by European scholars, although it was difficult to define the difference between Sart and Özbek. According to Radloff (*Kasab-nām-i Pavar*, loc. cit.) Sart now means, "the Turkish-speaking town dwellers of Central Asia in contrast to the villagers the Özbek". In some regions especially around Samarkand, the villagers still pride themselves on being Özbek and have retained the division into families, but this distinction between town and country does not apply to the whole of Turkistan. No attempt has yet been made to establish a dialectic difference between Sart and Özbek. The settled peoples of Central Asia are in the first place Muslims and think of themselves only secondarily as living in a particular town or district, to them the idea of belonging to a particular stock is of no significance. It is only in modern times under the influence of European culture (through the intermediary of Russia) that a striving for national unity has arisen. The word "Sart", applied by the nomads with unconcealed contempt to the settled population and popularly explained as *sart* it ("yellow dog"), has now been banished from use; now only an Özbek nationality is recognized in contrast to the nationalities of the Kazak, Turkomans and Tajiks.

(W. BARTHOLO)

SART, small village in Lydia in Asia Minor, the ancient Sardes (*at Sardis* of the classical authors, which makes Sāmi write Sārd), capital of the Lydian Kingdom, situated on the eastern bank of the Sart Çai (Pactolus) a little southward to the spot where this river joins the Gediz Çai (Hermus). Although in the later Byzantine period Sardes had lost much of its former importance (as a metropolitan see) and been outflanked by Magnesia (Turkish Maghnia) and Philadelphia (Ala Shehr, q. v.), it still was one of the larger towns, when the Seljuk Turks, in the 11th century, made incursions into the Hermus valley. At the time they were expelled by the Byzantine general Philocalus (1118). At the end of the 13th century Sardes had been for some time under a combined Greek and Turkish domination, until the Greeks were able to drive away the Turks a second time (Pachymeres, ed. Niebühr, Bonn 1835, II. 403). In the beginning of the 14th century the citadel was surrendered to one of the Seljuk amirs, and the town probably belonged during the remainder of that century to the territory of the Sarukhān [q. v.] dynasty, whose capital was Magnesia. So when in 792/1390 the Ottoman Sultan Bayazid I, after the conquest of the then Greek town Philadelphia, took possession of the Sarukhān country, Sardes was equally incorporated in his empire (Anonymus, Giese, Breslau 1922, p. 28; *Akhiş Paşa Zāde*, Constantinople 1335, p. 65). After the battle of Angora, when Timur marched against Smyrna (805/1402), Sardes and

its citadel were probably destroyed and never recovered again.

At present Sart consists only of a few miserable huts inhabited by Yürüks, between the Sart Çai and the citadel hill. This hill is a long narrow counterfort, 200 metres in height, belonging to Mount Tmolus (now Mahmud Dağı) in the South (a topographical sketch of the site in Curtius, *Reise zur Geschichte und Topographie Kleinasiens*, in *Abh. Pr. Ak. W.* 1872, Plate V3). East of the ridge is a small millbrook called Tabaş Çai; north of the town it joins the Pactolus, which is united with the Hermus about six km. to the North of the acropolis hill. At the other side of the Hermus is situated the big necropolis of Sardes, a large plain of mounds called *İm Bir Teps*. North of this plain is the Mermere Lake, the ancient Lake of Gyges. The railway from Smyrna to Ala-Shehr runs along the southern Hermus bank and has a station at Sart. In the Turkish administration Sart belongs to the *İzmir* vilâyet of the *Sarıbaş* *Sarukhān* of the *vilâyet* Aydın. The necropolis belongs to the *Kağı Kışaba*.

The site of Sardes has gained much importance from an archaeological point of view. The most complete information is to be found in the *Publications of the American Society for the Excavation of Sardis* (Leiden 1916). See also Pauly-Wissowa's *Encyclopaedia der classischen Altertumswissenschaft*, 2nd Series (Stuttgart 1922), col. 2475 sq.

(J. H. KRAMER)

SARUDJ, a town in Diyār Muḥar [q. v.] on the most southerly of the three roads from Bīrdjīk [q. v.] to Urfa [q. v.] in 36° 58' N. Lat. and 38° 27' E. Long. As the name of the town is also that of the district, its relation to the ancient names Anthemusia and Batnae is disputed; cf. *Bibliography*. On account of the fertility of the district in which the town is situated and its central position between the Euphrates on the one side and Urfa and Hama [q. v.], from each of which it is about a day's journey distant, on the other, the traffic through it brought it a certain degree of prosperity, especially as it was also important as a post-station between al-Rakka and Sumailā. According to Ibn Khondūdbeh [q. v.], it was 20 farsakh from the former town and 13 from the latter. The principal occupation was settled by the natural suitability of the soil for growing fruit and the vine, as all the geographers tell us. Within the town itself Ibn Djabāl [q. v.] found orchards and running water.

The town was captured with the rest of al-Djazīra in 18 (639) by 'Iyāḍ b. Ghanm. There are a number of references to its later history scattered through the geographers and historians; but the history of the town can only be intelligently handled in connection with the history of the Djazīra. — By the time of Abn 'l-Fidā' [q. v.], Sarudj was already in ruins. Modern travellers describe it much as do the mediæval geographers, except that it appears smaller to them. Suchan (see *Bibl.*) actually speaks of the village of Sarudj; it is now the residence of a *kā'im-makām*.

Saruji has attained great fame in literature because the hero of the *Maḡāzī* of al-Harrī, Abū Zakī, belonged to it. In this work there are also details regarding the town itself.

SARUKHĀN, the name of a Turkoman dynasty, which made itself independent in Anatolia on the collapse of the kingdom of the Saljuqs of Rūm and had its capital in Magnissa, the ancient Magnessa on the Sipynus; whether the name was originally that of a tribe (cf. *Sārūkān* in Houtsma, *Kiṣṣat*, iv, 188) and later survived as that of the dynasty is uncertain. At the beginning of the sixth century *Sārūkān* (written *Sayzawar* by the Greeks) is mentioned as lord of Magnissa which he had occupied in 1313 and had made his capital. He seems to have been engaged in heavy fighting with the Catalan mercenaries of the Byzantine Emperor (about 1304 cf. *Chronik des Sultan En Ramon Muntaner*, transl. by F. F. W. Lang, ii, 116 [Leipzig 1842]; *Macaricia* = Magnissa), but in the end to have succeeded in asserting his independence. Indeed the Genoese settlement of Foca (Phocaea) owed him allegiance and had to pay a yearly tribute to him (*Ducas*, p. 162; Ibn Battuta, ii, 314). While *Sārūkān* resided in Magnissa (*Ducas*, p. 15; Pachymeres, ii, 451-452; Nicéphore, *Gregor.*, ii, 314; Shihāb al-Dīn al-Umārī in E. Quatremère in *N. E.*, xii, 339, 368; Ibn Battuta, ii, 313), his brother 'Alī was established as an independent prince in Nīl (the ancient Nymphaeum, south of Smyrna) cf. Shihāb al-Dīn al-Umārī, p. 367 and Delileux in the *Nouvelles Annales des Voyages*, ii, 19 (Paris 1851). *Sārūkān* gradually gained a territory which roughly coincided with the ancient Lydis and included the following towns and villages: Güzel Hisār, Mememen, Ak Hisār, Mermere, Gündük, Górdon, Kaindük, Adala, Demirdü, Nīl, Hüdje, Torghudlu, Foca, Kara Hisār, Kaşaba. His rule even seems to have extended, partially at least, to the Aegean Sea the islands of which he repeatedly ravaged with this fleet (from Pachymeres f. von Hammer, *G. O. R.*, ii, 70). In the course of his apparently stirring reign, *Sārūkān* made an alliance with

Andronicus III, the younger, Emperor of Byzantium about 1329 against the Genoese (cf. *G. O. R.*, i, 126 sq. and against Urkhān and about 1345 allowed Umar Beg lord of Aidin-eli a free passage through this land in return for a disputed strip of land when the latter was marching along the Asiatic coast to the Hellespont to assist John VI Kantakuzenos. *Sārūkān*'s son Sulaimān accompanied the army but died suddenly at Apuntea of a malignant fever (cf. Kantakuzenos, ii, 29-30, 450-484; iv, 86, 391-396, where details of these events are given). *Sārūkān* must have had another son who died earlier, in addition to Sulaimān (cf. Ibn Battuta, ii, 313). Soon afterwards, the Empress Anna, mother of John Palaeologos, sought the assistance of *Sārūkān*, which, although granted at once, was of no avail (cf. Kantakuzenos, *op. cit.* and *G. O. R.*, i, 136). *Sārūkān* must have died very soon afterwards. The throne passed to his son Fakhr al-Dīn Ilyās about whose activities almost nothing is known. He died in 776 (1374/1375) and left the kingdom to his son MUẒAFFAR AL-DIN IŞHAK of whom also little is known. He was an ardent member of the Mewliye and founded a Mewlewī monastery in Magnissa as well as the chief mosque (*Ulu Dīwān*) the splendid minbar of which of carved wood contains an Arabic inscription of 778 (1376/1377) with his name and titles. He was — probably the first — Mewlewī-Celebi of Magnissa and was buried with his wife and sons in the sarcophagi adorned with the Mewlewī head-dress in the mosque built by him in Magnissa. On his death in 788 (1386/1387) he was succeeded by his son KHIDR SHAH Beg who lost his kingdom in 792 (1390) or 793 (1391) when Sultan Bayazid I conquered it and gave it with Aidin-eli and Monteshe-eli to his son Sulaimān (so İdris Bilihi, but Sa'd al-Dīn to Artoghral cf. *G. O. R.*, i, 606). Khidr Shah Beg himself fled to Kütürüm Bayazid lord of Sinop and Kaşamünal to seek protection from his oppressor. After the battle of Angora (1402) he was restored to power by Timur like the other petty dynasts of Anatolia (*trav. of al-Mulub*). A few years later he made an alliance with İsa Celebi brother of Sultan Mehmed I and supported him in his war against his Sultan brother. Mehmed I was victorious, took Khidr Shah prisoner and had him put to death after promising him burial in the mosque of his ancestors and guaranteeing the maintenance of his foundations (mosques, schools and hospitals): cf. Sa'd al-Dīn, *Taḡrīḡ al-Tawārīkh*, ii, 287 sqq., also *G. O. R.*, i, 343. With him the family of the family of the *Sārūkān*-oghlu became extinct, and their lands henceforth formed an Ottoman province. As the province of *Sārūkān* was that nearest the capital Constantinople and its governorship formed a regular steppingstone to influence and power, the position was usually given to eldest sons of the house of 'Othmān (cf. also *G. O. R.*, iii, 267). The sandjak of *Sārūkān* existed down to quite recent times and retained its ancient boundaries (on it cf. V. Cuiant, *La Turquie d'Asie*, iii, 523-575). The following is the dynastic list based on the available data (see particularly Mümmidīn bāshī, iv, 33). *Sārūkān* (c. 700-746 = 1300-1345) Fakhr al-Dīn Ilyās (746-776 = 1345-1374) MuẒaffar al-Dīn Işhāk (776-790 = 1373-1388) Khidr Shah Beg (790-792/93 = 1388-1390/91 and 805-813 = 1402-1410).

Like the lords of Aidin and Monteshe, the

Šārūkhānoghlu struck *gigliati* modelled on the coins struck in Naples and Sicily by the house of Anjou to have a medium of exchange suitable for trading with Italian merchants (cf. J. Friedländer, *Beiträge zur älteren Münzkunde*, p. 52; A. de Longpérier, *Revue numismatique franc.*, 1860, p. 59; Sp. Lampros, *ibid.*, 1869, xiv, 355 *sqq.* (erroneous attribution); J. Karabek, in the *Wiener Numism. Z.*, 1870, ii, 525 *sqq.*, 1877, ix, 200 *sq.*; briefly dealt with in G. Schlumberger, *Numismatique de l'Orient Latin*, Paris 1878, p. 479—481). The coins of the Šārūkhānoghlu are comparatively rare: only a few pieces in silver and copper are known of the last two rulers, Ishāq Celebi and Khidr Shāh Beg; details in St. Lane-Poole, *Catalogues of the Oriental Coins in the Brit. Mus.*, vii, 12, London 1894; do., *Catal. of the Bodleian Library, Muhammad. Coins*, Oxford 1888, p. 31 *sq.*, but especially Ahmed Tewhid in vol. iv. of the *Catalogue des Monnaies des Khakans Turcs*, Istanbul 1321, 1903 Turkish, p. 382—386.

Bibliography (in addition to works quoted in the text): Ahmed Tewhid, in the *Revue Historique publiée par l'Institut d'Histoire Ottomane*, i, (1910/11), 615—619; W. Heyd, *La colonie commerciale degli Italiani in Oriente*, i, 437, ii, 91; do., *Histoire du Commerce du Levant*, Leipzig 1885, i, 488, 636, 546, ii, 353. Of the Byzantine historians we may also mention Chalkokondyles, p. 15, 65 *sq.*; Pachymeres, p. 589; Phrantzes, p. 77. (FRANK BABINGER)

SASAK. [See LOMBOR.]

SĀSĀN, the patron saint of all wanderers and vagrants such as jugglers, beggars, conjurers, and those who go up and down the country accompanied by animals (goats, asses or apes), who show real or feigned diseases and mutilations, gipsies etc. These people are often classed together as the Banū Sāsān and have a bad reputation, as is evident from the literary references, as almost all classes of swindlers are included under this name. Their arts and tricks are called *ʿilm Sāsān*.

Various traditions seem to exist regarding the father of this trade of begging. According to one story, he was no less a person than the ancestor of the Sāsānian dynasty, Sāsān b. Isfandiyār or b. Bahman, who was excluded from the throne by his father at his death in favour of his sister Humān and then became a shepherd and beggar. This tradition apparently owes its origin to anti-Sāsānian circles in Persia (Nöldeke, *Gesch. d. Perser u. Araber*, Leiden 1879, p. 432) and is said to be alluded to as early as Imru al-Qais (*Muḥit al-Muḥit*, ii, 1026). In modern Persian Sāsān has actually come to mean "beggar".

The gild literature also deals with Sāsān. Although the mention of a *Tarīḡh Sāsān* has perhaps never been taken seriously, in certain manuscripts discussed by Thorning (*Beiträge zur Kenntnis der islamischen Vereinigungen*, Berlin 1913) the *Shāikh Sāsān* is considered as not belonging to the *forīḡh*, although there are also traditions according to which Shākh Sāsān with his brothers Khāmdān and Raḡbān, all sons of Kāḡān, are in a way the fathers of all handicrafts (Thorning, *op. cit.*, p. 39 *sqq.*). The author of a manuscript on the gilds in Egypt (Gotha, *Persisch* No. 903) makes a vigorous onslaught on Sāsān whom he describes as *ʿlīḡh* and the cause of the decline of the gild system in Egypt, as he parodied all the old respected customs of the gilds.

Bibliography: The Banū Sāsān and their tricks are discussed by al-Djāwharī, in his *Atāsh al-Maḡhār fī Kashf al-Aḡwār wa-Hakk al-Aḡwār*, discussed by de Goeje in the *Z.D.M.G.*, x, 485, 493, 500; cf. also Justi, *Iranische Namenbuch*, Marburg 1885, p. 291; Dory, *Supplément*, s.v. SĀSĀN, (J. H. KRAMERS)

SĀSĀNIANS, a Persian dynasty. The names of the kings in modern Persian form are as follows:

Ardashīr I, 226—241	Bahrām V, 420—438.
A. D.	Yasdigird II, 438—
Shāpūr I, 241—272.	457.
Hurmīd I, 272—273.	Hurmīd III, 457—459.
Bahrām I, 273—276.	Frīz, 459—484.
Bahrām II, 276—293.	Balāsh, 484—488.
Bahrām III, 293.	Kawādīh I, 488—531.
Narmā, 293—303.	Khusrāw I, 531—579.
Hurmīd II, 303—310.	Hurmīd IV, 579—
Adharnarsai, 310.	590.
Shāpūr II, 310—379.	Khusrāw II, 590—628.
Ardashīr II, 379—383.	Kawādīh II, 628.
Shāpūr III, 383—388	Ardashīr III, 628—
(or 387? cf.	630.
Paully-Wissowa, <i>Real-</i>	Several ephemeral
<i>encycl.</i> , 2nd Series,	rulers; cf. Justi in
i, col. 2355).	the <i>Gr. d. Iran</i> .
Bahrām IV, 388—399.	<i>Philol.</i> , ii, 545.
Yasdigird I, 399—	Yasdigird III, 632—
420.	651.

The dates are not absolutely certain; this is especially true of the reigns between Hurmīd I and Shāpūr II (see Nöldeke, *Gesch. d. Perser und Araber*, p. 400 *sqq.*). The dynasty is said to be descended from a certain Sāsān, of whom little that is really historical is known; the genealogy is then traced farther back through Dūrā to the mythical royal family of Irān. In the beginning of the third century A. D., several petty kings were reigning in Persia under the suzerainty of the Arsakids. The epoch of these dynasts is called the period of the *Mulūk al-Tawāʾif* by the Arabic and Persian historians, and the term includes the Arsakids (and Seleucids) as well as the minor rulers. Ibn Kṭāibā (*Kṭāib al-Maʿārif*, p. 321), for example, includes Ardashīr I himself among the *Mulūk al-Tawāʾif*, as ruler of Iṣṭakhr.

Bābak, Ardashīr's father, who, according to al-Tabarī, was originally king of Khir (east of Shirāz) and whose father Sāsān is said to have held some priestly office in Iṣṭakhr, began to extend his territory at the expense of the other petty kings of Persia. After the brief reign of his son Shāpūr came Ardashīr, who continued what his father had begun until he defeated the Arsakid Artabanus V (Ardawān) in battle and killed him (224). It was probably in 226 that the Sāsānian king conquered the capital Ctesiphon; 226 is usually given as the initial year of the dynasty. But Iṣṭakhr was held in honour throughout the whole period of the dynasty as the ancestral home of the family. The Sāsānians succeeded to the inheritance of the Parthian kings, which included the struggle with Rome and later with the Byzantines. As our most reliable sources for their history are Greek and Roman authors, the relations of the Sāsānians with the empires of the west are best and most fully known to us. Ardashīr I conducted an offensive against Rome. Apart from relatively short periods of peace, this

war went on almost to the end of the dynasty. The earlier Sāsānians endeavoured to expand their empire and Rome in this first period was called upon to defend her eastern possessions.

An important bone of contention was Armenia, where a branch of the Arsakid house ruled which had very early adopted Christianity and directed its policy on Roman lines. A treaty of partition regarding Armenia was made about 387. When Christianity became the official religion in the eastern Roman empire also, a new element entered the political relations with Persia. The persecutions of the church by some kings (like Shāpūr II, Bahrām V, Yazdigird II) contributed to intensify the differences. The history of these wars, the details of which do not belong to this article, has often been written in modern works on Roman and Byzantine history, from Gibbon down to Seck and Hury (cf. also the biographical articles that have so far appeared in Pauly-Wissowa's *Real-encyclopädie der class. Altertumswissenschaft*² on the kings Artaxerxes [Ardashir] I—III, Sapor I—III, Yazdigird I and II). The best known of these wars were fought between Ardashir I and Severus Alexander, between Shāpūr II and Julian, in which the Roman offensive was at first successful, by Kawādh I against Anastasius I and by Khusrāw I against Justinian. This last war ended in 562 with a treaty which established a fifty years' truce.

The Christians in the Persian empire then attained religious freedom, but the Persian government soon resumed its repressive measures against the Armenian Christians. When the Emperor Justin II soon afterwards began to be dissatisfied with the boundaries of the respective kingdoms and made demands on Khusrāw, hostilities began again. This begins the last stage of this period of wars. Khusrāw I was unsuccessful in the fighting that followed and under Hormizd IV also the Roman armies were victorious. The Persian general Bahrām Čubin, who had been insulted by the king, seized the occasion to rebel against Hormizd; he even aimed at the throne itself. During these tumults Hormizd was murdered by two of his relatives; but his son Khusrāw succeeded in escaping to Byzantine territory, where he appealed for help to the Emperor Maurice. With Byzantine assistance he disposed of the usurper, but in the reign of Khusrāw II there was no more prospect of lasting peace with Byzantium, as the Sāsānian, on the deposition and murder of Maurice by Phocas in 602, assumed the role of avenger of the murdered Emperor. In this, the last great war with Byzantium, the Persians at first won considerable successes. Khusrāw's armies conquered Jerusalem and even Egypt. The reaction followed in the reign of Heraclius. Kawādh II, who had deprived his father, Khusrāw, of life and throne, was forced to beg peace from the Emperor. With Khusrāw II died the last important ruler of the dynasty. Kawādh II begins a series of ephemeral rulers (including a usurper, Shahrwārā, and two queens, Būrān and Azarmidukht) who were raised to the throne in succession by the nobles, only to disappear soon afterwards, until in 632 a grandson of Khusrāw II, Yazdigird III, came to the throne. Although it looked at first as if more settled conditions were to return, Yazdigird III was the last Sāsānian to rule over Irān.

It was not only wars with Rome and Byzantium that endangered the Persian empire. Less civilised peoples, like the Chionites and Gīlānis (against

whom Shāpūr II had to take the field) and the Hephthalites (Haitāl, defeated by Bahrām V) continually threatened its existence. King Firūz lost his life in an unsuccessful struggle with the latter. It even seems that for some time after this event Persia was tributary to the Haitāl. About the middle of the sixth century A. D., the threat from the Haitāl was replaced by the danger from the Turks. It was not, however, the northern nomads that put an end to the Sāsānian empire, but the Arabs. Even before the beginning of the dynasty, Arab tribes had settled in the Euphrates and Tigris region; in the wars between Byzantium and Persia both parties used Arab assistance. The first king who came into conflict with the Arabs seems to have been Shāpūr I, of whom a war against Hatra is recorded. It must have been an Aramaic king who reigned there, but a story of an expedition by Shāpūr against the Kūdā'a has been amalgamated with this story, which was itself already overgrown with legendary matter. How confused all this is shown by the fact that Ibn Kutāiba (*Kitāb al-Ma'arif*, p. 322; cf. Eutychius, ed. Cheikh, I, 106) puts this war with Hatra in the reign of Ardashir, contrary to the usual Persian-Arabic tradition. It is, however, a historical fact that Ardashir besieged Hatra (unsuccessfully) (Dio Cassius, 80, 3). Finally Firdawsī gives a different version of the whole episode and puts it in the reign of Shāpūr II (Macan, p. 1432 etc.). That Hormizd II inflicted a defeat on the Arabs is very doubtful (Nöldeke, *op. cit.*, p. 51, note 2). According to the oriental sources, Shāpūr II was a bitter enemy of the Arabs; that he penetrated to Yamāma, however, and the vicinity of Medina and received the name Dhū 'l-Akṭāf from the way in which he ill-treated his prisoners of war is an invention of legend. The Arab kings of al-Hira, the Lakhmids, were vassals of the Sāsānians; their antagonism to the Ghassanids, who were in Roman service, was an important factor, for example in the wars of Khusrāw I with Byzantium, and earlier they had played a part in the dynastic affairs of Persia. It is probable, indeed, that Bahrām V, whose rule was not at first recognised by several nobles, overcame a rival with the help of Nu'mān of al-Hira, amongst others. Khusrāw I even interfered in the domestic quarrels of Arabia, when about 570 he assisted the Yamani pretender Saif b. Dhī Yaran [q. v.] with a Persian army against the Abyssinians. According to Arab tradition, the last king of al-Hira assisted Khusrāw II when fleeing before Bahrām Čubin, but when the king was firmly established on his throne, he had the Lakhmid seized and executed. Tradition gives no valid reason for this impolitic act. This king Nu'mān of al-Hira is said to have refused his horse to Khusrāw on his flight, or, according to another story, the intrigues of an enemy of his brought about his fall. Governors were appointed to al-Hira by the Persian king. The — not very serious — defeat which the Bakr tribes inflicted on an army of Khusrāw's consisting of Persians and Arabs at Dhū Kār soon showed how impolitic it had been to put an end to the dynasty of al-Hira, the bulwark against the Arabs of the desert. It is, of course, a question whether the Lakhmids would have been of much use against the great Arab tide of conquest which soon afterwards swamped the Sāsānian empire. As early as 633 Abū Bakr sent armies to the Irāk; this began a

series of attacks on the Persian monarchy (battle of the chains, battles of Walsaj and Ullais, subjection of al-Hira, etc.) which culminated in the battle of Kādisiyya (probably still in 636; cf. the art. *ḡāḡsiyā*) where the imperial Persian forces were completely routed. The complete subjection of Irān, however, only dates from the defeat of the Persians at Nihāwand (642). Yazdgerd III escaped; but in spite of all his endeavours he did not succeed in obtaining effective assistance from the neighbouring peoples. One of the nobles had him assassinated near Marw in 651.

The Sāsānian empire was a feudal monarchy. The powerful families which already had very great influence in the Arsakid period, like the Surēn, Karēn etc., formed an influential nobility. The influence of the higher priesthood was also considerable. There was a revival of Mazdaism with the rise of the dynasty; this creed became the state religion in the strictest sense, although the Jews and Nestorians, for example, were usually unmolested in Persia. The punishment for abandoning Mazdaism for another religion was death. The political influence of the higher priesthood was seen at the accession of Bahrām V. His claims to the throne seem to have been supported by the clergy to an important extent. The works of Chr. Bartholomae (*Über ein sasanidisches Rechtsbuch*, in the *S.B.A. Heftelberg*, Phil.-Hist. Klasse, 1910; *Zum sasanidischen Recht*, I.—IV., ibid. 1918—1922) give us a survey of civil law in the Sāsānian period.

The Persian-Arabic tradition of Sāsānian history goes back to Pahlavi sources now lost, the most important of which must have been a work entitled *Xrōdaynāmāh* (mod. Pers. *Kādaynāmāh*). Taking up a rigidly legitimist attitude, it comprised the period of the mythical kings as well as the history of the reigning dynasty. Good historical material was preserved in this work, e.g. on the early deeds of Ardashīr; on the other side the "historical anecdotic" plays a great part in it. The records of the doings of the kings are often interwoven with the stock motives of romance. Besides the *Xrōdaynāmāh* there were also smaller historical works, among them the *K'ārdnāmāh* i *Artaxšatr* i *Pāpakān* still extant (transl. by Nöldeke, Göttingen 1878; text several times published, e.g. Bombay 1896, 1899, 1900); a fairly long historical romance about Bahrām Gūr can be partly reconstructed from the echoes of it in modern Persian and Arabic literature (Nöldeke, *op. cit.*, p. 474 etc.; A. Christensen, *Romanen om Bahrām Trakān*, 1907). Such Pahlavi works were early translated into Arabic; for example, the *Xrōdaynāmāh* by Ibn al-Muqaffā'; on the other hand, there were modern Persian versions to which traditions preserved in Firdawsi and al-Tha'alibi go back, although they are not in complete agreement (Nöldeke, *op. cit.*, p. xiv. sqq.; do., *Das iranische Nationalepos*, p. 5 sqq.; al-Tha'alibi, ed. Zotenberg, p. xxiii. sqq., xliii.; I have been unable to consult V. Rosen, *K' wopran ab arabichsk. gerowdach Chudajname = Zur Frage betrefft der arabischen Übersetzungen des Ch.* [quoted in Zotenberg, *op. cit.*, p. xliii., note 3]. On the relation of the traditions preserved in al-Tha'alibi to those in Firdawsi see al-Tha'alibi, ed. Zotenberg, p. xxv. sqq.). The old Arabic translation of Ibn al-Muqaffā' has also been lost, but it is reflected in those sections of the Arabic historians, like al-Tabari, al-Mas'ūdi, al-Dinawari, etc., which deal with the Sāsānian period.

It is uncertain how far these authors have used the al-Muqaffā' actual work. The tradition of the history of the dynasty in Ibn Kūṭayba (in his *Atiṣā al-Ma'arifi*) and Eutychius is more closely connected than in the other writers and shows a special character; indeed, these two historians often agree word for word. According to Nöldeke, it is probable that these two used the original Ibn al-Muqaffā' (*Geogr. d. Perser*, p. xxi.); the other historians must have used later versions of the original work (cf. al-Tha'alibi, ed. Zotenberg, p. xliii.). Several of the later historians of the Persians have also a section on the Sāsānians, e.g. Raḡhib al-Iṣṣā (*Ḥikmat al-Tamīz*) and his copyist al-Karwini (*Tarīkh al-Ghazā*). These as a rule have no independent value, although it seems to be not impossible that details might still be found in them which are not given elsewhere, as is the case with Ibn Balḡh's *Fārināmā* (*Gibt Memorial Series*, New Ser., vol. I; cf. p. xliii. sqq.).

It is from this semi-historical tradition that the anecdotes and witty sayings which are found in the *Adab*-literature relating to these kings and their court for the most part come. They are not uncommon, for example, in the excursus in al-Mas'ūdi's *Murūj*. The *Marzbānāmāh*, which belongs to narrative literature proper, contains several stories of Khurraw I Anūshirwān and his vizier Buzarjmihr. In poetic literature we may mention Nišāwī, who, on several occasions, took the material for his romantic works from the Sāsānian period, although he occasionally deviates from the accepted tradition, for example, when he gives, in the *Haft Paykar*, the story of Bahrām Gūr (Bahrām V.) master-shot in an essentially different form from Firdawsi and al-Tha'alibi, who give a less polished and therefore probably older version. That tradition became much altered in course of time is undoubted. It must also have incorporated Arabic elements, which were foreign to the old Book of Kings, alongside of original Irānian matter. It is no longer possible to discriminate between these strata with any approximation to accuracy. The omission of one or other story in Firdawsi or al-Tha'alibi is, of course, no criterion; besides, these two no longer used Pahlavi originals, but later versions. Among stories that are certainly old and original are the history of the founder of the dynasty, the story of the killing of Yazdgerd I by a demoniacal horse, most of the stories of Bahrām Gūr relating to hunting or women, the death of Fīrūs in the Hephthalite war, most stories of Anūshirwān, the cycle containing stories of the fall of Hormizd IV, the rebellion of Bahrām Gūr and his fall and the further history of Khurraw II Farwiz to his murder at the instigation of his son Kawādī (Shīrīyā); on the other hand, originally historical events of the Sāsānian period may also have given rise to similar stories, which were put back into the mythical period, as Nöldeke suggests, for example, in the case of the records of the events that followed the death of Fīrūs (*Iran. Nationalepos*, § 9). We also find episodes which are related of Sāsānian kings in some histories attributed to mythical kings by others; for example, the story of Bahrām Gūr's prohibition of wine in Firdawsi (Masan, p. 1497 sqq.) is placed by al-Tha'alibi (p. 149; cf. p. xxix) in the reign of Kai Kābad. The stories based on the very common motif of the king who goes unrecognised into the enemy's country (Shāpūr II, Bahrām Gūr) belong to the older

tradition. Other subjects are perhaps later — occasionally due to an Arab intermediary —, like the story of the siege of Hatra and the story connecting Saif b. Dhī Yazan with Khuraw I; it is possible also that the part of the stories relating to Bahram Gūr and Khuraw II, in which the kings of al-Hira play an important part (accession of Bahram Gūr, flight of Khuraw II before Bahram Gūr), is not entirely free from Arabic elements, which are perhaps also found among the apophthegms of the kings. This is certainly the case with a saying of King Narsai reported by al-Tha'alibi (p. 510: *wa-kāna lā yarkabu illā buṭat al-nirān, fa'idhū hila lahu fi dhūlka, kafa: had shaghālan khidmatu illāhi an khidmat al-nūr*).

The rulers the accounts of whom are fullest are as a rule the most important historically: Ardashir I, Shāpūr I and II, Khuraw I and II; Bahram V, however, is really not one of the great kings. When there was nothing known to record of a monarch, the old Book of Kings seems to have confined itself to giving speeches which the king was said to have delivered at his accession, etc. The speeches and apophthegms of the kings were regarded as models of elegant style (Nöldeke, *Gesch. d. Perser*, p. xviii; al-Tha'alibi, ed. Zotenberg, p. xv. In the latter, p. 481, we find that even Ardashir I possessed oratorical talents). Arabic rhetoric seems to have made its influence felt here; at least Hurmizd IV's speech from the throne in al-Dinawari (*Kitāb al-Akhbār al-Tiwāl*, p. 77 sqq.) gives the impression of coming from an Arabic rather than a Persian original. (Cf. also Nöldeke, *Gesch. d. Perser*, p. 326 sqq.).

SATALIA. [See ADALIA.]

SATAN. [See SHAYṬĀN.]

SATĪH R. RAH'Ā, a fabulous diviner (*kāhin*) of pre-Islamic Arabia, whose tradition connects with the beginnings of Islām; in reality we have here to deal with a quite mythical personage like the other *kāhins* in whose company he appears in most stories, *Shikḥ al-Sa'bi*, who is simply the humanisation of a demoniacal monster in appearance like a man cut in two (*shikḥ al-insān*: cf. van Vloten, *W.Z.K.M.*, 1893, vii. 180—181). Satīh, whose name means "flattened on the ground and unable to rise on account of the weakness of his limbs" (*Lisān al-Arab*, iii. 312), is described as a monster without bones or muscles; he had no head but a human face in the centre of his chest; he lay on the ground, on a bed of leaves and palm-branches, and when he had to change his position "they rolled him up like a carpet"; only when he was irritated or inspired did he inflate himself and stand up. His close resemblance to *Shikḥ* is accentuated by legend which makes them both be born without the intervention of a father in the night before the death of the *kāhina* Turaifa (the wife of 'Amr Mumalhiya, ancestor of the tribe of this name, who is said to have foretold the catastrophe of the breaking of the dam of Ma'rib in the Yaman). She is said before dying to have made the two newborn monsters come to her and after spitting in their mouths (the classic method of transmitting magic power) declared them her successors in the art of *kāhina*.

In spite of these characteristically mythical features Arab genealogical tradition has not refused to give Satīh a place in its system, but gives him a name and a paternity (Rabī' b. Rahī'a b. Ma'ād b. Māsin b. Dhī'b) which connect him with the Ghassanid branch of the tribe of Azd (just as it connects *Shikḥ* with the Banū Sa'b, a branch of the Banū Badīlla) and more precisely with the Banū Dhī'b (Ibn Duraid, *Ishā'iq*, p. 286, v—v); Wustenfeld, *Genealog. Tabellen*, 11, 16; according to others, the Banū Dhī'b belonged to the 'Abd al-Kais, a tribe belonging to the Rabī'a group; there even seems to have been in historic times an Azd clan claiming descent from Satīh (Abū Ḥatim al-Sijistāni, *Kitāb al-Mu'ammarn*, p. 3, in Goldziher, *Abhandl. zur arab. Philologie*, ii.).

Among the legends associated with the name of Sath some are connected with the pre-history of the Arabs and represent Sath as acting as a diviner and judge (*hakam*) without any regard for history or chronology, even fictitious; sometimes we find him dividing among the sons of Nu'ar (Nu'ar Rabi'a, Iyad and Anmar) their father's estate (*Iqd*, 1st and 2nd ed., ii. 46 = 3rd ed., ii. 46-47 = 4th ed., ii. 39); sometimes we find him consulted with *Shik* by al-Zarib al-Adwani (Wüstenfeld, *Gen. Tabellen*, D, 13) regarding the real position of Kasi, the ancestor of the Thakif, to whom al-Zarib had been forced to promise his daughter in marriage (*Aghani*, 1st and 2nd ed., ii. 75). In al-Ya'kubi (ed. Houtsma, i. 288-290) it is he who decides the difference that has arisen between 'Abd al-Muttalib, the Prophet's grandfather, and the two Kasi tribes, al-Kilab and al-Rihab, regarding the ownership of the well of Dhu 'l-Harm discovered by the former in the vicinity of al-Thakif; but the parallel versions of the same story either do not mention the name of the arbitrator or give him that of another kahn, Salama b. Abi Haliya al-Kud'i (al-Maidani, *Amthal*, ed. 1284, i. 36 = ed. 1310, i. 30; Yäqut, ed. Wüstenfeld, iv. 629; *Lisän*, xiii. 283).

Two other legends, on the other hand, have a completely Islamic stamp; according to the first, given by Ibn Ishak, who does not give his sources, Sath consulted — as always with *Shik* — by the Lakhmid chief Rabi'a b. Nafar regarding a dream which had frightened him, reveals to him that South Arabia will be invaded by the Abyssinians and that after the expulsion of the latter and the brief dominion of the Persians it will be conquered by a Prophet (Muhammad); as a result of the oracle Rabi'a b. Nafar sends his son 'Amr at the head of the tribe to the king of Persia who settles them at al-Hira; this is the "South Arabian" version of the foundation of the Lakhmid dynasty (cf. G. Rothstein, *Die Dynastie der Lakhmiden in al-Hira*, Berlin 1899, p. 39).

The second and most widely disseminated legend goes back to a certain Han' al-Mahrumi, who is said to have lived to 150 and about whom Muslim historiographical tradition knows nothing (cf. Ibn Hajar, *Ishba*, Cairo, vi. 279, No. 3,929). It forms part of the cycle of the *alim al-nubuwat*, that is of the miraculous signs which confirm the truth of the prophetic mission of Muhammad. In the night when the latter was born remarkable phenomena occurred throughout the kingdom of Persia. The king (Kisr Anushirvan) not being able to get an explanation from his magicians asked the king of al-Hira, al-Nu'min b. al-Mundhir (an anachronism!), to send him someone who could explain it. Al-Nu'min sent 'Abd al-Masih b. Bakila al-Jassani (on him see the *Kutub al-Mu'annarin*, p. 38; Caetani, *Annali dell' Islam*, ii. 935, 12 A. H., § 165; 12 A. H., § 328), who not being able to explain these marvels himself went to Sath, his maternal uncle, who lived in the desert. He found him at the point of death and his appeal was unanswered; only after his nephew had addressed him in verse, did the kahn predict to him the coming fall of the Persian Empire and its conquest by the Arabs, etc. Having delivered this oracle, his uncle Sath died.

Sath claimed to receive his knowledge of the future from a familiar spirit (*ras*, cf. above, ii. 625) who had overheard the conversation of God with

Moses on Mount Sinai and had revealed part of it to him. Here we see the influence of the Koranic passage (xxii. 1) about the djinn who overhear God's utterances.

The calculations of the Arab historians on the age reached by Sath are naturally quite fanciful; those of them who place his birth at the time of the bursting of the dam at Ma'rib and his death at Muhammad's birth, give him a life of 600 years. It should be observed that Abū Hātim al-Sidisi [q. v.], whose version is markedly different from the others (he does not speak of his monstrosity, puts his home in al-Bahrain, etc.), makes him die in the reign of the Himyar king Dhu Nuwas and therefore does not know of his prophecy to Kisr Anushirvan.

(G. LEVI DELLA VIDA)

SAUL. [See TALUT].

SĀWA (older SĪWĀN), a town and district in Central Persia. It lies on the direct road from Kāzin to Kūm (Kāzin-Sāwa: 22 farsakh; Sāwa-Kūm: 9 farsakh). This road practically corresponds with the royal road (Shāhrāh) described by Masta'wi (Sāmghān [I]-Sāghān-Sāwa-Ishān) which was very important when, under the Mongols Arghūn and Uljaitū, Soltāniya became the capital of Persia. The Kāzin-Sāwa road may yet again resume its old importance for traffic between North Persia and the southern provinces. For the present it is eclipsed by a longer combination of paved roads leading through the capital: Kāzin-Teherān (22 farsakh) and Teherān-Kūm (22 farsakh). On the other hand Sāwa has definitely lost its position as a stage on the route from Hamadhān to Ray (Teherān) (61 farsakh) on which the Arab geographers place it. Traffic between Hamadhān and the capital now goes via Nāwbarīn-Zarand or, with a detour, by the paved roads Teherān-Kāzin-Hamadhān (about 54 farsakh). Geographical considerations explain the decline of the town. The desert is gradually invading the district of Sāwa as a result of a breakdown in the control of the irrigation system.

Sāwa is situated in the north-west corner of a plain (c. 30 × 25 miles) open towards the east the lower part of which is being gradually engulfed by salt marshes. The district is watered: 1. by the Kārn-Sū (the Gāwānāh or Gāwānāh of Masta'wi) which is formed by three streams: the

southern and most important (Do-āb) comes from the north face of the Bakhtiyārī mountains (Djapelaḥ); the western descends from the Alwand (Orontes) of Hamadhān and the northern has its source in the mountains of Kharrakān. Having crossed the plain of Sāwa, the Kara-āi pours its brackish waters into the central desert and disappears; 2. by the Mazdakān (*vulgo*: Maslaghātū) which rises near Dargasfa (east of Hamadhān) and runs parallel to the Kara-āi and before re-joining it on the left bank (north) disappears into several irrigation canals in the north-west part of the plain of Sāwa.

Sāwa is not known before the Muslim period. Tomaschek connects its name with the Avestan word *sava*, Pahlavi *saraka*, "advantage, utility" (?). The Persian dictionaries give "pieces of gold" for *sāwa*. According to Tomaschek, Sāwa corresponds to the Seravicina or Sevakina of the Tabulae Peutingerianae.

Ibn Hawkal says that Sāwa was noted for its camels and camel-drivers. Al-Muqaddasi mentions its fortifications, its baths and a Friday mosque near the great road at some distance from the market. The people of Sāwa (as of Ulūdžird) were Shī'ī Sunnīs who were at permanent feud with their neighbours in Āwa who were fervent 'twelver' Shī'īs. The Mongols sacked the town in 617 (1220) and burned its fine library (Yāqūt) which also contained astronomical instruments (al-Kazwīnī). Hamd Allāh Mustawfī (ed. Le Strange, p. 62) gives the four *nāhiya*'s of Sāwa: Sāwa, Āwa, Djahūd and Bīshā(?) with 46, 17, 25 and 42 villages respectively, 130 in all. Khwādja Zahr al-Dīn Sāwādī about the time of Mustawfī (viiith—xivth cent.) rebuilt its walls which were 6200 dhar' (7,000 yards) in circumference and his son Khwādja Shams al-Dīn incorporated into the town the suburban village of Rūdābān.

Mustawfī extols the fruits of Sāwa but quotes the Persian proverb about its cereals: "the straw of Kūm is better than the grain of Sāwa". The pomegranates of Sāwa are renowned throughout Persia to this day.

Among the European travellers Marco Polo mentions Sāwa ("Saba") as the town from which the three Magi kings set out for Bethlehem and where they are buried in a square sepulchre. This Persian-Christian legend must be based on a local popular interpretation of texts like "Reges Arabum et Saba dona adducent" (Psalm lxxii. 10). According to another story given by Marco Polo, the three kings are buried respectively at Sāwa, Āwa and Kal'ā-i Ātashparastān, which Yule locates between Sāwa and Abhar, while Tomaschek identifies it with Diz-i Gabrān (one stage beyond Kūm on the road from Kāhān).

Sāwa is mentioned by Giosafā Barbaro (1474), Figueroa (1618) etc. Chardin laments its sterile soil and heat. In 1849 the English consul K. E. Abbot counted 300—400 houses in Sāwa with 1000 inhabitants; he says that the soil is excellent everywhere that it is not mixed with the *ḥamr* but that the salt desert is met with at only 9 miles from the town.

At a distance of only 4 farsakh to the south of Sāwa is the old Shī'a centre: the little town of Āwa watered by a stream coming from the heights of Tafrīsh which separate the plain of Sāwa from that of Fārsān (Persian 'Irāk'). According to Tomaschek, Āwa corresponds to the *Āpaxawa*

of Ptolemy. Al-Muqaddasi calls it Āwā, Yāqūt Āh. Kūh-i Namak lies between Āwa and Kūm. It is composed of salt and its friable soil — Hans-knecht calls it *Gidān-Gelman* — makes it impossible to climb it. In Mustawfī's time Āwa was 5000 paces in circumference. Houtum-Schindler says that the ruins of the old town are beside the modern village (100 houses) and that the tomb of Shām'ūn (Simeon?) is shown there. Mustawfī talks of the tomb "attributed" to the Prophet Samuel but puts it 4 farsakh north of Sāwa.

At the present day the population of the district of Sāwa is wholly Shī'a. It consists of Persians and Turks. The latter belong to the local confederation of Shāh-Sewen which includes the remnants of the tribe of Khālādī. The district of Sāwa is frequently called Khālādīstān. There are Shāh-sewen to the north-east and to the south of Sāwa. The Khālādī live more especially to the north of the Kūm-Sultānābād road (Rāhgird, Tadj-Khātūn, Djahūd, Tafrīsh). In several of their villages (Kandurūd, Mawdžān, Sift, Fowdžird, Kardedjan) a very peculiar Turkish dialect is spoken: *warorom kaghā*, "I am going to the garden"; *kūz-yi*, "it is warm"; *hāw-āi*, "in the home"; *yol hawāl dagh-arti*, "the road was not good", etc. The dialect is worth the attention of students of Turkish (cf. the art. SHĀH-SEWEN).

In the tenth century A.H. (Ibn Faḥl) Sāwa formed part of the province of Kūm. In modern times it has formed part of various administrative combinations. Sometimes it was governed along with the districts to the south (Mahallāt, Kāzās), sometimes with Zaranḍ (N.E. of Sāwa) and Kharrakān (*vulgo*: Karaghān). This last mountainous district formed an enclave between the provinces of Kāzwin and Hamadhān. It consists of three *kūlūb*: Afshār-i Bakishlu, Afshār-i Kutulu and Karagor; the chief town of Kharrakān is situated in the latter at the foot of the pass. It is called Āwa and must not be confused with the place of the same name in Sāwa. About 1890 Sāwa was governed by an Austrian officer in the Persian service, von Taufenstein. At the beginning of the twentieth century it formed a kind of fief of the brigade of Persian Cossacks at Teherān. One of the higher officers of this military force acted as governor of Sāwa and controlled the Turkish natives who supplied the principal contingent to the brigade.

The antiquities of Sāwa are: 1. the barrage on the Kara-āi (about 12 miles S. S. W. of the town) said to owe its origin to Shams al-Dīn al-Djuwāinī [q. v.], vizier of several rulers of the viith (xiiith) century (cf. *Nushat al-Kutub*, ed. Le Strange, p. 221). The barrage is said to have been restored under the Safawids; it is known as *kand-i Shāh Abbās*. It occupies the passage between two hills and is about 65 feet high, 100 long and 45 thick. Beside it on the left bank, the road rises in a kind of spiral: caravans were thus able to ascend the dam which was used as a bridge and descend on the west side by a gradual slope on the right bank. The attempts to repair this important work by closing the path which the river has made through it have so far failed with resultant ruin for the district. 2. The fortress of Kiz-kāfa on a rock in the centre of an amphitheatre of hills not far from the dam. 3. Two mosques at Sāwa, one in the town, built, according to Houtum-Schindler, in 1518 A. D.; the other, very beautiful,

situated outside the town among the old ruins on the south side. This *maḡḡid al-jum'a* seems to occupy the site of the mosque mentioned by al-Mukaddasī. According to Houtum-Schindler, the present building dates from 1516 A.D. but J. Dieulafoy attributes its "restoration" to Shāh Tahmasp (930—984 = 1524—1576). 4. Near this Friday mosque is a much older minaret 36 feet high, built of bricks arranged in rows with geometrical designs superimposed. Dieulafoy dates it to the Gharnawid period but a comparison with a similar minaret at Khuzargird (Khurāsān) which is dated 505 (1111) suggests that it is of the same period (cf. Sarre, *Denkm. pers. Baukunst*, Berlin 1910, II, 112—113, and E. Herzfeld, *Kherādin*, in *ist.*, XI, 170). 5. The reservoir (*ab-anbār*) with the great gateway which may date from the XIIIth century of the Christian era (Herzfeld, *op. cit.*, p. 171).

Among famous men born in Sāwa, Yāqūt mentions Abū Tāhir 'Abd al-Rahmān b. Ahmad, one of the principal Shāfi'ī Imāms (d. 484). Mustawfi mentions the tomb of Shāikh 'Uthmān Sāwājī near the town. On the poet Salmān-i Sāwājī (700—778 = 1300—1376) see E. G. Browne, *A Hist. of Pers. Litt. under Tartar Dominion*, Cambridge 1920, p. 260—271 etc., and the article SALMĀN.

(V. MINORSKY)
[Sāwa plays an important part in the legends of Muḥammad. According to a frequently quoted tradition (for details see A. Sprenger, *Das Leben und die Lehre des Muḥammad*, I, 134 *sqq.*, and Th. Nöldeke, *Geschichte der Perser und Araber*, p. 253 *sqq.*), a lake (*buhaira*) in the neighbourhood of Sāwa sank into the ground in the night in which the Prophet was born. The site was still pointed out to al-Kāswīnī in the XIIIth century. As the tradition quoted shows a rather accurate knowledge of Iranian matters, we may safely seek an allusion to a definite Iranian conception in this single feature of the story. Now in Zoroastrian eschatology the lake Kamāva (*Kaosaeva*) plays an important part; in the later Avesta it is located in Eastern Irān and is said to correspond to Lake Hāmān in Sijdištān. In it is preserved the seed of Zarathustra from which in the end will arise the saviour Saoshyant. When we find the legend of the drying up of a lake in Irān connected with

the birth of Muḥammad, we may interpret it as an allusion to this mythical lake. The legend symbolises the destruction of the hope of a Zoroastrian saviour, just as the earthquake in the royal palace at Ktesiphon recorded in the same tradition symbolises the end of the Iranian empire and the extinction of the sacred fire the end of Zoroastrian culture. (H. H. SCHANDER)]

SAWĀD, a name of the 'Irāk (q.v.). While the name 'Irāk has been proved to be a Pahlavi loanword (from *Ērag*, "low land, south land", occurring in the Turfan fragments, with assimilation to the semantically connected stem 'rē; cf. A. Siddiqi, *Studien über die persischen Fremdwörter im klass. Arab.*, p. 69; H. H. Schander, *ib.*, XIV, 8—9; J. J. Hess, *Zeitschr. f. Semitistik*, II, 1900), "black land" is the oldest Arabic name for the alluvial land on the Euphrates and Tigris given on account of the contrast to the dry between it and the Arabian desert (Yāqūt, *Ma'ājam*, III, 174, *sqq.*). The name has undergone a threefold development of application. 1) It is identified with the political division of 'Irāk and thus corresponds to the Sāsānian province of *Saristān* (*Dīl-i Erānshahr*). With this meaning the historians of the Arab conquests use the name Sawād for the 'Irāk (cf. for example, al-Balādhuri, *Futūḥ*, p. 241, *sqq.*) and especially the compilers of monographs on taxation or political handbooks (cf. Abū Yūsuf, *Yabys* b. Adam, *Knāma al-Mawārid*; also Ibn Khaldūn). The reason for this is that in the cadastral and revenue regulations of 'Umar I the name Sawād was used officially. 2) It is used as the name of the cultivated area within a district, e.g. *Sawād al-'Irāk*, *Sawād al-Khūstān*, *Sawād al-Urdunn*. 3) Before the name of a town it means the systematically irrigated and intensively cultivated fields in its vicinity, e.g. *Sawād al-al-Baḡra*, *Kūfa*, *Wasīḥ*, *Baghdād*, *Tustar*, *Bukhārā*, etc.

Lexicon*, I, 4, 1463b; on the technical question of taxation A. von Kremer, *Über das Budget der Einkommen unter der Regierung des Hārūn al-Rašīd*, in the *Verh. d. VII. Internat. Orient. Kongr.*, II, 1888, and M. van Berchem, *La propriété territoriale et l'impôt foncier sous les premiers califes* (1886).

(H. H. SCHANDER)

SAWĀKIN (SUAKIN or SUAKIN) a seaport on the west coast of the Red Sea in 19° 5' N. Lat. The town is built on a picturesque little oval-shaped island about a mile in circumference and 300 yards long, which lies off the mainland in the centre of a deep bay. The harbour is reached through a narrow channel 4 or 5 miles long hemmed in by coral reefs; Sawākin is connected with the African continent, by a causeway about 60 yards long, commanded by a fort. At the entrance to this road is a pretty gateway which can be closed by a door, through which one reaches the suburb of al-Kaif, which lies on the mainland. The Customs House and the Government buildings are the most important buildings on the island town. The best houses are fine white buildings of three stories, recalling in style those of Djidda. Among modern erections Kitchen's Gate, a handsome half Moorish edifice, is worthy of note. The pri-

primitive shapeless huts of the natives are in lurid contrast to these buildings. The bazaar consists of drinking-bars kept by Greeks and a little street with coffee-shops and booths. The half-dozen Europeans settled in Sawākin live among the primitive reed-huts of the natives in houses which are not always particularly habitable. The town possesses a single school which, however, is one of the best in the whole Sūdān. The suburb of al-Kaif on the mainland is surrounded by a wall which was at one time flanked by half a dozen forts and protected by an outer line of trenches. It has a much larger population than the island town, possesses a large bazaar in which the business life of the town is carried on and irregular streets in which live smiths and leather workers — the former make spearheads and knives and the latter do a busy trade in amulets — and barbers much visited by the male population. A few silversmiths provide the ornaments required by the women and make bracelets and anklets, ear- and nose-rings. Outside the suburb, which is a long narrow oasis surrounded by salt-lakes and prairie-like desert, are wells surrounded by gardens and date-palms, providing the town's drinking-water. The climate of Sawākin is not particularly healthy for Europeans. The heat never falls below 86° F even in winter; in June and August changeable winds predominate which often rise to dangerous sandstorms.

Sawākin is an old settlement, although the harbour is not important — it can only be entered by day owing to the narrow channel and the coral-banks. It has been suggested — probably rightly — that Pliny's *Oppidum Succae* was here. In the middle ages the district belonged to the Bedjā (Bemnyers) to whom belong the modern Hadendwa, Abubde and Bisharin. The old connections of the Mekkans with the West African coast of the Red Sea brought about the settlement of Arab merchants here who intermarried with the Bedjā. The matrilineal institutions of the Bedjā enabled the half-breeds to attain important positions and Ibn Battuta in 1330 A. D. found in Sawākin a son of the Amir of Mekka ruling the Bedjā. The upper strata of the populace professed Islām. al-Maḡribī calls them *Ḥadārib*. In those days Sawākin had a serious rival in the harbour of 'Aidhāḥ farther north, which Th. Bent has identified in the modern Sawākin Kadim, 12 miles north of Halab. The harbour, now in ruins, was very important between 450 and 760 A. H. as a landing-place for goods from India and Arabia and was a meeting-place for merchants from the Yaman and a rendez-vous for Egyptian and African pilgrims who sailed from here for Djidda. As Sawākin, which lay seven days' march to south, was also a landing-place for ships from Djidda, there must have been a good deal of competition between the two towns, from which Sawākin in the end emerged victorious. Al-Hamḍani († 945 A. D.) still reckons it in Central Abyssinia (*al-Hobash al-Wusṭā*). Under Sulṭān Selīm I the Turks occupied the harbour. It was under the Pasha of Djidda who governed it through an Agha until in 1865 Egypt acquired it from Turkey by cession or purchase. The Mahḍī period (1883—1898) was a heavy blow to Sawākin, as trade died away completely owing to the closing of the important Sawākin-Berber caravan road. By the treaty of July 16, 1899, between England and Egypt, Sawākin was placed under the Anglo-

Egyptian condominium along with the Sūdān and now belongs to the Red Sea Province, the largest cotton-growing area in the Sūdān.

Sawākin now has about 10,000 inhabitants. The town has a rather neglected look and almost half the buildings are in ruins, as the inhabitants in many cases are no longer able to afford the expense necessary to maintain them. The newly founded harbour of Port Sūdān is also a serious rival to Sawākin and has attracted a great deal of the trade and traffic in which Sawākin was once supreme. In spite of this competition Sawākin has been able to keep an important position as regards trade and the wholesale migration of business to Port Sūdān expected by many has not materialised. Although the numerous wholesale and retail firms are no longer as busy as they were before the foundation of Port Sūdān, they are still doing very well and very few native firms are suffering under trade depression. Sawākin will maintain its position if only because the trade of the natives stubbornly sticks to it and regards it as the main centre of the commerce of the Red Sea Province. Sawākin still is, as before, the starting place of pilgrims to Djidda. Fifty years ago the slave trade was still flourishing on the same route and some 3000 slaves annually were shipped from here to the market in Djidda, a trade which the English government was only able to suppress with great difficulty. Sawākin is now connected by a branch line from Athbara Junction with Port Sūdān; the railway was made in 1905. If the stretch from Sawākin to Tokar (56 miles) is made, and it is planned for the near future —, the two towns are at present connected by a caravan road — the harbour of Sawākin will receive a new stimulus. At the present time the excellent cotton-wool from Tokar, 56 miles S. E. of Sawākin, is brought on camel-back to the harbour of Trinitat and then shipped the 1½ to 2 days voyage to Sawākin. With the building of the railway the Kassala-Sawākin (via Tokar, 297 miles) and Berber-Sawākin (241 miles) caravan routes, on which most of the trade with the interior is done at present, would lose their importance but the amount of the trade would considerably increase. Beside the railway line there is also an irregular steamer service connecting with Port Sūdān. There is also a steamer connection with Djidda with a fortnightly service. The main article of commerce and export are cotton, sesame oil, butter, hides, wax, resin, anna and ivory.

SAWDA BINT ZAM'A b. KAIS, Muhammad's second wife, was one of the first women who embraced Islam. She accompanied her first husband al-Sakrān b. 'Amr and her brother Malik to Abyssinia, with the second party of Muslims who repaired thither. The pair returned to Mecca before the *Hijra*, and al-Sakrān, who had become a Christian in Abyssinia, died there. By this union Sawda had a son, 'Abd al-Rahmān, who was killed in the battle of Djalila.

Sawda's marriage to Muhammad was arranged by Khawla bint Hakim, who wished to console him for the loss of Khadija, and took place about a month after the latter's death, in the tenth year of Muhammad's mission, in Ramadan, before his journey to al-Ta'if.

In the first year of the *Hijra* Sawda, together with Muhammad's daughters, joined him in Medina; her dwelling and 'A'isha's were the first to be built in the Mosque.

Sawda was no longer young at the time of her second marriage, and, as she grew older, became fat and ungainly to such a point that Muhammad, during a pilgrimage, allowed her the privilege of reaching Minā for the morning prayer before the crowd's arrival, to avoid being jostled. As she grew older Muhammad wearied of her and neglected her, while he spent a great deal of his time with the youthful 'A'isha; in 8 A. H. he divorced her, but Sawda stopped him in the street and begged him to take her back, offering to yield her day to 'A'isha, as "she was old, and cared not for men; her only desire was to rise on the Day of Judgement as his wife". The Prophet consented; on this occasion *Sūra* iv. 127 was revealed.

Sawda was charitable and good-natured; in one of his prophetic utterances Muhammad seems to have alluded to her as the "longest-handed", i.e. the most charitable of his wives, who would be the first to join him in Heaven, and 'A'isha used to say: "There is no woman in whose skin I had rather be than Sawda's, except that she is somewhat envious".

Together with Zainab bint Jahlsh, Sawda did not take part in the last pilgrimage. Of her life after Muhammad's death there is no record, except that she received a gift of money from 'Umar; this, together with the fact that no mention is made of her dowry, may mean that she was in straitened circumstances, though she had received her share of the spoils of Khaibar. She died in Medina, in Shawwāl 54 A. H., during the caliphate of Mu'awiya, who bought her house in the Mosque, together with that of Safiya, for 180,000 dirham.

AL-SAWDĀ or **AL-KHARĪT AL-SAWDĀ**, a ruined city in al-Djāwī in South Arabia, in what was once the ancient Minaean kingdom. J. Halévy, who visited the ruins, calls it *al-Sūd* and describes it as an extensive system of ruins one hour's journey N. E. of the also important al-Balāḥ. Al-Sawdā is built on an eminence. The ancient town was apparently destroyed by a conflagration and was presumably an important industrial centre, especially for metal work; even at the present day the vitrified soil is covered with slag-heaps. Insignificant remains of the sur-

rounding wall and a few stelae are all that remain of its former splendour. D. H. Müller suggests that these ruins mark the site of the Minaean town of Karna. F. Hommel identifies it with the Naḥḥān of the Minaean inscriptions. Al-Hamdānī describes al-Sawdā as one of the strongholds of the tribe of Naḥḥ. The old Minaean town thus survived into the later period as the stronghold of a prominent family. The name "Black Fort" should probably be explained as referring to the building material, black lava or basalt.

SAWDA, **MIRĀ** MUHAMMAD RĀY, Urdu poet and satirist, was born in Dehli in 1125 (1713). His father Mirā Shāfī (from Kābul) was a merchant and had established himself in India. Sawda was educated in Dehli and his teachers in the art of poetry were Sulaimān Khān Khān Wifāḥ and Shāh Zuhār al-Dīn Ḥatīm. Like his contemporaries, Mirā Maḥar Dīn-i Dīnān, Mir Taqī Mir and Khwājā Mir Dard, he had derived much literary benefit from the eminent Persian scholar and poet Sirāj al-Dīn 'Alī Khān Arāḍ; and it was he who persuaded Sawda to write in his own mother tongue in preference to Persian. Sawda's Urdu poetry very soon attained a high standard of excellence and he was recognised as one of the masters of Urdu poetry. At the age of about sixty he left Dehli, and after a short sojourn at Farrukhabād went to Lakhnāw where he settled for the rest of his life. Āṣaf al-Dawla, the king of Lakhnāw, raised him to the high position of *Malik al-Shu'arā'*. Sawda died at Lakhnāw in 1195 (1781). His works were collected by Ḥakīm Aḥlā al-Dīn Khān and were first published at Calcutta early in the sixteenth century followed by numerous lithogr. editions.

Sawda is rightly considered to be one of the greatest Urdu poets. He excelled in *ghazals* and *ghazals* and his satires are witty and sharp. He was well versed in music also. Dr. Fallon's adverse remarks about his poetry are not justifiable.

SĀWĎJ-BULĀK, a Persian corruption of the Turkish *sāw-j-bulak* "cold spring"; the form *sāwċ* (pronunciation *sāwċ*) is found as early as the

Nuzhat al-Kulūb (740 = 1340). There are two places of this name:

1. The fertile district beginning at Teherān and stretching to the west of the river Karāj along both sides of the great Teherān-Kāswīn road. To the north a range of hills separates it from Tālākān. On the southern slopes of these hills are the pits of Feshand which supply the capital with coal. The district is watered by the Kordān which rises in the same heights. Among its villages Hamad Allāk Mustawfī mentions Sunkurābād and Nadjābād which still exist at the present day. The centre of the district is marked by Yangī-mīm (an artificial mound with a tomb). At the south-western extremity of the district is the little town of Ishtihād whose inhabitants speak the Iranian dialect called *tārī*; other villages of the same language (towards Kāswīn) are Sagrābād, Shādmān, Isfāwārīn, Čāl and Sāhdahān. Many of the people of Ishtihād profess Bahā'ism. See the map in A. F. Stahl, *Petterm. Mitt.*, suppl. fasc., No. 118, 1896, sheet 1, and his map *Umgebung von Teheran*, Gotha 1892.

2. The southern section of the province of Ādharbīdžān, the capital of which is Sāwdj-Bulāk (in Kurdish Sā-bāgh). The governors of Sāwdj-Bulāk are appointed from Tabriz, but ethnographically Sāwdj-Bulāk forms part of Persian Kurdistan, which consists of three parts: a) Kurdistan of Mukri in the north, corresponding to the *shūmāt* of Sāwdj-Bulāk; b) to the south Kurdistan of Sinna (cf. the art. SENNA) and c) to the south of it Kurdistan of Kirmānshāh.

The province of Sāwdj-Bulāk is bounded on the north by Lake Urmīya; in the north-west by the districts of Sulūsi and Ushnū watered by the Gādīr-čai; on the west by the heights of the Kāndil forming the Turco-Persian frontier; in the south by the Sūr-kēw range separating Hāna from the district of Shīlār; on the east by the watershed between the Tatawū and the Džaghātū (only the district of Sakki borders on the basin of the latter river); on the north-east by the course of the Tatawū on the right bank of which lies the isolated district of Mijān-du-āb ("between the two waters"). The Tatawū at the same time forms the boundary between the Turks of this latter district and the Mukri-Kurds of Sāwdj-Bulāk. Sāwdj-Bulāk measures 80 by 60 miles and has an area of about 4,800 to 5,000 square miles.

Hydrography. The Mukri country lies across two watersheds, that of the Lake of Urmīya and that of the Little Zab (a tributary of the Tigris). To the first belong three separate rivers: 1. the Džaghātū, which rises in Mount Čihil-Qashma at the eastern extremity of the Turkish enclave of Shīlār which runs far into Persian territory between Hāna in the north and Marwān in the south; 2. the Tatawū (Mustawfī: Taghatū) rising in the extreme south-east of Kurtak; 3. the Sāwdj-Bulāk rising in the eastern face of the Maidān pass (between Paswa and the town of Sāwdj-Bulāk). The river-system of the Little Zab (*al-Zāb al-ʿaṣfā*) belongs to the basin of the Persian Gulf. Its upper course is formed on the high plateaux of Lahidjān Mukri; the north-western branch (Lāwān) rises on the eastern face of the Kāndil just south of the pass of Keli Shīn; the north branch (Bārd-i Māshe) comes from Džaldjān via Ushnū; the north-east branch (Āwa-turū) from the west face of the Maidān pass.

Taking in on its right bank the swift waters of Badīnāwā, Āwa-Prdānān, Khidrāwā, Tālestān and Kāzān and on the left the large streams that rush down the gorges of the Kurtak, the Little Zab under the name of Zei or Kālū rolls southwards, but below Sardāht it turns sharply westwards to force a passage through the ravine of Alān to the Tigris. Just at this bend, close to the pretty village of Alūt, the Kālū receives on the left bank the important tributary which drains the whole basin of Hāna (except the district of Namashīr, the waters of which enter the Kālū above Alūt). The river of Hāna (Āwa-Kīwerū) forms an almost straight line with the ravine of Alān. The left bank below Dunēs belonged to Turkey (Alān-i Gīrgashā). The frontier here follows the course of the Kīwerū and then of the Kālū, finally ascending the Kāndil leaving Bētūgh to Persia and Kāndöl to Turkey.

There is only one little stream that escapes the gigantic funnel of the Alān; the rivulet of Wasna rising on the verdant heights of this name to the south-east of the great cone of the Kāndil describes a semi-circle to the west of the Kālū and enters the Mesopotamian plain (Pīzdar) by a deep defile where it finally rejoins the Little Zab on its right bank.

Orography. The lofty chain of the Kāndil rises like a wall between the territory of Sāwdj-Bulāk and the districts of the former Turkish Kurdistan: Rawāndūz and Kū-i Sandjāk. Among the Arabs the Kāndil was called *Shā'ran*, in Persian Takht-i Shīrūye (Yāqūt, ed. Wüstenfeld, III. 298), by the Armenians Zarap (Hoffmann, *Austriger*, p. 249, 266). The famous pass of Keli Shīn (about 9,000 feet high) between Ushnū and Sīdākan (belonging to Rawāndūz) lies to the north and outside the boundaries of Sāwdj-Bulāk. Communication between Sāwdj-Bulāk and Mesopotamia is maintained by the less elevated (6,000 feet) and more convenient pass of Garū-Shīnka, between Lahidjān and Bulāk (Rāyāt), as well as by the defiles of Wasna and Alān. All traffic is, however, considerably hampered by the presence of turbulent tribes on both sides of the frontier.

The great perpendicular arête which is detached from the southern extremity of the Kāndil and forms the northern wall of the ravine of Alān is noteworthy. It is called Dārū and its pass the Hawmīl.

The heights running between Lahidjān and the valley of the Gādīr are of little importance except a few peaks (Bīcārā and Čoghantū). They extend to the Tatawū, where they cut the town of Sāwdj-Bulāk off from the northern district of Shā-i Wēran; they allow a passage, however, to the Sāwdj-Bulāk river.

The central longitudinal massif of Kurtak (up to 7,000 feet) separates the waters of the Kālū from the basin of Lake Urmīya; to the north it joins the summit of Čoghantū.

The eastern part of Mukri Kurdistan is in the form of a square, the sides of which are in the north the latitudinal heights; in the west the Kurtak; in the south the watershed of the Tatawū on one hand and of Namashīr and Sakki on the other; these heights coalesce in the extreme south of the Kurtak and their principal summit is Bārd-i Sūr ("red stone"); lastly on the east the heights of the watershed between the Tatawū and the Džaghātū. The interior of the square formed by the system of the Sāwdj-Bulāk-čai and of the Tatawū is extremely irregular: it contains mountain peaks (*Tarāks*), gentle slopes and fertile valleys.

To the south and outside the square are the districts of Sakki [q.v.] and Bāna. The first inclines from south-west to north-east. It is watered by the northern sources of the Djaghān and fills the angle between the square of Sawdī-Bulāk and the lands of Bāna. The latter district, on the other hand, forms a valley sloping from east to west towards the basin of the Kālā. To the south Sūr-kēw ("Red mountain") forms the boundary; to the east the heights of Shwē-g'wān separate it from the southern sources of the Djaghān (River Sāhī); to the north-east the heights of the Kulī Khān pass rise as a barrier between the wooded slopes of Bāna and the bare hills of Sakki. To the north the rocky group of Balū (the "oak") bounds the principal valley of Bāna. To the north of Balū runs the river of Namashī which runs directly into the Kālā on its left bank. Balū thus forms an isolated group corresponding to Bān on the right bank of the Kālā. The true northern boundary of Bāna is therefore formed by the mountain of Isardī Sūr to the north of the districts of Daghī-i Tal and Namashī.

From the administrative (and ethnographical) point of view the province of Sawdī-Bulāk is divided into the following parts:

I. Mukri Kurdistan properly so-called, inhabited by settled Kurds belonging to the Mukri and Debokri tribes. The capital is the town of Sawdī-Bulāk founded, according to Rawlinson, at the beginning of the xviiith century. A century later it comprised 1200 houses of which 100 belonged to Jews and 30 to Syrians. The town retained this size till the outbreak of the Great War. According to H. Schindler, the town lies in 36° 45' 48" N. Lat. and 45° 47' E. Long. at a height of 4,272 feet above sea-level. The following districts (*maḥall*) form this part of Mukri Kurdistan: 1. The environs of the capital, 36 villages; 2. Shūr-i Wazīn "the deserted town"; this very rich district is situated to the south of the capital and has 65 villages belonging to the Debokri tribe; 3. Akhtāzī "grooves", on the Sawdī-Bulāk-Miyan-dān road, in the valley of the Tātawū, 90 villages, of which the principal is Būrhān; 4. Balū on the Tātawū at the crossing of the Sawdī-Bulāk-Sakki and Marāgha-Sakki roads, 65 villages of which the principal is Bōkha with a fine residence of the hereditary "sarār" of the Mukri; 5. Turdān south of Balū, 38 villages; 6. Gowruk-i Mukri near the sources of the Tātawū southeast of Kurtak, 24 villages.

II. The territory of the Kurd tribe Bībāz, related to the Mukri and speaking the same dialect. Formerly nomads, the Bībāz now spend the winter in their villages and in summer go to the heights (*zarāw*) near their dwellings. The following are always on Persian territory:

a. The Mangar, a brave and courageous tribe, mostly settled, on the Sawdī-Bulāk-Tal and in the districts of Rī-Tamūr (below Gowruk) and Nāl-lāl-i Mangar (the "horse-shoe", i.e. an amphitheatre formed by the mountains on the western face of Kurtak). But the headquarters of the Mangar where their *qāhā* live is at Mērgān (Tirkāsh) on the right bank of the Kālā between Lāhidjān and Sardāsh. The total number of the villages of the Mangar amounts to 148.

b. The Pirān to the north of Mērgān in old Lāhidjān on the Lāwā, 30 villages, including the little fort of Mutawā-tāp just opposite the pass of Garā-shimā.

c. The Mamash live in New Lāhidjān, the centre of which is the ancient stronghold of Paawa, now in ruins, but mentioned as early as Yāqūt. The Mamash occupy the valley of Bārd-i Māsh (Djaldān) and all the upper part of Lāwān above the part where it enters the plain of Old Lāhidjān. There are Mamash at Sardāsh and at Ushū, in all over a hundred villages.

d. The clan Odjāsh-kā-Khīrī in summer occupies the rich pastures of Wāna and in winter descends to the warm plains of Rū-i Sandjāq, but it also has an inclination to settle in Persia.

III. The territory of Sardāsh consists of the following divisions:

a. The wretched little town of Sardāsh, the residence of a vice-governor, and the district of the same name on the right bank of the Kālā.

A. The tribe of Gowruk (Gawrik) which besides the villages already mentioned occupies the wooded spurs of the Kurtak on the left bank of the Kālā and has over a hundred villages.

α. The Sūzān live in the villages (68) between Wāna, Sardāsh, the bend of the Kālā and the Kandī. Their clans (Baryādjī; Mīlkārī, Darma, Harz-Alān and Alān) live separately without common chiefs. Bāhū, the chief place of the Alān, has 70 houses surrounded with beautiful gardens. It ought to become quite important, being situated on the Marāgha-Sawdī-Bulāk-Sardāsh road and the districts of Sulaimāniya and Kīrkūk. At Teyet below Bāhū there are to be seen on the Kālā the ruins of an old bridge having seven piers of brick.

IV. The two other districts of Mukri Kurdistan are Sakki and Bāna. They were both at one time under the wills of Sinna, but geographical, ethnical and political conditions (especially since the Turkish occupation in 1906) explain their being attached to Sawdī-Bulāk.

Bāna is a very important district with 8 subdivisions (Dūla-Khānawā, Balaw-Bashwā, Shwā, Namashī, Daghī-i Tal, Kīwerā, Tāzān, Pāsh-Arbēhā) with 145 villages and about 3500 households. The town of Bāna at the foot of Mount Arbēhā has 800 homes, of which 80 belong to Jews, and a very busy market. In Pāsh-Arbēhā ("behind A."), on the road from Pēndjwā, we may mention the village of Campāra, which although situated to the south of the Sūr-kēw range belongs to Bāna.

Rawlinson estimated the number of Mukri families at 12,000 which would give about 100,000 souls. This figure does not seem to include Bībāz, Bāna, Sakki, etc. The actual number of inhabitants of the *submūt* of Sawdī-Bulāk cannot be below 200,000. The foreigners are a few Persian officials, several hundred Jewish families at Sawdī-Bulāk, Bāna and Sardāsh, and even in the villages; a dozen Armenian families (with a church) at the town of Sawdī-Bulāk, whence, on the other hand, Syrians have entirely disappeared.

Language. O. Mann concludes that the same Kurdish language (Kurmāndjī) is spoken on the territory bounded on the east by the valley of the Tātawū and the left bank of the Djaghān; to the south, in Sakki and Bāna, Kurmāndjī is spoken, but at Marwān(?) and among the Tīkū tribe (in the district of Hōbārī) the dialect of Sinna [q.v.] is said to be spoken. Kurmāndjī extends beyond the bounds of Persia as far as Sulaimāniya and even south of it. The favourite poets of the people of Sawdī-Bulāk are natives of Kīrkūk.

Darband and the villages of Sulaimāniya. To the north-west the dialect passes a little beyond the plain of Ughni, but in the Urmia region begins the area of the dialects which are connected with those of Hakkāri. Thanks to the labours of O. Mann we have a fine collection of heroic ballads and Mukri folk-lore. There is a translation into the Mukri dialect of the Gospel of St. Mark (Awatariyan press at Philippopolis, 1909) and of Protestant hymns (L. O. Fossam) etc. Before the war American missionaries had begun to publish at Urmia a little magazine for the Mukri (*Kurdistan*, No. 1, April, 1914).

Religion. The Mukri Kurds are Shī'ite Sunnis. They are very lukewarm in religious matters, but the Shaikhs belonging to the religious orders (Nakshbandi and Qādiri) exercise a very great personal influence among them. The disciples of Shaikh Sa'īd of Kāwelbād (killed in 1915 during the Turkish occupation) practised a very violent *ghāz* in his *tabiya*.

Costume. The Mukri costume consists of a shirt with very long sleeves coming down to the feet and tied behind the back when fighting. Above it is put a kind of robe which comes down to the knees and the tails of which cross; a huge girdle of cotton material, sometimes 20 feet long, is then rolled round the body. In summer the tails of the coat fall down over the huge white drawers tightened at the ankles. In winter or when on horseback the tails are thrust into cloth trousers of ample dimensions. Above all a very short sleeveless coat of hard felt is worn. On the head is worn a peaked headress surmounted by a tassel. This is surrounded by a turban of Mosul silk, the felings of which fall over the eyes. The old armour, coat-of-mail, helmet, buckler, lance and sword (cf. de Morgan, II, Pl. ix. and x.), has completely disappeared. The Mukri is content with a dagger and a rifle, and is specially fond of making a show of the number of his handlovers and belts arranged to hold cartridges. There is not much variety in the equestrian sports; the favourite is the *talpala* which consists in throwing a heavy stick to the ground and catching it while going at full speed.

The women wear dark cotton trousers, a long undergarment, and a piece of blue cotton with which they cover their shoulders; a black or red turban skilfully arranged forms their headress. The relations between the sexes have not the strictness usual among the Muslims. The women do not veil themselves. Among the Mukris there are a number of dances (*lāpā, rōmā, zāstak, lāpāl, bārdā, kār-parrā*) in which the men and women form circles holding one another's hands.

Occupations. To the north-east, especially in the rich valley of the Tātaw, we have agriculture with a view to export; everywhere else the tribes cultivate the soil for their own requirements only. The vine and tobacco are grown at Alān, Sardasht and Bānā. Sheep are reared throughout the mountainous region; cheese is made flavoured with sweet smelling herbs and felt is manufactured. In the wooded districts the people burn charcoal, gather acorns, gal-nuts and mums (*gāz*); these districts are: on the right bank of the Klān the region between Prānān and Sardasht; on the left bank the western slopes of the Kurtak; in Bānā the eastern parts of the district. In the river at Wānā (near Aghāim) auriferous sand is found in small quantities.

History. Down to about 1890 there was at Taghtapa on the lower course of the Tātaw a cuneiform inscription in the Khaldaiic (Vannic) language, which has since been carried off by some vandal. According to Belck (*Das Reich der Mannen*, in the *Verhandl. Berl. Ges. f. Anthropologie*, 1894, p. 479-487), it was put up by Manna, son of Ishpūnī, a Vannic (Khaldai, Urmian) king who reigned between 812 and 778 B.C. (C. F. Lehmann-Haupt, *Armenien einst und jetzt*, 1910, I. 632). This monument, the most eastern known in the cuneiform character, must have marked the site of the town of Manā in the land of the Mannēans (Minnā) conquered by Manna. Traces of Khaldaiic influence can also be seen in the waterworks, subterranean corridors and stairways hewn out of the rock, which Rawlinson (*J.R.G.S.*, vol. x.) discovered at Shūnān-ābād and at Sawkand on the left bank of the Sāwdj-Bulāk river. The Assyrian king Sargon, in the account of his famous campaign in 714 B.C., mentions to the south of Lake Urmia — apart from Mannaeu territories — the districts of Allahria, Parsuash, Zikirta, etc. (Thureau-Dangin, *Une relation de la huitième campagne de Sargon*, Paris 1912). But the identification of Parsuash with the land of the Persians (Pārsā) and its localisation on the lower course of the Klān are still only hypotheses.

Another very remarkable monument is the rock tomb of Fakrānā near the village of Indirāsh north of Sāwdj-Bulāk; it resembles the Achaemenid type of tomb (de Morgan), E. Herzfeld connects it with the group of monuments which he regards as Median (Sarre-Herzfeld, *Iranische Felsreliefs*, 1910, p. 184; Herzfeld, *Cherubim*, in *DMZ*, 1921, xl. 131). Among the towns of Media enumerated by Ptolemy (vi. 2) there are two in the same latitude (38° 30'): *Sagabara* (long. 87° 30') and *Saxat* (long. 88°). Rawlinson identifies the latter with Singa in the district of Ughni and he connected the former (*Dumyavanda*) with the Daryā mentioned in the Kurdish chronicle (ed. Velliamouf-Zernof, I. 268). But he did not know the site of Daryā; it is the name of a village (2 miles N.W. of Indirāsh) quite close to which are the ruins of the "deserted town" which has given its name to the whole district of Shār-i Wānā, which is still recognised as the ancient capital of the district.

De Morgan (iv. 283) has remarked on the great number of artificial *tell's* (mounds) on the upper Klān; there are 24 in Lāhijān. The ruins of the "old town" of this district are to the south-east of the pass of Garū-Shinkā. Farther down the *tell's* disappear but in the centre of the Mukri country, at Ghoghā-tapa there is a large mound 150 paces in circumference. Quite near, at Khaldāh, de Morgan found tombs of the iron age (*Mus. orient.*, vol. iv., *Richesses archéol.*, I. 9). In the Bānā district Harris mentions "mounds" (*tell's*) near Sīwānā, the inhabitants of which sold him ancient seals, cylinders, etc. All this shows that the region of Mukri Kurdistan has been inhabited from a remote period.

The Emperor Heraclius crossed this region in 624 in pursuit of Khusrāw Parwēz; in the caves of Kerefān (Sān-Kāl'a, q.v.) Ker Porter found a Greek inscription (Kabel, *Epigr. Graeca*, Berlin 1878, p. 512).

The history of Mār Yabālāhā, patriarch of the Nestorians (1281-1317 A.D.), shows the im-

portance of the traffic through the territory of Säwdj-Buläk in the Mongol period. The present toponymy of the region shows the clash of Turkish influences from the north-east and Kurd influences infiltrating from the west. In the eastern cantons (Akhtaci, Bâhi, Turdjân, Saklâ) there are Kurdish villages with Turkish names. We also find a certain number of Mongol names: Tarağa, Tatawû (in Mustawfî: Taghatû), Džaghataû, which, according to the *History of Mîr Yabalâhâ* (transl. Chabot, 1895, p. 151), was called in Persian Wakya(?)—rûd or, according to Rashid al-Din (ed. Quatremère, *ad fol.* 297^b), Zarîna Rûd. On the other hand, the Turkish districts between the Tatawû and Marâgha formerly subject to the Mukri have been lost to them. To the west of the Kurtak we only find Kurdish names with a few sporadic Semitic ones (Aramaic): Dribka, Kôka, Nalosa and Šimôla.

We have to distinguish several historical layers among the Kurds of Säwdj-Buläk. In general the large tribes are divided into two classes: warrior ('*ashiraf*') and peasant ('*ra'ayat*') and it is very probable that before the formation of a tribe organised in this way the peasants had to be subjugated and sometimes even "Kurdicised" by the invaders who are their present masters. According to O. Mann, the peasants are usually proud of belonging to the (now called?) Debolak tribe who would represent an older element than the Mukri. The same hypothesis is probable for the Süesni (between the valley of Aîlân, Sardasht and Wazna) in view of their settled character and their ability as gardeners and vine-growers.

As regards the tribal aristocracy it always claims to have come from the west. For the principal tribe of the Mukri we have the references in the *Šaraf-nûma*. The Mukri chiefs claim to have belonged to the Mukriya tribe which lives in Šahrîstân and to have been of the family of governors of the Bâbân tribe. During the period of Turkoman dynasties (ixth cent. A. H.) a certain Saif al-Din took Daryâ from the Çabuklû (a Turkish tribe?) and enlarged the territory by the addition of the districts of Döl-i Bîrik (Döl is a little district to the S.-W. of Lake Urmiya and Bîrik a tribe at present scattered round the mouth of the Tatawû), Akhtaci, El-Tamir and Suldûz. The tribes united under his sway received the name of Mukri. His son and successor Šârim challenged Šâh Imâd'î Šafawî and in 912 inflicted a defeat on the Persian troops. Then (in 918?) he sought support and investiture from Sulţân Selâm. On the death of Šârim his estates were divided among the three sons of his nephew Rustam, who recognised the suzerainty of Šâh Tahmasp. At the revolt of Alâş Mîrzâ (948) Sulţân Sulaimân sent against them his vassals of the 'Amûdiya, Hakkârî and Brâdest tribes who fought and killed them. The young son of Šârim, Amîra-bêg I, succeeded them having received investiture from Sulţân Sulaimân and ruled his tribe and the fief of Daryâ for 30 years. Another Amîra, grandson of Rustam, succeeded him, with the help of the Šafawîs. During the troubles in the reign of Šâh Muḥammad Khudâ-banda, Amîra-bêg II in 991 visited Sulţân Murâd III who added to his hereditary fief the willâyet of Bâbân (Šahr-i Zûr) and the sandjak of Moḡul; Erbil and certain dependencies of Marâgha were given to his sons. With the help of the Mîr-i Mîrân of Wan, he defied the Persian governor of Marâgha and plundered the

district, of which the Sulţân appointed him beyler-beyi with the title of pâšâ. The hereditary fief of Daryâ was, however, awarded to his nephew Ḥasan who had given his adherence to the Porte before him. A war broke out between Amîra Pâšâ and Ḥasan. The latter was killed and Sulţân Muḥammad III (1003—1012 A. H.) granted his brother Uluḡ-beg the district of Dîb-i Khwârkân (D. Harrakân to the north of Marâgha) in fief. In the meanwhile the Turks had captured Tabriz and Džafar Pâšâ, appointed Governor-General of the province, wished to have Amîra-Pâšâ recognise his authority. The latter complied with a bad grace. Džafar Pâšâ lodged complaints against him in Constantinople and the sandjaks of Bâbân, Moḡul and Erbil were taken from Amîra. Marâgha was subordinated to Tabriz with an obligation on Amîra to pay an annual contribution of 15 khar-wîr of gold. Finally his lands were reduced to Daryâ alone. His son Šaikh Haidâr, however, was able to hold out in the old fortress of Sârû-Kurghân rebuilt by him. The people of Marâgha complained of him as a troublesome neighbour and Khidîr Pâšâ, governor-general of Tabriz, issued an edict allotting Sârû-Kurghân to the Mahmûdi tribe. Fighting began around the fortress and Amîra-Pâšâ had to intervene to put a stop to the hostilities. About 1005 the father and son still had the following districts: Daryâ, (Miyân)-du-âb, Adjari and Leîlân (the two last named on the right bank of the Džaghataû), as well as the fortress of Tarağa and Sârû-Kurghân with the districts attached to them.

Information on the later period is still little accessible. Iskandar Manḡhî, author of the *Turîkh-i Alam A'ra*, was an eye-witness of Šâh 'Abbâs's expedition against the Mukri and Brâdest Kurds; the episode of the siege (in 1017 = 1609) of Dîmdîm-ka'â (south of Urmiya on the river Kâsimlû) is the favourite subject of Mukri heroic ballads. Mîrzâ Mahdî-Khân's history of Nâdir Šâh also contains information about the Mukri (O. Mann, *op. cit.*, I, Preface).

The more recent history of Mukri territory is as follows: In 1810 the governor of Marâgha, Ahmad-Khân (of the Turkish tribe of Muḡaddam), invited the Mamagh Aghâ's to a feast and had 300 of them massacred there, which put a stop to this tribe's depredations for a long time. In 1850 the rebel Bâpir Aghâ (Bîlbâs) threatened Marâgha. In October, 1880, the Mukri territory was invaded by Šaikh 'Ubad Allâh of Šamandînân, whose ambition was to found a Kurdish principality of the same character as that of Rumelia. On this occasion the religious chief of the Sunnis of Säwdj-Buläk proclaimed the holy war against the Šu'î'a which resulted in horrible massacres especially around Marâgha. In 1905, the Turks contesting the Turko-Persian frontier occupied Lâhidjân. Muḥammad Faḡîl Pâšâ's headquarters were at first established at Paawa; in the end the occupation gradually opened all over Mukri territory. In 1914 the delimitation took place with the assistance of British and Russian representatives; it re-established the old frontier along the Kandîl. The World War began in these regions with a new Turkish-Kurd movement. Colonel Iyâs, Russian consul at Säwdj-Buläk, was assassinated at Miyân-du-âb on Dec. 16, 1914. The region then became the scene of Russian-Turkish fighting which left a trail of devastation behind it.

Five great families constitute the Mukri nobility: they are all called Bāhā-Amīra (Bāhā-mīr) and trace their descent from Amīra Pāhā. Their more certain ancestor is Budākh-Sultān who is buried in Sāwdj-Bulāk; his connection with Amīra II is, however, not at all clear. According to Rich (i. 309), his brother Bāhā Sulaimān flourished about 1700. There are curious legends about the life of Budākh-Sultān: he is said to have been the son of a certain Fakih Ahmad who had married a young Frank girl called Kēghān (Rich, i. 291, 299, 389). One of the peaks of the Kāndil is called Khān Budākh Kēghān (metonymic names are common among the Mukri). The descendant of Budākh in the eighth generation was 'Aziz Khān Sardār, governor-general of Ādharbāidjān, who died in 1868. De Morgan (ii. 40—41) extols the ability of his son Saif al-Dīn, governor of Sāwdj-Bulāk and owner of the fine estate of Bōkān (he died in 1891). His son and successor, Husain-Khān Sardār-i Mukri, several times governor of Sāwdj-Bulāk, was killed in 1914 during the Turkish invasion. Other Bāhā-mīr families have estates at Akhtāti, Tundjān and Yād-āhād (Yālawā).

Rawlinson (p. 35) describes the fiscal organisation of Sāwdj-Bulāk. The Bāhā-mīr families receive $\frac{1}{10}$ of the produce of the land; $\frac{1}{10}$ is received by the farmers (*agāh*) and $\frac{1}{10}$ goes to the 'zarfet-chān' who superintend the cultivation. These quotas evidently represented the rest while the rest of the produce defrayed the expenses of tillage and labour. According to O. Mann, this system still flourishes; but feudal customs generally tend to disappear.

The tribe of Debokri has only played a subordinate part. Their very centre, Daryā, has long been regarded by the Mukri as their hereditary fief. It is only very recently that the Debokri seem to have again organised themselves with some degree of independence under their present chiefs of whom the great-grandfather, Ibrahim Aghā, is said to have come from Diyār-bakr (?). Near Sāwdj-Bulāk there is a little village of Debokri from which Debokri must be derived. The connection between Debokri (Dih-i Bokri?) and Diyār-bakr is uncertain. In any case the name *Debokri*, which does not occur in the *Sharaf-nāma*, cannot be old but, as it is applied especially to a family of chiefs, this fact does not prejudice the antiquity of the people owning their rule. The district of Lāhidjān, like its homonym in Gilān, used to be called Lāridjān. Hoffmann, *op. cit.*, p. 244, 263, identifies it with the Salāk al-Awāl of the Arabs, while not denying that the name *salāk* may be a reminiscence of the ancient *Siliak*. According to the *Sharaf-nāma* (i. 279), Sulaimān-bēg Sohrān (before 994?) pillaged the land of the Zarā. A corrupt passage (i. 280) then seems to show that Lāridjān formed part of this territory and that it was taken from the Zarā by Pir Budāk Babān. The Zarā now occupy the district of Ushnā immediately to the north of Lāhidjān. The date of arrival of the present occupants, the Bilbās, in Lāhidjān is unknown. The Bilbās with the Kāwālā are occasionally referred to in the *Sharaf-nāma* to the west of the Kāndil where some of their branches are still to be found (Mamash-i Bōe, Khidir-mamashen). In Rawlinson's time the Bilbās still paid to the Mukri a tribute of 1000 toman a year.

As to Bāna, the *Sharaf-nāma* says that this district lies between the Ardilān, Bāhān and Mukri, and that it consists of two parts, one of which is

the *nāhiya* of Bāna properly so-called with the fort of Birtā; the other consists of the fort of Shlwa (in Kurdish "slope") which must correspond to the village of Shwē in the district of this name lying to the south-west of Bāna. The former capital, the official Persian name of which is Bihritā, is a short distance from the modern town but its name survives in the popular name given by the Kurds to the present town of Bā-rūza ("exposed to the sun"). The Amīra of Bāna (*Sharaf-nāma*, i. 320) were called Ikhtiyār al-Dīn because "of their own accord (*ba-ikhtiyār-i khud*) they had adopted Islām". The first chief mentioned by the author is Mirzā-bēg of Bāna, who married the daughter of Biga-bēg, governor of Ardilān, which brought him trouble with a rival and the resultant temporary loss of his fief. His son Budāk-bēg, driven out by his brothers, sought the support of Shāh Tahmasp but died at Kāzin. The Shāh ordered the governor of Marāgha to install in Bāna Budāk's brother Sulaimān-bēg who ruled the district for twenty years and finally handed over his position to his son-in-law and nephew Badr-bēg. The Ikhtiyār al-Dīn family, which also claimed descent from the 'Abbāsids, then became vassals of the wālīs of Ardilān. In the time of Rich (i. 217, 248) Nūr Allāh Khān was hereditary governor of Bāna. The last scion of the Ikhtiyār al-Dīn family, Karīm Khān, was killed (about 1890) by his old servant Wenis (= Yunus) Khān, who seized the power in Bāna. His son Hanna (Muhammad) Khān was governor in the district before the Great War. Since 1912 by order from Teherān Bāna has been detached from Sinna and incorporated in the province of Sāwdj-Bulāk.

(V. MINORSKY)

SAWDJĪ, the name of three Ottoman princes. Its origin like that of most old Ottoman names (cf. Baki, Salik etc.) has not been satisfactorily explained: cf., however, W. Radloff, *Wörterb. der Türkisch.*, IV, 431, and Kien, *Gal. of Turk. Mo.*, p. 2729, according to whom it means "Prophet".

1) Sawdjī lived, in the old Ottoman chronicles also called ŞARİ YAVI or ŞARİ BALI, was one of the younger brothers of 'Osman, the founder of the Ottoman dynasty, and a son of Ertoghrul. He supported his brother on his campaigns and fell (684 = 1285/86 in the date given) in battle against the governor of Angelokome (Aine Gol) at Egridje south of Koladja behind Olympus at the foot of a pine tree. The tree was still called *Kundin tan* "pine tree of the lamps" in later times presumably from the lights lit there, the glimmer of which was afterwards given a mystic significance. (According to Neshri, Idris Bidlisi and Sa'd al-Din, *Tuğl al-Tawridh*, I, 18, a 199, a heavenly light, *nur ul nur*, illuminated the tree by night). Sawdjī Beg was buried beside his father in his tomb (*turbe*) at Sogud destroyed by the Greeks in 1922.

Bibliography: J. von Hammer, *Gesch. des Osm. Reiches*, I, 54, and following him J. Zinkeisen, *G.O.R.*, I, 70, (from Sa'd al-Din who follows Idris Bidlisi, *Heft Bidhi*, and Neshri, *Qikamran*).

2) A son of 'Osman was also called Sawdjī. We

only know of him that he fell in battle (*Siddiqi-Othman*, I, 37).

3) The eldest son of Murad I who, when governor of Kuselia, made terms with a son of John V Palaeologus of Byzantium named Antheimos, and rebelled against his father. The Ottoman chronicles give very scanty information about this conspiracy while the Byzantine historians Chalcocondyles, Phrantzes and Ducas give very full accounts, differing only in details; cf. Chalcocondyles, ed. Imb. Bekker, I, 40 199. (Zawjic); Phrantzes, ed. Bekker, I, 50, where the rebel is wrongly called *Mare Tzawrec* i.e. Müsl Celebi through confusion with Bayazid I's son; Ducas, ed. Bekker, p. 22 (Zawjic); where Sawdjī is mentioned but the rebel is called *Kavroç* i.e. Qandir. Murad I acted jointly with John V and took the field against the two princes. After an unsuccessful battle at a place which the Byzantine writers call *Λαυαβίον* (Chalc., p. 43 a) Sawdjī fled to Didymoteichon, where he was surrounded and forced to surrender to his father. He was blinded and then beheaded. The execution took place in 787 (1385/86) and the body was brought to Brusa and buried there. Murad I had apparently made up his mind to get rid of Sawdjī as he had appointed his son Bayazid to watch his movements, cf. Murad I's letter to Bayazid in *Peridika*, *Münasibat Selam*, II, 107 (of the beginning of Rabi' I, 787 = 1385-1386), with Bayazid's answer, *op. cit.*, esp. p. 108 supra, according to which the Kadi of Brusa must have passed a death sentence on Sawdjī. The execution of Sawdjī was the first of a long series of similar cases, in which princes dangerous to the Ottoman heir-apparent were put out of the way.

(FRANZ BARNHART)

SAWIK (A.) is in the first place barley flour, then also wheat flour and flour made of dried fruits, then a soup made from flour with water or a paste to which honey, oil or pomegranate syrup etc. is added. The effects of such flour dishes are discussed by al-Razi in his work on diet. — To revenge the battle of Badr, Ali Sufyan in 129 H-1144/45, 2 A.H., rode with a body of huns towards Medina. Near the town there was some trilling skirmishing and Ali Sufyan fled as soon as Muhammad and his followers approached. The Mekhams in their flight threw away their provisions, mainly *sawik*, which were picked up by the Muslims. The incident has been perpetuated in the *Sira* under the name *Qaswat al-Sawik* (cf. Castani, *Annals dell' Islam*, year 2, § 99).

Bibliography: Ibn al-Balbi, transl. I. C. Clerc, II, 308.

(J. RUSSA)

SAWM (A.), with *SYEM*, *majdar* from the root *š-w-m*; the two *majdar* are used indiscriminately. The original meaning of the word in Arabic is "to be at rest" (Th. Noldeke, *Neue Beiträge zur sem. Sprachw.*, Strasbourg 1910, p. 36, note 3; cf. previously S. Frinkel, *De vocib. in Corani periculis*, Leiden 1880, p. 20: "quiescere"). The meaning "fasting" may have been taken from Judaeo-Aramaic usage, when Muhammad became better acquainted with the institution of fasting in Medina. The word has this meaning in the Muslim *siras*; in the Mekka *siras*

it only occurs once, in Sūra alx. 27, where the commentators explain it by *ṣawm* "silence" (this is therefore given as one of the translations of the word in the dictionaries); but perhaps *ṣawm* has simply to be translated "fasting" here (see below). The verb is followed by the accusative of the time spent in fasting.

Origin of the rite of Fasting. That fasting was an unknown practice in Mecca before Muhammad's time cannot be *a priori* assumed. Why should not the *Ḥunafā* in whose manner of life there were so many Judaeo-Christian features apparent — at least according to tradition — have also used this spiritual discipline? In favour of the occurrence of fasting as a voluntary practice of mortification among the first Muslims in Mecca is the probability that Muhammad on his many and varied journeys had observed the rite among Jews and Christians. But we can say nothing definite on this point; anything told us on this subject in the *Sūra* and Muslim tradition may be biased. In the Mekka *sūras*, as above mentioned, there is a reference to *ṣawm* in xix. 27: a voice commands Mary to say "I have made a vow of *ṣawm* to the Merciful, therefore I speak to no one this day." There is some possibility that *ṣawm* here simply means "fasting", because observing silence as a Christian fasting practice (cf. Afschütz, ed. Parinot, in *Patrol. Syriaca*, i. p. 97) may have been known to Muhammad. Muhammad was in any case not acquainted with the details, because it was only after the Hijra that he ordered the *ʿAshūrā*-day to be spent in fasting, when he saw the Jews doing it in Medina. In the year 2 A. H., according to unanimous reliable Muslim tradition (cf. A. J. Wensinck, *Muhammad in de Joden te Medina*, Diss. Leiden 1908, p. 136—137, in contradiction of e. g. A. Sprenger, *Das Leben und die Lehre des Muhammad*, iii. 53—59), the revelation of Sūra ii. 179—181 again abolished the *ʿAshūrā*-fast as an obligation by the institution of the fast of Ramaḍān. On the question why Muhammad chose this particular month and whence he took the arrangement of the Muslim fast, various opinions have been expressed. Islām teaches that it is the fast imposed by God on Jews and Christians, but corrupted by them and restored by Muhammad to its true form; Sprenger, *op. cit.*, iii. 55 *seq.*, thinks that it was an imitation of the Christian quadragesima; Nöldeke-Schwally, *Geschichte des Qurʾān*, I, Leipzig 1909, p. 179—180, note 1, points to the similarity with the mode of fasting among the Manichaeans. More recently, however, A. J. Wensinck has called attention to the particularly sacred character of the month of Ramaḍān even in pre-Muhammadan times (on account of the — also old-Arabic — *Lailat al-Kaʿb* [q. v.], which happens in Ramaḍān) in his essay *Arabic New-Year and the Feast of Tabris*, *under the Verb. Ak. W. Amst.*, New Series, 1925, vol. xxvii, 1—13; cf. also M. Th. Houtsma, *Over de Israëlitische Fastendagen*, in *Verh. en Med. Ak. Wetensch.*, Afd. Letterk., Series 4, vol. ii. 3 *seq.* (Amsterdam 1898) and with this has opened up the possibility that the solution of the problem of Ramaḍān is to be sought in this direction (for further information see the article *RAMAḌĀN*).

The first regulations concerning the manner of the Muslim fasting are given in Sūra ii. 179—181, which probably belong together (Nöldeke-Schwally, p. 178; in opposition to Th. W. Juynboll,

Handbuch des islamischen Rechts, Leiden-Leipzig 1910, p. 114, who considers 181 a later revelation; al-Buhārī also assumes that it was revealed in separate parts): one ought to fast during a definite number of days, to be precise, in the month of Ramaḍān, "in which the Qurʾān was sent down"; special dispensations were granted to invalids and travellers on condition that they made restitution for it. In obedience to these divine commands the Muslims fasted in Ramaḍān and the devout among them followed the Jewish custom of fasting from one sunset to the next until a new revelation (ii. 183) limited the period of fasting to the day (cf. al-Buhārī, *Sawm*, bñh 15, etc.). The fast is also mentioned elsewhere in the Qurʾān: in Sūra ii. 192, where it is prescribed as a substitute for the *ḥajj* in certain circumstances; in iv. 94, where fasting during two successive months is ordered as an atonement when someone has killed a believer of an allied nation by accident (cf. the article *ḤATĪ*); v. 91: one should fast three days (as a substitute) if one has broken an oath; v. 96: one should fast (as a substitute) if one has killed game on the pilgrimage; viii. 5: one should fast (as a substitute) for two successive months if one wants to make the *ḥajj* [q. v.] invalid (cf. the regulations of the *ḥajj*, below). *Ṣawm* is further used in xxiii. 35 to describe the devout Muslim, along with other epithets, while in Sūra ii. 42 and 148 *ṣawm* [q. v.] is explained as *ṣawm*.

The ordinances in Sūra ii. 179—181, 183, form the basis of the detailed regulation by the *fuḥūḥ* of the law regarding fasting; many minutiae were taken from tradition. What follows here is a résumé of the law on fasting according to the Shāfiʿ school, as contained in the treatise by Abū Shujʿāʾ al-Iṣḥāqī (vth century A. H.) *Muḥṭasab ʾl-Fikḥ*, annotated by Ibn Kāsim al-Ḥarāzī (d. 918 = 1522) and glossed by Iḥṣān al-Bāḍūrī (d. 1278 = 1861) (Cairo edition).

How the fast should be observed and who is bound to fast. Fasting in the legal sense is abstinence (*imāḍ*) from things which break the fast (*muḥṭabāt*), with a special *niyya* (intention) for each of the statutory fasts, and for the whole day; the *ṣāʾim* must be a Muslim in full possession of his senses (*ʿāqil*) and, if a woman, free from menstruation and the bleeding of childhood. The fast may be valid (*ṣāʾim*) under these conditions; there is an obligation to fast on every one who is full-grown (*baligh*) if he is physically fit (*ḥāḍir*). It is to be noted that the actual profession of Islām at the time is necessary for the *ṣāʾim*, while for the *muḥṭabāt* the Islām of a *muḥṭab* is also valid, who is thus after his conversion obliged to make up for the fast days he has omitted (*ḥuḍūr*); one who was born a *ḥāḍir*, who is pledged to Islām, and ought, therefore, to obey its laws also, need not, however, make up for his omissions; the law calls his obligation *muḥṭab ʿalāh*, whereas that of the *muḥṭab* is called *muḥṭab muḥṭab ʿalāh*. The fasting of a non-*ḥāḍir*, who is *munayyis* (has power of discrimination), is valid (one ought to compel a child to fast from the tenth year), as is that of a non-*ḥāḍir*. *ʿAḍl* is to be interpreted as meaning that for an unconscious, insane or intoxicated person *adl* (fulfilment of the obligation at the right time) is not *muḥṭab*. One may spend the day sleeping if the *niyya* has been previously formulated; or in a state of drunkenness or unconsciousness, if one

can pull oneself together even for a moment only during the day.

The *arāḥ* (pillars) of the fast are, besides the *ḥajj*, the *niya* and abstinence from the *muḥarrāt*. One ought to formulate the *niya* before dawn on each day of fasting (*ṭahīr*); by *ṭahīr* [q. v.], however, the *Shāfi* can follow the *Mālikī* *muḥabbab*, which allows one to formulate the *niya* for the whole of the month of *Ramādān* in the night before the first of *Ramādān*; if one fasts voluntarily, the *niya* may still be formed before noon, if one has actually fasted during the preceding part of the day. The *niya* should be deliberately formulated; it is desirable but not necessary to utter the words aloud (the law-books give formulae); indeed, preparations which are made directly in view of the coming fast day may be regarded as *niya*.

The *Muḥarrāt* are:

1. The entering into the body of any material substances in so far as it is done conscientiously and is preventable, i. e. the swallowing of food and beverages, the inhaling of tobacco smoke, the swallowing of spittle which can be ejected; if one sprays or drops liquids or inserts instruments into the various orifices of the body; if one retains what the body in the course of nature would reject. On account of the limitations in a, b, c (see below) it is not *muḥarr* if insects, dust of the road, fragments of food from the teeth, anything that the skin may absorb, water from rinsing the mouth or rinsing the nose, provided too much is not used, even in the not-compulsory *ḥajj* [q. v.], and ritually pure scents find a way into the body. If thirst troubles one exceedingly one may hold water for a moment in his mouth, if it can be done without danger.

2. Deliberate vomiting, which is only permitted by doctor's orders and even then only with liability to *ḥajj*.

3. Sexual intercourse.

4. Deliberate seminal emission, which is a consequence of sexual contact; in other cases a distinction is made as to whether it is caused by passion or not, whether the person causing it is a stranger or a *ḥajj muḥarram*, a boy, a woman or a *ḥajj*. Nocturnal or similar emissions (*istihā*) are not *muḥarr*.

5. Menstruation; this even makes the fast *ḥarām* (this rule is not clear to al-Rāḍī, because the fast does not demand ritual purity otherwise).

6. The bleeding of a woman in child-bed.

7. Unsound mind and

8. Intoxication (7 and 8 make any *ḥajj* impossible), to which a ninth may be added, childbirth, but only in the view of some *ḥajj*.

The *ifṭār* occurs, *causa quæ*, only in case of deliberateness (*al-ḥamūd*), knowledge (*ʿilm*) and free will (*ikhtiyār*), i. e. not by neglect, in ignorance of the obligations if this is to be excused, or under compulsion. "If one eats by an oversight", says the tradition, "he may continue the fast because God himself has caused him to eat" (Ba. Saḥm, bāb 26; *Aḥmād*, bāb 15; *Muḥamm*, *Siyūm*, tr. 171).

It is to be commended if the *ḥajj* (1) takes the *ḥajj* [q. v.] as soon as possible after he is certain the sun has set; he ought preferably to use ripe dates for this, or *ḥajj*-water or otherwise something tasty; the *ifṭār* is *ḥajj*, because the continuous fasting (*ḥajj al-ḥajj*) is *ḥajj*;

2) eats the *ḥajj* (what is eaten after midnight) as late as possible and uses for it the same as is recommended for the *ḥajj*; 3) refrains from indecent talk, slander, calumnies, lies and insults, because, according to the tradition, "the result of fasting is only hunger and thirst, if one does not keep his hands and feet from evil deeds"; 4) avoids such actions as, although not actually forbidden, might arouse passion in oneself or in others; 5) refrains from being copped or blasphemous; 6) tastes no food; 7) chews nothing edible; 8) thanks God after the day of fasting; 9) recites the *ḥajj* for oneself or others, and 10) observes the *ḥajj* in the month of *Ramādān* [q. v.] (in accordance with *Saḥm* II, 183). Al-Ghazālī adds to these charity in the month of *Ramādān*.

Arranged according to the five legal categories, the fast may be:

1. Obligatory (*ḥajj*, *ḥajj*) (a) in the month of *Ramādān*; (b) if one has to make up for days omitted in *Ramādān* (*ḥajj*); (c) on account of a vow; (d) in definite circumstances to atone for a transgression (*ḥajj*), and (e) when the *ḥajj* prescribes the *ḥajj*-ceremonies [q. v.] in season of drought. In the case of inexcusable *ifṭār* one is bound, according to al-Ghazālī, to fast during the remainder of the day, *ḥajj* al-*ḥajj*.

(a) Fasting in the month of *Ramādān* is the fourth pillar of Islam; whoever denies the obligation to fast is a *ḥajj*, unless he has only recently come in contact with Islam, or has grown up remote from the *Ulamā*. Whoever denies to fast without good cause, without, however, denying the compulsion to fast, is to be locked up and brought to formulate the *niya* by forced abstinence. The general obligation to fast (*ḥajj al-ḥajj*) begins on the first of *Ramādān*, after the 30th *Shabān*, or after the 29th if the *ḥajj* (*ḥajj*) has then accepted the evidence of one *ḥajj* that he has seen the new moon; the personal obligation (*ḥajj al-ḥajj*), in the case of an unaccepted *ḥajj* of one's own or that of another person whom one believes in this respect, even if he should not be *ḥajj*, after the 29th *Shabān*; if only one *ḥajj* has seen the new moon on the 29th *Shabān*, fasting etc. only becomes due on the 2nd *Ramādān*. The beginning of *Ramādān* has to be announced to the people in a way settled by the local custom (gun-shot, the hanging of lamps on the *ḥajj*, in Java by beating the *ḥajj*). Special regulations hold regarding *niya* and *ḥajj* if it is impossible for one to hear of the announcement or if he is wrongly informed. The observations of an astronomer, the calculations of a mathematician, or the dream of one who has received in his sleep information regarding the beginning of *Ramādān* from the Prophet, etc., can only allow *Ramādān* to begin for the astronomer, mathematician or dreamer themselves and those who firmly believe in them.

b) Days omitted in *Ramādān* have to be made good (*ḥajj*) as soon as possible, i. e. on the next day if this permits fasting, i. e. is not one of the forbidden days (see below) or is itself a compulsory fast day. If a man dies without having done his *ḥajj*, the obligation is thereby removed if there was a valid excuse for his being in arrears; otherwise his *wali* (in this case any relative can be a *wali*) must pay from his estate, or, with the consent of the *wali*, any stranger can

pay, a small *kaffāra* or *ḥajya* (see below), or the *walt* (or stranger) — and this is the older Shāfi' view, which later authorities do not approve of except, however, al-Bāḥūrī who even calls it *ḥajya* — can perform the *ḥajya* himself, in which case the merit acquired by the fast is credited to the deceased.

(c.) According to the opinion which has predominated in the Shāfi' school, a vow which would impose the obligation to the — reprehensible — *ḥajm al-dahr* (see below) is regarded as not done (cf. al-Bāḥūrī, *Kitāb Aḥkām al-Aimān wa'l-Naḥḥ*).

(d.) A distinction is made between the major and minor *kaffāra*. The first is imposed on anyone who (a) breaks the fast in Ramaḍān by sexual intercourse if this is sinful (*ifḥām*), under the above mentioned conditions, he is further obliged to perform *ḥajya* and be liable to *ḥajm* [q. v.]; because every fast day is an independent *ḥajm*, a *kaffāra* ought to be performed for every fast day broken in this way. Al-Bāḥūrī gives this subterfuge (*ḥajm*) to escape the *kaffāra*, that one should previously break the fast with another of the *ḥajm*; then the *kaffāra* drops out but the sin remains. The female participator in the transgression is only liable to *ḥajya* and *ḥajm*; (β) is guilty of illegal killing (cf. the article *ḥajm*); (γ) has pronounced the *ḥajm*-formula [q. v.] but not the *ḥajm* immediately after it (because he does not observe the vow contained in the *ḥajm*); (δ) has broken a valid oath (*ḥajm*; see the article *ḥajm*). This *kaffāra* consists of

	1	2	3	4
(a)				
and, 'iḥ	(resp.) ḥajm	(resp.) ifḥām	—	—
(γ)				
(β)	'iḥ (resp.) ḥajm	—	—	—
(δ)	'iḥ or ifḥām or ḥajm (resp.) ḥajm	—	—	—

i. e. in the cases (a), (β) and (γ) fasting (*ḥajm*) will do as a *kaffāra* if one is not able to do the first mentioned; if one receives the means to do so after having begun to fast, 'iḥ should be performed and the fasting that has been done is counted as a voluntary work of merit; similarly in case (δ) fasting takes fourth place with the idea that the first three are interchangeable, but fasting always comes fourth. In (a), (β) and (γ) two months' successive fasting is prescribed; the omission of one day makes it necessary to begin the fast from the first again, even if the omission was excusable; in case (δ) the fast is limited to three days and need not be successive. — If a man is not able to do any of the things mentioned, the obligation is put off until he has an opportunity to do one of them.

The minor *kaffāra* or *ḥajya* has to be paid when one takes advantage of one of the dispensations which are detailed below; the question of fasting does not arise. For a dead man (cf. above) it consists in his *walt* giving a *ḥajm* from the corn that grows on his land to the poor for each day omitted. The same aims have to be given by anyone who has not yet performed his *ḥajya* for days omitted in Ramaḍān by the beginning of the following Ramaḍān, and multiplied according to the number of years in arrears. — Anyone who has omitted, while performing the *ḥajm* or the *ḥajm*,

one of the obligatory rites which is not one of the four *arḥām* or performs anything forbidden during the period of *ḥajm* or takes advantage of a dispensation allowed by the law (e. g. *ḥajm* or *ḥajm*), should atone it with a *ḥajya* consisting in the first place of a definite sacrifice which is prescribed for each case separately; if the person liable to it is not able to perform the sacrifice he should fast, in some cases for to days — 3 during the *ḥajm* and 7 after returning home — and in other cases as many days as the quantity of *ḥajm* which would otherwise have been given to the poor. These regulations originate in Sūra n. 192 and v. 90; cf. al-Bāḥūrī, *Kitāb al-Ḥajj*, faḥ. II. and III.; Juyaboll, *Handbuch* etc., p. 145 and esp. p. 157; the art. *Ḥajm*.

(e.) In the case of great drought, the *ḥajm* may, according to the *ḥajm*, prescribe extraordinary ceremonies which include fasting; the three days before the *ḥajm* al-*ḥajm* [q. v.], cf. al-Bāḥūrī, *Kitāb Aḥkām al-Ḥajm*, Faḥ. I. *Ḥajm* al-*ḥajm* are spent in fasting. One notable feature here is that the formulation of the *ḥajm* by night (*ḥajm*) is *ḥajm* for everyone, even when the fast is not obligatory for him, i. e. also for a boy or one who enjoys a dispensation. (This is the only case where *ḥajm* is necessary for a fast which is not obligatory). — Cf. also C. Snouck Hargronje, *Verspreide Geschieden*, I. Bonn-Leipzig 1923, p. 137, note 2.

The law permits relaxations in the following circumstances:

A. Such as have reached a certain age (men 40; not exactly defined for women) and sick people for whom there is no hope of recovery, if they are unable to fast, may omit the fast without being bound to the *ḥajm* should their strength or health be restored. In compensation they should give alms at the rate of one *ḥajm* for each day omitted; a slave does not need to perform *ḥajm* but his owner may do it for him, or a relative; the latter is also permitted to fast in compensation.

B. If pregnant or nursing women fear it would be dangerous for them if they should fast, *ḥajm* is *ḥajm* for them and *ḥajm* is obligatory. If their fear is for the unborn child or the one they are nursing (not necessarily their own), *ḥajm* is *ḥajm* in this case also but a *ḥajya* is imposed on them as well as *ḥajm*, which, however, like the *ḥajm* al-*ḥajm* [q. v.], need only be paid out of the amount which is left over from the expenses of maintaining oneself and dependent family or from the expenses of housing and service; this *ḥajya* is to be given only to the poor and to *ḥajm*. — The same regulations hold generally for cases where one breaks the fast for fear of danger to oneself, respectively to another person.

C. Sick persons who are likely to recover and those who are overcome by hunger and thirst may break the fast on condition that the *ḥajm* is performed. If a man is in danger of death or danger of losing a limb, *ḥajm* is *ḥajm*. Chronic invalids need not formulate the *ḥajm* in the night; nor persons sick of a fever if they are actually feverish at the time.

D. Travellers who set out before sunrise may, if necessary, break the fast, but not if they begin their journey during the day. In case of mortal danger, *ḥajm* is *ḥajm*. Two days' journey is the minimum. *ḥajm* is obligatory on them, *ḥajm* *ḥajm*. The same relaxation is allowed to

divorced women. — If the persons mentioned under C and D break the fast by sexual intercourse, they are not liable to *kaffāra* because in this case it is not a sin but is permitted to them *bi-niyati 'l-tarakkhūṣ*.

E. Those who have to perform heavy manual labour should formulate the *niya* in the night but may break the fast if need be.

When the justification for relaxing the rules disappears during the day of fast, it is *sunna* to pass the rest of the day fasting.

II. Voluntary fasting is meritorious (*saum al-taṭawwūṣ*); for a married woman only with the consent of her husband; it may be broken without any penalty; the *niya*, which can be formulated any time up till noon, need not be definitely specified, although some *fuḡḡah* consider it desirable for the *sunan rawātīḥ*. The *sunan rawātīḥ* in the *saum* are fasting (a) on the 'Āshūrā'-day (q. v.); (b) on the 'Arafa'-day, the 9th Dhu 'l-Hijja; (c) on six days of Shawwāl. Fasting on the day of 'Arafa applies specially to those who do not spend this day in 'Arafa. Whether Muḥammad fasted on this day is disputed in Tradition. Wensinck, *Muḥammad in de Joden te Medina*, p. 126—130, points to the fact that the whole of the first ten days of Dhu 'l-Hijja had a special character and is recommended in the law for voluntary fasting; the 9th Dhu 'l-Hijja, however, is regarded as the most auspicious day, just as in the Jewish month of Ab the 9th is a great feast, for which preparations are made from the beginning of the month. Because Ab and Dhu 'l-Hijja probably coincided in the year 1 A.H., Wensinck thinks that the celebration of the 9th Dhu 'l-Hijja may have been taken from Judaism. Another view is put forward by Nöldeke-Schwally, *Geogr. d. Qorān*, i. 159, who considers Sūra vii. 29 as probably Mekkan and see in it an attack on the ancient custom of 'making the circuit of the Ka'ba naked and fasting at the time of pilgrimage' (cf. p. 179, note 1). According to this view, this fast should be traced back to old Arab customs (cf. al-Baiḡdī's commentary on Sūra vii. 29: 'It is said that the Banū 'Amir in the days of their ḥajj only ate what was necessary to nourish them but took no fat (= tasty) food and thus observed their ḥajj; then the Muslims were disturbed; then this (verse 29) was revealed'). It is considered meritorious if one who has to fast (as a substitute) three days during the ḥajj and seven days afterwards (cf. above) chooses as the 3 days the 7th, 8th and 9th Dhu 'l-Hijja, because the 10th and the *ṭaḡrīḥ* days are not possible (cf. below). If the 9th Dhu 'l-Hijja is a doubtful day (i.e. whether 9th or 10th, on account of uncertainty as to the beginning of the month) fasting is only permitted for *ḥajj*, on account of a vow or a regular custom. Al-Baiḡdī calls fasting from the 1st to the 9th Dhu 'l-Hijja *mandūḥ*.

Six separate days can be taken for the fast on the six days of Shawwāl; but it is best to take six successive days immediately after the festival, i.e. from the 2nd to the 7th Shawwāl. These days can also be taken for a *ḥajj* or a *nadh* fast. Women who have had their menstruation in Ramaḡān often use these days for the *ḥajj* (Juynboll, *Handbuch* etc., p. 132).

The following days are further recommended for voluntary fasting: the day before and

after the 'Āshūrā'-day; the Yaum al-Mi'rāj (27th Rajab); Monday and Thursday (*sunna mu'akkada*, according to al-Baiḡdī), because on these days, says Tradition, the works of men are offered to God. Muḥammad is reported to have said: 'I should like my works to be offered while I fast'. Wensinck, *Muḥammad* etc., p. 125—126, points out that the Jews also fasted on these two days; Wednesday, 'out of gratitude', says al-Baiḡdī, 'that God on this day did not lead this *umma* to destruction, like the other *umam*'; the days of the white nights, i.e. the 13th, 14th, 15th and best of all also the 12th of each month. As Wensinck, p. 125, says, Muḥammad fasted, according to tradition, three days of every month and the later Muslims, who no longer knew which, chose those days. Perhaps these three days were an obligatory fast in the year 1 A.H. Nothing certain can be said regarding the origin of these fast days; Prof. Wensinck in conversation called my attention to the sacred character of the Jewish 14th and 15th Nisān, and to the sacredness of the middle of the month, e.g. in Shābān, in ancient Arabia; as a counterpart, presumably after the example of the white nights, the days of the black nights, i.e. the 28th, 29th, 30th (or 1st) and best of all also the 27th of each month; every day on which one has nothing to eat; all other days if they are proper for fasting. — On a three days' fasting as an atonement and a preparation to a better life see C. Snouck Hargronje, *Verspreide Geschriften*, i., Bonn-Leipzig 1921, p. 137, note 2.

Al-Baiḡdī only briefly mentions the voluntary fast days and refers his readers for further information to more detailed treatises. To supplement what we have said we give the following from the third fast of the *ḥajj* of al-Ghazālī (see below).

He gives as additional days recommended for fasting the first, the middle and the last day of every month, speaks of the superiority of fasting in the sacred months (*al-ayḡhur al-ḥuram*: Muḥarram, Rajab, Dhu 'l-Hijja and Dhu 'l-Ḥa'da), but more important is what he says regarding life-long fasting (*saum al-dahr*) which, as he tells us, was practised by the mystics (*al-sālikīn*) of his time in various ways (as had already been done by ascetics in the earliest days of Islām). In general he considers it blameworthy, as the *iffā* is not only *wājib* some days of the year, but desired generally; only exceptionally may one have follow the example given, according to tradition, by the *Ṣaḡiba* and the *Tābi'ūn* (traditions regarding the *saum al-dahr*: al-Bukhārī, *Saum*, bāb 59; Muslim, *Sayam*, trad. 18 19; cf., however, Ahmad b. Hanbal, iv. 414; cf. also Ahmad b. Hanbal, ii. 263, 435 etc.; ii. 164, 190 etc.). It is highly recommended, however, to fast on alternate days (*nif al-dahr*), which achievement al-Ghazālī considers even more difficult; Muḥammad said: 'The most excellent fasting is that of my brother Dā'ūd, who fasteth one day and not the next' (cf. al-Bukhārī, *Saum*, bāb 50, 56; cf. 58, 59; *Abīyā*, bāb 37, 38, etc.; Muslim, *Sayam*, trad. 181, 182, 186, 187, 189—193, 196 etc.). To fast every third day is also very meritorious. To fast voluntarily for more than four days in succession is considered wrong by the 'Ulamā' and (as a general rule) also by al-Ghazālī. — If one has properly understood the correct significance of fasting, says al-Ghazālī for this see

below), one need observe no rules in voluntary fasting; it is, indeed, said of the Prophet (al-Tirmidhī, *Sawm*, hāb 56) that he sometimes fasted so long that the people thought he would never stop and sometimes went for so long without fasting that the people thought he would never fast again, just as the *nūr al-nuhūrīna* inspired him.

III. Fasting is forbidden (*ḥarām*) on the days of the two great festivals, on the *ṭaḥrīḥ*-days and for a woman during menstruation; in definite cases when danger threatens, as already mentioned above.

IV. It is wrong to fast on Friday, because it distracts the attention from the Friday service (but according to al-Ghazālī it is meritorious); on Sunday or Saturday, at least if one has no particular reason for fasting, because the Christians and Jews observe these as holy days. One also should not fast if one fears he will suffer in any way on account of the fast. It is very wrong to fast without special reason on the "doubtful day" (*yawm al-shakk*) and in the second half of the month of Sha'bān. The "doubtful day" is the day following the 29th Sha'bān if one does not know, with a clear sky, whether an *adl* has seen the new moon of Ramaḍān. If one has a particular reason for fasting, then one may use the doubtful day and the second half of Sha'bān for any kind of fasting: *ḥajl*, *naḥr*, *kaffāra*, etc. Fasting in Sha'bān is otherwise commendable, for the Prophet fasted, as Tradition tells us, so long in this month that he began to think he was in Ramaḍān (many traditions; cf. also A. J. Wensinck, *Arabic New-Year*).

The three other madhabs differ in details from the Shāfi' school; the differences are collected in the *ṭaḥṭīf*-books. The following is taken from the *Kitāb al-Mīnān* of 'Abd al-Wahhāb al-Shar'ānī (ii. 20—30; Cairo 1279); the author appends to his list of divergencies a short explanation of the points of view (*maḥjāz*); sometimes he associates himself with one of them. In the following the order of the subject matter is the same as in the earlier part of this article.

1. Abū Ḥanīfa teaches that the fasting of a young boy or girl is not valid, but valid is that of a *murāḥib*, and that a *mustadd* is not bound to a *ḥajl* after his conversion. The four Imāms teach the validity of fasting by a *djinn* [q. v.]; some other *fuḥahā* are of a different opinion in points of detail.

2. Abū Ḥanīfa teaches that the fast need not be definitely specified in the *niya*, that even the intention of doing a good work is sufficient; that the *niya* can also be formulated in case of an obligatory fast up to noon (others only permit this for a *naḥr* fast). But Mālik teaches that even with voluntary fasts the *niya* cannot be formulated after dawn; his opinion that one *niya* is sufficient for the whole of Ramaḍān has already been mentioned above. Abū Ḥanīfa and the majority of Shāfi' and Mālikī *fuḥahā* teach that the mere intention of breaking the fast does no harm; but Aḥmad b. Ḥanbal holds the contrary view.

3. Abū Ḥanīfa does not consider deliberate swallowing of fragments of food one of the *muḥṣirāt*, any more than one of the opinions said to have been held by Mālik regards the application of a poultice as one.

4. Vomiting does no harm, according to Abū Ḥanīfa and Aḥmad b. Ḥanbal, up to a certain point, which they calculate differently.

5. Mālik teaches that seminal emission spoils

the fast if it is a result of sensual images, even without preceding sexual contact.

6. In spite of the above-mentioned tradition, Mālik teaches that anyone who deliberately eats, drinks, or has sexual intercourse breaks the fast and is liable to *ḥajl*; Aḥmad b. Ḥanbal, only in the last case, *kaffāra* then being also necessary. Forced breaking of the fast holds good also in al-Nawawī; in Aḥmad b. Ḥanbal only in the particular case of a woman being forced to have intercourse.

7. Mālik says that kissing is always *ḥarām*; Aḥmad b. Ḥanbal that the cupper and his patient both break the fast; both Imāms say that the taking of *ḥajl* is to be deprecated and, if the fragrance enters the throat, is actually *muḥṣir*. The Shāfi' view that the cleaning of the teeth after noon is wrong is not shared by the other Imāms and not even by the later Shāfi's (but is shared by al-Ghazālī; even now it is still condemned in the Dutch Indies). There is *ijmā'* on the point that for a *djinn* a *ḥajl* is recommended before dawn.

8. Mālik demands for the settlement of the beginning of Ramaḍān the evidence of two *adl*, Abū Ḥanīfa only the testimony of one, but of a large number when the sky is unclouded. Some other *fuḥahā* recognise only the general obligation (see above) to fast in Ramaḍān, not the personal obligation of the one who has seen the new moon, but whose evidence has not been accepted.

9. Like al-Shāfi', Abū Ḥanīfa also teaches that the weak-minded is not bound to perform *ḥajl* in the event of his recovery; Mālik teaches the contrary; both views are credited to Aḥmad b. Ḥanbal.

10. The four Imāms impose the major *kaffāra* only on one who breaks the fast in Ramaḍān; some *fuḥahā* also on those who break the *ḥajl* fast of Ramaḍān. Aḥmad b. Ḥanbal imposes a *kaffāra* for every breach of the regulations in question, even if several are committed on the same day; in the second transgression the obligation is imposed on the guilty woman also, Abū Ḥanīfa, however, is less severe and does not even multiply the *kaffāra*'s by the number of fast days broken if the *muḥṣir* is in arrears with the payment of the first *kaffāra*; Abū Ḥanīfa and Mālik say that in case of sexual intercourse both man and woman are liable to the *kaffāra* and they impose it also on everyone who breaks the fast of Ramaḍān by eating or drinking, if he is not ill or on a journey, without affecting the liability to *ḥajl*. Mālik leaves the *muḥṣir* free choice as to in which of the three ways he will fulfil his obligation, although he himself prefers *ifām*.

Abū Ḥanīfa does not impose the minor *kaffāra* (the donation of a *muḍ*) if one has not yet fulfilled his obligation to *ḥajl* for the Ramaḍān fast by the beginning of next Ramaḍān.

11. Aḥmad b. Ḥanbal imposes, in addition, the (minor) *kaffāra* on pregnant and nursing women, if they have broken the fast out of fear of injuring themselves; Abū Ḥanīfa, however, only *ḥajl*, others only *kaffāra* and no *ḥajl*.

12. Sick people for whom there is no hope and old people are, according to Abū Ḥanīfa and a section of the Shāfi's, liable to *fiḍya* only; Mālik denies this also.

13. Travellers may, as Aḥmad b. Ḥanbal teaches, break the fast, even if they have set out after the beginning of the fast, but this relaxation does not

include, according to him, permission for sexual intercourse; the *haffara* regulations hold, therefore, also with him. Some *Zahiri*s teach that fasting of a traveller is not valid at all. — Malik and al-Shafi'i teach that one is bound to fast for the remainder of the day if the reason for the dispensation disappears; Abū Ḥanifa and Ahmad b. Ḥanbal hold the contrary. — The *ḥaḍra*, according to the two last-named, is a half *ṣā'* [q. v.] for every day omitted.

14. Malik teaches that fasting on six Shawwāl-days is not recommendable; he and Abū Ḥanifa say that one is bound to complete (*itmām*) a voluntary fast day also.

15. One ought to fast on the doubtful day, according to Ahmad b. Ḥanbal, when the sky is clouded; otherwise it is wrong. — Abū Ḥanifa and Malik teach that occasional fasting (*ifrād*) on Friday is not wrong.

16. Lastly it is to be mentioned that, according to the Ḥanafi and Maliki view, fasting during the *Ṣūf* [q. v.] is obligatory; cf. e. g. Abū Dā'ūd, *Sawm*, *hāḥ* 80 (as A. J. Wensinck says, in his treatise *Arabic New-Year*).

The Shī'a law regarding fasting differs in the following details from the *Sunna* (according to A. Querry's edition of the *Shārḥ al-Isām fī Maṣā'il al-Ḥalāl wa'l-Ḥarām* of Naḍīm al-Dīn al-Mubakkī, entitled *Recueil de Lois concern. les Musulmans Schyites*, Paris 1871-72, i. 182-209, ii. 75-77, 197-199, 203-205):

1. The *niya* is not regarded as a pillar; it need not even be specified for Ramaḍān, although it does in other cases; it ought to be formulated before noon.

2. Smoking is not one of the *muffirāt* but unconsciousness is and if one deliberately remains in a condition of great *ḥadath* after dawn.

3. It is forbidden, nay *muffir*, to scorn God's word or that of the Prophet or that of the (Shī'i) Imām; it is forbidden, although not *muffir*, to bathe completely in water. It is forbidden to keep deliberate silence during the fast.

4. If a man deliberately breaks the fast of Ramaḍān, he is to be chastised (25 lashes with a whip for a man or a woman in a case of sexual intercourse) and for the third offence the penalty is death. — The testimony of two *ādil* is necessary for the beginning of Ramaḍān.

5. One is bound to perform *ḥaḍra*, for example, if one awakes after dawn in a state of great *ḥadath* even if the *niya* for purification has already been formulated. In the *ḥaḍra* fast one may eat before noon; if one eats later he has to pay a *ḥaḍra* (to *mudd* or three days' complete fast); in deliberate neglect of purification in great *ḥadath* makes the *ḥaḍra* fast not invalid. If an invalid remains ill till the following Ramaḍān, his obligation to *ḥaḍra* expires but the *ḥaḍra* (1 *mudd*) remains.

6. *Kaffara* is compulsory if one, during the fast day, eats, drinks etc., has sexual intercourse, practises onanism, voluntarily remains in a state of great *ḥadath* after dawn or falls asleep in this condition without having previously formed the *niya* for purification, and then does not awake till after dawn, viz.: on a day of Ramaḍān; during *ḥaḍra* for an omitted fast in Ramaḍān if the *ḥaḍra* takes place after noon; in fasting on account of a particular vow and for *ṣūf*. — If a man forces his wife or slave to marital intercourse in Ramaḍān, his *ḥaḍra* and *kaffara* are doubled but the

wife is exempt. Other causes of *kaffara* are: manslaughter, forbidden expressions of grief at a death, hair-cutting when in a state of *ḥaḍra*, intercourse with a slave woman who is in a state of *ḥaḍra* if one has given her permission for the *ḥaḍra*.

In performing the *kaffara*, fasting comes second, as with the *Sunnīs*; deliberate murder, however, and, according to some *ḥanbalīs*, also the breaking of the fast of Ramaḍān with forbidden foods, entails threefold *kaffara*: *ṣūf* + *ṣawm* + *ṣūf*. The choice is free if one breaks the fast in Ramaḍān in another way than by sexual intercourse, breaks a vow or *ṣūf*, cuts one's hair when in a state of *ḥaḍra*, or has intercourse with a slave woman who is in a state of *ḥaḍra*.

In general the *kaffara* fast should be uninterrupted. In the case of a two months' fast inexcusable interruption in the first month makes a repetition necessary; in the second it only entails obligation to the *ḥaḍra*. Interruption by a pregnant or nursing woman is here excusable, but not an unnecessary journey (see below). If the duration of this fast is only one month, as e. g. the *kaffara* fast of a slave, the hard period lasts 14 days. Interruption on the 10th *Ḍhu'l-Hijja* does no harm in the three days' compensatory fast (see above), if one has already fasted two days. — The choice of the days is, however, open in the case of *kaffara* for breach of an oath, for breaking the prohibition of hunting during the *ḥaḍra*, and in the seven days' compensatory fast (see above) (as also in case of *ḥaḍra*). If one is not fit to fast for two successive months, he should fast 28 days and seek God's mercy with contrite heart. — Another kind of *kaffara* (not fasting) may be voluntarily taken over on behalf of another person.

7. The relaxations. Only if a physician permits an invalid to fast, is it legitimate. Pregnant women are only given a dispensation in their last months and nursing women only when their milk supply is defective. The fasting of travellers is in general not valid; but if a man travels for the best part of a year in the course of his business he does not get the benefit of relaxation. A fast neglected on account of a journey must always be observed later; in case of death by the *waḥl* of the deceased.

8. Voluntary fasting may begin before noon. The Shī'a *Fiqh*-books recommend fasting on the following days also: on every first and last Thursday of the month; on the first Wednesday of the second ten days of the month (on should even pay compensation, 1 *mudd* or 1 *dirham*, if this is omitted); on the day of the *Id al-Ghadir*, 18 *Ḍhu'l-Hijja*, on which day Muhammad is said to have appointed 'Alī his immediate successor at the side of a pond (*ghadir*) (Querry, *op. cit.*, p. 37, note 2); on Muhammad's birthday (17 Rabi' I) and on the first day of his mission (27 Rabi' I); on the day when the Ka'ba was liberated from chaos, the first place to be created on earth (25 *Ḍhu'l-Ka'da*); on the *Muḥalla*-day, because on this day Muhammad and Abū Ḍjaḥl are said to have hurled a curse against the one of them who preached a false doctrine. (Querry, *op. cit.*, p. 37, note 3) (24 *Ḍhu'l-Hijja*); on the 10th of Muḥarram, the anniversary of the murder of Husain; on Friday; during the month of Rajab and Sha'ban. Fasting on the doubtful day is also meritorious. — The law recommends moderation for the days on which an obstacle to fasting is removed: one should first eat a little and then fast.

9. It is wrong to fast: on the 9th Dhū l-Hijja in 'Arafa, if one fears harm from it; on a pious journey except 3 days in Medina during the Hajj; if a guest fasts without permission from his host, and a child without its father's permission, etc.

10. Fasting is forbidden: on the *taḥrīḥ*-days for those who are in Miṣr; for travellers.

Al-Ghazālī gives at the beginning of his *Kiṣāb al-Ṣiyya* in the *ḥajj* some considerations on the value of fasting. He points out, referring to some well-known traditions, the high esteem in which fasting stands with God; he gives as a reason for this that fasting is a passive act and no one sees men fast except God; secondly it is a means of defeating the enemy of God, because human passions, which are the Shayṭān's means of attaining his ends, are stimulated by eating and drinking. The passions "are the places where the Shayṭān live in abundance and where they feed; so long as they are fruitful, they continue to visit them often, and so long as they visit them frequently, the majesty of God is concealed from the slave and he is shut off from meeting with Him. The Prophet of God even says: 'If the Shayṭān did not fly around the hearts of men they would readily think of heaven.' Fasting is therefore 'the gateway to divine service'."

In the first *faṣl* al-Ghazālī details the legal obligations and recommended actions of the fast, according to Shāfi'i doctrine, and in the third the recommended fast days, just as a faḥṣh would do. But he says in the second *faṣl* that the most punctilious observation of the external law of the fast is not the essential of the fast. He distinguishes three steps in the fast. The first step is that of the *fiḥ*, the third that of the Prophets, the *ṣā-dīqūn* and those who have been brought into the proximity (of God) (*al-muṣṭarrabūn*), whose fast consists in refraining from all mean desires and worldly thoughts. The second step suffices for the pious, however; it consists in keeping one's organs of sense and members free from sin and from all things that detract from God. Everything should be avoided which might affect the result of the fast; for example, at the *ḥajj* one should not eat more or fare better than usual (this is contrary to the *fiḥ* regulation) and one should not sleep during the day to avoid feeling hunger or thirst, for they are the *ṣūb* and *ṣirr* of fasting because they fight the power of the passions. Subjection of the passions, whereby the soul is brought nearer to God, is the real object of fasting, not mere abstinence; and he deduces the worthlessness of the fast of those whose conduct at the *ḥajj* destroys the results of the fast day, of whom the tradition says: "How many fasters there are for whom only hunger and thirst are the results of their fast."

The ethical conception of the fast which al-Ghazālī gives in this second *faṣl* supplements, he says, the barren law of the *ṣaḥāb*, but to us it appears often to contradict it. In the *ḥajj* we find already various traditions with ethical tendencies and al-Ghazālī does not fail to quote them in support of his view. Besides we find in the works on *ḥajj* a mass of traditions relating to the fast, which will be found classified under the separate subjects in Prof. Wensinck's work (now about to appear) *A Handbook of Early Muhammadan Tradition*, under the word *FASTING*. Here we can only quote a few traditions which refer to the estimation in which fasting was held

in the early Muslim world. As it is to this day a widespread view that fasting, especially the fast of Ramaḍān, is the most fitting atonement for sins committed in the course of the year — which is why the fast is fairly generally observed, although not always so strictly as the *ṣaḥāb* desire; cf. the article *RAMAḌĀN* —, so it was with the early Muslims (cf. al-Bukhārī, *Imān*, bāb 28; *Ṣawm*, bāb 6; al-Tirmidhī, *Ṣawm*, bāb 1, etc.). Various traditions compare the value of fasting at one time with its value at another, as, for example, "fasting on one day in the holy months (see above) is better than 30 days at another time, and fasting on one day in Ramaḍān is better than 30 days in the holy months". "If anyone fasts three days in a holy month, Thursday, Friday and Saturday, God considers one day equal to 900 years for him". Similar traditions refer to fasting on the 'Ashūrā'-day, the ten days in Dhū l-Hijja and especially in Ramaḍān (q. v.). Other traditions tell how dear to God is the person of the faster or his characteristics; even is "the scent of the breath of a fasting man pleasanter to God than the scent of musk" (Aḥmad b. Hanbal, ii. 232, etc.). God compares one, who denies his passions for His sake, with His angels and says to him: "Thou art with Me like one of My angels", and He urges His angels to regard those who fast. The joys of the faster in Paradise are described and how he is honoured there; he will enter by a special gate (*al-Raiyān*) and meet God (al-Bukhārī, *Ṣawm*, bāb 4; Muslim, *Ṣiyya*, tr. 166, etc.). This is his heavenly joy; his joy on earth is the *ḥajj* (al-Bukhārī, *Tawāḥid*, bāb 35; Aḥmad b. Hanbal, i. 446, etc.). One should, therefore, not deny this joy, because one has a right to it. To continue fasting after twilight is, moreover, not necessary, for "the sleep of the faster is (already) 'ḥajj'".

Bibliography: A comprehensive work on fasting among the Muslims has not yet appeared. An outline of the law on the subject according to the Shāfi'i school is given by Th. W. Juynboll, *Handboek des islamischen Geestes*, Leiden-Leipzig 1910, p. 113-144. (Dutch: Leiden 1903 and 1925; in the edition of 1925 the most recent bibliography is given). The main sources are the pertinent sections in the books of *ḥadīth*, *Fiḥ* and *ḥajj*. For Tradition cf. the work just about to be published, *Handbook of Early Muhammadan Tradition*, alphabetically arranged by A. J. Wensinck. Al-Ghazālī, *ḥajj* 'Uḥm al-Dīn, Cairo n. d., i. 207-214. For details of the observance and various customs of Ramaḍān in Muslim lands see the articles *ORUḌ*, *FUWASA*, *RAMAḌĀN*, *RŪḤA*.

(C. C. BERG)

SA'Y. When the pilgrim who is making the *ṣumra* or the *ḥajj* has performed the circumambulation (*ṭawāf*) of the Ka'ba, kissed the Black Stone for the last time and drunk of the well of Zamzam, he goes out, taking care to put his left foot first, of the sacred mosque by the Bab al-Sa'ā, pronouncing the formula of salutation to the mosque, then a second formula indicating his intention (*niyya*) to accomplish the ceremony of *sa'y*. He ascends the steps of al-Sa'ā about 50 yards from the gate and standing there he makes an invocation, looking towards the Ka'ba, with his hands raised to the level of his shoulders and the palms turned towards the sky. Between al-Sa'ā and another little hill, al-Marwa, lies a broad street with houses

and shops on either side; this is the *Maṣ'ā* where the pilgrims have to accomplish the ritual course. Walking at a normal rate he descends towards the former bottom of the valley (*Masīl*), marked by four pillars, two along the mosque on the left and two others opposite it; to cross it, he assumes a more rapid pace, called *ḥarwal* or *ḥadab*, like the *ramal* of the *ṭawāf*, and runs. Then walking slowly he reaches al-Marwa which is marked by an arch of stone like al-Saffa and he again prays there. He has now completed one of the seven elements of the ceremony for, except for one isolated opinion, the authorities agree that the *sa'y* consists of seven simple courses. It is usually followed by a desanctification by shaving or cutting the hair, which explains the large number of barbers' shops on the *Maṣ'ā*.

The *sa'y* has not the value of an independent rite like the circumambulation of the Ka'ba, the accomplishment of which, without the *'umra* and the *ḥajj*, is reckoned to the spiritual credit of the believer. The *sa'y* is an appendage to the circumambulation (*ṭawāf*) of the *'umra* or of the arrival (*ḥudum*) or of the desanctification (*ifāda*), and the authorities are not agreed as to its importance, whether essential, obligatory or traditional. The law does not impose on the faithful who accomplish it the strict necessity of ritual purity that it demands for the *ṭawāf*.

The *sa'y* is an ambulatory rite with a brief period of running, analogous to the *ṭawāf*, to the *ifāda* of 'Arafa and Mudalifa etc.; undoubtedly it was actually a separate ancient rite, which became combined with those of the Ka'ba, as the *ifāda* did to the ceremonies of 'Arafa and Mudalifa. Tradition has retained the memory of the cult of two divinities, Isf and Nā'ila, but only in the story that they were a man and a woman who were turned into stone for fornicating in the sanctuary and later came to be worshipped. Later Muslim tradition turned them into Adam and Eve, who sat on either of the hills to take a rest. But tradition has made special efforts, not without hesitation, to connect the rite with the story of Abraham: Hājar, cast off by Abraham and seeing lamā'il perishing of thirst, ran in despair seven times from one hill to the other; or it is said that Abraham instituted the *sa'y* for the worship of Allah and quickened his pace (the *ḥarwal*) to escape Satan who was lying in wait for him at the bottom of the ravine.

Bibliography: See the art. *ḤAJJ* and *KA'BA*, and add: Gaudfroy-Demombynes, *Le Pèlerinage de la Mekka*, p. 225—234, with references especially to al-Azraqi, Kuth al-Din, Ibn Djubair, Nāṣir Khusrāw, Muḥammad al-Ṣādiq, al-Batānī, Burkhart, etc.

(GAUDFROY-DEMOMBYNES)

SAYĀBIGA, سِيَابِجَة, read SAYĀBIGA, name

of a people. The Arabic form سِيَابِجَة is to be read with ج used as a guttural sonant, as the etymology of the name indicates.

De Goeje has devoted a short article to the Sayābiga in his *Mémoires d'histoire et de géographie orientale* (N^o 3, Leiden 1903, *Mémoire sur les migrations des Tringues à travers l'Asie*, p. 18 and p. 86—91) which has been used here; see also his *Contribution* (*Kon. Ak. v. Wet.*, Amst. 1875, ed. in English by D. MacRitchie, *Accounts of the Gipsies of India*, London 1886).

According to al-Balādhuri (ed. de Goeje, p. 373, s. infra), they were already settled before Islām on the coasts of the Persian Gulf (*wa-kānū ḥabī al-islām bi-l-baḥr al-ʿarabī*). In the reign of the Caliph Abū Bakr (632—634), there was at al-Khatt in al-Bahrain a garrison of Sayābiga and Zoṭī — these two peoples are frequently mentioned together although they have nothing in common (cf. the art. Zoṭī) — (cf. al-Tabari, ed. Zotenberg, p. 823—923; ed. de Goeje, i. 1961, 4; Abū 'l-Faraj al-Iṣṭahārī, *Kitaḥ al-Aghānī*, xiv. 46). In 17 (638) the Oswāri, horsemen of foreign origin in the service of the king of Persia, concluded a treaty with the Muslim commander, which the Caliph 'Umar ratified, by the terms of which they pledged themselves to adopt Islām and to enter the service of the Arabs on condition that they received a scale of pay equal to that of the best paid soldiers, that they should be free to attach themselves to the Arab tribe which they preferred and that they should only have to fight against non-Arabs (al-Tabari, i. 2562 199). Their example was followed by the Sayābiga and the Zoṭī and they all attached themselves to the Arab tribe of Tamim (al-Balādhuri, p. 373—375). In 36 (656), the Sayābiga were entrusted with the guarding of the Treasury of al-Basra; the army of the people of Kūfa which came to the help of 'Alī included a body of Zoṭī and Sayābiga (cf. al-Balādhuri, p. 376; al-Mas'ūdī, *Les premières d'or*, ed. and transl. Barbier de Meynard, iv. 307, where السكك is wrongly written for السيابكة; al-Tabari, i. 3125, 3134 and 3181). In

a poem by Yazīd b. al-Mufarragh al-Himyari edited about 59 (677—678) there is a reference to "savage Sayābig barbarians who put irons on me in the morning" (Ibn Kūṭāba, *Kitaḥ al-Shu'ara'*, p. 212), which seems to imply that the Sayābiga acted as gofers. In 160 (775/776) they took part in a naval expedition against the town of al-Narbadh, that is the modern Branch on the west coast of India (cf. al-Tabari, iii. 460 199).

The Sayābiga came from Sind. "The Sayābiga, the Zoṭī and the Andaghār", says al-Balādhuri, "formed part of the army of the Persians; they were people of Sind whom the Persians had taken prisoners and made to perform this service" (p. 375, s. 7). Al-Jawāziri (*al-Mu'arrakh*, ed. E. Sachau, Leipzig 1867, p. 82) similarly says: "al-Laith says: ... These are people of Sind who accompanied the *ḥajj* (سَيَابِجَة plur. سَيَابِجَة).

In al-Mukaddasi, ed. de Goeje, p. 10, 17; the origin of this word is unknown; it means the leader of the marines in the warships"; then, according to another source, "the Sayābiga are people of Sind who in al-Basra were police officers and prison warders". Ibn al-Sikkī (d. 857) quoted in the *Lisān al-Arab* (iii. 118—119) gives identical information: "The Sayābiga are a people of Sind who were hired to fight as mercenaries and they formed the guard". Similar explanations are given in the *Taḥf al-Arab* (ii. 56).

From all these sources which are in perfect agreement it is evident that the Sayābiga were naturally soldiers, disciplined, used to the sea, faithful servants, which qualities rendered them most suitable to serve in the army by land or sea, to act as guards and to act as soldiers, police officers, gaoles and warders of the treasury.

All the readings of the manuscripts of the Arab texts quoted above bring us to *Sayābiga* which is the correct form (cf. likewise Muharrad, *Kāmil*, ed. W. Wright, Leipzig 1864, p. 41, 5, and 82, 17). It is the form which Sibawaih gives (ed. H. Derenbourg, ii. 209, 5-6), and he adds "they say *Sayābiga* because this word combines the two peculiarities of being a foreign word and plural of an

ethnic in *سَي*, being practically equal to a plural *sayābiyyūn*". According to al-Djawālīqī (*loc. cit.*), the singular is *sayābi*. Now de Goeje points out (*loc. cit.*, p. 88) that the people of the 'Irāq pronounce the vowel *ā* as *ā* and this phenomenon is not isolated in Arabic dialects; my friend William Marçais calls my attention to its occurrence in Tunisian. This enables us to state the following equation: *سَيَابِغَة* *Sayābiga* < singular *سَيَابِغِي*

Sayābi = *سَيَابِغِي* *Sābiḡi* < *سَيَابِغ* *Sābiḡ*. The *Lisān al-'Arab* (*loc. cit.*), on the other hand, notes that "sometimes they say *Sābiḡ*".

The original form of *Sābiḡ* was pointed out to de Goeje by Hendrik Kern. It is now easy to reconstruct its phonetic history from documents which were not available to the latter. The change *Sābiḡ* < *Djāvaka* = Sumatra, the *زَابِغ* *Zābiḡ* (inaccurately transcribed *Zābiḡ*) of the Arab geographers, is thus proved: the earliest mention of the island of Sumatra by this name is found in the third century A.D. in the *Nan tou yi wen* of Wang Chen and the *Fu-nan tu su lun* of K'uei

Tai in the form *社薄* *Sā-pu*, old pronunciation **Dja-lak* = *Djāvaka* > Arabic *Zābiḡ*. Much later we find in the *Mahāvamsa* (lxxxiii. 36-48, and lxxxviii. 62-75) the original form *Jāvaka* (pronounce *Djāvaka*; for these texts cf. my memoir *L'empire sumatranais de Grivijaya*, in the *J. A.*, Series 9, vol. xx. 170-173). In the thirteenth century a Tamil inscription of 1264 has *Sāḍavaka* (*ibid.*, 1922, p. 48), which is the Dravidian form of the above readings. The initial is rendered in Tamil by a character which is transliterated indifferently *ṣ*, *ṣ*, *ṣ*, and even *ṣ*, i. e. the sonant and mute palatals and the palatal and dental sibilants; it is the palatal that is generally used to transliterate it; whence *ṣ* > *ṣ*. The change of Indian *ṣ* to *ṣ* — palatal to dental sibilant, in the present case of *Sāḍavaka* to the Arabic *Sābiḡ* — is quite regular. We have a parallel example in the Sanskrit *शक्र* *śakra* "teak" (*Tectona grandis*) which becomes in Arabic *سَاج* *sāj*, more frequently inaccurately transcribed *siḡ*.

The *Sayābiga* then are the descendants of ancient Sumatran emigrants to India, then to the 'Irāq and the Persian Gulf where there is evidence of their existence before Islam. This is not surprising for we know from other sources also that the Sumatrans colonised Madagascar at a very early date (see the art. *खण्डो*); the eastern route was familiar to them. (GABRIEL FERRARD)

SKUTARI. [See SKUDĀR.]

SEBASTIYA. 1) The Arabic name for the ancient Samaria, which Herod had changed to *Σεβαστή* in honour of Augustus. The form *Σεβαστή* — as in the case of other towns of this name — was presumably also used, as the

Arabic name (which is sometimes also written *Sebastiya*) suggests. By the end of the classical period, the town, overshadowed by the neighbouring Neapolis (Sichem; Arab: Nābulus), had sunk to be a small town (*πρωτεύουσα*) and played only an unimportant part in the Arab period. It was conquered by 'Amr b. al-'Ās while Abū Bakr was still Caliph; the inhabitants were guaranteed their lives and property on condition that they paid poll-tax and land-duties (al-Balādhuri, ed. de Goeje, p. 138; Ibn al-Athīr, *al-Kāmil*, ii. 388). Al-Battāni is the first of the Arab geographers to mention it, but gives already much less accurate figures for its position than Ptolemy had done. In the later Arab geographers *Sebastiya* appears on a place in the Djund Filastin. According to a tradition found as early as Jerome, for example, the tomb of John the Baptist was there (Ibn al-Athīr, *loc. cit.*: Vahyā b. Zakariyā; xi. 333 wrongly only Zakariyā); on its site there was in late antiquity a basilica built and in the crusading period (in the second half of the thirteenth century) a church of St. John; remains of the latter still survive. According to western sources, *Sebastiya* was again a bishopric at this time (Lequien, *Oriens Christ.*, iii. 650-664). 'Uṣāma b. Munqidh, about 1140, visited the town and its sanctuary. Šāliḥ al-Dīn advanced on *Sebastiya* in 1184 but its bishop by handing over 80 Muslim prisoners saved the town from the terrible fate of Nābulus (Ibn al-Athīr, *op. cit.*, xi. 333; Abu 'l-Fida', *Annales*, in the *Recueil des hist. orient. des croisades*, i. 53; Ibn Shaddād, *ibid.*, iii. 82; *Epistola Balduini*, in Röhricht, *Regesta regni Hierosol.*, N° 638). In the year 1187 it was finally taken from the Crusaders by Ḥusām al-Dīn 'Umar b. Lādīn; the church of St. John was turned into a mosque and the bishop brought to 'Akkā (Ibn al-Athīr, *op. cit.*, xi. 357).

Bibliography: al-Battāni, *Kitāb Zīj al-Šāliḥ*, ed. Nallino, in the *Pubblicazioni d. Reale Osservat. di Brera in Milano*, N° xl/ii. 39, N° 114; *B. G. A.*, v. 103, vi. 79, vii. 329; Vāḡūṭ, *Muḡjam*, ed. Wüstenfeld, iii. 33; Derenbourg, *Vie d'Ousama*, p. 188-194, 486; Arabic text, p. 528, 617; Cuinet, *La Syrie*, p. 192; Thomsen, *Loca Sancta*, i. 102; Schürer, *Geogr. d. jud. Volkes im Zeitalter Christi*, ii. 195-198; R. Hartmann, *Palästina unter den Arabern (Das Land der Bibel, I/iv)*, p. 14; Baudouin, *Palästina u. Syrien*, 1904, p. 195. On the results of the American excavations, which, however, only affect the pre-Arab period, see: G. A. Reisner, C. S. Fisher, D. G. Lyon, *Harvard Excavations at Samaria 1908-1910*, i. (text), ii. (plans and plates), Cambridge (Mass.), Harvard Semitic Series 1924. 2) A place in the *Thughūr al-Šāmīya*, according to Ibn Khurṣādībīh (*B. G. A.*, vi. 117), on the Cilician coast, 4 *mil* from an otherwise unknown Iskandariya, which again was 12 *mil* from Kūrsiyya (*Kopron*). It is the ancient *Ἐλεάνθη* or *Σεβαστή*, the modern Ayasb.

Bibliography: Pauly-Wissowa, *Realencykl.*, v. 2228, s. v. *Elainissa*; il A. 952, s. v. *Sebastie* N° 5; Tomaschek, *S. B. Ak. Wien*, 1891, Abh. viii. 65; E. Herzfeld, *Peterm. geogr. Mitt.*, 1909, iv. 29, col. 2.

3) A town in Asia Minor, which was taken by al-'Abbās b. al-Walīd in 93 (711/712) along with al-Mazubānain and Tūs (? should we not read *Tarūs*?) whose situation is unknown. In some manuscripts

of al-Jabart and Abu 'l-Mahāsīn the name is wrongly written *Samastiya* (or something like that) which can hardly, as Brooke suggests, stand for the Byzantine *Mastua* in Phrygia. The reference is rather to the Phrygian *Σαβάρρ* (Pauly-Wissowa, *Realencykl.*, ii A. 951, N° 1).

Bibliography: Ibn al-Athīr, *al-Kāmil*, iv. 457; al-Jaluri, ed. de Goeje, ii. 1236, with note b.; Abu 'l-Mahāsīn, i. 251; Brooks, *Journ. of Hellenic Studies*, 1898, xviii. 193.

4) A town of this name said to be not far from Samasāy on the Upper Frāt is mentioned by Yāqūt, *op. cit.*, iii. 33. It might be Juliopolis in Cappadocia (Ptol., v. 6. 25, p. 893, ed. Müller) which was presumably called after Augustus and perhaps may have also been called *Sebasteia*; but perhaps we should rather assume there has been some confusion with Siwās on the Upper Nahr Alia (Halys).

(HONIGMANN)

SEBKHA, a salt lagoon. The *sebkha* is one of the characteristic features of the hydrography of North Africa and the Sahara, very common in the high plains, without communication with the sea. It is the terminus of a network of streams either above ground or subterranean, which have spread out and disappear in the ground; it is a shallow basin with well marked contours sometimes delineated by steep sides. After rain it is more or less completely filled with water impregnated with mineral substances which accumulate at the bottom of the basin. In periods of drought, the waters evaporate completely or partly and the floor is uncovered. The floor of the *sebkha* is covered with saline incrustations, sometimes traversed by crevasses in which the crystals gather. The salt deposit sometimes covers mud, quicksands and dangerous quagmires.

This definition and description of the features of the *sebkha* apply equally to the *shott*. An attempt has been made to establish a distinction between the two, the former term being applied to hollows which always remain more or less moist, the second to those whose evaporation is greater than the access of subterranean water or to those the floor of which looks like a plain losing itself in the horizon. There is no real foundation for this distinction. The two terms are employed indifferently in the same district. For example we have in Orania the *sebkha* of Oran and the *shott* Ghartū and Shurkī, in the Sahara the *sebkha* of Timimūn (Gurara), the *shott* of Southern Tunisia, the *sebkha* of Wargla, of Siwa, etc.

Bibliography: see the *Bibliography* of the article SAHARA.

(G. VYER)

SEBZEWĀR, near Herāt, is the present name of the town of Asfīzār or Asfuzār (Ahmad Rāzi, *Haft Ilām*: Sebzar) attached to Sijistān. It lies to the south of Herāt, three days' journey north of Fara. In the itineraries it has the name of Khastān or Dīshān. In the 14th (15th) century there were in this region four towns of importance besides Asfuzār, which was the chief place of this district; a town of medium size, surrounded by orchards and vineyards; its inhabitants were Sunnis of the school of al-Shāfi'ī [q. v.]. There used to be a stone fortress called Muṣaffar Kūh on the summit of a mountain; the soil inside and around the town was so soft that it was sufficient to dig down a few inches to get water. According to al-Isṭakhri, *B. G. A.*, i. 264, it was the name of the district and not of the town.

A.*, i. 249, 264, 268; ii. 305, 318, 319; iii. 298, 308; Hamd Allah Mustawfī, *Nuzhat al-Kulūb*, ed. Le Strange, Gibb Mem. Ser., text, p. 152, 178; transl., p. 151, 171; G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 340, 351, 412, 431. (CL. HUART)

SEBZEWĀR is a city of Khurāsān, situated sixty-four miles due west of Nishāpūr, and should not be confounded with the town of the same name in Western Afghanistan, south of Herāt; see the preceding article. Many legends of the heroic age of Persia are associated with Sebzewār, and the square in the centre of the town was long pointed out as the scene of the combat between Rustam and Suhrāb and was known as *Maidān-i Div-i Safid*, "the plain of the White Demon". Sebzewār was a town of some importance in the district of Baihaḡ [q. v.] and eventually took the place of Baihaḡ as the principal town of the district. Sultān Shāh, after having been expelled from Khwārizm by his elder brother Takaish, took Khartak as his share of his father's kingdom, and in 1186 besieged and captured Sebzewār, and was with difficulty restrained from ordering a massacre of its inhabitants, who had defied him with abusive language to take their town. The town was destroyed by the invading hordes of the Mongols, but recovered its prosperity, and in 1337 'Abd al-Razzāk, a native of the village of Baghtū who had been in the service of the Il Khān Abū Sa'īd (1316—1335) of Persia, headed a rebellion against the tyranny of the local governor, gained possession of Sebzewār and the neighbouring district and founded the dynasty of the Serbadars, [q. v.] who reigned there for nearly half a century, until they were overthrown, in 1381, by Timūr Mahmund, the heir male of the house, was enabled by the favour of Timūr's grandson, Bāysunqar, to retain some part of the heritage of his ancestors. The town, which fell into decay, was restored by the early Safawid kings and became the capital of a district containing forty townships. It has ever since remained an important town of Khurāsān. The inhabitants have been noted for centuries for their attachment to the Shī'a, and Husain Wā'iz, author of the *Amwāl-i Sahābi*, whose zeal for that sect was suspected, narrowly escaped death at the hands of the fanatics of the town.

Bibliography: C. Barbier de Meynard, *Dictionnaire Géographique, Historique, et Littéraire de la Perse*, Paris 1861; al-Djuwainī, *Tarīkh-i Dīwān Ghāzī*, ed. Mirzā Muḥammad, Gibb Memorial Series, 1916; Stanley Lane-Poole, *The Mohammadan Dynasties*, Westminster 1894. (T. W. HAIG)

SEDJESTĀN. [See SĪSTĀN.]

SE'ERD, SĪ'ERD or SĀ'ERD, a little town in the frontier region between Armenia and Turkish Kurdistan, situated in a valley formed by the Bohtān Sū and the river of Bidlis about 30 miles S.W. of Bidlis and about 18 north of the Tigris. The little river Kezer runs near Se'erd; but it is the Bohtān Sū which is sometimes called Se'erd Sū (So'örd Sū in von Moltke). This name is also found in al-Mas'ūdī, the earliest Arab geographer to mention Se'erd; he calls the Bohtān Sū سُرْدِسْتَان

(ed. Paris 1840, i. 227); likewise al-Iḍrāt (transl. Jaubert, ii. 172). The orthography varies much:

سعر (al-Iṣṭakhrī, Ibn al-Aṭhīr, Sharaf al-Dīn), سعار (Abu 'l-Fidā', Yāqūt), ساعر (al-Mustawfī), ساعر (Hādījī Khālifa). The last form is the official Turkish orthography (cf. *Kamūs al-A'lām*). The Syriac form is Se'erd (*Z. D. M. G.*, viii. 357, note) and the Kurd form is Sērt (al-Khālidi, *al-Hadīya al-Hamidiya fī 'l-Lughat al-Kurdiya*, Constantinople 1310, p. 144). The origin of the town is unknown; the suggestion put forward by the travellers Shiel and Kinneir that it is the ancient Tigranocerta has already been disposed of by Ainsworth and Ritter, who rely particularly on the complete absence of traces of ancient buildings and on the description of Lucullus's campaign against Tigranes given by Plutarch. Moreover, C. F. Lehmann-Haupt in 1899 has identified the site of Tigranocerta with the modern Maīyāfārīk.

Se'erd, a town with only slight fortifications (al-Iṣṭakhrī; the *Sharaf-nāme* alone calls it *ḥal'a*), has generally shared the political history of Diyār Bakr and Hīn Kaifa. Thus in the xth century it was in the hands of the Marwānids (Ibn al-Aṭhīr, ix. 56); in the century following it passed to the Uruḡids of Hīn Kaifa and was taken by 'Imād al-Dīn al-Zangī in 538 (1143/44; cf. Ibn al-Aṭhīr, x. 62). The Mongols sacked it after the defeat of Djalāl al-Dīn Khwārizm-Shāh (Ibn al-Aṭhīr, xii. 326) but it seems to have quickly recovered, for al-Mustawfī calls it a large town with rich revenues. After experiencing the rule of the Il-Khāns [q.v.] and the Ak-Koyunlu [q.v.] Se'erd about 1500 passed to the Ṣafawids. During the xivth and xvth centuries the town had belonged to the little Kurd dynasty of the Malikān of Hīn Kaifa (descendants of the Aiyūbids). After the battle of Cālāfrān (1513) their prince, Malik Khālīf, who had been thrown into prison by Shāh Ismā'īl, escaped and again took possession of Se'erd and then of his old residence (*Sharaf-nāme*, i. 157). This dynasty continued to exist for some time under the suzerainty of the Ottomans represented by the wali of Diyār Bakr. In the new administrative territorial division established by Idrīs Bidlīst, Se'erd became the capital of a sandjak. The town continued to belong to the eyālet, then to the wilāyet of Diyār Bakr down to 1301 (1884). The sandjak of Se'erd was then attached to the wilāyet of Bidlīs.

The number of inhabitants is given by Cuinet (1892) as 15,000 of whom the majority are Muslim Kurds (5 mosques). In the Christian element (c. 4,000) the Catholic, Syrians (Chaldeans) are the most numerous (two churches), along with Gregorian Armenians (one church), Protestants and Jacobites (one church). The number of Christian inhabitants, however, must have considerably diminished by the deportations during and after the war of 1914–1918.

Se'erd has been built in the Arab style (Lehmann-Haupt); the houses are of clay and the town is noted for its lack of cleanliness. Water is scarce there and comes from several springs. On the hills around, the principal crop is grapes; the other products of Se'erd are cereals, rice and vegetables. Its trade is with Diyār Bakr. The town has been famous since the xivth century for its manufactures of weapons and copper utensils. Other

industries are cabinet-making and the manufacture of cotton stuffs, dyed red. On the only inscription known at Se'erd see van Berchem in the *Adh. G. W. Gott.*, Ph.-hist. Kl., N.S., ix. 157.

The sandjak of Se'erd has 5 kaza of which that of Erub (Arwah) is in Bohlān [q.v.].

SEFID KOH (SAFID KŪH, 'the White Mountain'), is the name given to the most prominent mountain range of Northern Afghanistan, extending from a point situated in 34° N. Lat. and 69° 30' E. Long., near which rises its highest point, Sikkāram, 15,620 feet above the sea, to the neighbourhood of Atak on the Indus (33° 15' N. Lat. and 72° 10' E. Long. approximately), and separating the valley of the Kābul river from the Kurram Valley and Afridi Tīrāh between these two points; but the range is continued in a mass of uplands running in a south-westerly direction and known as the Pāis Dāg and Toba as far as a point situated, approximately, in 31° 15' N. Lat. and 67° E. Long. This latter range forms the watershed of Southern Afghanistan and a natural barrier between that country and India. In the northern and eastern spurs of the Sefid Koh proper are the Khaibar Pass [q.v.] between Peshawār and Djalālābād, and the formidable passes between Djalālābād and Kābul in which British and Indian troops suffered so severely in the campaign of 1841–1842. Through the passes of these ranges have streamed from the dawn of history the numerous hosts by which India has from time to time been invaded, and some of the invaders in historical times have left brief descriptions of those parts of the ranges which they traversed. The northern spurs are barren, but the upper slopes are wooded with pines, *deodars*, and other trees, and many of the southern spurs with pines and wild olives. Its valleys are a combination of orchard, field and garden, abounding in fruit-trees, and the banks of their streams are edged with turf and wild flowers and fringed with willows.

SEFID RŪD. (See *ḠIZIL TARKH*).

SEGBÂN (P., 'dog-keeper, whipper-in'), popularly *SEMEN*, the third division of the corps of Janissaries forming 34 companies (*orta*); the 33rd was in garrison in Constantinople. It was created in the reign of Bāyazīd I at the same time as the *saghārājī* (keepers of blood-hounds), the *qamjūnājī* (keepers of bull-dogs) etc. who later formed the 64th and 71st *orta* of the *djīmā'āt*. Some of

these companies had special names of their own: the 18th was called *kūlibi-segbānū*, the 20th *kūlibi-segbānū*, the 33rd *ḥunfī*, "huntmen" (chasseurs), the captain of whom was called *ḥunfī-ḥunfī*, "chief huntman". Their barracks, like those of the other Janissaries, were destroyed in the conflagration of Muḥarram 4, 1105 (Sept. 5, 1693), in the reign of Sulṭān Aḥmed II; rebuilt five years later, they were again destroyed in the reign of Maḥmūd I.

Segbān-lāghī was at first the title of the general commanding this division; when it was placed under the authority of the *agha* of the Janissaries, his position became a sinecure. In case of mobilisation, however, he acted as *ḥīm-maḥīm* (lieutenant) to the *agha*, lived in the capital and commanded the Janissaries of the garrison there.

Segbān-nuḥūrī "Cavalry of the Seimen" was the name given to the 65th *orta* of the *ḥimāḥāt*.

SEGESTAN. [See SĪSTĀN.]

SEGOVIA, in Arabic *Shakūbiya*, an important and ancient town in Spain, now the capital of the province of the same name, situated in Old Castile, 60 miles N.W. of Madrid, 3,300 feet above sea-level, on an isolated rock near one of the last spurs of the Sierra de Guadarrama. This town is famous for its Roman (aqueduct) and Christian (alcázar) remains and was only under Muslim rule for a short time. It was recaptured in 140 (757/758) by Alfonso I of Castile or his son Fruela I at the same time as Zamora, Salamanca and Avila. It was, like those towns, recaptured but only for a very brief period by al-Ḥajjib al-Manṣūr b. Abī 'Amir in the second half of the tenth century.

(E. LÉVI-PROVENÇAL)

SĒGU, now capital of a district in the French Sūdān. Sēgu is a little town with 6,500 inhabitants lying on the right bank of the Niger about 150 miles below Bamako and consisting of four groups of buildings, of which Sikoro is the principal.

This place was the capital of a Bambara state founded by a chief of the Kulubāli family, who was at first more or less a vassal of the Mandingo empire or empire of Mali. Towards 1670 king Biton Kulubāli liberated Sēgu from Mandingo suzerainty and made it very powerful with the help of a kind of standing army of regular soldiers which he had formed of slaves belonging to the state called in Bambara *tan-dyon*. In his reign the Bambara of Sēgu, although pagans, subjected the Fulba kingdom of Māsina, in which the majority of the inhabitants were Muslims, and the completely Muhammadan town of Timbuctu, which was nominally governed by a paṣhā who claimed to be Moroccan. It is even said that Biton having offered an asylum to a holy man of Sūs, an enemy of the Haasanid Sulṭān al-Rashid, sent troops against the

ruler of Fās who had come to seek the fugitive and that al-Rashid having encountered the Bambara army south of Timbuctu took his way back to Morocco without daring to risk a battle.

On the death of Biton in 1710, however, the *tan-dyon* took advantage of their power to make and unmake kings and ended by overthrowing the Kulubāli dynasty and seizing the power. But the period of their domination was one of anarchy which was ended towards 1750 by a popular rising. A certain Ngolo or Molo belonging to the Bambara family of Dyāra had himself proclaimed king and founded a new dynasty, which reigned from 1754 to 1861 and was noted mainly for its wars with the other Bambara kingdom, that of Kaarta, located farther to the west.

In 1860 the conquering Tuculor al-Ḥajjib Umar, a native of Fās in Senegal who had been lord of Nyōro, capital of Kaarta, since 1854, marched against Ali Dyāra, king of Sēgu. The Bambara were supported in their resistance by their neighbours, the Fulba of Māsina, who had, however, been freed from Sēgu suzerainty in 1810 by the Emir Sēku (Shukku) Aḥmadu; this alliance of a wholly pagan state with a kingdom which had become Muslim against a conqueror himself a Muslim, who justified his expedition against Sēgu by calling it a holy war, is one of the most curious features in the religious history of the Sūdān; Aḥmadu Aḥmadu, then Emir of Māsina, explained the motives of his conduct in a series of letters addressed to al-Ḥajjib Umar which have been preserved. However, after a stubborn resistance by the defenders, al-Ḥajjib Umar took Sēgu in 1861 and Hamdallāhi, capital of Māsina, in 1862, captured the two kings Ali Dyāra and Aḥmadu Aḥmadu and put them to death. The Bambara and the defeated Fulba kept up the resistance for a long time in a guerrilla war, in the course of which al-Ḥajjib Umar died (1864). He left several sons, nephews, and favourites who divided the lands he had conquered amongst themselves, not without quarrelling. His eldest son, Aḥmadu Tal, whom he had installed in Sēgu as his lieutenant, lived there from 1862 to 1884 exercising a tyrannical sway over the people without successfully enforcing Islām on the Bambara or preventing the survivors of the Dyāra dynasty, aided by their Fulba allies, from harassing his troops continually, and even threatening him up to the walls of his capital. The naval Lieutenant Mage, sent with Dr. Quintin on a mission to Aḥmadu Tal by the French authorities in Senegal, was kept for two years at Sēgu by this despot (1864—1866) and was able to take exact stock of the situation. In 1884 no longer feeling his life safe in Sēgu where he was detested even by the Tuculors, Aḥmadu Tal handed the government over to his son Madani and established himself in Nyōro.

In 1888, the French government resolved to put an end to a state of affairs which was paralyzing the development of the country and found expression in continual massacres and the reduction to slavery of a great part of the population. An expedition was organised under the command of Colonel Archinard who took Sēgu on April 6, 1890, and Nyōro on Jan. 1, 1891. Madani had fled to Mopti and Aḥmadu Tal to Bandyagara, in Māsina. General Archinard took Mopti and Bandyagara in April, 1893. Aḥmadu Tal once more escaped; accompanied by a few followers he fled

along the bend of the Niger and sought refuge with his compatriot, the Sultan of Sokoto and died in his country in 1898.

After an attempt to restore the ancient Bambara kingdoms of Segu, at first under the government of Māri Dykra, then of a certain Bodayn Kululali, an attempt which was not successful, the French in March, 1893, decided simply to annex the town of Segu and its lands to the new colony of French Soudān.

A few Tukulors who came with al-Hādjdj 'Umar or in the time of his son Ahmada have remained in Segu; they all profess Islām and follow the Tijāniya order, of which al-Hādjdj 'Umar was *Mukaddim*. The bulk of the population which consists of Bambara has remained attached to animism.

(M. DELAFOSSE)

SEHİ ÇELEBİ, an Ottoman poet and biographer of poets. He belonged to Adrianople, in his youth received his education from and was on intimate terms with his fellow-townsmen and later father-in-law, the celebrated poet Nedjati Nuh Bey (d. March 17, 1509; q. v.), became *Kātib* (secretary) to Prince Mehmed, the youngest son of Soljān Bāyazid II, and accompanied the latter to Kaffa where he was governor (*sandjak-bey*) (Leunclavius, *Hist. Musulman.*, col. 659, 44). When the prince died in 910 (1504/1505) Sehī went to Stambul and obtained an appointment as secretary in the Diwān (*diwān-i kâtibî*) there. Later he returned to his native town of Adrianople, was for a time administrator (*mütevelli*) of a *wakf* of a school of tradition there (*Dār-ül-Hadīth*) and died there in 955 (1548/1549).

Sehī was the author of a collection of poems (*divān*) and of a collection of biographies of poets with an anthology (*tefekkür*) which contained notices of 261 metrists and poets and was entitled *Heşt Bihîşt* ('Eight Paradises'). The work is expressly planned on Persian models (*Djāmī*, Dewlet-shāh and Mir 'Alī Shīr Nawā'i) and classified under eight heads (*saba'at*).

Apart from the *Kemāl-Kubrā* of Sheikh-Oghlu (xvth century, very scarce, so far only known in one MS.), Sehī's biographical collection is the oldest work of this kind in Turkish. Of particular value are the notices of the Ottoman poets with whom Sehī was personally acquainted from his youth upwards or later, and of contemporary poets in general. The work was published in 1325 (1907) in Stambul (8vo, 144 pp.) by Mehmed Shāh and has an appendix by Fakr Rüşād. Sehī's *Divān*, of which specimens are given in the Turkish anthologies, is of little importance.

SELÄNIK, the town of Salonika in Macedonia, situated at the foot of the Gulf of Salonika, to the east of the mouth of the Wardar and at the foot of a hill which commands it on the north-east. It is the ancient Greek town of *Thessalonike*, founded on the site of Therna by Cassander, who gave the new city the name of his wife, the sister of Alexander the Great (Strabo, VII. vii. 4). Towards the eleventh century, the popular form *Salavikion* appears (*Chronicle of the Morea*) on which is based the form *Salānik* or *Salānik* in al-Idrisi, the Bulgarian form Solun, the western form Salonika and finally the Turkish name Selānik.

Salonika, situated on the Via Egnatia (from Durazzo to Byzantium) and having a large and safe harbour, was from ancient times an important commercial city. It was still so under the Byzantine empire and in those days included considerable European colonies, especially Venetians. From the tenth century onwards, it received its share of commerce with Muslim lands; once, in 904, it was sacked by a Saracen fleet from Tripolis in Syria led by a Byzantine renegade; twenty-two thousand inhabitants are said to have been carried off into slavery (description by John Comeniana, *De Excidio Thessalonicensi*, Bonn ed., in *Script. post Theoph.*, p. 487 sq.). The town is, however, hardly mentioned by the Arab geographers; only al-Idrisi notes it. His patrons, the Norman princes of Sicily, had dealings with the Byzantine empire. In 1185 William II of Sicily undertook an expedition against the empire at the instigation of Latins and Greeks who had sought refuge with him after the troubles provoked by the usurper Andronicus. The Normans took Salonika on August 24, 1185. Under the Latin Empire the town was the capital of the kingdom of Salonika under the Marquises of Montferrat; during this period it had to undergo a siege by the Bulgarians, the allies of the pretender Kalo-Johannes (who was killed there, according to the legend, by the lance of St. Demetrius, the patron of the city). At the end of the thirteenth century, Salonika was finally restored to the empire of the Palaeologoi, then reduced to Macedonia, Thrace and the western coast of Asia Minor. The Serbian conquests still further diminished this territory, so that in the time of Cantacuzenus (1347—1355) Salonika with the western part of the peninsula of Chalcidice was only connected with Constantinople by sea. Soon the Ottoman Turks, under Murād I, began to take the place of the Serbs by their conquests in Europe. It seems that the environs of Salonika were ravaged for the first time by Lala Shāhūr in 787 (1385) after the conquest of Serres and Kareseriya. These lands were thereafter settled by nomads from the sandjak of Sarukhān (Anonymus, ed. Giese). The town was soon after taken by Khair al-Din Pasha, but restored again to the Emperor Manuel (Hādjdj Khalifa, *Ta'wīm*). Bāyazid I retook it in 796 (1394) after having defeated the allied Christian fleets (Sā'ī al-Dīn). The statements of the Turkish chroniclers and the Byzantine historians on these early conquests are by no means clear and often contradictory (cf. von Hammer, *Gesch. d. osm. Reiches*). Sulaimān, son of Bāyazid, concluded an alliance with

the Emperor by the terms of which Salonika and a number of other towns on the coast were given back to the latter (1403). After the death of Sulaiman, his brother Musa (1410—1413) laid siege to Salonika, without being able to take it. Muhammad I also, after setting out from Serres to attack the city, had to abandon his plan as a result of the rebellion of Shalikh Badr al-Din. Towards the end of his reign the pretender Dürme Mustafa, coming from Wallachia, was defeated near Salonika and found refuge within its walls. It was from here that Mustafa began his conquests after the death of Muhammad I (1421). Mustafa being beaten, Murad II turned his attention to the Greek empire and attacked Salonika in 1423, after a fruitless siege of Constantinople. But Andronikos Palaeologos, son of Manuel, governor of the town, thereupon invited the Venetians to take possession of it and sold it to them for fifty thousand ducats (Salonika at this time had forty thousand inhabitants). This act made the Turks withdraw for the time. Murad even recognised the sale in 1427, when a kind of capitulation was concluded between him and Venice by which the Turks were allowed to have a *kışla* in the town. Three years later Murad laid siege to Salonika for a second time; the Turkish sources say he did this because of acts of piracy committed by Venetian ships on Muslims. The town fell after a siege of forty or fifty days in March, 1430 (the 29th according to Anagnosta and the 13th according to Venetian sources; the Turks only give the year 833, or — wrongly — 832). The capture was accompanied by looting and a general massacre which Murad had promised his soldiers; it has been chronicled by Johannes Anagnosta: *De extrema Thessalonitenis exitio narratio* (Bonn 1838). A Turkish fleet from Gallipoli had shared in the attack on the town. Venice was quick to recognise Turkish rule over Salonika and obtained in return freedom of trade for Venetian merchants in the Sultan's lands.

A great part of the population had been in favour of the Turks in order to escape the terror of the Frank soldiery. The conqueror, moreover, after the looting showed himself conciliatory. For the moment only one church, that of the Virgin, was converted into a mosque (known as the Eski Djum'a). The Monastery of St. John Prodromos seems to have become a mosque during one of the earlier Turkish occupations. In the centuries that followed, the majority of the great churches were destined to be converted for Muslim usage. The conquerors also demolished a number of churches to get materials for other buildings. Murad, for example, in 1430 built a bath in the centre of the town. To give the town a Muslim population, colonists from Yenije Wardar were transplanted thither. Although the number of Turks increased, Salonika has never had a majority of Turks in its population.

The town was not long in again becoming an important commercial centre. The immigration in the reign of Bayazid II of a large number of Sefardim Jews and Maranos, expelled from Spain, Portugal and Italy, contributed largely to its commercial revival. There had previously been Jews in Salonika (Benjamin of Tudela reckoned five hundred in 1170), but after the immigration of the fifteenth century the Jewish element became the feature of the town. The Jews also brought thither their Spanish language, Ladino, which they

have kept down to modern times (Lamouche, *Quelques mots sur le dialecte espagnol parlé par les Israélites de Salonique*, in *Roman. Forschungen*, vol. xxiii.) and their religious and scholarly tradition (from 1515 they had their printing press). Under the benevolent rule of the Turks, Salonika became in the sixteenth century "the mother of Judaism". Their number was then put at twenty thousand; the cloth which they manufactured was sold throughout Turkey (Dernschwam, *Tagebuch*, ed. Babinger, 1923, p. 107). Towards the end of the seventeenth century, there was formed among them the sect of the followers of Shabbetai Zabi, the Crypto-Jews or Dönnies [q. v.], which had such a great cultural influence on the development of modern Turkey since the Young Turk revolution.

For the Ottoman empire, the possession of Salonika was a source of great revenue, especially from trade with the commercial nations of Europe, who by their capitulations obtained the right to have consulates there. The harbour has never been a naval port; it was only exceptionally visited by the Ottoman fleets (e.g. in 1715 in the war with Venice; cf. Rüşid, *Tarih*, iv. 51). Administratively Salonika has been since the Turkish conquest capital of an eyalet which has at times included Serres and Drama. In the judicial hierarchy the Selnik Mollas was one of the eight mollas of the sixth rank or *muhtaref mollalar* (d'Ohason, *Tabl. de l'emp. Ott.*, ii. 271). The Turks, however, never built great mosques there as the Greek churches were sufficient. The Mewlewî-Khâne to the north-west of the town is one of their best known religious buildings. A large part of the town consists of *wakf* properties founded by Ghâzi Ewrenos.

With the decline of the Turkish empire in the nineteenth century, Salonika became more exposed to enemy attacks and foreign influences. For example, in April, 1807, the English fleet attempted a landing there after the failure of the expedition against Constantinople (Zinkeisen, vii. 454). In the second half of the century the Macedonian troubles began and Salonika became the theatre of the nationalist intrigues of the Slav elements, while at the same time it was the centre of the Turkish opposition. The administrative reform of 1864 had created the wilâyet of Salonika, which, after extending as far as Elbasan and Üsküb, had been afterwards considerably reduced and in the end comprised only the sandjaks of Salonika, Drama and Serres with a population in which Bulgarians were in the majority. The assassination in 1876 of the French and German consuls brought about European intervention in favour of the Slave in Turkey (Conference of Constantinople). In 1902 Salonika became the residence of Hilmi Paşa, who had been appointed inspector of reforms in Macedonia, assisted from 1903 by a Russian civilian agent and an Austrian representative. The town, as the result of European control, became less subject to the direct influence of Constantinople and thus became a hotbed on Turkish soil of Young Turk propaganda, directed from Paris against 'Abd al-Hamid; from the beginning of the twentieth century the Committee of Union and Progress (*Ittihad u Terakki*) held its meetings here in the Italian Masonic Lodge; the constitutional movement among the garrisons of Macedonia had its centre here; besides Turks, the Committee had Jewish members. In the night of 22—23 July,

1908, the constitution was proclaimed in Salonika, followed by the first revolution in Constantinople. The central section of the Committee had remained in Salonika and organised in 1909 the suppression of the counter-revolutionary movement, which broke out in Constantinople on April 13. Mahmūd Şevket Paşa organised in Constantinople the constitutional troops, who entered the capital on April 24. 'Abd al-Hamid, deposed on April 27, was sent to Salonika, where he remained till the Balkan War. The beginnings of the constitutional régime bear the stamp of its origin in a milieu where the Turkish element was in a minority, in as much as the Young Turks began by proclaiming the equality of all races being under the Sultan's rule.

Turkey lost Salonika in the Balkan War. The Greek army, commanded by the Crown Prince, crossed the Wardar after the battle of Yantra and surrounded Salonika on November 8, 1912. On the same day General Hasan Taksin Paşa surrendered the town to the Greeks through the mediation of the neutral consuls. Besides the Greek troops, some Bulgarian battalions also entered it, but by the peace of Athens (November 14, 1913) Salonika, with the greater part of the wilayet of the same name, was incorporated in Greece. As a result of the Greek occupation not only the Turks but also a great many Jews migrated, especially to Constantinople. The occupation by the allies in November, 1915, with the object of making it a base of operations against Bulgaria, is only of importance for Turkish history in as much as it contributed indirectly to the defeat of the Turks three years later.

On the eve of the Greek conquest, Salonika had about 130,000 inhabitants, of whom 76,000 were Jews and about 30,000 Muslims, the remainder being mainly Greeks and Bulgarians. The commercial development had been greatly furthered in the nineteenth century by the railways connecting it with Nish, Üsküb, Monastir and Constantinople. The new harbour was opened in 1901; ships cannot approach the quay there. The export of the products of almost all Macedonia (especially tobacco) took place through Salonika as well as the import of European goods, which made it compete more and more with Constantinople. As an industrial town, Salonika has very old established manufactures of cloth and carpets (*selânîk kelim*), to which have been added silk-weaving, glass-bowing and the manufacture of soap and faience.

The town has many old monuments. Of classical buildings there remains practically nothing but the triumphal arch of Galerius. The Byzantine churches are numerous. Besides the Church of the Virgin, already mentioned, the principal are that of St. George, made a mosque in 999 (1590/1591), according to an inscription, and then called Ortadje Džami'i; that of St. Sophia, which became a mosque in 993 (1585) as Ayâ Sofya, and notably that of St. Demetrius, the patron of the city, in the central part of the town on the Rue Midhat Paşa (governor of Salonika in 1873); the date of its erection is uncertain. Under Bayazid II it was converted into a mosque and given the name of Şâsimiye Džami'i (St. Demetrius—Şâsim is a double saint; cf. the art. *AL-ŞÂSİM*). Of the Byzantine wall which formerly surrounded the town the southern part no longer exists and is replaced by the great

quay. The hill to the north-east of the town bears an acropolis called Yedi Kule by the Turks. A detailed description of the ancient monuments of Salonika is given in O. Trufali's book, *Topographie de Thessalonique*, Paris 1913.

Nicolaides, *Griechenlands Anteil an den Balkankriegen*, Vienna and Leipzig 1914.

SELÂNİKİ, MUŞTAFÂ, Turkish historian. He was born at Salonika (Turkish Selânîk), and lost his father at Salonika in Dhu'l-Ka'da 972 (1565/1566), while he accompanied the Beylerbey of Rumili, Şamân Ahmed Paşa, as a reader of the *Kur'an* (*Târîh*, p. 11, line 6 *ab infra*). He held a number of offices which are accurately enumerated in his work. When in 1584 he had been for some time secretary and *divânîdar* of the Nishânîdî Mehmed Paşa, he became secretary of the *silâhdâr* (*silâhdâr alâhî*; cf. *Târîh*, p. 235; Dhu'l-Hijja 22, 995 = Nov. 23, 1586), then of the *sipâhî*; then he was appointed *rûnûmâllî* (diarist) president of the auditoffice of the two holy cities (*haramain muhâsebbîsî*) and quarter-master of the court (*mutteferriş*). In October 1588 he was *nishânîdâr* of the Persian prince Haidar who then resided at Constantinople (*Târîh*, p. 261). In Sha'bân, 1003 (1595/96), he was inspector of the soldiers' pay (cf. J. v. Hammer; *G. O. A.*, iv. 244). Finally he possibly held the function of *Anadolu muhâsebbîsî* (president of the treasury of Anatolia). The year of his death is not certain. Probably he died soon after 1008 (1599/1600) at Stambul.

His work on history, part of which was printed at Stambul in 1281 (*Târîh-i Selânîkî Muştafâ Efendi*, 14 folios, 351 pages octavo), begins with Şâfar 971 (1565/64), and ends in 1008 (1599/1600); it comprises the last years of Sulaimân the Great, the reign of Selim II, Murâd III and the first five

years of Mehmed III. Composed in the manner of a diary it is a mirror of the events at which the author was present as an eye-witness. His office in the treasury supplied him with statistic materials. Selanki's work is consequently a very valuable source for the years 1563-1599. It is to be regretted that the printed edition (cf. a note at the end, p. 351) is carried on to the year 1601 only (1591/93, because Na'ima [q. v.] begins his work with this year). Complete MSS. are preserved (apart from libraries in the East) at Upsala (cf. Tornberg, *Codices arab., pers. et turc. lib. reg. univ. upsali.*, Lund 1849, p. 196 sq., No. 284) and at Vienna (Flügel, *Die arab., pers. und türk. Hss. der K. K. Hofbibl.*, II. 246 sq., No. 1030 H. O. 57).

SELJUQS, a Turkish princely family which ruled over wide territories in Central and Nearer Asia from the 10th to the 13th century. The following dynasties are distinguished: 1. The Great Seljuqs; 2. the Seljuqs of the Irak; 3. the Seljuqs of Kirmân; 4. the Seljuqs of Syria and 5. the Seljuqs of Asia Minor (al-Rûm).

Early History of the family. The ancestor of these rulers was Seljuq b. Dukâk (Tukâk) called *Timur-yigh*, i.e. "with the iron bow". This Dukâk was a member of the Ghuzz tribe of Kîlîk, which is mentioned in the first place in the list of these tribes in al-Kashgharî, *Divân Lughât al-Turk*, I. 56. The following is told of him by Ibn al-Athîr, *al-Kâmil*, ed. Tornberg, II. 322: "He was leader of the Ghuzz; they had implicit faith in him and they never contradicted him in a speech or neglected a command of his. Then it happened that one day the king of the Turks named Baighû collected his armies and wanted to march against the lands of Islâm. Dukâk spoke against it and after a long discussion the king of the Turks insulted him with coarse words. Dukâk then gave him a box on the ear and wounded him in the head. When the king's servants surrounded and tried to seize him, he defended himself and fought with them; his people gathered round him and they separated from him (i.e. the king). The dispute between them was afterwards settled and Dukâk remained with him." A similar story is then told of his son Seljuq but the end is different: Seljuq leaves the king with his people, enters the land of Islâm and takes up his abode in the vicinity of Djand at the mouth of the Sâihân. According to Marquart, *Ostürkische Dialektstudien*, p. 46, the Turkish title *yaghân* is concealed in Baighû and the reference here is to the supreme chief of the infidel Ghuzz, who in turn recognised the suzerainty of the Khâkân of the Uighurs. It seems to me, however, that the whole story is an invention to explain the settlement of the Kîlîk near Djand. Whether this tribe, or at least its chief Seljuq, already professed Islâm at this time is equally uncertain although the story presupposes it; the conversion perhaps only took place after relations had been formed with the Muslim population of Djand. Some Russian scholars have expressed the opinion that the Seljuqs came to

Islâm through Christianity and in support of this point to the Biblical names of their sons Mîsâ'îl, Mîsâ, Isrâ'îl, to a casual remark in al-Kashgharî (ed. Wüstenfeld, II. 394) and to the fact of the spread of Christianity among the Turks in Semir-jetse, but tradition makes no mention of it.

Political conditions in Transoxania, where the Sîmânids and the Turkish Kera-Khânids were fighting for the mastery, were favourable to the development of the power of Seljuq and his Ghuzz. They became involved in this feud and usually they took the side of the Sîmânids, but at the same time took the opportunity to further their own interests. In the meanwhile Seljuq died in Djand, aged, it is said, 107. His sons above mentioned (some records also mention a fourth, Yûnus) we now find not in Djand, but near Bakhârâ in Nûr Bakhârâ (now called Nûr Atâ, N. E. of Bakhârâ; cf. Barthold, *Turkistan* etc., p. 123), about the year 375 (985), as Hamîd Allîh al-Kashgharî, *Turkî Gulistân*, ed. Brown, p. 434, states. Isrâ'îl, whose proper name was Arslân, seems to have assumed the leadership among those sons. Sometimes the name is followed by Baighû, which is probably also to be interpreted here as the title *yaghân*; he is mentioned simply by this name in al-Gardîzî, ed. Barthold, p. 13, as the prince of the Ghuzz who in 1003 assisted the Sîmânîd general Mustajir to victory over the Kera-Khânids (cf. Barthold, *Turkistan* etc., p. 283). We next find him mentioned as ally of 'Alî Tegn who had captured the city of Bakhârâ. In 416 (1025) Mahmûd of Ghazna undertook a campaign into Transoxania to overthrow the latter and had a meeting with the Kera-Khânîd Kâdî-Khân, with whom he came to an agreement regarding a common attitude towards the affairs of the district. On this campaign he sought information regarding the strength of the Seljuqs. There is a well known anecdote which tells how Arslân, when he was asked about the question, showed him two arrows and said that 100,000 men would turn out if these two arrows were sent round his people, and if the bow were added, as many as one could wish. This caused Mahmûd some anxiety; he therefore consulted his Hâdîb, Arslân Djâhîb, as to what should be done regarding these people. The latter proposed that each man's thumb should be cut off so that he could not draw the bow any longer, or, as Ibn al-Athîr adds, that they should all be drowned in the Djâhîm. Mahmûd thought this too inhuman and perhaps also impracticable; he thought it better to let them come across the Djâhîm and wander over wide tracts in Khurâsân so that they would be easily kept in control. He took Arslân back with him to Ghazna and kept him a prisoner in the fortress of Kîlândâr in Multân as a hostage for the good behaviour of his people. These measures did not succeed in their aims, however; the Ghuzz proved turbulent in spite of the severe punishment which Tâh Farrâsh awarded to them (cf. al-Balhâkî, 73-163, ed. Morley, p. 544). Under the leadership of their chiefs Vaghmur, Kîlî, Beka, Koktâsh etc. they withdrew from the jurisdiction of their Ghaznavîd rulers and began raiding the lands of Islâm. Damaghân, Samnân, al-Râiy, Isfahân, Marâgha, Hamadân and many other towns in the Irak and Adharbâidjân suffered from their incursions. These Ghuzz are always called the 'Irâkî Ghuzz by al-Balhâkî, who says nothing about Arslân in the part of his history that

has survived to us, and distinguished from the Ghuz who had remained in Transoxania, to whom he refers as the people of Tughri-Beg (this is the correct form, according to al-Kashghari, *Divân* etc., p. 400), Dâ'id and the Niyâlyûn. Tughri-Beg, Muhammad and Cagri-Beg Dâ'id are the sons of Mikâ'il b. Seldjûk, who, according to some records, was early killed in the war with the infidel Turks; as to the Niyâlyûn, these are the people of Inâl or Yûlâ, a maternal uncle of Tughri-Beg, so that probably the reading should be Yûlâlyûn. It is true that this Inâl is mentioned nowhere else but his son Ibrahim b. Inâl is well known and at first faithfully supported his two nephews. We hear little of Mûsâ, Seldjûk's third son, but his sons also supported Tughri-Beg.

These Seldjûks lived in security in Nur Bukhârâ as long as 'Alî Tegin lived; as the pastures there were not sufficient for them, they received from Hürân b. Altîntâsh, the governor of Khwârizm, through the intermediary of the vizier Ahmad b. Muhammad b. 'Abd al-Samad Abû Naqr, later vizier to the Ghaznawid Mas'ûd, permission to dwell in Khwârizm territory in winter. But when 'Alî Tegin had died in 425 (1034) they came into conflict with his sons and successors, and, as Hürân b. Altîntâsh was murdered soon afterwards and the then ruler of Djand, Shah Malik, attacked Khwârizm by command of Mas'ûd and put to flight the sons of Altîntâsh who were in open rebellion and with whom they sided, they found themselves forced to seek other lands to live in. They therefore sent a written petition (cf. al-Baihaqî, *op. cit.*, p. 583) to the governor of Khurāsān, Abû 'l-Faḍl al-Shîrî (al-Sawâtî), notorious for his extortions, requesting him to ask Mas'ûd to allot them the districts of Nāsā and Farwā. In this remarkable document Tughri, Dâ'id and a third brother Paighû, already call themselves protégés of the Commander of the Faithful. These negotiations, which did not lead to the desired result, and the events that followed can be followed almost from day to day in al-Baihaqî's narrative, but here we must be brief and refer the reader to the full account by Kaziminski in the preface to his edition of the *Divân* of Minûchîrî. In brief, the result was an open war between the Seldjûks and the Ghaznawids. Mas'ûd's generals were repeatedly defeated and finally Mas'ûd himself was routed in the battle of Dandānāqān (Ramadân, 431 = May, 1040). By the end of 429 (Aug., 1038) the Seldjûks had taken Naimûr, the name of Tughri-Beg was mentioned in the *Ḥuḥḥa* there and an ambassador arrived from the Caliph to complain of the ravages of the 'Irâqî Ghuzs. The rule of the Great Seldjûks was established.

I. The Great Seldjûks, 1038—1157.
TUGHRIL-BEG — 1063, ALP ARSLAN — 1072,
MALIK-SHÂH — 1092, MAHMUD and BARKIYARUK —
1104, MALIK-SHÂH II and MUHAMMAD — 1117,
SANDJAR — 1157.

The history of the individual rulers, with the exception of Mahmud and Malik-Shah II, whose names were only mentioned for a brief period in the *Ḥuḥḥa*, is dealt with in separate articles; here a few general observations will suffice. As regards the expansion of the Seldjûk empire, the majority of the Muslim rulers of the eastern and central provinces of the lands once ruled by the Caliph submitted to Tughri-Beg, either voluntarily or under compulsion. The rulers of Djurdjân and Tabaristân

had done this by 433 (1041/42); in 434 (1042/43) Khwârizm was conquered and was followed by the other lands which form modern Persia. In 440 (1048) Liparites, chief of the Abkhaz, was taken prisoner and raids were made into Asia Minor. In Ramadân, 447 (Dec., 1055), Tughri's name was mentioned in the *Ḥuḥḥa* in Baghdad and at a ceremonial audience in 449 he was addressed by the Caliph, who had in the meanwhile married a daughter of his brother Cagri-Beg, as 'King of the East and of the West'. The suzerainty of the Seldjûk Sultân was recognised throughout the 'Irâq, in Mawâlî and in Diyar-bakr. Under Alp Arslân the Seldjûk conquests reached to the Jaxartes and after the defeat of the Armenians and Byzantines almost the whole of Asia Minor passed to the Turks. Finally Syria was added and in 485 (1092) even 'Adan and al-Yaman were conquered, although we can hardly talk of an effective rule of the Seldjûks in Arabia. Malik-Shah's death in the same year, the quarrels for the throne among his sons which followed, and the Crusades put a limit to their conquests.

As regards the conquered territories, in many cases the conquered rulers continued to rule and paid tribute; in Kirmân, and later also in Syria and Asia Minor, the princes who had conquered these lands set themselves up as independent rulers and did not trouble about the Great Seldjûks with whom they even waged war (see below). The same thing happened in other outlying parts of the empire, which the Sultân, e.g. Alp Arslân in 458 (1066), bestowed on their brothers and other relatives as fiefs, with this difference that the latter did not succeed in founding dynasties. According to the Turkish view, the right to rule belonged to the whole family and the oldest member had a certain right as *primus inter pares* to the obedience of his male relatives, but in a family with so many ramifications as that of the Seldjûks, harmony could not long be maintained. Even in the reign of Tughri-Beg his nephew Ibrahim b. Inâl rebelled and if his brothers Cagri-Beg and Paighû remained faithful to him this was probably because he had no sons. His successor had to fight with Kutalmûsh, son of Arslân and ancestor of the Seldjûks of Rûm. It was the same in the reign of Malik-Shah, and after his death the rather brief reign of Barkiyaruk was marked by continual fighting with his uncle Tutugh and his brother Muhammad. The empire of the Great Seldjûks therefore comprised strictly only the eastern provinces of the former territory of the Caliph, with the exception of Kirmân. They had their residences in Isfahân, Baghdad, and under Sandjar, who handed over to his brother Muhammad's sons the rule over 'Irâq, Fars, Khurāsân and the western provinces, in Marv. The latter, the last of the Great Seldjûks, was more than once forced to use the sword to exert his authority as head of the family to settle disputes among his nephews; for the rest he was content with sovereignty over Khurāsân and the eastern frontier provinces. On his wars with the Ghaznawids, the rulers of Transoxania, the Ghurids and the Ghuzs see the article SANDJAR, above. When he died childless in 552 (1157) the line of the Great Seldjûks came to an end.

For Islâm the rise of the Seldjûks meant the victory of the Sunnî creed, as far as their power stretched, over the Shî'a tendencies which had been gaining more and more ground under the

Buyids and Fātimids. The Buyids had, it is true, allowed the 'Abbāsid caliphate to continue a nominal existence in Baghdad, but in 450 (1058) al-Basā'iri [q.v.] had the name of the Fātimid caliph mentioned in the *ḥaṭṭa* in the 'Irāk also. The 'Abbāsid al-Kā'im b. Amr Allāh had to leave Baghdad, and his palace there was plundered for several days. Tughril-Beg, who at that time already was on intimate relations with the Caliph, was at this time engaged in his struggle with Ibrāhīm b. Ināl; as soon as the latter was taken prisoner and put to death, Tughril brought the Caliph back to Baghdad. In the following period, notably in the later years of Malik-Shāh, there was serious friction between the Caliph and the Sultān, but this did not have its roots in religious questions but was of a personal nature (cf. Houtsma, in the *Journal of Indian History*, iii. 147—160). The Seldjūks regarded the Caliph as such as the head of orthodox Islām whom they were called upon to defend with the sword. They took energetic steps against the dangerous activities of the Ismā'īlīs and furthered the interests of Sunni theologians, although in this respect it was not they themselves but their viziers, notably the great Nizām al-Mulk [q.v.], that are entitled to most credit. Personally they were anything but fanatical Muslims, as is evident from the release of Liparitēs above mentioned and later of the Byzantine emperor Romanus Diogenēs and from the treatment accorded their Christian subjects. It is practically the same with the credit given to some of the Sultāns, e.g. Malik-Shāh, for their patronage of learning; although untutored, they were able to esteem what they themselves did not possess. They therefore entrusted the administration of their empire to their viziers, who sometimes, like Nizām al-Mulk, governed with unlimited powers. In what spirit they did so, the latter himself has told us in his *Siyāsat-nāma*. As regards art, very little of the architecture of the Seldjūks has survived for posterity. Only in Marā are there still considerable remains from Sandjār's reign. Taken all in all, we must admit that the Seldjūk Sultāns were able to guide the rude Ghuzz people, whose chiefs they were, with great skill and with true insight: to turn to their use the advantages of Arabo-Persian civilisation.

II. The Seldjūks of the 'Irāk, 1118—1194. After the death of Muḥammad in 511 (1118) his eldest son MAHMUD, a thirteen year old boy, succeeded him as Sultān of the whole empire with the exception of Khurāsān and the north-eastern frontier provinces, where, as already mentioned, Muḥammad's brother Sandjār ruled. After him the title of Sultān was borne by his son NĀ'UD, 1131—1132, TUGHRIL I — 1134 (according to al-Basā'iri, *Kawā'id al-hakīm* etc., ii. 172, wrongly, beginning of 528 = 1133), MAS'UD — 1152, MALIK-SHĀH II — 1153, MUḤAMMAD II — 1159, SULAIMĀN-SHĀH — 1161, ARSLĀN-SHĀH — 1175 and TUGHRIL II — 1194. Almost all these Sultāns ascended the throne while still boys and met with a premature, often violent, death. Of the majority of them, therefore, it can hardly be said that they actually ruled; they were simply tools in the hands of their Atabegs and Emirs. In keeping with the old Turkish custom, the four sons of Muḥammad, Mahmūd, Tughril, Mas'ud and Sulaimān, were each brought up by a prominent Turkish Emir, who acted as their second father and was therefore called Atabeg. The natural result was that each of these Atabegs endeavoured to

gain the title of Sultān for the prince allotted to him in order thereby to increase his own prestige. The result was continual wars between these brothers, which were decided for a short time by the intervention of Sandjār in favour of one or other of the claimants. For the details of these wars the reader is referred to the separate articles; here we will only point out that the 'Abbāsid Caliphate also became involved and that two of them, al-Mustarshid [q.v.] and al-Rāshid [q.v.], perished in them. This happened in the reign of the valiant Sultān Mas'ud, but his successor Muḥammad II — Malik-Shāh II only bore the title of Sultān for three months — had to abandon the siege of Baghdad in 551 (1157). The power of the Caliphs began to rise again after this and the Seldjūk Sultān no longer lived in Baghdad but in Hamadshān. As a rule these Sultāns, from as early as Mahmūd, were only nominal rulers. The great Turkish Emirs held most of the provinces as military fiefs; the Sultāns lacked the money as well as the necessary troops to enforce their authority, if their Atabegs for the time did not assist them. To the latter also they entrusted war with foreign foes e.g. with the Crusaders in Syria, they themselves had continually to contend with enemies at home. Some of these Emirs succeeded in founding a hereditary dynasty and making themselves independent with the title Atabeg, Shāh or Malik. Among the latter we may reckon the Urtākiids in Mardin and Hira Kufa and the Armanshāhs in Khilat, who had already succeeded in doing so in the preceding period, and among the former the Zangids in al-Mawṣil and other places, the Selgharids in Fāra and the Atabegs of Adharbāidjān. The first of these Atabegs, Shams al-Dīn Ildegiz [q.v.], married the widow of Tughril I and when Sulaimān Shāh died in 1161 had his stepson Arslān b. Tughril proclaimed Sultān, but without affording him any authority. When he later threatened to become dangerous, Pahlawān, son of Ildegiz, had him disposed of by poisoning him and raised his minor son Tughril II to the throne (571 = 1175). When the latter had grown up and Pahlawān was dead, he endeavoured to enforce his authority but was not a match for Kīlā Arslān, the successor of Pahlawān, although he defeated the troops of the latter's ally, the Caliph, at Dīmarg in 584 (1188). He was taken prisoner by Kīlā Arslān after whose death he was restored to liberty, but fell shortly afterwards in a fight with the troops of the Khwarizm Shāh Takash (590 = 1194).

III. The Seldjūks of Kirmān, 1041—1186. The ancestor and founder of their line was KĀWUD KARA ARSLĀN-BEG, a son of Caghri-Beg who went to Kirmān with his Ghuzz about 433 (1041) and a few years later (440 = 1048/49) occupied the capital Bardān. He then waged further wars on his own account with the Shabānkārs, with the Kufs in the Garmīr (the hot coast region) and even became lord of 'Omān without troubling much about Tughril-Beg. When the latter's brother Alp Arslān succeeded to the throne Kāwud made an attempt (459 = 1067) to pose as an independent chief, but submitted when Alp Arslān hurried in person to Kirmān to force him to obedience. On Alp Arslān's death he thought, presumably as the oldest member of the family, that he had himself a claim to the Seldjūk throne, and led his army against Malik-Shāh but suffered a terrible defeat in the vicinity of Hamadshān where he was taken prisoner and

afterwards struggled (466 = 1074). The victor then in his turn marched on Bardasir where first Kirmān-shāh and later Saljān-shāh, the sons of Kāward, had assumed the reins of government *ad interim*, but withdrew when the latter showed himself submissive and left him in possession of his father's dominions. Saljān-shāh reigned till 477 (1084) and was followed by TURKĀN-SHĀH — 1097, ISKĀN-SHĀH — 1100 (1101), ARSLĀN-SHĀH — 1142, MUHAMMAD — 1156, TUGHRIL-SHĀH — 1169, BAKHRĀM-SHĀH and ARSLĀN-SHĀH II — 1176, TURKĀN-SHĀH II — 1183, MUHAMMAD-SHĀH — 1186. The end of the dynasty was brought about by the arrival of a body of Ghuzz; the Ghuzz after the defeat of Sandjar had fallen like a devastating deluge on the provinces of Persia and went wherever the weakness of authority seemed to offer them a chance of gaining rich booty. In Kirmān, where anarchy was practically complete under the last Seldjūks, they had an easy task, routed TURK-SHĀH who marched against them and went plundering up and down the country. When the latter was murdered his successor MUHAMMAD-SHĀH soon found himself forced to leave the country to seek help from neighbouring princes, which was, however, not granted him. A Ghuzz prince, known by the name of Malik Dīnār, then became lord of Kirmān.

IV. The Seldjūks of Syria, 1078—1117.

After the Marwanid Nag of Halab in 463 (1070/71) had submitted to Alp Arslān, a body of Turkomans under Atsız b. Abāk (or Awāk) invaded Palestine, captured Ramla and Jerusalem and the rest of Judaea with the exception of Ashkelon, where the Fāṭimids held out. He then turned his attention to Damascus which he was, however, not able to take till 468 (1076). An attempt made by him to conquer Egypt in the following year failed; he was routed by the Fāṭimid general Badr al-Dīnawālī [q.v.] and was next so hard pressed in Syria that he appealed for help to Tutuḡh b. Alp Arslān, who came to Syria in 470 and Damascus was handed over to him (471 = 1078). Tutuḡh then treacherously murdered Atsız and became lord of the town himself. An attempt to take Halab failed; the then lord of this city, the 'Ukalid Muslim b. Kuraish [q.v.], even attacked him in Damascus (475 = 1082), and when the latter had fallen in battle with the Seldjūk of Asia Minor, Sulaimān [q.v.] (478 = 1085), Malik-Shāh himself hastened to Halab and installed Aḡsunkor, the ancestor of the Zangids there, as governor, to the great vexation of Tutuḡh who had in the meanwhile disposed of his rival for the possession of the town, Sulaimān, in an encounter at 'Ain Salīm (Sallām), not far from Halab (479 = 1086), where the latter met his death. It was only the death of Malik-Shāh (485 = 1092) that enabled him to gratify his ambition, to make great conquests and to set up as a claimant to the sultanate against his nephew Burkiyūk [q.v.], till he finally was defeated in 488 (1095) and fell on the battlefield. For details see the article TUTUḢ. His son Ridwān [q.v.] then became lord of Halab and another son, Duḡāk (the statement in Abu 'l-Mahāsīn, ed. Popper, II, 344, that he was Duḡmāk is wrong), of Damascus. The latter died soon after in 497 (1104) but the real power lay in the hands of his Atabeg, Tughrigīn [q.v.], who was had the *khawāṣṣ* read for a short time in the name of an infant, then for a brother of Duḡāk, named Artāsh (in the al-Aḥlī called Begīsh), then made himself independent and founded the Burid [q.v.] dynasty.

Ridwān of Halab died in 507 (1114); he was followed by his son Alp Arslān who was soon afterwards murdered by his servant Lu'lu'. The latter then had his brother Saljān-shāh proclaimed Sultān but was himself murdered in 511 (1117). The inhabitants then handed over the town to Ighās [q.v.] and Seldjūk rule came to an end.

V. The Seldjūks of Asia Minor (al-Rūm), 1077—1302.

The ancestor and founder of this dynasty was SULAIMĀN b. KUTULMISH b. ARSLĀN (ARSLĀN) b. SELJUK. His father Kutulmish was one of the Seldjūk paladins under Tughril-Beg but later rebelled against Alp Arslān, and in the end fell on the battlefield near al-Rāy (456 = 1064). Sulaimān himself came to Asia Minor after the great battle of Malāḡkird (1071) (in which the Byzantines suffered a terrible defeat and their emperor was taken prisoner), like so many other Turkish emirs, with the intention of making new conquests there and founding a kingdom. Being a prince of the ruling family he was successful in his aim and we therefore find him prince of Nicaea about 1077 when the fighting for the Byzantine throne seemed to give him a fine opportunity to play a prominent part. When this hope was thwarted by the accession of Alexius Comnenus, he turned eastwards, took the town of Antākīya from the Armenian Philaretus (477 = 1085), was thereby brought into conflict with Muslim b. Kuraish [q.v.], and, after the conquest and death of the latter, with Tutuḡh, which brought about his death in the following year (1086). These events caused Malik-Shāh to make the journey to Halab to arrange matters there and elsewhere, e.g. in Antākīya and Edessa. Sulaimān's son, KILIJ ARSLĀN, was taken back by him on his return, and only returned in the reign of Burkiyūk after Malik-Shāh's death to Asia Minor. We have only scanty information in Arabic sources regarding events in the interval in Asia Minor, so that we have to rely on Byzantine, Syrian and Armenian originals. We cannot go into these here, nor is this the place to deal with the history of KILIJ ARSLĀN and his successors; the reader is referred to the separate articles. Here we give only their names and lengths of reign: KILIJ ARSLĀN I — 1107, MALIK-SHĀH and MAS'UD — 1155, KILIJ ARSLĀN II — 1192 (interregnum, see below), RUKN AL-DIN SULAIMĀN II — 1204; KILIJ ARSLĀN III and GHIVĀTH AL-DIN KAIKHUSRAW I — 1210, 'IZZ AL-DIN KAIKĀ'US I — 1219, 'ALĀ' AL-DIN KAIKĀ'US — 1237, 'IZZ AL-DIN KAIKHUSRAW II — 1245, 'IZZ AL-DIN KAIKĀ'US II (for several years [see the article] with his two brothers) — 1256, RUKN AL-DIN KILIJ ARSLĀN IV — 1266, GHIVĀTH AL-DIN KAIKHUSRAW III — 1284, GHIVĀTH AL-DIN MAS'UD II and 'ALĀ' AL-DIN KAIKHUSRAW III down to the year 702 (1302).

The kingdom of these Seldjūks underwent many vicissitudes of fortune. More than once its fall seemed imminent, but it revived again until finally it sunk into insignificance with the Mongol invasion and collapsed altogether. Sulaimān's capital, Nicaea, was lost in the First Crusade in 1097 and never belonged to the Seldjūks again and with this ended Turkish rule in the whole of western Asia Minor, as the Byzantines under the Comnenos again brought this region under their sway and were able to retain it throughout the period of the Seldjūks. In the south-east the Seldjūks were cut off from the rest of the Muslim world by the Christian

principalities of Antakya and Edessa, which had recently arisen, and by the rise of the kingdom of Little Armenia. Practically only the interior of Asia Minor was left to them and even there they were not the only rulers, as they had dangerous rivals in the Dānişmandids [q. v.]. Kılıç Arslān's thrust towards al-Mawşil came to an inglorious end with his premature death. It was his son Mas'ūd who first succeeded in founding a securely established dominion in Konya, after overcoming his brothers, and gradually extending his power. His successor Kılıç Arslān II continued his work and forced the Dānişmandids to submit to his rule, although the powerful Nūr al-Dīn took up their cause. He was also not unsuccessful in his wars with the Byzantines and succeeded in inflicting a severe reverse on the Emperor Manuel in the vicinity of Murioképhalon (the pass of Kantak) (572=1176). But when he grew old, he became a pawn in the hands of his numerous sons, each of whom ruled a territory of his own; in addition, the Crusaders invaded his lands and even captured the capital Konya (1190). He died soon after this in 1192 while with his youngest son Ghiyāth al-Dīn Kaikhusraw and left his kingdom in a state of complete anarchy, as his sons were fighting among themselves. In the end one of them, Rukn al-Dīn Sulaimān, lord of Tokat, succeeded in overcoming his other brothers and taking Erzerum from the Soltukids. He then granted this town to his brother Tughril-Shāh, who ruled there till his death in 1225 as an independent ruler and had coins struck in his own name there. His son Djāhān-Shāh was, however, dethroned by Kaikobād I during the war with the Khwārm-shāh. Djāhān al-Dīn and his kingdom incorporated in the victor's. After an unsuccessful war with the Georgians Rukn al-Dīn died and his brother Ghiyāth al-Dīn, who after many wanderings had found a refuge with the Byzantines, ascended the throne. This happened about the time that the Latin kingdom was being founded in Byzantium and this gave him a fine opportunity to extend the power of the Seldjūks. In 1207 he seized the important harbour of Antakia and his successor 'Izz al-Dīn Kaik'us also took Sinope. The Turkish empire was thus opened to world trade; relations were established with the Italian merchant republics; the export of the valuable products of the district and the through-commerce with Little Armenia assumed great proportions and "Turkey" at that time became considered the richest land in the world. The Greek princes of Nicea and Trebizond and the kings of Little Armenia in Cilicia pledged themselves to pay tribute either voluntarily or under compulsion. The Ortukids and Aiyūbids in the border cities of the south-east frontier recognised the suzerainty of the Seldjūks on their coins and in the *ḥuṣṣa*. The Sultāns and their great emirs vied with one another in the erection of splendid buildings, mosques and madrasas, bridges and caravanserais. In brief, the Seldjūk kingdom passed through a period of glory such as had not been seen in Asia Minor for centuries; but the picture was not without its other side. The luxurious life of the rulers made them weak and effeminate and aroused the indignation of the lower classes and of the devout. Even Kaik'us I and Kaikobād I, although they were able rulers, had to rely in their military enterprises on foreign, Greek, Armenian and Arab, mercenaries; this became still more the case when

the worthless Kaikhusraw II ascended the throne (1237). In the meanwhile the Mongol deluge had reached the frontiers of Asia Minor. Erzerum, the frontier fortress, fell before their onslaught and soon afterwards the Turkish army suffered an ignominious defeat at Kösedağ (1243). The future of the kingdom was thereby decided. It is true that a peace was concluded and the Sultān granted an appearance of independence on payment of a huge tribute, but the wealth of the land continually stimulated the covetousness of the Mongols and incited them to new raids, pretexts for which were given by the struggles for the throne among the sons of Kaikhusraw. In the end, in the reign of Hülagü, a partition of the kingdom was drawn up whereby 'Izz al-Dīn was to rule on the one and Rukn al-Dīn on the other side of the Kiliç İrmak, but when the former entered into secret negotiations with the arch-enemies of the Mongols, the Egyptian Mamlūks, an end was soon put to his rule and he had to seek a refuge in Byzantium. Rukn al-Dīn henceforth ruled alone but the real power was exerted by Mu'īn al-Dīn Sulaimān with the title of Parwāna, as agent for the Mongols, and when Rukn al-Dīn became inconvenient to him he had him put out of the way in 1266 so that he might rule all the more unchecked in the name of Rukn al-Dīn's infant son Ghiyāth al-Dīn. In the meanwhile the Turks began to rise against the Mongols in Laranda and elsewhere. A number of Turkish Begs therefore appealed to the Mamlūk Sultan Baibars [q. v.] and proposed that he should send an expedition into Asia Minor, where he would find the whole population on his side, if only the Mongol troops stationed in the country had once been defeated. Baibars agreed, defeated the Mongols in the bloody battle of Albastan and advanced as far as Kaisariya (1277). But the Parwāna and the Sultan held aloof and the people did not move so that Baibars was forced by lack of supplies to retire again and leave things as they had been before. Soon afterwards Aḥak appeared in Asia Minor and took fearful vengeance on the Turks, who, as he thought, had conspired with the Egyptians. The Parwāna also had to pay for his inactivity with his life. The Mongol regime now became stricter. Mongol financial officials settled the taxation which for the most part was used to maintain the troops stationed in the country. The Seldjūk Sultāns, whose names appeared on the coins down to 702 (1302), had no longer any authority worth mentioning. The turbulent Turkish emirs, among whom the Banī Karamita and the Banī Ashraf played the most prominent part, were more than once brought to periods of obedience by ruthless punitive expeditions led by the Mongol princes Kungkaratzi and Gaikhatā, only to come again from their retreats and found independent emirates when Mongol sovereignty finally diminished in power. In this way there arose on the ruins of the Seldjūk empire a dozen Turkman dynasties, on which see the separate articles. The last descendants of the Seldjūk family of whom we have historical notice are found in Sinope and perhaps in Alaya. The Kılıç Arslān b. Lutfibeg, who had to yield in 876 (1471-1472) to the Ottoman general Gedik Ahmed Paşa, was deported with his whole family to Stambul and had Gümüşhane allotted to him by the Sultān as *ḥuṣṣa* [q. v.] but afterwards fled to Egypt, presumably belonged to the old family of rulers.

Bibliography: On the sources for Seldjuk history see K. Süssheim, *Prolegomena zu einer Ausgabe der im R. M. zu London vorhandenen Chronik des seldschukischen Reiches*, Leipzig 1911. We may first mention the compendiums of general history by Ibn al-Athir; Sibṭ b. al-Djawzi, *Mir'at al-Zamān*, facsimile edition by J. R. Jewett, Chicago 1907, on the years 495–654; Bar-hebraeus (Syriac and Arabic Chronicle); Abu l-Fidā; Ibn Khaldūn; Hamd Allāh Mustawfī; al-Kāzwinī, *Tārīkh-i Gūstān* (facsimile by E. G. Browne, Leiden and London 1910); from whom was taken the *Histoire des Seldjoukides et des Ismaélites* etc., by Desfrenoy in *J. A.*, 1848; Mirchānd, *Kamūsh al-Safā*, from whom are taken Mirchānd's *Geschichte der Seldschuken*, ed. Vullers, Gießen 1838; Khwandamīr, *Ḥabīb al-Siyar*, lithographed; ed. Thirān 1271 and Bombay 1273. Mas'ūdīyūn Bāghī, *Ṣaḥīf al-Akhbār*, Istanbul 1285. The same author's *Ṭīghāt al-Ḥamāl*, in Arabic, is fuller but only available in MSS.

Special Histories: *Recueil de textes relatifs à l'histoire des Seldjoukides*, ed. Houtsma, Leiden 1886–1902, contains in vol. i, the history of the Seldjüks of Kirmān by Muḥammad b. Ibrāhīm; in vol. ii, al-Bondārī's synopsis of 'Imād al-Dīn, *Nuṣrat al-Fatra wa-Uṣrat al-Fitra*; in vol. iii, and iv, the Turkish transl. and the Persian text of a synopsis of Ibn Bibī's History of the Seldjüks of Asia Minor; al-Kāzwinī, *Ṣaḥīf al-Sudūr wa-Ayn al-Sudūr*, ed. Muḥ. Iḥṣānī, Leiden 1921; al-Hamāmī, *al-Uṣṣā fī 'l-Hikāyat al-Saldjūkiyya*, ed. K. Süssheim, Cairo 1326–1908.

Among the chronicles of contemporary dynasties the following are important: *The Tārīkh-i Bihārī* etc., ed. W. H. Morley, Calcutta 1862; al-Uṭbī, *Tārīkh-i Yamūt*, ed. Maulawī Manīṭik al-'Alīyī and Sprenger, Delhi 1847, with comm. by al-Manīṭī, Cairo 1286; Ibn al-Ḥalānī, *History of Damascus*, ed. H. F. Amedroz, Leiden 1908; Kamāl al-Dīn, *Zuhd al-Ḥalāq min Tārīkh-i Ḥalāq*, French transl. of a part by E. Blochet, Paris 1909; other parts in vol. 3 of the *Historiens orientaux des Croisades*; Abū Shāma, *Kitaḥ al-Rumātān fī 'l-Akhbār al-Dawlatiyya*, Cairo 1287, 1292; Rashīd al-Dīn, *History of the Mongols*, ii., ed. E. Blochet, Leiden and London 1911; al-Djūwainī, *Tārīkh-i Djāhāngushā*, ed. Mirza Muḥ. al-Kāzwinī, Leiden and London 1912–16; al-Makrīzī, *al-Sulūk li-Ma'rifaṭ Dīwal al-Mulūk*, French transl. by Quatremère, Paris 1837–44, and by E. Blochet, Paris 1908; Abū l-Mahāsin, *al-Nuṣṣān al-Zāhira fī Mulūk al-Misr wa'l-Ḥāira*, ed. W. Popper (University of California publications in Semitic philology, vol. ii., 1909, 1910) Biographies of separate Sultāns and visitors in Ibn Khallikān, *Wafayāt*. Cf. also Niṣām al-Mulk, *Siyāset-nāma*, ed. Schefer, Paris 1891, and its Supplement, Paris 1897.

Of special importance for the history of the Seldjüks of Asia Minor and Syria are: *Chronique de Michel le Syrien*, ed. and transl. by J. B. Chabot, Paris 1899–1910; E. Dulacrier, *Chronique de Mathieu d'Edesse*, Paris 1858; M. Brosset, *Histoire de la Géorgie*; also the historians of the Crusaders and of the Byzantine Empire: Vincentius Bellovacensis, *Speculum Historiale*, Books 30, 31.

Coins, Inscriptions, Art. On the Seldjüks

coins see the well-known catalogues by Lane-Poole, Dorn, Ghālib Beg, Ahmed Tewhīd etc. Inscriptions in M. Sarre, *Reise in Kleinasien*, Berlin 1896; Cl. Huart, *Épigraphie arabe de l'Asie Mineure*, in the *Revue Semit.*, vol. ii. and iii.; J. H. Löyved, *Konia, Inschriften der seldsch. Bauten*, Berlin 1907; v. Berchem, *Matériaux pour un corpus inter. arab.*, vol. iii., Cairo 1910, and many scattered articles by the same author; Khalil Edhem, *Katariyya Şehri Mevlânâ-i İslâmîye ve Kitâhları*, Istanbul 1334, and other articles by him and by Ahmed Tewhīd etc. in *Revue historique*; Zukovski, *Razvalini storogo Mirwa*, St. Petersburg 1894; Sarre, *Denkmäler der persischen Baukunst*, Berlin 1910. Cf. also the works of H. Saladin and G. Migeon, Woermann, E. Dies, Strzykowski etc. Since Deguignes, *Histoire générale des Huns, des Turcs, des Mogols et des autres Tartares occidentaux* etc., 1756–1758 (Book X–XI), no European scholar has specially investigated the history of the Seldjüks, although in the works on history by Weil, Mair, A. Müller, d'Ossun, Howorth, Barthold etc. there is much information on the subject. For the early history of the dynasty Kasimīrskī's already mentioned preface to his edition of the *Utāris* of Minutibiri is of particular importance; for the history of the Seldjüks of Kirmān see Houtsma's synopsis (from *Recueil*, vol. i.) in the *Z. D. M. G.*, xxxix, 362–402; for that of the Seldjüks of Rūm, besides the above quoted works of Huart, von Berchem, Khalil Edhem etc., see: Negjili 'Asim, *Türk Tārīkhī*, p. 406–445; Huart, *Konia, la ville des devichet tourneurs*, Paris 1897; do., *Les Saints des devichet tourneurs*, Paris 1918–1922.

SELEBES. [See CELEBES.]

SELEPKÉ, the ancient Σελύχεια, Seleucia Tra-chena or Cilicia, a small town, capital of the sanjak of İc-İl in the province of Adana. It was built by Seleucus Nicator towards 300 B.C. The river Gök-Su (Calycadnus) runs past it, about 10 miles from its mouth. In it is a reservoir called *Tekfūr Anbūrī*, 'the Emperor's storehouse', hewn out of the rock and covered by a vaulted roof. It is a great cistern carved out of the rock, 30 cubits broad and deep and 60 long; the aqueduct which brought the water to it has been destroyed. There are numerous ancient ruins and a mosque dating from the Arab epoch; the town was actually conquered by al-Ma'mūn but soon afterwards evacuated. There is a Byzantine castle on the mountain (xth century). The town is mentioned by Yağuz, *Mu'āzam*, iii, 119, *Murāyid al-Ḥillā*, ii, 44, under the name Selaghū.

The district, for the most part mountainous, contains 3 *nāhiya*: Buldja, Yağda and Aysak; in the *Sel-nāma* of 1325, p. 816, Yağda is given as the capital of İc-İl and its district has now only two *nāhiya*; the number of its inhabitants is 24,860 of whom 1032 are Christians. The exports are the abundant agricultural produce; coarse carpets and sacks are manufactured there. The people in the hills rear cattle and those on the plains are farmers. The district at one time belonged to Cyprus and was administered like the islands of the archipelago by the Kapudan-vaṣṣa (Grand Admiral) [q. v.].

SELİM I, ninth sultan of the Ottoman Empire, known in history as *Yavuz Sultan Selim*, reigned 918–926 (= 1512–1520). He was one of the sons of Bāyazid II, born in 872 (= 1467/68) or 875 (= 1470/71) (*Sijill-i 'Osmānī*, i. 38). Towards the end of his father's reign, he was governor of the sandjak of Trebizond. Although his brother Ahmed, older than he but younger than prince Korkud, had been designated his successor by Bāyazid, Selim also cherished designs on the throne, knowing that he had the support of the greater part of the army. Civil war finally broke out between the two brothers as a result of the nomination of Selim's son Suleimān as governor of Boli. Ahmed protested and the sandjak of Kaffa in the Crimea was then given to Suleimān. Selim soon afterwards (1510) went to join his son in Kaffa and refusing to obey Bāyazid, who had ordered him to return to Trebizond, he went to Adrianople in March, 1511, with a body of Tatar troops. He then asked for a sandjak in Rūm-ili. Only after the Sultan had made up his mind to send troops against his son, did Selim consent to retire, after receiving the sandjak of Semendere as a result of negotiations conducted through the mediation of Mawlānā Nūr al-Dīn Sarfkūrā [q. v.]. But he soon took the field again, giving as a pretext the rebellion of Shāh Kālī or Shāhīn Kālī [q. v.] in Asia Minor. This time he was defeated on August 3 near Çorlu by his father's troops and again sought refuge in the Crimea with his father-in-law, Khān Mengli Girāy. But the Janissaries in the capital were in favour of Selim; they forced prince Ahmed, who had advanced against Constantinople, to retreat (August 21). The attempts of Ahmed and Korkud to profit by the absence of their brother only increased the latter's popularity. Selim therefore left the Crimea in January, 1512, and reached Constantinople in April, where the Janissaries had openly declared for him. Bāyazid in vain attempted to open negotiations. He was dethroned on Safar 8, 918 (April 25, 1512), by a great mob of Selim's partisans and died a month later on the way to Demotika (see the art. BĀYAZID II).

Selim employed the first year of his reign in exterminating his brothers and nephews. By July, 1512, he had set out against Ahmed and his son 'Alī al-Dīn, who had taken Brussa; he put them to flight, but did not capture them. Ahmed entrenched himself in Amasia. An attempt by Selim to take him by surprise there failed, probably through the treachery of the Grand Vizier, Mustafa Paşa [q. v.]. The latter in any case was executed and replaced by Hersek Ahmed Paşa. On November 27, five nephews of the sultan were executed at Brussa, sons of his deceased brothers Mahmūd, 'Alam-shāh and Shāhīn-shāh. In the end Korkud, who had fled to the sandjak of Teke, was captured and put to death. The same fate overtook Ahmed, who, after several successes, was finally defeated and captured on the plain of Yenī Şehir (April 24, 1513).

Peaceful relations with Venice, Hungary and Russia were maintained as a result of negotiations conducted by the embassies which these powers had sent to Constantinople and Adrianople. The warlike spirit of Selim found an outlet in the east, where Shāh Ismā'il [q. v.] had founded the powerful empire of the Shī'ī Safawids. Ismā'il had supported the cause of prince Ahmed and had

given asylum to the latter's son Mutād. Ismā'il, moreover, had many partisans in the Shī'ī element in Asia Minor. His own dynasty owed its success to the Kālī-bash of Anatolia, who had rebelled only recently under Shāh-Kālī against Sultan Bāyazid. Selim, urged either by hatred of Ismā'il or by his zeal for orthodoxy, began a systematic persecution of the Shī'īs in his empire. The total number killed or imprisoned was forty thousand, according to all the Turkish sources. War was inevitable after this. On March 20, 1514, the Sultan left Adrianople and a month after the whole army met on the plain of Yenī Şehir. During this time Selim had begun with a declaration of war his celebrated correspondence with Shāh Ismā'il in a series of letters written in an elegant style and insulting and provocative in their contents (see the *Munsha'āt* of Feridūn Bey, i. 374 *et seq.*), which often resulted in the immediate slaughter of their bearers. At the same time he had turned to 'Ulaid Khān, prince of the Uzbeks, to incite him to war against the Shāh. The Turkish army marched by Konya, Kaisariye (where 'Alī al-Dawla of the Dhu'l-Kadr dynasty showed little enthusiasm to assist the expedition) and Sirta, while the fleet went to Trebizond with the commissariat. After Erzurūm the Janissaries began to murmur at the length of the campaign, but Selim restored his authority with a few executions. The Shāh's army was not met till the plain of Çaldīran [q. v.] between Lake Urmīya and Tabriz. Here on Radjab 2, 920 (August 23, 1514), the Persian army was utterly routed by the Ottoman, mainly through the latter's superiority in artillery. Ismā'il fled, leaving the whole of his harem in the hands of the victor. On September 5, Selim entered Tabriz. He left it by the 13th, carrying off vast treasures and several hundred artisans, to spend the winter at Kara-Bagh, but the opposition of the Janissaries forced him to resume the road to Anatolia. He went via Kara and Baihurt, where Bilyālī Muhammad Pey had been left with a force. Selim himself went into winter quarters at Amasia; the Janissaries, who had begun to mutiny once more owing to the shortage of food, were sent to Constantinople. These disorders resulted in the dismissal of the Grand Vizier and the raising to the office of Khādim Sinān Paşa, Beylerbey of Anatolia (October, 1514). During the same year the Sandjak-Bey of Semendere had driven back a Hungarian invasion near Belgrade.

The year 1515 was marked by the conquest of eastern Anatolia and Kurdistan. Selim, who had assumed the title of Shāh after his victory (according to the coins), went in person to Kumākh or Kemākh [q. v.] which he took in May and then returned to Sirta. From here he sent the new Grand Vizier against the aged 'Alī al-Dawla, lord of the Dhu'l-Kadr [q. v.]. Selim had previously, in the autumn of 1514, invested 'Alī Beg, nephew of 'Alī al-Dawla, with the sandjak of Kaisariye and 'Alī had defeated and killed Salāmān, son of 'Alī al-Dawla. On June 12, 1515, Sinān Paşa defeated the Dhu'l-Kadr army in the plain of Göksum. 'Alī al-Dawla was killed and his four sons captured and executed. The conquest of the land of the Dhu'l-Kadr, including the fortresses of Albīnān and Marāsh, was one of the causes of the war with the Sultān of Egypt, who had been recognised as suzerain of this dynasty. Selim then returned to Constantinople, which he reached on

July 17; there he had executed several high officials accused of having incited the rebellion of the Janissaries, including the *Kağıt 'Asker* and the poet *İbrâhîm Çelebi* (q.v.). In August a great fire destroyed a part of the capital and was followed by more executions.

After the battle of Çaldıran, the Begs of Kurdistan (q.v.), the population of which was for the most part Sunni, declared for Selim; the inhabitants of Diyar Bakr and other towns had opened their gates to the Turks, but the citadels of several towns (e.g. Mardin) were still occupied by Persian garrisons. Dilykîlî Muḥammad, who had been appointed Beylerbey of Diyar Bakr, had been given military control of the country and the historian İdris Bitlisî, himself a Kurd, had been appointed to assist him as high commissioner for civil administration. In the beginning of 1515, however, the Persian general Kara Khân, brother of the former governor of Diyar Bakr, Ustâdjîlî Oghlî killed at Çaldıran, was sent to reconquer the country. He besieged Diyar Bakr, but was forced by Dilykîlî Muḥammad to raise the siege in October, 1515. At the beginning of 1516, Kara Khân was defeated a second time near Koç Hisâr between Urfa and Nisibin by Muḥammad and the Kurdish Begs, a battle in which Kara Khân himself was killed. In this way the towns of Kharput, Maiyufariqin, Bitlis, Hîm Kaifa, Diyar Bakr, Urfa, Mardin, Dîjâra and the lands farther south as far as Rakka and Mawşîl fell into Ottoman hands, the conquest being completed in the reign of Süleimân I.

In the capital, Selim had been busy with the construction of a new fleet and arsenal under the direction of Piri Paşa, while he had reorganised the corps of Janissaries so as to secure a more effective control over the higher ranks of this turbulent soldiery. These were the preparations for a new expedition against Persia. The Sultân left Constantinople on June 5, 1516, and went first to Konya; Sinân Paşa, who had been appointed commander-in-chief, was awaiting him in Albistan. In the meanwhile, the Sultân of Egypt, Kânsûh al-Ghûrî (q.v.), disturbed by Selim's annexation of the lands of the Dîr 'I-Kadr, had left his capital on May 18 with a large army with the object of supporting Shâh Ismâ'il and retaking Marâṭh. Selim, having learned of the arrival of Kânsûh at Aleppo (August, 1516), was the first to send ambassadors. The latter were not at first well received, but returned with an offer of mediation in the war with Ismâ'il. Selim did not accept the proposal; on the contrary, he sent back with contempt an envoy of the Sultân of Egypt after executing his companions. In the end Selim set off via Aintâb, capturing towns like Malatya on his line of march. He met the Egyptian army on the field of Dâbiq (q.v.), north of Aleppo. On August 24 (on the date see *İslâm*, vi. 389, note 4) the Egyptians were completely routed in a short battle; their defeat was due to dissensions among their troops and to the superiority of the Ottoman artillery. Kânsûh himself fell either in or after the battle. Yûnus Paşa had been sent by Selim against Khâ'ir Beg, governor (*malik al-umara'*) of Aleppo; the latter surrendered the town to the Ottomans without striking a blow. Selim encamped for eighteen days on the Kôk Maidân, near Aleppo, and then resumed his march via Hamâ and Hîm to Damascus, which the Mamlûk Begs had abandoned on September 22. Damascus was surrendered by negotiation with

the traitor Khâ'ir Beg and he occupied the town on the 26th. Selim stayed about two months here and ordered among other edifices a mosque to be built over the tomb of Muḥyî al-Dîn b. al-'Arâfî. On October 22, the Mamlûks in Cairo had chosen their new Sultân, Tûmân Bâi. Selim sent him two envoys to offer him peace on condition that the Sultân of Egypt recognised Ottoman suzerainty. The two ambassadors were put to death, much against the wish of Tûmân Bâi, which rendered inevitable the continuation of the war. The Egyptian army left Cairo towards the end of October, under the command of Dînberdî Ghazâlî. They met the Ottoman vanguard under Sinân Paşa near Ghazâlî and were defeated. Selim had left Damascus in December, before rejoining the army at Ghazâlî, he made a pilgrimage to Jerusalem. The decisive battle was fought on January 22, 1517, at Ridâniya near Cairo, after the Ottoman army had crossed the desert in thirteen days. The defeat which the Egyptians suffered there is attributed to the treachery of Dînberdî Ghazâlî, acting in arrangement with Khâ'ir Beg, who was in Selim's army; they are said by a ruse to have immobilised the Egyptian artillery, which was served by Europeans. The two Sultâns took part in the battle in person. Tûmân Bâi slew the Grand Vizier Sinân, believing he was Selim. Sinân's office was filled by the appointment of Yûnus Paşa. By the battle of Ridâniya, the fate of Cairo was decided; although Tûmân Bâi succeeded in regaining the city five days later he was driven from it on January 30, after desperate and bloody fighting in the streets followed by the execution of eight hundred Mamlûk Begs and a general massacre. After the definite occupation of Cairo, Selim, who had pitched his camp on the island of Bulâk, continued the war with Tûmân Bâi. The latter had retired to the Delta and endeavoured to resist with the help of the Beduins. But after another defeat at Dîjâra, his allies betrayed him and handed him over to the Turks. Selim at first treated him with consideration, but in the end yielded to the pressure of Khâ'ir Beg and Ghazâlî and ordered his execution on April 12 or 13 (cf. the article TÛMÂN BÂI).

Selim, being recognised as undisputed master of Egypt, remained a month in Cairo. Among the numerous embassies which came to pay him homage, one of the most important was that of the Sharif of Mekka, Barakâtî, who sent a deputation led by his own son, Abû Numayy Muḥammad, then aged twelve, which was received by the Sultân towards the end of May. The Sharif, who had not much reason to speak highly of the Mamlûk Sultâns, readily submitted to the Ottoman Sultân, who had already, during his stay in Damascus, showed his solicitude for the holy places. Barakâtî declared himself ready to insert the name of Selim in the *khutba*. Abû Numayy returned with rich gifts and in December following (Dîr 'I-Hidjâz, 923) the pilgrim caravan (*ṭurra-i ḥumâyûn*), sent by Selim from Damascus, carried for the first time a covering for the Ka'ba as a gift from the Ottoman Sultân. From this time onwards the Ottoman Sultâns bore the title of Khâdim al-Haramain al-Sharifain which has given them such a great prestige in the Muslim and Christian world. Selim, however, in spite of his solicitude for the sacred places, took care to take with him to Constantinople as hostages several Hidjâz notables resident in Cairo.

Another important delegation consisted of the two ambassadors from Venice, who came to negotiate regarding the payment of the tribute for the island of Cyprus hitherto paid to the Sultān of Egypt. They had, besides, to defend their city from the charge of having assisted the Egyptians against the Ottomans. Their ancient privileges were confirmed by a document of September 8, 1517. There is, however, in existence an Arabic document by which Selim confirmed as early as February 16, 1517, to the Venetian consul in Alexandria the privileges enjoyed by the Venetians (B. Moritz, *Ein Firman des Sultans Selim I für die Venetianer*, in the *Festschrift Sachau*, p. 422 sq.).

Among the monuments of Cairo, Selim paid most attention to the Nilometer, the *wiḡyār* on the island of Rawḡa (cf. the article CAIRO, § 4). He had a pavilion built there which was his favourite abode during his stay in Cairo. Towards the end of May, he undertook a journey to Alexandria to visit his fleet which had arrived there under Piri Pasha, and returned to Cairo on June 12 to remain another three months there. He left the city on September 10, leaving Khā'ir Beg as governor of Egypt (but he had sent his harem and children as hostages to Filibe) and arrived in Damascus on October 8. The main reason for his return was the discontent in the army. He left Egypt without having been able to do much reorganisation there during his stay. Although, according to the Ottoman historians, "true justice" was introduced there (Rustem Pasha), the numerous abuses had not been diminished; İdris Bitlisi, who had dared to call the Sultān's attention to them, was sent back with the fleet. Yūnus Pasha, the new Grand Vizier, was no more pleased with the expedition; the Sultān had already removed him from the governorship of Egypt; then Khā'ir Beg aroused the Sultān's suspicions of him, which led to his sudden execution on September 19 in the desert near Ghazāl. His successor was Piri Pasha. Selim spent the winter in Damascus and resumed his journey in February, 1518, having appointed Dīnberdi Ghazālī governor of Syria. He spent a further two months in Aleppo, from where Piri Pasha made an expedition against the Kīlī Bash, and returned to Constantinople on July 25 and went on to Adrianople on August 4. His son Suleimān, who had taken his place in his absence, was sent as governor to Sarakhān.

Among the notable personages whom Selim had sent as Egyptian hostages to the capital was al-Mutawakkil, the last of the "Abbāsid" Caliphs at the court of the Mamlūks in Cairo. He had accompanied Kāshūh to Aleppo along with three of the chief Kādīs of Egypt and was made prisoner after the battle of Dīlūk. Treated with great consideration by Selim, he accompanied the latter to Egypt, where during his absence his place had been taken by his father and predecessor at the investiture of Tūmān Bāi. Selim had endeavoured on several occasions to make use of the authority of the Caliph in his negotiations with Tūmān Bāi, but without success. In June, 1517, al-Mutawakkil had to leave Cairo and seems to have been sent by sea to Constantinople. Here his conduct is said to have decided the Sultān to imprison him in the castle of Yedi Kule, where he remained till the death of Selim, after which he returned to Cairo at some time not now exactly known. These details regarding the Caliph al-Mutawakkil

are only given by the Egyptian historian Ibn Iyās, who probably much exaggerates the part played by him in the Egyptian campaign, while the Ottoman chroniclers do not say a single word about him. It may be concluded from this that the importance of the "Abbāsid" caliphate and Caliph had become infinitesimal by the time of Selim I and existed practically only for theologians. These early and almost contemporary sources in no case guarantee the authenticity of the tradition which appeared two and a half centuries later, according to which al-Mutawakkil formally renounced the caliphate in favour of Selim. It seems that this story was first given in d'Osson's *Tableau général de l'Empire Ottoman*, Paris 1788, I. 232 and 270. It is afterwards found in several Ottoman historians and thus became an article of general belief in Turkey. It is obvious that this story is intended to justify the claim of the Ottoman sultāns to the caliphate, but it is unnecessary to assume that d'Osson invented it, as Barthold thinks, for the tradition seems in every way worthy of the great conqueror and may have been originated by the Turks themselves. Selim in any case had been called caliph even before the conquest of Egypt; the historians say on several occasions that the *khutba* of the caliphate was pronounced in his name in different places. Cf. also the article KHALIFA.

Selim's successes made a deep impression on the Christian world. The Pope Leo X. endeavoured to enlist the Emperor and the kings of France and England in common action against the Turks. But Selim's relations with Europe remained peaceful during the next few years; the truce with Hungary was continued and a Spanish envoy obtained the confirmation of the privileges of the Church of the Holy Sepulchre in Jerusalem. The Sultān also recognised the new Khān of the Crimea, his brother-in-law Muḥammad Girāy, son of Mengli Girāy. The Grand Vizier was sent to the eastern frontier to defend the empire against the Persians. During this time two new Shī'a risings had to be put down, that of Ibn Hanūsh in Syria in 1517, which was suppressed by the governor Ghazālī and the Begs of Tripolis and Hamā, and that of a certain Shīh Welī (according to Luṭfi Pasha) at Terkhal near Tokat. He and his followers are called Dīlālī, a name found in several Shī'a risings, e.g. that of Kara Yarıḡıl [q.v.]. Ferhād Pasha was sent against this Dīlālī, but it was 'Alī Sheḥawār-Oghlū, who had been appointed in 1516 governor of the country of Dhu l-Ḥadr, who finally defeated and slew him in 1518.

In 1519 Selim left Adrianople for Constantinople, where the equipment of a great fleet was begun, intended for the conquest of the island of Rhodes, but before the preparations were finished he died suddenly on Shawwāl 7, 926 (September 20, 1520). He was on the way from the capital to Adrianople when an illness, signs of which had shown themselves a few days before (an ulceration called *shir jundi*; according to others it was cancer) forced him to stop near Corlu; the father of the historian Sa'd al-Dīn, Ḥasan Dīn, was present at his death-bed. His death was kept secret by the viziers until the new Sultān Suleimān reached Constantinople. The body was buried on the hill on the north-west side of Stambul; Suleimān had the mosque of Selim I built there, to which the *türbe* was joined; it was completed in Muḥarram, 929. The *türbe* also covers the tombs of the mother

of Selim, of several of his daughters and of several princes (Hafiz Hussain al-Ahwani, *Usthat al-Djandari*, i. 14 sqq.).

The personality of Selim I dominates all the great events of his reign. His unrelenting severity and the numerous executions which he ordered earned him the name of Yawuz, expressing at once horror and admiration. It is the latter sentiment that has prevailed regarding him. A whole series of histories are devoted specially to him with the title of *Selim-nâme* (see *Gesch. d. osm. Reiches*, vol. II, p. vii). Selim I has been made a national hero (one of the two German warships which the Turks acquired in 1914 was baptised Yawuz Sultan Selim). Just as his vast conquests of Muslim lands have given rise to the tradition of the transfer of the caliphate, so there has been attributed to him the deliberate pan-Islamic idea of reuniting all the lands of Islam under his sceptre and in this way an attempt has been made to excuse his apparent cruelty (cf., for example, the pamphlet *Yawuz Sultan Selim ve İttihâd-ı İslâm Siyaseti* by Yusuf Ken'in, printed at Constantinople n. d., but since the revolution). In reality the conquered lands had at the beginning of the sixteenth century just entered on a period of decline and depopulation as a result of the change by the Portuguese of the trade route with the Indies. The conquests were nevertheless of enormous importance for the religious and political orientation of the Turkish empire, which henceforth became the great Sunni power in opposition to Shi' Persia (cf. e.g. the *fatwa* addressed to him by the poet Khwâdjâ Isfahani in Browne, *A Literary History of Persia in Modern Times*, Cambridge 1924, p. 78). It is also from this time that Persian Shi'a influence in Turkey definitely gives way to Arab Sunni influence (Babinger, *Z. D. M. G.*, lxxvi. 143). The Ottomans, besides, imposed several of their manners and customs on the conquered, such as the practice of shaving the beard (Selim is always represented beardless) and the style of dress and mode of dressing the hair, without, however, exerting a greater influence for the moment on the civilisation of Syria and Egypt.

Selim is equally celebrated as a poet. His *Divân* is entirely in Persian and was printed in Constantinople in 1306. It was again published in Berlin in 1904 by Paul Horn, by order of the Emperor Wilhelm II. Only a single one of the verses in Turkish attributed to him is regarded as authentic (*Tughkire-i Latif*, Constantinople 1314, p. 57 sqq.). From his early days in Trebizond, Selim was fond of the society of poets; among the better known of these are Dja'far Celebi, whom he made marry the wife of Shah Isma'il, taken prisoner in the battle of Çaldıran, and whom he had executed in 1515 (cf. above), Abi Rewânî, whose *Mahnavi* Was'il was dedicated to Selim; other influential men of his time were Kemal Pasha Zade [q.v.], and the Mufti 'Ali Dîemâli Efendi [q.v.] who legalised by a *fatwa* the war against the Sunni Sultan of Egypt and who was one of the few men powerful enough to oppose on several occasions the execution of the Selim's sanguinary orders.

SELİM II, eleventh Sultan of Turkey, reigned from 974—982 (1566—1574). He was born probably in 930 (1524). He was the son of Suleimân I and the celebrated Khurrem Sultan (Roxelana) (*Sidjill-i 'Othmânî*, i. 39, gives three different dates) and was the eldest of the latter's four children: Selim, Bâyezîd, Djahângîr (d. 1553) and Mihrmâh (became wife of the Grand Vizier Rustem Pasha). Khurrem Sultan favoured Bâyezîd and to secure his succession to the throne she brought about by her intrigues and influence over Suleimân the execution of the heir presumptive Mustafa (October 6, 1553, at Ereğli). After the death of the Sultan in 965 (1557/58) a rivalry began between Selim and Bâyezîd which reached its height in 1559 on the occasion of the changing of the sandjaks of the two princes. Bâyezîd was moved from Konya to Amasia and Selim from Magnisia (where he had been since 1545) to Kutahya; the former refused to move and collected troops. According to the historian 'Ali, this quarrel was the result of the intrigues of Lala Mustafa Pasha, who had been appointed in 1556 to the post of Lala with Selim by the Grand Vizier Rustem Pasha, with the object of bringing about Mustafa's downfall, as he was an old enemy of his. Mustafa is said to have provoked insulting letters from Bâyezîd to Selim, which resulted in the orders for the change of sandjak; as 'Ali was himself secretary to Mustafa Pasha, his statements may be considered accurate. The modern historian Ahmed Refik, however, thinks that it was the Sultan himself who, with the help of Rustem, wished to get rid of Bâyezîd in favour of Selim. Bâyezîd was defeated on May 30, 1559, on the field of Konya, fled to Amasia and thence to Persia to the court of Shah Tahmasp. The latter, after a long correspondence with Suleimân and Selim, consented to

hand over the prince and his four sons to Selim (so as not to break the oath by which he had sworn to Bayazid not to deliver him up to his father). As a result, Bayazid was put to death on September 25, 1561. Selim remained in his sandjak until the day when a messenger from the Grand Vizier, Muḥammad Şokollı Paşa, informed him of the death of Suleimân (September 6, 1566) and the taking of Saigeth (September 8). Reaching the capital on September 24, where no one had expected him, the death of the Sultân being still kept secret, the new Sultân set out two days later for Belgrade. Here he awaited the return of Şokollı with the army and his father's body. When on October 24 the death of Suleimân was finally made public, Selim refused to receive the solemn *hafsâ* of the troops and had distributed among them accession presents which were thought insufficient. They then returned to the capital. Suleimân's body was sent in advance with a small escort and buried in Constantinople without any ceremony. By the time Selim reached the capital in the early days of December, the Janissaries began to mutiny near the Adrianople gate and would not allow the new Sultân to enter his serail until the increase in the accession presents they demanded had been promised them. The distribution took place on December 10. Besides the Janissaries, the *'ulemâ* and notably the Mufti Abu 'l-Su'ûd had handsome gifts given them; there was not even enough left in the treasury to pay the other troops.

Re-entering his palace, Selim abandoned himself to his taste for wine and dissipation, leaving the government in the hands of Muḥammad Şokollı [q. v.]. It was the latter who throughout the reign of Selim continued the traditions of the glorious reign of Suleimân. Here it is sufficient to give a brief résumé of the political and military events of the reign of Selim II. In April the Kapudan Paşa Piyâle returned with the fleet from the taking of Chios (Saklı) and the ravaging of Apulia and was given the rank of a vizier. At the same time negotiations were begun with Austria as a result of which plenipotentiaries arrived to discuss peace, which was arranged at Adrianople on February 17, 1568, between Maximilian and the Sultân; in addition to agreeing to the rectifications of the frontier, the Emperor promised to pay an annual present of 30,000 ducats. In the same month a Persian embassy arrived with great pomp in Adrianople to renew the truce. The peaceful relations existing with Poland, France and Venice were likewise confirmed. The French and Venetian capitulations were renewed. In 1569 took place the unsuccessful expedition against Astrakhan [q. v.], undertaken to make possible the project of making a canal from the Don to the Volga; this plan had been conceived by the governor of Kaffa, Çerkes Kârim, but the enterprise fell through, chiefly as a result of the secret opposition of the Khân of the Tatars; next year peace was concluded with the Russians. From 1568 to 1570 a Turkish army was engaged in the reconquest of the Yaman from the Zaidîs, who had driven out all the Turkish garrisons in 1567 except that of Zabul. At first Lala Mustafa Paşa — who, after a period of disgrace, had returned to the Sultân's favour, but never enjoyed that of Şokollı — had been appointed commander of the Yaman expedition, but was recalled as a result of intrigues by the governor

of Egypt, Kôdjâ Sinân Paşa, who replaced him as Ser-asker. After the successful commencement of the campaign by Özdemir Oğlu 'Othmân Paşa in 1568, Sinân arrived in 1569 and saw his conquests crowned by the taking of San'a' (July 26, 1569) and Kawkabân (May 18, 1570). Several Turkish poets celebrated this victorious campaign, e.g. Nihâlî, *Futûḥât al-Yaman*. The taking of the island of Cyprus in 1570—71 was more due to Selim's own initiative; it was his favourite, the Jew Joseph Nassey, appointed by him Duke of Naxos, who is said to have suggested the plan to him. The violation of the truce with Venice was justified in a famous *fatwâ* of the Mufti Abu 'l-Su'ûd. Lala Mustafa commanded the expedition; he took Nicosia on September 9, 1570, and forced Famagusta to capitulate on August 1, 1571. After this capitulation took place the horrible execution of the commander Bragadino. (The conquest of Cyprus is described in a *Târîḫi Akârik*; see Flügel's Catalogue, i. 236, No. 1015). In the same year an alliance was formed by Venice, Spain and the Pope. Their combined fleets almost completely destroyed the Turkish fleet in the Gulf of Lepanto (October 7, 1571), but this defeat was not enough to weaken Turkey; a new fleet was built during the winter and by the peace of March 7, 1573, Venice had to give up Cyprus and promise to pay a war indemnity. The war with Spain was continued. The Spaniards occupied Tunis in 1572, but were driven out again in September, 1574, by Kôdjâ Sinân Paşa. During the same period (1572—1574) there were troubles with Poland in Moldavia on account of the pretender Ivonia; the latter at first supported by the Turks was in the end defeated and killed by them in June, 1574. Peace was renewed with Austria in November, 1574, in spite of the troubles on the frontier and the intrigues of the claimants for the throne of Transylvania.

Selim died in the night of December 12/13, 1574 (Shah'sân 27/28, 982), as the result of an accident in the palace. He was the first Ottoman Sultân to spend his life in the Serail, where the Sultâna Nûr Bânî was all powerful. His fondness for wine gained him the name of *Meat Sultân Selim*. During his reign dissipated habits spread even among high *'ulemâ*. The system of bribery and corruption, which had begun under Rustem Paşa, penetrated to all ranks of society. But the traditions of the reign of Suleimân were still able to maintain the empire at the height of its glory under the direction of capable men like Şokollı and Abu 'l-Su'ûd. The *Kânûn-nâmî* of Suleimân I, legalised by *fatwâ*s of the Mufti, was put into force, especially in all that concerned the disposition of landed property and the fiefs (cf. *Millî Tercüme-i Medî-mî'at*, 1331, vol. i., Nos. 1 and 2).

Selim II's most famous building is the Selimiyya mosque in Adrianople, built from 1567 to 1574 by the architect Sinân (detailed description in vol. iii. of the *Siyâḥat-nâmî* of Evliya Çelebi). He also carried out various buildings and repairs in Adrianople, Navarino, Mekka (see C. Snouck Hurgronje, *Mekka*, i. 16) and Constantinople (Ayâ Sofya). According to Gibb, he is the best poet among the Ottoman Sultâns. He wrote his poems under the *makhloq* of Selim and surrounded himself with poets, such as Faḫrî [q. v.]; Bâkî also enjoyed his favour.

(J. H. KRAMERS)

SELİM III, the twenty-eighth Sultân of the Ottoman Empire, reigned from 1203 (1789) to 1222 (1807). He was born on Djumâdî 126, 1175 (Dec. 24, 1761), a son of Sultân Mustafa III and the Valide Sultân Mihr-Shah (d. 1805; see *Sijillat-i 'Othmânî*, i. 83) and succeeded on Radjab 11, 1203 (Apr. 7, 1789), to his uncle 'Abd al-Hamid I [q. v.] who had died on that day. Selim's reign is characterised by disastrous wars against the European powers and revolts in the interior, showing the weakness of the Ottoman Empire, and at the same time by the continuous efforts of the Sultân and a party of enlightened men to reorganise the old decayed institutions of the state, which led finally to his deposition.

On his accession to the throne he energetically continued the war against Russia and Austria, but the Turks were beaten in Moldavia at Focani by the Austrians (Aug. 1, 1789) and especially at Martinesci on the river Bîza in Wallachia by the Austrians and Russians (Sept. 22). Here the Grand Vizier Djenâze Hasan Pasha (who had previously replaced Kocja Yûsuf Pasha) died and was succeeded by the famous Kapudan Pasha Djerâ'irî Hasan [q. v.]. On Nov. 10, the Austrians occupied Bucarest, while, on October 8, Belgrad had already fallen into their power. At the same time the Russians under Potemkin continued their conquests in Bessarabia (Khotin and Ochakow had fallen already) and took Bender (Nov. 15). The treaty with Sweden (July 11) to subsidise this country in the war with Russia was of little avail, and Selim, being prevented by tradition from joining the army himself, summoned in a *Khatt-i Sherif* all the Muslims to the holy war. Next year the Austrian danger lessened, especially after a treaty of alliance with Prussia (Jan. 31, 1790) and the death of Joseph II. In June the Turks even gained some success against them. After Prussia had concluded with Austria the Convention of Reichenbach on July 27, in which Austria promised to make peace with Turkey and both nations undertook to guarantee the integrity of that empire, an armistice was concluded at Djurdjow (Sept. 17), followed, after very long negotiations, by the peace of Zistowa (to the West of Rusluk on the Danube) of Aug. 4, 1791. This treaty, concluded by the mediation of Prussia, England and Holland, restored the Danube principalities to the Porte; only Old-Orsowa had to be ceded to Austria. The war with Russia had been disastrous in 1790. The new Grand Vizier

died in March and was succeeded by Hasan Pasha Sherif [q. v.], who was not able to stop the Russian advance in Bessarabia. The Russians took Kilia in Oct. and, after a desperate struggle, Isma'il [q. v.] on Dec. 22. They were also successful in the Black Sea and beyond the Kubân river, though they did not succeed in taking Anapa. Moreover, Sweden had concluded peace with Russia (Aug. 14). In the Aegean, however, the small Greek fleet commanded by Lambro Canziani and equipped at Trieste with Russian aid, was destroyed by the Turks. In February, 1791, the Grand Vizier was executed, by order of the Sultân, in his camp at Shumla and replaced by Kocja Yûsuf Pasha who made energetic preparations to continue the war. But the Russians under Repnin crossed the Danube at Galatz and beat the Turks completely at Matchin (April 9). As spirits in Constantinople had sunk very low, and there had been a big fire, the Porte ordered the Grand Vizier to propose an armistice, which was concluded at Galatz on August 11 and followed by the peace treaty of Jassy of January 9, 1792. In its 13 articles the treaty of Küçük Kainardji was renewed; in the West the Dniestr became the frontier between the two powers, whereas in the east the Porte undertook to bridle the Tatar tribes on the left bank of the Kubân; the Crimea was definitely lost to the Turkish Empire.

Immediately after the war the Sultân took up the question of the reforms which he considered inevitable to restore the strength of his Empire. In the beginning of his reign he had already made an attempt in this direction by insulating on the application of the sumptuary laws (on them see e.g. Mehmed Ghâlib, *Selim (hâlihi) bî'âi evâmîrî mühtemmel*, in *T.O.E.M.*, No. 8, p. 500—504). Soon afterwards he invited a number of prominent and enlightened personalities belonging to the army, the administration and the *ulama* to submit to him schemes of reform. All the projects were sent to the palace, and, as it seems, treated in a way which gave the anti-reform party the opportunity of turning them into ridicule and beginning its never ceasing propaganda against them (Djerdet, *Tarih*, vi. 7; here all the people who presented *Lewâ'ih* are mentioned). The Sultân, however, proceeded with energy. The *divân* was enlarged to a body of about 40 members under the chairmanship of the Grand Vizier or the Mufti, according to the matters treated. The new regulations which were elaborated successively were called *Kânûn-nâmâ's* or *nizâmât* and the total of Sultân Selim's reforms is known as *nizâm-i djedid*, which word, however, is also especially employed for the new regular troops. One of the first measures was the foundation of a new treasury (*trez-i djedid*) for the cost of the new institutions. It was formed by all available revenues and especially by confiscating a large amount of fiefs, the titularies of which had not fulfilled their military obligations (*mahtûl olam arâmet we-timarlar*); a special regulation for the investigating of these fiefs was made. By these and other revenues the financial base of the innovations increased steadily. The first corps of new regular troops was formed from the Bostandji's in 1792. They were destined for the protection of the big waterworks of the capital near the Black Sea at the village of Belgrad Köy, where at that time a Russian invasion was feared. Large barracks were built for them at Lewend Çiftlik,

where they were drilled, though it proved difficult to get volunteers. This first attempt was followed by a still larger establishment at Skutari, where around the enormous Selimiye barracks almost a new town with mosques and baths was created for the new troops. Other regulations concerned the provisioning of the army, the restoring of discipline among the Janissaries, the reorganisation of the Djebedji-corps and the artillery; to the reorganisation of this arm the French contributed considerably. Bonaparte is said to have had in 1794 the intention to put himself at the head of the Turkish artillery, and in 1796 the French ambassador Dubayet even brought with him to Constantinople a mounted artillery brigade. The reforming activity extended also to the improvement of the Bosphorus fortifications, the building of new warships under the energetic direction of the Kapudan Paşa Küçük Hüseini [q. v.], Selim's foster-brother, the manufacture of gun-powder and the instruction of the officers. The engineering-school at Sâdledje in the harbour of Constantinople, founded under 'Abd al-Hamid I, was also completely reorganised under French and English direction and a new navigation school was opened. Although the unfortunate experiences of the last wars made the people comply with all those innovations, there was, of course, a strong party opposed to them, consisting chiefly of the Janissaries and the *'alema*, the more enlightened of whom, however, supported the reforms. As a measure of precaution not too many new troops were stationed on the European side of the Bosphorus. It is a remarkable fact that, as the reforms proceeded, there was much less opposition to them in Asia than in Europe, where rebellious chiefs took them as a pretext for their taking arms against the government.

The peaceful period from 1792 to 1798 had made possible the taking of all these measures; even the two formidable rebels in Europe, Pazvân-Oghlu [q. v.], who in 1792 had entrenched himself in Widdin, and 'Ali Paşa Tepodilenli [q. v.], who had become Paşa of Yanina in 1788 and failed in 1792 in his first expedition against the Sulistes, were comparatively quiet; Servia enjoyed the generous administration of the Paşa's Ebu Bekir and Hâdîdîr Mustafâ. During this time the Porte paid much attention to her relations with foreign powers; new ambassadors were sent to the European courts and in Constantinople a great diplomatic activity was displayed by the Re's Efendi Râhid (d. 1798). The international situation became more and more influenced by the French Revolution. Although the execution of Louis XVI made a bad impression, especially on Selim, who had, even before his accession, been in correspondence with him, the emissaries of the revolutionary government (Descorches) succeeded in arousing sympathy, even in the *'alema*; they pointed, for instance, to the fact that, now that France had instituted the *'culte de la raison*", they were no more in religious opposition to the Muslims. They had influential helpers in Constantinople, e.g. the well-known Monradge d'Ollason, then Swedish dragoman and from 1796 to 1799 Swedish minister, and had nearly induced Turkey to declare war to Russia.

The situation was completely changed by the French expedition against Egypt. In vain the French representative in Constantinople, Ruffin, tried to tranquillise the Porte about the peaceful intentions of his government; on September 4,

1798, war was declared on France and Ruffin was imprisoned, as were also the French consuls and merchants. For the operations of the French in Egypt (they landed on July 1, 1798, after having taken Malta) see the article *KHITAW*; the action of Turkey was here much less important and much slower than that of England. On January 5, 1799, the Porte concluded an alliance with England and the first Turkish troops landed on July 25 in Abûkir, but they were compelled by Bonaparte to retreat to their fleet, after the French army had just returned from the siege of 'Akka, where Dja'zâr Paşa in defending the town had shown himself for the time a faithful vassal of the Sultan. In the last part of that year a Turkish army of 80,000 men commanded by Diyâ Yûsuf Paşa, Grand Vizier since 1798 (Kodja Yûsuf Paşa had been replaced already in June, 1792, by Melik Muhammad Paşa, to whom after 2½ years had succeeded 'Izzet Muhammad Paşa), and containing about 4000 men of new regular troops had reached Syria where it was joined by Dja'zâr's troops. The Turks took the little fort of al-'Atîsh on December 20 and at the same place the Grand Vizier concluded an armistice with General Kleber on January 28, 1800, in which the French promised to evacuate Egypt. But after the treaty had been broken by the English, Kleber attacked the Grand Vizier, who was advancing to Cairo, and defeated the Turkish army near the ruins of Heliopolis (March 20) after which the Turks retreated into the desert. Only a year afterwards, in March, 1801, the Turks participated again in the Egyptian campaign under the Kapudan Paşa Küçük Hüseini; this expedition resulted in the definitive evacuation of the country by the French and the occupation by British troops of Egypt. Turkey's other ally in this war was Russia. After a Russian fleet had already appeared in the Bosphorus in September, 1798, an alliance treaty was concluded on December 23. The combined Turkish and Russian fleets then went to the west coast of Greece and expelled, in March 1799, the French from the Ionian Isles, which former possession of Venice had been left to France by Austria in the peace of Campo Formio (October 17, 1797). The Ionian Isles then were constituted a republic under protection of Turkey and Russia. In the meantime 'Ali Paşa of Yanina succeeded in occupying temporarily some sea-ports in Albania. Notwithstanding the Russian alliance, the relations with Russia remained strained. By the mediation of Prussia a preliminary peace was concluded with France in Paris on October 9, 1801, in which the complete sovereignty of the Porte over Egypt was recognised, as well as the new republic of the seven Ionian Isles; for the ratification of these preliminaries the famous Sebastiani was sent for the first time to Constantinople on an extraordinary mission. To the peace treaty of Amiens, where the same stipulations were confirmed (March 27, 1802), the Porte was no party; she concluded in June a separate peace with France. In the meantime the Grand Vizier and the Kapudan Paşa tried to restore order in Egypt by exterminating the great Mamlûk Beys. As the latter were protected by the British, they did not succeed and in December returned to Constantinople leaving Khosrew Paşa as governor in Cairo; the evacuation by the English troops only followed in 1803, after on January 9 of that year an agreement had

been reached at Constantinople between the ambassador Lord Elgin and the Re'is Efendi, in which the Porte pledged itself to pardon the Mamluks.

The situation in the interior had been equally unsettled in these eventful years. Since the peace of Jassy bandit chiefs ('Othmân Pasha) had been terrorising Rumelia; they were patronised by influential people in Constantinople, enemies of the reforms, especially by Yûsuf Agha chief equester of the Walide Sulân. In 1797 Parwân-Oghlu had taken possession of a large part of Bulgaria and, when an expedition against him under the Kapudan Pasha Husein failed, the Porte had to comply with his claims and recognised him as Pasha with three *tuğ's*. But soon afterwards Parwân-Oghlu, who was protected by Austria, invaded Wallachia (1801). The Porte then tried to restore order by appointing 'Alî Pasha of Vanina Beylerbey of Rumelia (1803), but in vain. The latter was suspected of having an understanding with Parwân-Oghlu and was deposed again. In December, 1803, he then exterminated the little people of the Sultans. In combating the Rumelian rebels that year the Porte derived great advantage from the use of the new *nişân*-troops. Parwân-Oghlu's invasion of Wallachia gave Russia the opportunity of intervention in the Danube principalities. Under Russian pressure the Porte consented to a revision of the former settlements, which increased the autonomy of the principalities, and appointed Ypsilanti as *Aspödar* of Wallachia and Muruzi as *Aspödar* of Moldavia, both for seven years (1803).

In 1803 difficulties arose in Servia [q.v.] occasioned by invasions of Parwân-Oghlu and by the return of the Janissary chiefs or *dây's*, who had been expelled after the war with Austria. These troubles resulted in the rising of the Knezes under the famous Kara Georg in 1804. Neither Turkish troops nor the diplomacy of the Porte were able to subjugate the Servians in the next years; they had since 1805 their own constitution and were masters of the citadel of Belgrad since Dec. 12, 1806. In the same year 1803 Mekka fell into the power of the Wahhâbites (April 30), after nearly the whole of the Arabian peninsula had already recognised the authority of their chief 'Abd al-'Azîz (cf. R. Hartmann in the *Z.D.M.G.*, 1924, p. 195). In the same year also Muḥammad 'Alî [q.v.] came to the front for the first time who, after having broken the resistance of the Mamlûk Bey Bardîst, was appointed in 1804 governor of Egypt.

After, in May 1803, war had broken out again between France and England, the Porte had decided to maintain a strictly neutral attitude, but she was put in a difficult position by France's demand that she should recognise Napoleon as Emperor, from which, however, Russia's menaces withheld her. A personal letter of Napoleon to Selim was of no avail. Only in 1806, after in 1805 the alliance with Russia had been renewed, recognition followed. In 1805 General Sebastiani had come as Napoleon's ambassador to Constantinople and finally French influence prevailed. The Porte went so far as to depose the two russophile hospodars of Wallachia and Moldavia; the Czar then ordered General Michelson to occupy the two principalities. Notwithstanding the resistance of Parwân-Oghlu and Mustafa Bairakdar, the Pasha of Ruscuk, this order was completely executed in Decem-

ber, 1806. Under the influence of anti-Russian manifestations in Constantinople and Sebastiani's pressure war was declared on Russia (Dec. 27). Next month England came with exaggerated claims, e.g. the departure of Sebastiani, enforced by the presence of the British fleet at Tenedos. When the Porte refused to accept, Admiral Duckworth entered the Dardanelles, scarcely meeting any resistance, and appeared on February 10, 1807, before the capital. After a moment of consternation, in which the Kapudan Pasha was executed, the defence of Constantinople was organised under the direction of Sebastiani and French officers (Juchereau de St. Denis). As the British shrank from the responsibility of bombarding the town, they retired again, after fruitless negotiations, on March 1, and reached Tenedos with considerable losses. Immediately afterwards Turkey declared war on England. The English were no more successful in Egypt. Though an English fleet occupied Alexandria on March 17, they were beaten everywhere by Muḥammad 'Alî and had to evacuate the country in September.

In the meantime the interior political situation had passed through a grave crisis. After 1802 the reforms had been taken up again and in March, 1805, a *Khattî Sherif* had ordered a general levy among the population for the *nişân*-troops. This occasioned at last an open revolt of the Janissaries, who concentrated themselves in Adrianople and Kırık Kilise. They completely defeated the *nişân*-troops which the government sent against them in August, 1806. The result was that the reforms had to be given up for the moment; it was due to the influence of the Muftî Sâlih-Zâde Es'ad Efendi [q.v.] that no worse things happened. The Grand Vizier Hâfîz İsmâ'il Pasha (succeeded in 1805 to Diylâ Yûsuf Pasha) was replaced by the Agha of the Janissaries, İbrâhîm Hilmi Pasha. The Porte did not even dare to send *nişân*-troops against the Russians in Rumania.

The successes against England had not restored the Sulân's authority. On the contrary, the opposition had been still more alarmed by the influence of the French during the fortification of Constantinople. Though the reform party continued its work unostentatiously, a plot was devised in order to depose Selim, the leaders of which were Mûsâ Pasha (so the name is given by Djewdet; Zinkeisen and others have Musta Pasha), the *Kâ'im-maklûm* of the Grand Vizier (who himself had marched against the Russians), and the new Muftî 'Atî-ullah Efendi. They incited the rude auxiliary troops (called *Vamak's*), that were encamped on the Bosphorus, to rebellion. The rebellion broke out on May 15, 1807, because they refused to put on *nişân*-uniforms; the leader of the rebels, Kâhakdji-Oghlu, pitched his headquarters at Büyük Dere. In the following days, while Mûsâ Pasha and the Muftî were calming the alarmed Sulân, the propaganda against him spread rapidly and a fortnight afterwards Kâhakdji went with his followers to Constantinople, provided with a list of all the notorious reform partisans. Nearly all these people were dragged to the At Meidân and killed. At this last moment the Sulân hoped to save his throne by a *Khattî Sherif* abolishing the *nişân-i dîvânî*. But his dethronement had already been decided. Next day, Rabi' 1 22, 1222 (May 29, 1807), the Muftî declared with feigned reluctance

to a deputation of the Yamağa that the deposition of Selim was lawful; after this comedy he himself went to inform Selim of the decision of the people. Selim, yielding immediately, retired and as he had no children, the elder of Sültân 'Abd al-Jamîd's two sons, Muṣṭafâ, was placed on the throne as Muṣṭafâ IV [q. v.].

Selim's tragic death happened a year afterwards, when Muṣṭafâ Bairakdâr [q. v.] marched against Constantinople with his own troops and those of the Grand Vizier Çelebi Muṣṭafâ Paşa to re-establish the reforms and to restore Selim to the throne. On Jumâda II 4, 1223 (July 28, 1808), Bairakdâr entered with his troops the first court of the Serây, demanding Sültân Selim. Muṣṭafâ IV then allowed the execution of Selim, which had been postponed until that time, and that of his own younger brother Mahmûd. Bairakdâr came just too late to save the unhappy Sültân, who had been already killed when the Serây gates had been broken open. Then Muṣṭafâ's brother Mahmûd was brought forth from his hiding place and put on the throne.

Selim III is described as a ruler of great gifts (cf. especially his necrology by Djewdet, viii, 262 *sqq.*). He wrote poems under the *takhalluṣ* İhlâsî and is said to have had musical talents. His zeal for reform proves his high intelligence, but was checked by his inclination to occupy himself with the minutest details. He also seems to have been unable to tolerate powerful characters in his immediate surroundings; during his 18 years' reign he had no less than ten Grand Viziers. Of the pious works he had carried out, are chiefly mentioned a silver gate for the *ṭhür* of Abû Ayyûb Anṣârî and the complete restoration of the mosque of Fâtih. The greater part of his constructions were the barracks and schools for the reform projects.

(J. H. KRAMERS)

SEMÂ-KHÂNE, a Persian formation from the Arabic *semâ* [q. v.] and Persian *khâne*, the dancing hall or dancing room, i.e. the space in the monasteries devoted to those Sûfi dances always held in abhorrence by Muslim orthodoxy, to *muḥabbele* (*muḥabbele*) and to *dhikr*. Dancing and

music etc., as a rule, particularly associated with the Mevlevî. But the Bektaşî monasteries have also their *semâ-khâne*; the great old Bektaşî monastery of Seyid-i Çhârî, for example, has three *semâ-khâne* in one suite, in front of the *ṭhür* of Seyid Batîl. Cf. K. Wulfinger, *Drei Bektaşî-Klöster Phrygiens*, in the *Beiträge zur Islamwissenschaft*, part 21, Berlin 1913, p. 32 and plan. Cf. also the Arabic, Persian and Turkish dictionaries. (Th. MARIET)

SEM. [See *SEM*].

SEMENNÜD, a town in the Delta of Egypt, in the province of Ghartâys on the west bank of the Nile (Damietta arm), a railway station on the Tanja-Damietta line (11,550 inhabitants in 1884). The Arabic name is based on the Greek *Σεμηννύς* (which gave its name to the Sebennytic arm), in Coptic *Ḥemennūt*, and *Sebennyt* is ancient Egyptian. The ancient town was perhaps built on both sides of the river; in any case there is a little town opposite Semennüd on the east bank of the Damietta arm called Mîr (Minya). Semennüd (4372 inhabitants in 1884), capital of a district (*markaz*) of the province of Daḡahîya, known from at least the sixth century A. D.

Succeeding the pagarchy of Sebennytos, the *ḥara* of Semennüd included an area not easy to define on account of the difficulty of identifying certain adjoining *ḥara's*. It was bounded on the east by the Nile; to the south by the *ḥara* of Banî and Baṣr (places which exist to this day); on the west by the *ḥara* of al-Buḡjûm, which seems to correspond to the ancient *Bouabakia*, even if we do not admit the phonetic relationship of the two words; on the north by the *ḥara* of al-Awhâya, which al-Ya'qûbî identifies with al-Damîra about 15 miles from Semennüd. The Fâtîmids and the Ayyûbids had an independent province called Semennûdiyya, which was not much larger than the old *ḥara* (129 villages against 108).

Semennüd, which, according to a tradition preserved by Ibn Duḡnâk, was founded by an eponymous magician, a descendant of Lâz, the son of Shem, had a temple which was destroyed about 350 (961) after having been used for a short time under Arab rule as a storehouse for fodder. It seems from a passage in the Jaenbite Synaxarion that this temple had suffered abuse before the days of Islam. Arab legends credit this temple with possessing a *ḡinn* of a dark complexion, with long hair and a short beard, and Maspero thinks that the Arabs were describing a statue of Osiris or Ptah, whose face was painted blue or green.

Coptic tradition records the passage of the Holy Family through Semennüd during the flight into Egypt, and locates a certain number of martyrs here. This town was the see of a bishop still mentioned as late as the 12th century A. D. The town had a Coptic population which gave Egypt several Jacobite patriarchs. Al-Makrîsî, however, tells us that the principal church, dedicated to the Apostles, was in a private house.

Semennüd was not on the line of march of the Arab army of invasion, which went from al-Farṣa via Bîlûs, and the Arab writers do not mention it in connection with the conquest of Egypt. John of Nikiu mentions that the local soldiery refused to fight the Muslims. Semennüd is again mentioned in 132 (750) on the occasion of a local revolt directed by a certain John (Yuhannis), who was captured and put to death.

Savary found it a medium-sized town, populous and busy. 'Alī Pasha gives a list of the mosques of Semennūd, all modern or recently restored.

Wiet, *Matériaux p. servir à la géogr. de l'Égypte*, p. 29, 31—32, 106, 187—188. (G. Wiet)

SEMENNĀN, a town in Persia, on the main road from Media to Khurāsān, situated in the old province of Kūmis (Comisene; cf. Marquart, *Erdkunde*, p. 71), between Tīhrān (in the middle ages Ray) and Dāmghān, at the foot of the Alburz mountain and on the border of the great Kawir. The form Semennān is most frequently found (e.g. Yāqūt); the modern pronunciation is rather Semnān. The foundation of the town is ascribed to Tahmāsiyāth (al-Kāzwīnī), and it is probably of considerable antiquity, although it is not mentioned in the sources dealing with pre-Muhammadan history. Semnān is often mentioned by Arab and Persian historians à propos of the frequent passing of armies on the road to Khurāsān. In the time of al-Hudaydīdī the *isphahān* of Ray defeated there the Khāridīthī Kātari (Ibn Isfandiyyār, *History of Tabaristān*, transl. Browne, p. 104; cf. also the article KĀTARĪ in AL-FURJĀ'Ā).

In the beginning of the tenth century Semnān belonged to the lands of the Ziyārīdī, who lost it in 331 (943) (Ibn al-Athīr, viii. 140). In the time of the Būyids the towns of Kūmis were considered to belong to Dailām. In 427 (1036) Semnān suffered from the ravages of the Ghuzz tribes (Ibn al-Athīr, ix. 268). But when Nāqir-i Khuraw passed through it in June, 1046, it seems that the town had been rebuilt (*Sefer-nāme*, ed. Schefer, Paris 1884, p. 3—4). It was laid waste in 618 (1221) by the Mongols under Subutai (al-Djauwānī, *Djāhān-gushā*, Gibb Mem. Series, l. 115) and Yāqūt still found it for the most part in ruins (iii. 141). In the xvth century Semnān belonged to the little dynasty of the Celawīds of Tabaristān (Melgunof, *Das südliche Ufer des kaspischen Meeres*, Leipzig 1868, p. 52). In the present administrative division the province of Kūmis no longer exists and Semnān is now the most westerly town in the province of Khurāsān.

The distances from Semnān to Ray and to Dāmghān are given by al-Makdīsī as 3 days' journey each, but the town is nearer Ray. The water supply of Semnān and its vicinity comes from the little streams that run down from the Alburz. The surrounding plain is quite extensive and well watered. Tobacco is the principal crop. This plain is separated by a range of hills from that of Dāmghān.

The town has been famous since the time of Yāqūt for its manufacture of cotton goods. It is surrounded by a wall of clay and contains the ruins of several castles. There is also a xiith century bath (*hammām*) there and a fine minaret, of which the mosque is now a ruin in the centre of the bazaar. It is probably this mosque which is mentioned by al-Makdīsī (p. 356), although, according to Fraser, it cannot be older than the xvth century (Sarre in *Islam*, xi. 170). At the present day the town has a fine mosque built by Faty 'Alī Shāh. The population was estimated by Curzon in 1890 at under 16,000.

The dialect of Semnān, remarked upon even by Nāqir-i Khuraw, has the reputation in Persia of being particularly unintelligible. Geiger (*Grundriss d. iran. Phil.*, l. 421) connects it with the group of Caspian dialects. Christensen, who was the last to study the Semnānī, reckons it among the numerous dialects of central and north-western Irān, the place of which in the general scheme cannot yet be definitely fixed.

Several traditionists and lawyers have the *sikhs* Semnānī (Yāqūt, *loc. cit.*, and Brockelmann, *G.A.*, l. 373).

SENĀR. [See SANĀR].

SENEGAL. The origin of the word Senegal has not been definitely ascertained. The majority of modern writers have connected it with the name of the Berber tribe of the Sanhādja or Zanāga, representatives of which have occupied since a fairly remote period a district north of the lower course of the Senegal, and they have interpreted the "river of Senegal" to mean "river of the Sanhādja". This explanation seems to be based simply on a fortuitous resemblance of two names denoting distinct objects. From the information supplied by early geographers and travellers, Muslim as well as Christian, it seems evident that there was at one time in the lower valley of the river a black kingdom called Samanghāna or Sanghāna (al-Bakrī, xiith century) or Senegany (a "Pilot-book" of the Medici of 1351) or Sanaga (Denis Fernandez, 1446) or Senega (Ca de Mosta, Thevet, Marmol) or *S-n-g-i* [the vocalisation is uncertain] (Mahmūd Kōll, author of the *Ta'rīkh al-Fattāh*, xvith cent.). The same authors and documents give the Sanhādja, whom besides they place more to the north, names clearly different (Sanhādja, Assenages, Azanages, Zanhaga,

Sénégues, etc.). To this day the Moors descended from the *Šanḥādja* give the lower valley of the river the name of *Isongān*. It is probably from the name of the province that the word "Senegal" comes. Marmol further says that Lancelot du Lac, who visited the region in 1447, gave the river the name of a kingdom within which its mouth lay.

In any case in the form Senegal the name has been applied since the xviiith century to the river which flows into the Atlantic about 120 miles north of Cape Verd and to the colony founded by the French in this part of Africa. This colony, the capital of which is St. Louis on the Senegal river and near its mouth, and which includes the town of Dakar, the capital of French West Africa, measures approximately 75,000 square miles and had (in 1921) 1,225,523 inhabitants of whom 5,287 were European and 1,220,236 were natives; of the latter, 1,021,791 belong to the negro race, 191,351 to the hybrid branch of the Fulbe or Ful and 7,094 to the white race (Moors). It is bounded on the north by the course of the river Senegal from the region of St. Louis up to the confluence of the river Faleme; in the east by the latter river from its mouth up to about 12° 40' N. Lat.; in the south by a line running from the upper Faleme to the ocean at Cape Roxo, a little south of the estuary of the Casamance. Inland there is a foreign enclave formed by the British colony of Gambia which consists of the two banks of the river Gambia from *Varbutenda* to the sea. Geographically the two colonies are sometimes included under the composite name of "Senegambia".

Senegal was perhaps the first of all the negro countries of Africa to succumb to the attacks of Islam. It was in a hermitage built on an island of lower Senegal that the religious movement of the Almoravids began about 1040 A.D. and the Almoravids won over to the Muslim faith about 1050 the sovereign and principal notables of the negro kingdom of the *Takrūr* or *Tokorōr*, which lay in the present province of Senegalese Futa and the name of which slightly altered to the form *Tuculor* is still employed by the French to designate the negro inhabitants of this province. It was presumably soon afterwards, towards the end of the xiith century, that Islam was introduced among the *Sarakollé* or *Soninke* of the province of *Galam*, above *Futa*. Much later, towards 1770, the *Tuculor* clan of *Tōrōḍbe* preached the holy war against the pagan Fulbe, then in political control of *Futa*, a war which ended in 1776 with the defeat of the latter, the forced conversion to Islam of a great number of them, and the establishment at *Futa* in the hands of the *Tuculors* of a Muslim theocracy with an elected government which lasted till 1890, the time of the definite annexation of *Futa* to the French colony of Senegal. It is from this religious centre founded by the *Tōrōḍbe* of the Senegalese Futa that several great campaigns of conquest and islamisation covering a very wide field, have started, notably about 1800, that led by 'Uḥmān Fōḍye which ended in his conquest of the Hausa country and the foundation of the Muslim empire of *Šokoto*, and about 1845 that of 'Umar Tal, called al-Ḥādīdī 'Umar, which ended from 1854—1862 in the conquest by the *Tuculors* of the Cambara kingdoms of *Kaarta* and *Sēgu*, and the Fulbe kingdom of *Māsina*. Meanwhile Islam had spread among a considerable part of the *Mandingo* peoples of the upper Faleme, of

the upper Gambia and the upper Casamance. At a more recent period it won over almost all the *Wolof* of the lower Senegal river and of the lands to the south as far as Cape Verd. The other native populations of the colony (*Serer*, *Non*, *Banyun*, *Balant*, *Dyola*, *Basari* etc.) are still faithful to their ancestral animism and resist Islam.

The statistics divide the native population of Senegal into 719,000 Muslims, 469,500 animists and 4,700 Christians. (M. DELAFOSSE)

SENKERE, a village on the Lower Euphrates, situated 15 miles E. S. E. of Warka [q. v.] on the mound of Tell Sifr; it is built on the ruins of an ancient Chaldean city, *Larsam*, the town of the god *Šamash*; it is in the present *kaḏā* of *Samāwa*.

Bibliography: *Razūlī* *Tāl*, *Kitāb Djoḡhrāfiyāt al-ʿIrāq*, Baghdad 1340, p. 216; *Loftus*, *Travels and Researches in Chaldaea and Susiana*, London 1857, p. 244—245; *Trelawney Saunders*, *Surveys of Ancient Babylon*, London 1885, plate vi. (L. MASSIGNON)

SENNA is written *Sinna* or *Sinandidj* (*siḏj* = *sis* "castle, fort"). The form *Sihna* leading to confusion with *Šahna* [q. v.] is wrong.

1. Capital of the Persian province of *Kurdīstān*, the ancient seat of the walls of *Arđilān* [q. v.]. For the period before the building of the present town see the article *Šisak*.

Under the year 988 (1580) the *Šaraf-nāma* (i. 88) speaks of a *ḡef* of *Timūr-Khān*, *Arđilān*, including *Hasanābād*, *Sīna*, etc., but the historian of Senna attributes to *Sulaimān-Khān* the building of the modern town on the site of a ruin already there. According to Rich, i. 208, the ancient Senna (?) was built on a flat hill to the south of the present town. The Persian *tārīkh* for the building of the latter is *ghamhū* ("woes") which gives 1046 (1636).

The town lies between the right bank of the *Qishlak* and *Mount Awidar* which separates Senna from the old capital *Hasanābād*. The castle of the walls crowns the hill about 70 feet high which rises in the centre of the town. The principal decorations date from the walls *Khusrāw Khān* I and *Amān Allāh* I. Malcolm, Rich and Čirikov have given descriptions of the castle. The hall of honour of *Amān Allāh Khān* (*ālār*), covered with transparent marble with numerous figures and inscriptions (dated 1233 = 1818) formerly had a gallery of pictures representing the principal sovereigns of the world (Napoleon, Alexander I), celebrated battles, etc. Another was still in 1918 decorated with eleven portraits of walls and their visitors. A beautiful panorama is revealed from the now ruined *tālār* on the mountain separating the valley of the *Qishlak* ("winter grazing") from the plateau of *Lēlagh* (*yaylagh*, "summer grazing").

The population of Senna in 1820 (Rich) was 45,000 families of whom 2000 were Jews and 50 Chaldeans. In 1851 Čirikov counted 10,000 houses. The census of 1295 (1878) gave the figures of 5,484 houses and 24,744 inhabitants. In 1918 the number of inhabitants was about 30,000 with 500 households of Jews and 60 of Christians, Aramaic-Catholics (Chaldeans) and Armenians. There is a Turkish consulate-general at Senna. Senna is a busy centre of trade. The exports are gall-truits (*māzū*), tragacanth (*astira*), skins of the fox, marten and wolf, cattle and carpets of a special design.

2. The province of Senna (Persian Kurdistan in the strict sense) is bounded on the north by southern Adharbaidjan (cf. the art. *SÄWIG-NUTÄG*), in the N.E. by *Sä'in-Kälä* [q. v.], in the E. by Bidjār (Garrus), in the S.E. by Hamadān, in the S. by the province of Kirmānshāh and more especially by its divisions: Sunkur, Dainawar, Bālā-Darbānd, Māhlašt and Zohāb; in the E. Kurdistan of Senna is bounded by the former Turkish districts: Shahr-i Zūr (Halabca and Khurnal = Gul'ambar), Pendiwin and Shīr.

Within these boundaries the land of Senna with the exception of Sakkiā [q. v.] and Bāna, now attached to Adharbaidjan, has an area of about 75 square miles; except for the principal routes the province is insufficiently explored. In the N. E. and S. E. we have high plateaus devoid of trees; the centre cut up by numerous narrow valleys slopes down to the E. where we find forests (oaks, nut-trees, elms and beeches).

The main group of mountains is formed by the massif of Čihil-Čashma (about 12,000 feet); it begins in Persia at the eastern extremity of the enclave of Shīr which runs deeply into Persian territory. Towards the south the Čihil-Čashma sends out a prominent spur which forms the barrier of Kārān on the Senna-Mariwān road (see below). The continuation of the Čihil-Čashma to the east forms the southern boundary of the basin of the Djaghātū which turns northward towards Lake Urmīya. To the N. E. of the Čihil-Čashma is the frontier district of Haft-dāsh with its capital Sakkiā and watered by the main branch of the Djaghātū. In the S. E. of the Čihil-Čashma are the sources of the Khoikhora, the first important tributary of the Djaghātū on the right bank. A little below their junction the river of Tilakū flows into the Djaghātū; its valley is separated by the mountain Tandūrtū (?) from the next tributary which is called Sārūkh.

In this valley there are three districts of Senna: 1. Khoikhora with 8,000 inhabitants and 50 villages of which the chief are: Baat, with a mosque built in 929 (1523) and Mawlañshād; 2. Tilakū (with the canton of Kōciān), 4,240 inhabitants and 24 villages of which the best known is Bāshenak; 3. Karastū on the left bank of the Sārūkh; 4,600 inhabitants, 15 villages. The Afshārs of *Sä'in-Kälä* encroach upon Karastū.

To the south of Khoikhora and Tilakū are the northern sources of the Kizil-Uzan (in Kurdish Kizil-wāzan) which run into the Caspian Sea. The plateau through which these waters flow is covered with snow for four months of the year but in the summer is covered with rich pasturage. Three cantons administered together and including 82 villages are situated here. 4. Kara-tawara in the N. (village Bārharār); 5. Hübātū in the S. (villages of Kelekowā and Dīwāndara) and 6. Sārāl to the east of Hübātū. The southern bank of the Kizil-Uzan also has its sources in the territory of Senna but the fork between the two branches, north and south, is occupied by the basin of Kishlak, the waters of which run eastward.

The basin of the southern sources of the Kizil-Uzan is situated to the S. E. of Senna on the Senna-Hamadān road. It is a large plain sloping north-east, watered by numerous streams and having an altitude of 6,200—6,600 feet. The pass of Kargāhād-Sālawāñshād (8,300 feet) separates it from Senna (5,788 feet); to the south the pass of Mēl-i Muḥammad separates it from the plain of Hamadān;

to the east it is bounded by the low chain of Pandja-i 'Alī behind which lies the district of Sunkur (Songhor). This chain ("Alī's five fingers") corresponds to the *Kūb-i Pandj Angūst* mentioned in the *Nuzhat al-Kulūb*, ed. L. Strange, p. 209. To the N. E. the mountain of Talvānū forms the frontier of Bidjār. The principal source of the south branch of the Kizil-Uzan is called Talwār (Tarwāl) or Arzand; its tributary from the south is called Hādjdjā (Aḡḡ-čai, "bjiter water"). The Talwār waters the district of 7. Ellāk (Kurd. Ellāgh), noted for the coolness of its climate and having 80 villages with 12,000 inhabitants. The Hādjdjā waters the district of 8. Isfandābād (*isfand* "lycopodium"), 94 villages with 14,000 inhabitants; the old capital of Isfandābād is Kaalān; its present centre is Korwā. Khanykov visited in these regions the tomb of Bāhā-Gürgār, near which is a sulphurous spring and quarries of translucent marble (*batghaul*). This saint, Djamāl al-Dīn, bears the same sobriquet (Turkish *gür-gür* "coming in torrents") as the well known Bāhā Gürgār of Kirkūk, on whom see W. Schweer, *Die türkisch-persischen Erdwerke*, Hamburg 1919, p. 10.

The central part of the province is much more undulating and less well known; it is bounded on the west by the mountains forming the Persian frontier (the Awrāmān chain). All the streams of this area are carried off by the river Sirwān (see the art. *DIRÄLX*) which makes its way westwards by the formidable defile separating the mountains of Awrāmān from those of Shāhō. Although Hausknecht mentions a village of Sirwān near the confluence of the Kishlak and Gāwarūd, the great river of Sirwān only has this name below the defile of Awrāmān.

Two main arms form the Sirwān: one coming from the east and the other from the north.

The eastern branch is called Gāwarūd (Gābarūd) and rises near the pass of Asadābād. It flows first through the lands of Saḡur (Songhor) and then waters the districts of Senna south of the capital. From the right the Gāwarūd receives its important tributary the Kishlak which rises in the fork between the two arms of the Kizil-Uzan. On the left it receives waters rising in the Murwāt, the Palangān (?) etc. The lower course of the Gāwarūd is given on the maps as hypothetical.

In this valley are the following districts: 9. Husainābād on the Kishlak above Senna, with 34 villages and 5,000 inhabitants; 10. Hasanābād with 32 villages and 5,500 inhabitants which form the immediate neighbourhood of Senna. The district takes its name from the ancient capital Hasanābād, a stronghold on a considerable height 6 miles S. E. of Senna. 11. Zāwarūd with 58 villages must lie near the confluence of the Kishlak and Gāwarūd. The canton of Sursūr with the village of Fakth-Sulaimān (on the Kirmānshāh road) seems to belong to the same district. The 12th district, Palangān, must be farther down along with 13. Amīrābād and Bilāwar which are said to have 35 villages with 3,000 inhabitants. Palangān has an ancient ruined stronghold in which had lived an independent clan of the tribe of Kalhur, the chiefs of whom are given in the *Sharaf-nāme* (l. 317—318). The new English map places Palangān on the Gāwarūd at the mouth of the river that comes from the villages of Shāhīn and Lahon (Lōn) on the northern slopes of the Shāhō.

The northern branch of the Sirwān is formed by a fan-shaped series of streams; the topography of several of them is still uncertain.

After these rivers join one another, they flow into the Gāwarūd near the village of 'Abbāsābād in the Awrāmān-i Takht.

Four districts lie in the northern basin of the Sirwān. 14. Kalāt-Arsān with 64 villages and 10,000 inhabitants immediately west of Senna. 15. Korrawaz, with 20 villages and 2,300 inhabitants, may be located on the south of the Senna-Gārān road. Lycklama praises the beauty of the landscape in this wooded district. 16. Mariwān (formerly Mihribān), an important district with 200 villages and 26,000 inhabitants which stretches east of the pass of Gārān up to the western frontier of Persia. The great Senna-Gārān-Pendjwin-Sulaimāniya road crosses it. Its centre is occupied by Lake Zarīhār; this depression in the frontier range has always been of great strategic importance. 17. Awrāmān-i Takht (the "A. plain") lies east of the chain of the same name and is immediately south of Mariwān. The northern arm of the Sirwān crosses it from north to south. It is an inaccessible district governed by its hereditary *sulṭān's* ("captains"). Their capital is Razāw. The district includes 33 villages with 4,000 inhabitants. The people of A. have preserved their own particular costume from early times (Rich, *op. cit.*, i. 202) and still use their own dialect. They are very brave but not hospitable. 18. Awrāmān-i Luhūn lies S. W. of the preceding. According to the natives, *luhūn* means "rocky" (cf. Vullers, *op. cit.*, ii. 1108, *lahana* "rock"). The district has 22 little villages buried among the spurs of the mountain to the north of the defile of the Sirwān. It occupies the western face of the chain and its frontier with Turkey is much complicated. A. Luhūn is also governed by its *sulṭān's*, who are related to those of A. Takht and live in Nafūd.

In 1049 (1639) the Turco-Persian treaty confirmed the rights of Persia to Awrāmān and Mariwān but Persian suzerainty was only nominal.

To the south of the Sirwān running N. W. to S. E., as usual with Persian mountains, lies the great massif of Shāhō (= Shāh-Kūh) from which descend the left bank tributaries of the Sirwān: Dāriyān, Sarāb-i Hawl watering Pāwa, Lāla and the oriental sources of the Zimkān. The important district to the north and south of the Shāhō (between the Sirwān and the district of Zohāb) is called 19. Djawānrūd and has about 100 villages with 15,000 inhabitants. It is governed by a collateral branch of the Anilān family. Djawānrūd is the principal centre of the great Djāf tribe and its name may be explained as Djāfān-rūd ("the river of the Djāf"). The little canton of Pāwa dependent on Djawānrūd lies opposite Awrāmān-i Luhūn. The *Staraf-nāme* (i. 319) mentions "Bāwa" among the possessions of the Kalhūr-i Dartang. Local tradition attributes the foundation of Pāwa to Bāw, eponymous ancestor of the Bāwandids (cf. above, RĀWAND); the Arabs, led by 'Abd Allāh b. 'Umar, are said to have entered Kurdistan via Pāwa where there was a sacred fire.

To the south and outside of the basin of the Sirwān are two districts dependent on Senna: 20. Rawānsar and 21. Bilāwar, both lying on the northern sources of the Kara-su (cf. the art. KARKHĀ). Rawānsar stretches to the S. E. of the Djawānrūd on the south slope of the outer spurs of the Shāhō. It is ruled by relatives of the governors of Djawānrūd.

The canton of Shādābād (in Kurd. Shāliāwa) on the road from Kirmānshāh is governed from Rawānsar. Bilāwar is on the direct Senna-Kirmānshāh road, to the south of the Murwārī pass. Its waters flow into the Razāwar river which belongs to Kirmānshāh. Its principal village is Kām-i Yārm.

Such are the four principal river systems of the province of Senna; those of the Lake of Urmiya, of the Caspian, of the Tigris and of the Karkhā.

Population. The total settled population of the province, according to the census of 1208 (1881), was about 150,000 in about a thousand villages. With the exception of the district of Isfandābād, peopled by Persian and Turkish elements and the tribes of Awrāmān belonging to a particular Iranian stock, the population is Kurdish.

The nomads of Senna are following the general course of evolution towards a settled or semi-settled life: in the winter they remain in their villages and in summer after the harvest (April-May) they go up to the neighbouring heights; thus, for example, the Kōmāi tribe seems to have become definitely settled at Korrawaz.

The tribe of Djāf is the most important among those of Kurdistan of Senna. There are about 4,000 families of Djāf on the Djawānrūd which represents a total of at least 20,000 men (Khabādi, Enakht, Kalāghī, Ulād-begī sections etc.). In the xviii century a part of the Djāf migrated to the west and gradually occupied the left bank of the Diyālā, Shahr-i Zūr and Pendjwin. Towards 1914 these Turkish Djāf numbered 10,000 families; of this number about 2,000 are settled and 8,000 are semi-nomadic and go every year to the pastures of Persia. They go by the enclave of Shīlār by which they reach the Čihil-Čashma mountains where they pass the time from May to October. Another emigration from Djawānrūd took place about 1850 when some 150 families of the Djāf settled on the Zohāb under the protection of the Gārān.

The other important tribes of Senna are the Mandumī at Humānābād and their neighbours, the Galbāghī at Hōbātū, Sārāl and Kārā-tawara. The first-named numbered 2,000 families (in 1286 A.H.) and the latter about 3,000. The two tribes are very turbulent and the central government frequently sends expeditions to punish them. Less important are the Shaikh-i Ismā'īlīs (1600 families) and the Prishā (1000) at Isfandābād. At Lelāgh ("summer pasture") we have the Tamar-tōza (300), the Kōrkā (1500), the Lāla (600), the Mahmūd-Djibrā'ī (400), the Bālwand (1500) and the Durrādī (1200). A section of the two last-named tribes leads a nomadic life on the Kishlak and the Gāwarūd. At Zāwarūd and Kalāt-Arsān we have the Kōrk (1000) and at Bilāwar the Gashkī (1500), a very turbulent tribe. To the north-east along the Karāfīs the Bōrkā lead a nomadic life (450) and a number of tribes lead a scattered existence: the Sakūr (300), the Giwa-kash ("cobblers"), the Kharrāt ("turners") and the Lurr-i Kalāghar ("hatten"). These last tribes (1700), whose names give their professions, are rather associations of workmen, "travelling guilds", serving the needs of nomads and settled tribes.

In conclusion we may mention quite near Senna the village of Kishlak occupied by the Sazmānī whose men are musicians and women dancers of rather light morals (Lycklama, iv. 53).

Religion. The great majority of the population of Kurdistan of Senna belong to the Sunnī Shāfi

school. The Shaikhs of the Nakshbandi religious order have many devoted followers among the Kurds; the real hereditary centre of these Shaikhs is in the villages of Tawilla and Beyara which form an enclave in Awrāmān-i Lahūn. Even in Senna, Lycklama (iv. 51) says he saw a Shaikh who, holding a seance, cured sores which his dervishes inflicted upon themselves in the course of their ecstatic meeting (*dhikr*). Sha'is are only found in the non-Kurdish district of Isfandābād. It may, however, be noted that the family of wālīs of Ardilān professed the Shī'a, which perhaps is explained by the sojourn which their ancestors had made among the Gūrān who were fervent 'Alī-Ilāhīs. The great sanctuary of the latter sect, Perdiwar, is on the right bank of the Sīrwān at Awrāmān-i Lahūn (above the Pridi-karān bridge). The people of Hadjdj (in the same district) claim to be descended from the seven dervishes whom the "Kūsa" (*kuṣa* "beardless"), who is buried in this village, had brought with him. This saint is said to be no other than 'Ubaid Allāh, brother of the eighth Shī'i Imām. According to the people of Awrāmān, the people of Hadjdj were rather late in being converted to Islām by a certain Gushāsh; they still venerate the tomb of Pir Shāhriyār, their religious chief before they adopted Islām. A manuscript book (in the local dialect) of his moral precepts is said to be preserved at Nāfūd.

The very costume of these peaceable woodcutters seems to suggest ethnic peculiarities. Lycklama speaks of their "bonnet in the shape of a cornet bent back behind, quite like the headdress . . . of one of the personages on the bas-reliefs of Bisutūn."

The only Christians (60 families) are in the town of Senna. These are for the most part Aramaic Catholics (*Kalānī*) whose head is the patriarch of Mawālī. They have a church built about 1840 on the site of an older church. The Jews are more numerous: 500 families in Senna and little groups in the villages.

Language. The Mukri Kurd dialect (*Kur-māndjī*) stops at Bāna and Sakki. To the south of the Djaghātī in the Khorkhōra and Tilakū districts the *Kurdīstānī* dialect begins and continues to the southern frontier of the province. Its linguistic peculiarities still await systematic study. The language of Marīwān like that of the Djāz closely resembles Kur-māndjī.

A non-Kurdish Iranian dialect is spoken in the two Awrāmāns. It is called *Awrāmī*, or popularly *malā* (= "I say" in Awrāmī). To the same group belong the language of certain villages of Pāwa, (that of the great tribe of Gūrān (on the Zohāb), that of the village of Kandūla (between Dainawar and Kirmānshāh) etc. In the heart of Armenia in the district of Darfūn the "Zaza" dialect is related to the Awrāmī. According to O. Mann (*Die Türkisch-Mundarten der Provinz Fars*, Berlin 1909, p. xxiii.), all these dialects can be classed with the "central" dialects of Persia (Samnānī, Kohrūdī, Mahallātī, etc.). We have no original Kurdish texts from Senna, but the Awrāmī-gūrānī dialects have a whole literature of lyric and epic poetry. The wālīs of Ardilān particularly encouraged at their court the production of this dialect poetry which has certainly passed beyond the limits of the people speaking these dialects. It is curious that "to sing" in Senna Kurdish is *gūrānī larin* "to recite Gūrānī poetry". The Chaldeans and the Jews of Senna speak their Aramaic dialects in addition to Kurdish.

History. There are no monuments like those of Kirmānshāh or even of Kurdistan-Mukri (see the art. *sāwrij-bulāx*) in Senna.

For the oldest period we may mention the chamber cut out of the rock near Rawānār (Čirikov, p. 528); it seems to belong to the same category of monuments as the sepulchres (Median?) of Sabna (q.v.). Its entrance has the typical rectangular form but its ceiling is vaulted. At the other end of the territory of Senna (N. E.) are the caves of Karaftū, which seem (Ker Porter, ii. 538-552) to have been used for the Mithraic worship. The Greek inscription there is an invocation of Heracles. The caves lie off the usual route, but at the period when Gaznā (*al-Sā'ir* of the Arabs, the modern Takht-i Sulaimān) flourished they must have led to its sanctuary (the fire-altar *Ādhargushasp*).

As to the ancient toponymy, Streck, Billerbeck and Thureau-Dangin have collected the Assyrian references to Persian Kurdistan. Unfortunately no concordance of modern names has so far corroborated their hypotheses.

The leases in Greek and Pahlavi found about 1909 in a cave in Mount Kōsālān (Awrāmān-i Takht) and going back to the first century B. C., mention names which may refer to the locality where the find was made (the hyparchies: *Bakēpa* and *Bavīdapa*, the stations *erasthai*: *Bakēpasta* and *Avaxāde* and the village *soyus*: *Kaḡāwuz* or *Karāwuz*).

The ingenious identification of Median places mentioned in Ptolemy (vi. 2) proposed by F. C. Andreas refer to territories outside of the modern Senna. For the Arab period see the word *SISAK*.

Kurdīstān of Senna and Ardilān (q. v.) were for at least four centuries governed by hereditary wālīs. Their legendary history makes them originate in the Sāsānīan or early 'Abbāsid period. The *Sharaf-nāma* only says that Bābā Ardilān, a descendant of the Marwānids of Diyār-bakr, had settled among the Gūrān and towards the end of the Mongol period became governor of Shahr-i Zār. According to Rich (i. 214), the wālīs were of Gūrān origin (of the clan Mamū'ī). Their history became better known from the time of Ma'mūn b. Mundhīr to whom the historian 'Alī Akbar gives the date 862-900 A. H. The wālīs took an active part in the struggle between the Safawīs and the Ottoman Sultāns, sometimes on the Persian side and sometimes on the Turkish. The *Sharaf-nāma* stops at the reign of Halā-Khān (*halā* "eagle" in Kurd.) oscillating between the two rival empires (994-1014). Local historians continue the tradition to our day.

With only slight interruption the Ardilān family retained authority throughout the Safawid period when the four western frontier districts enjoyed a semi-independence: 'Arabistān (the Shī'i wālīs of Huwāza), Luristān, Kurdistan and Georgia. During the Afghan invasion Khāna Pasha Bābān of Sulaimāniya seized Senna in 1132. The coming of Nādir brought back to Senna Subhān Wardī Khān Ardilān (1143-1169 with interruptions). In 1164 Karīm Khān Zand laid waste the district of Senna. After a period of troubles Khusrav Khān Ardilān (surnamed "the Great") settled at Senna (1168-1204). Agha Muhammad Kādjār as a reward for his exploits assigned Sunkar (Kulā'ī) to him. His son Amān Allāh "the Great" (1214-1240) much improved the town. Malcolm and Rich were his guests. His son Khusrav Khān Na-kām ("not having enjoyed life" i.e. died young) succeeded him.

(1240—1250); he is celebrated for his literary abilities. Under his son Rikā-Kūlī quarrels broke out in the family. The walli (1250—1266) was imprisoned at Teherān whence he only escaped after the death of Muḥammad Shāh. His brother Amān Allāh (1265—1284) was the last hereditary walli of Kurdistan. In 1851 Čirikov was a witness of the intervention by the central government in the affairs of the province under the pretext of discontent among the subjects of the walli. In 1284 (1868) the energetic prince Tazhād Mirzā was appointed governor-general from Teherān. He ruled Senna till 1291 and restored order to the ancient fief of the Ardilān. Their descendants still exist in Senna but are now of no importance. On the other hand the old families who held office at the court of the wallis continue to play a prominent part in local life.

(V. MINORSKY)

SENNÄR. Modern Sennär is a village situated on the Blue Nile about 170 miles south of Khartūm. It is the seat of a District Commissioner, and the headquarters of an administrative district of the Blue Nile Province. The district has a population of about 50,000, which is composed of a mixture of Süddn tribes and Fellata immigrants from West Africa. The Sennär dam, which irrigates a large cotton growing area, is situated at Makwar, about six miles to the south of Sennär village.

The older usage which extended the name of Sennär to the triangular territory between the Blue and the White Nile with undefined borders in the south is obsolete, and the country in question now forms the Blue Nile Province and the Fung Province of the Anglo-Egyptian Süddn.

The discovery of pre-historic remains at Gebel Moya and of Meroltic finds near Sennär itself shows that the district has been inhabited since a remote period, but historically Sennär has only been of note as the seat of the Fung [q. v.] Sultānate, which formed the most important political organisation in the Eastern Süddn from the sixteenth to the beginning of the nineteenth century, and the foundation of Sennär itself is connected by native chroniclers with the establishment of this kingdom in A. D. 1504. The semi-barbaric dynasty, known to natives of the Süddn as the

Blue Sultanate (*al-sultāna al-azraqa*), claimed sovereignty over the territory extending from the Red Sea to Kordofan and from the borders of Abyssinia to the third cataract, but its rule was never effective except in the immediate neighbourhood of Sennär itself; the rest of the country was split up amongst a number of petty kings and tribal chiefs, who were attached to the paramount power by means of a loosely-knit feudal organisation. The chronicle of the Sennär kings, a dreary record of internecine wars and barbaric diplomacy, may be read in MacMichael's *History of the Arabs in the Sudan*. The organisation and laws of the kingdom are of some interest as exhibiting a blend of pagan African and Arabo-Muslim elements. Even in the time of Bruce, the discoverer of the Blue Nile, there still survived the law that a king might be slain "if it were decreed that it is not for the advantage of the state that he be suffered to reign any longer", and a high functionary of state, styled *id el-göm* (*saiyid al-ḡom*), was charged with the duty of carrying out the decree. Parallels to this law are afforded by the custom of Meroë in the 3rd century A.C. and an analogous custom still observed by the Nilotic Shilluk and Dinka. The intercourse between the kings and the vassal chiefs was regulated by an elaborate ceremonial; the more important of the latter bore the title of *mungil* (a word of unexplained origin) and were distinguished by the rights of *kakar* and *tafiya*, i.e. the right to use a royal chair of state and a peculiar head-dress shaped like the horns of a bull.

Arab and Muslim influences, on the other hand, made themselves felt from an early period. The kings claimed descent from a remnant of the Banī Umayya, who were said to have entered the country from Abyssinia, where they had taken refuge after the rise of the 'Abbasid dynasty, and this tradition may well refer to the immigration of small parties of Arabs, who married into an aboriginal tribe and introduced Islam without materially affecting the ethnic characteristics of the tribe (cf. the marriage of Djuhaina Arabs with the daughters of Nubian kings in the account of Ibn Khuldūn, quoted by MacMichael, *op. cit.*, i. 138). In any case it is clear that the Fung were nominally Muslims at the time of the establishment of their kingdom and that the overthrow of the kingdom of Aloa and the disappearance of Christianity from Sennär were brought about by an alliance between the negroid Fung and a coalition of the Arab tribes, which had immigrated into the Sūdān during the period of decay which beset the Christian kingdoms of Nubia. The Islamisation of the country is intimately connected with the missionary activities of a number of scholars and saints who flourished under the Fung sultanate, and whose lives are related in the still unpublished *Tabaqāt* of Wad Daif Allāh. Yet owing to the isolation of the country Sennär has played no serious part in the cultural life of Islam, and the *riwāq* (or hostel) of Sennär students at al-Azhar is a foundation of the Egyptian government subsequent to Maḥammad 'Alī's conquest of the Sūdān.

After a period of rapid decay Sennär became a dependency of Egypt in consequence of Maḥammad 'Alī's expedition in 1821. Under Egyptian rule the town was a centre of trade and the headquarters of a *mudiriya*, the buildings of

which were destroyed by the Mahdists in 1885. The palace and mosque erected by the Fung kings was already in ruins at the time of Caillaud's visit.

Modern Sennär is about a mile and a half distant from the ruins of the old town. It is now of comparatively small importance, and its place as a centre of trade and administration has been taken by Wad Medani.

(S. HILLELSON)

SEPOY is the English corruption of *sipāhī*, the adjective formed from the Persian word *sipāh*, "army". *Sipāhī* is used substantively for "member of an army, soldier", and occurs in literary Persian, though it is no longer current in the modern language. The Turks and the French have borrowed the word, the latter in the form *spahi*, and in these languages as well as in Persian it invariably means a horse-soldier, in which sense it is used by the English traveller Hedges (*Diary*, ed. Hakluyt Society, i. 55) in 1682. In India both the French and the British adopted the word, which seems to have reached them through the Portuguese, the former writing it *cipaye* or *cipai*, and the latter *sepo*, *sepoi*, *scapoy*, *scapy*, *ciphey*, *zipey*, etc., but these both nations have applied it since the beginning of the eighteenth century to natives of India trained, armed and clad after the European fashion as regular infantry soldiers. Regiments of sepoys were first raised and employed by the French. In 1748 Dupleix raised several battalions of Muslim infantry, armed in the European fashion, and in 1759 Lally wrote to the Governor of Pondicherry: "De quinze mille cipayes, dont l'armée est censée composée, j'en compte à peu près huit cents sur la route de Pondichéry". Stringer Lawrence soon imitated Dupleix in forming regular battalions of sepoys in Madras, and in 1757 a force of sepoys accompanied Lord Clive when he left Madras in order to recover Calcutta. The military establishment of Bengal had consisted of one company of artillery, four or five companies of European infantry, and a few hundred natives armed in their own fashion, but after the recovery of Calcutta from the Nawab Sirāj al-Dawla a force of Madras sepoys was used to form the nucleus of an army for Bengal, and 2,000 sepoys fought at the battle of Plassey in June, 1757. About the same time sepoys were raised and employed in Bombay, and European adventurers in native states raised and drilled battalions of sepoys for their masters.

In 1795 the infantry of the three Presidency armies was organised in regiments of two battalions each, each battalion consisting of eight battalion and two grenadier companies. Of such regiments Bengal possessed twelve, Madras eleven, and Bombay four, with an additional marine battalion. Henceforward the three armies grew on divergent principles and with different organisations. The

Sepoy Mutiny of 1857 shattered the old Bengal army and seriously affected that of Bombay, but both were reconstituted and remodelled. Early in the twentieth century Lord Kitchener, then commander-in-chief in India, formed the three Presidency armies into one Indian army.

SER. [See **SAR**].

SERAIL. [See **SERĀY**].

SERĀY (P.). This word which is derived from an old Persian form **srāda* (from the root *srā* 'to protect') has in Persian the general meaning of dwelling, habitation. The Arabic word *serāḍīk* 'tent' has been borrowed from a diminutive in *s* formed from **srāda* (Horn, *Grundriss der neu-persischen Etymologie*, Strassburg 1895, p. 199).

We frequently find in Persian the word *serāy* compounded with another substantive to indicate a particular kind of building, like *Ārman-serāy* (cf. the art. **KĀRĀN**). In Persian mystic poetry *serāy* is an expression for the terrestrial world, the temporary abode of man (cf. *Sipendī*).

It is in Turkish lands that *serāy* has come to mean particularly the seat of government (like the Turkish word *hona*) and the residence of a prince, a palace. From this meaning come the names of towns in Tatar countries and in Turkey called simply *serāy* (cf. the articles **SARĀY** and **SERAYÉVO**) or compounded with *serāy* (*Ak-Serāy* etc.). In Turkey the *serāy* par excellence was the *serāy-i Humāyūn* of Top Kapı in Constantinople (q. v.).

In Arabia the form *serāyo* is used for palace in the 1001 Nigha. The Italian loanword *seraglio* and the French *serail* are sometimes found with the meaning harem but this limitation of meaning is not Oriental.

SERAYÉVO, Turk. **BOSNA SERAI** or simply **SERAI** (cf. the art. **BOSNA SARAI**), capital of Bosnia in the Southern Slav states, picturesquely situated on the Miljacka in a valley open to the west enclosed on other sides by high and rocky hills, 1730—2273 feet above sea-level, with 60,087 inhabitants (1921) (of whom one third are Muslims); they mainly live by local industries (copper-ware, silver-filigree, carpets and tobacco). In the xvth century we find in place of Serayévo the powerful fortress of Vrhbosna, part of which still survives in the modern citadel of Serayévo. Even in the xvth century Serayévo was still generally known as Vrhbosna. The place is first mentioned in the Christian period in 1379 as the residence of Ragusan merchants and again in 1415 as the burial-place of the vojvod Paul Radenović. The Turks saw the admirable situation of the place and chose it as the military centre of the conquered district when they captured Bosnia under Mehmed II in the spring of 867 (1463); tradition records as the name of the alleged leader, Giray Khān (= Hacı) Giray Khān, d. 871 = 1466?, who was also buried near Serayévo (cf. *Die früh-slawischen Jahrbücher des Urudsch*, ed. by F. Bahlinger, Hanover 1925, p. 126, 4-5, and F.

Giese, *Die altom. anonymen Chroniken*, I., Breslau 1922, p. 113, 22 sq.; II. [German transl.], Leipzig 1925, p. 150 [Abb. f. d. N. d. Morgenl., xvii/1]). We already find here as early as 1438 and 1439 a Turkish governor who had been appointed to control the tributary native dynasts. After the final conquest of Bosnia by the Ottomans the Turkish governor of Bosnia ruled at Vrhbosna which name was retained, as the journals of Petanius and Benedict Kuripesić (1530; cf. B. Kuripesić, *Itinerarium der Betschaftsreise*, ed. by El. Lamberg-Schwarzenberg, Innsbruck 1910, p. 33 sq.; Vrhbosna) and the Ragusan correspondence (cf. J. Gelcich and L. v. Thallóczy, *Ragusa et Magyarország*, Budapest 1887, p. 674 [1513]; Vrhbosaria) show; forms like Vrhbosna, Vrhbosania, Vrhbosanania etc. are also found. About the middle of the xvth century, however, the name Bosna Sarai ('Palace on the Bosna'), Slav. Serayévo, Ital. Seraglio, Seralo (cf. Giac. di Pietro Lucari, *Copione Ritratto degli Annali di Bana*, Venice 1605, p. 17: *il castello di Varch-Bosna, da cui crebbe la città di Sarajo*), appeared and gradually drove out the older name. Serayévo is found in 869 (1464) in a *waḡḡ-nāma* as *Medinet Serāy*. The name Bosna Sarai or simply Sarai comes from the palace which Mehmed II built after the capture of the town, on the site of the Khunkār Džamī (Imperial mosque, Careva Jamiya) (cf. Ewliya, v. 428; J. v. Hammer, *Rumel und Bosna*, Vienna 1812, p. 160). Under Ottoman rule Serayévo increased in importance, particularly because it was the residence of the governors of Bosnia (cf. C. v. Peez, *Die ottom. Statthalter in Bosnien*, in the *Wienschriftl. Mitteilungen aus Bosnien* etc., II. 344 sq., Vienna 1894), who did much to beautify the town and transformed it into a Muhammadan city between 900 and 1000 A.H. Numerous mosques, madrasas and baths arose, some very splendidly equipped, like the foundations of Ghāsi Khusrāw Pasha (1506/1512 and 1520/1542) which are still kept in existence to-day. Ghāsi Khusrāw (cf. and the document in *Cod. Turc.* 320 of the Saxon National Library in Dresden) is buried in Serayévo (cf. Ewliya, *Seyāhat-nāme*, v. 441, and *Wienschriftl. Mitteilungen aus Bosnien*, I. 503 sq.). Although after the definitive conquest of Bosnia the residence of the Turkish governor was moved from Serayévo to Banyaluka, the former retained its importance. Apart from a brief interruption by Prince Eugene's occupation of the town in October, 1697, which lasted a few hours only, Turkish rule lasted 415 years in Serayévo. On Aug. 18, 1878, the town was taken by the Austrian Artillery General, Josef Freiherr von Philippovich (1818—1889) after a sharp fight and incorporated in the Danube monarchy. On Oct. 6, 1908, the annexation with the consent of the Powers was proclaimed. On June 28, 1914, the Austrian heir, the Archduke Franz Ferdinand, was assassinated here. After the collapse of the Danube monarchy in 1918 Serayévo with Bosnia and Herzegovina passed to the newly formed Southern Slav State.

Serayévo which is the residence of a Muslim *Ka'is al-Ulamā'* and has a Sherfat school, has a number of buildings from the Muslim period. Among the eight mosques, all of the xth century, of which Ewliya Čelebi (xvth century) mentions the mosque of Ferhād Pasha (built 969 = 1561), of Khusrāw Pasha (built 937 = 1530),

of Ghāzī 'Alī Paşa (built 960 = 1553) and of 'Isā Paşa (built 926 = 1520), the finest is that of Ghāzī Khānaw (Begova Jamiya). Of the monasteries (cf. Ewliya, v. 431 sq.) that of the howling dervishes, Sinān Tekkesi (Sinan-tekiya), founded by Hādīdī Sinān Agha (d. Ramadān, 1049 [began on Dec. 26, 1639]) in 1638 (cf. *Wissenschaft. Mitteil. aus Bosnien*, I. 506 sq., with a picture), still exists. The description which Ewliya gives of Serayēvo in the xviith century is surely much exaggerated (cf. Ewliya, v. 428—441); at least of the splendours of all kinds described there not very much has been saved for the present day. It is true that in course of time many edifices have been destroyed by numerous devastating fires (1480, 1644, 1656, 1687 and 1879). Serayēvo was an Ottoman mint; copper coins (*manḡir*) were struck here under Sultān Mehmed IV and Suleimān II in the years 1085, 1099 ("Bosna") and 1100 ("Serai") (illustrations in St. Lane-Poole, *Brit. Mus. Cat. Or. Coins*, vol. viii., *The Coins of the Turks*, London 1883, pl. vi., N^o. 401; cf. Ghālib Edhem, *Taḥwīn-i Mesḡūhāt-i 'Oṭmāniye*, Stambul 1307, p. 228 sq.); C. Trabelka, in the *Wissenschaft. Mitteil. aus Bosnien*, ii. 350 sq., iv. 396 sq. (copper coins struck in 1085 (1674/75) in the reign of Mehmed IV; for general information E. v. Zambaur, *Prägungen der Osmanen in Bosnien*, in the *Numism. Z.*, New Series, vol. i., Vienna 1908). Serayēvo is the birthplace of the important Ottoman poet Mehmed Nerkesi (cf. *Mitteil. aus dem Geschichte*, I., Vienna 1922, p. 152 sq., and *Yāsi Medfūn'a*, I., Stambul 1917, part 15—18), and intellectual life was always active in Serayēvo and neighbourhood in the Turkish period (cf. Safvet Beg Baṣagić, *Bosnija i Hercegovina u islamskoj književnosti*, Serayēvo 1912, a literary history of Muslim Bosnia Herzegovina).

Hoernes, *Dinarische Wanderungen*, Vienna 1888, p. 78—106. On the daily press in S. cf. H. Renner, *Durch Bosnien und die Herzegovina kreuz und quer*, Berlin 1897, p. 54 sq.

(FRANZ BABINGER)

SERBEDÄRS, the name of a line of robber chiefs who made themselves masters of a considerable part of Khurāsān; their subjects are also known as Serbedārs. This state, a regular republic of brigands, in which military considerations and the influence of Shī'ī dervishes predominated, was formed during the troubles that succeeded the death of the Ilkhān Abū Sa'īd; it collapsed before the great Timūr. The name Serbedār, which one might translate "gallows-bird" (or perhaps better "desperado"), goes back, according to the historian Khwānd-amīr, to a saying of the first chief, 'Abd al-Razzāk: *"Ba mardī zar-i khwānd bar dār dādan kharīr bar bihtar kih ba nāmardī ba kārī razidan"* ("courageously venturing to be hanged is a thousand times better than being killed as a coward"). Dawlat-shāh, *Tadhkirat*, ed. Browne, p. 278, gives, however, a different explanation of the origin of the name. According to Ibn Baṭṭūṭa, the Serbedārs were called in the Irāk: *Shūffār* (robbers) and in the Maghrib: *Ṣafāra* (birds of prey, falcons). Their capital was Sabzewār in the district of Baiḥāk. The first Amīr Serbedār, 'Abd al-Razzāk, was the son of an 'Alid, Shihāb (or Tādī) al-Dīn Faḡl Allāh Bāshṭnī, a former official of the Shāh of Djuwain.

'Abd al-Razzāk was able to gain the favour of the Ilkhān Abū Sa'īd (d. 736/1335) who gave him a public appointment. Appointed to administer the taxes of Kirmān, 'Abd al-Razzāk spent all the tribute he received; but the death of the Mongol prince took place in time to get him out of his difficulty. He went to Bāshṭn (a village in the district of Baiḥāk), his former abode, where he collected a band of adventurers and malcontents, with the object of becoming independent sovereign of a part of Khurāsān. He had first of all to fight with the vizier 'Alī al-Dīn Muḥammad Faryumādī, then all-powerful in this country; the latter was defeated and killed in 737 (1336/1337). After the death of 'Alī al-Dīn, 'Abd al-Razzāk seized the town of Sabzewār (738) which became the headquarters for the Serbedār chief's brigandages. According to Dawlat-shāh, he also conquered Djuwain, Asfarā'in, Dīdārm, Biyār and Khudjand. In 738 (1337/1338) in the month of Ṣafar (according to others in Dhū l-Hijja) 'Abd al-Razzāk died, assassinated by his brother Waḡīth al-Dīn Mas'ūd, who succeeded to the throne. The Oriental authors, even those who, like Ibn Baṭṭūṭa, are not prejudiced against the Shī'ī Serbedārs, represent 'Abd al-Razzāk as a tyrannical and unjust ruler, the opposite of his brother Mas'ūd. The latter, according to them, only killed him in legitimate self-defence. The romantic details that are given of the death of the first Serbedār prince have a very apocryphal look; probably the historians have blackened the character of 'Abd al-Razzāk to excuse Mas'ūd's fratricide. The latter, the second Serbedār chief, took the title of Sultān (Ibn Baṭṭūṭa, ed. Defrémery and Sanguinetti, iii. 65/66), and had warlike ambitions of further extending Serbedār rule. An ardent Shī'ī — Ibn Baṭṭūṭa tells us that the Serbedārs at that time intended to exterminate the Sunnis in Khurāsān — he attached the dervish Ḥasan Dīrī to his person, who for political reasons had been thrown into prison by the prince of Nishāpūr. The dervish was able to escape the wrath of the latter; the authorities are not agreed if Mas'ūd aided him to escape or not. Dawlat-shāh says that Mas'ūd himself became a *murīd* of Dīrī.

The first campaign of the new Serbedār chief was directed against the lord of Nishāpūr, Arghūn-Shāh Dīnī Kurbānī. It is probable that this expedition took place as early as 738. Arghūn's army was routed: Nishāpūr and Dīnī fell into the hands of Mas'ūd. The defeated ruler sought refuge with Togha Timur Khān of Djurdjān. It seems that Mas'ūd and Dīnī had considered the possibility of extending their power over the whole of Kharāsān. The Serbedār forces seem to have begun by attacking Togha Timur. It would seem then that the defeat of the Khān on the banks of the Atrak, an event mentioned by Dawlat-shāh as happening before Mas'ūd's campaign against Husain Kurt of Herāt, took place during this first war of the Serbedārs against Djurdjān. In any case, to realise their projects of conquest, Mas'ūd and Dīnī turned their attention to the king of Herāt already mentioned (743 = 1342–1343). On Šafar 13 of this year the two princes' armies met near Zāwa. In the battle Hasan Dīnī fell, either killed by the enemy or assassinated by order of the Serbedār chief. Indeed, it would not be surprising if Mas'ūd feared the ascendancy of the Šaikhī at this time when, according to the historian Zāhit al-Dīn (ed. Dorn, p. 338): "*simān-i ištīyār-i ān mīšyat dar atkhār-i umūr ba dast-i shaykhān hūd*"; in free translation: "In this country most things are performed in accordance with the wishes of the *shaykh*s". The battle of Zāwa was decided in favour of the ruler of Herāt, although it at first looked as if the Serbedār army had won. Mas'ūd had to withdraw and returned to Sabzewār. The historian Khwāzandamīr recounts after these events a campaign against Djurdjān as well as the defeat and death of a brother of Togha Timur; he says that as a result Mas'ūd was able to become master of Asarābād, while the Khān fled from his capital (end of 743). Another authority, however, puts these events in 741 (cf. B. Dorn, *Die Geschichte Turanians und der Serbedars nach Chondimīr*, p. 165, note 5). This would be before the war with Husain Kurt; if this is correct the victory won by Mas'ūd over the brother of Togha Timur would be identical with the battle on the Atrak. Once in possession of Djurdjān the Serbedār began to cast covetous eyes on Mazandāran. This was the end of his career. He was attacked by surprise in the land of Rastandār; he and almost all his army perished (Rabī' II, 745 = Aug–Sept., 1344).

Mas'ūd was the greatest Serbedār prince; his kingdom, according to Dawlat-shāh, stretched from Dīnī to Dāmghān and from Khabāshān to Tashk. He was the *shāh* *hīrān* of the dynasty. After him the power fell into the hands of those who had been subalterns of the family of 'Abd al-Razzāk; that is to say, the empire having reached its zenith, fell into the control of a coterie of soldiers (and in this case of dervishes also) until the glory of the Serbedārs had departed for ever. This is the normal course of the history of oriental dynasties. Mas'ūd left one son, a minor, named Latīf Allāh; one of his notables, Muhammad Alī-timur, who during the war with Djurdjān had been *amīr* at Sabzewār on behalf of the late prince, seized the actual power. He reigned two years and a few months; in 747 or 748 (1346/1347 or 1347/1348) he perished, the victim of a plot hatched by the dervish clique, *murīd*'s of Dīnī, the prime mover in which was the Khwāzandā *Abi* Shams al-Dīn. The latter becoming master of the

situation, proposed as ruler a certain Kalwā (or Kulā) Isfendiyār, who reigned for about a year; 'Alī Shams al-Dīn had him assassinated in 748 or 749. It was then proposed to make Mas'ūd's minor son successor to Isfendiyār; 'Alī Shams al-Dīn appointed a brother of Mas'ūd, who also was called Shams al-Dīn, to be regent. He only held the throne for some seven months; in Dhū'l-Hijja, 749, according to Dawlat-shāh, he resigned. 'Alī Shams al-Dīn himself then assumed the external attributes of royalty also. In general the historians approve his rule, although they admit that he was as bigoted as he was cruel. He is said on one occasion to have had 500 prostitutes buried alive; his officials and officers when they had to enter his presence used to make their wills first. Shams al-Dīn built or renovated the *maḥfil-i ḡāmī* at Sabzewār. He also built a great storehouse (*anbār*) in the same town. With Togha Timur he concluded a treaty which secured the Serbedār chief possession of all the territory formerly ruled by Mas'ūd. In return it is probable that the Serbedārs pledged themselves to pay tribute. Dawlat-shāh (p. 236) says that they obeyed Togha Timur (*va'ld wa munḥad shudand*), which can only be true of the period after the death of Mas'ūd.

'Alī Shams al-Dīn, already much detested for his avarice and cruelty, insulted in frightful fashion one of his treasury officials, Haidar Kaṣāb, from whom he wanted, in addition, to extort a large sum of money. Kaṣāb conspired with Yahyā Karrābī, a former officer of Mas'ūd, and killed 'Alī Shams al-Dīn with his own hand (towards the end of 753 or the beginning of 754: Karrābī was reigning in 754 because the assassination of Togha Timur by the latter's order took place on Dhū'l-Ka'da 16, 754 = Dec. 14, 1358, as is testified by the poem quoted in Dawlat-shāh, p. 237–238). Karrābī became chief of the Serbedārs while Kaṣāb became *ipsh-satār*. The new ruler was a devout man but a bloody tyrant in whom there were thought to be signs of madness. A quarrel soon broke out between the Serbedār and Togha Timur because Karrābī did not acknowledge the suzerainty of the Khān. On the occasion of a meeting at Sulṭān Duwīn, Karrābī had Togha Timur assassinated by an officer of his suite. One can hardly imagine that this attempt could have succeeded if the Serbedār had not had allies among the nobles of Timur's kingdom. With the latter's death the suzerainty of the descendants of Čingiz Khān in those regions came to an end. The Serbedārs, the Dīnī Kurbānī and the Kurts of Herāt divided the empire of the Khān. Karrābī took Tūs from the Dīnī Kurbānī. He paid a great deal of attention to the water-supply of this town and to that of Mashhad. Karrābī, like his predecessors, came to a violent end. 'Alī al-Dawla, his brother-in-law, assassinated him (759 = 1358). Kaṣāb then placed on the throne a brother (or cousin) of the dead ruler, the insignificant Zāhir al-Dīn. The *ipsh-satār* was, of course, the actual master of the kingdom and this was not altered when Zāhir al-Dīn renounced the throne (Rajab, 760 = May/June, 1359). Kaṣāb himself took the reins of government, but it was not for long. While he was besieging the rebel Naṣr Allāh Bābīnī (perhaps brother of Mas'ūd) in Asarān he met his end, the victim of a conspiracy instigated by his own *ipsh-satār*, Hasan Dāmghānī (Rabī' II, 761 = Feb.–March, 1360). Hasan concluded a treaty of peace with Naṣr Allāh;

the throne returned to the old dynasty. Luṭf Allāh b. Mas'ūd was proclaimed king while Dāmghānī and Naṣr Allāh appointed themselves his guardians (*atābeg*), i.e. the actual holders of power. The faintest Luṭf Allāh only retained the throne as long as he pleased the *Sipāh-sālār*. As soon as a difference arose — a propos of nothing at all — between Mas'ūd's son and the Atābeg the latter had him thrown into prison, and shortly afterwards ordered him to be put to death (Radjāb, 762 = May-June, 1361). Henceforth Ḥasan Dāmghānī reigned in his own name. Disorder was not long in breaking out. The dervish 'Aziz, a follower of Djūri, stirred up a rebellion which Dāmghānī was able to put down. 'Aziz had seized Tūs but the Serbedār king recaptured it and banished 'Aziz from his territory. The latter went to Isfahān. From the point of view of policy Dāmghānī had made a grave mistake in preserving the life of the dervish out of religious scruples. Besides, things were becoming worse in this part of the empire of Togha Timur which now obeyed Serbedār authority. Amir Wali, son of an officer of Togha Timur, drove the Serbedār governor from Astarābād and routed the army sent to assist the latter by Dāmghānī. The Serbedārs seem to have lost the town of Tūs about the same time. One of Mas'ūd's old officers, Naḍīm al-Dīn 'Alī Mu'ayyad, hastened to take advantage of the troubles. He seized the town of Dāmghānī and summoned the rebel 'Aziz from Isfahān. One part of the Serbedār army, which had been beaten by Amīr Wali, joined him. This took place while Dāmghānī was away from Sabzewār, because he was besieging the stronghold of Shakkān. Mu'ayyad and 'Aziz were able to enter Sabzewār where they put Dāmghānī's vizier, Yūnus Sammānī, to death and made a *ta'ziyat* for Luṭf Allāh b. Mas'ūd. The military officers were exhorted to desert Dāmghānī in letters full of threats and promises. When the army besieging Shakkān received a similar message the soldiers took the side of Mu'ayyad, and soon Dāmghānī's head was sent to Sabzewār (766 = 1364/1365). Mu'ayyad, who succeeded Dāmghānī on the throne, was the last Serbedār king. According to the historians, he was generous and pious, an ardent Shi'ī (this appears also from the inscriptions on the coins struck by him; see Frāhn, *Revue Numéraire Muhammedanorum*, p. 632—633). But his devoutness did not prevent him ridding himself of the dervish 'Aziz, who had been so bold as to disobey an order from his sovereign. Mu'ayyad, in any case, hated the dervishes of Djūri's sect. He desecrated the tomb of Khalfā, Djūri's *murshid*, and that of Ḥasan Djūri himself. The last Serbedār also had ambitions to extend his dominions: among his conquests Tarāhiz and Kūhistan are mentioned. In the war that he had to wage with Malik Ghiyāth al-Dīn of Herāt (on which see *J. A.*, 1861, Series 5, vol. xvii, 515—516) he lost Nishāpūr. The relations of the Serbedār with Amir Wali, ruler of the former kingdom of Togha Timur, were not in general very friendly. It appears that, in course of hostilities, Mu'ayyad held Astarābād for a time, as we know of a coin struck by him here in 755 (1373/1374; cf. Howorth, *History of the Mongols*, iii, 737). On the other hand, Wali helped the Serbedār king to reconquer his kingdom when the latter had been driven from Sabzewār by the dervish Rukn al-Dīn, a rebel who had secured troops to help him from the ruler of Fārs (780 = 1378/1379).

Later, troubles broke out once more. At the siege of Sabzewār by Wali's forces, Mu'ayyad sought the help of the great Timur (783 or rather 781; cf. Dorn, *Gesch. Tabaristan*, p. 186, note 2). This meant that the Serbedār had to abandon all idea of independence and that his kingdom became a part of the great Mongol conqueror's empire. Mu'ayyad lived on for some time at the court of Timur. He was assassinated in 788 (1386/1387). His body was taken to Sabzewār and buried in the town.

Here ends the history of the Serbedārs, although in 807 (1404/1405) there was again a rising by a son of Mas'ūd, Sultān 'Alī, against Shāh Rukh, son of Timur, a rebellion which was duly suppressed. As a panegyrist of the Serbedār kings Dawlat-shāh mentions the poet Maḥmūd b. Yamin al-Dīn Faryamādī.

SERDĀB (Pers. *serdāb*, "cold water"; the *Kāmūs* has wrongly *sirdāb*), in Baghlād, a kind of rather large vaulted cellar, more or less decorated sunk four or five feet into the ground where the heat does not rise above 77°—80° F. while that of the rooms is from 92°—95°. It is supplied with a ventilator, a kind of chimney turned to the north side which ends at the highest part of the house; the air is also kept fresh, morning and evening, with the help of several small windows; in the summer the people of the house spend the time from 11 a.m. till sunset there. This arrangement is also found in the southern parts of Persia where it is called *ār-samin* "subterranean"; the ventilator is called *ād-dār* "wind-catcher". The name is extended to cover any kind of subterranean room or *mad* (Ibn Battūta, Paris 1853, i, 264; Dory, *Suppl.*, i, 647).

(CL. HUANT)

SERDESĪR (v), a cold place or a summer habitation in high grounds. The Persian *ferheng's* cite verses where the word occurs (e.g. *Ferheng-i Shu'arā'*). The opposite is *germešt* [q.v.].

At present both words are used for the northern and southern part of the province of Fārs, corresponding to the division in Serūl and Djūrum by the Arabic geographers (Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 249).

SERES. [See SERRES].

SERRES (*Seres*, Turk. *Sirös*), capital of the former sanjak of Sirös in the vilayet of Salonika, situated on the edge of a broad well-watered fertile plain, not far from the Struma, on the Salonika-Dede-Agha railway. Serres has a castle, called Dragota in the middle ages, built on a steep hill, numerous mosques and Greek churches. The number of inhabitants is nearly 30,000, the majority Bulgarians. In the country around much rice, fruit, wine, tobacco and vegetables are cultivated, and a big export trade is carried on in tobacco, cotton and cloth. — Serres is the ancient Siris or Serrhai, a settlement of the Siropaeon which existed even in the time of Xerxes.

The date of the Ottoman conquest, about which the Turkish chroniclers make inaccurate and contradictory statements (Sa'd al-Din, *Ta'rif al-Tamârik* [probably following Nesrî], i. 92, gives 770 = 1374/1375, whom J. v. Hammer, *G.O.R.*, i. 180, apparently follows; Leandrinus, *Hist. Musulm.*, p. 243, 33 sqq.: 787 = 1385/1386 [codex Verantianus], = Giese, *Anon. Chron.*, p. 26, 11, 12; 'Ashik Pasha Zade, *Turikâ*, Stambul 1332, p. 61: between 783 [or, according to codex Mordtmann-Cayol, p. 45: 784] and 787; Hâdjî Khalifa, *Rumeli und Bosna*, ed. v. Hammer, Vienna 1812, p. 73 sqq.: 784 = 1382/1383), is known from several contemporary Greek sources, which unanimously give September 19, 1383 (cf. Miklosich-Müller, *Acta et Diplomata*, i. 77–79; Sp. P. Lampros, *Néss 'Ellinoparkeuon*, viii. 403, 407, Athens 1912; cf. P. N. Papageorgiou in *Byz. Zt.*, 1894, iii. 292). On this day the castle was taken by Deli Halaban and the Lala Shakin Pasha, who had hastened to his assistance. That the town was securely in Turkish hands a few years later is known from the contemporary evidence of two Athos chronicles (cf. L. Petit-W. Regel, *Actes d'Esphigméon*, p. 42, xxi., and L. Petit-Korablev, *Actes de Chilandar*, p. 335, N° 158).

Serres and the surrounding territory fell as a fief to the celebrated Ewrenos Beg [q. v.] and the neighbourhood was settled with Türks who were transplanted from Sarukhân (cf. Leandrinus, *Hist. Musulm.*, p. 244, 33 sq.; Giese, *Anon. Chron.*, 26, 10). Henceforth Serres was an important Ottoman mint: the first coins were struck there in 816 = 1413/1414. The dangerous rising, half religious and half political, stirred up by Shaikh Badr al-Din Mahmud and his follower Bürklâdjî Mustafa came to a tragic end in Serres, in the neighbourhood of which the rebels had assembled for their last stand, with the execution of the ringleader in the late autumn (cf. *Islâm*, 1921, xi. 63 sq.). In the xvth century at the beginning of which the French zoologist Pierre Belon passed through Serres, the inhabitants were mainly Greeks; he found German and Spanish-speaking Jews there but the country people spoke Greek and Bulgarian. Hâdjî Khalifa (*Rumeli und Bosna*, Vienna 1812, p. 73 sqq.) following closely, almost literally, Mehmed 'Ashik, *Menzir ül-Evâlim* (Vienna MS., fol. 240^a sq.; Berlin MS. [inaccessible to me], fol. 246^a – 247^b), describes Serres in the xvth century as a town with 10 mosques, 7–8 bathes, fine khâns, a *karavân*, kitchens for the poor and pleasant gardens. Ewliya Çelebi also visited the town; his account is found in the eighth, still unprinted volume of his *Seyahat-nâme*. Serres never attained particular importance in the history of the Ottoman Empire; only in the xviiith and xixth

century it was the seat of a Derebey [q. v.] of whom Isma'il Bey was the most prominent (cf. E. M. Cousinier, *Voyage dans la Macédoine*, Paris 1831, i. 157, [130]–166). Since the treaty of London (1913) Serres has belonged to Greece. — A favourite excursion from the town is to the pleasantly situated Higârardi outside the gates of Serres (cf. *Rumeli und Bosna*, p. 74). Here is buried the author of the work, very important for the history of Adrianople, *Ensi ul-Mushâmirin* (cf. G. Flügel, *Orr. Hist. Wien*, ii. 259, where — wrongly — *Mushâmirin* is given), 'Abd al-Rahmân b. Hasan called Hibri (d. about 1550; cf. Brunsli Mehmed Tahir in *Türk Yurdu*, third year, vol. 6, part 27, S. 2225).

(FRANZ BARINGER)

SERT. [See SERET].

SERVET. [See TÂHIR BEY].

SETH. [See SETH].

SEVILLE, in Spanish SEVILLA, Arabic *ISHBILIYA* (ethnic *Ishbili*), a large city in Spain with over 150,000 inhabitants at the present day and capital of the province of the same name, formerly capital of the kingdom of Seville situated at an average height of 45 feet above sea level in a vast plain, on the left bank of the Guadalquivir (Arabic al-Wâdi 'l-Kabir = Wâd al-Kabir = the "great river"), which separates it from the suburb of Triana (Arabic Taryâna; cf. Yâkût, *Mu'djam al-Buldân*, q. v.). Although 60 miles from the sea the town has all the advantages of a seaport on account of the very gradual fall of the river; the tide is perceptible up to above Seville (cf. the *aequoreus amnis* of the Latin poet Ausonius). The climate is dry and warm.

The province of Seville in the Muslim period comprised all the low valley of the Guadalquivir, and stretched to the east as far as the Sierra d'Arcos and Gadir, to the west as far as the valley of the Guadiana (Wâdi Anî) in a very wealthy region fertilised by the great river. The slopes of Aljarafe (or Axarafe, Arabic Djabal al-Sharaf) in the immediate vicinity of the capital are specially favoured, and their groves of fig and olive trees were famous for their fruit throughout Muslim Andalusia. The Arab geographers were never tired of marvelling at the natural wealth of the country. It was the only district in the peninsula to produce cotton, the exports of which were important. Other

characteristic products were saffron and sugar-cane. The population of the country was of great density; no less than 8,000 villages, according to al-Iḍrīṣī, were dependent on the capital.

The name Iḥbīliya is derived from the ancient *Hispalis*, a name of Iberian origin which the Romans retained for the town. It was of great importance under them after its capture in 45 B.C. by Julius Caesar, who made it "Colonia Julia Romula". Under the empire it was alternately with Baetis (Cordova) and Italica (Arabic Ṭālika) the capital of the province of Baetica. It then became that of a Vandal kingdom (411) and from 441 the residence of the Visigothic kings, until in 567 Athanagilde transferred to Toledo the seat of his government.

It was in the spring of 94 A.H. (712) that Seville after the fall of Medina Sidonia and Carmona fell in its turn into the hands of the Muslims after a month's siege, according to some historians, but probably longer if we may believe the more detailed account of the capture of the town given by the anonymous chronicle entitled *Alḥikār Maḍīni'a*. A section of the Christian population took refuge in Beja (Bāḍja) and the conqueror, Muṣā b. Nuṣair, installed a Jewish colony in the city, left a garrison there under the Medinese Ṭas b. 'Abd Allāh al-Ṭawīl as governor, and then laid siege to Mérida. An attempted rising by the Christians in Seville, aided by their co-religionists of Beja and Niebla (Labla) in July of the same year was promptly put down and the town definitely re-captured by the son of Muṣā b. Nuṣair, 'Abd al-'Azīz, who massacred the rebels. When his father left for the east, 'Abd al-'Azīz became governor of Muslim Andalusia, and chose Seville as his capital; he there married the widow (and not the daughter, as is often said) of the Visigoth Roderick, Egilona (the Aila of the Arab historians) and installed himself in the old church of St. Rufina, opposite which he built a mosque. It was there that he was killed by his soldiers in Rajab, 97 (March, 716), at the instigation of the Caliph of Damascus, Sulaimān.

After his death, the seat of the Arab administration was moved to Cordova; Seville nevertheless remained one of the richest cities of al-Andalus. Indeed, it escaped more than any other the influence of the conquerors and there is no doubt that its population only abandoned their old religion for Islām slowly, as much from policy as of necessity. It was in great part Roman or Gothic, and the names of notable citizens of Seville for long preserved the memory of this double origin. The spread of Islām in the Peninsula made commerce and agriculture still more active and the importance of its harbour augmented.

When residences and fiefs were allotted in al-Andalus to the *qunāt* of Syria and Egypt, Seville fell to that of Hīm (Emesa) which was established in 125 (742) by the governor Abu 'l-Ḥaṭṭār al-Ḥuṣām b. Dirār al-Kalbi, at the same time as the *qunāt* of Damascus was given Elvira, that of the Jordan Reyro (Malaga), that of Kinnasrin Jaen, that of Palestine Sidonia and that of Miṣr Tudmir (Murcia). The name of Hīm was even sometimes applied to Seville (cf. Yāḥyā, *Mu'jam al-Buldān*, s. v. Hīm at the end).

When the Umayyad Caliphate of Spain was established in the reign of 'Abd al-Rahmān I b. Mu'āwiya al-Dākhil and his successors, Seville was

entrusted to his governors (for example the energetic 'Abd al-Malik b. 'Umar) and, like the other large towns of the country, was often the scene of rebellions. In 149 (766) two risings, those of Sa'īd al-Yahṣubī al-Maṭarī of Niebla and Abu 'l-Sabbāḥ b. Yahyā al-Yahṣubī, were quelled in turn. In 156 (773) the Caliph had again to suppress an attempt at independence by the governor 'Abd al-Ḥaṭṭār (or 'Abd al-Ḥaṭṭār) al-Yamānī and Ḥayāt b. Muḥammīn (or Muḥābīs).

The town was surrounded by a fortified wall by 'Abd al-Rahmān II. He also had a great mosque built in it. It was in the reign of this sovereign that Norman pirates captured Seville for the first time in 230 (844). It was stormed after a short siege, and the Caliph had to mobilise his forces to regain it and put the invaders to flight at the decisive battle of Ṭalyāṭa. As a precaution against another attempt at landing by the *Madjūs* (Normans) he built an arsenal at Seville and constructed swift ships, which did not prevent his entering into friendly relations with the king of the Normans and even sending him an ambassador, Yahyā b. al-Ḥakam al-Ḥazālī. In the reign of his son Muḥammad, in 245 (859), Spain was again attacked by the Normans, but the latter, who landed at the mouth of the Guadalquivir, probably did not go up to Seville but went direct to seize the town of Algeciras. Ibn al-Khaldūn and al-Nuwairi nevertheless suggest there was a Norman landing in Seville at this time (cf. particularly R. Dozy, *Les Normands en Espagne*, in *Recherches*, p. 256-263 and 279-284).

In the reign of the Caliph 'Abd Allāh, Seville was for a long time perturbed by the ambitions and proceedings of the two great families of Yamānī origin, the Banū Khaldūn and the Banū Ḥaḍḍaj. These Arabs had large domains throughout the country and numerous clients, and hated the Islamised Spaniards of Seville as much as the Umayyad Caliphs of Cordova. The head of the first family, Kurāib b. Khaldūn, soon after the accession of 'Abd Allāh, raised the whole country of Aljarafé and rallied to his flag of rebellion the chief of the Banū Ḥaḍḍaj family and other Arab or Berber chiefs of the south of Spain. He ravaged all the territory of Seville with fire and sword and later on, sometimes assisted by the caliph himself, he ruined completely the renegades of Seville (278 = 891). In the town the Arabs became all-powerful and it was not till four years later that the sovereign decided to send an expedition against them.

In 286 (899) the heads of the two families, who had hitherto been at peace, quarrelled, and Ibrāhīm b. Ḥaḍḍaj was victorious and slew Kurāib. After an alliance with the famous rebel 'Umar b. Ḥafṣūn [q. v.] he finally submitted to the Caliph of Cordova while retaining practically unlimited power in Seville. There he set up as a regular sovereign and poets of talent and the famous singer *Kamar* were ornaments of his court. His return to loyalty to the Umayyad dynasty was the beginning of the return of order in al-Andalus. In the reign of the great caliph 'Abd al-Rahmān III, Seville, without, however, rivalling Cordova in importance, entered upon an era of peace and prosperity and remained loyal to the central power.

But its most brilliant epoch, and the most important from the political point of view also, was that which followed the fall of the Umayyad Caliphate, when it became the capital of the independent dynasty of the Banū 'Abbād or 'Abbēdids (cf.

above, i. 177) from 414 = 1023. The founder of the kingdom, the *Kādi* Abū l-*Kāsim* Muḥammad I, was the son of an illustrious Andalusian jurist of Lakhmid origin, Jamāl b. 'Abbād. He seized the power, at first recognising the suzerainty of the Hammūdīd sovereign Yahyā b. 'Alī, but was not long in repudiating this suzerainty which was quite nominal. At his death in 434 (1042) his son, Abū 'Amr 'Abbād, known by his honorific surname of al-Mu'tadīd, succeeded him and during a reign of 27 years his policy was marked by deeds of cruelty and treachery. He increased his kingdom at the expense of the neighbouring principalities of the west and south and only found a serious opponent in Bādis, the Zīrid king of Granada. He died in 461 (1068). His son, Abū l-*Kāsim* Muḥammad II al-Mu'tamid, is renowned for his poetic taste and talents. In his reign Seville became the rendezvous of the best scholars of the period. He took Cordova from the Banū Djawhar but soon came in conflict with the ambitions of the King of Castile, Alfonso VI, and then had to appeal for help to the new sultān of the western Maghrib, the Almoravid Yūsuf b. Tāshfin. The latter crossed over to Spain with his troops and on Raddjāh 12, 479 (October 23, 1086), won the great victory of Zallaka. When the Almoravids returned to Morocco the Christians resumed the offensive and al-Mu'tamid had to go in person to the Lantini sultān to ask his assistance once more. Yūsuf granted it, but was not long in depriving him of his kingdom to seize its wealth. Seville along with Cordova, Almeria, Murcia and Denia, was taken in 484 (1091) by Yūsuf's general, Sīr b. Abī Bakr b. Tāshfin. The Berber troops sacked the towns from attic to cellar, and pillaged the palaces of the 'Abbādids and the unfortunate al-Mu'tamid was taken prisoner and exiled to Morocco, where he died at Aghmāt in 488 (1095) after giving expression to his misfortunes in elegies which came to enjoy a well merited reputation among literary Muslims: he left the reputation of a generous, chivalrous and cultivated prince. — All the texts relating to Seville in the 'Abbādīd period have been collected by Dozy in his *Scriptorium Arabum Loet de Abbādids*, 3 vols., Leiden 1846–1863.

The Almoravid general, Sīr, governed Seville for his master and the town, like the rest of Muslim Spain, continued under the yoke of the Maghribi Sultāns. In Raddjāh, 526 (May, 1132), a Christian force from Toledo invaded the country round Seville. In the course of an engagement the governor of the city, 'Umar b. Makrūr, was killed.

It was with satisfaction that the people of Seville heard of the decline of the Almoravids in Africa and the rise of the Almohads. Barrāz b. Muḥammad al-Ma'nī, general of Sultān 'Abd al-Mu'min, after conquering the south-west of the peninsula, laid siege to Seville and took it in Shu'la'n, 541 (January, 1147), putting to flight the Almoravid garrison. Next year a deputation of notables of Seville went to the Almohad sultān to give him the homage (*harāz*) of their fellow-citizens, led by the *Kādi* Abī Bakr b. al-'Arabi, who died at Fās on the way back (cf. above, i. 362b). 'Abd al-Mu'min appointed governor of the town the Almohad Yūsuf b. Sulaimān and in 551 (1156), at the request of the inhabitants, his own son, Abū Ya'qūb Yūsuf. The latter kept this post till he succeeded his father in 558 (1163).

Under his reign Seville became the headquarters of the Almohad forces in Spain. Abū Ya'qūb stayed

there from 568 (1172) to 571 (1175), and on his departure left as governor his brother, Abū Ishāq Ibrāhīm, with the general Muḥammad b. Yūsuf b. Wāṣūḍ and the admiral 'Abd Allāh b. Dīnār. It was also in Seville that Abū Ya'qūb made his preparations in 580 (1184) for the Santarem (Shantaria) expedition in which he met his death. His son, Abū Yūsuf Ya'qūb al-Manṣūr (580–595 = 1184–1199), who succeeded him, brought back the Almohad army to Seville and returned to Morocco, leaving the Hafṣid chief Abū Yūsuf as governor of Seville. Summoned by the latter he returned to Seville in 586 (1190) to retake Shilb (Selves) from the Christians, who had taken it by force of arms. After the brilliant victory of Alarcos (Arabic al-Ark, cf. above, i. 205a) won on Sha'bān 8, 591 (July 19, 1195), over Alfonso VIII of Castile, the Sultān made a long stay in Seville, and it was during this period that he imprisoned the famous Cordovan philosopher, Ibn Rushd (Averroes). He did not return to Morocco till 594 (1198), a year before his death.

In the course of the reigns of these two Sultāns Seville rivalled the glories of the most flourishing periods of the 'Abbādīd dynasty. It had at this date more inhabitants than Cordova. The Almohad sovereigns and the great dignitaries of the court built palaces there, and the number of mosques, baths, caravanserais and markets increased considerably. It was in the reign of Abū Ya'qūb that the new great mosque was built on the site which the present cathedral was later to occupy in the xvth century. The *Rawḍ al-Kirfās* (ed. Tornberg, p. 138) gives 567 (1172) as the date of building this *ḡāmī*, the anonymous chronicle entitled *al-Hulal al-Manṣūriyya* (ed. Tunis, p. 120) 572 (1176/1177). According to Ibn Abī Zar', it only took eleven months to build, which seems improbable. The same author mentions the building at Seville in the same year of a bridge over the Guadalquivir, of two *ḡaḡha's*, of ramparts and moats, of quays along the river and an aqueduct. Nothing now survives of the great Almohad mosque of Seville but the *ḡaḡha* (now *Patio de los Naranjos* "court of the orange trees"), with the gate known as "Puerta del Perdon", and most notable of all the celebrated minaret, called Giralda (because a statue of Faith which surmounts it "turns" [Spanish *girar*] at the least wind). This tower, as a whole less successful than its twin sisters, the tower of Hassan in Riḡāt al-Fath (Rabat) and that of the Dīnārī al-Kutubiyyin at Marrākush, built at the same time, has a base 43 feet square. It is built of brick; its walls, about seven feet thick, are pierced by numerous windows with Arab and Visigothic capitals. The lantern-tower which rose from the platform of the tower has been replaced by a campanile; the total present height is over 300 feet.

In 609 (1212) al-Manṣūr's successor, the Almohad Muḥammad al-Nāṣir, collected under the walls of Seville the great army which was to reconquer the part of al-Andalus then in the hands of the Christians. It was defeated on Ṣafar 15 (July 16) of the same year at las Navas de Tolosa and the Sultān and his forces returned to Seville utterly routed.

It was a little later, in the reign of the Almohad Yūsuf II al-Mustansir, in 617 (1220), that the governor, Abū l-'Ulā had built on the bank of the Guadalquivir a tower intended to protect the

royal palace (now the Alcázar, rebuilt in the sixteenth century by Pedro the Cruel) and the river. It has retained in a Spanish translation its Arabic name Burdj al-Dhahab ("Tower of Gold"); the lower part, which is in twelve superimposed sections and is crowned with battlements, and the smallest tower at its top are still standing.

Some years later Seville again became the headquarters of the Almohad Sultān Idrīs al-Ma'mūn, and on his departure for Morocco in 626 (1228-1229) the town passed under the domination of the rebel Muhammad b. Yūsuf b. Hūd, who ended by driving the Almohads out of Spain. Strengthened by the alliance which he had made with the first Nasrid dynasty of Granada, Muhammad I b. al-Ahmar, Ferdinand III laid siege to Seville in 1247 and after blockading it for sixteen months took it on Sha'bān 1, 646 (November 19, 1248) (or four days later, according to some authors). The Muslim population was spared and allowed to emigrate to that part of Andalusia which still remained Muhammadan and to Africa. The attempts of the Marinid Sultāns of Morocco to recapture the town from the Christians in the years following met with no success. In 674 (1275) Sultān Abū Yūsuf Ya'qūb b. 'Abd al-Haqq, after his victory over the troops of General Don Nuño de Lara, laid waste the country of Seville and Jerez (Sharfsh); but he had soon to abandon his siege of the capital. On his second campaign in Andalusia in 676 (1278) he again came up to the walls of Seville and pillaged the district of Aljarafe. He continued these raids, which are recorded in detail in the *Rawḍ al-Kirfās*, down to 684 (1285), and Don Sancho had to seek a truce which lasted till 690 (1290) in the reign of Abū Yūsuf's successor, his son Abū Ya'qūb Yūsuf. In the end, after the defeat of the Sultān of the same dynasty, Abū 'I-Hasan 'Alī, under the walls of Tarifa, the Muslims abandoned all hope of retaking Seville.

It would take too long here to give the names of all the famous Muslims who were born or lived in Seville. It is sufficient to mention the poets Ibn Hamdis, Ibn Hānī, and Ibn Qasman, the traditionalist Ibn al-'Arabī, the biographer Abū Bakr b. Khair, and to refer the reader to the separate articles on them.

(E. LEVI-PROVENÇAL)

SEZAY, a Turkish poet. Shaikh Hasan (Dede) Sezay Efendi was a Greek by birth, a native of Kordos (the old name for Corinth), who spent the greater part of his life in Adrianople. He belonged to the order of Gülshen there, first as a disciple of the Shaikh Mehmmed La'li and after his death as his successor. According to some sources, he was also head of a Gülshen monastery in Constantinople. Ramadān, 1151 (end of 1738 or beginning of 1739), is given as the date of his death, the only date known of his career. His tomb is in a *derkhā* which bears his name.

We still possess several of Sezay's works. His *Diwān* is of a mystical and allegorical nature and is remarkable for the beauty of its language, so that Ottoman critics sometimes actually describe him as the Hāfi of Turkish literature. There is a MS. of the *Diwān* in the Vienna Hofbibliothek and in the Gibb collection (see Gibb, *A History of Ottoman Poetry*, ii. xxii below), and it has been printed at Constantinople. It begins with a series of *ḥafida's*, on the works of the different kinds of the mystic path, the *Waf-i Athār-i Afwār-i Turīfat*. Then come 333 *ghazal's*, a few *takhts*, *tasdis*, *rubā'is* and other shorter pieces including a chronogram on 'Ushshāki Sādiq Efendi (d. 1094 = 1683). Among other works by Sezay, his *Mekhtūbat* and his commentary on a *ghazal* of al-Miḡrī are mentioned. There are commentaries on some of Sezay's *ghazal's*, including some of quite modern date. Among Sezay's pupils are mentioned Mehmmed Hash Bey, the author of a poem called *Gülshen-i Ebrar*, which deals with the *silsile* of Gülshen, and the Turkish poet Mahwi Efendi and Mehmmed Fakrī Kīmī, who translated the *Menāzil al-Sā'irīn* of al-Anṣārī into Turkish. Sezay is also the name of a modern Turkish novelist; cf. Horn, *Geschichte der türkischen Moderne*, Leipzig 1902, p. 43 sq.

SFAX (SFAXES or SFAXES), a town in Tunisia, on the eastern coast to the north of the Gulf of Gabes on the site of the ancient Taparura. Built on a flat piece of ground the native town, beside which the European quarter has grown up, is of an unusually regular plan. It is quite rectangular in shape (600 by 400 yards) and its streets are at right angles to one another. In the centre is the Great Mosque built about 275 (849), rebuilt at the end of the tenth century and several times since restored. The first wall built in the Aghlabid period was of clay and bricks. Parts that decayed were repaired in stone. Al-Bakri describes it as built of stone and bricks. It was frequently repaired either by princes or by the gifts of pious individuals. This wall was flanked by square towers and, according to al-Tidjani (beginning of the thirteenth century), it was a double one. Several *ribât* defended the adjoining coast.

During the anarchy that followed the Hilali invasion, Sfax was from 1095 to 1099 the capital of a little independent principality protected by the Arabs. In 1148 it was taken by Roger of Sicily. 'Abd al-Mu'min retook it in 1159. By then it had, however, lost much of its former splendour. The Arabs had almost entirely destroyed the plantations around the town. Before the invasion, Sfax had indeed been of a remarkable economic importance. It was one of the principal centres for the cultivation of the olive. Muslim and Christian ships exported the oil, particularly to Italy. In the tenth century the Pisans established a *funduq* here. Sfax was also noted for its manufacture of cloth, which was fuelled by the processes used in Alexandria but with more perfection. Fishing was also an important source of income.

Sfax in 1881 was one of the few centres of resistance to the French occupation. A squadron came to bombard it. Since then it has begun to enjoy a new prosperity. It is a town of 75,000 inhabitants which exports sponges collected in the Gulf of Gabes and is surrounded by a double girdle of gardens and olive groves. The latter, planted according to methods improved during the sixteenth century, cover a depth of about 30 miles.

SHABAK, a religious community of Kurdish origin in the wilayat of Mawail. English statistics estimate the number of Shabaks at 10,000; the Muslims give them the nickname *awadî* ('turbulent', 'disloyal'). The Shabak live in the villages in the Sindjir district ('Al-rash, Yangidja, Kharna, Tallira etc.). They are related to their neighbours, the Yazidis, most of whose assemblies and places

of pilgrimage they attend. On the other hand, if we may rely on Father Anastase, they show a particular devotion to 'Ali whom they call 'Al-rash (rash in Kurdish = 'black'). Another statement connects them with the extremist Shi'a, the Ahl-i Haqq (cf. the art. 'ALI-ILKUNI). The Shabak never cut their moustaches 'which are proverbial in the country' (see Cuinet); in eating they hold them up with the left hand so that the food may not soil them. As is the case with all the secret sects, popular stories credit them with abominable practices; once a year they are said to assemble in a secret cave and spend the night in feasting and debauchery. This night is called among them, as among the Sârlî (cf. the art. 'SÂRLIYA'), *lailat al-kafsha*.

The Sârlî who claim to belong to the Kurdish tribe of Kaka' are also found in the wilayat of Mawail on the lower course of the Great Zâh (villages of Tell-Laban, Basâdiyya, Kabarlî, Kharab al-Sultana) and in the district of 'Ashâ-i-i Sah'a. Their present chief, Tîlha Koshak (Koçak?), lives in Wardak. There are Sârlî in Persia in the border districts. The sacred book of the Sârlî is said to be in Persian. Their name is explained as *sârat li* ('*l-jannata*') 'Paradise has been acquired by me' for the Shaikh of the Sârlî are said to sell them places in Paradise at 25 magdîsiyas the oil (*dhar*). The Sârlî permit divorce and polygamy. Their Shaikh also never cut their moustaches and grow enormous beards. The *lailat al-kafsha* among the Sârlî is accompanied by agapes (*aklat al-waḥshati*) for which every married man kills a cock. The Shaikh blesses these offerings which are dressed with wheat or rice and proclaims a blessing on every child conceived that night. The candles are then extinguished and an indescribable orgy ensues. The Sârlî of Father Anastase evidently correspond to the *Khurû-Kushân* ('cock-killers') and *Çirâğ-Kushân* ('candle-extinguishers') of other travellers.

Father Anastase mentions a third secret sect in the same region: the BAĞOKAN; they are Kurds and call themselves 'Allâhî' (Ali-allâhî?). They live in the villages of 'Omar-kân, Toprakli-eyrât, Tell-Va'ḥûb, Rashpita etc. There are also a few in Persia near the Turkish frontier. The Bağokan venerate particularly the prophet (*imâm*?) Ismâ'il. During the month of Muharram (*ashûra*) they lament the death of Husain and collect provisions which on the ninth day (of the month) are distributed under the name of *shahshâh*. When the chief visits a community of the faithful each man offers him seven fresh eggs; the Shaikh cuts each into seven pieces and places them in a jar. Those present drink wine. The Shaikh pronounces a prayer, offering the eggs to Ismâ'il as an expiatory sacrifice (*qurban*). No one can eat them without forthwith confessing his sins.

Attention may be called to the links connecting these Kurdish sects with one another and with Persia, their devotion to the Shi'a Imâms ('Ali, Husain, Ismâ'il), the rites resembling the communion, the syncretist tendencies. The Shabak seem to be a link between the Yazidis and the extremist Shi'a. Finally we may mention that a document coming from Ahl-i Haqq circles and found in Khurâstân by W. Ivanov mentions Malak-Tâ'ûs, the great saint of the Yazidis.

As to the 'night of *kafsha*', Father Anastase explains this word from the Arabic root meaning 'to seize' (?). Perhaps we have simply to deal with the Persian *kafsh* alluding to some part said to

be played by the shoe in the course of the ceremony. For *shushkâ* we may recall the name *lailat al-ma'âshûh* which al-Shabûshî gives to the alleged nocturnal feast and orgy of the Nestorian nuns; cf. Hoffmann, *Auszüge aus syrischen Akten persischer Mätyrre*, 1880, p. 127.

(V. MINORSKY)

SHA'BÂN, name of the eighth month of the lunar year. In classical *hadith* it has already its place after Rajab Mudar. In British India it has the name of *Shab-i harât* (see beneath), the Atchinese call it *Kanduri bu* and among the Tigre tribes it is called *Muddagen*, i.e. who follows upon Rajab.

In early Arabia the month of Sha'bân (the name may mean "interval") seems to have corresponded, as to its significance, to Ramaḍân. According to the *hadith* Muhammad practised supererogatory fasting by preference in Sha'bân (Bukhârî, *Sawm*, b. 52; Muslim, *Sûm*, trad. 176; Tirmidhî, *Sawm*, b. 36). 'A'isha recovered in Sha'bân the fastdays which were left from the foregoing Ramaḍân (Tirmidhî, *Sawm*, b. 65).

In the early-Arabian solar year Sha'bân as well as Ramaḍân fell in summer. Probably the weeks preceding the summer-solstice and those following it, had a religious significance which gave rise to propitiatory rites such as fasting. This period had its centre in the middle of Sha'bân, a day which, up to the present time, has preserved features of a New-Year's day. According to popular belief, in the night preceding the 15th the tree of life on whose leaves are written the names of the living is shaken. The names written on the leaves which fall down, indicate those who are to die in the coming year. In *hadith* it is said that in this night Allâh descends to the lowest heaven; from there he calls the mortals in order to grant them forgiveness of sins (Tirmidhî, *Sawm*, b. 39).

Among a number of peoples the beginning or the end of the year is devoted to the commemoration of the dead. This connection can also be observed in the Muslim world. For this reason Sha'bân bears the epithet of *al-mu'azzam* "the venerated". In British India in the night of the 14th people say prayers for the dead, distribute food among the poor, eat *halwa* (sweetmeats) and indulge in illuminations and fireworks. This night is called *lailat al-harâ'a* which is explained by "night of quittance" i.e. forgiveness of sins.

In Atcheli this month is likewise devoted to the dead; the tombs are cleansed, religious meals (*bandhe*, q. v.) are given and it is the dead who profit from the merits of these good works. The night of the middle of Sha'bân bears a particularly sacred character as is testified by the *kanduris* and the *shabits* which are called *jalât al-badja* or, on account of certain eulogies, *jalât al-taqâlib*. During the last days of the month, a market is held in the capital.

At Makka Radjah, not Sha'bân, is devoted to the dead. Here, in the night of the 14th Sha'bân, religious exercises are held; in the mosque circles are formed which under the direction of an *imâm* recite the prayer peculiar to this night.

In Morocco on the last day of Sha'bân a festival is celebrated which resembles a carnival. A description of it is to be found in L. Brunot, *La mer dans les traditions et les industries indigènes à Rabat & Salé* (Paris 1921), p. 98 sq.

SHA'BÂN AL-MALIK AL-ASHIRAF, a Mamlûk Sulṭân, was chosen Sulṭân on Sha'bân 15, 764 (May 30, 1363), through the influence of the all-powerful Atabeg Velboghâ al-'Umari when only ten years old. His father Husain was passed over because the ambitious Atabeg Velboghâ wished to rule himself and therefore preferred the ten-year-old son, the grandson of Muhammad al-Nâsir. His reign was marked by frequent attacks by Frankish fleets on Mamlûk seaports like Alexandria and Tripolis in Syria. For example at the beginning of 767 (1366) ships of Pierre de Lusignan, king of Cyprus, together with Venetian, Genoese and Rhodian ships appeared before Alexandria which they plundered, but withdrew on the approach of the Egyptian troops, carrying off, according to the sources, 5,000 prisoners. The Christians in Egypt and Syria had to pay the ransom for the captive Muslims, and also pay for the building of a fleet which was to invade Cyprus. The negotiations with Egypt were not successful, as Velboghâ was not really anxious for peace but was planning a landing on Cyprus with his fleet. But troubles at home prevented his plan from developing. The king of Cyprus, however, took the offensive and sent a fleet to Syria to take the harbour of Tripolis and the town of Aiyâs in the south of Asia Minor. His fleet was able to land raiding parties but had to withdraw before the superiority of the Muslim forces, as had another Frankish fleet which appeared before Alexandria. Peace was only concluded in the beginning of 772 (August, 1370). The Egyptians later exacted vengeance for these Frankish raids by falling upon the kingdom of Little Armenia, which was an ally of the king of Cyprus (776 = beginning of 1374), and conquering the towns of Aiyâs, Sis and the rest of the kingdom; the king was brought a prisoner to Cairo and his land became permanently a Muslim possession.

A conspiracy broke out in 768 (1367) against Velboghâ, whose Mamlûks could no longer stand his harshness and cruelty. The Mamlûks wanted to take him prisoner, but receiving timely warning he was able to escape to an island on the Nile, and to hold out there, and soon afterwards to return to Cairo and appoint Sha'bân's brother Onûk Sulṭân. Sha'bân, however, who was now sixteen, was forced by the Mamlûks to put himself at their head and Velboghâ was forced to retire again to his island on the Nile. Sha'bân then succeeded in seizing the fleet newly built by Velboghâ; the latter had to leave his place of refuge and fly to Cairo. There he was taken by the Mamlûks who had in the meanwhile returned to the citadel, and soon after-

wards killed by a Mamlūk while attempting to escape. Yelboghā's Mamlūks now terrified the people and did not obey their new leader, the emir Esendimir. Constant fighting was the result, which ended by a great number of Yelboghā's Mamlūks being banished to Syria and interned in Kerak. They later played an important part in the Mamlūk Kingdom. After several changes in the person of the regent the emir Aktemir al-Shāhī came to power, and held his position till the death of the Sultān. The Sultān had transitory success in the south of the kingdom, in Nubia. The king of Nubia recognised the suzerainty of the Sultān of Egypt. But as a result of Aktemir's cruel treatment of prisoners, the Nubians rebelled again and destroyed the frontier town of Aawān.

The Sultān's idea of making a pilgrimage to Mekka in these troubled times was quite a mad one. In order to be secure against conspiracies of his relatives he had his brothers and cousins brought to Kerak and sent his regent to Upper Egypt to protect the frontier against the Beduins; but he had too little authority over his own Mamlūks to be able to risk such an expedition. The avaricious Mamlūks mutinied at 'Aqaba and as the Sultān would not yield to their demands they threatened him with death so that he had to flee secretly to Cairo, but the Mamlūks had accomplices there who were hostile to the Sultān. He was able to remain concealed in Cairo for a short time in the home of a singing-girl but was soon recognised and strangled. He was lamented by the people as he had abolished burdensome taxes and in general treated his subjects with mildness. The main reason for the terrible state of the country was the insubordination and cruelty of the Mamlūks who ill-treated and oppressed the people.

SHABÂN AL-MALIK AL-KĀMIL, a Mamlūk Sultān, son of al-Malik al-Nāṣir Muḥammad (q.v.), brother of al-Malik al-Sālih Ismā'īl (q.v.), ascended the throne on Rabi' II 4, 746 (Aug. 4, 1345), after having won over during the illness of his brother the emirs of influence, notably his step-father, the Emir Arghūn al-Alā'i. He is said to have used threats as to what he would do to them if not elected. He forced his brother's widow to marry him and soon after also married the daughter of another Emir and, indeed, women always played a great part in his life. His main occupations were all kinds of gladiatorial contests, racing and cock-fighting. His court was marked by great extravagance and the very slave-girls wore jewels on their dresses in his and his brother's reigns. Offices were sold quite openly and shamelessly; the Sultān invented a special tax on the appointment to fiefs and offices, as his biographer al-Safī (see below) tells us. An edict issued in his reign has been preserved in the citadel of Tripoli (Syria) and in a fragmentary state in Kal'at al-Hiṣn; by this certain overpayments to the Mamlūks resulting from the difference between the lunar and solar years, which in case of their death before the end of their period of service could be claimed by their heirs, were left to the latter (see *Bibliography*).

He had two of his brothers and two of his most important emirs murdered. Yelboghā al-Yahyawī, governor of Damascus, ran a similar risk. He therefore arranged with the other Syrian governors to send a letter to the Sultān in which he threatened him with deposition and reproached him vigorously with his wickedness. Sultān Shabān then sent an apologetic reply in which he promised to reform but made preparations against the rebels. When he wanted to put to death two more of his brothers he was prevented by their mother and his step-father. Other emirs who had once been friendly to him but who now saw armed threatening them collected their followers and other malcontents in the neighbourhood of Cairo until the Sultān in the end had only 400 horsemen at his disposal. He took refuge with his mother in the citadel where he was discovered and taken prisoner. He was murdered two days later on Djumādī II 3, 747 (Nov. 20, 1346). In his brief reign he had proved himself one of the most worthless rulers who ever sat on the throne of Egypt.

Bibliography: Weil, *Geschichte der Chalifen*, iv, 462—469. His biography in al-Safī, Berlin Ar. MSS., N^o. 9864, f. 51a, and al-Manhaj al-Safī, MS. Paris, Ar. 2070, f. 152a. On the edict see M. Sobernheim in *Matériaux pour un Corpus Inscriptionum Arabicarum*, Syrie du Nord, p. 94—103, and thereon Becker, *loc. cit.* 97—99, who interprets the inscription somewhat differently; also al-Makrizī, *Khitāt*, ii, 217, from below; on the new taxation on fiefs see Ibn Iyās, i, 184, and *Manhaj*, *loc. cit.*

(M. SOBERNHEIM)

SHABĀNKĀRA, name of a Kurdish tribe and their country. Ibn al-Athīr has Shawānkāra; Marco Polo: Soncāra. According to Hamīd Allāh Mustawfī, the realm of Shabānkāra is bounded by Fārs, Kirmān and the Persian Gulf. Nowadays it forms part of Fārsistān; modern maps show a village of the name of Shabānkāra on 30° N. Lat. and 51° E. Long. Mustawfī says that the capital was the stronghold of Ig; other localities of the province, which was divided into six districts, were: Zarkān (near Ig), Iṣṭahānā (or Iṣṭahānī), Bārk, Tāram, Khāira, Nāirā, Karm, Rūnā, Lār and Darābdjird. As for particulars and identifications it suffices to refer to the notes of G. le Strange on his translation of Mustawfī's *Nashat al-Kulūb* (O.M.S., XXIII/ii, 138/139); for Darābdjird cf. also the article (above, i, 960) and P. Schwarz, *Fran im Mittelalter*, ii, 92 etc.). As for the climate, Shabānkāra is reckoned among the warm countries (*garmīr*); but it encloses also regions of a moderate temperature (*hawā-i mu'tadil*). The products of Shabānkāra consist chiefly in corn, cotton, dates, (dry) grapes and other fruits; at Darābdjird mineral salt is found. Among the most fertile districts are those of Zarkān and of Bārk. The revenues (*ḥuṣūl-i diwānī*) during the Seljūq rule amounted to more than 2,000,000 dinārs, but at the time Mustawfī wrote (± 740=1340) they only came to 266,100 dinārs. The country abounded in strong places, e.g. Ig, Iṣṭahānā (destroyed by the Aṭabeg Cāwāl, rebuilt later on), Bārk. At the time of Mustawfī, the fortifications of Darābdjird were ruined, but the mountain-pass of Tagāi Ronba, to the east of the town, had a strong castle. In the chapter on the Muṣaffarid dynasty, interpolated in the manuscript of Mustawfī's *Tarīkh-i Gūstā*, facsimilized by Browne (O.M.S., XIV/5,

665/666), there is also mention of the fortifications of Shabankāra, the fertility of that country ("beautiful and cultivated like the garden of Iran"), its mills, bāzars, etc.

The Shabankāra tribe were Kurds; in Ibn al-Balkhī's time (early sixth [twelfth] century) there were five subdivisions of them, viz. the Ismā'īlī, the Rāmānī, the Karzuwī, the Mas'ūdī and the Shākānī. They were hardmen, but also intrepid warriors, who more than once, in the course of history, became a power to be reckoned with. Their chiefs boasted descent from Ardāshīr, the first Sāsānian, or even from the legendary king Mīnūshīr. Leaving aside the exploits of the Shabankāra in Sāsānian times (as e.g. the fact that Yazdegerd III is said to have taken refuge among them at the time of the Muslim invasion), the history of the Shabankāra begins at the epoch of the decline of Būyid power.

The Ismā'īlīs were regarded as the most noble in descent; their chiefs are said to descend from Mīnūshīr and to have held in Sāsānian times the function of Isphābād. The first time, so far as we know, this tribe came into collision with a great Muslim power was in the days of the Ghaznawid Mas'ūd (421/1030—431/1040), whose general Tāsh Farrāsh drove them from the environs of Isfahān; so they were compelled to remove southward. But now they came within the sphere of Būyid influence. The Būyids not suffering their presence, they had to migrate once more, until they settled in the Darābājird district. Ibn al-Balkhī gives the history of their ruling family at some length. It may be sufficient to state that in the course of the quarrels which arose among the kinamen one of them, Salk b. Muḥammad b. Yahyā, called to his aid the mighty Fadlūya of the Rāmānīs; at the time Ibn Balkhī wrote, Salk's son Ḥasūya was the ruler of the Ismā'īlīs, but his kinamen contested his supremacy.

The Karzuwī Shabankāra, taking advantage of the decline of the power of the Būyids, obtained Kāzerūn but were driven out of it by Āwulī when he made his expedition in Fārs. The Mas'ūdīs also came to some power in the days of Fadlūya; the Karzuwī chief Abū Sa'd had also served under that Rāmānī ruler. For some time the Mas'ūdīs possessed Fīrūzābād and part of Shāpūr Khūra, but they were no match for the Karzuwīs, whose chief, Abū Sa'd, defeated and put to death Amīrāya, the Mas'ūdī prince. When, later on, Āwulī ruled Fārs, he installed Amīrāya's son Vīghāf as ruler of Fīrūzābād. The Shākānīs, rapacious mountaineers of the coastland, present no historical interest. They also were subdued by Āwulī.

Historically the most important tribe is the Rāmānīs, to whom belonged Fadlūya (Ibn al-Athīr, x. 48, calls him Fadlūn), the mightiest Amīr of the Shabankāra. This man, the son of a certain 'Alī b. al-Ḥasan b. Aiyūb, who was the chief of his tribe, rose to the rank of *Sipāhshār* in the service of the Shāhī 'Adīl, the waṣī of the Būyid ruler of Fārs. Even before this time the Būyids had been troubled by the Shabankāra. The *Tawārīkh-i Gūstāw* (ed. Browne, p. 432) mentions an insurrection of a certain Ismā'īl of Shabankāra against the king al-'Imād b. Dīn-Allāh Abū Kālīnjār (416/1025—440/1048). This prince was succeeded by his eldest son Abū Naṣr, who died in 447 (1055) and left the throne to his younger brother Abū Manjūr, the royal master of the Shāhī 'Adīl.

Abū Manjūr put to death this waṣī, whereupon Fadlūya rose in rebellion. He succeeded in capturing the king himself and his mother, the Saiyida Khurāsīya. Abū Manjūr was confined in a stronghold near Shirāz, where he was murdered in 448 (1056); the Saiyida was, by order of Fadlūya, suffocated in a bath. The Shabankāra chief, now ruler of Fārs, soon came into collision with the Seljuq power. After fighting without success against Kāwurd, the brother of Alp Arslān, he submitted to the latter, from whom he received the governorship of Fārs. Fadlūya afterwards revolted; the stronghold of Khurāsah, to which he had betaken himself, was besieged and taken by the great Nizām al-Mulk, and Fadlūya, after many vicissitudes, captured and executed (464/1071). Such is in substance the account of Ibn al-Balkhī, a younger contemporary. Ibn al-Athīr represents these events somewhat differently (x. 48/49; the Kurd Fadlūn, who, according to Ibn al-Athīr, ix. 289, held part of Adharbaijān and raided the Khazars in 421/1030, cannot, of course, be identified with the Shabankāra chief). With the Fadlūya-affair is connected without any doubt, the expedition of Alp Arslān to Shabankāra of the year 458/1066, mentioned by al-Rāwandī, *Kāfiyat al-Jadīd* (G. M. S., New Ser., vol. ii.), p. 118.

The Shabankāra were to be for many years a nuisance to the countries of Kirmān and Fārs. In 492 (1099), supported by the prince of Kirmān, Irān-Shāh b. Kāwurd, they defeated the Amīr Unar, who was waṣī of Fārs from the part of the Saltān Barkiyārūk. About these times the struggles of the Atābeg Āwulī with the Shabankāra begin. This prince, Fakhr al-Dīn Āwulī, who died in the year 510/1116 (the *Tawārīkh-i Gūstāw* wrongly places his death under the rule of Mas'ūd b. Muḥammad b. Malik-shāh), governed Fārs on behalf of the Seljuq ruler of Irāk, Muḥammad b. Malik-shāh. The Shabankāra Amīr al-Ḥasan b. al-Mubārīz Khusrāw refused to pay homage; thereupon Āwulī attacked him suddenly. Khusrāw had a narrow escape, being saved by the help of his brother Fadlū. Now Āwulī subdued Fāst and Dīshram in Fārs; thereupon he besieged for some time the stronghold where Khusrāw had taken refuge, but perceiving that the siege would be a long and hard one he came to terms with the Shabankāra chief. Later Khusrāw accompanied the Atābeg on his expedition to Kirmān, the king of which had sheltered the prince of Darābājird, Ismā'īl. In this connection Ibn al-Athīr mentions the fact that Āwulī requested the king of Kirmān to hand over some Shabankāra forces who had taken refuge to him.

After these events the Shabankāra seem to have kept quiet during the rule of Muḥammad b. Malik-shāh, but new troubles arose when under the following king, Maḥmūd b. Muḥammad (511/1117—525/1131), the waṣī Nāṣir b. 'Alī al-Darkaznī began to illtreat these tribes also. This caused an insurrection during which the Shabankāra wrought great damage. For the time up to the Kirmān affair there may be noted the following data: In the service of the Salghūri Atābeg Sunqur, the Kurd Muḥammad Abū Tāhir, who afterwards became the first independent sovereign of the Greater Lur dynasty (he died 555/1160), made himself meritorious by a victory on the chiefs (*zakkān*) of Shabankāra. In 564/1168 the Shabankāra sheltered Zangī b. Daklā, who was expelled from Fārs by the ruler of Khurāsān.

We now enter on the most glorious period of Shabānkāra history, which, however, lasted only a few years. The Shabānkāra chief Kūṭb al-Dīn Muḥarriz and his brother Nūṣr al-Dīn Maḥmūd, Amirs of Ig, availed themselves of the disturbances which arose in Kirmān after the extinction of the ruling Seljuq dynasty of that country. They responded to the call of the wazīr Naṣh al-Dīn, who solicited their aid against the Ghuzz. Contrary to the intention of the wazīr, but assisted by the citizens, they occupied before giving battle to the Ghuzz the capital Bardasir and so secured the dominion of Kirmān (597 = 1200/1201). The two Amirs now defeated the Ghuzz, but the strained relations between these rulers of Ig and the Atābeg of Fārs compelled them to return to their realm after having appointed as their *nā'ib* one of the nobles of Kirmān. Thereupon the Ghuzz appeared once more to repeat their ravages. One of the Kirmān Amirs, Ḥurmuz Tādī al-Dīn Shāhshāh, concluded a treaty with them. Nūṣr al-Dīn marched against him from Ig; in the battle which ensued Ḥurmuz fell and his Turkish allies were routed. Shortly after, Nūṣr al-Dīn entered Bardasir again. He made himself, however, by his debauchery and his expacity odious to such a degree that a plot was laid against him. In the night the conspirators took him prisoner with his sons (600 = 1203/1204). They intended thereby to compel the commanders of Muḥarriz's garrisons to surrender. These commanders, however, remained in their strongholds and the latter had to be besieged. In the meanwhile a new actor made his appearance on the political stage viz. 'Adjam Shāh b. Malik Dīnār, a protégé of the Khwārim-shāh [q.v.]. 'Adjam Shāh had concluded an alliance with the Ghuzz who assisted him in his attempts to secure the realm of Kirmān. In short, the course of events was as follows. The prisoner Nūṣr al-Dīn was sent to the Atābeg of Fārs, but if 'Adjam Shāh expected to remain in the quiet possession of Kirmān, he was disillusioned by a polite message from the Atābeg, Sa'd b. Zangī, to the effect that Sa'd was sending his general 'Iz al-Dīn Fadlān to accelerate the reduction of the garrisons mentioned above (600). The troops of Fārs duly arrived and delivered Kirmān definitively from the Shabānkāra. An expedition which Muḥarriz undertook in revenge had no results except bringing about once more more severe devastations.

In 658 (1260) Hūllāgī destroyed Ig and killed the Shabānkāra Amir Muḥarriz Muḥammad; afterwards, in the year 694/1295 we find Shabānkāra among the countries which, according to the treaty between Balid Khān and Ghāzīn Khān, fell to the lot of Ghāzīn. For the year 712/1312 mention is made of an insurrection of the Shabānkāra against the authority of Uljāitū Khān. It was repressed by Sharaf al-Dīn Muḥaffar, who later became the first historically important member of the Muḥaffarid dynasty. It was the princes of that house who definitely put an end to the power of the Shabānkāra. In the year 755 or 756 (1354 or 1355) the last Shabānkāra ruler, the Malik Ardāshīr, refused to obey the orders of the Muḥaffarid Muḥarriz al-Dīn. The latter sent his son Maḥmūd with an army to chastise the Kāndīsh prince. Maḥmūd subdued the country and obliged Ardāshīr to fly. From this time onwards Shabānkāra forms a part of the Muḥaffarid empire; incidentally, in the year 765 (1363/1364), we hear of a *ḥākim* of Shabān-

kāra on behalf of the Muḥaffarid kings (G. M. S., XIV/i. 698). After the time of this dynasty mention is found of Shabānkāra as one of the fiefs (*ḥif*) held by Bāghughur Behlūdūr (Dawlat-shāh, *Tadhkirā*, ed. Browne, p. 351).

AL-SHĀ'BI, AND 'AMR b. SHARĀHIL b. 'AMR AL-SHĀ'BI, traditionist, was one of the many South-Arabians who gained prominence in the early days of Islām. He was descended from the clan Shā'b, which is a branch of the large tribe of Hamdān, and was born in al-Kufa, where his father Sharāhil was one of the foremost of the *ḥurrā* or Kur'an readers. There is a great divergence in the dates assigned as the year of his birth, but we may assume that the date which he himself gives is approximately correct. He stated that he was born in the year of the battle of Djalila', which took place in the year 19/640, but, according to another statement, his mother was one of the captives made after that battle, so that the year 20 given by other authorities may be more accurate. He himself tells us that when al-Ḥajjāj came as governor to al-Kufa in the year 75 he had him called to enquire from him about the conditions of the city and finding him well-informed he made him spokesman (*arif*) of the tribesmen of Hamdān and settled a salary upon him. He kept in favour with al-Ḥajjāj till the time of the rebellion of 'Abd al-Rahmān b. al-Ash'ath (in 81/700) when several of the chief *ḥurrā* of the city came to him telling him that he, as the foremost of their class in the city, ought to take part in the rising and finally persuaded him to join them. He actually went so far as to address the opposing armies and overwhelm al-Ḥajjāj with reproaches. The latter when informed about it said:

*Do not be surprised at this Sha'bi, the villain; if God grant me that I get hold of him, I shall make this world narrower for him than a camel's hide".

Soon after, the army of Ibn al-Ash'ath was defeated (in 83 A.H.) at Dair al-Djamidim and al-Sha'bi to preserve his life went into hiding. When he learned that al-Hadidj had granted an amnesty to all who joined the army of Kutaba b. Muslim, which was being raised to be sent to Kharrān, he obtained through a friend a donkey and provisions and went to Farghāna. Here he remained unknown but was able to get into favour with Kutaba who employed him as secretary. From one of his letters al-Hadidj guessed that it was al-Sha'bi who was the composer and commanded Kutaba to send him back to him without delay. Al-Sha'bi had been for a long time on friendly terms with Ibn Abi Muslim, the chamberlain of al-Hadidj, and the latter had probably spoken in his favour before al-Sha'bi arrived before the governor. Ibn Abi Muslim and other friends advised al-Sha'bi what excuses to make, but when he came before al-Hadidj he silently endured the many reproaches of ill-rewarded favours which he made and then admitted his guilt and stupidity. Al-Hadidj, who must have valued his learning perhaps more than his position among his tribesmen, readily forgave him.

His reputation must have reached the caliph 'Abd al-Malik for he sent to al-Hadidj to send al-Sha'bi to him and he spent the next few years at the court in Damascus. It is difficult to credit the account of the three years till the death of 'Abd al-Malik as, on the authority of al-Sha'bi himself, we are told that he was employed on two very important missions, one to the Greek emperor to Constantinople and the other to the caliph's brother 'Abd al-'Aziz who was governor of Egypt. The first mission related by al-Sha'bi himself was remarkable on account of the fact that the emperor tried to make the caliph suspicious against his ambassador, in which he was not successful on account of the straightforwardness of al-Sha'bi. The mission to Egypt was of the most honourable character, the caliph recommending the ambassador in flattering terms to his brother. The favour of the caliph did not confine itself to the person of al-Sha'bi, but we are told that thirty other members of his family were with him and all received salaries. After being present at the caliph's death-bed he appears to have gone after the decease of 'Abd al-Malik back to al-Kūfa and died there a short time before the death of al-Hasan al-Basri, who died in 110/728. Here again the dates given by various authors differ very much; every year from 103 to 110 is mentioned, the latter being probably the right one.

As regards his personal appearance, al-Sha'bi was a slim, little man and he himself attributed it to having been born a twin. His mental qualities must have been great, in contrast with other theologians he had a sense of humour. The celebrated traditionalist al-A'mash was asked why he did not go to hear traditions from al-Sha'bi; he replied: "Because as soon as he sees me coming he makes fun of me and says: Does this look like a man of learning? He looks just like a weaver!"

But Ibrāhīm al-Nakha'i received him with honour. Al-Sha'bi is said to have stated that he had heard traditions from more than 500 Companions and the general judgment of critics is very favour-

able as regards his trustworthiness. Among his many pupils was the great lawyer Abū Hanīfa whose oldest authority he was, and it is not surprising that his authority is cited no less than 37 times in the *Kitaḥ al-Kharāj* of Abū Yūsuf, the chief pupil of Abū Hanīfa. The passages in which he is cited in the canonical books of traditions are too numerous to be counted. Though he himself did not claim to be a lawyer it was the custom of lawyers in al-Kūfa to go to him for advice. He himself said: "I am not a *faqīh*, but I deliver those principles which have been handed down to me and they judge in accordance with them." He was a strong opponent of judging by analogy (*ra'y*) and examples are quoted by several of his biographers of his refutations of the principles of analogy. It is, however, not only in traditions that he handed down information; we owe to him a great amount of our knowledge of the history of the time of the Umayyads; a glance into the index of the annals of al-Ṭabarī will suffice to confirm this. He himself said that he could recite poetry for a month and not exhaust the store of his knowledge in this branch of learning. He did not compose any books — the time had not yet come — and he is stated to have said that he had never put a single line in black and white but related all from memory. This can only apply to the transmission of knowledge, as we have from him himself the admission that he acted as secretary to Kutaba.

Bibliography: His name is mentioned in nearly every book dealing with early Islam; the principal sources for his biography are: *Kitaḥ al-Aghani*, Index; al-Ṭabarī, ed. de Goeje, Index; Ibn al-Kaṣir, *Djām' bain 'l-Riḡāl*, Haidarābād 1323, p. 377; al-Sam'ānī, *Anṣab*, ed. Margoliouth in *G.M.S.*, 1912, fol. 334 recto; Ibn al-Kaṣir, *Homonyma*, ed. Leiden 1865, p. 261; Ibn Khallikān, *Cairo* 1310, l. 244; Ibn Ḥajar, *Tahḍīb*, Haidarābād 1328, v. 65-69; al-Dhahabī, *Tahḍīb al-Huff*, Haidarābād, l. 69-77.

SHABIB b. YAZID b. NU'AIM AL-SHAIBANI, a Kharijite leader. He belonged to the region of al-Mawṣil, to which his family had migrated from the oasis of al-Lasaf in the Kūfa desert, and was born in Dhu 'l-Hijja 25 (Sept./Oct. 646) or 26 (Sept./Oct. 647). In the beginning of 76 (695) he joined Sa'īd b. Musarrāh, the leader of the Kharijites in Dār al-Naṣīb and Mārdīn and when the latter was slain on 17th Djumādī I (2 Sept. 695) in battle against the troops of al-Hadidj [q.v.] under al-Ḥarith b. 'Umayr al-Hamdānī at the village of al-Mudabbaj between al-Mawṣil and al-'Irāq, Shabīb assumed command and with the little body that survived fought his way through to the border country belonging to al-Mawṣil. During the whole of the war with the government troops he showed himself a master of guerrilla warfare. He never remained long on the same spot but continually changed his place of abode and was on good terms with the Christian inhabitants of the country. He was therefore easily able to find shelter for his force which was always very small, although the statements of the Arab historians regarding the smallness of the number of his followers in contrast to the strong bodies of government troops seem somewhat exaggerated, and he was always well informed regarding the enemy's movements. After his defeat

of the 'Anaza and the Banū Shalbān, he took his mother who lived on the slope of Mount Sā'idamānabi Mawṣil and went farther south. Sufyān b. Abī 'l-ʿAlīya al-Khath'amī was defeated at Shā-nikhān and Sawra b. Abdjār (al-Hurr) al-Tamīmī at al-Nahrawān, whereupon al-Hadīdīdī returned collected a new army and put al-Djāzī b. Sa'īd al-Kindī in command. The latter showed the greatest caution in following up his dangerous enemy, was always on his guard and ready for battle, and entrenched himself at night. An attack made by Shabīb failed. Al-Hadīdīdī who wanted a speedy end to the long struggle, then appointed Sa'īd b. al-Mudjalīd al-Hamdānī and ordered him to attack at once, but he was killed. His successor Suwaid b. 'Abd al-Rahmān al-Sa'dī could do nothing and suddenly Shabīb appeared before Kūfa on the same day as al-Hadīdīdī returned from a journey to Baṣra. In the night Shabīb even entered the town and knocked at the gate of the citadel with a mighty blow from his mace, but on the following morning he had disappeared again. Al-Hadīdīdī then sent a body of cavalry under Zahr b. Kais al-Djā'fī against him; Zahr was however defeated at al-Sallāhīn and when Zayda b. Kudāma, who succeeded him had fallen at Rūdhbar, Shabīb threatened the town of al-Madīn. A new army was at once equipped and the command given to 'Abd al-Rahmān b. Muhammad b. al-Ash'ath al-Kindī [q. v.] who pursued the same cautious tactics as al-Djāzī. As he did not succeed in gaining a decision, al-Hadīdīdī became impatient and replaced him by 'Othmān b. Kaṭan al-Hārithī, who was defeated and killed in Dhu 'l-Hijja 76 (March 696) on the river Ḥawlayā. While Shabīb was spending the next three months in the mountains, al-Hadīdīdī again collected a strong army the command of which was given to 'Atūb b. Warḳā al-Riyāhī. In the meanwhile al-Madīn fell to Shabīb without a blow being struck. Soon afterwards he attacked the troops sent against him at Suk Ḥakama near Kūfa. 'Atūb was killed and Shabīb was once more victorious. He therefore again threatened Kūfa; al-Hadīdīdī, however, had already appealed to the caliph for help, 4,000 men under Sufyān b. al-Ahrad al-Kalbi soon arrived and there was again a battle at Kūfa, in which Shabīb had the worst of it and had to take to flight to save himself. After an indecisive fight at al-Anḥār he went to Dīkḥā, i.e. the region of al-Nahrawān, did not stay long there but went to Kirmān. When the Syrians pursuing him approached he went to meet them, crossed the Dūdīl into al-Ahwāz to attack Sufyān but was forced to retreat after a desperate struggle and was drowned while crossing the river (probably at the end of 77 = spring of 697). Shabīb's appearance was in keeping with his almost legendary exploits. He was very tall and is said to have possessed extraordinary physical strength.

(K. V. ZETTERSTEN)

SHABWA, a town in South Arabia, 6 hours' journey from al-Sifil in the Wādī Djerdān and 2 days' journey (in Ibn al-Mudjāwī 9 parasangs) S.W. of al-'Alī, about 3850 feet above sea-level. The town is mentioned as early as the Ḥaḍramūt dedicatory inscription Oviander 29.6 (שְׁבוּרָה שִׁבְוָה), Pliny (*Nat. Hist.* vi. 28, 154; xii. 14, 52) knows it by the name of Sabota as the capital of Ḥaḍramūt. According to him it was built on a high hill and had 60 temples within its walls. According to the authorities from whom C. Landberg got his information about Shabwa, the old town is actually on a hill called Karn, the only elevation in the wide plain, close to the modern settlement. Ruins on a great scale still exist on the top of the hill, enclosed by a wall; large buildings with columns and statues are still standing. Glaser also describes Shabwa as the centre of many ruins between Baiḥān and Shibām.

Al-Bakrī alone among the Arab geographers describes Shabwa as the first town in Ḥaḍramūt; the others transfer it to the region between Baiḥān and Ḥaḍramūt so that they do not include it in the latter. A. Sprenger (p. 306) suggested that this limitation of the geographical conception of Ḥaḍramūt was a natural result of the Himyarite conquest. Shabwa indeed is actually described as a Himyar town. Al-Hamdānī says that the people of Shabwa left the town during the war between Madhijīdī and Himyar and settled in Ḥaḍramūt. The new settlement was called Shibām after them, originally Shibāh; a *min* was put in place of the *h*. According to L. Hirsch this town is 6 days' east of the ancient Shabwa. D. H. Müller in the critical notes to his edition of al-Hamdānī (p. 89) has however described the connection of Shibām and Shabwa as sheer imagination on the part of South Arabian scholars. In any case there is evidence for Shibwa as a second pronunciation alongside of Shabwa. That the latter is older may well be deduced from Pliny's Sabota.

In ancient times Shabwa was the centre of the frankincense trade and of the trade between Egypt and India, which brought to Rome via Gharra (Gaza) the rarest products of Arabia and China. Shabwa is still connected by three caravan routes with the north. One leads from Najrān via 'Elāib, al-Setima, Ruwaik, Šafir, 'Irq Musabbah to Shabwa, a second from Najrān via Khabbī, the Djawf Mārib, 'Irq Dakhaim to Shabwa and the third via Mārib, Wādī Ḥarīb, al-Ayādim, Djaww al-Kudāif to Shabwa. The town however no longer plays an important part in commerce and is only of importance for its salt trade. Even in al-Hamdānī's time Shabwa was famous for its salt deposits. The salt-hill called Haid al-Meleh, is two hours west of Shabwa and is still being worked; the diggings are open and still confined to the foot of the hill so that there is salt here for centuries still.

The ancient ruins of the city have given rise to many legends. Al-Maḥrizī says that there is the tomb of a giant in Shabwa, whose bone from knee to foot measured 13 ells. Yāqūt (iv. 184) mentions that the tomb of the prophet Šalīb [q. v.] — which others say is in Mekka — is here and that the footprints of the Prophet's she-camel were to be seen there. As, according to C. Landberg (*Arabica* v. 248) Shabwa has nothing to do with the Sahwa visited by von Wrede — the latter is identified with a Sahwa in a valley a considerable distance from Shabwa — this tomb cannot be identical with the Himyar tomb described by von Wrede (p. 245). Yāqūt (iii. 257)

besides knows a castle on mount Raima (now the Djebel Rēma) in Yemen also called Shabwa.

SHADD (or **RAWT AL-MIḤZAM**), "ligature", "knot", "girt which is bound"; this is the most important rite in the initiation ceremony practised since at least the twelfth century A. D. in the guilds of artisans (*ḥirfa*, cf. *ṣina*) as well as in certain mystical congregations (cf. *ṭarīqa*). At his initiation before the body of initiates, the candidate (*maḥḥūd*) if he is a Muslim, takes part if required in the recitation of the *fātiḥa*, the 7 *salūm*'s, the *naḥḥūd* in honour of the Prophet, the latter preceded by his taking a preliminary oath. Then comes the *shadd*; the novice bends down and is "bound" by the initiator (*naḥḥūd*), either on the body, the head, or the shoulder (cf. the Turkish miniature in *Islam*, vi. 171), with a knot of material, a shawl of silk or wool (*miḥzam*), a cloth handkerchief (*fāṭa*, *mandil*, *ghaiba*, *sumnār*), or a simple piece of string (*maṣṭūl*). Several successive twists, knots or turns are made in the cord, usually 4 (sometimes 3, 7 or 8); prayers are recited at each twist invoking some patron saint; when there are four of them, the prayer is in honour of the *maḥḥūd*, Gabriel, Muhammad, 'Alī and Salmān; in this case, two supplementary knots are added (called *gharān*, *shakla*) in honour of Hasan and Husain.

The *shadd* is characteristic of the solemn initiation 'alā ḥisāq Allāh, fī ma'idūn 'All, bayn al-fityān; it binds the initiate, whether he be Muslim, Christian or Jew to the corporation as a body, as the 'ahd al-ḥirfa of the mystics binds one to the whole brotherhood; on the other hand, the *ṭaḥḥūm*, called "pact without a knot" is a private

pact of brotherhood binding to a single individual only by a kind of foster-brotherhood (cf. 'ahd al-yad wa 'biḥḥūd or *ṭalḥin*, for the novice mystic).

After the *shadd*, the initiate is sometimes partially shaved (forelock, moustache or beard); then he puts on a special dress (*libās*, *sarḥall*) in the old guilds; *ḥirka* on the shoulders and *ṭaḥḥūd* [*ḥalāh* or *ḥarmus*, according to Bakli as early as 570 (1174) or *ṭaḥḥūd*] on the head, in the congregations. The initiate's solemn pledge is then taken ('ahd, bay'a, *muḥḥūd*, *miḥḥūd* al-*ḥabā*), certain esoteric instruction on his new duties is given him with permission to make use of it (*idḥān*). He then takes his place with his brethren on the carpet of initiation (*ḥisāq*, *saḥḥūd*), for the traditional meal (*ṭamṭiḥ* *waṭṭima*).

During the last forty years this rite has begun to disappear with the gradual disappearance of the old guilds. Some congregations (*Rifā'iya* and *Bakṭā'iya*), however, have still preserved the solemn *shadd*.

Thorning was the first to study and classify methodically the esoteric manuscripts relating to the guilds, or *ḥirka* al-*futuwwa*, which describe this ritual (they are a kind of catechism of initiation, like the masonic handbooks, compiled in vulgar Arabic with some Persian terms: *darṭūr* "by your leave", *ḥir*, *ḥār*); the earliest manuscript is dated 844 (1440) but the text is of the thirteenth century; an inscription found by van Berchem in Egypt alludes to them as early as 771 (1369); the Caliph Nāḥir (d. 622/1225) is remembered for having based his attempt at an order of chivalry (*libās* al-*futuwwa*) on the rite of *shadd*, which is found even earlier in 578 (1182) among the *Nubūḥiya* of Damascus, and in 535 (1140) in a guild of thieves of Baghdad (cf. also Ibn al-Djāwzi, *Taḥḥūd*, ed. Cairo 1340, p. 42').

Its origins are still more remote, if we remember the significance from the fourth century A. D. among the mystics of the words already mentioned *ḥisāq*, *fāṭa*, and especially *futuwwa* [q. v.], this "knightly honour" which no threat nor prayer could turn from regarding their oaths (like Satan damned for his fidelity to the monotheistic pact, which he had taken, according to Hallāj, *Tawḥīd*, vi. 20—25; Abū Ṭālib al-Makki, *Kāṭ al-ḥalāh*, Cairo 1310, ii., p. 82, 1. 2—3; Ahmad Ghazālī quoted in Ibn al-Djāwzi, *ḥirka*, Leiden MS., cod. Wam. 998, f. 117^a sq.). The appropriation to the *shadd* of Kur'an, vii. 171 and xlviii. 10 seems to be more modern. But certain elements of the ritual itself are ancient, probably of extremist Shi'a origin. It is not by chance that the sect of the Nusairis who practice initiation as reformed by Khayṣi and Taharāni in the fourth century A. D., already credits Salmān with the same qualities as initiator as do the guild catechisms describing the *shadd*; besides the oath of secrecy and the right to initiate non-Muslim monotheists point to the Karmatians.

(LOUIS MASSIGNON)

SHADDĀD, BANU. The Banū Shaddād, of whom there is little record, ruled over Arrān from 340—468—951/952—1075/1067 when most of the country was conquered and annexed by Malik-Shāh. Members of the family continued, however, to hold governorships in various districts, such as Gandja and Ānī, which they purchased from the Seldjūqs, at any rate down to the end of the 15th/16th century. They were probably Kurds. The principal towns included in Arrān were Nakhčevān, Gandja, Tiflis, Damiškapa and Karabagh. The inhabitants were called *شاد* or *Lesghians*.

In 337/948 the Musafirid ruler of Ādharbāidjān, the Salār Marzubān Muḥammad, was captured before the gates of Raiy, whereupon that country was thrown into confusion and any chief who had a following set himself up as independent governor of some town or district. Among these was a certain Muḥammad b. Shaddād b. Kaṭrā, who, having first made himself master of Dabul by 340/951, became practical ruler of Ādharbāidjān, which he apparently held intact until 344/955 when his power began to decline, and in 360/970 his son succeeded only to the province of Arrān. There was about this time a ruler of Gandja named Faḍlān who was possibly a brother of Muḥammad b. Shaddād. The son of Muḥammad b. Shaddād b. Kaṭrā was Abu 'l-Ḥasan 'Alī b. Dja'far Lashkari, who reigned for eight years and was succeeded by his brother Marzubān, who after a reign of seven years was killed by another brother named Faḍl b. Muḥammad while out hunting. Faḍl, by his good government, made himself loved of the people, and among his memorable acts was the building of a vast bridge across the river Araxes. He died in 423/1031 after a reign of 47 years and was succeeded by his son Abu 'l-Faḥ Mūsā, who, after a reign of three years, was succeeded by his son Abu 'l-Ḥasan 'Alī b. Mūsā Lashkari, who reigned down to his death in 440/1048. This Abu 'l-Ḥasan was one of the patrons of the poet Kaṭrān [q.v.] in Gandja. He was succeeded by his son Nūshirwān, who, dying three months later, was succeeded by Abu 'l-Aswār Shāwir b. al-Faḍl, of whom more is known than of the other members of this dynasty, for he is mentioned more than once by Kābūs in his *Kābūs-nāma*, and Ibn al-Athīr tells us that he swore allegiance to Tughril when the latter visited Gandja in 446/1054 after his conquest of Tabriz. Abu 'l-Aswār died in 459/1067 and was succeeded by his son al-Faḍl II Minūčīhr. Kābūs (*op. cit.*) writing in 468/1075 refers to Faḍlān b. Abu 'l-Aswār in the past tense, and it would appear that with the death of this Faḍlān and the annexation of Arrān by Malik Shāh the independence of the Banū Shaddād came to an end, and from this point it is very difficult to follow the history of the family. This Faḍlān was presumably the patron of this name so often addressed by Kaṭrān, and is also the subject of several anecdotes in the *Kābūs-nāma*. He apparently ruled over Gandja, Ānī and Tovin.

According to Khanikoff (*Bull. Acad. Petr.*, 1849, vi. 195), al-Faḍl II Minūčīhr had two sons, Faḍlān, who was Amir of Gandja when that city was captured by Malik-Shāh in 481/1088, and Abu 'l-Aswār II Shāwir, who was Amir of Ānī when that city was captured by King David the Restorer in 518/1124. This Abu 'l-Aswār II Shāwir had a

son Maḥmūd, who had a son Kai-Sultān, of whom we know from an inscription found in Ānī bearing the date 595 (1198), where he calls himself Kai-Sultān b. Maḥmūd b. Shāwir b. Minūčīhr al-Shaddādī.

RULERS OF THE HOUSE OF THE BANU SHADDĀD.

1. Muḥammad b. Shaddād, A. H. 340. In Gandja Faḍlān I;
2. Abu 'l-Ḥasan 'Alī b. Dja'far Lashkari, A. H. 360—368;
3. Marzubān, A. H. 368—375;
4. al-Faḍl b. Muḥammad, A. H. 375—422;
5. Abu 'l-Faḥ Mūsā, A. H. 422—425;
6. Abu 'l-Ḥasan 'Alī b. Mūsā Lashkari, A. H. 425—440;
7. Nūshirwān b. 'Alī b. Mūsā, A. H. 440;
8. Abu 'l-Aswār Shāwir b. al-Faḍl b. Muḥammad, A. H. 440—459;
9. al-Faḍl Minūčīhr b. Shāwir, Faḍlān II of Gandja;
10. Abu 'l-Muḥaffar, Faḍlān III of Gandja;
11. Abu 'l-Aswār Shāwir b. Minūčīhr of Ānī, d. A. H. 468;
12. Abu 'l-Faḥ Dja'far b. 'Alī b. Mūsā of Ālān, d. A. H. 470;
13. Maḥmūd b. Shāwir b. Minūčīhr b. Shāwir b. al-Faḍl of Ānī;
14. Kai-Sultān b. Maḥmūd b. Shāwir of Ānī, still alive in A. H. 595.

(E. DENISON ROSS)

AL-SHĀDHILĪ, ABU 'L-ḤASAN 'ALĪ b. 'ABD ALLĀH b. 'ABD AL-DJABRĀK AL-SHARĪF AL-ZARWILĪ, a celebrated mystic, founder of the Muslim religious brotherhood or *ṭarīqa* [q.v.] known as the *Shādhiliya* [q.v.], which has itself given rise to some fifteen other brotherhoods like the *Wefā'iya*, the *'Arifiya*, the *Djāfiliya*, the *Hafnawiya* etc. etc.

He was born, according to some, at Ghemāra near Ceuta about 593 (1196/1197); others say he was born at Shādhilā, a place near the Djabal Zafrān in Tunisia from which he would take his *nishā* of al-Shādhilī. In any case the ethnic al-Zarwīlī would suggest a Moroccan origin. His disciples attributed a nobler origin to him and trace his descent back to the Prophet through the line of al-Ḥasan.

From his youth al-Shādhilī had devoted himself to study with such ardour that he contracted a serious disease of the eyes; perhaps he became blind. Henceforth he devoted himself completely

to the doctrines of the mystic Šafīs (cf. the art. TAŠAWWUF). In Fās he had attended the lectures of the adepts of the great eastern mystic Džunaid, particularly those of Muḥammad b. 'Alī b. Hirzīm, himself a pupil of Abū Mīdyān Šu'āib of Tlemcen. But it was only under the influence of the Moroccan Šafī 'Abd al-Salām b. Mašūh that the subject of our article went to Ifrīkiya to the reign of Tunis to spread his doctrines. Persecuted for his teaching and especially for his influence on the people, he took refuge in Alexandria in Egypt where his popularity extended and increased. According to some of his biographers, he could not leave his house without being followed by crowds. He made many pilgrimages to Mekka, on the last of which he died at Hamašīrā while crossing a desert in Upper Egypt (656 = 1258). His tomb, which was an object of great veneration and pilgrimage, is surmounted by a dome, the gift of a Mamlūk Sultān of Egypt (Cf. al-Batānīnī, *Riḥla* p. 29). Silvestre de Sacy gives another tradition (*Chrestomathie*, ii. 233), according to which he is buried in the region of Mokha.

Al-Šādhilī led the life of a *Šāikh* [q. v.] *Ṣūfī* or religious man seeking through a wandering life of meditation constant union with the divinity, eternal ecstasy. He taught his disciples the entire devotion of life to the service of God. He recommended them to pray at all hours, in all places and in all circumstances and the practice of *tašawwuf*; his profession of faith was the *taḥḥid*. His immediate pupils had no *khawā* (a kind of hermitage), nor monastery, nor noisy practices nor juggleries. Among his many disciples the most famous were in Egypt Tādj al-Dīn b. 'Aṭā Allāh and Abū 'I-Abbās al-Mursī; in the North-west of Africa the most of the Muslim religious brotherhoods claim to follow his teaching.

Al-Šādhilī left a number of works of which the majority are *ḥisb* [q. v.], a kind of formula of prayer for recitation, either regularly or in case of need. They are entitled:

1. *al-Muḥadditha al-ghāfiya li 'I-djām'a al-ashkariya*; 2. *Kitāb al-Uḥwā*; 3. *Ḥisb al-barr*; 4. *Ḥisb al-baḥr*; 5. *Ḥisb al-kabr*; 6. *Ḥisb al-jam'* *alā 'ayn al-aidū*; 7. *Ḥisb al-naḥr*; 8. *Ḥisb al-luṭf*; 9. *Ḥisb al-faḥ*, also called *Ḥisb al-annūr*; 10. *Ṣalāt al-faḥ wa 'I-maḡrib*; 11. various prayers or litanies; 12. lastly a *Waḡiya*, a kind of religious charge to his disciples.

(A. COUR)

ŠĀDHILĪYA, or **ŠĀDHILĪYA**, pronounced in Africa *Shāduliya*, *Sūfī* sect called after Abū 'I-Ḥasan 'Alī b. 'Abd Allāh al-Šādhilī, whose title is variously given as Tādj al-Dīn and Taḡī al-Dīn (593-656 A.H.). For the life of this personage see the art. AL-ŠĀDHILĪ.

His system. Al-Šādhilī does not appear to have composed any large work, but many sayings, spells and an ode are ascribed to him, and since some of the first are recorded in the work of his

disciple's disciple, Tādj al-Dīn al-Iskandari, composed in 694, they may be to some extent genuine (see the art. AL-ŠĀDHILĪ). The best known of his productions is the *Ḥisb al-Baḥr* "Incantation of the Sea", which was reproduced by Ibn Baṭṭūṭa (i. 41), whence the translation is copied by L. Rinn (*Marabouts et Khouans*, p. 229). Extraordinary powers are ascribed to it by Ḥājjī Khalīfa (iii. 58), and its author thought it might have prevented the fall of Baghdad; several commentaries on it are enumerated. Several other incantations and prayers are given in the *Laṭā'if* (ii. 47-66) and the *Mafāḥīr* (p. 135 *seq.*). The latter of these works also contains fairly lengthy discourses, in some of which the stages through which the *murīd* should pass are described in detail, though the language is, as usual in such cases, not intelligible to the ordinary reader. It would appear from these that al-Šādhilī's aim was in the main the inculcation of the higher morality, such as is found in the works which he approved, viz. the *Iḥyā' 'Ulūm al-Dīn* and the *Kut al-Kulūb*; and indeed the five principles (*uṣūl*) of his system are given as (1) fear of Allāh in secret and open; (2) adherence to the Sunna in words and deeds; (3) contempt of mankind in prosperity and adversity; (4) resignation to the will of Allāh in things great and small; (5) having recourse to Allāh in joy and sorrow.

It would seem unlikely that it was his intention to found an order in the sense which afterwards became attached to the word *ṭarīqa*. He desired his adherents to pursue the trades and professions in which they were engaged, combining, if possible, their normal activities with acts of devotion. Anecdotes are recorded of men who offered to abandon their employments and follow the saint, who urged them to continue working at the same. Mendicancy was discouraged and even government subsidies for their meeting-houses were, it is asserted, refused. Indeed the erection of *ṭawāyif* and similar buildings does not seem to have been contemplated by al-Šādhilī or his successor Abū 'I-Abbās, who is praised by his biographer for never placing stone on stone. Even the holding of high office with ample emoluments and a luxurious mode of living was not discouraged; and this doctrine, as will be seen, survived till recent times among adherents of the system.

Doubtless the ultimate aim of al-Šādhilī was, as with other *Sūfīs*, *al-faḥ*, and the method pursued was the usual one of the religious exercises called *awrād* and *adhkār*. Formulae, as usual, were selected and their repetition a stated number of times enjoined. Lists of these with the ritual appertaining to them are given in the *Mafāḥīr* (p. 125, 126). The *ṣāikh*, indeed, is said to have adapted his recommendations to the needs of each *murīd* and to have given each permission to follow some other *ṣāikh*, if he found his methods more effective. The use of such formulae, however, is not easily separated from the supposed acquisition of miraculous powers, which are described in the *Mafāḥīr* (*loc. cit.*): "The least of their (the *Shādhilīs*) messengers are blindness, crippling and desolation", but there was some doubt whether they were justified in sending them on their enemies.

Apart from their mysterious knowledge the leaders of the system claimed to be strictly orthodox, and, indeed, when a revelation which one

of the adherents received conflicted with a *sunna* he was told to reject the former in favour of the latter. In spite of this some of al-Shādhilī's assertions incurred the censure of Ibn Taimiya, whose supporters in this matter in turn incurred the censure of the historian al-Yaḥṣī (iv. 142).

The three specialties which the members of the sect claimed were: (1) that they are all chosen from the "well-guarded Tablet", i. e. have been predestined from all eternity to belong to it; (2) that ecstasy with them is followed by sobriety, i. e. does not permanently incapacitate them from active life; (3) that the *ḥaṣṣ* will throughout the ages be one of them.

Spread of the system. The absence at the first of religious buildings renders it difficult to trace the progress of the community. It seems clear that the first group of adherents was formed in Tunis; al-Shādhilī's successor, however, Abu 'l-Abbās al-Murāṣ (d. 686) lived 36 years in Alexandria, "without once seeing the face of the governor or sending to him" (*Lafā'if*, i. 128), and, as has been seen, did not lay stone on stone; still 'Alī Pasha Muḥarrak (*Khiṣṣat Dīdida*, vii. 69) records the existence there of a mosque bearing his name (restored 1189 = 1775/1776), doubtless built by his disciples; also of one called after his disciple Yaḥyā al-'Arāḍī (d. 707) and a third called after their joint disciple Tādī al-Dīn b. 'Alī al-Iskandarī (d. 709; author of the *Lafā'if*). The first of these is called a *ḡāwī* and is richly endowed. There are *ḡawā'id* celebrated in honour of the first two of these persons. The Pasha states that the mosques are chiefly frequented by Maghrebines; he mentions a mosque belonging to the order in Cairo, which, however, is in ruins. It is probable that the adherents of al-Shādhilī were at all times to be found chiefly in the West of Egypt; but H. H. Jessup (*Fifty-three Years in Syria*, ii. 537) asserts that they were in his time numerous in Syria and advocated the reading of the Old and New Testaments and fraternisation with Christians. In 1892 a lady adherent, "from Korass in the Bukaa, North of Mt. Hermon", set out on a preaching tour in Syria; she advocated reform and an upright life and insisted that all, Muslims, Christians and Jews, are brothers. She preached in the mosques in Damascus, Hasbeia, Sidon, Tyre and other cities, rebuking the sins of the people. It would seem certain that religious toleration of this sort by no means coincided with the views of the founder of the order.

It was reported by C. Niebuhr (*Reisbeschreib. nach Arabien*, i. 439; French transl., i. 350) that in Mokha in S. Arabia Shaikh al-Shādhilī was regarded as the patron saint of the place and, indeed, the originator of coffee-drinking; and S. de Sacy afterwards (*Christi. Arabi*, ii. 274) produced from the *Dīḥān-munā* a passage relating how al-Shādhilī came to Arabia in 656, and the series of miracles which led to the production of coffee becoming the staple industry of Mokha. It is more probable that the patron of Mokha is a later member of the sect, 'Alī b. 'Umar al-Kurashī (whose verses are cited in the *Mafāḥīr*, p. 7), a disciple (and probably cousin) of Najār al-Dīn Muḥammad b. 'Abd al-Dā'im b. al-Mallāk (d. 797), head of the order in his time (Ritter, *Erdenkunde*, *Arabien*, ii. 572). It is not clear from Niebuhr's account how far the people of Mokha in his time observed the Shādhilī ritual or be-

longed to the community. Since Niebuhr's time the place has seriously diminished in importance, being now "a dead-alive mouldering town whose trade as a port for coffee and hides has been killed" (G. Wyman Bury, *Arabia Infelix*, 1915, p. 24).

The main seat of the Shādhilī community appears then to have been Africa west of Egypt, and chiefly Algeria and Tunisia. Materials for the religious history of this region are at present scanty; from a MS. called *Tahkāt Wad Jaifulla*, written 1805 A. D., MacMichael produces the following excerpt relating to a shaikh who died A. H. 1155 (*A History of the Arabs of the Sudan*, ii. 250):

"It was characteristic of him (Ehoggali b. 'Abd al-Rahmān b. Ibrāhīm) that he held to the Book and the Law [*sunna*] and followed [the precepts and example of] the Shādhaliya Sayyids as to word and deed. And he used to wear gorgeous raiments, such as a green robe of Bagra, and upon his head a red fez [*ṣarfūsā*], and round it as a turban rich muslim stuffs. For footwear he wore shoes [*ṣarṣiḡa*]; and he fumigated himself with India-wood [*al-'ūd al-hindī*], and perfumed himself, and put Abyssinian civet on his beard and on his clothes. All this he did in imitation of Sheikh Abu el Hasan el Shādhali And it was remarked to him that the Kādiria only wear cotton shirts and scanty clothes, and he replied 'My clothes proclaim to the world "We are in no need of you," but their clothes say "We are in need of you"'. "

The same notice contains the names of some important members of the order; the shaikh's conduct, as will be seen, agrees exactly with the anecdotes recorded in the *Lafā'if*, and the same is the case with what is told in the next paragraph:

"It was also characteristic of him that he never rose up to salute any of the great ones of the earth, neither the AWLĀN AGHĀ, the rulers of his country, nor the kings of GA'AL, nor any of the nobility, excepting only two men, the successor [*Khalīfa*] of Sheikh Idris and the successor of Sheikh Ṣaghayerūn".

In the nineteenth century the order received considerable extension through the efforts of one "Si Maïsum" Muḥammad b. Muḥammad b. Aḥmad, born about 1820 among the Ghārib, a tribe located halfway between Bogar and Miliana, whose biography is given in detail by A. Joly in the *Revue Africaine*, 1906, 1907. After studying under certain provincial teachers he went to Marouma, the centre of Muslim studies in Algeria. Having acquired what was to be learned there, he went back to the Ghārib among whom he founded two mosques, in one of which he taught the *Kur'ān* and *Fiqh*, in the other Grammar and Logic. Having associated with members of different orders, he hovered between the Madaniya and the Shādhiliya; in 1860 he visited the shrine of 'Abd al-Rahmān al-Tha'libi near Algiers, and this saint having been a Shādhilī, Si Maïsum became attracted to their doctrine; a member of the order advised him to join it and visit the Shaikh of the order, Adda, at Djahat al-Lah in Walad Lakrend. There he stayed for a time, after which he returned to the Ghārib. By special providence he had been spared the preliminary trials imposed on other aspirants, and instead of starting his career in the order as a *mukaddim*, he was elevated shortly

after joining to the dignity of *Shāikh*. About 1865 he founded a *sāwiya* at Bogari and divided his time between the *Gharib* and Bogari, to the latter of which he ultimately withdrew. In 1866 owing to the death of Adda he became *Shāikh* of the *Shādhiliya* in Central Algeria, though at first he had to contest it with Adda's son. He was offered the headship of a government madrasa at Algiers, but declined. This invitation, however, brought him the acquaintance of European officials, whose respect he enjoyed till his death in 1883. By this time his sphere of influence had extended over the greater part of the Tell Oranais and the whole of Western Algeria. Places where he had *khulafā'* were Mustaghanem, Mascara, Relizane, Nedroma, Oran, Tlemcen. After his death some of these *khulafā'* made themselves independent and the unity of control which he had established came to an end.

Statistics for the end of the last century are given by Depont and Coppolani (p. 454), whence it appears that the number of adherents in Algiers and Constantine did not reach 15,000, with 11 *sāwiya's*. The communities which split off from the *Shādhiliya* are there given as 13 in number, and among these the *Shāikhīya*, *Taibiya* and *Der-kāwiya* are said to be the most numerous.

Although when the community started there appears to have been little in the way of organisation contemplated and the connection between adherents was loose, it is evident that in course of time the normal organisation of a *ṭarīqa* was introduced.

Literature of the Order. It is noticed that neither *Shādhili* himself nor his successor Abu 'l-'Abbās al-Murṣī published any treatises, whereas his disciple Yāqūt al-'Arabi seems to have composed *Manāẓih*, and their joint disciple Tāḡi al-Dīn al-Iskandarī was the author of several works, of which two, *Lafẓif al-Minan*, dealing with the first two heads of the sect, and *Miftāḥ al-Falāḥ wa-Miḥdāḥ al-Arwāḥ*, are printed on the margin of the *Lafẓif al-Minan* of al-Sha'rānī (Cairo 1321). The former of these is the main source of our knowledge of al-*Shādhili's* career. A biography of al-*Shādhili* which cannot have been much later was the *Durrat al-Awṣar* of Muḥammad b. al-Kāsim al-Himyari b. al-Ṣalībāgh, which is excerpted in the *Mafāḥir*. Another biography called *al-Kawāḥib al-Zahira*, by Abu 'l-Faḍl 'Abd al-Qādir b. Mu'airil (d. 894), was excerpted by Haneberg (*Z. D. M. G.*, vii. 14 199.). The general account of the system called *al-Mafāḥir al-'Alīya* ḥ. 'l-Ma'āḥir al-*Shādhiliya* (printed Cairo 1314) by Iḥm lyāḡ is later than al-Suyūṭī. For doctrine this work refers to two *Risāla* called respectively *al-Uṣūl* and *al-Umūmahūt* by Sidi Zarrūk (Shihāb al-Dīn Aḥmad al-Fīal, d. 896). Haneberg, *loc. cit.*, mentions the *Shādhili* poet 'Alī b. Wafā' (d. 807) and his father Muḥammad Wafā', author of certain mystical works, and a *diwan*, of which the odes breathe for the greater part the spirit of joyous devotion to Allah, without disturbing admixture. A poem called *Ḥal al-Sulūk* by the Nāṣir al-Dīn who has already been mentioned is noticed by Haneberg. A *Shādhili* writer, Dāwūd b. 'Umar b. Ibrāhīm of Alexandria (d. 733), is mentioned by al-Suyūṭī in *Bughyat al-Wa'at*, p. 246.

The chief European literature has been noticed above.

(D. S. MARGOLIOUTH)

SHADJAR AL-DURR is famous as the only woman to sit on the throne of Egypt in the Muslim period. She was the favourite slave of Malik al-Ṣāliḥ Aiyūb (q. v.) who had her sent to his cousin al-Malik al-Nāṣir Dā'ūd in 620 (1223) during his imprisonment. After she had born a son named Khalil, she became Sultāna with the title *Umm Khalil* (mother of Khalil). Khalil died when about 6 years old. When Aiyūb died in Mansūra in 647 (1249) during the war with Louis IX of France, she concealed his death and had his son al-Malik al-Mu'azzam Tūrān Shāh brought back from Mesopotamia. Sultān Aiyūb's death was not announced till his son's arrival. In place of being grateful to her for her help Tūrān Shāh treated her shamefully. Since he had come of age he had not lived for any considerable period at a time in Egypt and he could not come to terms with the Mamlūks, as he was incapable of serious work in those difficult times and led an extravagant life with his own Mamlūks whom he had brought from Mesopotamia. He particularly brought down the wrath of Shadjar al-Durr on himself by demanding from her an account of Aiyūb's wealth, which she said she had spent for the war against the Franks. The general discontent led to a conspiracy against Tūrān Shāh as a result of which he was killed at the beginning of 648 (1250). The followers of Shadjar al-Durr had such confidence in her wisdom and ability that they put the government in her hands. She accepted their choice and on coins and edicts called herself al-Mu'taṣimīya (vassal of the Caliph al-Mu'taṣim in Baghdad), al-Ṣāliḥīya (the slave of Ṣāliḥ Aiyūb), Umm Khalil (from her deceased son), 'Imat al-Dunyā wa 'l-Dīn (preservation of the world and of religion, i. e. with the sovereign title), Malikat al-Muslīmīn (queen of the Muslims). The Emir Aibak with whom she was already closely associated was appointed her Atābeg (commander-in-chief). While she was recognised in Egypt, the Syrian Emirs declined to do so and handed over Damascus to Malik al-Nāṣir Yūsuf II. The Caliph took the side of the Syrians and ordered the Egyptian emirs to choose a Sultān. The latter could not evade this command and in the same year chose the Atābeg 'Izz al-Dīn Aibak who thereupon married Shadjar al-Durr. Her period of sole rule had lasted 80 days. As the Aiyūbid princes in Syria were not yet pacified, a scion of their family, Mūsā, a great-grandson of Kāmil was elected Sultān along with him. He was a boy of six and had of course no influence at all, but his name appeared on coins and edicts. Four years later he was banished and went to Constantinople where he received a friendly welcome from the Emperor.

While Aibak was almost entirely occupied with campaigns against the Sultān of Aleppo or rebel Mamlūks and lived in the town of al-Ṣāliḥīya near the Syrian frontier, his queen reigned uncontrolled at home. She had only to deal with the shameless greedy Mamlūks of her first husband, even when it was against Aibak's interest. In her thirst for power, she prevented the latter from visiting his first wife and his son and when later she heard that he was thinking of ridding himself of her and seeking the hand of a Mesopotamian princess of the Zangid house, she decided to anticipate him and offered her hand to the Sultān of Aleppo. It was to some extent a race between

the two to see which would get rid of the other first. By a great display of affection she managed to dispel Aibak's suspicions and to entice him into her palace in the citadel of Cairo. There he was murdered in his bath (655 = 1257) by two Mamlūks devoted to her. When he was attacked and called to her for help, she is said to have struck him with a wooden shoe. Others say that she repented and vainly tried to prevent the murder. But she did not succeed in finding a Mamlūk officer who would share the responsibility with her; all turned in disgust from the murderess. She was seized by the other party and beaten to death with wooden shoes by the slave women of Aibak's first wife. Her body was thrown into the castle moat and lay unburied for days. Later it was placed in the little mausoleum which still stands in Cairo. She was the most vigorous woman that the Muslim period in Egypt had seen, but she did nothing good during her reign.

Orientaux*, vol. i., passim; al-Makrīzī, *Khitāt*, ii. 237–248; *Sulūk*, transl. by Quatremère, i. 72 sqq.; Weil, *Geschichte der Chulifen*, iii. 483–487; iv. 4–8. On her tomb see *M.I.F.A.O.*, xix. 111 sqq., 728 (with some important notes on the Sultāna by European writers in Ann. 3), 730.

(SOBERNHHEIM)

SHAFĀ'A (A.), intercession, mediation. He who makes the intercession is called *Shāfi'* and *Shafī'*. The word is also used in other than theological language, e.g. in laying a petition before a king (*Lisān*, s. v.), in interceding for a debtor (Bukhārī, *Islāḥ*, bāb 18). Very little is known of intercession in judicial procedure. In the Ḥadīth it is said: "He who by his intercession puts out of operation one of the *ḥudūd* Allāh is putting himself in opposition to Allāh" (Ibn Ḥanbal, *Muṣnad*, ii. 70, 82; cf. Bukhārī, *Anbiyā'*, bāb 54; *Ḥudūd*, bāb 12).

The word is usually found in the theological sense, particularly in eschatological descriptions; it already occurs in the *Qur'ān* in this use. Muḥammad became acquainted through Jewish and more particularly Christian influences with the idea of eschatological intercession. In Job xxxiii., 23 sqq. (the text is corrupt) the angels are mentioned who intercede for man to release him from death. In Job v. 1, there is reference to the saints (by whom here also angels are probably meant), to whom man turns in his need. Abraham is a mortal saint whom we find interceding in the Old Testament (in the story of Sodom and Gomorrah).

In the apocryphal and pseudopigraphical literature we again find the same classes of beings with the same function. The angels (*Test. Adam*, ix. 3), the saints (1. *Maccab.*, xv. 14; *Assumptio Moisi*, xii. 6). In the early Christian literature the same idea repeatedly occurs, but here we have two further classes of beings; the apostles and the martyrs (cf. Cyril of Jerusalem in Migne, *Patrologia Graeca*, vol. xxxiii., 1115; patriarchs, prophets, apostles, martyrs; cf. vol. alvi., 850; lxi. 581).

In the *Qur'ān* intercession occurs mainly in a negative context. The day of judgment is described as a day on which no *shafā'a* will be accepted (Sūra, ii. 45, 255). This is directed against Muḥammad's enemies as is evident from Sūra x. 19:

"they serve not Allāh but what brings them neither ill nor good and they say these are our intercessors with Allāh"; cf. also Sūra lxxiv. 49: "the intervention of those who make *shafā'a* will not avail them".

But the possibility of intercession is not absolutely excluded. Sūra xxxix. 45 says: Say: the intercession belongs to Allāh, etc. Passages are fairly numerous in which this statement is defined to mean that *shafā'a* is only possible with Allāh's permission: "Who should intervene with Him, even with His permission" (Sūra ii. 256, cf. x. 3). Those who receive Allāh's permission for *shafā'a* are explained as follows: The *shafā'a* is only for those who have an 'aḥd with the Merciful (Sūra xix. 90) and xliii. 86: "They whom they invoke besides Allāh shall not be able to intercede except those who bear witness to the truth". XXI, 28 is remarkable where the power of intercession is evidently credited to the angels: "they say the Merciful has begotten offspring. Nay they are but His honoured servants who and they offer not to intercede save on behalf of whom it pleaseth Him". It appears that the angels are meant by the honoured servants. Sūra xl. 7 (cf. xliii. 3) is more definite: "Those who bear the throne and surround it sing the praises of their Lord and believe in Him and implore forgiveness for those who believe (saying) 'Our Lord; who embrace all things in mercy and knowledge; bestow forgiveness on them that repent and follow Thy path and keep them from the pains of Hell'".

Such utterances paved the way for an unrestricted adoption by Islām of the principle of *shafā'a*. In the classical Ḥadīth which reflects the development of ideas to about 150 A. H. we already have ample material. *Shafā'a* is usually mentioned here in eschatological descriptions. But it should be noted that the Prophet even in his lifetime is said to have made intercession. 'A'isha relates that he often slipped quietly from her side at night to go to the cemetery of Bakī' al-Qharḳad to beseech forgiveness of Allāh for the dead (Muslim, *Ḍiyā'at*, trad. 102; cf. Tirmidhī, *Ḍiyā'at*, bāb 59). Similarly his *istighfār* is mentioned in the *ḥadīth al-ḍiyā'at* (e.g. Ibn Ḥanbal, *Muṣnad*, iv. p. 170) and its efficacy explained (*ibid.*, p. 388). The prayer for the forgiveness of sins then became or remained an integral part of this *ḥadīth* (e.g. Abū Ishāq al-Shirāzī, *Kitāb al-Tawḥīd*, ed. J. W. T. Joyntoll, p. 48) to which a high degree of importance was attributed. Cf. Muslim, *Ḍiyā'at*, trad. 58: "If a community of Muslims, a hundred strong, perform the *ḥadīth* over a Muslim and all pray for his sins to be forgiven him, this prayer will surely be granted"; and Ibn Ḥanbal, iv. 79, 100, where the number a hundred is reduced to three rows (*ḥadīth*).

Muḥammad's intercession at the day of judgment is described in a tradition which frequently occurs (e.g. Bukhārī, *Tawḥīd*, bāb 19; Muslim, *Imān*, trad. 322, 326–329; Tirmidhī, *Tafīr*, Sūra xvii., trad. 19; Ibn Ḥanbal, i. 4) the main features of which are as follows: On the day of judgment Allāh will assemble the believers; in their need they turn to Adam for his intercession. He reminds them, however, that through him sin entered the world and refers them to Nūḥ. But he also mentions his sins and refers them to Ibrāhīm. In this way they appeal in vain to the great apostles of God until 'Isā finally advises them to

appeal to Muhammad for assistance. The latter will gird himself and with Allāh's permission throw himself before Him. Then he will be told "arise and say, intercession is granted thee". Allāh will thereupon name him a definite number to be released and when he has led these into Paradise, he will again throw himself before his Lord and the same stages will again be repeated several times until finally Muhammad says: "O Lord now there are only left in hell those who, according to the Qur'ān, are to remain there eternally".

This tradition is in its different forms the locus classicus for the limitation of the power of intercession to Muhammad to the exclusion of the other apostles. In some traditions it is numbered among the charismata allotted to him (e.g. al-Bukhārī, *ṣaḥīḥ*, bāb 56).

Muhammad's *shafā'a* then is recognised by the *ijmā'*; it is based on Sūra xvii. 5: "Perhaps the Lord shall call thee to an honourable place"; and on xciii. 5: "and thy Lord shall give a reward with which thou shalt be pleased" (al-Rāzī's commentary i. 351; cf. earlier, Muslim, *Imān*, trad. 320). Muhammad is said to have been offered the privilege of *shafā'a* by a message from his Lord as a choice; the alternative was the assurance that half of his community would enter paradise. Muhammad, however, preferred the right of intercession, doubtless because he thought he would get a considerable result from it (Tirmidhī, *Sīfat al-Kiyāma wa 'l-Kaḥṣ'ish wa 'l-warā'*, bāb 13; Ibn Hanbal, iv. 404).

The traditions describe very vividly how the "people of hell" (*ash-shamāniyūn*) are released from their fearful state. Some have had to suffer comparatively little from the flames; others on the other hand are already in part turned to cinders. They are sprinkled with water from the well of life and they are restored to a healthy condition (e.g. Muslim, *Imān*, trad. 320).

In another class of traditions it is said that every prophet has a "supplication" (*da'wā*) and that Muhammad keeps his secret in order to intercede with Allāh for his community on the day of judgment (cf. e.g. Ibn Hanbal, ii. 313; Muslim, *Imān*, trad. 334 sq.).

Quite in keeping with the Christian view already mentioned, Islām, however, was not content with Muhammad as the advocate. Along with him we find the angels, the apostles, the prophets, the martyrs and the saints. (Bukhārī, *Tawḥīd*, bāb 24; Ibn Hanbal, iii. 94 sq., 325 sq., v. 43; Abū Dā'ūd, *Ḍiḥād*, bāb 26; al-Tabarī, *Tafsīr*, iii. 6 on Sūra ii. 255; xvi. 85 on Sūra xix. 90; xxi. 91 on Sūra lxxiv. 49; Abū Ṭālib al-Makki, *Kaṭ al-Kaṭūb*, i. 139).

Finally after all these classes have said their word, there is still Allāh's *shafā'a* (Bukhārī, *Tawḥīd*, bāb 24; cf. Sūra, xxxix. 44). Muhammad's pre-eminence remains inasmuch as he is the first to intercede for his community (Muslim, *Imān*, trad. 330, 332; Abū Dā'ūd, *Kitaḥ al-Sunna*, bāb 13).

Finally the question for whom intercession is effective is discussed. While it is generally said 70,000 will enter paradise through the intercession of one man of Muhammad's community (e.g. Dārimī, *Riḥāḥ*, bāb 87; cf. Hanbal, iii. 63, 469 sq.), the answer is already given as early as classical tradition that *shafā'a* holds good for those who ascribe no associate to Allāh (Bukhārī, *Tawḥīd*, bāb 19;

Tirmidhī, *Sīfat al-Kiyāma*, bāb 13). To this group also belong those who have committed great sins (*Ahl al-Kaḥṣ'ir*). "The prophet of God said: My intercession is for the great sinners of my community" (Abū Dā'ūd, *Kitaḥ al-Sunna*, bāb 20; Tirmidhī, *Sīfat al-Kiyāma*, bāb 11). This view, however, is not shared by the Mu'tazila (cf. Zamakhsharī, *Kaḥṣ'ir* on ii. 45; no *shafā'a* for the *uqūṭ*). Al-Rāzī deals very fully with the Mu'tazili view in his commentary on the Qur'ān (i. 351 sq., vi. 404) according to which there is no such thing as *shafā'a*, as no one is released from hell who is once thrown into it. For the denial of *shafā'a* they appeal to some of the verses of the Qur'ān already quoted above.

(A. J. WENSINCK)

AL-SHAFĀ'Ā (A.), also **AL-SUBH** and **AL-FADJR**, dawn and twilight, which are of special importance in the Muslim world and in Muslim astronomy because they settle two of the principal times for prayer. Al-Bīrūnī gives an excellent description of the phenomena in the *Ma'ādic Kānūn* (Maḥ. 8, bāb 13). In the morning a long thin column of light appears first, which is more or less inclined to the horizon according to the latitude of the place. This is called the false dawn *al-Subḥ al-Kāḍiḥ* or *al-Faḍr al-Kāḍiḥ* or from its shape *Dhanab al-Sirḥān* "wolf's tail" also "dog's" or gazelle's tail". This is followed by the true dawn *al-Subḥ al-Sādiq*, first as a faint white light which gradually extends in the form of a crescent along the horizon; it marks the time for the beginning of the fifth or morning prayer. Next comes the red dawn. The same phenomena occur in the evening but in the reverse order. That the *Dhanab al-Sirḥān* is not so frequently noticed in the evening as in the morning is, according to Muslim scholars, due to the fact that in the evening people are going to rest while in the morning they are beginning work; Redhouse has definitely shown that first false dawn corresponds to the zodiacal light; he also shows that it is mentioned as early as Kor'ān, ii. 183, i. e. about 630 A. D. and in al-Djawharī's dictionary and elsewhere. It was therefore noticed earlier in the east than in the west. Numerous Persian verses deal with the dawn and twilight (cf. Redhouse, *op. cit.*). He also gives the Persian and Turkish names.

Shāfi'is, Mālikis and Hanbalis all agree that the end of the third and beginning of the time of the fourth prayer occurs at the moment when the red shimmer *al-Shafā' al-Aḥmar* disappears, while Abū Hanīfa relies on the white one. His pupils Abū Yūsuf and Muhammad al-Shaibānī follow other schools.

Various Arab astronomers have pointed out how much the depression D of the sun in which

the above phenomena appear depend on the atmospheric conditions (fog, etc.), the presence of moonlight, or the sharpness of the eyesight. Different scholars give therefore varying values for D which lie between 16° and 20° . According to Šibt al-Murīdī (1423—1494/1495) the general opinion in his time was that for al-Shafā' $D = 17^\circ$, for al-Subh $D = 19^\circ$. Abū 'Alī al-Ḥasan al-Marrākūshī (d. c. 1262) had taken 16° and 20° and said that dawn lasts longer than twilight. The time between sunrise and sunset i. e. between the two times at which the depression of the sun is e. g. 18° depends on the inclination of the sun's path to the horizon. The Muslims took a particular interest in calculating the day on which dawn and twilight coincided. For places in the latitude of 48° for example, this happens when the sun is at the beginning of Cancer. The "arguments" (*ḥisāb*) of Shafā' and Faḍl are the chords of the ecliptic between the Western or Eastern horizon and Shafā' or Faḍl.

Astronomical calculations for the beginning of the dawn from Ibn Yūnus (d. 1009) and Abū 'Alī al-Marrākūshī are given by C. Schoy in the *Naturwissenschaftliche Wochenschrift*.

To explain the varying phenomena in the dawn it is assumed by Kutb al-Dīn al-Shīrāzī and similarly by others that the earth is surrounded by a ball of vapour which contains earthy and watery parts. These are thicker in the lower strata than in the upper. Around the veil of vapour is a ball of pure air. The sun's rays throw a shadow into these balls from the earth. The parts lying outside the shadow reflect the light and seem to shine; the observations result from this more or less accurately.

On the planes of the astrolabe and on certain forms of quadrant and clepsidra lines are drawn which are used to fix the time of morning and evening prayer; on the other hand such lines are not found on the universal plane nor on the Zarqālī plane.

That we so frequently find among composers of astronomical works the *Muwāḍḍi'* of mosques, time-keepers and summoners to prayer such as Djamāl al-Dīn al-Murīdī, Šibt al-Murīdī b. al-Shāfi' (1375/1376) etc. is explained by the fact that it was the duty of these officials to calculate the hours of prayer exactly and make the necessary observations.

(E. WIEDEMANN)

AL-SHĀFI', AL-IMĀM ABU 'ABD ALLĀH MUHAMMAD B. IBRAHĪM, the founder of the Shāfi' school of law. A great mass of legend has grown up around his life and it is difficult to sift out the really historical matter. The chronology in particular offers great difficulties. The early sources are very scanty. Al-Mas'ūdī (d. 345) is the first historian to mention him. The only authentic documents are the Waḳf grant of his two houses in Mecca of Šafar 203 (Aug. 818; *Umm*, vi, 179 = Kern in *M.S.O.S.*, 1904, p. 55), his will of Šafar 203 (Feb. 819; *Umm*, iv, 48 = Kern in *M.S.O.S.*, 1904, p. 59) and the Waḳf grant of his house in Fuṣṭāṭ (*Umm*, iii, 281) which although the names and the dates are omitted is undoubtedly by al-Shāfi' himself. His later biographies are, it is true, based on old *Manāẓih* such as that of Da'ūd al-Zāhiri (d. 270), al-Sadī (d. 307), Ibn Abī Ḥatīm (d. 327) and others but here already there is much that is legendary. For example al-Khaṭīb al-Baghḍādī (d. 403) already gives on the authority of Ibn 'Abd al-Ḥakam (d. 257) the legend of his birth which connects it with the planet Jupiter rising over Egypt (cf. Ibn Khallikān).

Al-Shāfi' belonged to the tribe of Quraysh; he was a Ḥāshimī and thus remotely connected with the Prophet. His mother belonged to the tribe of Ard, but some say that she was an 'Alid. Born in 150 (767) in Ghazza (al-Iṣṭakhrī, p. 58) he lost his father early and was brought up in very humble circumstances by his mother in Mecca. He spent much time among the Beduins and acquired a thorough knowledge of the old Arab poets (e. g. Zuhair, Imru 'l-Qais, Jarir etc., cf. *Umm*, l, 174; v, 118, 142 etc.). The philologist al-Aṣma'ī learned from the youthful Shāfi' the songs of the Banū Hudhāl (cf. also *Umm*, ii, 167; iv, 133) and the *Diwān* of al-Shanfara. In Mecca he studied ḥadīth and fiqh with Muslim al-Zindjī (d. 180) and Sufyān b. 'Uyayna (d. 198); he knew the *Muwāḍḍi'* by heart. When about 20 he went to Medina to Mālik b. Anas and remained there till the latter's death in 179 (796). He then took an appointment in Yemen. Here he was involved in 'Alid intrigues, — he secretly paid homage to the Zaidī Imām Yahyā b. 'Abd Allāh (v. Arendonck, *Opheist van het zaiditische Imamaat*, p. 60 and 290) — and with other 'Alids was brought a prisoner to the Caliph Ḥārūn al-Rashīd to Raqqa (187 = 803). He was pardoned and then became intimate with the celebrated Ḥanafī Muḥammad b. al-Ḥasan al-Shābānī (d. 189 = 805), whose books he had copied for himself. But as he did not dare challenge al-Shābānī, a man influential at court, he went in 188 (804) via Ḥarrān and Syria to Egypt where he was at first well received as a pupil of Mālik. It was not till 195 (810/11) that he went to Baghḍād and set up successfully as a teacher there. Here he attached himself to 'Abd Allāh, son of the newly appointed governor of Egypt, 'Abbās b. Mūsā and came to Mīr on Shawwāl 28, 198 (June 21, 814; al-Kinī, ed. Guent p. 154). As a result of disturbances he very soon went to Mecca, from which he returned in 200 (815/816) to settle definitely in Egypt. He died on the last day of Rajab 204 (Jan. 20, 820) in Fuṣṭāṭ and was buried at the foot of the Muḳattam in the vault of Banū 'Abd al-Ḥakam. Saḥīb al-Dīn had a great and roomy madrasa built here (Ibn Dūbair, *Riḥla*, p. 48). The dome

on the tomb was built by the Ayyūbid al-Malik al-Kāmil in 608 (1211/1212). It was always a favourite place of pilgrimage.

Al-Shāfiʿi may be described as an eclectic who acted as an intermediary between the independent legal investigation and the traditionalism of his time. Not only did he work through the legal material available but in his *Risāla* he also investigated the principles and methods of jurisprudence. He is regarded as the founder of the Uṣūl al-Fiḥ. Unlike the Hanafis he sought to lay down regular rules for *ḳiyās* (*K. al-Risāla*, Cairo 1321, p. 66 and 70) while he would have nothing to do with *istiḥṣān* [q.v.]. The principle of *istiḥṣān* seems to have been first introduced by the later Shāfiʿis (cf. Goldziher, *Zahriten*, p. 20 sqq.; do. in *B. I.*, vol. II, 109 and Hergsträsser, *Anfänge und Charakter des juristischen Denkens im Islam*, in *Isl.*, 1924, xiv, p. 76, 80 sq.). In al-Shāfiʿi two creative periods can be distinguished, an earlier (Irāqī) and a later (Egyptian). Al-Ḥākim (d. 405) for example says this of the *Risāla* (al-ʿAsḳalāni, p. 77), which, however, only survive in the later recension (printed at Cairo 1321 etc.). These two periods are also often marked in the *K. al-Umm* as well as in the variant teachings of the later Shāfiʿis.

His writings in which he makes a masterly use of dialogue, with opponents usually unnamed, we have had transmitted to us by his pupil al-Rabīʿ b. Sulaimān (d. 270 = 884). A list of them is to be found in the *Fihrist*, p. 210, another of al-Baihaḳī (d. 458) in al-ʿAsḳalāni, p. 78, a third in Yāqūt, p. 396–398. The most of the titles mentioned there are parts of the *K. al-Umm*, a collection of writings of Shāfiʿi (printed at Cairo in 7 volumes: 1321–1325, in part from a manuscript of the celebrated Shāfiʿi Sirāḍ al-Dīn al-Bulḳīni). The title of this collection can hardly be old. As far as I know, it is mentioned for the first time by al-Baihaḳī (in al-ʿAsḳalāni, p. 78) and al-Ḡazālī, *Iḳyā* (Cairo 1327), II, 131. In the work itself it is mentioned only in such passages as appear to be glosses (e.g. *Umm*, I, 158). Several recensions of this work must have existed. As late as the fifth century another recension different from that of al-Rabīʿ was known to al-Baihaḳī for he gives some of the separate chapters of the *Umm* in a different order. This may perhaps have been al-Buwaiṭi's recension, which al-Rabīʿ seems to have used along with that of Ibn Abī ʿI-Djārūd (cf. *Umm*, I, 96, 157; II, 52; VII, 389 etc.). In the present printed text of the *Umm*, a number of larger and smaller glosses seem to have been incorporated; for example al-Ḡazālī, Ibn al-Sabḥāḡh (d. 477), al-Māwardī, etc., are quoted (cf. *Umm*, I, 114 sq., 158).

According to al-Ḡazālī (*loc. cit.*) this collection was arranged by al-Buwaiṭi and published by al-Rabīʿ with his own additions. Final inquiry into the origin of the *Kitāb al-Umm* cannot be based upon the printed edition, as the editor has followed the MS. of al-Bulḳīni without recording the variants of the other MSS.

The present components of the *Umm* are writings quoted by al-Baihaḳī as separate works: *Ḍiyāʾ al-ʿIlm* (*Umm*, VII, 250 sqq.), *K. Ḥal al-Iṣṭiḥṣān* (VII, 267 sqq.), *K. Bayʿan al-Farḍ* (VII, 262 sqq.), *K. Ṣifāt al-Ame wa ʿl-Naḳy* (VII, 265), *K. Iḥṭitāf Maḥk wa ʿl-Shāfiʿi* (VII, 177 sqq.), *K. Iḥṭitāf al-ʿIrāḳīyain* (VII, 87 sqq.) i.e. Abū Ḥanīfa

and Ibn Abī Laila († 148), *K. Iḥṭitāf maʿa Muḥammad b. al-Ḥasan* (VII, 277 sqq. = *K. al-Radd ʿalā Muḥ. b. al-Ḥasan*) and *K. Iḥṭitāf ʿAlī wa ʿAbd Allāh b. Maʿūd* († 32); VII, 151 sqq.). The *K. Iḥṭitāf al-Ḥadīth* is printed on the margin of *Umm*, vol. 7, the *Muṣnad* on the margin of vol. 6. This contains traditions which have been collected from the different writings, including those that have not survived but are mentioned in the *Fihrist* and in Yāqūt, e.g. *K. Ahḳām al-Ḳurʿān*, *K. Faḍl al-Ḳurʿān*, etc. The *K. al-Madḥūq fī ʿl-Fiḥ* (*Fihrist*, p. 210) must have been another large law-book, which was still available to al-Baihaḳī, and is also called *al-Mukhtaṣar al-ḳabīr wa ʿl-Manḥūrūt*. There has also survived a profession of faith by Shāfiʿi entitled: *K. Waḳīyat al-Shāfiʿi* (mentioned in Yāqūt, ed. by Kern in *M. S. O. S.*, XI, 1910) while the *K. al-Fiḥ al-akḥar* (Cairo 1324 etc.) is a short treatise on dogmatics of the Ashʿarī period. A few poems bear witness to his command of language (al-Masʿūdī, *Murūḡ*, VIII, 66; Ibn Khallikān, I, 448; al-ʿAsḳalāni, p. 73 sq.).

The main centres of his activities as a teacher were Baghdad and Cairo. The most notable of his pupils were al-Muzānī († 264), al-Buwaiṭi († 231), al-Rabīʿ b. Sulaimān al-Murāḍī († 270), al-Zaʿfarānī († 260), Abū Thawr († 240), al-Ḥunaidī († 219), Ahmad b. Hanbal († 241), al-Karībī († 248) etc. In the course of the third and fourth (ix. and x.) century the Shāfiʿis won more and more adherents from these two towns as centres, although from the first they had a difficult position in Baghdad, the centre of the *Ahl al-Raʿy*. In the fourth (xth) century Mecca and Medina were their chief centres next to Egypt. By the end of the third (beg. of the tenth) century they had already successfully disputed Syria with the Awṣʿis so that from Abū Zurʿa onwards (302 = 915), they always had the office of *Ḳāḍī* in Damascus. In the time of Muḳaddas the Shāfiʿis exclusively held the judgeships in Syria, Kirmān, Bukhārā and the greater part of Khurāsān; they were also in considerable strength in Northern Mesopotamia (Aḳūr) and Dailām (Egypt by this time was Shīʿa). In the fifth and sixth (xi. and xii.) century there was frequently street fighting with the Ḥanbalis in Baghdad, with the Hanafis in Iṣfahān while on the other hand they won the Ḡhārid princes to their side (Snouck Hurgronje, *Verpr. Gechr.*, II, 306). In Egypt under Salāḡ al-Dīn (564 = 1169) they again became the predominant *Madḥhab*. But in 664 (1265/1266) al-Malik al-Zāhir Baibars appointed one Hanafī and Malīkī one judge alongside of the Shāfiʿi (cf. al-Sabḳī, v, 134). In the last centuries before the rise of the Ottomans the Shāfiʿis had attained absolute preeminence in the central lands of Islam. Even in Ibn Djubair's time (*Riḥla*, p. 102) the Shāfiʿi Imām conducted the prayers in Mecca. It was only under the Ottoman Sultāns at the beginning of the x (xvth) century that they were replaced by Hanafis, who were sent from Constantinople to fill the judgeships, while in Central Asia with the rise of the Safawids (1501) they were lost to the Shīʿa. Nevertheless in Egypt, Syria and the Hidjāz, the people followed the Shāfiʿi *Madḥhab* (Snouck Hurgronje, *Verpr. Gechr.*, II, 378/379). The Shāfiʿi teaching is still eagerly studied to-day in the Ashʿarī mosque. It is still predominant in South Arabia, Bahrain, the Malay Archipelago, the former German East Africa,

Daghustān and some parts of Central Asia.

Among famous and important Shafī's were: The traditionist al-Nasā'ī († 303 = 915), al-Ash'arī († 324 = 935), al-Māwardī († 450 = 1058), al-Shirāzī († 476 = 1083), Imām al-Haramīn († 478 = 1085), al-Ghazālī († 505 = 1111), al-Raṣṣī († 623 = 1226), al-Nawawī († 676 = 1277) etc. On them cf. the separate articles and Snouck Hurgronje, *Verspr. Geschr.*, IV/1, p. 105.

Islamic law according to the Shafī school is given by L. W. C. van den Berg, *De beginselen van het mohammed. recht*, 3 ed. (Batavia 1883; cf. thereon Snouck Hurgronje, *Verspr. Geschr.*, II, 59—221), French transl. by R. de France de Tervant entitled: *Principes du droit musulman*... Algiers 1886; Ed. Sachau, *Muham. Recht* (Stuttgart and Berlin, 1897; cf. thereon Snouck Hurgronje, *Verspr. Geschr.*, II, 367—414); Th. W. Juynboll, *Handbuch des islamischen Geistes*, Leiden 1910 and 1925, Italian transl. with suppl. notes by G. Baviera entitled: *Manuale di diritto musulmano*... Milan 1916.

(HEFFENING)

SHAFSHĀWAN (popularly Chechaouen, ech-Chaoum, in Spanish Xauen; the original of the name is no doubt the Berber plural *shafshāwān*), a little town in Northwest Morocco, 35 miles south of Tetuan. It lies at the foot of the mountain of Sidi Bū-Hādja (a spur of the massif of lū-Hāhem) on a tributary of the Wādī Lāq; it now lies within the lands of the tribe of el-Khamās, but it used to belong to the Banū Zadjal, a tribe belonging to the Ghumāra group.

In 1918 the population was about 7,000, who lived in a thousand houses in the six quarters: el-'Onjar, Rif el-Andalus, el-Kharāzin, es-Sūḥ, es-Swika, Rif es-Ṣebbānī. There is an important Jewish colony in it of Spanish origin. The ghetto (*Mellah*), originally on the edge of the Wādī T-Dmānī, was later brought into the interior of the town. It contains 22 houses with about 200 inhabitants and 2 synagogues, one very luxurious. Almost all the houses have sloping tiled roofs, for the winter brings heavy falls of snow. The town is surrounded by walls and has eleven gates; there are twelve mosques, nine sawiyyas (including 3 Derkawa and 3 Isawa) and eight notable sanctuaries, the chief of which is that of Sidi 'Alī b. Rāshid, founder of the town. In the citadel (*ḥaḍra*) are the government buildings and the madrasa.

The Muslim population consists mainly of Shafī and Andalusian refugees, possessing the culture and amenities of town life but fanatical and uncompromising in character.

The surroundings, fertile and well watered, produce wheat, barley, fruits, olives and grapes in abundance; the town also has 21 watermills and 13 oil presses. The forests of the surrounding mountains supply wood for carpentry and furniture making (a speciality of the place is artistically painted woodwork); tan-bark is abundant and supplies the wants of 5 tanneries. Woollen cloth for djellābas (cf. *WILLIS*) is made on many looms.

The Jews are mainly occupied in trading in imported cloths and have constant dealings with their co-religionists in Tetuan with whom they are connected by common Spanish origin. They are also jewellers and saddlers, a despised trade which the Muslims leave to them.

Lying at the intersection of the roads from Tetuan, el-Kṣar, Wazzān and Fes, in the middle of the land of the Djebāla, Shafshāwan is a great centre of supplies for the latter to which they come to get the produce imported from Tetuan (cotton goods, sugar, tea and candles); but the well-nigh permanent state of anarchy in which the surrounding tribe el-Khamās lives, makes business difficult.

Shafshāwan was founded about 876 (1471—1472) by a descendant of the great saint 'Abd al-Salām b. Maḥshūh (q. v.), the 'Alawī Sharif al-Ḥasan b. Muḥammad, known as Ibn Djum's, who wished to make it a place of refuge and centre of resistance for the Djebāla against the Portuguese. The latter, taking advantage of the weakness of the dynasty of the Banū Wattās (q. v.) had seized Ceuta (1415), al-Kaṣr al-Yeghir (1458 q. v.), Tangier (1471) and Arzila (1472); from these ports they raided the country for over 50 miles inland, terrorised the mountaineers and brought the Audjera and various tribes of the Haḥt, including the Banū 'Arūs under their sway. It seems that, oppressed and harassed by the Shorfā, these tribes were quite ready to submit to Christian rule; a holy war was therefore an excellent pretext for the Shorfā to endeavour to regain their profitable prestige and authority.

Al-Ḥasan founded Shafshāwan on the bank of the river of the same name, in an excellent situation within easy reach of Tetuan and Ceuta in the northwest and el-Kṣar and el-Haḥt in the southwest. He died before completing his enterprise; having gone during the holy war to the people of el-Kharṣūb not far from Arzila, the latter were bribed by the Portuguese and set fire to the mosque in which he was performing his evening prayers; he perished in the flames.

His work was continued by his cousin the Sharif 'Alī (b. Mūsā) b. Rāshid who succeeded him as leader of the holy war (*ḥād al-djihad*). 'Alī lived among the Banū Ḥassān, a tribe to the north of Shafshāwan; when the latter rebelled against the tyranny of the Shorfā, he went over to Andalusia, where fighting sometimes in Christian pay and sometimes for the king of Granada, he became an expert in military matters. Returning to Morocco, he collected a body of horsemen belonging like himself to the Shorfā and began to fight the Portuguese. The Wattāid Sultan of Fes, Abū Sa'īd, then sent him a few horsemen and cross-bowmen, with whose help he was able to hold his own against the Portuguese. He used his force also to subjugate the mountaineers and restore the supremacy of the Shorfā. But rendered vain by his successes he went so far as to refuse to send

his tribute to the Sultān who came to attack him with a large army. Judging resistance impossible, 'Alī b. Rāshid submitted; the Sultān pardoned him out of respect for his Sharīfī origin and confirmed him in the government of Shafshāwan which became one of the marches of the empire of the Banū Wattāsa.

'Alī b. Rāshid built on the other bank of the Wādī Shafshāwan a citadel which he filled with members of his family and clan; people from the country round also came to settle there. 'Alī b. Rāshid is credited with the building of the rampart from the Bāb es-Sūr to the Bāb el-Mūkaf; it is from his time that the es-Sweka and Rif es-Sebbānī quarters date. After the capture of Granada (1492) and the general expulsion of the Muslims from Andalusia and Castile (1501—1502) numerous Spanish Muslims came and settled here so that by the death of 'Alī in 917 (1511—1512) a regular town had been created; Leo Africanus who was travelling through Morocco at this time, describes it as "a little city full of merchants and artisans".

The prestige of 'Alī b. Rāshid was still further increased by the brilliant attacks on Ceuta, Tangier and Arzila in which he fought along with al-Mandari, whom he had aided to install himself on the ruins of Tetuan with a colony of Spanish refugees.

'Alī (d. 1511) was succeeded by his sons, Ibrāhīm (d. 1530), then Muḥammad who was destined to be the last prince of the dynasty of the Banū Rāshid. In 948 (1511) the Wattāsid Sultān Abū l-'Abbās Aḥmad married the sister of the Amīr, al-Ḥurra; the marriage was celebrated in Tetuan. Muḥammad b. Rāshid had quarrels with the following Wattāsid, Abū Ḥassūn, whose fief of Bādis in the Rif adjoining his own territory. When with the help of the Turks of Ṣalāh Ra'īs, Abū Ḥassūn had taken Fes in 961 (1554) and, when he had quarrelled with the Turkish chief, Muḥammad b. 'Alī arranged with the latter to proclaim Abū Bakkr b. Aḥmad Sultān; when Fes was evacuated by the Turks, Abū Ḥassūn had the Amīr of Shafshāwan arrested but on the death of the Sultān, the latter was released and resumed his governorship.

The Sa'dians then replaced the Wattāsids in northern Morocco. In 969 (1561) the Sa'dī Sultān 'Abd Allāh al-Ghālīb billāh, fearing that the warlike activities of the Amīrs of Shafshāwan might prevent him from concluding with the Spanish an alliance against the Turks which he was planning, sent against the town his troops commanded by the vizier Muḥammad b. 'Abd al-Kādir, grandson of Sultān Muḥammad al-Shaikh; being strenuously besieged Muḥammad b. Rāshid fled through the mountains with his family during the night and reached the port of Targha among the Ghumāra; from there he sailed for the east and took refuge in al-Medīna where he died; some of his descendants were exiled to Marrākuṣh. The fief of Shafshāwan was then given to the grandson of Mu'min b. al-'Idj; the latter's grandfather Yahyā (or Muḥammad) al-'Idj was a Genoese merchant who had become a convert to Islām and had married the beautiful daughter of the semi-independent chief of the Tejrat region in Sūs. On the death of his father-in-law, the Genoese merchant was chosen chief of the people and gained the favour of the Sa'dian Shorfa by allowing them to cross his territory to reach the Hāha; his eldest son Mu'min had entered the service of the Sa'dians and was one of their most faithful supporters.

In 986 (1578) the Portuguese were crushed at the battle of Wādī l-Makhāzin; they had to abandon their hopes of occupying the interior of the country and the struggle against the Christians became localised round the occupied ports and on the sea. Shafshāwan then lost its strategic importance which passed to Tetuan its rival, which had been raised from its ruins by 'Alī al-Mandari and had been peopled by Andalusians who soon made it a regular nest of corsairs. On the other hand the religious prestige of the town, based for a large part on the successes of the holy war, also began to decline especially after the installation at Wazzān of the Sharīfī family of Mawlay 'Abd Allāh al-Sharīf (d. 1089 = 1678) whose influence continued to increase.

After the government of the grandson of Mu'min al-'Idj, the town seems to have returned under the authority of the Shorfa. In 1028 (1618—1619), we actually find the Sharīf al-Ḥasan b. 'Alī b. Raīsūn (buried in Shafshāwan) having Muḥammad b. al-Shaikh called Zaghūda proclaimed as Sultān by the people of Hāha.

In the beginning of the 'Alawī dynasty and during the struggle between Sultān al-Rāshid and his brother Muḥammad, the northwest of Morocco was under the domination of an independent chief al-Khadir Ghallān, whose capital was el-Kjar el-Kbīr and whose power extended over the lands lying between Tangier and Ceuta, Tetuan and Shafshāwan.

In 1667, M. al-Rāshid, lord of Fes, subdued the Banū Zarwāl and went to Tetuan after putting Ghallān to flight; he appointed the Muḥaddim al-Taiser, governor of the town, and the latter's sons succeeded him there.

On the death of Mawlay Ismā'īl the northwest of Morocco passed under the rule of a leader in the holy war, the Pasha Aḥmad b. 'Alī b. 'Abd Allāh al-Rifī (d. 1156 = 1743) who built at Shafshāwan, inside the citadel built by 'Alī b. Rāshid, the government-house and the madrasa.

In 1171 (1757—1758), a murābiṭ of the tribe of al-Khmās, Muḥammad al-'Arabī al-Khumṣī, called Abū's-sakhūr, rebelled against the Sultān Muḥammad b. 'Abd Allāh who captured him and sent his head to Fes. He then appointed the Pasha al-'Ayyāshī governor of the Ghumāra, al-Khmās and Shafshāwan. He was succeeded by governors appointed by the Sa'dian Sultāns down to the rebellion of the ṭālib Muḥammad b. 'Abd al-Salām called Zaiṭān, who raised all the tribes of this region in 1208 (1793—1794). Defeated and pardoned he was restored to the governorship of Shafshāwan and al-Khmās. After him the town was governed by local chiefs, then by the pashas of Tetuan who sent a khalifa there.

In 1306 (1899) the Sultān M. al-Ḥasan visited the town on his way to Tetuan.

Since the establishment of the Spanish protectorate the town has been under the influence of the famous 'Alawī Sharīf 'Aḥmad al-Raīsūn of Tāzrūt. On Oct. 4, 1920, it was taken by a Spanish army from Tetuan; on Nov. 15, 1924, the Spaniards evacuated it. It was then occupied by the Rifis under the rebel Muḥammad b. 'Abd al-Karīm and since the capture and death of the al-Raīsūn, it became their political and strategic centre from which they dominate the Djebāla and can raid the districts of Tetuan, el-Kjar and Wazzān; their tyranny has driven away many of the inhabitants of the town, which has been several times bombarded by French and Spanish aeroplanes.

(G. S. COLIN)

SHĀH (r.), "King". a. Etymological. The old Persian *Kāshāyathiya* is probably formed with a suffix from an unquotable substantive from the Old Iran. verbal root *kāshay* (meaning to "rule" etc.); cf. Sanskr. *kāyati* = "he rules", *kāyadvira* = "ruler of men (or heroes)", an epithet of the gods in the *Rigveda*. From the same root comes Old Persian *Kāshāth(r)a* ("kingdom") = M. P. *Shahr*; cf. *shahyār* ("king, ruler") from an unquotable root *shahyāth(r)ayūra*. The word *kāshāyathiya* is therefore originally an adjective: it is found as such once in the Bāntān inscription while in all other passages it means "king" (Bartholomae, *Air. Wörterb.*, col. 553/554). The modern Persian *shāhshāh* is regarded as a compound of *shāh*; this may be so as regards the modern usage. For a noteworthy attempt to give another explanation of *shāhshāh* see Bartholomae, *Zum sasanidischen Recht*, I. 5, note 5. (S. B. Ak. Heid., *Hist. Phil. Kl.*, 1918, Abh. 5). In Pahlavi the word already means *shāh*. Whether in the second syllable of the inscriptional form of the name *Shāpūr* שְׁפֹרִי the *yod* is a remnant of the second syllable of the old Persian word (*Grundr. d. Iran. Phil.*, I. 269) or a sign of an old oblique case, is not easy to decide. The modern form *shāhshāh* shows with its Turkish influence in the declension (*Grundr. d. Iran. Phil.*, i. b. 24); this combination might perhaps show a remnant of the original second syllable in the form in which it is found on Indo-Scythic coins (with the ending *-ians* in the first word; *Grundr. d. Iran. Phil.*, I. 269, but cf. p. 284; there is a good reproduction of one of these coins in Rapson, *Indian Coins*, Pl. ii. 12). The Indo-Scythic word is due to borrowing (but cf. also Konow in *Z. D. M. G.*, lxxviii. 93 sqq.).

b. Lexicographical. In Vulliers' *Lexicon*, pp. 392/393 the statements of the later lexicographers are collected. The derivation given in the *Burhān-i Kāfi* (*af u-khūdāwand*) is, at least as concerns the *af*, not supported by the etymology. The meaning given under (5) (*via aperta et lata e qua alius derivatur*) is perhaps more closely connected with that given under (4) (*magnum quodvis et excellens in suo genere*, in words like *shāhshāh* or *shāhparr*), although the author's view that simple *shāh* is also found with the meaning of *shāhshāh* may be deduced from the text of the *Burhān-i Kāfi* (p. 552); so far as I know this use of the word does not occur. The other meanings (a chessman, animal in Hindūstān etc.) need not be discussed; an (independent) meaning *dāmād*, *shāhshāh-i dādshāh* found not only in more recent lexicons like the *Burhān* and *Shāh'arī*, but as early as Shams-i Fakhri (see Salemann, p. 114), is perhaps not so certain as it appears in the lexicographical tradition. In the two passages from poets which *Shāh'arī* gives for it, the word *shāh* is associated with '*orūz*': this would be simply: "lord of the bride" = "bridegroom", which can of course, be expressed by *dāmād* so that only

one meaning derived from the main sense would be present. The verse which is quoted by Vulliers, s.v. *shāhshāh* out of *Shāh'arī* as evidence of a meaning *puer-i dāmād* (a peculiar combination in any case) is not absolutely convincing.

c. Historical. The usual title of the Achaemenids is *Kāshāyathiya*; on their inscriptions they call themselves *kāshāyathiya varra kashāyathiya* (*kāshāyathiyānām* ("great king, king of kings"): Pahlavi and Modern Persian *shāhān shāh* (also M. P. *shāhshāh*) corresponds to *kāshāyathiya kashāyathiyānām*. *Shāhshāh* regularly occurs in the titles of the Sāsānian kings, e.g. *mazdēn bagh ardashāh shāhān shāh(i) Erān* ("the worshipper of Mazda, the god Ardashir, king of kings of Irān"); it is written with the ideogram 𐭮𐭲𐭮 *malhān malhā*.

Ardashir's father Pāpak is given the title *shāh* (𐭮𐭲𐭮) on a coin of his son (E. Thomas, *Nismatique and other antiquarian illustrations of the rule of the Sassanians in Persia*, p. 16), and in inscriptions and this is also the designation of the rank of some pre-Sāsānian dynasts of Persia (*Grundr. d. Iran. Phil.*, ii. 487).

The Sāsānian crown princes in their father's time were often given the title *shāh* of a certain province, cf. Hamza, *Tārīkh*, ed. Gottwaldt, p. 50/51; (cf. Noldeke, *Tubari*, p. 115; Agathias, iv. 24 and 26 where we have *šāā*); Bahram III and IV before their accession were thus called *Sagānshāh* or *Karmānshāh*; Hormizd III had also the former title as Crown Prince (Noldeke, *Tubari*, p. 115). The word *sagānshāh* wrongly appears as *shāhshāh* in some Arab writers: not only in *Tabari* (Noldeke, *loc. cit.*) but also in Ibn Kutāiba (*K. al-ma'arīf*, p. 322), Eutychius (ed. Cheikh, i. 113) and Thā'ālibī (*Hist. des rois des Perses*, ed. Zotenberg, p. 507).

In Muslim lands where Persian is spoken *shāh* remains the usual word for king, a title also given in literature to rulers who have an Arabic title, e.g. the Amir Mahmūd of Ghazna in Firdawsi. The regular panegyrists are of course very liberal with the term *shāhshāh*; when for example Minūshihri VIII, calls the Amir Mas'ūd of Ghazna *Kāshāw-i shāhshāh-i dunyā*, this is only one example out of many. The term is further found frequently in kings' names in such a way that we can hardly speak of it as a title, e.g. we have among the Yemeni Aiyūbids a *Turānshāh* and in a Mongol dynasty an 'Arab-Shāh' (see Lane-Poole, *Mohammedan Dynasties*, p. 98 and 239). The word was already not unusual in personal names in Pahlavi; besides the name *Shāpūr* (*shāh* + Pahlavi *puhr*, son) cf. the names of the Sāsānid princes in Hamza, *Tārīkh*, ed. Gottwaldt, p. 61. Many rulers of the Seljūq dynasty used the term in such a way that it may be regarded as a title. From an examination of the names (e.g. Lane-Poole, op. cit., p. 153) we see that the combination may have as its first component the name of a people (*Turān Shāh*, *Irān Shāh*, i.e. on the Sāsānian plan), or a personal name (*Arslān Shāh*, *Bahram Shāh*), or we may even have a combination with other words meaning ruler (*Malik Shāh*, *Ruknuddin Sulṭān Shāh*). Analogous formations are found among the Atabegs. On a case of rulers who did not have the title *shāh* having adopted it at a definite time, cf. H. F. Amedroz, *The Assumption of the title Shāhshāh by Basmakid*

Antez, Num. Chron., 1905, iv., Ser. v., p. 393-397. There were Shāhs of Armenia from 493-604 A.H., and of Khwarizm about the same time (± 470-628 A.H.; see Lane-Poole, *op. cit.*, p. 170, 176); there have been Shāhs of Persia since the accession of the first Safawid (907/1502). In India we find the term among the rulers of Ahmadnagar, Bidar, Berar, Bidjapur and Golkonda; Shāh occurs as the first or second component of the name of several Mughal Emperors (Shāh Djahān, 'Ālam Shāh).

(V. F. RICHNER)

SHĀH 'ĀLAM was the title borne, before his accession, by Kūṭb al-Dīn Muḥammad Mu'izzam, third son of the Mughal emperor Aurangzib ('Ālamgir I), but on ascending the throne of Dīhli the prince took the title of Bahadur Shāh [q. v.].

The only Mughal emperor who bore the title while on the throne was 'Alī Gawhar, son of 'Azīz al-Dīn 'Ālamgir II, who succeeded his father in 1759 and in 1761 was recognised as emperor by Ahmad Shāh Abdālī, who had then crushed the power of the Marāṭhas at the third battle of Pānipt. Shāh 'Ālam was, throughout his forty-seven years' reign, a puppet in the hands of others, and on two occasions factions selected rivals from among his kinsmen and proclaimed them as emperors, viz. Shāh Djahān III in 1759 and 1760 and Bihār Baksh in 1788. Together with Shudjā' al-Dawla, the Nawwāb-Wazīr of Awadh, Shāh 'Ālam gave a half-hearted support to Mir Kāsim, the Nawwāb-Nāim of Bengal, who was defeated by the British at the battle of Baksar (Buxar) in 1764 but after the battle submitted and signed a treaty under which the Nawwāb-Wazīr became a vassal and he himself a pensioner of the victors. In 1765 he signed a treaty conferring on the East India Company the *dewānī*, or control of the revenues of Bengal, Bihār and Orissa (Uṭṭar), but the duties and responsibilities of the appointment were not accepted by the Company until seven years later. Shāh 'Ālam afterwards, in order to facilitate his return to Dīhli, threw himself on the protection of the Marāṭhas and transferred to them the districts of Ilāhābād and Kara, which had been assigned to him for his support. By this alliance he forfeited the Company's friendship and the tribute or allowance of Rs. 2,600,000 which had been assigned to him. In 1788 Mahādājī Sindhya, who was ordinarily held responsible for the emperor's personal safety, was in a critical position owing to attacks by Rohilla chiefs, and the Russian Ghulām Kādir captured Dīhli and plundered the palace. He flogged the princesses and throwing the emperor on the ground sat on his chest and blinded him with his dagger. Sindhya recaptured Dīhli and Ghulām Kādir was taken prisoner and suffered death by torture. In 1803 the East India Company formally made itself responsible for the emperor's personal safety and in 1806 Shāh 'Ālam died.

(T. W. HAIG)

SHĀH DJAHĀN was the title conferred by the Mughal emperor Djahāngir on his third son, Khurram, as a reward for his successes in the Dakan in 1616. Khurram was

born in 1592; in 1622 he caused his eldest brother, Khuraw, whom his father had placed in his care, to be murdered, and afterwards rose in rebellion. Having been defeated in 1623 he became a fugitive, but occupied Bengal and Bihār. In 1625 a peace was patched up between him and his father. When Djahāngir died, in October, 1627, Khurram was at Džunnār in the Dakan, but his father-in-law, Asaf Khān, caused his younger brother, Shahryār, to be blinded at Lāhor and proclaimed as a stop-gap Dawar Bakhsh (Bulāki), the son of Khuraw, whom he afterwards permitted to escape to Persia when the other males of the imperial family were put to death by Shāh Djahān's orders. In 1628 Shāh Djahān ascended the throne in Āgra, and soon had to deal with the rebellions of the Bundelas and Khān Djahān Lodi [q. v.], which he crushed. In 1631 his dearly loved wife, Mumtāz Mahall, died in childbirth at Burhānpūr, and he afterwards erected over her remains, at Āgra, the beautiful Taj Mahall [q. v.]. In 1632 he captured Dawlatābād and swept away the last vestiges of the kingdom of Ahmadnagar, and shortly afterwards compelled the two remaining kingdoms of the Dakan, Golkonda and Bidjapur, to acknowledge his suzerainty. In 1632 also Hūglī was besieged and taken from the Portuguese, and the Christians were cruelly persecuted for two years. In 1636 Aurangzib, the emperor's third son, was appointed viceroy of the Dakan, and in 1638 'Alī Mardān Khān, who held Kandahār for the Shāh of Persia, treacherously surrendered it to Shāh Djahān's officers, but the Persians recovered the town in 1649. In 1638 Badakhshān and Balkh were occupied but Aurangzib who, having been recalled from the Dakan, was sent to retain them, failed to hold them and was obliged to retreat. In 1652 the same prince and in the following year his eldest brother, Dara Shikūh, failed to recover Kandahār from the Persians. In 1653 Aurangzib was again sent to the Dakan, where his aggressive policy was checked by his father, who ordered him to make peace with 'Abd Allāh Kūṭb Shāh of Golkonda whom he had attacked, but in a campaign against 'Alī 'Adil Shāh II of Bidjapur, who had succeeded Muḥammad 'Adil Shāh, he captured Bidar and Kaliyāni. In 1657 reports of the failure of Shāh Djahān's health caused Aurangzib to rebel and a contest for the throne began between him and his three brothers. Aurangzib defeated Dara Shikūh at Samūgarh and Sultān Shudjā' at Khajwa, treacherously imprisoned and executed Murād Bakhsh and having imprisoned Shāh Djahān ascended the throne in Āgra on July 21, 1658. Shāh Djahān never regained his liberty and on January 2, 1666, died in the Āgra fort at the age of 74.

Shāh Djahān, the wealthiest of the "Great Mughals", displayed his taste and magnificence in his restoration and adornment of Āgra, in the construction of his city of New Dīhli or Shāh-djahānābād, where he spent the greater part of a luxurious old age, and in the famous peacock throne, which was seven years in the making. He had little military ability and was cruel, treacherous and unscrupulous. A redeeming feature of his character was his deep love for his wife, Mumtāz Mahall, of which her splendid tomb is a lasting memorial, but she died early in his reign and after her death he sank into unbridled

licentiousness. His rule was oppressive and tyrannical and he ill deserves the favourable treatment which he has received at the hands of some modern historians.

(T. W. HAIG)

SHAH MIR, an adventurer who founded the first dynasty of Muhammadan kings of Kashmir, settled in that country in A.D. 1315—1316 and, having ingratiated himself with the *rājā*, Sihadeva, who was perhaps impressed by the stranger's pretensions to descend from Arjuna, the Pāṇḍava, entered his service. Kashmir suffered two invasions during Sihadeva's reign, that of Dulā, a Turk from Kandahār, and that of the Bhautta of Tibet, Rincana, both of whom entered the country by the Zoji-lā. Rincana usurped the throne, made Shah Mir his minister and, according to Muhammadan accounts, was converted to Islam by him. He was succeeded on his death by a relation, Adnideva, under whom Shah Mir retained his office and extended his power. On the death of Adnideva Shah Mir contested the sovereignty with his widow, Kotā, and having defeated and captured her compelled her to marry him. Shortly after the marriage she retired to, or was imprisoned in, the fortress of Dīyapura and was there put to death by her husband's orders in 1339. In 1341—1342 Shah Mir succeeded the throne of Kashmir under the title of Shams al-Dīn and caused the *khutbas* to be said in his name. The rule of the Hindu *rājās* had been oppressive and extortionate and the people were the gainers by the usurpation of the adventurer who limited the demands of his treasury to one sixth of the gross produce of the land. He established order with a firm hand, and though he probably encouraged his people to accept his religion, his rule was tolerant and beneficent, and the forcible conversion of the inhabitants to Islam was not effected until the reign of his grandson, Sikandar Butshikan. Shah Mir is said to have accepted the claim of the Čakk and Mākari tribes to precedence over the other tribes of the country and to have employed them in the principal posts both in the army and the civil administration. It was by the Čakk tribe that the dynasty which he founded was overthrown about two centuries later. He died in 1349 and was peaceably succeeded by his eldest son, Djamshīd.

(T. W. HAIG)

SHAH NAWAZ KHAN. [See JAMSHĪD AL-DĀWLĀ.]

SHAH SHUDJĀ', DJALĀL AL-DĪN B. MUHAMMAD B. AL-MUẒAFFAR, a MUẒAFFARĪD. After Muḥarrir al-Dīn Muhammad, lord of Fārs, Kirmān and Kurdistan, had been deposed and blinded in Ramaḍān

759 (Aug. 1358), he was succeeded by his son Shah Shudjā' but within a couple of months Muhammad, whose sight had not been entirely destroyed, seized the citadel of Kalā-i Sefīd (q.v.) where he had been placed, and fortified himself in it. Peace was soon afterwards made between him and Shah Shudjā', the terms being that Muhammad should go to Shirāz and have his name mentioned in the *khutba*; further no business of state was to be decided without his approval. After some time his followers decided to seize Shah Shudjā' and put him to death; but they were betrayed whereupon Shah Shudjā' had the conspirators put to death and his father imprisoned. The latter died at the end of Rabi' I 765 (Jan. 1364). Shah Shudjā' had next to fight with his brother Shah Mahmūd. In 764 (1362/1363) his officials had raised a claim to tribute upon the town of Abarkūh, although it was governed along with Isfahān by Shah Mahmūd. This excited Shah Mahmūd's distrust and he invaded Yazd and seized this province. On his return to Isfahān he was besieged by his brother; but soon a friendly arrangement was come to, as a result of which he recognised the suzerainty of Shah Shudjā'. In 765 (1363/1364) however, he made an alliance with the Djalā'irid Uways, lord of Baghdad and Tabriz, and invaded Fārs. Shah Shudjā' took the field against him; the final encounter was not decisive; Shah Mahmūd then succeeded in taking Shirāz after eleven months' siege, but lost it again in Dhū 'l-Ka'da 767 (Aug. 1366). After the death of Shah Mahmūd on Shawwāl 9, 776 (March 13, 1375), Shah Shudjā' who had recognised the 'Abbāsid Caliph of the day in 770 (1368/1369), also became lord of Isfahān. He also wanted to extend his rule over Adharbāydjān because the notables there had become discontented with Husain, successor of Uways, who had died in 776 (1364/1365). With this object Shah Shudjā' set out with a large army, took Kāzwin, defeated Husain and advanced successfully up to the neighbourhood of Tabriz. The former surrendered and Husain had to retire to the south. But when Shah Shudjā' returned home a couple of months later, Tabriz was again occupied by Husain and as the former had also to fight his nephew Shah Yahyā, he had to make peace with Husain. To seal the treaty Shah Shudjā's son Zain al-'Abidin married Husain's sister. Nevertheless hostilities soon afterwards broke out again. When 'Adil Aghā, one of Husain's vassals, usually called Sārik 'Adil, equipped an army in 781 (1379/1380) to invade MuẒaffarid territory, Shah Shudjā' went to Saljānīya to anticipate him, but was surprised and only escaped with difficulty. When he himself took the offensive, however, he succeeded in putting to flight Sārik 'Adil's troops, who were busy plundering the camp. He then laid siege to al-Saljānīya, whereupon Sārik 'Adil had to surrender. In the meanwhile Shaikh 'Alī, a brother of Husain, after the murder of the governor of Baghdad, who ruled the city in Husain's name, was proclaimed lord of Baghdad, which again provoked hostilities. To strengthen his position he made an alliance with the governor of Shustar, Pir 'Alī Bībak, who had been supported by Shah Shudjā'; Shaikh 'Alī and Pir 'Alī had however to take to flight when Husain and Sārik 'Adil approached in 782 (1380/1381); but when the latter had departed, they came back and now it was Husain's turn to fly. Soon afterwards — the usual date is Djumādā II,

783 (Aug.-Sept. 1381) — the latter was killed by his brother Ahmad b. Uwais who then ascended the throne. He had first of all to defend his position against Shaikh 'Alī and Pir 'Alī; these two were defeated and killed but the third brother Bīyazīd then came forward as a pretender. When he sought help from Šarīf 'Alī, Ahmad appealed to Šah Shudjā' who at once occupied al-Sulṭāniya then belonging to Bīyazīd and appointed the latter his governor. Šah Shudjā's officers, however, were soon expelled and al-Sulṭāniya passed into Ahmad's hands. When Timūr soon afterwards approached, Šah Shudjā' sent him all sorts of valuable presents to gain the friendship of the threatening conqueror. As a pledge of fidelity, Timūr demanded a daughter of Šah Shudjā' for one of his sons. Šah Shudjā' died, according to the usual statement on Šahbān 22, 786 (Oct. 9, 1384), aged 53 years two months. The poet Ḥaṣī lived at his court.

(K. V. ZETTERSTEN)

SHAHĀDA, (A.), testimony, whether in the ordinary sense of the word, the statement of an eye-witness (from *shāhida* 'to see'), or in the religious and legal sense.

1. In the religious use of the word *shahāda* is the Muslim profession of faith: "there is no god but God; Muhammad is the Prophet of God" (cf. *TASHAHHUD*); and by extension it is the testimony one gives in fighting for Islām, and more particularly in dying for it in the holy war. The Muslim who falls on the battlefield is called *Shāhid* [q. v.] "witness, martyr"; e.g. Eyub, Sulḥān Murād, killed after the battle of Kosovo. *Mashhad*, the tomb of a martyr, *mashhad 'Alī*, *mashhad Husain*. This idea of the Muslim martyr is not explicit in the Qur'ān.

2. In the civil and legal sense, the witness is called *Shāhid*: e.g. the witnesses of a marriage who accompany the relatives before the Imām; the witnesses in a case of adultery; Sūra, iv. 19: "If your wives commit the act of infamy, call four witnesses".

On the theory of evidence in law consult the article *SHĀHĪD*.

(CARRÉ DE VAUX)

SHAHĀRA, a town in South Arabia, mentioned by Yāqūt among the fortified places in the district of San'a', on the Djabal Shahāra. A second place distinguished from the preceding as Shahārat al-Faish lies quite near it, a little to the east on the same hill, which lies due north of the town of Ḥabūr. Al-Ḥamdānī already knows this town as the source of the stone used in rings called *sa'mānī*, a red onyx with white veins, also called *'arwānī*. The town frequently played an important part in the history of South Arabia. The Amir Dhī 'l-Sharāfīn Muḥammad b. Dīnār, the last descendant of al-Kāsim al-A'yānī died here in 478 (1085/1086) and was buried here. His tomb

is widely celebrated and the place was called Shahārat al-Amīr after him. The Saiyid al-Kāsim b. Muḥammad, who raised the Yamani rebellion against the Turks about 1630 was born and lived here. When he had succeeded in expelling the Turks he retained Shahāra as his capital. He was the ancestor of the Imāms of San'a'. When the Turks began to regain their hold on the Yaman in 1871—1872 Shahāra was taken by Muṭāfā 'Asim Pasha in a bold campaign and the house of the ringleader in the anti-Turkish movement, Saiyid Muḥsin al-Shahārī destroyed; the latter had for years been at war also with the Imām of San'a' Muḥsin Mu'izz. Saiyid Muḥsin had to retire to Wādā'a and in 1884 the notables of Ḥabūr, Sa'da and Shahāra were forced to submit to the then governor of Yaman, 'Izzet Pasha. In the wars following Shahāra was again lost to the Turks and became the centre of all the elements hostile to Turkish rule.

(ADOLF GROHMANN)

SHĀHĪ, a small coin of the Shāhs of Persia. It was the smallest of the silver coins in the xviith and xviiith centuries and weighed 18 grains (1.17 grammes); it was worth $\frac{1}{4}$ of an 'abbās or $\frac{1}{2}$ mahmūdī or ten copper kashagis; in Fatḥ 'Alī's reformed coinage 20 shāhis were equal to the new silver unit, the *ḥavāri*. Under Nāṣir al-Dīn the shāhi was a copper coin = 5 centimes; the 2 shāhi piece and $\frac{1}{2}$ shāhi were also issued in copper.

(J. ALLAN)

SHAHĪD (A.), witness, martyr (pl. *shahāda*) is often used in the Qur'ān (as is *shāhid* [q. v.], plur. *shuhūd*, from which it is not definitely distinguished) in the primary meaning of witness. The following examples are typical of the various contexts in which it occurs: Sūra, ii. 127: "Or were ye eye-witnesses when Jacob was at the point of death and he said to his sons? ... Sūra, xxiv. 6: "Those who slander their wives and have no witness except themselves" ... Sūra, ii. 137: "And thus we have made you a people in the middle that ye may be witnesses in regard to mankind and that the Prophet may be a witness in regard to you"; Sūra, i. 20: "(On the day of judgment) every soul shall come, with an urger and a witness". (On the expression: to give evidence from belief, etc., see the articles *SHAHĀDA* and *TASHAHHUD*). *Shāhid* frequently occurs as referring to God, e.g. Sūra, iii. 93: "God is the witness of your deeds"; Sūra, v. 117: "Thou art the witness of all things". *Shāhid* is therefore also one of "the most beautiful names" (*al-asmā' al-ḥusnā*, cf. the article *ALLĀH*).

The meaning martyr is not found for *shāhid* in the Qur'ān. It is only later commentators that

have tried to find it in Sūra, iv. 71. The Qur'an always uses circumlocutions to express this conception, e.g. Sūra, iii. 151: "If ye be slain or die on the path of God, then pardon from God and mercy is better than what ye have amassed". Sūra, iii. 161: "Consider not those slain on God's path to be dead, nay, alive with God; they are cared for". Sūra, xlvii. 5-7: "And those who fight for the cause of God, their works He will not suffer to miscarry. He will guide them and bring their heart to peace and lead them into Paradise which He has told them of".

The development of meaning of *shahid* to martyr (there is not the parallel development in *shahid*; this never means anything but witness, namely in a court of justice, cf. the article *SHAHID*), took place under Christian influence, cf. the Syriac *shahid* for the N.T. Greek *μάρτυρ*.

Wensinck's monograph on martyrdom in the east shows that the development in Christianity and in Islam runs parallel down to minor details and that the doctrine of martyrdom in both religions in the last resort goes back to old oriental (Jewish) and Hellenistic ideas. The old meaning *shahid* = witness, later became so forgotten in Islam that false etymologies are regularly given for it (e.g. from *sh-h-d* to look, etc.).

The martyr who seals his belief with his death, fighting against the infidels is *shahid* throughout the Hadith literature and the great privileges which await him in heaven are readily depicted in numerous hadiths. By his sacrifice the martyr escapes the examination in the grave by the "interrogating angels" Munkar and Nakir, nor does he need to pass through the "purging fires of Islām", *harākāt*. Martyrs receive the highest of the various ranks in Paradise, nearest the throne of God; the Prophet sees in a vision the most beautiful abode in Paradise, the *Dār al-shuhadā'*. The wounds of the *shahid* received in the *Djihād* become red like blood on the day of judgment, and shine and smell of musk. None of the dwellers in Paradise could ever come back to earth, except the *shahid*: for on account of the very special privileges which are granted him in Paradise he still wishes to suffer martyrdom another ten times. Martyrs are freed by their death from the guilt of all sins so that they do not require the intercession of the Prophet, and indeed in later traditions we even find them interceding for other men. They are already pure, and therefore alone among men are not washed before their burial, a view which has found a place in the Fiqh (cf. A. J. Wensinck, *Handbook of early Muhammadan Tradition*, s. v. *Martyr*).

In the Fiqh books the *shahid* is dealt with in the section on *ṣalāt* in connection with the prayer for the dead, and the differences of opinion in the schools (the reasons for them are sometimes very interesting) centre mainly round the question whether the *shahid* is washed, whether the prayer for the dead is uttered over him, whether he is to be buried in his bloodstained garments, or not, etc. In them we find the distinction made whether the *shahida* has been for this world for the next or for both, for as an ethical action it must be judged according to its *niyya*; on the other hand we find the different kinds of *shuhadā'* in the wider sense, detailed below. The case of *shahid* in the legal sense does not occur if the man concerned survived the battle in spite

of his wounds and was able to arrange his affairs before his death. We sometimes find sections, *fi ṣalāt al-shahida* in the book of *Dhiḥād*, where martyrdom is praised quite in the style of the hadith.

The praise of *shahida* led to a real longing to meet a martyr's death and according to some traditions, even Muhammad and 'Omar longed for it. This *ṭalab al-shahida*, however, was by no means encouraged by orthodox theology but rather deprecated, perhaps — according to a suggestion of Wensinck — because this kind of self-sacrifice looked very like suicide, always condemned in Islam. Therefore peaceful moral duties are represented as equal to or even better than voluntary death, such as fasting, regularity in prayer, reading the Qur'an, gratitude to one's parents, honesty as a tax-collector, learning; these are all deeds on the path of God, *fi ṣalāt Allāh* (this expression with the gradual cessation of the wars of conquest undergoes the same change from a warlike to a peaceful ethical meaning as *shahid*, cf. the article *SAHIL*) and may enable men to share in the rewards otherwise promised for the *shuhadā'*. But the conception of *shahid* itself underwent an important extension which may be partly already seen in hadith's, so that in the end almost anyone who had died any violent death and aroused pity was considered by the general public to be a martyr and soon was actually regarded as a saint. An important factor in bringing about this development was the very old tendency of the people to worship holy men generally, cf. the article *WALI*. In this sense, for example, anyone who dies of disease, like the plague and the "diseases of the stomach", is considered a *shahid*; anyone who dies a violent death, e.g. from starvation, thirst, drowning, being buried alive, burning, poison, a lightning stroke, being killed by robbers or wild beasts, or a mother who dies in childbirth; also one who dies during the performance of a meritorious action, e.g. on the pilgrimage or in a foreign land, where no friend or relative is with him, or on a journey which is *ṣunna* or while visiting a saint's tomb or while in the act of prayer, or as a result of continuous ablations, or in the Friday night, or in the search for the knowledge of the faith: *fi ṭalab 'ilm al-Dīn*, or in defending the right against injustice: of the *amir bi 'l-ma'rūf wa 'l-nahy 'an al-munkar* against the *ẓālim*: whoever loves and remains chaste and does not betray his secret and dies, dies a *shahid* and anyone who meets his death fighting against his own impulses in the *djihād akbar*, is *shahid*.

The tomb of such a *shahid* is considered *maḥḥad*, enjoys the reverence of the pious and becomes an object of pilgrimage. In many of these *maḥḥad* it can be proved that we have pre-Islamic local cults which have been continued in this form under Islam. This side of the survival of the ancient in the nearer East has been illuminated by van Berchem's study of the inscriptions, but only after further material is available will a final verdict be possible. The phrase found as early as tombs of the third century A.H.: *hādū mī jashadū bihi wa 'alāhi*, with which the term *maḥḥad* might perhaps be connected (according to a suggestion by M. Hartmann, *Z.D.P.V.*, xvi. 652; cf. however, Ritter in *Id.*, xii. 148-150), is interesting. When we further find Sultans called *shahid* in inscriptions, the word here has lost its

real significance and is no more than a pious term for deceased. In many cases the name *maṣḥād* was transferred to rites of local cults, which have nothing to do with a *shahid* and in Turkish *shahidlik* and *meṣhed* (also pronounced *meṣhaf*) is a name for cemetery in general (see Mordtmann, in *Isl.*, xii, 223). The inscriptions also show that frequently the Muslim builders of *maṣḥād* built them in their own lifetime, apparently in order to share in the blessings of their good deed while still here on earth (cf. *MAṢḤAD*).

In Cairo there used to be celebrated a festival in commemoration of martyrs, in which Muslims took part up to the VIII/XIVth century (Maḥṣūn, *Khiṭaṭ*, i, 68 sq.; Mez, *Die Renaissance des Islām*, p. 399 sq.).

In contrast to orthodoxy the various sects often kept rigidly to the original sense of *shahid*; for example the Khawārij fanatically sought death fighting against the government, which they considered unrighteous, while the orthodox theologians taught that rebellion against the government was not a *ḡiyād* with a prospect of martyrdom.

Martyrdom plays a special role of peculiar importance for the Shī'a. For them Husain is the *shahid* par excellence, the king of martyrs, *shāh-i shuhadā* (much as the favourite martyr of the Sūfis is al-Hallāj). In keeping with the character of the Shī'a, Husain is sometimes endowed with features which almost recall the passion of Christ or sufferings of St. Francis (deliberate self-sacrifice, transmission and inheritance of the divine light in the family of the Prophet, immortality etc., cf. the articles *SHĪ'A*, *MUḤARRAM*, *HUSAIN*). There is a rich literature of martyrologies describing very fully the sufferings of Husain and other members of the family of the Prophet, a speciality of the Shī'a; for example there is a famous work entitled *Rawḍat al-Shuhadā* by Ḥusain b. 'Alī al-Wāṣi al-Kāshifī, which has been translated into Turkish (by Fuṭūlī with the title: *Hadīḩat al-Sa'ādā*) and into Eastern Turkish and several times also abbreviated.

The worship of *shahids* has attained noteworthy developments in parts of India where there is a gigantic *Shahid ganjī* said to be the tomb of no fewer than 150,000 *shuhadā*.

SHĀHID (A., pl. *shuhūd*), witness. The statement (*shahāda*) of a witness, is a declaration on a legal claim in favour of a second person against a third, which is based on an accurate knowledge of the state of affairs and is made before the judge in prescribed form (*ashḩadu bi-kadhā wa-kadhā*). The following main principles have grown up, based on the Qurān and Tradition and perhaps also influenced by the legal opinions in the Talmud and are in the main common to all *maḩḩabib*; there are of course numerous differences in points of detail which cannot be dealt with here.

The taking and giving of evidence (*shahāda*) is a *farḩ 'ala 'l-kifāya*; but if only one person was present on the scene, there is an absolute obligation on him to give evidence (*farḩ al-ain*). In the case of a *ḩaḩḩ Allāḩ* it is, however, left to the discretion of the witness whether he cares to bring the culprit before the *ḩaḩḩ* or spare his Muslim co-religionist and remain silent; the last course is usually recommended as the more meritorious. The witness must: 1. have accurate knowledge (*'ilm*) of what he is talking of and have perceived it with his own eyes and ears (cf. Sūra, v, 11); 2. be *mukāllaf* (q. v.); 3. be a free man; 4. be a Muslim (if he is giving evidence in a case brought against a Muslim); 5. be in full possession of his mental faculties; 6. be 'adl (q. v.) (cf. Sūra, v, 105, and lxx, 2; *ḩawāḩ 'adl*); he must also not have been previously punished with *ḩadd* for slander (cf. Sūra, xxiv, 4); 7. lead a decent and moral life (*murumma*); thus for example a witness is rejected, if he enters the bath without a shift or is devoted to gambling (chess, *nard*) or eats in public; 8. be above suspicion; he must not for example get any advantage for himself from his evidence or avert any injury to himself; he must not be on bad terms with the accused, if he is giving evidence against him. Nor can those who have a claim for maintenance give evidence against one another, like parents and children, husband and wife, master and slave.

The following regulations concern the number and sex of the witnesses: 1. In *zinā* four male witnesses are required (cf. Sūra, xxiv, 2 sq. and iv, 19). 2. In all other cases, which do not concern *māḩ*, like theft, murder, marriage and divorce, release of slaves etc., two male witnesses are required (cf. Sūra, ii, 282 sq. and v, 105 sqq.); in cases which, as a rule, women alone are competent to deal with (child-birth, unchastity in women, etc.), four women are sufficient according to the Shāfi' teaching (two for the Mālikis and only one for the Hanafis and Zaidis). 3. In cases which concern *māḩ*, like claims arising out of contracts and bonds or accidental homicide, two men or one man and two women are required as witnesses (cf. Sūra, ii, 282 sq.). In these cases one male witness is usually sufficient along with the oath of the accuser.

Except in criminal cases, it is allowed to replace one original witness (*shāhid al-awḩ*) by two male deputy witnesses (*shuhūd al-far*), the

so-called *shahīdā* 'alā *shahīdā*; but only when the original witness is dead or cannot appear before the court on account of severe illness or is three days' journey or more from the place of trial.

The witnesses may withdraw their evidence before the judge; but if sentence has already been passed, they are liable for the injury done. If a statement is withdrawn, which affirmed *amā*, the witnesses are punished with *hadd* for slander (*qadhf*). False witness (*shuhūd al-ḥur*) is already censured in the *Kurʾān* (*Sūra*, xiv, 72; ii, 283) and Tradition. Witnesses are frequently purchased in the east (cf. E. Lane, *Manners and Customs of the Modern Egyptians*, 1860, p. 100, 114; Ch. White, *Three Years in Constantinople*, 1845, i, 103).

The most difficult point in the above rules is undoubtedly the question of *ʿadāla*; the witnesses must either be personally known as *ʿadl* to the *qāḍī* or their *ʿadāla* must first of all be established. From the end of the second (eighth) century an assistant to the *qāḍī*, the *qāḥil al-maʿāḍil* or *mu-nakkil*, was appointed to conduct these often tiresome investigations. As Muslim procedure does not recognise documentary evidence as proof but only the oral evidence of eye-witnesses, such people were preferred for the verification of legal matters whose *ʿadāla* had already been proved. Thus permanent "witnesses" came into existence: at times their numbers rose to thousands but usually there were only a few. They were officials of the *qāḍī*, and were appointed and dismissed by him. Thus arose the body of notaries, who were called *shuhūd* in Cairo and Baghdad, in the east and the Maghrib *ʿadāl*. Besides verifying legal matters they also decided smaller disputes independently. They were as a rule young lawyers who later received judicial appointments. Muslim writers frequently complain of the corruption among these people. Their development began in the 11th (viii) century (the first reference is in Cairo in 174 A.H.: al-Kindi, *Governors and Judges*, ed. Guest, p. 386) and they were abolished in the 14th (xth) century. These "witnesses" are properly to be regarded as a revival of the Roman-Byzantine notaries. — For the present conditions see Lane, *op. cit.*, i, 117; Vassil, *Über muslimische Prozesspraxis in M. S. O. S. Az.*, 1902, v, p. 475 ff.

(W. HEFFENING)

SHĀHINSHĀH. [See **SHĀH**.]

SHAHR (P.), a town. It is etymologically the same word as old Persian *shahāra* — (cf. skr. *śatra* —); the old Persian word, however, means only: "dominion, reign", and also: "empire"; this old significance the Pahlavi *shahr* (written ideographically: 𐭮𐭲𐭮𐭲) originally retained, but it means also: "a district, a large town". The Armenian loan-word *ashkharkh* denotes: "a province, a land", also: "the world" (*shapur*, *shapuria*, cf. also the compound *ashkharkhat* = *shahrapur*). It seems to have been borrowed from the older (Arsacidian) middle-Iranian. The modern Persian *shahr*, which signifies "a (large) town", originally comprised the old meaning ("empire, realm") besides. It can be seen in phrases like *Irān shahr*, *Shahr-i Kūhān*, etc., which belong to the poetical style; cf. also the derivative *shahryār* (from *shahāra* —), "a ruler, a king".

It is perhaps no mere fortuity, that in old Persian there seems to be a trace of a similar semasiological transition in the case of the word *wardana* —, which in that idiom signifies "a town". In the Babylonian texts of the inscriptions of the Achaemenids, this word is rendered by *alu*; the old Persian term for "land, district" (*dahyāna*) is translated into Babylonian by *mutu*; now in Bisutūn 2,6 (= § 25 Weissbach), Babylonian *alu* corresponds to Persian *dahyāna* and a Babylonian duplicate of a portion of the Bisutūn inscription (cf. Weissbach, *Die Keilschriften der Achämeniden*, p. 311.) has 2,12 (= § 31 Weissbach) *mutu* for Persian *wardana*, whereas Bisutūn 3,13 (= § 49 Weissbach), Persian *dahyāna* is rendered in the Elamite text by the ideogram for "town". That the old Persian here may have influenced the Babylonian, is not impossible, as one could suppose, that also the later Babylonian use of the verbal form *iddin(u)* (lit. "he gave") for: "he created", which is found, e.g. in the Elwend-inscription of Darius, might have originated by the influence of Persian *adū* = he created (the Aryan roots *dā* and *dhā* no more being phonetically different in Iranian); cf. Delitzsch, *Assyr. Handwörterbuch*, p. 451; Weissbach, *Keilschr. der Achäm.*, p. 100, note a. It seems probable, then, that already in old Persian the meanings "a district" and "a large town" were inclined to fade one into the other. This is not very surprising, taking into consideration the fact, that in later times also several large cities in Persia had their dependent localities, which were reckoned to belong to the town, so that the ideas of "town" and "district" in some cases might cover each other.

The modern Persian, according to the lexicographers, has also the collateral form *shār*.

The word *shahr* occurs in several names of towns, e.g. *Shahrābād*, and, more often, in *ishāfa*-construction, as *Shahr-i Bīkta*, *Shahr-i Rustam*, etc. (cf. Le Strange, *The Lands of the Eastern Caliphate*, Index); is personal names it retains its old meaning: "empire", as in the (already Pahlavi) names *Shahrwarāz*, or *Shahrshān*.

The word passed into Osmanli under the form of *shahr*; town-names, in which it enters, are numerous, e.g. *Akshehir*, *Yeni-shehir*, etc.; see for this word and its derivations Barlier de Meynard, *Dictionnaire Turco-Français*, 2 v.

Shahrangiz or *Shahrshāh*, in Turkish and Persian literature, denotes a kind of poetical composition, which satyrizes or praises the inhabitants

of a certain town (*madh u-dhammi kīh shu'arū ahl-i shahr rā kunand*; cf. Vullers, *Lexicon*, s.v. *shahr*); Browne, *Persian Literature in Modern Times*, p. 237/238; Gibb, *Hist. of Ottoman Poetry*, II, 232 etc.). (V. F. BÜCHNER)

SHAHRASTĀN or *Shahristān* (s.), a derivation from *shahr* with the suffix — *stān*. Collateral forms are *shahrastāna*, *shāristān* (and, metri causa, *shāristān*). In Pahlavi the word also occurs, written ideographically 𐭮𐭲𐭮𐭲𐭮𐭲; the meaning is, both in Pahlavi and in modern Persian: a town, especially a fortified one, or a capital (cf. Vullers, s.v. *shāristān* and *shahristān*; i.e. Strange: *The Lands of the Eastern Caliphate*, p. 203, note 1). The principal part of several Persian towns is therefore named by this term, as was the case with that quarter of Barwān (according to al-Mukaddasī, the capital of Dailām), where the governor resided; also with the eastern part of the city of Djurdjān, the inner part of the city of Kuzwān; the (new) city of Kāth [q.v.], according to al-Mukaddasī, also bore the name of *Shahristān*, and during the Middle Ages, the old (eastern) city of Isfahān was known as *Shahrastāna*; otherwise, this latter locality was named *Djāy*, or simply, *Madina*, which term seems to be nothing but the Arabic translation of *Shahrastāna*.

There are some cities and villages, which are designated by this name, either exclusively, or optionally, viz.:

1) *Shahristān-i Yazdigird*, a fortified town, built by the Sāsānian king Yazdigird II (438—457 A.D.) against the incursions of the Turks; the king resided here from the fourth to the eleventh year of his reign. The town must have been situated in the province of Djurdjān.

2) A town in *Khurāsān*, at a distance of three days from Nāsā (Nisā), on the border of the desert. This locality seems not to have been of great importance; it had textile industry, and was the birth-place of the well-known al-Shahristānī [q.v.].

3) A village in *Sidjistān*, situated near the ruins of the medieval capital of the province, Zaranj.

4) *Shahrastāna*, a village near Hamādhān.

5) The city of *Shāpūr* [q.v.] in Fārs also bore the name of *Shahristān*, as was the case with

6) *Rūyān*, a city in the district of the same name belonging to *Tabaristān*.

AL-SHAHRĀSTĀNĪ, MUHAMMAD B. 'ABD AL-KARIM, the principal historian of religions in the oriental middle ages, was born in *Shahristān*, a town of *Khurāsān*, in 469 (1076); the date of his birth is also given as 467 and 479. He studied jurisprudence and theology at *Djurdjāniya* and *Nisābūr*; his teacher in scholastic theology was Abu 'l-Kāsim al-Ansārī. According to Ibn Khallikān he belonged to the *Ash'ari* school but Sam'ānī says that he adopted the dreams of the *Isma'ili*s and that in his conversation and discussions he only spoke of the philosophers and took no interest in religious law. He made the pilgrimage however and returning after having spent 3 years in *Baghdād*, he settled in his native town where he died in 548 (1153).

He wrote several books, of which the most famous is the treatise on religions and sects: *Kitāb al-Milal wa 'l-Nihal*; among the others we may mention, on speculative theology: *Nihāyat al-Idām fi 'l'm al-Kalām*, another on metaphysics, the title of which: *Mu'āma'at al-Falāifa*, the duel of the philosophers, recalls that of the *Tahāfut* of Ghazālī, and one on "the history of the learned": *Ta'rikh al-Hukamā'*, which has the same title as the well-known work of Ibn al-Kifī (d. 1248), written about a century later.

The treatise on religions and sects, one of the most remarkable documents of the philosophical literature of the Arabs, was written in 521 (1127). The author in it passes in review all the philosophic and religious systems that he was able to study and classes them according to their degree of remoteness from Muslim orthodoxy. He therefore begins with the Muslim sects, *Mu'tazila*, the *Shi'a* and the *Bāṭinis*. He next deals with the "people of the book", those who have a revealed book recognised by *Islām*, i.e. the Christians and Jews; next those who have revealed books either doubtful or false, e.g. the Magi and the Dualists, after whom come the Sabaeans who worship the stars. Leaving the sects founded on a revelation, he goes back to pagan antiquity and gives articles on the principal philosophers and sages of Greece, after which he gives an exposition of Arab Scholasticism as a derivative from Hellenism; the last part of the book is devoted to the religions of India.

The book is preceded by prolegomena, of which one chapter, the fourth, is an account of all the differences which broke out in *Islām* in the last moments of Muhammad's life and which, influencing religion on the one hand politics on the other, gave rise successively to the sects of *Shi'a* and *Mu'tazila*. This is a very fine section. In another chapter of these prolegomena *Shahristānī* deals with arithmetic and makes some pretensions to be a mathematician; but these are not justified in the result. *Shahristānī*'s mind is essentially and almost exclusively a philosophic one. He is interested only in ideas, he gives few biographical details, almost no titles of books, little chronology and no dates. As an analyst of the systems, he is very subtle and in general very objective. He has not the primarily apologetic character which the lost work of al-Ash'ari on the sects for example must have had.

The most important parts of the work of al-Shahristānī are those which deal with the *Mu'tazila*, the *Shi'a*, the Dualists and the Sabaeans. For the *Mu'tazila*, hair-splitting theologians and subtle thinkers, whose works have not come down to us, he is the one of the most important sources with al-'Idjī; the article on *Ash'ari* and the *Ash'ari* school which fixed Muslim orthodoxy, is interesting for the same reason. The articles on the *Shi'a*, *Khāridjīs*, *Murjīs*, divided into numerous sects political in character, which differed in the theory of the imamate, are very interesting; but the author is rather brief on the *Isma'ili*s and *Bāṭinis*. He is equally short on the Jews. As to the Christians he knows three principal sects: the Melkites, the Nestorians and the Jacobites; he contrasts St. Paul with St. Peter (Simon al-Salt), saying that Paul came to disturb the arrangements made by Peter and to mingle philosophic ideas in the teaching of Christ. He knows a little about the Christian scriptures but does not criticise them so acutely as Ibn Hārm.

The references to the Dualists, Manichaeism, Manes, Mardak, Bardesanes, Marcion, are of course very valuable; the opposition between light and darkness plays a considerable part in them as in the philosophy of *Ishrāq*. It is the same with the long section on the Sabaeans; Shahrastānī puts in it a dialogue in which an orthodox Muslim argues with a Sabaeen, opposing the idea of prophecy to that of the spirits of the stars, disputing the existence of the latter and criticising the conception of them.

At the present day, Shahrastānī appears quite ignorant of Greek philosophy; but he has quite a good article on Plato, whose theory of ideas he understands and another interesting one on Pythagoras, in which he gives an exposition of the theory of number and of geometrical ideas conceived as principles of beings. The article on Aristotle is derived from Avicenna and the commentary of Themistius. The very long article on Arab scholasticism is in the main a résumé of the *Nafīṣ* of Avicenna. Lastly the section on India contains some curious passages. We know that Arab authors as a whole knew very little about India. Nevertheless we find in Shahrastānī some accurate notes on Buddhist psychology and doctrine, on the Bodhisattvas and the successive Buddhas and on certain practices of Hinduism — the worship of the goddess Kālī, whose idol (Mahākālī) is described, ablutions in the sacred rivers, religious suicides etc. Shahrastānī seems to regard Pythagoras as the founder of intellectual thought in India.

Haubricher, *Religionspartheien und Philosophenschulen*, 2 vol., Halle 1850/1851; Ibn Khallikān, *ed. de Slane*; al-Sam'ānī quoted in Yāqūt, *Dictionnaire de la Perse*, transl. Barbier de Meynard, Paris 1861, p. 359. (CARRA DE VAUX)

SHAHRIŪR, the name of the sixth Persian month, which has 30 days like every Persian month. The older form of the name found also in al-Bīrūnī is *Shahrivar*. As the name is also that of the fourth day of every Persian month, the month and day are distinguished by the addition of *māh* or *rūz*. The 4th *Shahrīr*, on which the name of day and month are the same is called *Shahrīgūn*.

Bibliography: al-Bīrūnī, *Āthār*, ed. Sachau, p. 42 sq., 70, 221; al-Kāẓimī, *Adab al-Makhṭūṭ*, ed. Wāstenfeld, i. 79, 81 (German transl. by Ethé p. 163, 167); on the linguistic history of the name cf. Horn, *Neuperische Schriftsprache* (*Grundriss der iranischen Philologie*, i. 2), p. 181. (M. PLÉSSNER)

SHAHRŪD, 1. Name of two rivers belonging to the system of the Kizil Ūzen (Safīdrūd: this other name, however, which in the Middle-Ages designated the whole Kizil Ūzen, at present belongs to its lower course, from Mandjil to the Caspian, cf. Andreas in Pauly-Wissowa, *Realenz.* 2, i., col. 1736; Monteith, p. 16). The most important of the two Shahrūds is that, which at Mandjil (± 36° lat., 49° long.) joins the main river. This Shahrūd takes its rise in the mountain-system of the Alburz, and its direction is from the South-East to the North-West. According to Mustawfī al-Kāẓimī, who gives a concise, but tolerably clear description of this river (*Nuṣṣat al-Ḳulūb*, text, p. 217/218;

transl. p. 210), the Shahrūd rises from the confluence of two streams in the Rūdbār-district of Kāẓimī, one originating from the Taliḳān hills, the other from the „Nār and Takḥmas mountains“, as Le Strange construes the text, which is uncertain, as it presents some variants. Hādījī Khālifa, who, in his *Dihānūmūl* (p. 304), as often, copies the *Nuṣṣat*, reads here: *Kūh-i Shār* (cf. the variants in Le Strange's edition, p. 217, N° 4).

The Shahrūd, according to Mustawfī, passes Alamūt, while flowing through the Rūdbār-district, and unites in the district of Bara, „which is of the two Tārums“, with the Safīdrūd. From its origin to its junction with the last-named river it measures 35 leagues (*farsang*); its water, but for a small degree, is not used for field-irrigation. With these last words, the statement of the same author, that most of the lands of the district of Rūstamdār are watered by the Shahrūd (text, p. 160, transl. p. 157) should be compared or contrasted.

The Shahrūd, not being navigable, has no significance for traffic. Although the Kizil Ūzen is well-known in antiquity under the name of Amardus, there seems to be no mention of the Shahrūd before the Middle Ages. It is noticed by the Armenian geographer, translated and annotated by J. Marquart, in his *Erānshahr*, p. 126; this authority mentions its rising in the mountains of Taliḳān. On the infrequent mentions of the Shahrūd in Arab geographers, Andreas' article on the Amardus in Pauly-Wissowa, *Realenz.* 2, i., col. 1734 etc. may be consulted. In the nineteenth century, the river became known by the travels of Monteith and Rawlinson. The first, the account of whose journey dates from 1832, explored the valley of the Shahrūd, starting from Mandjil (or, as he calls it, Menjile), in search of the ruins of Alamūt. He first notices the height of Menjile (800 feet above the sea), and gives the names of some localities, situated on the Shahrūd: they are (retaining the orthography of the original): at 2 miles (from Mandjil): Loushan; at 28: Berenzini; 36 miles from Berenzini: Jirandey, „just where the stream from the mountains of Ala Mout in Mazanderan . . . joins the stream of Kherzan, coming from the mountains behind Kashine“. In this region there were found ruins, which were considered to be the ruins of the renowned stronghold of al-Ḥasan b. al-Ṣabbāḥ. Returning by the same route, Monteith visited, at 12 miles distance from Mandjil, the alum-mines near the village of Surdar.

In the account of Rawlinson's journey from Tabriz to Gilān (1838) the Shahrūd is also mentioned, but the last named traveller does not give a detailed account of it.

The other Shahrūd, as appears from Kiepert's *Nouvelle carte générale des provinces asiatiques de l'Empire ottoman*, 1884, joins the Kizil Ūzen between Senna and Miḡānsarūy; the locality, mentioned by Monteith (pp. 13 and 20) under the name of „Berendeh“, must be the „Berinda“ or Kiepert's map, to the North of Senna. This „Berendeh“ might be compared with the „Bara“ in the passage of Mustawfī, were it not, that the description of that author cannot but relate to the river of Mandjil. One might, however, suppose, that Mustawfī has, in this place, mistaken the one Shahrūd for the other. The second, or lesser Shahrūd, called formerly the river of Shāl, which

receives some small tributaries (of, as it seems, unknown names) from the East, rises in the Shäl hills, and passes some localities, e. g. Shäl (see below), flowing almost parallel to the Kizil Uzen to the east; then, east of Berinda (which lies on what seems to be a western tributary to the lesser Shährüd), it takes a curve to the South-West, to merge into the Kizil Uzen, joining it, therefore, from the north-east. To assume, as Ritter does, in his *Erdkunde*, three Shährüds, is not necessary.

II. A district described by Mustawfi as belonging to the Tülah-districts (تولایش). Among its villages, he mentions Shäl, Kalür, Hims, Darüd and Külüwän. We see, then, that it is the region of the lesser Shährüd. The climate, according to our authority, is temperate, and the soil produces good corn, but not much fruit. The people are Shäfi'ites, but, as the author observes, only by name, for they do not care much about religion. The revenues, in Mustawfi's time (middle of the viiith = xvth century), amounted to 10,000 dinärs.

III. Name of a city in the West of Khurāsān, not far from the frontiers of the province of Astarābād. It lies to the South of Bistām; according to Fraser, its geographical position is lat. 36° 25' 20", long. 55° 2' 23"; its height above the sea is 3500 feet. The town is a trade-centre; from it to the city of Astarābād there are two ways. The geographers of the Middle Ages make no mention of it.

SHÄHRUKH MİRZÄ, the fourth son of Timūr and the first of the Timūrid sovereigns, born at Samarqand on the 14th Rabi' II, 779 (20th August, 1377) and thus named, according to the legend, because his father heard of his birth in the middle of a game of chess, when the knight "rukh" was on the point of checking the king "shāh". He received also the titles of *Bahādur*, "valiant", *Akhān-i Sefid*, "fortunate sovereign". Married at the age of eleven, governor of the Empire during the Kipčak campaign [q.v.] at the age of thirteen, he was sent back to Samarqand during the great Persian expedition, but was called to the army in 795 (1392). At the age of seventeen he distinguished himself at the siege of Kāl'e-i Sefid [q.v.], cut off the head of the enemy leader, Shāh Manšūr, and acted as mediator at the siege of Takrit, became governor of Samarqand and of the country around in 796 (1393/1394); and three years later, he took part in the expeditions to Persia, Syria and Asia Minor, and held important commands at the siege of Aleppo and at the battle of Ancyra. Chalcondylas, who calls

him Σαγγελος, speaks of him with admiration. His presence being necessary at Herāt, he did not go to the *Shirāzī*, which decided upon the Chinese expedition, and he contracted then a new marriage.

On the death of Timūr, Shährukh was recognized as sovereign of the provinces which he was governing (Ramādān 807 = March-April 1405). The other princes, very much divided, finally adopted the proposal of Pir Muḥammad to rally around Shährukh, who would probably be content with a formal recognition and certain marks of respect. Shährukh showed himself touched by the deference of his brothers.

One of the latter, Khalil Sulṭān, dispossessed by the emir Barandaq, had taken his revenge by seizing Samarqand. Shährukh departed at once with his army for Transoxiana; he was conciliatory and his envoy, Shaikh Nur al-Dīn, concluded a peace leaving Khalil sovereign of the country. Soon after, war broke out between Khalil and Mirzā Pir Muḥammad. The latter was assassinated by his vizier, Pir 'Alī Tāz. Rebellions deprived Khalil of any authority. On the other hand, the Djalā'irids and Kara Yūsuf seized Baghdād and Adharbāidjān; Pir 'Omār was dispossessed and killed by his kinsman Iskandar. Shährukh then intervened, defeated Iskandar and annexed to his states 'Irāk 'Adjami and contrary to the promise he had given, Khalil's lands were given to Ulugh Beg; Khalil received as compensation the governorship of 'Irāk, and Shährukh restored to him his love, Djawhar Shād, who had been insulted and maltreated by the rebels. In the same year (809 = 1406-1407), Mūsādarān was finally conquered.

In the following year Mirānshāh, the brother of Shährukh, was killed in a battle against Kara Yūsuf. The sons of Kara Yūsuf's enemy, Abū Bakr and Muḥammad 'Omār, survived him only a short time, and Kara Yūsuf, following up his conquests, founded a vast empire embracing Tabriz, Adharbāidjān and the 'Irāk. Shährukh, desirous of avenging his brother, attacked him in the year 823 (1420). Kara Yūsuf died suddenly at the moment of giving battle, his troops were disbanded and his corpse treated with indignity.

Several expeditions took place in the year 810 (1407-1408); one against Balḫ in which Pir 'Alī Tāz was conquered and put to death; one against Pir Pādishāh, who had rebelled at Astarābād. War broke out between Pir Muḥammad and Rustam, who was victorious, and made his entry into Isfahān where he behaved with moderation. Abū Bakr and Iskandar were at war in Kermān; Sulṭān was conquered by Shährukh. Pir Muḥammad had a reconciliation with Iskandar, but 'Alī al-Dawla revolted; his father, sulṭān Ahmad, pursued him and Kara Yūsuf made him prisoner. At the end of 811 (1409) Samarqand was under the power of Shährukh.

In the year 812 (1409-1410) there was an expedition against a rebel emir, Khudābidād, whose head was sent by a Mongol Khan to Shährukh. The revolt of Shāh Bahā' al-Dīn in Badakhshān was put down and Transoxiana, after being conquered, was reorganized. Marw was rebuilt, the ancient course of the Murghāb was restored and the dikes repaired. During the two succeeding years Shährukh had to return to Transoxiana in order to put down in that country the revolts of the

Emir Shāikh Nur al-Dīn, who was killed in Mongolia. New troubles broke out in Kermān, where Iskandar supplanted Mirzā Rustam. Under the rule of Khālīl, the Tatars brought back from Asia Minor by Timūr, had fled from Transoxiana into Khwārizm, which they laid waste and they wished then to return to their native land. A first expedition sent against them in 815 (1412/1413) was a failure. Much affected by this lack of success, Shāhrukh sent another against them and, once master of Khwārizm, handed it over to an able administrator, the Emir Shāh Mulk.

In 817 (1414/1415) the revolt of Mirzā Amtrak Ahmad took place; Ulugh Beg departed to besiege Akhū. The Emirs of Iskandar revolted and placed themselves under the authority of Shāhrukh, who offered Iskandar an honourable peace. This offer was rejected. After a long siege Isfahān was taken by assault and laid waste. Shāhrukh intervened, undertook the defence of the inhabitants and gave them Rustam as governor. He also ordered Iskandar to be treated with clemency. No attention was paid to his orders and the prince was blinded. The latter assisted by the Emir Sa'd-i Waqqās, the ally of the Turkomans, had helped the revolt of Bākara Mirzā at Shirāz (818 = 1415/1416). Besieging this town, Shāhrukh pardoned Bākara and sent him into the district of Kandahār; after another revolt, he was exiled to India with Mirzā Amtrak Ahmad; another suspect, Mirzā Ilangar, was sent into remote exile. Two other rebels, Sulṭān Uwais of Kermān and the Emir Bahlūl Ilarās of Kandahār made their submission.

In 820 (1417—1418) Bāisonkor, the son of Shāhrukh, was placed at the head of the government and he abolished the hated exactions of the vizier Saiyid Fakhr al-Dīn, whom he made disgorge some of his ill-gotten gains. The death of this Emir, which took place soon after, was considered a blessing from heaven.

On 23 Rabi' II, 830 (Feb. 21, 1427), Shāhrukh was the victim of a plot in the great mosque of Herāt, where the Darwish Ahmad Lw, who had come under the pretext of presenting a petition, tried to stab him. He was immediately lynched by the crowd. The consequence of this plot was that many arrests and executions of suspected people took place. Iskandar, aided by his brother Dīhānshāh, had rebelled again against Shāhrukh in 832 (1429). After being in revolt for six years, Dīhānshāh submitted and became governor-general of Adharbāidjān. Iskandar, who had fled, was assassinated a short time after at the instigation of his son. In Ramadān 838 (March 1435) the plague laid waste Herāt and its suburbs. Hundreds of thousands are said to have died at this time.

Shāhrukh died at Fīshāward, in the province of Ray on the 25th Ūlu 850 (March 12, 1447). Of the five sons that he had — Ulugh Beg, Abu 'l-Fath, Ibrāhīm Bāisonkor, Suyūghatmish and Muḥammad Dīkū — only the eldest survived to succeed him.

Historians are of one accord in eulogising Shāhrukh as a munificent sovereign, peaceful and void of ambition, loving peace without feigning war, in which he was always successful, and endeavouring to repair the damage done by Timūr. He rebuilt Merw, fortified and embellished Herāt. A zealous Muslim, he was believed even to have the gift of working miracles. Himself a poet and artist, he was the patron of writers, of artists and of scholars,

whom he attracted to Herāt, where he founded a magnificent library. Dīwān and the mystic poets Saiyid Nī'matu'llāh Kirmānī and Kāsim al-Anwār (q.v.) lived at this time. Turkish poetry began to rival Persian. Shāhrukh, who was particularly interested in historical studies, inspired or encouraged the works of Nizām al-Dīn Shāmī, Sharaf al-Dīn, 'Alī Yazdī, Fāsihi, 'Abd al-Razzāk, Samarqandī, as well as Hāfiḡ Abū, whom he commissioned to write a great work on geography. His sons, Ulugh Beg, the learned astronomer, and Bāisonkor, the noted artist, who gave a great stimulus to painting and to calligraphy, followed his example.

With other states Shāhrukh maintained peaceful relationships. He exchanged embassies with China, the suzerain of the family of Timūr, who paid her tribute. India recognized his authority, at least nominally. In 824 (1421) Khīr Khān, the sovereign of Delhi, sent him an embassy and we have the story several times published or translated of the embassy of 'Abd al-Razzāk Samarqandī to China and India. Deferential to China, Shāhrukh was, on the other hand, arrogant with the Turks. His correspondence with Muḥammad I is the proof of this. With Egypt his relationships were sometimes difficult. In 824 (1421) Tibet sent him an embassy.

On the death of Shāhrukh the decline began. The Timūrid princes, who all aspired to power and found followers, exhausted themselves in struggles which hastened on the rise of the Sāfawis and the formation of the Uzbek Empire.

Bibliography: The *Maṣṭū' al-Sādain wa-Maḡma' al-Bahrain* of 'Abd al-Razzāk al-Samarqandī is the most important work to consult; unfortunately it has never been published completely. Galland made a French translation still unpublished (*Bibl. Nat.*, fonds français, No. 6084—6087) and Quatremère has taken from it his *Mémoires historiques sur la vie de sultan Schah-rokh* (J. A., 1836, II, 193—233 and 338—364), which revised and continued until the year 924 (1421) resulted in the *Notice de l'ouvrage persan qui a pour titre Matlo-attadein....*, Paris 1843 (N.E., XVI/1). Numerous passages of lost parts of Hāfiḡ Abū have been preserved by the *Maṣṭū'* which contains besides the substance of Sharaf al-Dīn Yazdī and other historians of Timūr. Mirkhwānd, VI, 180—223 and Khwāndamīr III, 178—214 are important. The *Tadhkirah* of Dawlatshāh gives but very scattered literary information; see on the same subject Mir 'Alī Shīr, *Maṣṭū'at*, book VII. (J. A., 1861, XVII, 285/286). The story of the plot is found in Barbier de Meynard's *Extraits de la Chronique persane d'Herāt* (J. A., 1862, XX, 268—272).

Munadījīm Bāshī, *Shāhīf al-akhbār*, Constantinople 1285, III, 57 is important for the relations with the 'Omānīs. Consult also: — Price, *Chronological Retrospect*, London 1821, III, 485 sq.; Sédillot, *Sur un sceau de Shah Rokh, fils de Tamerlan, et sur quelques monnaies des Timourides de la Transoxiane* (J. A., 1840, X, 295—319) and reprinted in *Matériaux pour servir à l'histoire comparée des sciences mathématiques chez les Grecs et les Orientaux*, I, 243—269; Browne, *Persian Literature under Tartar Dominion*, p. 379—387, and Blochet, *Introduction à l'histoire des Mongols*, p. 248—265 (on the relations of Shāhrukh with China).

(L. BOUYAT)

SHĀH-SEWAN, the name of several groups of Turkish tribes in Persia. The term means in Turkish "those who love the Shāh". Persian historians write: *shāh-sewān*, thus indicating the Turkish accusative (*shāh*) and the Turkish closed *e*.

History. According to Malcolm, Shāh 'Abbās I (995—1037 = 1587—1628), in order to reduce the turbulent Turkish tribes known as *Khāl-bāsh* (= "red-heads"), who played the part of praetorians, invited the men of all the tribes to enrol themselves in a new body which was called Shāh-sewan. Entirely devoted to the Safawi family, this tribe enjoyed the particular favour of the sovereign. At one time they must have numbered 100,000 families, but this number diminished in time.

Malcolm quotes the *Zubdat al-tawārīkh* and his version has been adopted by later historians. The European travellers, who were contemporaries of the Safawis (R. da Mans, D. Garcias de Silva Figueroa, Chardin, Olearius), however, do not mention the tribe of Shāh-sewan and the known facts somewhat complicate Malcolm's story.

I. The *'Alam arāyī* 'Abbāsī frequently uses expressions like "*shāh-sewān*" *kardan*, *zaltāyī-shāh-sewān* in the sense of "to make appeal to the faithful." Thus the father of Shāh 'Abbās, Shāh Sultān Muḥammad, had already used this procedure in the rebellions of 989 and 992. "Shāh Muḥammad", says Iskandar Munshi, "having launched the (appeal) *shāhī sewān*, ordered that all those of the Turkoman tribe who were servants and partisans of this hearth (*ghulam wa-zahājīhāt* in *dūdman*) should rally round His Majesty". These ad hoc appeals played upon the religious sentiments of the adepts of the Safawi family (*dūdman*, *oḡjak*). The sovereigns of this dynasty not only traced their origins to the *Shāhī imāms*, but even claimed to be the incarnations of the latter (cf. KHATĀ'Y). In the time of Shāh 'Abbās there was in Turkey a sect which regarded the Persian sovereign as its *murshid*. In our own day, the Ahl-i Ḥaqq (cf. the article 'AHL-I-HAQQ) give a place in their theophanies to the Safawi kings. The formula called of Shāh-sewan thus recalled to political recalcitrants their obligations to their superiors.

In 996, in the first year of the reign of Shāh 'Abbās, the Khāl-bāsh rebelled against the authority of the majordomo Murshid Kuli Khān. The Shāh had recourse to the process of "*shāhī-sewan*" and the faithful arrived en masse. A few days later the rebels were captured and put to death. This decisive blow dealt to the truculence of the Khāl-bāsh must have made an impression on his contemporaries, for in the firm reign of Shāh 'Abbās, it was rarely necessary to resort to unusual measures. Iskandar Munshi says nothing about the permanent results of the appeal of 996. He only adds that the Shāh-sewan who came at the king's call "mounted guard till morning".

II. On the other hand, Shāh 'Abbās continued vigorously and successfully the policy of regrouping the great tribes. His grandfather, Shāh Tahmāsp [q.v.], about 936 (1529) had already reformed one of the most important Khāl-bāsh tribes: the Tūkkālū (Malcolm, I. 506), remnants of which are still to be found in Kernān. The new military corps (*kullār*, *tufangār*) made unnecessary the Khāl-bāsh *Kurāt* (Chardin V, 292). Another way of weakening the old praetorians was to dilute them with new elements personally devoted to the sovereign.

These newcomers seem to have been particularly proud of the name of Shāh-sewan as is shown by the history of the Shāh-sewan of Ardabil. To sum up then, it may be doubted if a single regularly constituted tribe was ever founded by Shāh 'Abbās under the name Shāh-sewan.

The Shāh-sewan of Ardabil. Although the inhabitants of this *khūmat* all use the "Azari" Turkish dialect and are all Shī'is, the Shāh-sewan, even when settled, form a group apart, distinguished by its tribal organisation. According to their traditions the Shāh-sewan came from Asia Minor under their chief Yamsur (?)-pāshā who had obtained permission to do this from Shāh 'Abbās I. Yamsur is said to have brought 3,300 families (hearths), a section of whom migrated later to Khurān.

Among these Shāh-sewan three groups are distinguished: (1) the tribe of Yamsur-pāshā, which later broke up into clans bearing the names of the descendants of the chief: Saru-khān [q.v.], Kōdjā-bēg, Band 'Alī bēg, Pālid bēg, Damir bēg, Kurāt bēg, etc., with other later ramifications; (2) the tribe brought at the same time by Kurd bēg, of which following clans still exist: Tālīsh mikailū, Khālīfēlu, Mughānlu, Udullu, Murādlu, Zargar, etc.; (3) the tribes which arrived in the time of Yamsur-pāshā, but independently of him: Inanlu (*'Alam arā*: imānlu, evidently from the Mongol *iman* "goat") with the clans: Ir-Eiwatlu, Kalāsh, Kūr (Kor?), 'Abbāslu, Ge'iklu, Yurtē, Dursun Khodjalu, and Begdillu with the clans: Adjirlu, Khodja-Khodjalu, Yeddi Olmak, Arablu, Çakhlulu, Kabādlu. As to the Begdillu, the *'Alam arā* (p. 762) mentions the different fiefs (*tiyālat*) held in Adharbāyījān by the Khāl-bāsh chief Gundoghmuş Sultān Begdili, "who with his tribe and their tents dwelled at Tā'uk near Kirkūk. Having become Shāh-sewan in the first Baghdad campaign (1032 = 1622), he presented himself to the Shāh and received the rank of Sakān". Alongside of these two tribes, mention is made of isolated groups, the Rīzā bēglu, Sarwānlar ("camel-drivers") and Giamushči ("buffalo-breeders").

Saru-khān succeeded Yamsur-pāshā. Among the descendants of the latter is mentioned Badr Khān, who accompanied Nadir Shāh on his campaigns. His sons, as the result of a quarrel, divided all the Shāh-sewan into two parties. The Ardabil section took the side of the Ir-bēg; descended from Naḡar 'Alī Khān and the Mishklu section those descended from Kūčuk Khān.

The arrival of the Russians in Transcaucasia reacted on the fortunes of the Shāh-sewan. Between 1728 and 1732 several clans leading a nomadic life on the Kura (Kor) recognised Russian supremacy. The peace of Gandja (1813) established the Russians north of Mughān. The frontier fixed on the Turkman-čai (1828) and always rigorously maintained separated the Shāh-sewan from a great part of their winter-quarters. The Russians for a considerable time did not prevent the tribes from continuing to enjoy their pastures, but there were continual incidents. In 1867, the Rīzā-bēglu and Kōdjā-bēglu were refused access to Russian Mughān. On their side the Persian authorities burned the village of the Kōdjā-bēglu, Barzand [q.v.], and in 1876 the tribe was deported to Urmia, from which it has little by little regained its old home.

From 1869 a mixed commission was created on Russian territory at Bilasuwār (on the river

Bolghār) with the task of settling amicably the mutual claims of Russian and Persian subjects. In 1884, the Russian frontier was definitely closed to the Shāh-sewan and at the same time the Russian nomads (Perebēl, Darwishlu) were forbidden to descend into Persia. This measure dealt a blow to the prosperity of the Shāh-sewan, but did not put a stop to their incursions. On the other hand, it encouraged the Shāh-sewan to settle down and they had to cultivate their lands more intensively.

The governors of Ardabil had made very little impression on the Shāh-sewan. Only the expedition of 1910 undertaken against the turbulent tribes by the leaders of Persian revolution attained a notable success. Towards April of 1925, Rida Khān Sardār Sipāh succeeded in disarming the Shāh-sewan.

At the beginning of the nineteenth century, there were the following groups in Mughān; (1) Tarākama (Turkomans) 1,500 families of settlers; (2) Shākāki 8,000 families of nomad Kurds (?); (3) 10,000 families of Shāh-sewan nomads.

The Shākāki later withdrew into the interior of Persia. Before the Russian frontier was closed, fourteen clans of Persian Shāh-sewan, numbering 3,500 families, arrived in Russia, while 27 clans with 2,600 families remained in Persia.

Before 1914 the position was as follows: In the canton of Mishkhin on the northern slopes of the Sāwālān (q. v.), N. E. E. of Ardabil, from which it is separated by the river Dodjakh (a tributary of the Kama-su), there were over 5,000 hearths of the Shāh-sewan divided into 37 clans governed by their hereditary chiefs. The latter in turn were subordinate to an Il-bēgi. The Shāh-sewan of Mishkhin are nomads. They spend the summer on the high plateaux of Sāwālān and winter in Persian Mughān. The limit of their migration is about 120 miles. On this stretch they have villages inhabited by peasants, who have come from the interior of Adharbāidjān, who till the soil, receiving a third of the produce.

The number of Shāh-sewan in the canton of Ardabil was over 6,000 hearths divided into 12 clans, whose chiefs did not have an Il-bēgi in common. Among these clans only two are nomad; they go to Mughān of the eastern coast (Barand-Rāstwār). Four clans are becoming settled (*tahk-to-kapā* "the gates of wood"), especially in the S.E. and S.W. of Ardabil (the strongest clans are the Pulādla and Yurūl). In all there are over 11,000 hearths at Shāh-sewan residing in the *khūmūt* of Ardabil and they must number at least 75,000 souls.

The Shāh-sewan are Shi'is. The conversion of Yamsur-pāshā, who was at first a Sunnit, is said to have taken place when Shāh 'Abbās passed through Mughān. Since then the house of Yamsur-pāshā has been regarded as an *adakh* ("hearth") by which the tribes swear when taking an oath. The Kodja-bēgi are suspected of Sunnit leanings. One clan of Shāh-sewan consists entirely of *salayda* (Selyidus). Like the majority of nomads, the Shāh-sewan are rather indifferent in matters of religion.

The language of the Shāh-sewan does not differ from the "Azari" dialect spoken by the rest of the population of Ardabil, but it is said that the Zargār also use a Čaghatal dialect.

In the tribes a distinction is made between the clan of *hēg* and that of *hēg-sāda*, the latter being descended from lateral lines. The hired peasants

who till the earth on behalf of the tribes, are called *šawrāh* ("companions").

The Shāh-sewan of Sāwā. This group consists of two tribes: A. Baghdādī, 800 families living between Sāwā (q. v.) and Kum and governed by an Il-bēgi and four Il-bēgi. The tribe is said to have come from Shirāz in the time of Shāh 'Abbās I. It consists of 14 clans: Kāzayān (the most important), Kūselar, Kāz boyunlu, Mokhtabandlu, Yānjānlu, Ahmādla, 'Alī kurtlu, Sāthlu, Kutlu, Kādmīn, Suldūz, Husain khūmīn, Dugār, Nilkār, Mahdīn; B. Inānlu, 1000 families wintering between Teheran (Tihān) and Kum south of the river Karādī; summer quarters (54 months from April) at Parwān in the province Khāmas (Zandjān).

The tribe used to live in Mughān, whence they were transported by Nadir Shāh (?) to Khāmas to form a bulwark against the incursions of the Bihās Kurds (cf. SAWIJ BULAK).

Other groups. In the province of Khāmas (q. v.) the Doweitān, who dispute the power with the local Afshār, call themselves Shāh-sewan; they came from Mughān at the same time as the Inānlu. On the other hand, a tribe of this last mentioned name (Hādīdī Mirzā Hasan Fāsā'i, *Fārs-nāmayi Nāpīrī*, Tihān 1313, ii. 309; *Thi Inānlu*), numbering 5,000 families, forms a part of the confederation of the five tribes (Khāmas) in the eastern part of Fārs. Of at least one of the 25 subdivisions of these Inānlu, viz. of the Gok-pār, it is reported by Hasan Fāsā'i that, after having proclaimed themselves Shāh-sewan, i. e. "friends of the king (*šāh-fārd*)", they had separated from the tribe Gok-pār in the time of Shāh 'Abbās. Zain al-'Abidin Shirwānī mentions the existence of Shāh-sewan even in Kābul and Kashghir where they had gone in consequence of the dispersion policy practised by Nādir-shāh with regard to the Shāh-sewan (cf. J. Morier).

(V. MINORSKY)

SHA' (أ), a thing, anything, in Arab algebra the name for the unknown quantity in an equation. The expression is first used in the *Algebra* of Muḥammad b. Mūsā al-Kāwārismi (about 820) and probably goes back to the Indian *śiṣṭa-shat*. In the mediaeval Latin translations, it is translated by *res*, latterly *causa*, Ital. *cosa*, from which developed the name *cosa* given to algebra. P. de Lagarde's attempt to trace the *x* of algebra to *Shai'*, which has found some credence among Orientalists, is untenable.

SHAIBA (هَابَة), the name of the keepers of the Ka'ba (*Safana*, *ḥaḥāba*) whose authority does not extend over the whole of the sanctuary (*masjid al-haram*), nor even as far as the well of Zamzam and its annexes. They are the *Danū Shaiha* or *Shaihiyin* and have as their head a *wa'im* or *shaiḥ*.

Modern works only give brief references to them. Snouck Hurgronje gives the days on which they open the door of the Ka'ba. He notes that they only admit the faithful on payment of a fee and quotes the witty Mecca saying: "The B. Shai'ha are wreathed in smiles; this must be a day for opening the Ka'ba". — They find a further source of revenue in the sale of scraps of the covering of the holy house, which is replaced every year by their care. The embroidered parts reserved in theory for the sovereign are given more or less gratuitously to the great personages who represent him at Mecca and on the *ḥajj*. The remainder in accordance with custom (*Chroniken d. Stadt Mekka*, iii, 72) is the perquisite of the *Shaihiyin*, who sell it in the little booths at the Bāb al-Salām (Batanūni, p. 139), the ancient Bāb B. Shai'ha, the principal gate of the mosque. They also sell there the little brooms made of palm leaves, which are all alleged to have been used for cleaning the floor of the Ka'ba, a solemn ceremony in which the greatest personages glory in participating (Ibn Djabair, p. 138; Batanūni, p. 109). They also have the charge and care of the offerings made by the faithful, which adorn the interior of the holy house. This treasure comprises the most diverse objects, articles of gold and of silver, precious stones, lamps richly adorned, foreign idols, the offerings of converts in distant lands. This treasure has regularly been plundered by the Amirs of Mecca, by the governors, by its guardians and even by the *Shaihiyin* themselves (Gaudesroy-Demonbynes, *Le Pèlerinage*, p. 57) although according to tradition, the grand-master *Shai'ha* is said to have defended it against the attempts of the Caliph 'Omar (*Ud al-ghāba*, iii, 8). They have charge of the interior curtains of the Ka'ba. They had at one time the care of the *Maḥām* *ḥarām* which was considered a dependence of the holy house; but do I not know what is the present rule.

The possession of these diverse functions by the *Shaihiyin* is now so generally recognised that it attracts no attention. They evoked a more lively interest from earlier authors and especially from the pilgrims. The principal narratives are those of Ibn Djabair in 1183 and of Nāṣir-i Khosraw in 1276. The visit to the Ka'ba accompanied by

a *ḥajāt* of two *raḥ'a* made if possible, at the very spot where the Prophet performed them on the day of the taking of Mecca, is a pious act, which is not a part of the rites of the pilgrimage, but one from which the pilgrims themselves hope to acquire further merit although the people of Mecca seem to attach but slight importance to it. The dates of the public opening seem to have varied a little (*Le Pèlerinage*, p. 60 sq.) but the ceremony has remained unchanged. The *wa'im* alone has the key of the Holy House, the history of which I shall deal with below. When the gangway (*daraj*), which gives access to the door which is above the ground level, has been put into position by the *Shaihiyin*, their chief advances and, while he is inserting the key, one of his acolytes hides it from the gaze of the faithful. In the 12th century (Ibn Djabair, p. 93; *Pèlerinage*, p. 59), he held a black cloth (the 'Abbasid colour) in his extended hands. In the thirteenth century (Nāṣir-i Khosraw, p. 209), there was a curtain on the door which a *Shaihi* lifted to allow the *wa'im* to pass and which he let fall again behind him. The Prophet had veiled (*ataraka*) the door on opening it (Ya'qūbi, *Tarikh*, ed. Houtsma, ii, 61). In imitation of the Prophet the *wa'im* enters alone or with 2 or 3 acolytes, prays the two ritual *raḥ'a*, then opens the door to the public whose admission he regulates. The Persian pilgrim as well as the Spanish made a visit to the Ka'ba and they have both noted the miracle, which allows this very small building to hold at one time such a large number of the faithful. Nāṣir-i Khosraw counted 720 in it at the same time as himself. Ibn Djabair was particularly interested in the Ka'ba and its *ḥaḥāba*. He was present at the reception of Saif al-Dīn Tughtekin, the brother of Saladin (p. 146 and 147), on whose left hand the *wa'im* of the *Shaihiyin* solemnly entered the mosque; the *wa'im* Muḥammad b. Ismā'il b. 'Abd al-Rahmān was his chief informant (p. 81). He tells us that during his sojourn the Amir of Mecca, Mukhlir, arrested the *wa'im* Muḥammad and, accusing him of such baseness of conduct as was "unworthy of the guardian of the holy house", confiscated his goods and set up in his place one of his cousins, whom popular report accused of the same vices. Then some time after, he saw the *wa'im* Muḥammad, after paying 500 dinars to the Amir, re-established in his office, strutting proudly before the gate of the Ka'ba (p. 163, 164, 166, 179). This act of violence does not prove that there was any exact custom which regulated the relations of the Amir with the B. Shaiha. Under al-Mutawakkil (847–861), they sent delegates to the Caliph at Baghdad to assert, in opposition to the proposals of the governor of Mecca, their right to decide what works it was necessary to undertake at the Ka'ba; the master of works sent by the Caliph was to apply only to them. When he came to make his first enquiry the master Ishaq was, however, accompanied by the *ḥaḥāba shaihiyin*, and also by the governor, by pious individuals and by the *Ḥaḥib al-harām* (cf. the art. *RAḤIB*), "the postmaster", in reality the redoubtable intelligence officer of the sovereign (*Chron. d. Stadt Mekka*, i, 210/211).

The privilege of the B. Shaiha is very old; the historians of the ninth century Ibn Hishām, Ibn Sa'd, Ya'qūbi and the compilers of collections

of hadiths confirm this; but they pile up proofs of its legitimacy in a way that makes one think it was recent and disputed. We know what obscurity prevails in "spite of the texts" on the history of the "Arab kingdom" at the time when so many things were being organised of themselves.

According to tradition, Kogaly, the ancestor of the Korāshī, had reserved the guardianship of the Ka'ba (*hijāba*) for 'Abd al-Dār and his descendants. At the time of the conquest of Mecca, it was in the hands of 'Othmān b. Talha b. Abi Talha 'Abd Allāh b. 'Abd al-'Uzza b. 'Othmān b. 'Abd al-Dār (Tabari, iii. 2378; *Ud al-ghāba*, iii. 7 and 372 etc.). Ibn Sa'd (Tabaqāt, v. 331) has a variant story which casts doubts upon the near relationship of 'Othmān and Shaiba, while the genealogy given by the *as'im* to Ibn Djabair (p. 81) intercalates an ancestor Shaiba unknown to the other authors. 'Othmān by a happy foresight was converted at al-Hodaihiya with other notable personages of Mecca, although several members of his family had perished at Uhud in the ranks of the Korāshī (Tabari, i. 1604; Aghāni, xv. 11; Ibn Sa'd, v. 331 etc.). On the day of the taking of Mecca, he accompanied the Prophet to the Ka'ba and the latter demanded the key from him; in general the authorities say that he gave it up, but according to one tradition (al-Aini, *umda*, iv. 609; *Chroniken*, i. 187), 'Othmān, a new convert, had to get it from his mother, an infidel, who had charge of it and who refused to give it up. 'Othmān had to threaten to kill himself before her eyes. According to another authority (*Chroniken*, i. 185), she heard in the court-yard of the house the threatening voices of Abū Bakr and of 'Umar before she decided to give it up (cf. Ibn Khaldūn, *Ibar*, ii. 44). But another tradition which does not assume the conversion of 'Othmān in the year 8, shows him on the terrace of the Ka'ba holding the key in his hand and shouting to the Prophet: "If I were sure that he is the messenger of God I would not refuse it to him". "Alī climbed up, held in hand out, took the key and himself opened the door; here 'Alid bias is evident (Rāsi, *Mafatīh*, ii. 460; Kalkashandi, *Subh*, iv. 264). — The general tradition is that the Prophet, in possession of the key, opened the door and entered with 'Othmān, Bilāl and 'Ukma, prayed two *rak'as* in a spot which is to-day held sacred and went out holding the key in his hand. At this point the traditions differ once more in detail, but end in the restoration of the key to 'Othmān; according to one account, the Prophet either on his own motion or because of the appeals of al-'Abbās or of 'Alī, leant on the posts of the door of the Ka'ba and made a speech which ended: "Everything is under my feet except the *sidāna* and the *siḥaya* of the pilgrims, which are going to be restored to those to whom they belong". He gave the *siḥaya* to al-'Abbās and returned the key to 'Othmān; according to the other tradition, the Prophet came out of the Ka'ba uttering verse 61 of Sūra iv., which according to an opinion which Tabari (*Tafsir*, v. 86) accepts as only of secondary value, was revealed at this moment and applies to the *Siḥana* and the *Siḥaya* (Vāḥid, *Muḥjam*, iv. 625; Rāsi, *Mafatīh*, ii. 460; *Chroniken*, i. 186).

But 'Othmān, master of the *sidāna* and of the key, did not exercise his rights: he followed the Prophet to Medina and died there in the year 42

(662—663) or he was killed at Adjuḍān in 13 (634). No one mentions him further and authors take the precaution of making the Prophet say that he returned the *sidāna* to 'Othmān and to Shaiba, and to the Banū Talha (Abū T-Mahāsīn, i. 138; Nawawī, p. 407; *Ud*, iii. 372; *Chroniken*, i. 184).

This attempt to make the cousin german of 'Othmān, Shaiba b. 'Othmān b. Abi Talha, he present at the taking of Mecca is unfortunate. Shaiba was not yet a Muslim, although some late authors have tentatively tried to convert him at the taking of Mecca. They are not able to escape the legend, which has grown up round the conversion of Shaiba at Honain a month later. Shaiba searches out the Prophet in the middle of the combat in order to take vengeance for the death of his father, who had been killed at Uhud by Hamza, but from the Prophet a light emanates causing him to lose heart. Muḥammad puts his hand upon his heart and causes the demon to depart from him. Shaiba is converted (Ya'qūbi, ii. 64; Ibn Hishām, 845; Ibn Sa'd, v. 331; Tabari, *Annales*, i. 1661, 3; *Ud*, iii. 7; *Chroniken*, ii. 46; etc.) and without the writers knowing why, Shaiba becomes the keeper of the Ka'ba; all his family hasten to come to his assistance; his brother Wabb b. 'Othmān, the sons of 'Othmān b. Talha, those of Musāfi b. Abi Talha who was killed at Uhud: "It is then", concludes al-Azrakī (*Chroniken*, i. 67), "all the descendants of Abū Talha who in general exercise the *hijāba* (*Chroniken*, i. 67)". But according to all the traditionists, it is Shaiba who is their chief. It is he who had the power to demolish the houses dominating the Ka'ba (*Chroniken*, iii. 15). It is he who came into conflict with Mu'āwiya about the sale of a house and who at the time of the second pilgrimage of the Caliph, not wishing to be disturbed, sends his grandson Shaiba b. Djabir to open the door of the sanctuary (*Chroniken*, i. 89). It is he who arbitrates between the two *hādjdj* chiefs, the partisans of 'Alī and those of Mu'āwiya (Tabari, *Annales*, i. 3448 and iii. 2352; *Muḥjam*, ix. 56/57); one of his sons 'Abd Allāh or Talha was a victim of the "abominable" al-Kasri (*Chroniken*, ii. 37, 38, 175). It is he who appears in one of the versions of the hadith where 'A'isha wishes to have the Ka'ba opened (*Chroniken*, i. 220, 222, 223). There are discussions with 'A'isha which settle that it is lawful for the Shaiḥiyyin to sell parts of the covering (*kurwa*) but only for the maintenance of the poor (*Chroniken*, i. 180, 182 and iii. 70—72; al-Kalkashandi, iv. 283); in spite of the efforts of the makers of hadiths, the question is discussed by jurists and in 621 (1224) al-Malik al-Kāmil, the nephew of Salādin, purchased from the Shaiḥiyyin for an annual fixed sum, the revenues that they drew from the opening of the Ka'ba and forced them to open it free of charge (*Chroniken*, i. 266). Shaiba died in 57 (676—677) or under Yazid b. Mu'āwiya (Tabari, *Annales*, iii. 2378; Ibn Sa'd, v. 331; *Ud*, iii. 8).

The tradition which gave to the Shaiḥiyyin the *hijāba* of the Holy House is an ancient one. It is still perpetuated in the name of the archway, which, beside Zamzam, marks the ancient boundary of the wall of the *maq'did al-haram*. When the former had been enlarged, the new gate, called at the present time Bab al-Salām, which was in a line with the Ka'ba and the ancient arcade, was

called in its turn Bāb Hani Shaiba (*Pālinage*, p. 132 and 133). But for this institution as for many others the period when it was established and merged in an anti-Islamic institution, remains obscure.

Bibliography: See the works cited in the article.

AL-SHAIBĀNĪ, ABŪ 'AMR ISHĀK b. MURĀN, who, according to Abū Maṣṣūr al-Azhari, had the nickname al-Aḥwā, was descended from Persian country gentry, but being a client (*mawla*) of some person of the tribe of Shaibān was called al-Shaibānī. He was the foremost of the Kūfī grammarians. We are told that he was called al-Shaibānī because he was instructor to those sons of the caliph Hārūn al-Raṣīd who were under the care of Yazīd b. Maryād al-Shaibānī. The date of his birth can only be ascertained approximately, but if the age at which he is said to have died is correct, he must have been born shortly after the year 100 (719–720). The date of his death is also uncertain, the years 205, 206 and 213 being given; the latter date is probably correct, as he is said to have died on the same day as the poet Abū 'I-ʿAtāhiya and the singer Ibrāhīm al-Mawṣilī who died in that year. Abū 'Amr was not only celebrated as a grammarian, but has also the reputation of a trustworthy transmitter of traditions (*ḥadīth*), and is quoted as an authority in the *Musnad* of Aḥmad b. Ḥanbal. He studied under the most celebrated masters of the Kūfī school and spent a long time among the nomad Arabs collecting poetry and linguistic data. In later life he removed to Baghdād. Earlier in life he compiled his large collection of the poetry of the Arabic tribes. This collection, which has not been preserved to us, contained the poems of some eighty tribes and was extensively used by later editors of ancient Arabic poetry. We find his name regularly mentioned, especially when poems are cited which were not known to other grammarians. He surpassed his colleagues, with the exception of Abū 'Ubayda, in taking an interest also in the historical allusions found in ancient poems, about which many others, like the Baṣrian al-Aṣma'ī, seem to be particularly ignorant or uninterested. Although a pious man, he was at times addicted to drink. It is not surprising that he gives at times in good faith spurious poems as genuine, as for instance the 66th poem in the *Divān* of al-A'ashā (ed. Geyer), where the borrowings from the Qur'ān are too evident. Only one of his works has come down to us, the *Kitāb al-Liḡm*, which was intended to be a dictionary of the Arabic language but was never completed. No doubt the *Kitāb al-Liḡm* of al-Khalil b. Aḥmad had given him the impulse for this undertaking. It is arranged according to the ordinary Arabic alphabet, but only completed to the letter *ghīm*. It is preserved in a unique copy in the library of the Escorial and being one of the earliest books in the Arabic language deserves special study (brief description in Cat. Derenbourg, No. 572).

His biographers tell us that he would not dictate his *Kitāb al-Liḡm* to anyone and that in consequence copies were taken only after his death. The scribe of the Escorial MS. whom I have not identified so far, belongs to a much older period than is stated by Derenbourg; he used a copy made by the grammarian al-Sukkari [q.v.], but as some leaves were missing in that copy he compared it with

one made by Abū Mūsā al-Ḥāmidī. The book is not a lexicon as the biographers would have us believe, though in a rough way the words are arranged in four chapters comprising words commencing with the first four letters of the alphabet. There are frequent errors due to the author himself. The particular value of the book lies in the fact that it is a large collection of expressions peculiar to certain tribes; on the first 27 pages no less than thirty different tribes being mentioned, and there is not the least doubt that Abū 'Amr extracted the unusual words from the 80 old *Divān*'s of Arab tribes which he had collected. This is evident when he quotes e.g. the poet Kuthayyir four times in succession. A diligent search in the *Lisān al-Arab* reveals also that the book had not been used by the lexicographers whose works form the basis of that work. The authorities and poets quoted are in many cases not cited elsewhere and I hope to prepare an edition of the complete work, which is the greatest monument of the Kūfī school of grammarians.

Biographers mention in addition the following works of Abū 'Amr all of which seem to be lost: *Gharīb al-Muṣannaf*, *Kitāb al-Khall*, *Gharīb al-Ḥadīth*, *Kitāb al-Kutub*, *Kitāb al-Lughāt* and especially the *Kitāb al-Nawādir*, a miscellany which has been freely extracted, generally without acknowledgment, by later authors. Among his most prominent pupils were the Kūfī grammarians Tha'lab, Ibn al-Sikkī, Abū 'Ubayd al-Kāsim b. Sallām and his own son 'Amr. The indices of the *Mufaḍḍaliyyāt* and the *Nakā'id* give us only a faint idea of how often he is quoted as an authority for the earlier literature. Ḳālī mentions him several times, e.g. l. 136, 211 and 238.

KRENKOW).

AL-SHAIBĀNĪ, ABŪ 'ABD ALLĀH MUHAMMAD b. AL-ḤASAN b. FARQAD, Mawla of the Banū Shaibān, a Ḥanafī jurist, born at Wasīṭ in 132 (749/750). Brought up in al-Kūfa, he studied at the early age of fourteen under Abū Ḥanīfa, under whose influence he devoted himself to *ra'y*. At twenty he is said to have lectured in the mosque of al-Kūfa. He extended his knowledge of *ḥadīth* under Sufyān al-Thawrī (d. 161), al-Awza'ī (d. 157) and others and especially Malik b. Anas (d. 179), whose lectures he attended for over three years in Medina. His training in Fiqh, however, he owed mainly to Abū Yūsuf, but he soon began to threaten the latter's prestige by his own lectures, so that Abū Yūsuf tried to get him a judgeship in Syria or Egypt, which, however, al-Shaibānī declined. In 176 (792/793) he was consulted by the Caliph Hārūn al-Raṣīd in the affair of the Zaidī imām Yahyā b. 'Abd Allāh. On this occasion he lost the Caliph's favour through his own fault and became suspected of being a supporter of the 'Alids (Tabarī III, 619; Kardarī II, 163 sqq.). He was, it is true, like some of his teachers a Murji'ā (Ibn Kutaiba, *Ma'ārif*, p. 301; Shāhrastānī, ed. Cureton, p. 108), but he seems

to have kept clear of Shi'a activities (*Fihrist*, p. 204). It was not till 180 (796) at the earliest — in this year Hārūn made al-Rakka his capital (Tab., iv. 645) — that Hārūn made him *kāfi* of al-Rakka. After his dismissal (187 = 803) he stayed in Baghdad till the Caliph commanded him to accompany him on his journey to Khurāsān (189 = 805) and appointed him *kāfi* of Khurāsān (according to Abū Hāzim (d. 292) in *Kardari* ii, 147). He died there in the same year at Ranshawān, near al-Raiy.

He belonged to the moderate school of *ra'y* and sought to base his teaching wherever possible on *hadiths*. He was also considered an able grammarian. Among his pupils are mentioned the imām al-Shāfi'i [q. v.], who nevertheless wrote a polemic against him (*Kitāb al-Radd 'alā Muḥammad b. al-Ḥaṣṣan* in *K. al-Umm*, Cairo 1325, vii. 277 sqq.). It is to Shaibānī and Abū Yūsuf that the Hanafi *Madhhab* owes its first spread of popularity. His writings, which have had frequent commentaries made on them, are the oldest that enable us to judge the teachings of Abū Ḥanīfa, although they differ in many points from the ideas of Abū Ḥanīfa. The most important are: *Kitāb al-Aṣl fī 'l-Furū'* or *al-Mabāsū'*; *K. al-Djāmi' al-kabir*; *K. al-Djāmi' al-saghir* (pr. Bulak 1302 on the margin of Abū Yūsuf, *K. al-Kharāḍī*); *K. al-Siyar al-kabir* (pr. with the commentary of al-Sarakhsī in 4 vol., Haidarābād 1335—1336), *K. al-Aḥbār* (lith. in India).

We also owe to him an edition, with many critical additions, of the *Muwatta'* of his teacher Mālik b. Anas, which differs widely from the usual version (cf. Goldziher, *Mus. Studien*, ii. 222, sq.; now printed in Kazan, 1909).

Bibliography: Ibn Sa'd, *Ṭabaṭā'i*, ed. Sachau, vii/ii. 78 (synopsis in: Ibn Kutaiba, *K. al-Mu'arraf*, ed. Wustenfeld, p. 251; al-Jahiz, ed. de Goeje, iii. 2521; al-Nawawī, *Biograph. dictionary*, p. 104); *Fihrist*, p. 203 sq. — The later sources are more legendary in character: al-Khatib al-Baghdadi, *Tarikh* in al-Sam'ani, *K. al-Ansāb*, G.M.S., xi. fol. 342v; al-Nawawī, p. 103 sqq.; al-Sarakhsī, *Sharḥ al-Siyar al-kabir*, introduction; Ibn Khallikān, *Wafayāt*, i. 453 sq.; al-Kardari, *Manāẓib al-Imām al-ḥaṣṣan*, Haidarābād 1321, ii. 146—167 (uses old sources); Ibn Kutūbaghā, ed. Rechtsgelerten*, p. 283; Dimitroff, *Arch-Schailān und sein corpus iuris* in *M.S.O.S.A.*, xi. 1908, p. 75—98; Brockelmann, *G.A.L.*, i. 171 sq. (HEFFENING).

SHAIBĀNĪ, Abū Naṣr Faṭḥ-Allāh Khān of Kāshān, a Persian poet of the sixth century. His father Muḥammad Kārim was the son of the Muḥammad Sant Khān who had been governor of Kāshān, had fought successfully against the nomad Turkomans and was fond of the society of men of distinction. The poet lived at the court of Muḥammad Shāh and then retired from the world. He wrote a work in prose and verse entitled *Maḥāṣir* "discourses" containing dihyrambics in honour of his patron Naṣir al-Dīn Shāh, the prime Minister Ḥādīj Mīrā Akās, Farīdūn Mīrā, governor of Khorāsān, etc. A large selection of his poems was published in Constantinople in 1308, for the Akhtar press, 312 p.

Bibliography: Rīfā Kāfi Khān, *Madīyat*

SHAIBĀNIDS, descendants of the Mongol prince Shaibān, a brother of Batu Khān [q. v.]. The names of the twelve sons of Shaibān and their earlier descendants are given by Rashid al-Dīn (*Djāmi' al-Tawārīkh*, ed. Blochet, p. 114 sqq., with notes by the editor from the anonymous *Mu'iz al-Ansāb*; on its importance as a source see W. Barthold, *Turkistan = spokhu mongolskago nachistieya*, ii. 56). Later writers give information on Shaibān and his descendants which is more legendary than historical; the bias of these tales is decided by the political conditions of the countries concerned. For example, Ötemish Ḥādīj, writing in Khwārizm under Shaibānī rule, tells how Čingiz-Khān heaped distinctions on his grandson Shaibān at the same time as Batu, but paid no attention to their brother, Tughai Timur; in contrast to this Mahmūd b. Wali, writing in Bukhārā under the rule of the descendants of Tughai Timur, says that Bahādur, son and successor of Shaibān, always regarded the descendants of Tughai Timur as his suzerains. (*Zap.* xv. 231 and 256).

According to Abū 'l-Ghāzī (ed. Desmaisons, p. 181), Batu granted his brother Shaibān the land between his own territory and that of his eldest brother Orda-İben; the land between the Irghiz and Ural mountains and along the east bank of the Yäyik was allotted him as summer residence and the lands on the Sir-Daryā and the lower course of the Ču and Sarī-Su as winter residence. These statements are in general corroborated by the account of Plano Carpini, a contemporary of the three brothers (Engl. transl. by W. W. Rockhill, *Hakl. Soc.*, Ser. ii, No. iv, p. 15).

According to Abū 'l-Ghāzī, the sovereignty in the house of Shaibān regularly passed from father to son for several generations; the names of the princes concerned were Bahādur, Djuči Bagha, Badaḡul, Ming-Timur and Fülād. After the death of the latter his kingdom was divided between his two sons, Ibrāhīm and 'Arabshāh, but the brothers remained together. Their summer-quarters were on the upper Yäyik, their winter abode on the lower Sir-Daryā.

On the other hand, according to both the *Mu'iz al-Ansāb* and the *Tarikh-i Abū 'l-Khair-Khānī*, the sovereignty immediately before the accession of Abū 'l-Khair (a grandson of Ibrāhīm) was in another line, the descendants of Fülād's brother Tungā; according to the *Mu'iz*, in 829 (Nov. 1425/1426) there was ruling there a prince named Yumaduk (in the *Tarikh-i Abū 'l-Khair Khānī*: Djumaduk), a great-grandson of Tungā, although his father Šafti was still alive. For the names of the two brothers Ibrāhīm and 'Arabshāh, the ancestors of the later rulers of Mā warā al-Nahr and Khwārizm, the Özbek used the compound Isā-'Arab (according to Abū 'l-Ghāzī, p. 182). The people ruled by the descendants of the two brothers called themselves Özbek, presumably after the famous ruler of the Golden Horde under whom the rule of Islam on the Volga was definitely established.

The conquest of Mā warā al-Nahr by the Özbek took place under Muḥammad Shāh Bakht or Shāh Beg (also Shaibak Beg) known as a poet under the name Shaibānī, which is also frequently given him by historians, a grandson of Abū 'l-Khair. The capital Samarḡand was occupied by him

towards the end of the year 905 (1500) and definitely the next year. After Shaibānī had fallen in battle against Shāh Ismā'il, the founder of the modern Persian kingdom, at Merw (Ramadān 27, 916 = November 29, 1510), Bābur succeeded for a brief period in restoring the rule of the Timurids in Mā warā al-Nahr, but he was defeated in 918 (1512) and had to abandon Bakhārā and Samarqand and in 920 (1514) also his last possessions in Mā warā al-Nahr (cf. HÄBER). Mā warā al-Nahr now remained under the rule of the Shaibānids (as descendants of Shaibān and not of Shaibānī, after whose death the suzerainty passed not to his sons, but to other princes of the house of Abu 'l-Khair) or Abu 'l-Khairids (Howorth, *History of the Mongols*, ii., 1880, p. 686 sqq.). Cf. the names and dates of the members in Lane-Poole, *Mohammedan Dynasties*, 1894 (21925), N^o. 98; additions and corrections in the Russian translation by W. Barthold; and a few additional facts in W. Wyatkin, *Spravochnaya Knizka Samar'k. Oblast.*, vi., 242 sq. from the inscriptions on the tomb of the Shaibānids in Samarqand. On the most important ruler of this house, 'Abd Allāh, cf. the article 'ABD ALLĀH B. BUKANDAR; on the latter's father, cf. the article BUKANDAR. Central Asiatic sources always give as the last ruler of Mā warā al-Nahr the son and successor of 'Abd Allāh, 'Abd al-Mu'min, e.g. Abu 'l-Ghāzī, p. 183; Muḥammad Yūsuf al-Munshī in J. Senkowski, *Supplément à l'Histoire générale des Huns*, etc., p. 30; Mahmūd b. Walī in W. Barthold, *Zap.*, xv., 260; Welyaminow-Zernow in his work on the coins of Bakhārā and Khīwa also calls 'Abd al-Mu'min the last Khān of the house of the Shaibānids (*Trud. Vest. Otd. Arkh. Obshch.*, iv., 1859, p. 402); also W. Barthold, under 'ABD ALLĀH B. BUKANDAR. On the other hand, in the *Turik-i Alam Arā' (Abbas of Iskandar Munshī, a successor to 'Abd al-Mu'min is given, namely Pir Muḥammad, "a relative of 'Abd Allāh and a prince of the house of Džānī-Beg". This statement is quoted by Welyaminow-Zernow in his later work on the Tatars of Kasimow (*Trud.*, etc., x., 345 sqq.) and this Khān identified with Pir Muḥammad b. Sulaimān, a grandson of Džānī-Beg, mentioned in the 'Abdallāh-nāma. Pir Muḥammad was soon overthrown by Bakī Muḥammad, the founder of the new (Astrakhān) dynasty, taken prisoner and killed (end of 1007 = June/July, 1599). Therefore in Howorth (ii. 739 sqq.) and Lane-Poole the history of the Shaibānids ends not with 'Abd al-Mu'min, but with Pir Muḥammad II.*

Western European and Russian scholars restrict the term Shaibānids to the rulers of Mā warā al-Nahr, and do not apply it to the rulers of Khwārizm, although the descendants of Shaibān ruled for a considerable time in Khwārizm. Khwārizm, like Mā warā al-Nahr, was conquered by Shaibānī (Rab' I 21, 911 = Aug. 22, 1505).

After the death of Shaibānī, it passed not to Bābur, but directly to the Persians. Soon afterwards (according to Abu 'l-Ghāzī, p. 197, as early as the year of the sheep 1511, — the Hijra date 911 given is certainly wrong) the Persians were driven out by another branch of the house of Shaibān, the descendants of 'Arabshāh. Khwārizm remained under the rule of this dynasty till the end of the seventeenth century; on one of the last rulers, Abu 'l-Ghāzī and his historical work, see the article ABU 'L-GHĀZĪ BAHĀDUR KHĀN. The son

and successor of Abu 'l-Ghāzī, Anūsha Khān (1663—1687) also had considerable power; after the conquest of Meshhed, he took the title 'Shāh'; from this the great canal, which he dug and which still exists, takes the name 'Shāhābād'. He was followed by his two sons, Khudāddād and Muḥammad Krenk; the year of the latter's death is usually given as 1099 (1687/1688); in the still unpublished history of Mu'nis, the historiographer of Khwārizm, 1106 (1694/1695) is given. After this for a considerable period there was no longer a dynasty until the foundation of the house of Kunghrat. The Özbek aristocracy installed as rulers only for periods princes of the line of Čingiz Khān.

On the history of the Shaibānids of Khwārizm, cf. especially Howorth, *History of the Mongols*, ii. 876—905; Weselowski, *Očerki istoriko-geograficheskoi razvedki v Khivinskoi Khanstve*, 1877, p. 101—157; S. Lane-Poole, *The Mohammedan Dynasties*, N^o. 101 and the genealogy in the Russian translation by W. Barthold, p. 304.

According to Abu 'l-Ghāzī, p. 177, the princes of Siberia driven out by the Russians about 1003 (1594/1595), were also descendants of Shaibān.

(W. BARTHOLD)

SHAIBĀNĪ KHĀN, ABU 'L-FATH MUḤAMMAD, also called Shāh Beg Uzbek, or better Shāh Beg Khān Uzbek and also Shaibak, a corruption of Shāhbakht, a name given him by his grandfather Abu 'l-Khair (the *name* Abu 'l-Fath is only found on his coins), Khān of the Uzbeks and conqueror of Transoxiana, over which he reigned from 906 (1500/1501) to 915 (1509/1510). Born in 855 (1451) the son of Shāh Būdāk and Āk Kūz Begum, in 873 (1468) he lost his father, who was surprised and decapitated by Yūnus, Khān of Mongolia, who had come to the help of the Kazaks [q. v.]. Entrusted to the guardianship successively of the Atabek Uighur Khān, the Emir Karāčīn Beg and Kāsim, Khān of Astrakhān, in the troubled period that followed the death of Abu 'l-Khair, he waited till he had sufficient followers to avenge his father. He attacked and defeated Burke Sulṭān, whom a devoted follower endeavoured to save at the cost of his own life, but Burke was soon discovered and put to death. Defeated near Sabrān by Irānī, son of Džānī Beg, Shaibānī took refuge in Bakhārā, then in Samarqand. The Khān of the Manguts (Noghāis) Mūsā, promised him the sovereignty of Kiptāk [q. v.], but did not fulfil his promise, saying that the people were opposed to it. Resuming the struggle, Shaibānī defeated the Kazak Barandak, was defeated by Mahmūd Sulṭān, son of Džānī Beg, and received the hospitality of the Emir of Khwārizm, 'Abd al-Khalīk Firuz Shāh.

In the struggle between Ahmad Mirzā Khān of Transoxiana and Mahmūd Khān of Mongolia, Shaibānī declared for the former, but by his defection at the battle of Shīr (893 = 1488) secured the victory of Mahmūd, entered the latter's service, and received from him the town of Turkistān, again defeated Barandak, but failed in his siege of Urgendj (Khīwa). The people of Sabrān, having rebelled, replaced their governor by Mahmūd, brother of Shaibānī, but handed him over to the Kazaks, who laid siege to the town. Mahmūd escaped, rejoined his brother who was besieging Vān, the governor of which, Mazid Tarkhān, was made prisoner; restored to liberty, Mazid made an alliance with the Kazaks against Shaibānī, who had

previously offered him his services. Peace was concluded with Barandak, who besieged Otrār, which was defended by Muhammad Timūr, son of Mahmūd Sulṭān; the treaty was sealed by a marriage.

Entering Transoxiana in 900 (1494/1495), Shaibānī four years later was master of almost the whole of this region as well as of Khorāsān; in 906 (1500), the conquest was completed. Bāisonkor Mirzā, the Timūrid sovereign of Samarkand, having demanded his assistance against Bābur in 904/905 (1498/1499), he came, but withdrew on seeing the enemy in force and went to raise a large army of mercenaries with which he took Samarkand, abandoned successively by Bābur and by Sulṭān 'Alī, brother of Bāisonkor, in 906. Zuhra Begum, mother of Sulṭān 'Alī, is said to have offered to hand over the town to Shaibānī if he would promise to marry her. The town was taken by assault. Khwāzja Yahyā, who defended it, was executed with his sons and Sulṭān 'Alī is said to have met the same fate. According to another story, Sulṭān 'Alī was killed by Shaibānī. He is also said to have been accidentally killed.

Aided by the inhabitants, Bābur regained Samarkand by a bold stroke. All the country rose and the Uzbeks were massacred. Shaibānī, who only retained Bukhārā and the neighbourhood, resumed the offensive some months later, seized Kara Kul and Dabāst, inflicted a disastrous defeat on Bābur at Sar-i Pul (q. v.) and starved Samarkand into surrender. By the terms of the capitulation, Khānzāda Begum, sister of Bābur, was to marry the victor.

In 908 (1502/1503), Shaibānī quarrelled with his protector, Mahmūd Sulṭān, laid waste the region of Shāhrukhiya and Tashkent and left it before Bābur arrived. After a raid against Uratpā, he gave his assistance to Sulṭān Ahmad Tambal, who had rebelled against Mahmūd Sulṭān, and recognised Shaibānī as suzerain of Fārgāna. Not strong enough to engage in battle, the enemy army stole away. Shaibānī surprised it and scattered it near Akhst. Bābur escaped, but Mahmūd Sulṭān and his brother Ahmad were made prisoners. They were well treated, but had to agree to the cession of Tashkent and Shāhrukhiya, to the incorporation of 30,000 of their subjects in the army of Shaibānī and to several marriages with the family of the conqueror. Returning to his estates, Mahmūd Sulṭān died soon after, poisoned, he said, by Shaibānī.

In the same year took place several expeditions in the south of Transoxiana, in which Khusrāw Shāh of the Kīpčak, had taken several towns. Balkh, which was governed by the Timūrid Badī' al-Zamān, was besieged. Ahmad Tambal had entrenched himself in Andījān; obliged to surrender, he was executed with his brothers, but pillaging was forbidden. Khusrāw Shāh fled without fighting, leaving Shīrīn Cāhā to succumb in Hījar after a heroic resistance, and abandoned Kundūz, which had supplies to last for twenty years.

In 911 (1505) Shaibānī set out to conquer Khwāzism, with an army of 30,000 former subjects of Mahmūd Sulṭān, undisciplined and dangerous, whom he tried to set at variance by suppressing their chiefs. Besieged for ten months, Urgendī, valiantly defended by Čin (or Hussin) Sūfī, was only taken by treachery. Khusrāw Shāh, arriving too late to help him, was massacred with his seven hundred men. Kitk Bī was made governor of

Khwāzism, and the relatives of Shaibānī were given important posts.

Next year Shaibānī repelled the incursions of the Kazaks. The Kīpčak at that time had two rulers: one *de jure*, Barandak, who died in exile in Samarkand, the other *de facto*, Kāsīm Beg. The latter was so dreaded that the rumour of his arrival caused a panic in the Uzbek army. At the end of 912 (spring of 1507), Shaibānī took the offensive against the kingdom of Herāt. Husain Bāikarā summoned the help of his sons, who hurried up, except Muṣaffar Mirzā, but he died soon afterwards. Coming to the help of the Timūrids, Bābur, indignant at their apathy and their rivalries, soon left them. Crossing the Oxus, Shaibānī entered Andikhūd, which was surrendered by Shāh Manṣūr Bakhshī, defeated Bābā Khākī and routed Dhu 'l-Nūn Arghūn, who was put to death. The Timūrids fled to Herāt, but left it in a few hours, leaving their harems and treasures in the palace of Ikhtiyār al-Dīn. Shaibānī entered Herāt on Muḥarram 11, 913 (May 24, 1507), and levied a contribution of 100,000 *tanḡa*'s on it, but reassured the inhabitants by his humanity. Two or three weeks later, he entered the palace. Falling madly in love with Khānzāda Khānum, wife of Muṣaffar Mirzā, he married her by force, without even observing the legal interval. Troops were sent in all directions against the Timūrids, who were tracked down and put to death; Badī' al-Zamān alone escaped, through the protection of Shāh Ismā'īl.

Two years were occupied in new expeditions against the Kazaks, a demonstration against Kābul and the siege of Kandahār, held by Nāṣir Mirānshāhī, which had to be abandoned. At this time Shaibānī massacred the Dughlāt princes, Sa'īd Caghātī, Mahmūd Khān, and his six sons, Muḥammad Husain Mirzā, etc. (914 = 1508/1509). Then posing as the champion of the *Sunna*, he next year summoned Shāh Ismā'īl to return to orthodoxy. The Persian ruler paid no heed to his threats and protested against the aggressions of the Uzbeks; Shaibānī then sent him a dervish's *kaykāl* (wooden bowl) and ironically invited him to follow the profession of his ancestors. Shāh Ismā'īl promised to go on a pilgrimage to Meḥmed, where he would meet his adversary, and at once took the offensive. Shaibānī at this time was busy putting down a revolt at Frīnkūh; the Kīrghiz had just inflicted a disastrous defeat on his son Muḥammad Timūr, and Shaibānī took refuge behind the walls of Marw. There he received an ironical letter from Shāh Ismā'īl on his way to meet his adversary, who had not kept his promise to come to attack him in his own country. The battle was fought on the banks of the Murghāb. Surrounded by 17,000 Persians, who had destroyed the bridges, the Uzbeks, having lost half their fighting men, succumbed after a desperate struggle. Shaibānī left the field to die of his wounds in an abandoned farmhouse. It has been said that his skull, mounted in gold, became Shāh Ismā'īl's drinking cup, that the skin of his head, stuffed with straw, was sent to Bāzaid II, and his right hand to Aḥs Rūstām, prince of Māzandarān, who had always wanted his support. His tomb in the madrasa, which he had founded some months before in Samarkand, became a place of pilgrimage. The most probable date of his death is Shābān 29, 915 (December 2, 1510). Cf. *Bābur Nāma*, transl. Beveridge, p. 350 note.

Shaibānī has rightly been reproached for his complete lack of scruples and for his cruelties; he only thought of extending his dominions and for him the end justified the means. But he was not the unlettered and boastful barbarian, extravagant and coarse, that Bābur shows us, giving lessons to theologians, correcting the works of artists and having his own bad verses recited before an audience (*Bābur Nāma*, ed. Beveridge, p. 206^b and transl. p. 325—326). He knew Persian and Arabic well and has left notable productions in Turki. His official poet, Mullā Binnā'i, had ability. He helped and encouraged men of letters, artists and scholars, sought their society and founded several madrasas. The last of the founders of great empires to arise in Central Asia, Shaibānī brought Uzbek power to its apogee; his successor, Kōtkūndjī Khān, was able to restore it again and successfully resist the Persians and Bābur; but the death of Shaibānī, with the separation of the Shī'īs of Persia from the Sunnis of Transoxiana, marks a far-reaching change in the situation in Central Asia (cf. Vāmbery, *Geich. Buchara's* ii. 64).

Shaibānī had married Mir Nigār Čaghatalī, daughter of Yūnus Khān, Khānzāda Khānum, whom Shāh Ismā'īl sent back to her brother Bābur with great honour and Zuhra Begī, who handed over Sāmārkand to him. In addition to Muḥammad Timūr, he had a son Khurram, who died young.

Bibliography: Mirkhānd, *Rawdat al-Safā*, vii. 61, 199; Khwāndamīr, *Ḥabīb al-Siyar*, iii. 284 199; Bābur, *Memoirs*, years 906 up to 915; This work, often misused, has a much needed complement in the *Tārīkh-i Rashīdī* of Mirzā Muḥammad Haidar Dughlāt (cf. especially p. 116—123, 158—169, 175—180, 190—211 and 221—237); Mrs. Beveridge also calls attention to the importance of the *Tārīkh-i Gulīda* *Nurāt Nāma* (British Museum, Or. 3222), a Turkish work dated 908 (1503/1503) of which the *Shaibānī Nāma* publ. by Bērczine, Kazan 1849, is only a synopsis. The epic of Muḥammad Sālīb Mirzā with the same title is a long panegyric of Shaibānī; it has been published with a German translation by Vāmbery, Vienna 1885, and re-edited by Melioransky and Sanoilovitch, St. Petersburg 1908. The genealogical history of the Turks by Abu 'l-Ġhāṣī, often transl. or edited from Bentinck 1726 and Denham's 1874, devotes its viiith book to him: *The Tadhkirat al-Muḥim Khānī* of Muḥammad Yūṣuf al-Munshī only contains the main events (*Mémoires asiatiques*, iv. 259). Veliūminoff-Zernoff, *Khānī* de *Kāsimoff*, p. 234—249; Erskine, *History of India* (cf. esp. 184—192, 203—206, 295—325); Howorth, *History of the Mongols*, ii. 691—713; Vāmbery, *Geichichte Buchara's*, ii. 35—65, 191—193, 250—268.

(L. BOUVAT)

SHAIKH. This word means one who bears the marks of old age, who is over fifty (cf. *Lisān*, iii. 509). It is applied to aged relatives; the Shaikh is the patriarch of the tribe or family.

In pre-Islamic antiquity the title *Sayid*, the chief of the tribe, was frequently given the epithet *Shaikh* meaning full maturity in years and therefore of mental powers. The moral influence of the Shaikhs over the Beduins was considerable and the term came to mean chiefs having a long career behind them, the glorious veterans.

In the history of the Muslim period, it has

frequently the sense of supreme chief, especially among the royal pretenders seeking to revive Arab traditions. Thus in the fourth (tenth) century the reformer Abū Yaṣīd calls himself *Shaikh al-Mu'minīn*, i.e. Shaikh of the Believers (Dory, *Bayān*, i. 225, transl. Fagnan, i. 315). Ibn Battūṭa (ii. 288—289) mentions a governor of a town with this title. It is also the title of the governor of Medina *Shaikh al-Haram*. Ibn Khaldūn (*Muqaddima*, ii. 14 and 165 of the transl.) tells us that at the Hafṣid court of Tunis the first minister, regent of the empire, who appointed all the officials was called *Shaikh* of the Almohads. Muḥammad, the founder of the Wattṣid dynasty took the title *al-Shaikh* as did Muḥammad al-Mahdī founder of the dynasty of Sa'dī Sheriffs.

The title, at the present day, at once a term of polite address and a sign of importance, respected, venerated, which all who govern, administer or hold a share of public authority are happy to have, whether in the spiritual or political sphere, in the mystic as well as the social life, is borne with unconcealed pride. It is given to the head of a family, to the political head of the section of a tribe called *shayb* (in North Africa) and comprising a group of common origin. It is given to high dignitaries of religion, to teachers, scholars, to men of religion without distinction of age, to all persons respected for their office, their age or their morals. Thus we have the *Shaikh al-Islām*, the title of the Grand Mufti, the Pontiff of Islām, the *Shaikh al-Dīn*, Minister of Religion, *Shaikh al-Madīna*, Chief of police, *Shaikh al-Balad*, the mayor of a town. Al-Bukhārī and Muslim are the two *Shaikhs* par excellence (Ibn Khaldūn, *Muqaddima*, ii. 165); the official leader of the pilgrimage is called in Egypt *Shaikh al-Djinnāl* (Perron, *Précis de jurisprudence musulmane*, ii. 641).

But it is particularly in the Muslim religious brotherhood or *ṭarīqa* (q. v.) that the title *Shaikh* has an importance of its own. (A. COUPE)

SHAIKH AL-ISLĀM is one of the honorific titles which first appear in the second half of the fourth century A.H. While other honorific titles compounded with *islām* (like *ṭarīq*, *Djāmi*, *Saif al-Islām*) were borne by persons exercising secular power (notably the viziers of the Fātimids, cf. van Berchem, *Z. D. P. V.*, xvi, p. 101), the title of *Shaikh al-Islām* has always been reserved for 'ulama' and mystics, like other titles of honour whose first part is *Shaikh* (e.g. *Shaikh al-Dīn*; the surname of *Shaikh al-Fayyā* is given by Ibn Khaldūn to the jurist Anad b. al-Farāḥ; cf. *Muqaddima*, transl. de Slane, i. p. lxxviii.). Of all these titles only that of *Shaikh al-Islām* has been extensively used. Thus in the fifth century the head of the Shāfī theologians in Khurāsān, Ismā'īl b. 'Abd al-Rahmān, was called by the Sunnis the *Shaikh al-Islām* par excellence (cf. also Djawainī, *Djāmi-Guṣṣa*, ii. 23, where there is a reference to the *Shaikh al-Islāmī al-Khurāsānī*), while at the same period the partisans of the mystics Abū Ismā'īl al-Anṣārī (1006—1088) claimed this title for him (al-Sulḥī, *Tahqīq*, Cairo 1324, iii. 117; *Djāmi*, *Nafahāt al-Uni*, ed. Lees, Calcutta, 1859, p. 33, 376). In the sixth century Fakhr al-Dīn Rāzī was called *Shaikh al-Islām*. Other examples in the centuries following are the mystic *Shaikh* Ṣafī al-Dīn of Ardabil (cf. Browne, *Persian Literature in Modern Times*, p. 33), and the theo-

logian al-Taftāzānī. In Syria and in Egypt, however, Shaikh al-Islām had become a title of honour (but not an official one) which could only be given to jurists and more particularly to those who by their *fatāwā*'s had attained a certain fame or the approval of a great body of jurists, especially at the beginning of the Mamlūk period. Thus in the polemics provoked by the teachings of Ibn Taimiyya, his adversaries refused him the title of Shaikh al-Islām, given him by his partisans (cf. the article *IBN TAIMIYYA*, where in the *Bibliography*, Muḥammad b. Abī Bakr al-Shāhī's treatise, *al-Radd al-wāḍiʿ ʿala man ʿaṣama anna man zammā lān Taimiyya Shaikh al-Islām kāfir*, is quoted). The modernists of our day who are under the influence of Ibn Taimiyya and Ibn Kāyim al-Djāwīziyya, represent these two jurists as religious leaders who really deserve the title Shaikh al-Islām (*al-Manār*, ix. 34, according to Goldziher, *Die Richtungen der islamischen Koranauslegung*, p. 339). Towards 700 (1300) Shaikh al-Islām had thus become a title which each *mufti* of some authority could claim for himself. Maḥmūd b. Sulaimān al-Kafawī (d. 1582) in his biographies of Ḥanafī jurists, *al-ʿAṭām al-akhyār min fuḥalāʾ madīnah al-Nuʿmān al-Muḥṭār* (Bruckmann, *G.A.L.*, ii. 83) says that among the *mufti*'s those are called Shaikh al-Islām who settle differences and decide questions of general discipline (according to 'Alī Emīrī in *ʿIlmiyye Sālnāme*, p. 306). We thus find that in Egypt and in Russia down to the present day, and in Turkey till the xviiith century (cf. Ewliyyā Celebi, *Siyāhatnāma*, passim) *mufti*'s (Shīʿis as well as Sunnis) of any importance may be given this title. In Persia the development of the title has been different; here the Shaikh al-Islām has become a judicial authority who presides in each important village over the ecclesiastical tribunal, composed of Mollas and Madṭahids. In the time of the Ṣafawids he was appointed by the Ṣadr al-Sudūr (cf. Tavernier, *Les six voyages*, Paris 1676, i. 598, who calls him Scheik el-Selom and Curtan, *Persia*, London 1892, i. 452, 454).

But the title gained most glory after it had become applied more particularly to the *Mufti* of Constantinople, whose office in the Empire of the Ottoman Sultāns in time acquired a religious and political importance without parallel in other Muslim countries. In the early centuries of the Ottoman Empire the influence of the 'ulama' had been greatly surpassed by that of the mystic shaikhs and after the reconstitution of the empire by Muḥammad I, we see a furious struggle between the new Sunni orthodox influences and mystic-Shīʿa influences (e.g. the incident of Badr al-Dīn Maḥmūd), a struggle that ended in the victory of orthodoxy under Selīm I. Historical pragmatic tradition seems to have ignored this development and must be accepted with a good deal of reserve, while the older sources give but little information. Thus the collection of biographies *al-Shaikh al-Nuʿmāniyya* (written under Sulaimān I) is compiled from quite the orthodox point of view, but it is quite evident from it that the majority of the older jurists in Ottoman countries had studied in Egypt or Persia or had Arab or Persian teachers; some of the first *mufti*'s of Constantinople were themselves foreigners like Fakhr al-Dīn al-ʿAdjāmī (*mufti* from 1430—1460) and 'Alī al-Dīn al-Araḥī. Later tradition makes Shaikh Ede Hāli, father-in-law of 'Othmān, already the

the first *mufti* of the Ottoman lands (*ʿIlmiyye Sālnāme*, p. 315). They also claim that a *Mufti* al-Anām was appointed as early as under Murūd II, with authority over all the other *mufti*'s (*Sijillat ʿOthmāni*, i. 6), and that Muḥammad II after the taking of Constantinople gave the official title of Shaikh al-Islām to the *mufti* of the new capital, Khidr Beg Celebi, who was at the same time given authority over the two *ḥāḍiʿ asker* (d'Ohason, von Hammer), but there is nothing to show that the *mufti* was already so important a personage at this time. According to the *Shāhī*'s, this Khidr Beg was only *ḥāḍiʿ* of Stambul, while Fakhr al-Dīn al-ʿAdjāmī was the *mufti* (*op. cit.*, p. 111, 81). If we later find that the biographer of the Shaikh al-Islām in the *Dawḥat al-maḥālikā* (see *Bibl.*), begins his biographies with the *mufti* Muḥammad Shams al-Dīn Fenārī (d. 1430), this seems to be purely conventional. It is only under Selīm I that the great influence of the *Mufti* of Constantinople begins to manifest itself during the 24 years in which the office was held by the famous Zambillī 'Alī Djemālī Efendi (q.v.). In the time of the latter (he was *Mufti* from 1501 to 1525), the two *ḥāḍiʿ asker* still had precedence over him because they sat in the Imperial *Dīvān*, while the *Mufti* did not (*Shāhī*'s, p. 305), but on the other hand we are told that the same Djemālī Efendi refused to accept from Sultān Sulaimān I the two *ḥāḍiʿ askerlikā* combined which were offered him (*Shāhī*'s, p. 307). It is only in the reign of Sulaimān that the *Mufti* of Constantinople seems to have acquired undisputed authority over all the 'ulama' of the empire, including all grades of judges. According to d'Ohason and von Hammer, this *mufti* was Civi Zāde Muḥyī al-Dīn Efendi (q.v.); it should be noted, however, that the latter was also the first *Mufti* who was relieved of his office by the Sultān (in 1541).

The growth in importance of the *Mufti* of Constantinople was in any case spontaneous and not caused by the sovereign will of the Sultāns, expressed by the conferring on his part of the title of Shaikh al-Islām, which at this period was borne by many *mufti*'s (see below). To explain this development, we may investigate in several directions. There is the tempting hypothesis of M. Gaudesroy-Demonbyones who sees a striking analogy between the position of *Mufti* of Constantinople and that of the 'Abbasid caliph at the court of the Mamlūks, before the conquest of Egypt by the Turks (*Le Syrie*, Paris 1923, p. xxii.). On the other hand, the organisation of the 'ulama' of the Ottoman empire under a religious chief may be in some way influenced by that of the Christian hierarchy in the empire under the Oecumenical patriarch. Lastly we may perhaps see in the Shaikh al-Islām a survival of the ancient mystical religious tradition in the Ottoman state, a tradition which demanded alongside of the secular power, a religious authority having no judicial powers but representing, so to speak the religious conscience of the people.

This last hypothesis would explain the tenacity with which the Shaikh al-Islām maintained his position through the centuries that followed in spite of the power of the Sultān to dismiss the holder of the title, a power of which they make frequent use. 'Othmān II (1618—1622) went so far as to deprive the *mufti* of all his

prerogatives — on account of his refusal to issue a *fatwā* legalising the fratricide — but under his successor all these prerogatives were restored. Murād IV had the *muftī* Akhi Zāde Husain (1632) put to death, without the dignity of the office itself being compromised. Sixteen years later it was the *muftī* 'Abd al-Rahmān Efendi who took the initiative in the dethronement and execution of Ibrahim I, although this cost him his office. The last *muftī* who was able to retain his position for a long series of years was Abū 'I-Su'ūd (1545—1574). After this time they succeeded one another at intervals averaging three to four years. Since the end of the xvth century it has been possible for the same person to become *muftī* several times. The frequent change of *muftī*'s became more and more connected with the political intrigues of the grand viziers, of the imperial harem, of the janissaries, intrigues by which the *muftī*'s themselves were sometimes gravely compromised, e.g. the famous Kara Çelebi Zāde [q.v.]; the majority, however, were men of integrity, although their political independence became for the most part quite illusory.

Since the beginning of the xvth century, the *muftī*'s have all been natives of Ottoman countries and, like all *'ulamā*, have belonged to Muslim families; in this they have been distinguished from the high officers of state and of the army who were frequently children of Christian parents, recruited by the *dewānīrme*. Later the *muftī*'s sometimes belonged to different generations of one family. They usually acquired the *maḥyā-khāt-i islāmīye* (the usual Turkish pronunciation, however, is *maḥkhat*) after having gone through the higher offices of the judicature; the majority of the *muftī*'s therefore had been *hāṭī* 'ashir before their appointment. This custom gave rise to an esprit de corps among the *'ulamā* and their chief which often comes out in history. Unlike the usage which gradually became established for the high judicial offices, the title of Shaikh al-Islām was not given to an individual without his actually accepting the office (there are only two exceptions).

The eminence of the Shaikh al-Islām's position in the state found its expression in the ceremonial. As, according to the *Kānūn* on ceremonial, he was regarded as the Abū Hanīfa of his time, only the Grand Vizier was higher in rank than he. In the xviiith century the *muftī* was obliged to pay visits only to the grand vizier. The formalities of his visits to the latter and to the Sultān were minutely regulated. The duties and prerogatives of the *muftī* on the occasion of religious ceremonies, the burial of the Sultān, the taking of the oath to the new sovereign (*la'fat*) and the solemn installation of the latter were equally defined. In addition to Shaikh al-Islām he had several more titles, the oldest of which *Muftī al-Anām* was the most used; others were *'Alam al-'Ulamā*, *Bahr 'Ulam Shattā*, *Asās* or *Afḥal al-Fuḍalā*, *Ṣadr al-Shūrā*, *Meinad-Nashin-i Fetwā*. His dress was always characterised by simplicity; the early *muftī* Molla Khouraw (q.v., d. 1480) wore a little turban over the *ṭāḍī* of the Imām Aḥmān (*Shakhṣiyye*, p. 137). In later times he wore a white *kafīlān*, trimmed with fur and a turban with a band of gold brocade (there are many pictures of the dress, e.g. in Choiseul Gouffier, *Voyage pittoresque de la Grèce*, II. 49).

The political function of the Shaikh al-Islām was formerly confined to his power of issuing *fatwā*'s. In supplying the demand for *fatwā*'s to private individuals, he was soon replaced by the Fetwā Emini (see below) but enormous importance was attached to *fatwā*'s relating to questions of policy and public discipline. To the first category belong for example the *fatwā* of 'Alī Djemālī on the war against Egypt (1516) and that of Abū 'I-Su'ūd on the war against Venice (1570). Under 'Othmān II the *muftī* Es'ad Efendi declined to authorise by *fatwā* the fratricide of the Ottoman princes. *Fetwā*'s regarding public discipline were for example, that of Abū 'I-Su'ūd authorising the drinking of coffee (see *KAHWA*), that of 'Ahd Allāh Efendi on the establishing of a printing-press (in 1727, cf. Babinger, *Stambul Buchwesen*, Leipzig 1919, p. 9) and that of Es'ad Efendi authorising the Niḡām-i Djedid of Selīm III [q.v.]. By their *fatwā*'s the *muftī*'s also collaborated in imperial legislation by legalising by their *fatwā*'s the different *Kānūnnāme*'s (e.g. the *Kānūn* of Sulaimān I all had the approbation of Abū 'I-Su'ūd, cf. *Milli tettebbuat mecmu'atı*, 1331, I, Nos. 1 and 2). Besides, it was the custom to consult the Shaikh al-Islām on all political matters of any importance. In the majority of cases the *muftī*'s thus exercised a beneficial influence on public affairs, although by their personal interference they had often to suffer from the Sultān's arbitrary measures. The decline of the Ottoman empire has sometimes been attributed to the reactionary spirit of the institution of the Shaikh al-Islām; it should be noted, however, that in many cases the *muftī*'s have shown themselves less reactionary than the majority of the clergy and that through their intervention they were able to prevent fanatical and arbitrary acts (e.g. Abū 'I-Su'ūd's opposition to the forced conversion of all the Christians). Although in the Ottoman empire of the xixth and xxth centuries the Shaikh al-Islām no longer played this important political role, appeal was occasionally made to the traditional authority of this institution when policy required it, as on the occasion of the deposition of 'Abd al-Hamid in 1909, the proclamation of the *ḡikāḥ* in 1914 and the *fatwā* against the nationalists of Angora in 1920. The *fatwā*'s of 1914 are not only concerned with the policy of the Ottoman empire but are addressed to the whole Muslim world. This fact reveals a new, and more general, pan-islamic conception of the function of the Ottoman Shaikh al-Islām. It is a conception which seems to have developed in Turkey in the course of the xixth century, probably in connection with new theories of the caliphate. And just as is the case with these latter theories, the idea of the central importance of the Shaikh al-Islām for all the Muslim world is first found in Christian European authors. The xvth century travellers (e.g. Ricaut) already compare him with the Pope. Volney (*Voyage en Syrie*, Paris 1789/1790, II. 371) regards him as the representative of the spiritual power of the Caliph to the whole Muslim world. Legally speaking, it is true, the *fatwā* of a *Muftī* is addressed to every Muslim who wishes to follow it, but it was only in 1914 that the attempt was made to take advantage of the universal spiritual authority, which was attributed at the time by Christians as well as by Muslims to the Shaikh al-Islām in Constantinople (cf. Snouck Hurgronje, *Verbreide Geschiedenis*, III. 272).

As head of the hierarchy of the 'ulamā', the Mufti had acquired the right of recommending to the sultan persons, who should be nominated to the six higher grades of the judiciary. He himself only very rarely acted as a judge.

When towards the end of the xviiith century the administration of the Ottoman empire began to be modernised, there was gradually formed an administrative department with the Shaikh al-Islām at its head. By this time there were already several personages who assisted the Mufti in his many duties, such as the *keşhoda* or *kāfya* who could represent the mufti, the *teşhîdî*, who was his agent in the government, the *mektûbî* or general secretary and the *fetvâ emini* whose duty it was to prepare and give out the fetvâs asked for by the public. All these functionaries had their own offices. In the period of the *tanzîmât*, this departmental organisation was consolidated. The Shaikh al-Islām was given as his official residence the former residence of the Agha of Janissaries; it was in this office henceforth called Shaikh al-Islām Kâpısı or Bab-ı Fetvâ (cf. the article Constantinople), that the offices of his department were housed till its abolition. The department dealt with the administration and management of all institutions having a religious basis, except the administration of the *emlâk*. The Shaikh al-Islām thus became the colleague of the heads of the other ministerial departments, which were created in the course of the xixth century. He became a member of the Ministry and as such his tenure of office was limited by the life of the cabinet of which he was a member. He retained his precedence over the other ministers; this priority was laid down in Art. 27 of the Constitution of Midhat Paşa of 1876, in which it is enacted that the Sultan is to choose the Grand Vizier and Shaikh al-Islām directly while the other ministers are appointed by the Grand Vizier. As early as the xviiith century the Grand Vizier and the Shaikh al-Islām were the only officials who received their investiture in the presence of the Sultan.

In proportion as the secularisation of the institutions of the Ottoman empire advanced, the influence of the Shaikh al-Islām in the State declined. The institution in 1839 of a Council of State (*Şûrâ-yı Devlet*) deprived him of much of his influence on domestic politics; then the creation in 1879 of new civil and penal tribunals under a new Minister of Justice (*Adliye Nâzırı*) took away another large share of his influence. A series of legislative measures was passed which defined the competence of jurisdiction according to the *şar'î* and *nizâmîye* tribunals. This development filled a prominent part in the religious reforms of the Young Turks (cf. e.g. the poem *Mezâkhat* of Zî Gök Alp, p. 62 of *Aus der religiösen Reformbewegung in der Türkei*, by Dr. A. Fischer, Leipzig, 1922) and was brought to its logical conclusion, when in 1916 the Young Turkish government removed the administration of all the *mahkâm-i şar'îye* to the Ministry of Justice and that of the *medresât* to the Ministry of Education. This step was justified by appeals to modern public law. The declared object was to avoid the mistakes made at the time of the *tanzîmât* and to make the *mahkâm-i islâmiye* a department for purely religious matters (cf. e.g. the *Tanin* of Oct. 31 and Nov. 2, 1916). It was in the same spirit that

an office was established in 1917 at the Shaikh al-Islām, the *dâr al-îlmâ al-islâmiye*, of a propagandist character. But after the armistice of Mudros (Nov. 2, 1918) the Young Turkish reforms were revoked by the new government. But by this time, however, the life of the Shaikh al-Islām was nearing its end, for in November 1922 after the victory of Turkish nationalisation all that remained in Constantinople of the old government institutions of the Ottoman empire was abolished. Their functions were taken over by the officers of the new government at Angora. This government no longer included the Shaikh al-Islām. At the constitution of the new government, it is true, a *şar'îye meclîsi* had been instituted but the anti-clerical spirit of the Grand National Assembly did not allow this imitation of the Shaikh al-Islāmlik to survive; it was replaced by a modest *diyanet işleri reisliği*, by a law passed on March 3, 1924, the day on which the Ottoman caliphate was abolished.

The fullest description of the office of Shaikh al-Islām towards the end of his existence is found in the *İlmîye Sâlnümesi* published in 1334 (1916) by the Shaikh al-Islām which was then under the vigorous direction of Mustafa Khair Efendi. The principal departments which composed it, were the *fetvâ-khâne*, the *medfîli-i idâre-i şer'îye*, a kind of court of cassation for the *mahkâm-i şer'îye*, an office for the administration of the medreses (*derz meclîsi ve medfîli-i mazâlih-i talebîye*), an office which superintended the printing of Kur'ân and legal works (*teşhî-i mazâhif ve müellifât-i şer'îye medfîsi*), an office dealing with the mystical orders (*medfîli-i meşârik*) and the administration of the *bait al-mâl* or *cumûl-i aylâm*. There were also administrative departments dealing with the archives, correspondence and accounts. As in other government offices, there was an under-secretary of state (*muşteşâr*). The Shaikh al-Islām Kâpısı also contained the great *şar'îye* tribunals of the *hâfî 'âşer*, the *hâsâm* and the *İstanbul hâfîsi*. Finally a large number of committees (*cumûmen*) whose advice was asked on different matters, including a committee for the nomination of judges had their homes there. For further details see the *İlmîye Sâlnümesi*.

Bibliography: The biographies of 108 Shaikh al-Islām are given in *Davhat al-Mashâ'ikh* by Rifat Efendi, lithogr. at Stambul n.d.; the last biography is that of 'Omer Husâm al-Dîn Efendi (d. 1288/1871). A *dhîl* has been written by 'Ali Emiri Efendi. Following these two sources the *İlmîye Sâlnümesi*, p. 322—641 gives the biographies of 124 Shaikh al-Islām down to Mustafa Khair Efendi (held office till Nov. 1916), edited by the historians Ahmad Refik and Ali Emiri Efendi. The latter contributed to the same *Sâlnüme*, p. 304—320, a *Mashâ'ikat-i İslâmiye târîhleri*. At Vienna there is a manuscript of the *Davhat al-Mashâ'ikh* of Mustafa Zâde (Flügel, ii, p. 409 199.). Many western writers on Turkey have notices in their books of the Shaikh al-Islām: Ricaut, *The history of the present state of the Ottoman empire*, London 1686, p. 200 199.; D'Obsson, *Tableau Général de l'Empire Ottoman*, ii, Paris 1790, p. 256 199.; J. von Hammer, *Der osmanischen Reichs Staatverfassung*, Vienna 1813 ii. 373 199.; other descriptions: Dr. Stephan Kekule, *Über Titel*,

Amir, Rangstufen und Anreden in der offiziellen osmanischen Sprache, Halle 1911, p. 16 sqq.; G. Young, *Corps de droit ottoman*, Oxford 1905, I, 285 sqq.; A. H. Lybyer, *The Government of the Ottoman Empire in the Time of Suleiman the Magnificent*, Cambridge 1913, p. 207 sqq.

(J. H. KRAMERS)

SHAikh 'ADĪ. [See 'ADĪ].

SHAikh SA'ID, a seaport in South Arabia on the strait of Bāb al-Manḍab, 2 miles from the island of Perim. It lies on a cape whose cliffs 850 feet high dominate this island. Two volcanic hills which lie on a peninsula 6 miles long by $4\frac{1}{2}$ broad here form the extreme south-west corner of Arabia. Between the latter and Perim runs the so-called Little Strait, called Bāb al-Manḍab or Bāb Iskandar by the Arabs, because Alexander is said to have built a town here; there are actually ruins south of the cape. A. Sprenger and E. Glaser have — probably rightly — identified Shaikh Sa'id with the ancient Ocellis or Acella mentioned by Pliny, *Nat. Hist.*, vi, 23, § 104, 28, § 152; Ptolemy, i, 7, and the *Periplus Maris Erythraei*, § 25. It took about 20 days to reach here from Berenice. The name Ocellis, as Glaser suggests, probably conceals some name like Ukālī. The harbour originally belonged to the kingdom of Katabān (q. v.), then passed to the Gubanites and finally to the Himyarites. In the 14th (x^{iv}) century it belonged to the Banū Maḍīd b. Ḥaldān b. 'Amr b. al-Ḥaf b. Qudā'a. The modern name of the place comes from the tomb of Shaikh Sa'id, who is buried on the north side of the cape. But the harbour is now of no practical significance. It is a so-called monsoon harbour, which may become very dangerous for shipping at the turn of the monsoon.

The unusually favourable strategic situation of the place prompted the French Admiral Mahé de Labourdonnais as early as 1734 to acquire the cape from a native Sultān. Louis XVI is even said to have kept an agent there. Shaikh Sa'id continued to be a French sphere of interest. No less a person than Napoleon Bonaparte wished to garrison the place, a proposal also suggested to Mehemmed 'Alī in 1828 by the French government. But, when in 1838 he was actually preparing to put the plan into force, he encountered the resolute opposition of England who occupied 'Aden in 1839 and Perim in 1857. Not long afterwards the French again became actively interested in the place. After long negotiations a Marseilles firm bought the territory for 50,000 francs from the native sultān to whom it belonged. It was not till 1871 that this purchase was confirmed to the Société de Bāb el-Mandeb, founded by Raboud-Basis. During the Franco-German War, the port was used as a coaling station by the French. But after the war French interest in this harbour declined and in 1873 an agreement was come to between England and Turkey in which the latter recognised England's sovereignty over Cape Bāb al-Manḍab. In 1884 Shaikh Sa'id was occupied by the Turks. The French had to reconcile themselves to this, especially as the Turks had planted fortifications in the Cape. It was not till 1896 that the French Chamber again began to take an interest in the harbour. France is even said to have declared the territory of Shaikh Sa'id to be a French Colony. Later repeated attempts to enforce France's claims in a practical fashion

have always come to nought. Turkey continued to occupy the place and in time made it a well defended fortress which, although bombarded by the English in 1914, was strongly supported next year by the troops of the Imām Yahyā Ḥamid al-Dīn and was even able to bombard Perim and close the straits for a time. The military collapse of Turkey in the world-war resulted in the restoration of the place to the native population. Like Mokhā, Shaikh Sa'id is an important coast-town in the independent imāmate of the Zaidī lord of Yemen, which is of all the more value as coal and iron are found there.

SHAikhī, followers of Ahmad Aḥsā'ī (q. v.), dissenting Shī'a theologians of Persia. Their teachers are the pupils and successors of the founder: Saīyid Kāzīm of Reḡat, teacher of Ḥādījī Muḥammad Kāzīm Khān of Kirmān and Mollā Muḥammad Māmakānī, a theologian who was one of the commission which tried and condemned the Bāb at Tabriz towards the end of 1847. Their doctrines definitely prepared the way for those of the Bāb. They are opposed to those of the Akhbārī, who follow pure tradition; they protest against the immoderate number of traditions and the complete absence of criticism with which they are adopted; from this particular point of view they approach the Sunnī way of thinking.

They give new explanations of the principles of religion and of ḥadīth. The twelve Imāms are the effective cause of creation, being the scene of the manifestation of the divine will, the interpreters of God's desire. If they had not existed, God would not have created anything; they are therefore the ultimate cause of creation. All the acts of the divinity are produced by them but they have no power in or of themselves; they are only organs of transmission. Hence we have the charge of *tafsīl* (delegation of God's powers) wrongly brought against the Shaikhī by the Shī'a theologians. God being incomprehensible and escaping the thought of every created being, He can only be understood through the intermediary of the Imāms, who are in reality hypostases of the supreme being; to sin against them is to sin against God. The *lawḥ mahfūz* is the heart of the Imām, which embraces all the heavens and all the worlds. The Imāms are the first of created beings and have preceded them all.

In eschatology the Shaikhī have been charged with denying the resurrection of the material body. They reply that man possesses two bodies; one is formed by temporal elements: "like a robe which a man sometimes puts on and sometimes takes off"; it is this which dissolves in the grave; the other which subsists when the first has crumbled to dust, is a subtle body which belongs to the invisible world (*ʿālam al-haywānīyāt*); it is this which is resurrected on this earth and then goes into paradise or hell.

Their thought became later more definite for they admitted two *ʿālam* and two *ʿālam* (these Arabic words both mean "body"); the first *ʿālam* is composed of the four visible elements, it is it which is perceptible in this world below and does not share in the future life; the second *ʿālam* persists and reappears in the other life; the first *ʿālam* is the body which the spirit reclothes in *barzakh* (purgatory); from the moment of death till the first sound of the trumpet, the second *ʿālam* subsists pure: it is it that the spirit becomes incarnate which directs itself towards the second *ʿālam*; it is it and the latter which come out of the grave entirely purified.

Knowledge of God. For God there exist two kinds of knowledge; one is essential knowledge and has no connection with contingencies: the other is a new knowledge created (*mukhlāṭ*); this knowledge is the actual being of the known and the Imāms are the gates (*bāb*) which give access to this knowledge. The world is eternal in time and new in essence, for accidents without substances, forms without any substratum cannot come into existence. Accidents are transitory novelties, sometimes they exist, sometimes they disappear; they were nothing and they return to nothing. Substance on the contrary is not a transitory novelty; in consequence matter is a novelty in essence; it is eternal in the future, but not in the past; otherwise the future life would have an end; paradise and hell would disappear. Paradise is the love of the people of the House, the members of the family of the Prophet, the Imāms. Paradise and hell are created by the acts of men.

The material bodies of the Imāms after their death fall into decay in the grave; while it is true that these bodies are subtle they show themselves under the human form, created of the four elements; as soon as their human body is no longer useful to men, they return it whence they have taken it and each of its molecules returns to its source; while the Shīʿīs believe that the bodies of the Imāms are not subject to the injuries of time.

It is not possible for known things to be eternal; they must therefore then be new and contingent; they are different to the essence of God but knowledge existed before the objects of knowledge. There are two kinds of knowledge; essential knowledge and newly created knowledge; the latter is of two kinds, that of possibility *ʿilm al-ḥāzī* and that of beings *ʿilm al-mawjūd*; the first is used of beings before their existence, and the second once they exist. This second acquired knowledge is not an attribute of God, it is present before Him.

They attribute particular importance to the order given by God (*amr*) which is the first class of created things and precedes the creation in the strict sense of the word (*ḥaṣṣ*); the first constitutes a fixed world without change; it is through

it that time exists and in consequence the latter can exert no influence on it. The knowledge of other creatures is preceded by ignorance, while this is not the case with God; this knowledge is new in the creature, it cannot be so for God. It is by the reflection of phenomena that man gains the apprehension of the world which surrounds him. This reflection does not exist for God who knows beings by their essence. Just as beings are manifold and varied as regards their existence, so there exists in God's knowledge of beings plurality and multiplicity.

They condemn Sūfism and its pantheism with such sayings as: "It is impossible for the essence of God to be the being of multiple things". They explain the miracles of the Prophet (ascension by night, the split moon) not in a material sense but figuratively and with rationalistic interpretation.

At the beginning of the reign of Nāṣir al-Dīn Shāh, troubles broke out in Tabriz in 1266 (1850) because a Shaikhī was forbidden to enter the public baths as a result of a decision of the *Muḥtashid*. The governor succeeded in quieting the disturbance and made peace between the two parties. Later persecutions were several times directed against the members of the sect.

SHAIKHĪ (pronounced: *Sheikhī*), in two syllables, *nisha* from Shaikh, q.v.), nom de plume (*sahhāṭ* or *mahhāṭ*) of a considerable number of Turkish poets. V. Hammer mentions sixteen of them in his "*Geschichte der Osmanischen Dichtkunst*". (See the index s.v. Scheichī). The most important by far was Shaikhī Celebi, alias Mevlānā (Mawlānā) Yūsuf Sīnā Germiānī, a Turkish "Romantic" poet. Born at Kutahia (Cotaseum in Phrygia), the capital of the Germiān, he flourished at the beginning of the 15th century. He is sometimes called *shāikh al-shuʿarā*, "The sheikh of the poets".

It is difficult to form an exact idea of his life. Information is not lacking either from the "*ṭikrār-nāme*" (the authors of poetical biographies) or from the historians, but none of them was contemporary with Shaikhī, and their information is vague and they are sometimes difficult to reconcile with one another. V. Hammer and Gibb — the latter without even citing his sources — have combined the different data so as to obtain a continuous narrative, but one that does not give a great guarantee of truth.

Here we give a résumé of the biography of the poet according to Sehi, an author less often cited than Laṭīf but having, nevertheless, the advantage of being of an earlier date (he wrote between 1520 and 1548): Yūsuf Germiānī went to Persia where he studied under Saiyid Sharif Dīrdjānī (q.v.), showing a marked preference for medicine, whence the name of Hekim (doctor) Sīnā by which he was equally well known. The Emir Sāleimān (the son of Bāzand I, who ruled at Adrianople, then at Brussa from 1402 to 1410 and who was the patron of letters and of art) having noticed his poetical ability, Shaikhī entered into favour with

the Ottoman sovereigns and later Murād II wished to make him a vizier. Some envious individuals persuaded the Sultan to put Shaikhī's talent to the proof by imposing upon him a very difficult task, the translation of the "Five" Poems (*Khamsa*, q. v.) of the Persian Nizāmī. Shaikhī having chosen the poem called *Khuraw u-Shirīn* began by presenting the first 1000 verses of it to Murād who rewarded him generously. On his return into his own country, the poet was assailed and robbed by brigands whom his enemies had placed in wait for him. This was the occasion of his writing a well-known satire called *Khur-nūme*, "Laus naini". He was buried at Germiān (Kütahia).

According to *Tashköprüzade*, Shaikhī had been initiated into Sūfism by Hādī al-Bairāmī, the founder of the Bairāmī order, who was born and buried at Angora, in 833 (1429—1430). Shaikhī was actually at Angora, to which he was called to the court of Sultan Mehmed I (according to Rieu, wrongly Mehmed II) in 818 (1415—1416), (according to the *Taḥf al-tawarrūk* of Sa'd al-Dīn) in his capacity as doctor to the prince of the Germiān, who had been seized with a lethargy. The poet-doctor is said to have declared that an entertaining romance would suffice to dispel the melancholia. The following verse taken from a *na'at* of Shaikhī, which is quoted in the *Faṣḥ al-Riḥād* (p. 86) seems to confirm this detail:

lafe-lā müferriḡi maras-ı ruh-a dir ihfā.

"The entertaining word is the remedy for the sickness of the soul".

Shaikhī is said to have been rewarded for his medical services by the title of physician in ordinary to the Sultan (*ser fahib* or *schin-bazār*) which he is said to have been the first to hold officially. The author of the *Saḡīr-i 'Othmānī* in recounting this anecdote calls our poet Sināi instead of Sinān (iii. 113 and iv. 721) and also gives the date of his death as 829 (1425—1426), which would make him die at a very early age, if it is true that he was born under Bāyazid I (whose reign began in 1389). An anecdote which almost all the authors repeat and which resembles a folk-lore tale, tells how a patient with solemn countenance one day doubled the sum which he was giving to "doctor", Shaikhī in order to enable him to buy something to cure his own eyes, which were affected.

The sojourn and medical practice of Shaikhī at the Ottoman court seem very different to reconcile with the continuous stay which he is said to have made at Kütahia according to *Tashköprüzade*. One is at times given the impression that two persons have been confused. From the point of view of the history, which is so little known of the local Turkish dynasties, which the Ottoman dynasty, particularly jealous of its own greatness, had absorbed and effaced, it would have been interesting to have had more precise ideas on the relations of Shaikhī with the Germiānoghlu. [q. v.] In the preface to his interminable *Sāḡh-nūme*, Firdawsī Tawīl, who, having lived during the time of Bāyazid II (1481—1512), is anterior to Sehi himself, tells us that Shaikhī had begun *Khuraw u-Shirīn* not for the Sultan Murād II, but for a prince of the house of Germiān called Mustafā. The historian 'Alī tells (iv/l. 191) that the bucolic sovereign (*hākim-i rūstāyī*) of the Germiān, unable to appreciate the beauty of the "ḡazals" of Shaikhī, wearied quickly of his company. One day he greatly upset

the poet by showing, by his generous gifts, his preference for the following verses which an "aḡam" (popular bard) had recited to him.

*Benim dōwletü Sultānım, 'aḡbāfın (sic!)
ḡayr olun,
Yedüyüh balla haimaḡ, yürüdüyüh ḡayr olun.*

"Fortunate Lord that thy end may be happy, may you have only honey and cream for fare and may you tread on your way, only on the meadows".

The necessities of the metre (*azad*) made it necessary to read 'aḡbāfın instead of the correct 'aḡbetiḡ and ḡayr (metrical value: -) instead of ḡayr (-). The pronunciation ḡayr was in conformity with the vulgar Turkish usage but indescribably shocked men of letters.

The works of Shaikhī: the most important is the poem already mentioned, *Khuraw u-Shirīn*. All the authors say that it was left incomplete and that it was *Shāḡh-zāde* (Shaikh oghlu) Djemālī who finished it. In reality the addition consists of 111 verses, in which the subject dealt with in very vague terms is the death of Shaikhī and in which we find a new eulogy of Murād II. The first verse of the addition is: *ḡāḡib ey bīn dīnün nūḡh idenler; ku ḡikmet iḡstirini ḡāḡh idenler.*

According to the MS. Asc. f. l. 322 in the Bibliothèque Nationale of Paris, Djemālī had as his prenomens: Hāyazid ben Mustafā (fol. 273). The MS. 328 follows this hint with the words Ahmed al-tarḡūmānī al-Aḡshāhri. It is known that the poem attributed to Ferhād, the lover of Shirīn, the bas-reliefs of Bisutūn (cf. Hammer; *Hist.* ii. 169). The work of Shaikhī is not the first Turkish translation of the poem. See a translation into Kıptak Turkish of 1383, mentioned in J. Deny's *Gram. de la langue turque*, Paris 1920, p. xx—xxi.

The satire called *Khur-nūme* was due, according to certain authors, to reasons other than those mentioned by Sehi. The district where Shaikhī is said to have been the victim of brigands was called *Dokuzlu*.

Shaikhī also composed ḡazals, as well as *na'at* and *terḡi'at bend*, and a certain number of *ḡazla* of which a few were dedicated to the house of Germiān, others to the Emir Süleimān, which were discussed above. It seems difficult to admit that there is here, as in the case of the poet Ahmedī — see Gibb, i., p. 265 — a confusion with the prince Süleimān of the family of Germiān the date of death († 790 A.H.) of the latter rendering the same hypothesis improbable.

Like his predecessor and compatriot (?) Ahmedī [q. v.] but with greater authority, Shaikhī naturalized in Turkey the methnewi metre (which is that of *Khuraw u-Shirīn*). He was, moreover, greatly influenced by mysticism which pervaded the methnewi par excellence, that of Mawlānā Djālāl al-Dīn Rūmī. Shaikhī was considered the greatest of the Turkish poets of the epoch before Ahmed Pasha, who accustomed the Turks to a language more refined. Too learned for the taste of the prince of Germiān, Shaikhī was, however, criticised by Latīf for his "oghuzāne" style, this ethnic here meaning "vulgar". Certain Turkish critics, even modern ones, give vent again to these complaints, reproaching Shaikhī with the use of Turkish "archaisms". It is certain that in the eyes of Turks to-day these peculiarities are only an

additional merit, and that the relative simplicity of his poetry in which words truly Turkish are not systematically banned, is appreciated more and more.

Of other Turkish personalities of this name, there is to be mentioned the author of a supplement (*Dhail*, 1780 bibliographies up to the reign of Ahmed III) to the *Hadâ'ik al-Hakâ'ik* by 'Atî, who composed a continuation of Tashköprüzâde's work (cf. the *Bibliography*). Another Shaikhî ('Abd al-Kâdir, † 1002) was Shaikh al-Islâm in the reign of Murâd III.

Bibliography: Oriental authors: the different *Tadhkirat al-shu'arâ* (*tadhkirat-shu'arâ*) are easy to consult, being arranged in the alphabetical order of the names of the authors. (See those of 'Ashik Çelebi, Hinnîzâde or Kinnîzâde, especially). Here are, however, a few more precise references for the printed *tadhkirat*: Sehi, *Huht Bihisht*, edited by Mehmed Shâkirî (Library of Amid) 1325 (1909), p. 32 sqq.; Latîfî, *Teskere-i Latîfî*, ed. Ahmed Hecwet (Library of the İkdâm), Constantinople 1314, p. 215 sqq.; do. in German: *Latîfî oder Biographische Nachrichten von vorzüglichen türkischen Dichtern, nebst einer Blumenlese aus ihren Werken, aus dem türkischen des Mowla Abdul Latîf und des Ashik Hassan Tchelebi übersetzt von Thomas Chabert*, Zürich 1800, p. 219 sqq. (less complete); Tashköprüzâde, *al-Sha'ir al-namuniya*, transl. into Turkish by Edirneli Mehmed Medjdi Efendi, Constantinople 1269 (1853), p. 128—129; 'Ali Efendi, *Künhûl-Akhar*, Constantinople 1277, iv/l, p. 190; 199; Fâik Reshîd, *Esâf*, Conspile 1311, p. 36 sqq.; do., *Târîkh-i adabiyât-i 'omâniye*, Conspile n.d., p. 80 sqq. (many verses from Shaikhî quoted); Shihâb al-Din Süleimân, *Târîkh-i adabiyât-i 'omâniye*, Conspile 1328, p. 37 sqq.; Mehmed Thurnîya, *Sijill-i 'omâni*, Conspile 1308, ill, p. 113 and iv, p. 721.

Mus. by Rieu, p. 165. (J. DENY)

SHAIKHÎYA. Name of a sub-division of the Shâdhiliyya-order [q. v.], which deserves the name of a brotherhood rather than that of an order. It was founded by 'Abd al-Kâdir b. Mahammad (951—1023 = 1544—1615), who bore the title of Sidi Shaikh. He was a lineal descendant of the caliph Abû Bakr and belonged to a branch that emigrated from Arabia to Egypt in the 1st century A. H., and from there to Tunisia where it resided from 699—802 A. H.; from this date onward it had its quarters in the Maghrib, where it was known under the name of Bû Bakrîya or Ulûd Bû Bakr.

Sidi Shaikh was *mukaddam* of the Shâdhiliyya-order. He retained the rite of this order with the addition of a thrice repeated *fatîha* at the end of

each of the five daily *salâts*. His piety and character made him the chief of his people in matters spiritual and temporal. In order to procure accommodation for his many visitors, he built a *ḥusn* at al-Abyad which to the present day is one of the five *ḥusn* of the Shaikhî's. His position became hereditary in his family for some generations. In the second half of the xviiith century, however, a schism took place in consequence of which the Shaikhîya became divided into two groups, the *Shirazi* and the *Gheraba*. The further history is dominated by this schism.

In the xixth century a certain Bû 'Amama ('Amâma?) tried to unite the factions under his authority, which he based upon his being divinely appointed successor of Sidi Shaikh. His personal attitude resembled that of the popular derwishes and was moreover marked by hatred of Christians. He extended the rite by the addition of a *dhikr* and a *du'a*.

The Shaikhîya has its centre chiefly in the southern borderland between Algeria and Morocco. Apparently it never spread abroad.

Bibliography: L. Rinn, *Marabouts et Khaman*, p. 349 sqq.; O. Depont and X. Coppolani, *Les confréries religieuses musulmanes*, p. 468 sqq. Cf. also the art. *TARIQA*.

SHAIKHZÂDE, pronounced Sheikhzâde, a compound Persian word signifying "son (or descendant) of the Shaikh" [q. v.], synonymous with the Turkish expression *Sheikh-oghlu*. The word *sheikh*, pronounced in vulgar Turkish, *Shâh*, means according to Turkish usage "prescher in a large mosque; the head of a religious brotherhood". This expression must not be confused with *shâh-zâde* (vulgar secondary form for *shâh-zâde*) "prince imperial".

Sheikhzâde is a patronym of the same kind as *Imâmzâde* or *Imâm-oghlu*, *Mû'addihînzâde* or *Mû'addihî-oghlu*, *N.-Pashazâde*, *N.-Beyzâde*, *N.-Efendîzâde*. The Arabic synonym *ben al-Shaikh* is not used in Turkish; expressions like *Ibn-i Kemâl* for Kemâl Pasha-zâde are exceptional.

The patronymic Sheikhzâde or Sheikh-oghlu has been employed as a proper noun in the names of the following Turkish personages:

1. The author of the *Khusrâw Nâme*, which was completed about May 20, 1387. It is in the preface and in the epilogue of this work that we find information about the poet Sheikh-oghlu or Sheikhzâde, and at the same time about his patron, Süleimân Shâh, the prince of the Germanian. (The quotations which follow are from the manuscript A. F. T., N^o. 314 of the Bibliothèque Nationale in Paris).

Sheikh-oghlu was born about the year 1340. He was in fact "about fifty years" of age when he finished his book (*in shimidi illi-ye yaklaşkıl yaşımı*, fol. 304, b. l. 9). By birth on both his father's and his mother's side he was of high descent (*iki tarafdân benüm aslüm ulu-dur*; l. 2). His ancestors were powerful (*devlet isit*), men of learning (*ilm isri fâhîr beyler*), Muslims of note. Süleimân Shâh had absolute confidence in him (*hem il-idüm ada hem tash-idüm ben, Ne illüm uylessen zabûh (shâddâh) idüm ben*; ibid., l. 6) and had granted him the right of acting as secretary as well as High Treasurer (*nishân u defter u mül u shazine*; fol. 6, l. 7). This entirely confirms Sehi, who says that Sheikh-oghlu was *ni-shâddî* and *defterdâr* of the prince of the Germanian.

It is also to this prince that he intended to dedicate his poem. He says in fact:

*Süleimân-şâh semâni-di kâ ercel,
Usatdım bu kitâbı dümnye el,
Kî şâhı-di temâmeti Germiyanuh
Hem ulu oğlı-yıldi Cağhâdanuh*
(MS. N^o. 355: *Cağhâdanuh*).

"It was in the time of Süleimân Shâh when I first
"stretched out my hand to compose this book;
"he was the Shâh of all the Germiyan
"and the elder son of him who makes the
"weapons clash".

But this prince died when the author was in the middle of his work (fol. 16, l. 10). Sheikh oğlu then entered the service of Yıldırım Bayazid, the son-in-law of Süleimân Shâh, still prince imperial, having already received as an appanage the capital of the Germiyan (see article GERMİYANOĞLU), and it is to Bayazid that the poem is dedicated in recognition of the benefits which he had heaped upon the author in his turn (fol. 18, l. 1). This combination of circumstances explains how the poet could at the same time write a eulogy of his former master. He could not forget indeed that the latter must be eclipsed and over-shadowed by his powerful namesake, who was equally a patron of the Ottoman House (the Emir Süleimân, son of İlyasid). His name has only been preserved on inscriptions and coins (Khalid Edhem, *Al-i Germiyan kışâbıleri*, *Revue de l'Institut d'Histoire Ottomane* [in Turkish], i. 112—128; Ahmad Tawhid, ... *Kütahyede Germiyan [Kermiyan] Beyleri*, ii. 505—513).

In the eulogy of Bayazid, "young in age but old in knowledge" (*Yigit-dür 'emrile, 'ağlılı pîr*; fol. 18, b. l. 11), this prince is described in different ways in the different manuscripts. That of Berlin, the oldest, styles him: "Bayezid Bey, son (= descendant) of Orkhan Bey". In the MS. 314 of Paris (fol. 16, b. l. 1 and 2), he is the son of the Sultân Shâh (*Sultân oğlı-dür Shâh*), these words being followed by this qualification: *Ne (Na) Sultân ibni Sultân ten-i Sultân, Şehinşeh Bayezid ibni Murâd Khân*. The same formula is found in the manuscript 355, fol. 4, l. 4, but in place of *Şehinşeh*, etc. there is: *Çelebi Bayezid, of Şîr-i mirdân*. It will be noted that the imperial princes actually bore the title of Çelebi up to the reign of Mehmed II (*Sidfi'llâ 'otmânî*, i. 89). The surname Yıldırım (the form in old Osmanli for Yıldırım) appears in the verse: *Yıldırım dilerse haşş-dür*, fol. 16, b. l. 5.

In the same preface it is said that the work was finished in the time of Bayezid (*devletinde*, fol. 17, l. 10) and further on, the author expresses the hope of living long enough to finish under the name of the same prince (*Şehinşeh adlı*) an *Vekâ Nâme*. The end seems to be a eulogy of a minister (the Grand Vizier 'Alî Paşa, cf. fol. 19, l. 10). All these differences and variations make one surmise that the preface was entirely remodelled at a later date, perhaps by the author himself. A critical edition would be desirable, but whatever may be the version adopted as definitive, one can adopt as certain the date of the completion of the work (May 20, 1387) given in the epilogue. This date is thus formulated (fol. 304, l. 13): *yıldi yûz sekiz defında — Kî toktâ marmûh-ıdi Khurşîd âkâde —* "in 789 when the sun had raised his throne under (the sign of)

Taurus". Then a description of spring follows, which concludes thus: ... *robi' ul-âkhirîn* (sic) *âkhir âkhir — Bu Khurşîd Nâme eldu erel âkhir* (sic). "It was evidently at the end of the Rabi' II (spring). That the *Khurşîd Nâme* was finished (ibidem, l. 2)". Now the lunar month of Rabi' II, 789 extended from 21st April to 20th May, and that corresponds exactly with the passage of the sun to the zodiacal sign of Taurus. Such an exact coincidence, which is in contrast to the usual lack of precision in Ottoman chronology excludes the possibility of error. The poem then is older than is usually believed.

It follows from what has been said that Süleimân Shâh had already been dead for some time in the year 789 (cf. the article GERMİYANOĞLU). We may notice also that according to the eulogy of him by Sheikhoghlu, Süleimân Shâh was so devout that the dervishes forgot the respect due to a great prince (*ulu Şâh*) and did not salute him first (*islâm ehâretme-idi*, fol. 15, b. l. 13). As regards the epithet *Cağhâdan* which is given in a passage quoted above to the father of Süleimân Shâh (Germiyanoghlu Mehmed) and which we have translated by "he who makes the shields clash", it is obviously the regular participle in *-yan* of a causal verb of onomatopoeic origin *Cağh(-)sh-a-t-mâş* (*Cağhshatmaş*), synonymous with the metathesis of *Cağh(-)sh-a-t-mâş* or *Cağhshatmaş* (whence no doubt comes the proper name Fach Schad, wrongly given by v. Hammer, *Gesch. d. osm. Dichtkunst*, i. p. 110, note 1; we shall correct the other errors in the same quotation). The verb *Cağhshatmaş* is given by Mahmud Kâshghâri, *Divân-ı lughât al-Türk*, iii. 212, below in the sense of "to jingle (little pebbles), to tinkle, in speaking of toys or other objects". (Cf. also J. Deny, *Gram. turque*, § 850, rem. 4 and note; add the words *Cağhshat*, from the *Burhân-i kâfi* in Turkish, p. 626, l. 24; *Cağhshatmaş*, from the Diet of Redhouse, p. 722, b.; *Cağhshat*, from Kâshghâri, i. 390, l. 12—15; and *Cağhshatmaş*, Vambéry, *Altoin*, p. 185).

The *Khurşîd Nâme* describes the loves of Khurşîd, the daughter of the king of Persia Siyâwush and of Ferahshâd, son of the king of Maghrib (see the analysis in Hammer, *loc. cit.*). It is a poem of 7,640 verses (with two rhyming hemistichs of 11 syllables), that is to say it is a *mathnawî* like the *Khawerem Shîrin* and in the same metre, the *kesîdî* (--- ---). This poem is called *Khurşîd-u Ferrukhshâd* by Sehi and *Ferâk Nâme* by Hâdjî Khalîfa (iv. 412), v. Hammer, Gibb, and, following them, other authors pronounce it *Ferrukhshâd*, and Gibb corrects the editor of Hâdjî Khalîfa by reading *Ferrukh Nâme*. In the Paris manuscripts quoted, this name is always written *Ferahshâd* and this reading ought always to be retained as the only one compatible with the metre (---). The word is found indeed either at the beginning or at the end of the hemistich (fol. 70, 72 b., 73, 78, 78 b., 76 etc.) where *Ferrukhshâd* (---) would be inadmissible. This last word besides does not occur either in the *Shâhnâme* or in Justi, *Iranisches Namenbuch*, Marburg 1895, and seems due to a confusion with *Ferrukhshâd* and *Ferrukhshâz* (cf. an analogous confusion in the popular story of *Ferrukhshâd*, *Ferrukhshâz* and *Ferrukhnâz*, translated into French by the Jeune de Langues Maltor in 1742, Bibliothèque Nationale of Paris, Suppl. turc., N^o. 945).

Sehi identifies Sheikhoghlu with the "nephew", on his mother's side, and continuer of Shaikh. The historian 'Alî who makes the same confusion, calls him Djâmâlî Sheikhzâde (Hammer: Djâmâlîzâde). The dates contradict this identification (Shaikh, who wrote under Murâd II, was still alive in 1421), and it is difficult to believe that he could have for his continuer a nephew born in 1340. Two different individuals must therefore be distinguished.

Köprülü Zâde Mehmed Fuâd notes in N° 124 of the bibliography to his *Türk edebiyâtında ilk müteferrişler*, Stambul 1918, an autograph and unique manuscript belonging to him of a work entitled *Künûs ül-kütürâ* by Sheikhoghlu "extremely important from the point of view of the history of language and literature", but without more detailed information, it is impossible to say if it is here a question of our author.

Bibliography: See especially: Gibb, *History of Ottoman Poetry*, London 1900, I, 427 sqq.; The manuscripts of the Bibliothèque Nationale in Paris are: A.F.T., N° 314 (a fine vocalised *neshâ* MS. of 882), 315 and 355 (the last two incomplete). The Berlin copy (Pertsch, N° 365) is of Rabî I, 807 (Sept. 7—Oct. 6, 1404).

II. The author, or rather the translator, of the *Ḳırk Weir* (*Wair*) *hikayisi*, "the history of the forty viziers". Only the little which is given in the preface of this work is known about this writer. The text also varies according to different manuscripts. In some one finds only Sheikhzâde, in others only Ahmed-i-Misri. Gibb thinks it is one and the same person, the translator of the *Ḳırk Weir* from Arabic into Turkish, from a work which has been lost, entitled *Arba'in lailah wa-ma'â*, "The Forty Days and Forty Nights". This translation is dedicated in the great majority of manuscripts to Sultan Murâd II (1421—1451), and this indicates approximately the epoch in which our author lived (according to Pertsch he is said to have written the *Ḳırk Weir* in 850 = 1446). It is to be noted, however, that according to the text of Belletère (which is in agreement with one of the manuscripts of Vienna) Sheikhzâde is the name of an author who wrote in Arabic for the Sultan of Egypt (*Misr* and *Magr* in place of the *misr* of other manuscripts), and it is an anonymous writer speaking of himself in the first person who wrote the Turkish translation, ornamenting it with diverse flowers of diction and quotations. According to other manuscripts, we might suppose that Sheikhzâde (or Ahmed Misri) made the first translation and that an anonymous writer improved upon it. Fleischer, Behnasser and Gibb reject the reading Misri as wrong, but the change of person (which passes from the third to the first) in the text of the preface remains none the less a puzzle. It is important then to set up a critical text from the different manuscripts of the *Ḳırk Weir* in order to establish even the name of the author.

Like the *Bahktiyâr-nâme* [q. v.] or the "History of the Ten Viziers", "The Forty Viziers" are a ramification of the "*Sindbad Nâme*" [q. v.] or the "History of the Seven Wise Men" (seven viziers in the Arab version). The framework of "The Forty Viziers" may be summarized as follows: There was in Persia a sovereign called Shâh-i Khâshkayn (of the east and of the west), whose young wife fell in love with her stepson, a prince

of marvellous beauty and of great virtue. Solicited by the Queen (Khatun), the prince (Sheikhzâde) follows the advice which his tutor (*khodja, aâd*) had given him, who after consulting his horoscope, recommends him to maintain, whatever happens, the silence of a mute, during a dangerous period which will last forty days. Irritated by the indifference of the prince, the queen slanders him to the king, who orders his son to be put to death. It is at this moment that the forty viziers intervene and the first of them in the presence of the executioner tells a story (that of Shaikh Shihab al-Din Mahtûl, who died the victim of a woman's ruse), at the end of which the king consents to postpone the execution of the prince until he has obtained further information. In the evening the queen on her part tells a story calculated to revive the anger of her husband, who again summons the executioner on the following morning. But the second vizier intervenes in his turn and so on until the forty stories of the viziers alternate with the forty stories of the queen. Finally, on the forty-first day, when the king was just going to give credence to the queen by putting his son to death and throwing the viziers into prison, the tutor, who had disappeared during this time, comes back and relieves the prince of the silence imposed by the omens. Then the prince reveals the intrigues of the queen. The latter, confounded by the testimony of her servants, is attached to the tail of a horse, which shatters her to pieces dragging her over stones and rough roads.

The stories of the forty viziers are most frequently localised in Egypt, which is in accordance with the indications in the preface as to the place where the collection is said to have been written (Aqchid [Akshid], the Salân of Egypt, of one of the tales — cf. Chauvin, p. 123 — is probably Ikhshid).

Bibliography: A very full bibliography of the Forty Viziers is given in V. Chauvin, *Bibliographie des ouvrages arabes*, Liège and Leipzig 1904, viii. (Synopsis), p. 18—21, 112 sq. (and extracts publ. by Smirnov, *Chrestomathie Ottomane* [Russian title], St. Petersburg 1903, p. 220—223. We might also note that a young Turcologist of Prague, M. Duda, is preparing an edition of the Forty Viziers). The manuscripts of the Bibliothèque Nationale de Paris are: A.F.T. 378, 388 to 392; Suppl. turc. 428 to 434, 1392 to 1394, 644. For the other manuscripts and editions printed in Turkey, cf. Pertsch, Berlin, Catalogue No. 454, 437, 438; Gotha, Catalogue No. 230 and esp.: Rieu, British Museum p. 216, 4. 3. Muḥyî al-Din Muḥammad b. Maḥlîḥ al-Din Muḥṣaf al-Ḳudjawi, called Sheikhzâde, died in 951 (March 25, 1544—March 14, 1545), wrote a gloss in Arabic on the Commentary of Baiḍawî, the *ḥaṣṣat al-burda* and other texts.

Bibliography: Ḥadîdî Khalîfa, *Kaṣf al-Zunin*, vii, Index, No. 643; Brockelmann, *G.A.L.*, I, 265—417; Dozy, *Catalogue*.... bibl. *Ar. Langues-Orientales*, 1851, II, 82.

4. 'Abd al-Rahmân b. al-Shaikh Muḥammad b. Sulaimân, called Shaikhzâde (in Ḥadîdî Khalîfa: Shaikhî zâde), d. in 1078 (June 23, 1667—June 11, 1668), finished in 1077, *Maḥfûḍ al-anhur*, commentary (Arabic) on the *Multaḥḥ al-ahḥar*, a treatise on Hanafî law by Ibrahim al-Halabî; see AL-JALALI. The Turkish translation

of this work by Mawqūfātī is at the root of d'Ossun's *Tableau général de l'empire Ottoman*. This commentary was first published in Constantinople in 1240 (1824/1825) and again in 1305, 2 tomes in one large volume in-4°.

On other individuals who have had the surname Shaikhzade see: Rieu, *Cat. of Turk. MSS.* in the *British Museum*, 82, b. and 120b; Dorn, *Das aralische Museum*, St. Petersburg 1846, p. 219.

(J. DENV.)

SHĀ'IR (A.), poet. The word is probably derived from the word *shā'ir* "poetry" or "poem", which may be of ancient Semitic origin, for we have in Hebrew *shā'ir* for a solemn hymn, and it is most unlikely that the derivation is from the Arabic verb *shā'ara* "to know", as Arabic philologists explain it. The very fact that the verb is not used in the meaning of composing verses seems to speak against such a derivation. [Goldziher in his *Abhandl. z. arab. Phil.*, i. 17, has explained *shā'ir* as "the one with inspired knowledge"]. The origin is lost in the remotest antiquity and though to my knowledge no ancient Arabic inscription contains any metrical verse, we cannot argue from this that poetry did not exist at those times. The remarkable fact remains that the oldest specimens of Arabic poetry which we can consider genuine have already fully developed rules as to metre and rhyme. That a poem must rhyme is imperative, but the *shā'ir* in some of the earliest specimens of his art which are preserved employs metres which the critics of the second century of the Hijra did not acknowledge and did not know (e.g. poems by 'Abid, Imru' al-Kais and 'Amr b. Kamrā). Also in early times it was probably more frequent than we can now ascertain that the metre was not always correct, even if it corresponded with one of the 16 metres evolved by Khalil and al-Akhhafsh, for one verse of Zuhair has several syllables too many which the grammarians have not been able to amend.

It is also important that the earliest specimens of Arabic poetry are by men who held an honourable position in their tribe: the time had not come when poor men, like al-Hutai'a, practised the art. Some authorities wish to emphasise that the *shā'ir* and the *shākin* were probably identical, a view which I cannot endorse, as Arabic poetry as a rule in early times holds aloof from all that is religious. It is a strong point that it is as a rule strictly concerned with worldly affairs.

The short *rajaz* metre may have been the first which was practised in the *hidā'* or "leading the moving string of camels", but we have no ancient specimens of the *hidā'*, the earliest being preserved in the *Diwān* of al-Shammākh who lived during the time of the rise of Islām.

The earliest poets of whom we have any knowledge lived in Eastern Arabia and in their poetry they employed only very few of the 16 metres, and it is significant that even such late poets as Djarir and Farāsid never use the shorter metres, which seem to have originated later in the Hijra. Djarir only uses the metres *rajaz*, *hazl*, *wāfir*, *hāfif*, *kāmil* and *mutajarrif*, the poet al-A'shā adds to

this number only the metre *hāfif*. As later poets in various parts of Arabia employ all other metres, the fact mentioned might point to the existence of some unknown cause for this peculiarity. The *shā'ir* was considered to be possessed of some special knowledge communicated to him by a kind of familiar spirit which inspired him, and he had in his company one or more real persons whose business it was to remember his verses and to recite them in other camps. While the familiar spirit may only have been fictitious, the reciter of the poet, named *rāwī*, was very real and we have many names of such *rāwī's* mentioned in the *Kitāb al-Aghāni* and by the poets themselves in their poems. More important, however, is that in many cases the *rāwī* himself became a poet of note in the next generation. Among the *rāwī's* of repute the following may be named. Tufail al-Ghanawī had for his *rāwī* Aws b. Ḥajjar, whose *rāwī* was the poet Zuhair. The latter was also *rāwī* of his uncle Bashshār. The *rāwī's* of Zuhair were his son Ka'b, al-Hutai'a and al-Shammākh. Such chains of poets who recited each other's poems could be mentioned in greater numbers than is generally realised. This points to a kind of school for poets and the *rāwī* at the same time made attempts at own composition, which he submitted to his master; this also accounts for finding in certain parts of Arabia a prevalence not only of specific metres, but also of special themes. It is not an accident that Abū Dhū'ayb, Sa'ida b. Dja'āya and al-Mutamakkhal, the Hudhali poets, specialise in the description of bees; they were one the *rāwī* of another and not only used similar metres but also the same subjects which they had learned from their masters. This also explains why we find a line word for word in a poem of Tufail, Aws b. Ḥajjar and Zuhair. "The unfettered horses of passion" was an idea which the *rāwī's* of Tufail could not omit from their verses.

The poet of the early times loved to fill his poems with fine words and it is specially in the earlier times that a large quantity of foreign words were used to adorn the poems, a practice which ceased after the first century of the Hijra. At this time the calling of the *shā'ir* had altered entirely. In the earlier times the poet stood for the honour of his tribe; he had to mourn his relations or the valiant men of his clan or sing the defiant *hijā'* against the enemies of his tribe. Now the poet had sunk to be a beggar for favours from the mighty and rich; to this he added lampoons against rivals, who made his work of extorting presents more difficult, and new themes for the edification of drunken gatherings, poems on boys and obscene ditties. We have no Persian poetry as old, but Ibn Dinnat tells us (*Khazā'ir*, i. 252) that in Persia also poetry flourished and that they were very diligent in avoiding the use of any Arabic word in their poetry which was by critics considered a serious fault. We do not know the contents of this class of poetry, but we may assume that the lighter poetry in the Arabic language as represented by the poems of Bashshār and Abū Nuwās reflects the themes of Persian verse. The earliest authentic Persian poetry dates from the fourth century of the Hijra and the specimens preserved agree remarkably well with the kind of verse composed in Arabic by their contemporaries like Abū 'l-Faṭḥ al-Buṭi, who wrote in both

languages. Since then the *shā'ir* has never died out, but the art which seems so fresh in the earliest specimens has seldom been able to leave the old path and like sheep and cows the poets, whether Arabic, Persian, Turkish or Urdu, have been chewing the cud to this day.

The Prophet took a special stand against the poets. He was accused of being a *shā'ir*, which brought about the answer at the end of Sūra xxvii, which has been entitled "the Poets" from these verses. "The poets are liars and those who follow them have gone astray". The poets, however, were too well established in Arab civilisation and the traditions know that the Prophet's immediate successors were well versed in ancient poetry; especially 'Alī is credited with many verses, all of which are probably spurious. Though the Prophet would not be called a poet himself, he made full use of several poets, especially Ḥassān b. Thābit, who composed biting verses against the Mekkān adversaries. The method the *shā'ir* had to use for such verses to reach the hostile camp was to teach the verses to a *ṣāḥib* who recited them in another place before a neutral audience, which had, however, sufficient interest to repeat the verses to the party attacked. As regards the art of the poet I am inclined to doubt that all ancient poems were originally complete poems; often the *shā'ir* could only get from his familiar spirit the inspiration for part, and, like Zuhair, had to work for a whole year on a single poem or recite it before it was complete, according to the rules which Ahiwardt e. g. has laid down for every poem. We have ample evidence that many poems were at all times only fragments, for an Arabic (or Persian) *ḥazāda* with the same rhyme going through a great number of verses is a very unreal thing.

(F. KRENKOW)

SHAIṬĀN, Satan. (See also **ḌINN**, **IBLIS**). "Every proud and rebellious one among *ḍinn*, men and animals" is the meaning given in the dictionaries. As applied to spirits *shaiṭān* has two distinct meanings with separate histories. The sense of devil goes back to Jewish sources and that of superhuman being has its roots in Arab paganism, though the two meanings interact. In the stories about Solomon a *shaiṭān* is nothing more than a *ḍinn* superior in knowledge and power to other *ḍinn*. But even their powers are limited. Closely connected with this is the use of the word in the sense of genius. "He made up his mind, when they died, to hunger and disappointment, but his Demon said to him — Thou hast the charge of a household to meet" (*As-Saffat*, xvii, 68). Belonging to the same order of ideas is the belief that a poet was possessed by a *shaiṭān* who inspired his words. Later writers knew the names of these familiar spirits. There is some evidence that the pagan gods of Arabia were afterwards reduced to the rank of demons. Tabari says (*Taṣṭir*) that the *shaiṭān* are those whom the infidels obeyed while disobeying God. The bow of Kuzah was afterwards called the bow of *Shaiṭān* and the two horns of *Shaiṭān* is a name for a phenomenon accompanying sunrise. Similarly old superstitions are preserved in the belief that a *shaiṭān* eats excrement and all manner of filth and frequents the borderline between shade and sunlight.

The word is common in the *Kur'ān* but in the *Sūras* of the first Makkān period the indefinite

singular alone is found and that only once. It is not till the second period that the definite form occurs, suggesting that the prophet had found or remembered another idea. *Shaiṭān* is tacitly identified with Iblis who is obviously borrowed from Judaism. Thus al-*shaiṭān* is the chief of the evil spirits and *shaiṭān* is a spirit, though not necessarily evil. There is no fixed tradition as to the relation of al-*shaiṭān* with the *shaiṭāns* and other *ḍinn*. One account says that he is their father; another makes him produce eggs from which they were hatched and another says that God first created the devil then his wife and from the union came three eggs from which the various sorts of *ḍinn* were hatched. The *Kur'ān* says that *Shaiṭān* is made of fire; the commentators refine on this and say that the angels are made of light, *Shaiṭān* of fire or of the smoke of fire. It is not settled whether the *shaiṭāns* have no bodies at all or have bodies of some very subtle substance. The punishment of *Shaiṭān* for resisting God is postponed to the end of the world when he will receive his reward in hell-fire. He is not the lord of hell; according to the *Kur'ān* *Malik* is lord of hell. His standing epithet *raḍfīm* is derived by tradition from the stoning of the devil by Ibrahim at Minā; according to Prof. Nöldeke it is derived from the Abyssinian word meaning accursed. Other names for *Shaiṭān* are *Taḥāṭ* and *Ḍinn* which is said to mean the father of the *ḍinn*. The serpent which helped *shaiṭān* to tempt Adam was punished by being deprived of its legs but the peacock, the intermediary, seems to have escaped scot-free. Perhaps there is some connection with the *Malik* *Tā'as* of the Yazidis.

In religious thought *Shaiṭān* is the power that opposes God in the hearts of men. He whispers his insidious suggestions in their ears and makes his proposals seductive to them. The *Kur'ān* ascribes this activity now to one *shaiṭān* now to several. Later it is said that one *shaiṭān* is attached to each man so that it is possible for everyone to speak of "my *shaiṭān*". There are no exceptions to this rule for even Yahyā b. Zakariyā (the Baptist) had his *shaiṭān* though he was too good to listen to its insinuations. The union between a man and his *shaiṭān* is as close as that between a man and his blood. But there is no hint of dualism for a *shaiṭān* has no real power over man, he owes his success to craft alone. He cannot exploit that success for he is afraid of God and leaves men in the lurch as soon as he has persuaded them to sin. The activities of *Shaiṭān* are summarised in the following tale. He complained to God of the privileges granted to men and was thereupon given similar ones. Diviners were his prophets; tattoo marks his sacred books; lies his traditions; poetry his religious reading; musical instruments his mazzins; the market his mosque; the baths his home; his food was everything on which the name of God was not invoked; his drink all intoxicating liquors and the object of his hunting women. The popular view is that every man is attended by an angel and a *shaiṭān* who urge him to evil and good deeds respectively. Ḥasan al-Baṣrī is reported to have said: — They are two thoughts that rush into the minds of men. He thus reduced these spirit forces to mental states.

Shaiṭāns were of both sexes and ugly. They could appear in human form without anything

unnatural betraying their identity. Many had names. Those of the familiars of some poets were known. Farazdaq's demon was *Amr*. The shaiṭāns of India and Syria were among the most powerful and the names of their chiefs are given. Diseases, particularly the plague, were their weapons. Some said that the shaiṭāns were bound during the month of Ramaḍān and a cock was supposed to be a protection against them.

Attempts were made to reduce these ideas to some system. An unbelieving *ajfān* was a shaiṭān; one strong enough to move buildings and overhear the divine plans was a *marid* (rebel) and one capable of more than that was an *ifrīt*. Spirits who attacked boys were called *arwāḥ*. Some men had power over the various kinds of spirits, but this power was not for all. The body of the *maḥmūd* had to be a fit temple (*halkal*) for spirits if a man was to control them.

The Arab philologists accepted shaiṭān as a native word and derived it from the root *ṣ-ṣ-ṣ* though some preferred the root *ṣ-ṣ-ṣ*. The word is very rare in early poetry. Umayya b. Aḥī Ṭ-ṣalt uses it in connection with the throwing of the stars at the devils. 'Adī b. Zaid tells of Iblīs being punished in fire. It might be urged that he was familiar with the idea but not with the word shaiṭān. Umayya also has the participle shaiṭān in the sense of rebellious spirit. It almost looks as if he were experimenting to find a suitable word. The form shaiṭān used by Belādhorī seems to be an attempt to represent the Greek form of the word. As the idea is obviously borrowed, it is probable that the word — a regular Arabic form — is also borrowed from the Ethiopic which is in turn derived from Hebrew.

Shaiṭān is also the name of a snake and has some metaphorical meanings.

(A. S. TRITTON)

SHAIYĀD, a term used as a synonym of the word *kalender* and meaning a certain kind of dervish. The word has been derived from the root *sh-y-d*, which means "to perish", according to the translation of the *Ḥamās* by 'Āṣim. The same author defines *shaiyād* as follows: "to cry something with a loud voice; to raise (a building) to a great height; to mention some one loudly, i.e. to praise him openly and make him famous; to cry a lost article". Thus etymologically we might translate *shaiyād* by "some one who loses himself; who does not hesitate to annihilate himself on the path of Truth; who continually proclaims the Truth in a loud voice". This comes near Zenker's translation (p. 554). Tāyār Efendi in his *Ruh-i Gulistan* (Maṭba'at-i 'Amire, 1308, p. 156) gives the meaning impostor (*kahdān*), but this is due to the fact that the word *shaiyād* is used as a synonym of *aiyār* — which is also an old Sufi term — and is not a translation (the *aiyār* formed a special body which played a part in politics in Baghdad towards the end of the second century A. H. and whose influence long survived; they contributed a great deal to the spread of

Sufism in other lands of Islam and laid the foundations for the development of the *ṣūfīya*, cf. *Kashf al-Mahjūb*, transl. Nicholson, p. 100, 183; *Taḥṣīrat al-Awliyā'*, ed. Nicholson, i. 332; R. Hartmann, *Ar-Sulamī's Risālat al-Malamatiya*, *Der Islam*, viii. 190—191. In the third century, we find in Khorāsān and in Transoxiana similar groups which in Khorāsān are called *shaiyān* or *shayān* and in Transoxiana *shayān*; cf. Köprülü Zāde Fu'ād, *Turkiye Tarih-i*, i. 81—82).

We find this term — which is synonymous with *kalender*, *haidar*, *abdāl* — in general use from the seventh century A. H. onwards and especially in Asia Minor. We know that there was a Sufi named Shaikh 'Abd al-Rahmān Shaiyād, a contemporary of Djalāl al-Dīn Rūmī, in Konya (*Les Saints des Derwiche Tourneurs*, transl. Huart, i. 113); Sa'di, in the *Gulistan*, speaks of a *shaiyād* with dishevelled hair who claimed to be 'alewi and referred a *ḥajida* of Enweri to himself. In the seventh century and later, we find Turkish poets like Shaiyād Ḥamza [q. v.] and Shaiyād 'Isā, author of a romantic poem called *Salṣal-nāme* (in the *Bibl. Nat.* there is a Turkish MS. No. 1207, entitled *Salṣal-nāme* by a Turkish poet called Ibn Yūsuf). The references in Fakiri, a poet of the tenth century, in his *Risāle-i ta'rifāt* (on this book cf. the bibliographical index to my *Ilk Mutevewwifler*) show that these *shaiyāds* still existed in his time and that, both in their manner of living and in their mystic life, they did not differ from the groups of heterodox dervishes who had much in common and were closely connected with one another, like the *abdāl*'s, *haidar*'s, *kalender*'s, *djāmī*'s, *edhemī*'s, *ishāqī*'s and *bektāshī*'s (for historical information, regarding them, cf. my *Anadolu'da İslamiyet*). In the *Alam-arāy-i 'Abdāl*, among the events of 1029 A. H., there is mention of a *shaiyād* (cf. Dorn, *Auszüge aus Mohammedanischen Schriftstellern*, 1858, p. 370; the note which Dorn gives in his introduction on the word *shaiyād* is of no importance, cf. p. 18).

(KÖPRÜLÜ ZADE FU'AD)

SHAIYĀD ḤAMZA, a Turkish poet who lived in Asia Minor in the seventh century A. H. He was one of the Baṭīnī [q. v.] *bāḥās*, who spread throughout Asia Minor in this century under different names like *kalender*, *abdāl*, *bāḥā*'i, *yesewi* and *haidar*, and taking the opportunity of the material and moral crisis caused by the invasion of the Mongols, went from village to village, trying to spread their teaching among the people (on the religious situation and movements in Asia Minor at this time see my *Anadolu'da İslamiyet*, p. 36—90). This explains the surname of Shaiyād [q. v.] which he took. The only information regarding his life is found in certain legendary biographies written in the tenth century. It is certain that he was the author of mystical-religious poems written in the language of the people in syllabary metre (*hidvā wazn*) in preference to the 'arūd but these poems are lost like many of the literary products of this period. The only remnant that survives is a *mathnawī* of 15 *baire*'s preserved in the *Djāmī al-naṣā'ir*, composed in 918 by Egerdirli Hādjdī Kemāl (the only known MS. of this work is in the Kütübhāne-i 'Umūmī; for further information cf. the bibliographical index to my *Ilk Mutevewwifler*); this *mathnawī* has been published by me. Shaiyād Ḥamza the memory of whom and his works sur-

vived till the tenth century, did not, like Vünas Emre, have a powerful poetic personality but, like his predecessors and contemporaries whose names are now forgotten, he had an influence on the development of Vünas (on the character of and formative elements in Turkish literature at this time cf. my *İlk Müteavvifler*, Ch. vii, p. 205-286). Nevertheless after gaining some fame at the period when this style of poetry was adopted by Vünas Emre and his successors to the popular taste, the works of Şaiyâd Ḥamza gradually lost their popularity and became completely forgotten from the tenth century onwards.

Bibliography: Besides the sources mentioned above: Köprülü Zâde Fu'âd, *Seldüktiller devrinde Anadolu şâirleri*, I, *Şaiyâd Ḥamza*, in *Kerkür Cema Archivum*, I, No. 3, 1922, p. 18-19. (KÖRKÜLC ZÂDE FU'ÂD)

SHAIẒAR, a town in Northern Syria, the ancient *Σαῖζα*, Byzantine *Σαῖζα*. It is mentioned as early as the inscriptions of Thutmose III and in the Amarna tablets. Seleucus I settled colonists here from Larissa in Thessaly and gave it the name of this town; but the new name could not drive out the old, which soon came into general use again in the Muslim period in the form *ShaiẒar*. It is mentioned as *ShaiẒar* along with *Hamâ* by Imru' l-Qais and 'Ubaydallah b. Kais al-Ruḥayyât (Imru' l-Qais, *Diwan*, xx, 40, ed. Alwardt, *The Diwan of the six anc. Arab. Poets* . . . , p. 130; Kais al-Ruḥayyât, *Diwan*, liv, 9, ed. Rhodokanakis, *S. B. Ak. Wien*, phil.-hist. Kl., c. lvi, Abh. x, p. 240).

In the year 17 (638), the people of the town received Abū 'Ubayda with open arms. They went out to meet him with music, and were satisfied with the same general terms of peace as had been offered to the people of *Hamâ*, namely payment of the poll and ground-tax (*ḡizya* and *ḡharāj*). *ShaiẒar* later became a district (*ihlām*) of the military province (*ḡund*) of *Hims*. Towards the end of the 11th century, the people were *Kindis* (al-Ya'qūbī, ed. Houtama, ii, 324). When Nicephorus Phocas advanced on Halab, Sa'īd al-Dawla retired to *ShaiẒar*, but fell very ill there and was brought back dying to his capital (356 = 967). In the following year Nicephorus took *ShaiẒar* and burned down its chief mosque. In the treaty between him and Karghūya of Halab (Safar 359) the town was included in the latter's territory (Kamāl al-Dīn, *Zuhd*, transl. Freytag, *Z. D. M. G.*, xi, 232 = Migne, *Patrol. Graeca*, cxviii, Col., 1023). On the 16th Rajab 383 (Sept. 6, 993), *ShaiẒar*, which then belonged to the Hamdanid Sa'īd al-Dawla, was taken by the Egyptian general Banḡutakin who guaranteed the commandant *Sitān*, an old officer of Sa'īd al-Dawla, security of life and property. When Sa'īd al-Dawla appealed to the Emperor Basil for help against the Egyptians, the latter came up and besieged *ShaiẒar*; the commander appointed by the Caliph, Manṣūr b. Karḡis, was bribed by him and handed over the fortress, which received a strong Greek garrison (383 = 994/995). But it again passed — apparently as a result of the defeat of Damianos Dalassenes at *Afamiya* (998) — who installed *Hamān* (or *Hamān*) b. Karḡis as governor there (who can hardly be identified with the above mentioned Manṣūr in Rosen, *Zapiski Imp. Ak. Nauk.*, xlv, p. 311, note 266 and Schlumberger *Égypte byzantine*, ii, 151, note 3, suppose; rather his brother). Basilios however attacked *ShaiẒar* the very next year (999),

began hostilities on October 28 and destroyed the aqueduct which supplied the fortress with water. An attempt to bribe the commander failed, but want of water finally forced him to offer to surrender, if he and his troops were allowed to march out freely, without the usual *proskynese* before the Emperor, and the citizens were guaranteed security of life and property; the Emperor accepted these conditions; in spite of this, many citizens left the town with the garrison, and Basilios repopulated it with Armenian colonists.

The town remained for the next eighty years in the hands of the Byzantines. In the year 395 (1004/1005) a certain *Aḥmad* b. al-Ḥusain al-Aḥṣar of the tribe of Taghlīb appeared as a *ṣāḡir* and advanced against *ShaiẒar* with a prominent Arab named al-*Hamālī*, to drive the Greeks out of it. They defeated a Byzantine detachment and were only driven away by an Egyptian army sent in reply to an official complaint by Basil to the Caliph al-Ḥākim (Yaḥyā al-Anṣārī, in Rosen, *op. cit.* p. 41 [transl. p. 43] and Kamāl al-Dīn, *ibid.* p. 342-4; in Müller, *Historia Merdasidarum*, p. 2, *Sisaram* should be read for *Casaram*, cf. his note p. 95). About 1025 Ṣāliḥ b. Mirdās [q. v.] granted the Munkidhīs of the tribe of the Banū Kindā the land round *ShaiẒar*, which however itself still remained in the hands of the Byzantines. The Munkidhī Muḥallad was ruling over *Kafarṭāh* in 1041; he was the ancestor of *Usāma* Abū 'l-Matawwadī Muḥallad b. Naṣr b. Munkidhī, who extended his territory down to the Orontes, and probably built the fortress *Djār* hunt Munkidhī at the bridgehead below *ShaiẒar*. When he died in January 1059, he was succeeded by his son 'Izz al-Dawla Sa'īd al-Mulk Abū 'l-Ḥasan 'Alī, who in 1078, by arrangement with the last Mirdāsīd of Halab, Ṣāliḥ, rebuilt the fortress above mentioned and the salarḡ of *ShaiẒar*, *Iljān* al-Djār, in order to cut off the fortress from supplies and support from the Greeks, and thus force it to surrender. In the same year he gave shelter in this fortress to the Turkomans under *Aḥmad* Shāh, who were fleeing before Tādī al-Dawla Tutuḡh (Kamāl al-Dīn, *Hist. Merdas.*, p. 85, 90; Derenbourg, *Orient*, p. 20), but was able to win the favour of Tutuḡh again, and later of Sharaf al-Dawla, who took Halab on June 18, 1080. On December 19, 1081 he succeeded in getting possession of the citadel of *ShaiẒar* which had hitherto belonged to the Emperor Alexios Comnenus, by a treaty with the Bishop of al-Bān, who resided in it. The Greek garrison were allowed to depart. Sharaf al-Dawla who envied him the possession of the fortress, and in vain endeavoured to take it from him, was appeased by rich presents from the Munkidhī. The latter died next year (towards the end of 1082); he was succeeded by his pious son 'Izz al-Dawla Abū 'l-Murḡaf Naṣr, a peaceful, art-loving prince, under whom the territory of *ShaiẒar* for a time also included *Afamiya*, *Kafarṭāh* and al-Ladhikiya till he had to cede these towns in 1086 to Malik-Shāh of Isfahān. *ShaiẒar* was several times besieged during his rule, but always unsuccessfully. He died childless in 1098, shortly after the conquest of Anṣārīya by the Crusaders (Oct. 1097). He had destined as his successor his younger brother Maḡdī al-Dīn Abū Salama Muḡhid (1098-1137), father of *Usāma*; but this hunter and calligrapher declined the emirate in favour of his youngest brother 'Izz al-Dīn Abū 'l-Asāḡir Sulṭān.

Madjd al-Din Mu'ayyid al-Dawla Abu 'l-Mu'azzar Usama (d. 1188), the celebrated author of the *Kitab al-Fitah* (born July 4, 1095), gives in this autobiography a valuable account of life and activities in his native town, which however he left in 1129 and never saw again after his father's death (May 30, 1137).

The fortress (*Hisn, Kafsa*) was built on a steep ridge running north and south, called *waf al-dih* ["cock's comb"] (Dimashki, ed. Mehren, p. 205). The Nahr al-'Asi flowed round it on north and east; on the south side it was cut off by a deep trench from a high plateau which formed its continuation. The upper town (in Usama: *balad*, in European sources: *præsidium, oppidum, pars superior civitatis*) lay within this citadel, the fortifications of which were presumably strongest at the north and south ends, and therefore are still best preserved here. It had only three gates; through the north gate one crossed over a sloping stone bridge of several arches, which crossed a brook and formed the only entrance to the fortress, to the stone bridge Djir Banî Munkidh, leading straight across the Nahr al-'Asi, over which lay on the south side of the river the lower town (Usama: *Madina*, in European sources: *suburbium, pars inferior civitatis*), which was called al-Djir after it (*Güterb., Hierap.*) and was defended by a fort which probably lay on the right bank (*Hisn al-Djir*). The neighbourhood of Shaizar was well-watered and had a luxurious vegetation. It was particularly rich in pomegranate-trees.

During Sulṭān's rule, Shaizar was frequently threatened by raids of the Banî Kilāb of Ḥalab, the Franks and other enemies, without their being able to take this stronghold. The Emperor, John Comnenus, who laid siege to the fortress from the Djabal Džursidjis opposite on the east bank of the Orontes for 24 days (April 29, — May 21, 1138), and bombarded it for ten days in succession, had finally to retire with no success, in spite of the fact that he had already promised it in the preceding year to Fulco of Antioch as a fief. Sulṭān died in 1154, or a little before that. He was succeeded by his son Tādī al-Dawla Nāṣir al-Din Muḥammad, who perished in the middle of a festival in a terrible earthquake with almost all the members of his house (1157). In October of this year the Franks endeavoured to seize the ownerless shattered fortress, but were driven back by the Isma'ili, who had held the region of Masyād since 1140. Nūr al-Din, however, took Shaizar from them, restored the citadel and placed it under his foster-brother, Madjd al-Din Abū Bakr b. al-Dāya. He also repaired Shaizar after a second earthquake which devastated a considerable part of Northern Syria on June 29, 1170. In the same year Abū Bakr died, and was succeeded by his brother Shams al-Din 'Alī. Salāḥ al-Din who took Northern Syria in 1174 after Nūr al-Din's death from his eleven year old son, Isma'īl, made Sābiḥ al-Din 'Uthmān, his vassal in Shaizar; he was succeeded by his son 'Izz al-Din Ma'ūd and later by his grandson Shihāb al-Din Yūsuf under the suzerainty of the Aiyūbids of Ḥalab. Malik 'Aziz of Ḥalab deprived the latter of his fief for insubordination in 630 (1233). Four years later, however, we again find him described as lord of Shaizar; but it is doubtful if he was still living there. In 638 (1240/1241), Shaizar was again occupied by a Ḥalabī army. When the Mongols invaded Syria in 1260, Malik Nāṣir al-Din Yūsuf of Ḥalab fled

before them, and razed his fortresses to the ground as he went; Shaizar was among these. Baibars had it rebuilt when he ascended the throne, after the expulsion of the Mongols in 1261. He visited the town in 1268 on a tour through the country. Under Sulṭān Kalā'ān, Shaizar belonged for a year (1280—1281) to the rebel emir Sunḡur al-Ashkar of Dimashki. Henceforth it was a *niyāba* under the *nāib* of Ḥalab (cf. the inscriptions of Shaizar of the time of Barsbāh, published by Littmann). After the troubles stirred up by Muntash and al-Nāṣiri (1389), nomad tribes occupied this *niyāba* (Kalkashandi, *Ṣubḥ al-'Ashā*, iv, 227, 17). About 1450 Khallī al-Zāhiri uses the modern form of the name, Saidjar, for the first time. No deduction can be made from the fact that al-Lijān Abū 'l-Bakā' in his description of Kāthbā's journey (1477) through Northern Syria, does not mention Shaizar (cf. Devonshire's edition in *B.I.F.A.O.*, xx, Cairo 1921), as the Sulṭān's route did not take him near the town. With Turkish rule or even before it began the gradual decay of the stronghold, which is still going on.

SHAKĀK (SHAKKĀK), a Kurdish tribe on the Turco-Persian frontier. In Persia to the west of Lake Urmia before the war they occupied the cantons of Brādōst, Somāl (q. v.), Čehrīk (cf. SĀLMĀS) and Kōtūr; in Turkey, the eastern districts of the wilāyet of Wān: Sarāi (Mahmūdī) and Albak (Baḡkal'a), i. e. the territory which in the xvth century belonged to the Dumbuli tribe (*Sharaf-nāma*, i. 313—314).

The name of the tribe is written by Yūsuf Diyā al-Dīn: Shikākān and by Shirwānī: Shākāk; Khurshīd Efendi writes "Shikākī or Shikākī". To the south of Lake Urmia in the canton of Bāhī we have a village Kāni-Shākāk ("the source of the Shākāk"), which not being far from Bolak-Shikākī (cf. SHAKĀK) may be evidence of contact between the two tribes, if it is not a phonetic variant of the same name.

Among the Persian clans, the principal are: Kandā and Delān (Somāl and Brādōst) and 'Awdō' (Čehrīk and Kōtūr). There were in all about 2,000 families of Shākāk in Persia who formed the warrior caste (*ashīrat*); their subjects (*ra'yaf*) were the remnants of tribes who have disappeared.

The 'Awdō' have played a prominent part in local politics. Their ancestor is said to have arrived in Diyār Bakr at Urmia about 1700. The first known chief was Ismā'īl Aghā (d. 1231/1816) whose stronghold and tomb are on the river Nāzu-Esī (N.W. of Urmia). The 'Awdō' harassed by the Afghar then entrenched themselves in Dīnāi (Somāl) from which they went northwards to Čehrīk. Dī'far Aghā, sometimes frontier-commissioner and sometimes rebel and brigand, was killed at Tabriz in 1905 by order of the governor-general. His brother Ismā'īl, better known by the Kurdish diminutive of Simkō (Simītkō) succeeded him and operated between Čehrīk and Kōtūr. He trimmed carefully between Persians, Turks and Russians, holding a practically independent position. As a result of his numerous crimes (e.g. the assassination of the Nestorian patriarch, Mīr-Shimūn, and the massacres of Muslims at Urmia), the Persian government undertook several expeditions against Simkō who in 1922 was driven towards Turkey and Mesopotamia.

On the Turkish side, the principal clans are: Makūrī, Millān, Shamīsī and Takūrī (at Mahmūdī) and Mersīkī (at Baḡkal'a). The Turkish government used to recruit 5 "Hamīdiye" regiments from among these clans. About 1900 these clans numbered 2,000 families, but the war must have severely reduced their numbers.

(V. MINORSKY)
SHAKĀKĪ (Shikākī), a tribe of Kurdish origin. According to Yūsuf Diyā al-Dīn, the word *shikākī* means in Kurdish a beast which has a particular disease of the foot. According to the *Sharaf-nāma* (i. 148), the Shākākī were one of the four warrior tribes (*ashīrat*) in the nāhiya of Fīnk of the principality of Dīzma. According to the Ottoman *sal-nāma*, there were Kurdish Shākākī in the nāhiya of Shikākī in the ḡazā of Kīllis in

the wilāyet of Aleppo (cf. Spiegel, *Iran. Altertums-kunde*, i. 744). The nāhiya Shākākī of the *Dīhān-nāma* (between Mukus and Dīlāmārg) is certainly only a mis-reading for Shātīkī. As a result of certain movements, probably in the time of the Ak-Koyunlu, we find the Shākākī leading a nomadic life on the Mughān on the frontier of Transcaucasia (cf. HĀH-SĒWAN). At the beginning of the sixteenth century there were 8,000 families on Russian territory. Dupré speaks of 25,000 hearths of Shākākī among the tribes speaking Kurdish. About 1814 J. Morier numbered them at 50,000 grouped along the Tabriz-Zandjān road in the districts of Hajhtarīd, Garmatūd and Miyāna as well as at Ardabil. 'Abbās Mīrā drew from this tribe the main cadres of his infantry drilled in European fashion. According to Morier, the Shākākī spoke Turkish. Shirwānī puts the summer and winter quarters of the 60,000 families of Shākākī in the region of Tabriz-Sarāb (on the road from Ardabil) and adds that it is a Kurdish tribe whose language is Turkish, which forms part of the Kīllī-bāsh (*min rawūl-i Kīllī-bāsh*), which evidently means that the tribe is Shī'a as is also suggested by its association with the Shāh-sewan. The importance of the tribe may be judged from the fact that at the beginning of the xxth century the Persian government recruited four regiments from the Shākākī; we do not know the connexions that may exist between the Shākākī and the Kurdish Shākākī, but all indications point to their being a Turkicised Kurdish tribe (like the Kurds of Gāndjā). In the toponymy of the region south of Lake Urmia (cf. the article *sāwūn-wīlāk*), we find traces of the passage of the Shākākī (the village of Kīllī-bāsh-Shikākī at Suldūr).

(V. MINORSKY)
SHAKAR-GANDJ, Indian saint, whose real name was FARID AL-DIN MAS'UD, was born in 569 A.H. (1173 A.D.). He was a disciple of Khwāja Kūb al-Dīn Bakhtiyār Kākī and settled in Aḡwadhān, better known as Pākpatan, in Multan and died there on Saturday, Muharram 5, 664 (October 17, 1265), at the age of 95 years. It is said that by continued fasting his body had become so pure that whatever he used to put into his mouth to allay the cravings of hunger, even earth and stones, used to turn immediately into sugar; hence he derived his title of *Shakar-gandj*, "sugar-store".

At the tomb of this saint there is an annual fair on the fifth day of Muharram, and Muslims in considerable numbers come there to pass through a narrow gate-way known as the *Bīghīlī Darwāze* or "Gate of Paradise", which leads to the mausoleum and is opened only once a year.

His teachings were collected by his famous devotee Badr al-Dīn Ishāq b. 'Alī al-Dihlawī under the title of *Asrār al-Awliyā'*.

(M. HIDAYAT HOSAIN)

SHAKIKAT AL-NU'MAN (A.), the blood-red anemone hortensis or A. conoraria, which is a native of the Mediterranean lands and nearer Asia. According to al-Kazwini, *al-Aghā'ib al-Maḥallāt*, i. 288, it is also called *Khadd al-'Adhā'*, "the virgin's cheek", and Persian *Lālah* (cf. Valler's, *Lex.*, ii. 1074: "any wild flower and especially the tulip and anemone"). It opens by day and closes at night and turns towards the sun. Nu'mān b. al-Mundhir (reigned 482-489 A.D.) is said to have said as he passed a spot covered with anemones: "any one who pulls up one of these, will have his shoulder torn out". *Shakika*, however, was also the name of Nu'mān's mother. Others say the name comes from *shakika* "summer-lightning" and *nu'mān* "blood", which is probably true. According to de Lagarde, *Zeitschrift für die griechische Philologie*, p. 373, it is the other way round and *an-nu'mān* comes from anemone. Ibn al-Baitār gives a detailed description of the plant; the medicinal uses of it and its root are numerous.

SHAKUNDA, arabised form of Secunda, name of a little town opposite Cordova on the left bank of the Guadalquivir. According to al-Maḥḥārī and Ibn Ḥalīb it was originally surrounded by a rampart. It was here that a decisive battle was fought in 747 A.D. between the Ma'addi clan under Yūsaf al-Fihri [q.v.] and al-Ḥumail b. Ḥatim [q.v.] and the Yamanī clan commanded by Abū 'l-Khaṭṭār who was defeated. Later at the zenith of the Umayyad caliphate, Secunda became one of the richest suburbs of Cordova and was also called the "southern suburb" (*al-rabad al-djannabi*). The celebrated Abū 'l-Walid Ismā'īl b. Muḥammad al-Shakundi, the most famous man of letters in al-Andalus in his day was born in Secunda; he was appointed Kāḍī of Baeza and Lorca by the Almoḥad Sultān Ya'qūb al-Manṣūr and died in 629 (1231/1232). It was he who wrote the famous epistle (*risāla*) on the merits of his native country as a companion piece to that which the author Abū Yaḥyā b. al-Mu'allim of Tangier had composed on the excellence of North Africa. The text is given almost in full by al-Maḥḥārī in his *Nafḥ al-Tib*. On him see especially: F. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos árabes-españoles*, Madrid 1898, No. 234, p. 276-280.

Dozy, *Histoire des Musulmans d'Espagne*, i. 286 sqq. (E. LÉVI-PROVENÇAL)

SHAKURA, a Spanish Arabic place-name corresponding to the Spanish Segura. This last name is now only applied to the river which waters Murcia and Orihuela and flows into the Mediterranean near Guardamar. In the Muslim geographers this river is usually called the "white river" (*al-mihr al-abyad*). It rises like the Guadalquivir in the range called Djabal Shākūra, but on the eastern slope. The mountains to which this name was given are of considerable extent. They were, according to the Arab geographers, covered with forests and had no fewer than 300 towns and villages and 33 strongholds. They corresponded apparently not only to the Sierra de Segura still called on the maps Sierra de Segura, but also to those called del Velmo, de las Cuatro Villas, de Castril and de Cazorla. The highest points are the Velmo de Segura (6,000 feet) and the Blanquilla (6,100 feet).

Shākūra was also the name in the Arab writers of a fairly important town in the district, clustered round a castle reputed to be almost inaccessible. It was here that Ibn 'Ammār, the vizier of the 'Abbāsid al-Mu'tamid, came to seek refuge with Ibn Mubārak, lord of the town, who handed him over to his master. At the end of the Almoravid dynasty, Segura was the usual residence of Abū Ishāk Ibrāhīm b. Hemoshko, lieutenant and vassal of the famous king of Murcia, Abū 'Abd Allāh Muḥammad b. Mardaniḥ.

LÉVI-PROVENÇAL)

SHALTISH (sometimes SALTISH), Spanish Saltes, is the name which the Arab geographers give to the little island situated in the estuary of the river Odiel opposite the modern Huelva (Ar.: Walla). A fairly minute description of it is given by al-Idrīsī: it almost touches the mainland on the west coast, for the arm of the sea which separates it is only half a stone's throw in width. This island has no spring of drinking water; there was a little town on it in the period of Muslim rule. It is a fishing centre of some importance; according to Ibn Sa'īd, the fish caught here were salted and sent to Seville. Saltes formed part of the province of Sīdona (Arab.: *Shadūjina*) and in the middle ages shared the destinies of Huelva. This island was the last possession of the Bakrī ruler Abū Mus'ab 'Abd al-'Azīz after in 1051 he surrendered his capital to the 'Abbāsid sovereign al-Mu'tadid.

AL-SHALYĀK, the usual Arabic name for the constellation of the Lyre (Lyra), is the arabicised form of the Greek word *χάλυξ* (= lyre), as the Arabs usually reproduce the Greek *χ* by *sh* (cf. Arabinudes, Eutoshios) and are fond of adding a *sh* to such foreign words (E. B. Knobel, see below, thinks the meaning of *shalayāk* is unknown). The word *Sulhāfā* is a second name for the Lyre occurring in Uluġ Beg; it again corresponds to the Greek *χάλυξ* in its original meaning of "tertile". *Al-Lūra*, the form taken from the Greek *λύρα*, is also found quite early in the Arab astronomers, e.g. in al-Bīrūnī, in the form *qurat al-lūrā wa-huma al-ṣandī* (cf. *Ḥānūn al-Ma'ādī*, Berl. MSS. Or. 8^o, 275, fol. 196^b) and not for the first time in Uluġ Beg (as L. Ideler thinks). The word *al-ṣandī* (= cymbal, harp) comes from the Persian *sang, sang* or *lang* (= Persian harp).

The constellation of the Lyre is a northern one, but is not circumpolar in the latitudes of the Muslim world. It thus contains stars, one of which is particularly striking for its brightness and its white light. This is a *Lyrae* or *Vega*. The full name of the star is: *al-nar al-wāḡi* ("the falling eagle"). The last component of this expression was changed in course of time into *Vega* through the influence of the Spanish. The star *Vega* was classed by the Greeks and Arabs as of the first magnitude; as a matter of fact its magnitude is 0.1.

AL-SHĀM, Syria. From time immemorial the Beduins, troublesome neighbours of Syria and Palestine have been attracted by the fertility of this land, "a land of wine and leavened bread". They succeeded sometimes by whole tribes, sometimes by driplets in slipping into the districts bordering on the desert. They founded there from the beginning of the 2nd century before Christ principalities at Hims, at Palmyra and at Petra. They did not take long to adopt the Syrian language and civilization. In the fifth century A.D. the Ghassanid phylarchs (cf. GHASSĀN) were entrusted with the defence of the Syrian *finēs*. They soon embraced Christianity. So also did the tribes, which in the sixth century roved up and down the steppes which separated Syria from Arabia: the Banū Kalb, the Banū Lakhm, the Banū Dhihām [q.v.]. As is attested of the Banū Kalb (*Al-Ḥānī*, II, 127), these Syro-Arabs spoke a sort of *saḥir*, a mixture of Arabic and Aramaic, related without doubt to the Sinitic dialect. Thus any of these groups before the Hijra might have given a name to the Arab Parnassus. They all believed themselves to be Syrians and had only commercial relations with the Arabs of Naḥd and the Hijāz. At Māra [q.v.] they fought with the Byzantines against the invaders from Medina.

The Arab conquest: The death of Muḥammad (June 8, 632) and the election of Abū Bakr, was the signal in Arabia for the *riḍā*, the defection of the tribes. A year after that date bands were formed around Medina amongst the Beduins who had taken part in the bloody sup-

pression of this revolt. They undertook the government of Syria, in conformity with an order of the Prophet or simply with the object of ravaging this land now without defenders. Thinking he had only to deal with an ordinary raid of pillaging Beduins, Sergius, commander in Caesarea, hurried to meet them with several hundred hastily equipped soldiers. He came upon the Arabs assembled in the valley of al-'Araba, to the west of the Dead Sea. Overcome by numbers, the Byzantines retired in disorder, and suffered a second defeat at Dāthina. Sergius fell in the débâcle (Feb. 634). The imperial troops collected reinforcements, and the Arabs received reinforcements from Medina. Under the command of Khalid b. al-Walid [q.v.] who had hurried from the 'Irāq, they inflicted on the enemy the disastrous defeat of Adjūdāin (July 30, 634) between Jerusalem and Baitdžibrin. The defeated forces tried to reform behind the marshes of Balaia. Dislodged, they crossed the Jordan, to be again defeated at Fihl (Pella). Palestine was definitely lost to the Empire.

In March 635, the Arabs took up their position under the walls of Damascus. Abandoned by the Greek garrison, the citizens capitulated in the following September. The army collected by Heraclius to raise the siege arrived too late. The Arabs established themselves in Džābiya, then retired to entrench themselves behind the Yarmūk, the eastern tributary of the Jordan. A mutiny of Armenian troops broke out in the Byzantine camp. Abandoned by the Syrian Arabs in the middle of the battle, the imperial forces were completely routed. This battle (Aug. 20, 636) settled the fate of Syria. The conquest of the north and of the Phoenician coast was simply a route-march. Everywhere the towns, abandoned by their garrisons, paid contributions. Nowhere was a serious resistance encountered. This was literally the *faṣḥ yatr*, easy conquest, as Balādhuri tactfully calls it. Jerusalem did not surrender till 638, and Caesarea after a more or less continuous siege of seven years, in 640, thanks to the treachery of a Jew. After the surrender of the last coast towns of Palestine, the conquest could be regarded as complete.

Shortly before the capitulation of Jerusalem, the Caliph 'Umar arrived in Syria, to preside over the congress or "Day of Džābiya" [q.v.]. The question of the organization of Syria was debated. The year 18 was marked by the plague of 'Amwūs [q.v.]. Yazid b. Abī Sufyān, governor of Damascus, perished in the epidemic and was replaced by his brother, Mu'āwīya. 'Umar rigorously maintained the political inequality of the conquerors and conquered. The latter formed the *dhimmīs*. The privileged race of Arabs was to furnish the framework of a military and salaried aristocracy. Syria was divided into *qunds* or military districts: Damascus, Hims, Palestine, al-Urdunn or the Province of Jordan. Yazid I later added the *qund* of Kinnasra for the north of Syria. From their military cantonnements — the chief of which was Džābiya — the conquerors controlled the country and collected the taxes. Besides the land tax, the *dhimmīs* paid a personal or poll-tax. In Syria, as in the other conquered provinces, "organisation was confined to a military occupation for the exploitation of the natives. The Arab government was confined to finance; their chancellery was an audit office" (Wellhausen, *Das arabisches Reich u. sein Sturz*, p. 20).

At the beginning of his administration, which under 'Othmān extended over all Syria, Mu'āwīya realised the necessity of getting the support of the Beduin tribes, politically more developed than the Beduins of the peninsula. For his military operations see the article MU'ĀWĪYA.

'Alī, 'Othmān's successor, wanted to dismiss him, but the Syrians took the side of their governor. The encounter between Syrians and 'Irāqīs on the battlefield of Siffin [q.v.] being undecided, arbitrators were appointed to decide between the two parties. The conference at Adhroḥ [q.v.] proclaimed the overthrow of 'Alī (Jan. 658). Profiting by this diplomatic success, Mu'āwīya sent 'Amr b. al-'Ās, his lieutenant, to conquer Egypt. On January 24, 661, 'Alī fell a victim to a Khāridjī dagger, and the field was left clear for his rival.

Omayyad Syria: Mu'āwīya had only been awaiting this day to found a dynasty, that of the Omayyads. The elder branch is called Sufyānid, from Abū Sufyān [q.v.], father of Mu'āwīya. The younger line begun by Marwān b. al-Hakam took from him the name Marwānid.

Mu'āwīya was acclaimed Caliph at Jerusalem by the troops and emirs of Syria. By taking up his residence in Damascus, he made it the capital instead of Medina, or Kūfa. Whether deliberate or not, this step displaced the centre of gravity of the caliphate to the advantage of Syria. It dealt the unjustified supremacy of the Beduins a blow from which it never recovered. Mu'āwīya made the Syrian Arabs supreme, and under the Omayyads they held all the principal offices. He twice tried to besiege Constantinople. For a verdict on the policy and character of the sovereign, who was with 'Omar I the real founder and organiser of the Caliphate, see the article MU'ĀWĪYA. He died at Damascus in April 680 (aged 75).

His son and successor, Yazīd I, had to face a rebellion, which the ability of his father had been able to prevent breaking out. Husain b. 'Alī and 'Abdallāh b. al-Zubair [q.v.], nephew of 'Ā'isha, the prophet's widow, refused to recognise Yazīd and took refuge on the inviolable territory of Mecca. Husain left the sanctuary to fall in the massacre of Karbalā' (cf. MASHHAD-HUSAIN); on October 10, 680 Medina quarrelled with Syria, and its inhabitants proclaimed Yazīd deposed. After futile negotiations recourse was had to arms. Victorious on the day of al-Harra [q.v.], the Syrians marched on Mecca, where Ibn al-Zubair had declared himself independent. His headquarters were in the great mosque. A scaffolding of wood covered with mattresses protected the Ka'ba from the Syrian catapults. The carelessness of a Meccan set it on fire (Nov. 683). The news of the death of Yazīd (Nov. 11, 683) decided the Syrian army to retreat. Yazīd was not a worthless sovereign, still less the tyrant depicted by anti-Omayyad annalists. He continued his father's policy. The patron of artists and poets, and himself a poet, he completed the administrative organisation of Syria by creating the *fund* of Kinnasrīn (cf. above). He perfected the irrigation of the *Qābiya* [q.v.] by digging a canal which was called after him. The *Continuatio Byzantine-Arabica* calls him *'Incunctissimus et cunctis nationibus regni ejus gratissime habitus . . . cum omnibus civiliter vixit'*. Beloved of his subjects, he lived *civiliter* like a private citizen. "No Caliph", says Wellhausen, "ever had such praise: it comes from the heart".

His younger son, the valetudinarian Mu'āwīya II had but a transitory reign. He was apparently carried off by the plague which was raging in 684. His brothers were all very young. The fact that they were minors compelled the Syrian chiefs to give their support to Marwān b. al-Hakam [q.v.], first Caliph of the Marwānid branch (June 22, 684). The Syrian Kais having refused to recognise him, were defeated at Mardj Rāḥī [q.v.]. His reign was a continual series of battles. A rapid campaign secured him Egypt. Exhausted with his exertions, the septuagenarian Caliph returned to Damascus to die on May 7, 685. His eldest son 'Abd al-Malik [q.v.] succeeded him. He had to retake the eastern provinces and Arabia from the anti-Caliph Ibn al-Zubair, and at the same time repel an invasion of the Mardais or Djurdjims [q.v.]. In Jerusalem we owe him the building of the mosque of al-Aḳṣā. His reign marks the beginning of the nationalisation or arabicising of the administration, which had remained in the hands of the individuals of the conquered races. He succeeded, if not in substituting Arabic for Greek, in getting it used alongside of Greek in the keeping of the official accounts and registers. He was the creator of Arab coinage. 'Abd al-Malik died in Oct. 705, after a reign of 20 years.

His successor, Walīd I, brought to the throne an autocratic temperament and a display of religious fervour unknown in his predecessors. He was the great builder of the dynasty. According to the earliest evidence it seems that the Christians of Damascus had been allowed to retain the splendid Basilika of St. John. Walīd took it from them and turned it into a mosque. In his reign the Arab empire attained its greatest extent. Walīd was singularly successful in his enterprises. His autocratic mood revealed itself in a diminution in tolerance to the conquered peoples. The great administrative offices were definitely taken from the Christians. By his fondness for magnificence, Walīd secured undisputed popularity with the Arabs of Syria. He died on February 23, 715.

His brother, Sulaimān b. 'Abd al-Malik [q.v.], founder of al-Ramla [q.v.] in Palestine, succeeded him. He perished at the disastrous siege of Constantinople. He was succeeded (Aug. 717) by his cousin 'Omar II b. 'Abd al-'Azīz [q.v.] who died on February 9, 720, and was replaced by the incapable Yazīd II. From the time of Walīd I the Omayyads had begun to forsake Damascus; the official capital, it ceased to be the Caliph's residence. The decline of the dynasty set in after the death of 'Omar II. Highām, who succeeded Yazīd II, vainly endeavoured to revive the prestige of the Syrian caliphate. The conquests ceased. In France the Arabs suffered the disastrous defeat of Poitiers, Oct. 732. Highām allowed the Melkite patriarchs of Antioch to reside in Syria. His greed, the failure of his military plans, and finally the way in which he shut himself up in his desert palace of Ruṣāfa, made this ruler unpopular, though he was the most hard-working of the Omayyad caliphs. He was succeeded in February 743 by his nephew, Walīd II, son of Yazīd II. This prince, an artist and poet, lived contentedly in the desert, where he began the building of the splendid palace of Mghatta [q.v.]. He died at the hands of an assassin before finishing it (April 744). His successor, Yazīd III, was the

first caliph born of a slave. He died five months later, having designated as his successor his insignificant brother, Ibrahim, who did not succeed in getting himself acknowledged.

In the midst of the general anarchy, there came on the scene the energetic governor of Mesopotamia, Marwān b. Muḥammad [q.v.], grandson of the caliph Marwān I. The victory of 'Aindjarr in the Bka' broke the resistance of his adversaries, the Syrian Yemenns. Becoming caliph in December 744, Marwān II made the mistake of moving the capital to Harrān (Mesopotamia) which alienated the Syrians from him. He exhausted himself in putting down their rebellions and those of the Khāridjīs. The 'Abbāsids, were now secretly conspiring against the Omayyad dynasty. Taking advantage of the disaffection in Syria, Abu 'l-'Abbās al-Saffāh [q.v.] had himself proclaimed caliph at Kūfa (Nov. 749). After his defeat on the great Zab (Jan. 750) Marwān had to evacuate Mesopotamia, and then Syria. Abandoned by the Syrians, he took refuge in Egypt where he died at Abū Sir in August 750. The Omayyads were everywhere pursued and exterminated, their tombs desecrated, and their ashes scattered to the winds. The Syrians tried in vain to regain their lost ground. They raised the "white flag" of the Omayyads in opposition to the "black flag" of the 'Abbāsids. They found too late that by indifference to the fall of the Omayyads they had thrown away the future and supremacy of Syria. They hoped henceforth for speedy coming of al-Sufyānī [q.v.], a national hero and champion of Syrian liberty. As his name shows, al-Sufyānī, was to be a descendant of Abū Sufyān. He was to bring back the golden age and the happy days of the dynasty, the memory of which his name perpetuates.

Immediately after the conquest, the tribes of Syria had to learn the dialect of the Quraysh, now promoted to be the classical language. Among the Syrian Arabs, distracted by foreign conquests and the suppression of revolts in the provinces, intellectual activity under the Omayyads had been confined to poetry. The chief representatives of this literary renaissance were, next to the Taghlibī Christian Akhtal [q.v.], the Caliphs Yūsuf I and Walid II. Arts and liberal professions remained the monopoly of the subject races, like banking and commerce. The Qadiri movement [q.v.] which seems to have started in Syria, shows that the Arabs of Syria were beginning to take an interest in the philosophical problems to which they had been introduced by their Christian compatriots.

Agriculture remained flourishing in spite of the greed of the exchequer. As a result of the war with Byzantium, maritime trade had considerably diminished. On the other hand the fall of the Persian empire had opened up Central Asia to the Syrians, but they were soon to meet the competition of the commercial cities of the 'Irāq, notably Basra. Syrian commerce, so active in the time of Justinian, became dormant under the Arabs. When maritime relations were resumed, it was the western peoples who secured the advantage from it, at the time of the Crusades. From the time of the Marwānids, the great towns of eastern Syria — Damascus, Hims, etc. — began to be Islamised as a result of the abolition of the military cantonnements. The subject races learned Arabic, without, however, abandoning Aramaic

or Greek. Decimated by epidemics, famine, civil strife and foreign wars, the Arab population of Syria grew slowly. If we neglect local outbreaks of fanaticism, there is no evidence of systematic persecution or proselytising encouraged by the authorities. The latter only exercised pressure on the Christians of Arab race, the Tanūkh and Taghlib. The Banū Kalb and other Syrian tribes had adopted Islam soon after the conquest.

In spite of their position as political helots, this was a period of marked tranquillity and tolerance for non-Muslims, if we compare it with the troubles that awaited them under the 'Abbāsids. For the Arabs, paid and fed by the State, it was a golden age, a continual feast. Their chiefs, growing rich in exploiting the provinces, acquired enormous fortunes. What favoured the success of the 'Abbāsīd conspiracy was the incapacity of the latter Marwānīd caliphs, excluding of course Hishām and Marwān II.

Then came the grave and continuous dissensions, after Mardj Rāhit, between Kaïs and Yemenns, and lastly the refusal of the conquerors to grant political rights to the non-Arabs, who were their intellectual superiors.

'Abbāsīd and Fātimīd Syria. With the fall of the Omayyads, Syria lost its privileged position, and ceased to form the centre of a vast empire. It found itself reduced to the rank of a simple province, and jealously watched on account of its attachment to the old régime. The capital of the caliphate was moved across the Euphrates. Straining under a power, the hostility of which they never ceased to feel, the Syrians found themselves systematically excluded from all share in government affairs, as they were henceforth to be under the Fātimīd and succeeding rules. The caliphs of Baghdād only intervened in Syria to make it feel its position of inferiority by inflicting increased taxation on it. Driven to extremes by the exactions of the caliph's agents, the Christians of Lebanon attempted without success to gain their freedom in 759—760. On the occasion of the pilgrimage or of the war against the Byzantines, the Caliphs al-Manṣūr, al-Mahdī, Hārūn and al-Ma'mūn passed through Syria. In the midst of the troubles that preceded the accession of al-Ma'mūn (813—833), the position of the Christians became intolerable and many of them migrated to Cyprus.

The misfortunes of their country, the loss of its autonomy, could not decide Kaïs and Yemenns to forget their regrettable differences, which ended by weakening the Syrians and dooming to failure their efforts to shake off the 'Abbāsīd yoke. A descendant of Mu'āwīya, 'Alī b. 'Abdallāh al-Sufyānī, raised the "white standard" which had become the symbol of Syrian independence. But to get the support of the Kalbis, he alienated the Kaïs (809—813). Another rising was no more successful. An Arab of obscure antecedents, named Abū Harb of Yemeni origin, proclaimed himself the Sufyānī (cf. above). The indifference of the Kaïs once again brought about his defeat in the reign of the Caliph al-Mu'tasim (833—847). Yielding to caprice the moody caliph al-Mutawakkil (847—861) thought of shifting his capital and living in Damascus. A mutiny in his guard forced him to return to Mesopotamia. His reign was a period of severe trial for the Syrians. From his reign dates for the most part the intolerant legislation, which it has been proposed to attribute

to 'Umar I: the wearing of a special dress, the prohibition of riding on horseback etc. Numerous churches were turned into mosques. At this date there were no longer any Christians of Arab stock in Syria. Under the Omayyads, the Banū Tammūkh had resisted all advances of the government. The Caliph al-Mahdī (775—785), however, forced them to apostatise.

It is to the early 'Abbāsids, that the Syrian military marches owe their origin, the *awāḥim* and *ḥuḡḡūr* [q.v.], lines of forts built to check the progress of the Byzantine invaders. In 906 an agitator claiming to be the Sufyāni was arrested. This was the last attempt at an Omayyad restoration; it failed before the apathy of the demoralised Syrians. A Turkish Mamlūk, Ahmad b. Tulūn [q.v.], already master of Egypt, invaded Syria under pretext of defending it against the Byzantines. He declared himself independent there. The dynasty which he founded had only an ephemeral existence (875—905), as had that of the Ikshīdids (875—905) who repeated the experience of the Tulūnids. In the interval, Syria had been devastated by the Karmatians [q.v.] who left behind them the germ of Ismā'īlī doctrines. From the time of the Tulūnids, the country may politically speaking be considered lost to the 'Abbāsids. Their power was only felt there during a few brief periods of restoration.

In their turn the Beduin tribes wished to take their share in plundering an empire in decay. A Taghlibī clan, the Banū Ḥamdān [q.v.] found themselves entrusted with the reconquest of Syria for the Ikshīdids and checking the Byzantine advance. They installed themselves as masters of the south of the country, without however breaking with the 'Abbasid caliphate. The most famous of these Ḥamdānī emirs was Saif al-Dawla [q.v.], who in his court at Aleppo, showed himself an enlightened patron of arts and letters (949—967). After the fall of the Ḥamdānids (1003/1004) in spite of a brief 'Abbāsīd reaction at Damascus (975—977), Syria fell into and remained for over a century (977—1098) in the hands of an 'Alid dynasty, or more accurately Ismā'īlī, that of the Fātimids [q.v.].

Having conquered Egypt, the Fātimīd armies invaded Syria (969), and conquered Palestine and then Damascus, without encountering any particular resistance. In the centre and north it is difficult to say what form the Egyptian conquest took. The direct authority of the Fātimids was enforced so long as their troops occupied the region. After their departure, the local Emirs did as they pleased without openly breaking with the suzerain in Cairo. Fātimīd rule was only kept up in Syria by continually dismissing the agents to whom it was forced to delegate its authority, thus perpetuating administrative instability. In Palestine it had to reckon with the Banū 'I-Djarrāh. These Emirs of the tribe of Tayy arrogated to themselves for over a century a regular hegemony over the nomad Syrians. In the reign of al-Hākim (996—1020), the Banū 'I-Djarrāh amused themselves by appointing an anti-caliph, and then sending him back to Mecca, whence they had brought him. In Tyre a humble boatman succeeded for a time in declaring himself independent (997).

Taking advantage of the anarchy the Emperor Nicephorus Phocas (963—969) had conquered Northern Syria. His successors, Tricases (969—976) and Basil II (976—1025), easily con-

quered the valley of the Orontes and the Phoenician coast. Of all these conquests all that the Byzantines were able to keep for over a century was the "duchy" of Antioch, which included northern Syria, except the emirate of Aleppo. We have already mentioned the Caliph al-Hākim [q.v.] with whom is connected the origin of the Druses [q.v.]. This moody prince quarrelled with the Christians and ordered the Basilika of the Resurrection in Jerusalem to be destroyed, Syria gradually detached itself from Egypt. In the midst of the political disorders, the pernicious influence of the Beduins increased. About 1023, the Banū Mirdās of the Ḳaist tribe of Banū Kilāb established themselves in Aleppo, and held it with interruptions till 1079.

By this time the Saldjūks [q.v.] had already gained a footing in Syria. The provinces of Syria fell into their power, Damascus in 1075. At Jerusalem a Saldjūk Emir Ortoḡ, founded a local dynasty (1086—1087). In 1084, the Greeks lost Antioch, their last possession in Syria. Syria was now divided into two Saldjūk Sultanates, that of Aleppo and that of Damascus. Saldjūk Emirs more or less independent commanded at Aleppo and Ḥimṣ, all at war with one another. At Tripoli, a humble *Ḳāḍī* founded the dynasty of Banū 'Ammār. To the south of this town the towns on the coast remained in the hands of the Egyptians. Into the midst of this confusion, this piecemeal distribution of territory, came the armies of the Crusaders.

The persistent hostility shown by the 'Abbāsids to the intellectuals of Syria, the political anarchy, the rule of Turkish and Berber adventurers, unlettered and greedy masters, were all circumstances unfavourable to the progress of ideas. A few poets had gathered at the court of the Ḥamdānids and Mirdāsids of Aleppo. The patronage of Saif al-Dawla encouraged the preparation of the celebrated *Kiṣṣ al-Aghāni*. The reader may be referred to the articles on Abu Tammām, Abu 'I-'Ala' al-Ma'arri, al-Mutanabbī, a native of Kūfa, but a Syrian by education and upbringing, al-Maḳḍisī, one of the most justly esteemed of Arab geographers. Less tolerant, more irritating than the Omayyads, the authorities began to encourage conversion to Islām. Arabic slowly began to take the place of Syriac as the spoken language of the subject races, who began to write in it. Profane sciences, especially medicine, began to be cultivated, mainly by Jews and Christians. The end of this period coincides with the institution of the Madrasas [q.v.] which grew up under the stimulus of the Saldjūks, especially in Aleppo and Damascus. The lack of respect into which the 'Abbasid caliphate had fallen reacted on orthodox Islām: it favoured the rapid growth of sects practising initiation and following the Shī'a: the Druses, Ismā'īlīs, Nuṣairīs and Mutawāllīs [q.v.].

The exactions of the 'Abbāsīd and Fātimīd agents diminished without however destroying the great vitality of the country. In 311, a governor of Damascus was sentenced to pay 300,000 dinars to the treasury. The country began to become depopulated and agriculture languished. Its complete decline was only checked by the introduction of new crops: sugar-cane and the orange. Cotton-growing was developed and cotton was used for the manufacture of paper. In the tenth century there was a paper factory in Damascus. One should

read the sketch of the commerce of Syria in al-Makdisi's geography, *Aḥqan al-taḥālim* (p. 180, 184), to get an idea of the varied resources of a country which centuries of oppression and the most deplorable administration had not been able to impoverish.

Syria under the Franks. On October 21, 1097, the army of the Crusaders appeared before the walls of Antioch. After a very laborious siege, they entered it on June 3, 1098. Then following the valley of the Orontes through the mountains of the Nisairis and along the coast, the Franks, now reduced to 40,000 men, debouched before Jerusalem. The city, which the Fātimids had just retaken from the Ortōkīds, was taken by assault on July 15, 1099, and Godfrey of Bouillon elected head of the new Latin state (1099-1100). But the first Frank king of Jerusalem was really his brother and successor, Baldwin I. He conquered the towns on the coast, Arsūf, Caesarea, Acre, Sidā, Bairūt and Tripoli (1109-1110). This brave leader, the most remarkable of the crusading sovereigns, died during an expedition against Egypt (1118). His successor, Baldwin II du Bourg, captured Tyre in 1124; he failed before Damascus, but the town had to promise to pay tribute.

It was towards 1130 that the Latin kingdom attained its greatest extent stretching from Diyār Bakr to the borders of Egypt. In Syria its frontier never crossed the valley of the Upper Orontes, nor the crest of the Anti-Lebanon. The great cities of the interior, Aleppo, Hamā, Hims, Baalbek, Damascus while agreeing to pay tribute, remained independent. The kingdom consisted of a confederation of four feudal states: 1. On the east, the county of Edessa lay along the two banks of the Euphrates. 2. In the north the principality of Antioch included in its protectorate Armenian Cilicia. 3. In the centre the county of Tripoli stretched from the fort of Margat (Marḡah) to the Nahr al-Kalb. 4. Lastly came the royal domains, or kingdom of Jerusalem, strictly speaking. It included all cis-Jordan Palestine and in Transjordan, the ancient districts of Moab and Edom, which became the seignoury of Crac (Kerak, q.v.) and of Montréal (cf. *SHAWHAK*) "in the land of Oultre-Jourdain". For a time it had a dependency, the port of Aila-⁴Aḥaba. To defend these possessions the Crusaders built strong castles: the Crac des Chevaliers (Hṣn al-Akrād, q.v.), Chastel-Blanc (Ṣafṣā), Maracles (Marḡṭya), Margat (Marḡah) and in southern Lebanon, Beaufort (Ṣaḡīf Arnūn). Lastly in Transjordan the two massive fortresses of Crac and Montréal.

After the death of Baldwin II (1131) the decline of the Latin state began; it was hastened by the isolation of the Crusaders and their lack of unity. The Byzantines claimed the rights of a suzerain over the north of the kingdom. The Armenians sought to form a national state for themselves in the region of the Taurus. Instead of coming to an agreement, Franks, Byzantines and Armenians only succeeded in enfeebling one another to the advantage of the Muslims, who were gathered round remarkable leaders like Zangī, Nūr al-Dīn and Ṣalāh al-Dīn (q.v.). Baldwin III (1144-1162) resumed the siege of Damascus (July 23-28, 1148) without any more success than his predecessors. Already Lord of Aleppo, Nūr al-Dīn installed himself in Damascus. Amaury, king of Jerusalem from 1162, formed the bold project of seizing the

heritage of the dying dynasty of the Fātimids. He was anticipated by Nūr al-Dīn. The latter sent his lieutenant, the Kurd Ṣalāh al-Dīn, to Egypt. On the death of the last Fātimid Caliph, Ṣalāh al-Dīn proclaimed himself independent in Egypt, and founded the Aiyūbid dynasty there, then seized Damascus from the sons of Nūr al-Dīn. On July 4, 1187, at Hattin between Tiberias and Nazareth, the whole Christian army under Guy de Lusignan fell into the hands of Ṣalāh al-Dīn. Jerusalem capitulated on October 2 following. Deprived of their defenders, the other cities, except Antioch, Tripoli and Tyre, had to surrender.

The preaching of the third crusade brought to the camp before Acre, which the Franks had been besieging two years, Philip Augustus of France and Richard Coeur-de-Lion of England. The town surrendered on July 19, 1191. A truce between the belligerents ceded the coast from Jaffa to Tyre to the Crusaders. In default of Jerusalem, which they had been unable to reconquer, Acre was henceforth the capital of the kingdom. The death of Ṣalāh al-Dīn produced dissension among his numerous heirs. The Emperor Frederick II took advantage of the discord to negotiate with al-Malik al-Kāmil, Aiyūbid Sultan of Egypt, for the cession of Jerusalem and other places of no strategic importance. Threatened by the sons of Ṣalāh al-Dīn, who had made an alliance with the Franks, their uncle al-Malik al-Kāmil called in the help of the Kh⁴arizmis who crushed the combined Syrian and Frankish forces near Ḥaṣṣa (1244) and enabled the Egyptians to occupy Jerusalem, Damascus and Hims.

The seventh crusade brought St. Louis to Syria after the check to his expedition to Egypt. For four years (1250-1254) he was engaged in fortifying the towns of the coast. It was the Mamlūk Sultāns, Balbars, Kalā'īn and al-Malik al-Aḥṣaf, son of the latter, who dealt the last blow to the Latin kingdom. Acre fell (May 31, 1291) after a heroic defence. In the course of the next months, Tyre, Haifa, Sidā, Bairūt and Tartūs were taken or evacuated. Athlith (q.v.) the imposing fortress between Haifa and Caesarea was the last to surrender (Aug. 14, 1291). The Frankish colonies in Syria were at an end.

The Crusades introduced into Syria the feudal organisation of contemporary Europe. The elective character of the kingship soon gave place to dynastic succession. The king only ruled directly the Palestinian kingdom of Jerusalem. His authority was limited by the privileges of the three orders: the clergy, nobility and bourgeoisie. "He cannot", notes Usama b. Munḡīḡ, "annul the decisions of the Court of Seigneurs". The authority of the great feudatories within their principalities was circumscribed in the same way. Agricultural serfdom was retained, as had been the custom in Syria. The name "poulatins" (*pūlatīn*) was given to the issue of marriages between Franks and natives: the etymology of this word is still obscure. The army was recruited not only from Franks but also from Armenians and Maronites. The Turcopols were the Muslim auxiliaries. The position of Muslims and Jews recalled that of the *dhimmī*s (q.v.) in Muslim lands, with this difference that they were not so heavily taxed. According to Ibn Dju-bair, his co-religionists did not conceal their satisfaction with Frankish rule.

Every principality had its own silver coin.

There were also gold ducats, "besants sarracénats", or "sarrasins" with Arabic inscriptions. Commerce, more or less dormant since the Arab conquest, again became active as a result of maritime relations with the west, which were never greater. The principal ports were Acre, Tyre and Tripoli. In the principalities of the north, the terminus for continental trade was La Liche (Ladhikiya) or Soudin (Suwaydiya) now called Port St. Simeon. We have to go back to the time of the Phoenicians to find a period of so great economic activity.

The state of war hampered, but did not put a stop to intellectual activity among the Muslims of Syria. In Damascus, al-Kāfīnī was busy with his history, and Ibn 'Asākir finished his monumental encyclopaedia, *Ta'rikh Dimashq*, devoted to individuals who had a more or less remote connection with Syria. At the end of his troubled career, the Emir Usāma b. Munqidh, produced an autobiography which is very valuable for the study of the relations which existed between Franks and Muslims. Barhebraeus, Syrian and Mesopotamian, wrote Arabic and Syriac with equal elegance. It was in this last language that the Jacobite patriarch wrote a voluminous *Chronicle*. Muslims, Christians and Jews studied medicine with success. Never except in the Roman period had there been so much building. The fortresses built by the Crusaders are wonderful specimens of mediaeval military architecture. Among the churches which they built, we mention that of Djubail, the monumental basilica at Tarsūs, the graceful cathedral of John the Baptist, now the great mosque of Bairūt, with its walls once covered with pictures. Many crusading lords had adopted Syrian customs (*taballadā*, [*Usūma*]). In the collaboration of Franks and natives was hailed, as by Pope Honorius III, a "Nova Francia", the dawn of a new civilisation. The destruction of the Latin kingdom destroyed any hopes based on it. The coming of the slave dynasty (Mamlūks) opened a period of anarchy, such as Syria had not yet seen.

Mamlūk Syria. We have already given a résumé of the exploits of the early Mamlūk Sultans against the Frank principalities. Fearing a return of the Franks and the warships of the European navy, which ruled the Mediterranean, the Mamlūks began to lay waste the towns of the coast, not even excepting the most prosperous, Acre, Tyre and Tripoli; they demolished the citadels at Saïda and Bairūt. Tripoli was rebuilt two miles from the coast. From the administrative point of view, they retained the old Aiyūbid appanages and divided Syria into six main districts called *mamlaka*, or *niyāha*: Damascus, Aleppo, Hama, Tripoli, Safad and Kerak (Transjordania).

The past history of Damascus assured its *nā'ib*, or viceroy, not only authority over his Syrian colleagues, but a special prestige of his own. This high official had little difficulty in persuading himself that he had the same rights to the throne as his ancestor in Egypt. To guard against the ambition of the Syrian *nā'ib's*, Cairo took care to change them continually (Sāliḥ b. Yahyā). Never did instability of government and greed of rulers, uncertain of the morrow, attain such proportions. Lebanon continued to enjoy a kind of autonomy. The dissenting Muslims of the highlands — Druses and Mutawallīs — took advantage of the troubles of the Mamlūks, occupied with the Franks and Mamlūks, to proclaim their independence. All the

forces of Syria had to be mobilised, and a long and bitter war endured (1293—1305) which ended in the complete destruction of the rebels and the devastation of Central Lebanon.

The Mongol Khāns of Persia were burning to avenge the military defeats which the Mamlūks had inflicted upon them. The most energetic of these sovereigns, Ghāzān (1296—1304), in 1299 secured the support of the Armenians and Georgians as well as of the Franks of Cyprus, and routed the Mamlūks near Hims. The troops occupied Damascus, and advanced up to Ḥama. The Egyptians having again invaded Syria, Ghāzān recrossed the Euphrates to meet them, but he was defeated in 1303 at Marj al-Saffar near Damascus. Syria had nothing to gain by the coming of the Burjids, who in 1382 replaced the Bahrī dynasty. They "preserved" Ibn Ayyās tells us, "the old laws", that is to say the anarchical rule of their predecessors. Saltān Farajī (1392—1405) had to begin the reconquest of Syria no less than seven times. The year 1401 coincided with the invasion of Timūr [q.v.]. After the capture of Aleppo which they sacked, his hordes appeared before Damascus. The town having agreed to surrender, the Tatars plundered it methodically. The majority of the able-bodied inhabitants were carried off into slavery, especially artists, architects, workers in steel and glass. They were almost all taken to Samarkand. Fire was then set to the city, to the mosque of the Omayyads and other monuments. Timūr led back his army and left Syria a prey to epidemics and bands of brigands. Meanwhile on the plateaus of Anatolia, the power of the Ottomans was gathering. The capture of Constantinople (1453) had increased their ambition. Death alone prevented Muḥammad II from invading Syria. His successors did not cease preparations. Kā'ibay (1468—1496) and Bīyazīd [q.v.] signed a treaty of peace, but it was only to be a truce.

The destruction of Baghdad by Hūllū and the fall of the 'Abbāsīd caliphate had shifted the centre of the Muslim world to the west of the Euphrates, Arabic literature found in the land of the Mamlūks an asylum, at best precarious. No encouragement was to be expected from ignorant and brutal sovereigns, many of whom could not even sign their own names. The intellectuals lived in the past, their activity lacks originality. It was the golden age of epitomisers, compilers, authors of handbooks and encyclopaedias. They were interested in collecting knowledge and learning it by heart. Among the encyclopaedists a special place must be given to the worthy Shihāb al-Dīn b. Faḍlallāh al-'Omari, author of the *Masālik al-Aḥyār*, a voluminous compilation of a historical, geographical and literary character for the use of officials of the Mamlūk chancellery. We may next mention Abu 'l-Fidā' [q.v.], historian and geographer, the geographer Shams al-Dīn al-Dimashqī (d. 1327), markedly inferior to his predecessor al-Maḳdisī [q.v.]. The versatile al-Dihābī [q.v.] was born in Mesopotamia but lived and died in Damascus (1353). Ibn 'Arabshāh (d. 1450) was the author of a history of Timūr. Al-Safadī [q.v.] compiled a great biographical dictionary (1296—1383), Sāliḥ b. Yahyā (d. 1436), the author of the *Ta'rikh Bairūt*, has left us in this work on the Emirs of the Ghārb the best contribution to the history of the Lebanon and a valuable supplement to the annals of the Frankish states. Ibn Talmīya [q.v.]

and his pupil Ibn Kaṣīm al-Djawzi are among the most original figures of this period. Their activities covered the whole field of Muslim studies. Indefatigable polemicists with a keen scent for heresies, they have had the peculiar good fortune to be exalted both by the Wahhābīs and the modernist Muslims of to-day.

The departure of the Crusaders marks the end of a period of astonishing economic prosperity. Syrian commerce fell back into stagnation. Little by little, however, necessity forced the resumption of relations with Europe. The decline of Acre, Tyre and Tripoli, ruined by the Mamlūks and the fall (1347) of the Armenian kingdom of Cilicia, to which western merchants had first gone, were to the advantage of Bairūt. For over a century this town became the principal port of Syria. Near Damascus and opposite Cyprus — the kingdom of the Lusignans and rendezvous of the European shipping — Bairūt was every year visited by ships of the Venetians, Genoese, Catalans, Provençals and Rhodians. These various communities had henceforth consuls as their representatives, officially recognised by the Mamlūks and receiving a grant or *ijāmaṭiyya*. On the other hand the Cairo government regarded them as "hostages" (*rakīna*) (*Khālī al-Zāhiri*); it held them responsible not only for those under their jurisdiction, but also for acts of hostility by Corsairs. The consuls protected pilgrims and intervened if required on behalf of native Christians. Thus we already have the system of capitulations which was to be developed in succeeding centuries.

Syria under the Ottomans. With the opening of the XVIth century the rule of the Mamlūks had begun to break up. Their exactions had exasperated the populace. The Ottoman Sultān Selīm I. [q.v.] resolved to take advantage of the occasion to invade Syria. Taking the initiative, the Mamlūk Sultān, Kānsūh al-Ghūrī [q.v.] mobilised his forces, and marched via Damascus and Aleppo towards Anatolia. The two armies met at Dabīk, a day's journey north of Aleppo. The Turkish artillery and the Janissary infantry scattered disorder through the Egyptian ranks. Ghūrī disappeared in the disaster of Dabīk (Aug. 24, 1516). Aleppo, Damascus and the towns of Syria opened their gates to the conqueror who went on to Egypt and put an end to Mamlūk rule. The Turks retained at first the territorial divisions or *niyāha*. The Mamlūk Ghazālī, *naib* of Damascus, had gone over to the Ottoman camp after Dabīk. The renegade was in return given the administration of the country except the *niyāha* of Aleppo, which was reserved for a Turkish Pasha.

On the death of Selīm I (1520), Ghazālī had himself proclaimed Sultān under the name of al-Malik al-Ashraf. He was defeated and killed at Kāhin at the gates of Damascus (Jan. 1521). Before the end of the 16th century, Syria had become divided into three great pashaliks: 1. Damascus, comprising ten sanjaks or prefectures, the chief of which were Jerusalem, Ghazza, Naplūs, Saīdā and Bairūt; 2. Tripoli, including the sanjaks of Hims, Hamā, Salamiya and Djabala; 3. Aleppo, including all North Syria, except 'Aintāb, which was included in the pashalik of Mar'ash. In the century following, the pashalik of Saīdā was created to include Lebanon. In its main outlines, this administrative division lasted till the middle of the xviiith

century, when the centre of government of Saīdā was moved to Acre.

The Diwān of Stamboul was only interested in Syria in so far as it enabled it to watch Egypt and Syria, and to levy upon its resources contributions to the expenses of the palace and for foreign wars. The taxes, which were put up to auction went to the highest bidder. According to a Venetian Consular report, the pashalik was worth 80,000 to 100,000 ducats (probably the silver ducat, the Venetian *grana* whence *grish* plur. *grush*, or piastre = 5 francs). The Pashas only administered directly the important towns and their immediate neighbourhood. The interior of the country was left to the old feudal tenants whose number and influence had increased since the Mamlūks: — Bedouin emirs, Turkomans, Mutawallīs, Druses, Nusairīs. The Porte only asked them to pay the tribute or *miri*, without worrying if it saw them fighting with its own representatives. Every year the Turkish Pasha at the head of his artillery and Janissaries set out to collect the taxes. The force lived on the country and laid it waste if resisted. It is remarkable that agriculture, the principal resource of Syria declined, the population diminished, the country districts emptied in favour of the Lebanon and mountainous districts where the harassed people sought an asylum.

The instability of their position increased the rapacity of the Turkish functionaries. Damascus saw 133 Pashas in 180 years. This period saw the rise of Fakhr al-Dīn [q.v.], the champion of Syrian independence (1583—1635), the Mutawallī emir, the Banū Harfūsh, lords of Ba'albek and al-Bīṣā, the Banū Manṣūr b. Furāikh, Beduin Shaikhs, who carved out for themselves an appanage in Palestine and in the region of Naplūs. These feudal lords were fairly well organised in spite of their cupidity, and they were able to defend their gains from the arbitrary Turk. By sending round the Cape the traffic of the middle East, the Portuguese occupation of India proved fatal to Syria. The harbour of Bairūt remained empty. Tripoli at first, then — thanks to the initiative of Fakhr al-Dīn — Saīdā attracted European ships which came for cargoes of silk and cotton. Aleppo, thanks to its situation between Mesopotamia, the sea, and the Anatolian provinces whose market it was, the principal depot on the direct route to the Persian Gulf, remained for three centuries the chief commercial centre of Northern Syria.

In the second half of the xviiith century, the doings of three individuals suddenly attracted attention to the town and region of Acre. These were Dāhiz (Syrian pronunciation of Zāhir) al-'Omar, Djazzār and Bonaparte. Dāhiz, a Beduin Shaikh, lord of the land of Safad, extended his authority over Galilee, and settled at Acre which he fortified and raised from its ruins. He resisted the Porte (1750—75) with assistance lent by the Egyptian Mamlūks 'Alī Bey and Abu Dhahab and a Russian squadron cruising in Syrian waters. Besieged in Acre by the Turks, he died there in 1775. His successor Djazzār [q.v.] held out for three months (March—May 1799) against the military genius of the youthful Bonaparte. Pasha of Damascus and of Acre, he remained the arbiter of Syria for nearly 40 years (1775—1804), in spite of his exactions and his cruelty.

The four million inhabitants of Syria and Palestine at the time of the Arab conquest were reduced

to one and a half after three centuries of Turkish rule. The cultivation of cotton, which with that of silk, formed one of the main sources of Syria's wealth had completely declined, when Muhammad 'Alī [q. v.] of Egypt, decided to attract to Egypt the disheartened Syrian planters. It was this state of anarchy that enabled the Lebanon emir Bashir [q. v.] to intervene in Syrian politics. Down to about 1840 we continually find him mixed up with the history of Syria. Even the great Turkish officials sought his intervention. Yūsuf Pasha of Damascus (1807-10) implored his help against a threatened invasion of the Wahhābīs. Bashir presided in Damascus at the installation of Sulaimān Pasha of Acre and successor-designate of Yūsuf Pasha. In the middle of the general confusion however Muhammad 'Alī of Egypt was watching for an opportunity of adding Syria to his governorship of Egypt. 'Abdallāh Pasha who succeeded Sulaimān at Acre (1818) undertook to give it him. He refused to allow the extradition of Egyptian fellāhīn and the repayment of a million piastres. Summoned to contribute towards this sum by the Pasha of Acre, under whom the Lebanon was, the Christians of the Lebanon refused to pay. The rising of the Christians was a new feature in Syrian politics, but it was not to be the only one. Through contact with the Europeans the Christians were becoming enlightened and they were learning their own strength. Taking as a pretext the refusals of 'Abdallāh Pasha, Muhammad 'Alī sent his son Ibrāhīm Pasha [q. v.] into Syria at the head of an army trained on European lines. Acre surrendered on May 27, 1832, after a siege of seven months. On July 8 at Hims, Ibrāhīm routed the Turks. A little later he forced the pass of Baḥlān and entered Anatolia. A treaty (May 1833) assured Egypt temporary possession of Syria.

The new rule proved tolerant. It admitted Christians to the communal councils; it favoured the abolition of measures humiliating to non-Muslims. It endeavoured to reform the police and the tribunals. On the other hand it provoked discontent by introducing forced labour and conscription even in the semi-independent regions of the Lebanon. Rebellions broke out among the Druses of the Lebanon and of the Hawrān, among the Nuṣairīs and in the never properly subjected province of Naplīs. Ibrāhīm exhausted himself in suppressing these risings. The Turks thought the moment had come for the re-conquest of Syria. They were completely defeated (June 27, 1839) at Nizib, north of Aleppo. European diplomacy then intervened at the instigation of England, which was disturbed by the ambition of Muhammad 'Alī. Until the expedition of Bonaparte, England had taken no interest in Egypt. Thenceforth she was continually occupied with Egypt and the Red Sea. Her agents stirred up the whole of Lebanon. An allied fleet bombarded Bairūt (Sept. 1850). On Nov. 2, Acre surrendered and Ibrāhīm Pasha had to agree to evacuate Syria. Shortly before, the Emir Bashir had gone into exile.

From the reign of Mahmūd II. [q. v.] the Porte had inaugurated a policy of administrative centralisation, and decreed the abolition of local autonomies and feudalities. After the departure of the Egyptians, it moved to Bairūt, whose importance was steadily increasing, the administrative centres of the ancient pashalīks of Acre and Sidā, in order to prepare for the annexation of Lebanon. With the

same object it declared the old line of princes of the Lebanon, the Shihāb Emirs, deposed. The only result was to perpetuate anarchy there. The Christians who had fought against the Egyptians claimed to be treated on terms of equality to the Druses. In the southern Lebanon several had acquired the confiscated lands of the Druse chiefs banished by Ibrāhīm Pasha. The latter, coming back from exile, demanded a return to the *status quo* and the restoration of their ancient privileges. In taking their side, Turkey paved the way for new conflicts and sanguinary fighting. The Syrian Muslims showed no less animosity to the Christians, whom Egyptian rule had partly enfranchised. They took no account of the intellectual and material progress made by the Christians, nor of the political equality promised by the *khatt* of the Sultan. The *khatt-i humayūn* [q. v.] of Sulṭān 'Abd al-Majīd [q. v.] communicated to the congress of Paris (1856), and tacitly placed under the guarantee of the Powers, scandalised Muslim opinion, but inspired confidence among the Christians. At Damascus and in the large towns they took advantage of the occasion to enrich themselves. A secret agitation began to stir up the Druses and Muslims, and waited for the events of 1860 to burst forth.

The Druses of the Lebanon combining with their co-religionists of the Wādī Ṭ-Taim and of the Hawrān, scattered fire and death through the villages of the Maronites, who were at sixes and sevens, as the result of an agrarian dispute. The anti-Christian movement reached Damascus, which the Muslims pillaged and then set fire to the prosperous Christian quarter, after massacring its inhabitants. In this city, in the Lebanon, and in Bairūt, the Turkish authorities intervened only to disarm the Christians, and watched the butchery inactive, powerless or abetting it. Under a mandate from Europe, France disembarked at Bairūt (Sept. 1860) a body of troops "to help the Sultan to restore peace." Taking the initiative, the Porte had sent Fu'ād Pasha [q. v.] with discretionary powers to Syria. He began to inflict summary judgment. Sentences of exile pronounced against the Turkish leaders and the most compromised Druses, faced Europe with the *fait accompli*: French intervention, though paralysed by the cunning of the Turks and the distrust of England, nevertheless restored confidence to the Christians, and preserved their native land for the people of Lebanon. The latter, given an autonomous organisation under the direct supervision of Europe (cf. LEBANON) thus gained half a century of peace and prosperity.

After 1864 Syria was divided into two wilāyets: Aleppo and Damascus. In 1888 Bairūt, the chief port, the centre of the commercial life of Syria, was made a separate wilāyet. Falling into stagnation after the shocks of 1860, the country saw with indifference the fall of Sulṭān 'Abd al-Azīs and Murād, the coming of 'Abd al-Hamīd [q. v.] and the granting of a constitution in 1876 (soon withdrawn). Between 1881 and 1883 we have the foundation of the first Jewish agricultural colonies in Palestine, which paved the way for Zionism. The latter received official recognition by the Balfour Declaration (Nov. 1917). It has been incorporated in the text of the British mandate over Palestine (1922).

Under 'Abd al-Hamīd also, emigration began to assume disquieting proportions. Having no room for development at home, exploited by a greedy

and untrustworthy power, the Syrians began to emigrate. Among the just complaints of the Syrians, was the indifference of the Turkish government to public works. France, with its capital, came to the relief of Syria, now left to herself, and having suffered a further economic blow by the opening of the Suez Canal. With the exception of the Syrian section of the Baghdad railway and the Damascus-Medina railway — the work of 'Abd al-Hamid, the Syrian railway system is in the main a French creation. These enterprises have considerably increased the wealth and productivity of Syria, by linking it up with an extensive series of connections, the Taurus, Anatolia and Constantinople on the north, and Arabia and Egypt on the south.

The Turks took even less interest than the Mamluks in furthering intellectual progress. 'Abd al-Hamid showed himself frankly hostile to Arabic literature, and instituted a system of turkicising. In spite of all obstacles the Christians of Aleppo in the xviiith century succeeded in resuming contact with Arabic studies, which had been practically closed to them for centuries. We owe to them the establishment of the first printing press in the Lebanon (1610) and in Aleppo. It is to their beginnings that we owe the literary revival of the xixth century when Syria became the centre of Arabic studies. Under the stimulus of foreign missions, French, Americans, etc., Syria became covered with schools and printing-presses which published newspapers, reviews and standard editions. Bairūt took the lead in the intellectual life of Syria, less by its own energy than under the stimulus of Europe. Still more efficaciously than the American mission, the Society of Jesus, with its very well organised printing-press, contributed to the renaissance of Arabic letters and no less to the diffusion of European culture. Bairūt and Syria in general thus produced a large number of young literary men. Their native land soon becoming too small for them (Brockelmann, *G.A.L.*, ii. 492), some migrated to Egypt. Among them we may note the two Yuzidj, Nasif [q.v.] and his son Ibrahim (d. 1906) and Butrus al-Bustāni [d. 1883, q. v.]. Turkey took no part in the movement for the education of Syria. Here it was again foreigners, particularly French and Americans, who made up for official indifference. They developed education in all three grades. In 1878 the Jesuits founded the Université St. Joseph at Bairūt. The older Syrian Protestant College of the Americans at Bairūt has recently been made a university (1923).

Syria of to-day. A revolution prepared secretly by the young Turkish party overthrew 'Abd al-Hamid and set up in his place his brother Reshād (April 1907). The Constitution of 1876 was re-established, and the Parliament which had been closed by the Sulṭān was reopened. Syria hailed with enthusiasm the revolution as the dawn of a new era. This illusion was of short duration. The young Turks, whom the Syrians had trusted, were not long in resuming once more the process of turkicising begun by 'Abd al-Hamid. With more method and continuity they declared war against all who were Arab by race or language. They insisted everywhere in Parliament and in the government offices on the employment of Turks only, and removed the Syrians from high offices and important military commands. This provocative policy

brought together for the first time Muslims and Christians in Syria. It awakened amongst all the desire to come to an understanding in regard to a common policy and to take joint action. Their demands were limited to reforms of a decentralizing nature. They asked that in the allotment of public offices, regard should be had to the progress which had been made by Syria, the most civilised province of the Empire, and that in the imposition and spending of taxes regard should be paid to the needs of their country. They thought the time had come to grant it a certain administrative autonomy. It was the obstinacy of the young Turks in rejecting these moderate demands which opened the door to separatist ideas, and finally convinced the Syrian nationalists that there was nothing for it but to rely upon their own efforts and upon the sympathies of Europe.

On the 29th of October 1914, Turkey entered the Great War. It began by suppressing the administrative autonomy of Lebanon, and imposing on it a Turkish governor. Djamāl-Pasha took into his own hands the government of all Syria with discretionary powers. He at once proceeded to hang the principal patriots whether Syrian, Muslim or Christian. Hundreds of others were sent into exile. Soon afterwards famine and disease decimated the population, principally of the Lebanon. Energetic but presumptuous, dreaming of the conquest of Egypt, Djamāl proceeded very unsuccessfully to attack the Canal of Suez (Feb. 1915). After the repulse of the second attack (August 1916), the English, commanded by Allenby, advanced as far as Ghazza. By November 1917 they had become masters of the southern portion of Palestine, and on the 11th of December, they entered Jerusalem, which the Turks had evacuated. The latter defended themselves for a further nine months on a line extending to the north of Jaffa as far as the Jordan. The decisive action took place on the 19th of September, 1918, on the plain of Sarona near Tulkarm. The forces of Allenby broke the Turkish front. It was a rout. At the end of the month the English, without meeting with any resistance, arrived in the neighbourhood of Damascus. The advance was delayed for a few days, in order to allow the Emir Faisal, the son of the Grand Sherif of Mecca, time to hasten from the remote end of Transjordan and to make on the 1st of October his entry into Damascus at the head of a body of Beduins. On the 31st of October, the Turks signed an armistice. A week later, the last of their soldiers had repassed the Taurus.

The English occupied the country with a military force. The French contingent, which had brilliantly contributed to the victories in Palestine, established itself on the Syrian side. During the course of the war the allies, in order to secure the help of Hamid b. 'Alī, Grand Sherif of Mecca, had promised to support the establishment of a federation of Arab states, with reservation of the rights acquired by France. The Emir Faisal took advantage of these equivocal formulae to claim the whole of Syria, and organised a form of government at Damascus. This town became a hot-bed of intrigues, from which hordes of bandits and assassins went out to perpetuate the insecurity in Syria. On March 7th, 1920, an alleged "Syrian Congress" at Damascus proclaimed "Faisal I, King of Syria". General Gouraud, appointed High Commissioner of the Republic of Syria, called upon

Faïsal to produce his credentials. When the ultimatum received no response, the French, after a few hours fighting, scattered at Khān Maissalīn in the Antelibanon, the bands who opposed their advance (24th of July 1920). On the following day they entered Damascus; Faïsal had taken to flight. On August 10th following, the Treaty of Sévres separated Syria from Turkey, in order to form provisionally an independent state, on condition that the councils of a mandatory should guide its administration until such time as it should be capable of independent government. Previous to this, the Congress of San Remo decided that the mandate should be confided to the French government. On the 1st of September 1920 at Bairūt, Gouraud solemnly proclaimed the constitution of "Grand Liban" (v. LUBNAN). Thereafter the "Federation of Syrian States" composing the three independent states of Damascus, of Aleppo and of the "territory of the 'Alawis" (the name officially adopted for the Nujairis) was formed. The administrative centre of this last state is Lādhikiya. A fourth state was formed for the Druses of the Hawrān. Like the people of Lebanon they had been allowed to remain outside the Syrian Federation. The latter had as its chief a Syrian president. Native officials, with the help of French advisers, assumed the government of these states. Representative councils were entrusted with the discussion of affairs of general interest and settling the budget.

Syria, placed under French mandate, adjoins Turkish Anatolia. The Northern frontier is defined by a line running from Alexandretta, crossing the Euphrates to the south of Djerāblus, and ending at Djaīrat b. 'Omar on the Tigris. On the west Syria is bounded by the kingdom of 'Irāq, on the south by Transjordan and English Palestine. This part of the frontier runs on irregularly from Rās al-Nakūra between Tyre and Acre. On the East it goes round the Lake of Tiberias, traverses the valley of Yarmūk, leaves the town of Dar'ū (Hawrān) on the north and after crossing the desert reaches the district of Djaīrat b. 'Omar by way of Abū Kamāl on the Euphrates.

The following are the approximate results in round figures of the census of 1921—1922, the first taken in Syria since the Arab conquest. The nomads in the district of Aleppo and of Damascus are not included in it. The state of Aleppo, comprising the independent sandjak of Alexandretta had 604,000 inhabitants. This number was made up as follows: 502,000 Sunnis, 30,000 'Alawis, 52,000 Christians of diverse denominations, 7,000 Jews, 3,000 foreigners. The state of Damascus contains 595,000 inhabitants, of which 447,000 were Sunnis, 8,000 Isma'ilis, 5,000 'Alawis, 4,000 Druses, 9,000 Mutawallis, 67,000 Christians of different denominations, 6,000 Jews, 49,000 foreigners. In the state of the 'Alawis, there were 60,000 Sunnis, 153,000 'Alawis, 3,000 Isma'ilis and 42,000 Christians of different denominations, in all 261,000 inhabitants. The state of Hawrān was remarkable for the homogeneity of its population. There were 43,000 Druses against 700 Sunnis, and about 7,000 Greek, Catholic, or orthodox Christians. For the population of Grand-Liban, see the article LUBNAN.

SHAMAN (v.), an idolater. The word belongs to the poetical language, and is at present obsolete. In Asadi's *Lughat al-Fars* (ed. Horn, p. 104), it is explained: „butparast“, while quoting the following verse of Rudaki:

„butparasti girifta im kamā,
im shāhūn dūn but ast u mā shaman im“

[„We have all adopted idolatry; this world is like the idol, and we are idolater(s)“, or: „because this world is the idol, etc.“]

The same explanation is given in the *Farhang-i Shāhī* (ii., fol. 132 verso) where besides the verse just mentioned (here reproduced in a somewhat altered, seemingly corrupt, form), quotations are given from Sanā'i, Shams-i Fakhri, and Amir Mu'izz; by Shams-i Fakhri (*Lexicon Persicum*, ed. Salemann, p. 105); by 'Abd al-Kādir of Baghdād (*Lexicon Shāhnamianum*, ed. Salemann, p. 143). The last named author cites *Shāhnāma*, 1074: 155 (Vallens), with which verse may be compared Minūshiri, *Divān* (ed. Kazimirski), ii. 2 19, and Kazimirski's note, p. 320, where two passages from Sanā'i's poetry are cited, one of which is also given in *Shāhī*.

In all these passages, shaman signifies nothing but „idolater“, and a term, expressing the idea „idol“ (*janam, but, wāhan*) always occurs in the verse also. *Shāhī*, *i. e.*, besides the signification „idolater“ gives that of „idol“ (*but*) too. It is, however, not probable, that these two ideas would be expressed by the same word; moreover, an instance for this signification: „idol“ seems to be

wanting. This second explanation, then, may be due to a mistake.

Respecting the etymology of the word, the derivation from Sanskrit *gramana*, a Buddhist monk, seems to be very probable. Words, denoting a religious person of some foreign sect, after passing into Persian, more than once acquired a less definite sense, for instance the word *nigūshāz*, which, while originally denoting the „auditor“ of the Manichees, in Persian poetry signifies simply: „an infidel“. As to the medium, through which the term *shaman* has been derived, we must look to the East-Iranian countries, where Buddhism once flourished. In Sakan as well as in Soghdian we find resp. the forms *saman(a)* and *shmn* (to be pronounced *shaman*), reflecting the Indian *gramana*. Most likely, then, the word entered the Persian from the Soghdian. The question, whether the East-Middle-Iranian word come directly from the Sanskrit or from some popular dialect, is of minor importance. The Pāli form *samāne* does not come into consideration, as the East-Iranian Buddhism belonged to the Northern form of that religion; besides, the initial *s* of the Pāli word could scarcely have been represented by Soghdian *sh* or Sakan *st*. A derivation direct from the Sanskrit seems probable for the Soghdian word (comp. R. Gauthiot, *Essai de grammaire soghdienne*, 1914—1923, I, § 177), and for the Sakan one also, for in all Prakrits, except Māgadhī and one minor dialect, Skt. *r* becomes *z*. Moreover, a word like *gramana* would rather be taken from the scriptural language of the religion, in this case Sanskrit.

A second question refers to the relation between the Persian word and the modern European term Eng. *shaman*, German *Schamane*, Russian *shaman*, etc., which designs the sorcerer-priest of the North-Asiatic and some North-American peoples. First, we must state, that the Persian *shaman* has no connection with any priestly function, but simply signifies an idolater. Kazimirski, who, in his edition of Minūshiri's poems, translates the word by „bonze“ seems to be led to this interpretation by his supposition, that the Persian *shaman* and the Siberian *shaman* were originally the same; cf. his note p. 320. Now, the European word occurs, so far I can see, for the first time in Brand's relation of Eberhard Isbrand's embassy to China, by order of the Russian government, in the years 1693—1695. The passage runs in the original (A. Brand, *Beschreibung der Chinesischen Reise, welche... d. 1693, 94 und 95... verrichtet worden*, Hamburg 1698, p. 80): „we fünf oder sechs Tungusen bey einander wohnen... halten sie einen Schaman, welche auf ihre Art einen Pfaffen oder Zauberer bedeutet“. The European term, therefore, originally designates the sorcerer of the Tunguses. And, indeed, only the Tungusian dialects (as well those of Siberia as the Mandjia) call the sorcerer *saman* (cf. M. A. Castrén, *Grundzüge einer Tungusischen Sprachlehre*, St. Petersburg 1856, p. 7, 91; A. Rudnew, *Novyya dannyya po žizni Mandžurskoj rli i jamanstwu*, St. Petersburg 1912, p. 9). It is not quite certain, if this word *saman* is originally Tungus; W. Schott (*Abh. Pr. Ak. W.*, 1842, p. 462) is inclined, though hesitatingly, to derive it from a Tungus root; a different etymology, but also from the same language, is proposed by C. de Harlez (*La religion nationale des Tartares Orientaux*,

Brussels 1887, p. 28 *sq.*). On the other hand, however, it is difficult to assume an Indian (or Iranian) origin for the Tungus word, as the other North-Asiatic idioms designate the sorcerer in a different manner. If Buddhist influence had been at work here, the term might have spread over a wider area. The derivation of the Tungus word from a Chinese one, which itself might be taken from the Indian (though representing rather *śākyā* than *śramaṇa*) seems also to be excluded (cf. Schott, p. 463). The form *Shaman* in the German work of 1698 presents an irregular *sch* in stead of *s*; we may, however, be sure, that the traveller acquired the word through a Russian medium, and therefore the difficulty lies in the Russian *shaman*, having *sh* instead of the Tung. *s*; de Harles (*op. cit.*, p. 28, n. 1), thinks that this fact may be due to Chinese influence.

The European "shaman" therefore, seems to be independent of the Persian *shaman*, which latter has nothing to do with any definite branch of religion.

(V. F. BÖCHNER)

SHAMDĪNĀN¹⁾, known also under the Kurdish name of *Nîw Cîx* (between mountains), *kaḫā* of the *sandjak* of Hakkārî, in the wilayet of Wan, is one of the least explored regions of Central Kurdistan. Its boundaries are: — on the north, the *kaḫā* of Guîawar; on the south, *Barîdost* and *Barzân* (*maḥall* of *Rawândiz*); on the west, *Oramûr* (*nâhiya* of the *sandjak* of Guîawar); on the east, the Persian districts, dependencies of Urmîya: *Desht*, *Merguîawar* and *Uşnû*. Situated between 37° and 38° N. and 44° and 45° E. (Greenwich), *ShamdĪnān* is divided into three *nâhiya*: (1) *Zerrân* with *Nehrî*, the administrative centre and seat of a *kā'immaḫān*; (2) *Humârû*, with the seat of a *mudîr* at *Benbô* or *Surûnû*; (3) *Guirdî Herikî* (*Herikî*), *mudîr* at *Bitkâr*. *Guirdî* is divided into three parts: (a) *Guirdiye Baroza* (against the sun); (b) *Guirdiye Nâwpâr* (middle); (c) *Guirdiye Bîn Cîx* (under the mountain). The greater part of the population is Kurd with a small Christian (Nestorian) minority. In 1914 there were about 13,000 Kurds and 2,000 Christians. The Kurd tribes of *ShamdĪnān* are the *Herikî*, *Guirdî* and *ShamdĪnān*. This last tribe is divided into *Zerrân* and *Humârû*. Every tribe recognizes the authority of its chief and all obey the power of the powerful family of *Shalkhs* of *Nehrî* (*Sadâte Nehrî*) [see below]. There are in all 126 villages in *ShamdĪnān*. In view of the importance of Kurdish toponymy, it may be useful to give here the names of the principal groups: viz. *Nâhiya Humârû*: *Nehrî*, *Benbô*, *Surûnû*, *Bûi*, *Deimîn Sufîsî*, *Melaiane Humârû*, *Begirdî*, *Awlîân*; *Nâhiya Zerrân*: *Gârê*, *Masîrû*, *Helîna*, *Nowshahr* (*Benârwe*), *Hexma*, *Serîrû*, *Ribunûs*; *Nâhiya Guirdî*: *G. Baroza*, *Nehâwa*, *Islân*, *Beirûh*; *G. Nâwpâr*: *Bîskân*, *Zet*, *Mawân*; *G. Bîn Cîx*: *Sûne*, *Shepatâne Guirdîân*, *Besûsîn*, *Zewîa Roci*, *Begûr*, *Sherwenân*, *Keled*; *Nâhiya Herikî*: *Bitkâr*, *Nefîs Herikî* (which includes three villages under the common name of *Shtwa Herikî*: *Gandê Zherî*, *Kerespânî*, *Zîrânî*), *Bedâw*, *Stûnî*, *Dîrî*, *Begâlîte*, *Sate*.

A few observations are suggested by the above names. On the subject of the name of *Nehrî* a suggestion has been made (Minorsky, *Zap. Vest.*

Old., xxiv., 1917, p. 157) connecting it with that of *Nairi*. This name, according to him, may have been brought here at a later date by the Christians. Delattre (*Esquisse de géographie assyrienne*, in *La Revue des Questions Scientifiques*, July, 1883) expounds at length the controversy on the subject of the site of *Nairi*, "which matter is of capital importance in the study of Assyrian geography." He is against the application of the names of Upper Sea of *Nairi* and Lower Sea of *Nairi* to the Lakes of *Wân* and of *Urmîya* respectively. Note, however, his remark that the name in question is rendered *Nairi*, *Nahri* or *Nahiri*, according to the different ways of writing it. He also says: "What must above all be noted is that Samiraman locates the country of *Nairi* to the east of the Great Zab, on the frontiers of Media." On the other hand, according to Thureau-Dangin (*Une relation de la 5ème campagne de Sargon*, Paris, 1912), there is every sign that *Nairi* or *Hubbâshkia* is the valley of the *Bohtân-Sa*. It is that part of the ancient region of *Nairi* which remained independent of the kings of *Urtu* (*op. cit.*, p. x., xi.). According to the same authority, "the *Guîawar* probably forms the centre of the country of *Muşaîr*. This localisation is confirmed by the itinerary of the thirty-first campaign of *Salmannasar*. ... Up to this time the site of the country of *Muşaîr* was placed further south, in the district of the steles of *Kelichîn* and of *Toprawa*..." If this is so, *ShamdĪnān* must have formerly formed part of the country of *Muşaîr*. Mention should also be made of the opinion of Th. Reinach (*Un peuple oublié: les Mattiènes*, in *Revue des Études grecques*, vii., 1894): "the territory of the *Mattiènes* of Herodotus corresponded in the main to the greater part of the present Turkish wilayets of *Hakkîari* and of *Moşul*... it is, in a word, the Turkish Kurdistan of to-day." Besides *Nehrî*, other names seem to suggest certain links with this ancient epoch. We refer particularly to *Bitkâr* (cf. *Bit - Ka - ri*, page 222, M. Streck, *Glossen zu O. A. Tofstain's Geographical List to R. F. Harper's Assyrian and Babylonian Letters*, vols. I—VIII in *Amer. J. of Sem. Lang. and Liter.*, vol. xxii., No. 3, 1906) and some names in *-is* (*Surûnûs*, *Ribunûs*) or *-ung* (village of *nâhiya Humârû*; the mountain *Baskî Gecang*, between *Helîna* et *Katûna Yukhârî*). Dr. W. Belck (*Beiträge zur alten Geographie und Geschichte Vorderasiens*, Leipzig 1901, I, 46—47) points to the importance of such names, saying: "I have discovered a whole series of ancient Chaldean names among those ending in *-is* or *-ick*". It is well to point out, however, in regard to the name *Shepatân*, that it might perhaps be connected with *Sciathan* mentioned by *Assemani* (*Solomana... sub Abdern Patriarcha Anno 1554 subiectas ecclesias habebat... Sciathanom...*). May there be some connection between *Galnica* (*Assemani, Bibl. Or.*, iii., p. l.) and *Gulung*, mentioned above?

As regards Kurdish orography of *ShamdĪnān* the following names are worth mentioning: *Shehidân* (Kur *Shehidân*), on the frontier of *Desht*; *Serî Gâwlekân*, above *Nehrî*; *Kûrî Mirgewtân*, above *Awlîyân* (Kur means a separate summit); *Çîaye Keleşhine*, above *Geleşhîm*; *Mîye Helîna*, at *Helîna*; *Serî Salîrân* at *Salîrân*; *Çîaye Resh* (ou *Resh Ruiyân*), at *Benawûk*; *Çar Çel*, *nâhiya Herikî*; *Tatte*, at *Bedâw*; *Gersûr*, at *Ardwel*, *Çîaye Huzûli*, between the *nâhiya* of *Guirdî* and *Herikî*; *Mengure*, *nâhiya Guirdî Baroza*; *Serî Sûlu*,

¹⁾ The editors have not attempted to bring the Kurd names in this article into uniformity with the transcription adopted for the *Encyclopædia*.

near Besham and Begor; Dolâ Mehendi, Gêwertik, Gîlhebâl and Çîaye Spt Rezi — on the frontier of Gulawar.

The principal passes leading into Merguiawar are: (1) the pass of Keleshim, very difficult, which must not be confused with the pass of the same name to the south of Uthun, famous on account of the celebrated stele which was found there; (2) the much easier pass, rendered passable even by vehicular traffic during the war, which is known by three names: Ziniya Sorik, Ziniya Pirgoule, Berd Hîştir. Mention must be made also of the pass of Guirve Talâtân between Kâtûna Yekhari (nâhiya Zerran) and Djerma (Desht). Finally the road from Nehri to Mosul (telegraph line) passes by Beguirdi (ancient bridge) Ruwân (pass Ziniya Beri) and Shepâtân. The principal water-course is given by the Turks the name Shamdinân Su, but amongst the Kurds it is known by the name Rubârî Beguirdi in its higher regions, and Rubârî Shîn in its lower regions. It is a tributary of the Great Zab into which it flows at the spot called Tengui Bîlinda, in the neighbourhood of the village of Suriya, in the district of 'Amâdiya. Its source is near the pass of Ziniya Sorik. Its principal tributaries are on the right: — Humârî (upper course called Dura), Nagârî, Herki, Rubârî Shîn (or Gramîr Su), Awî Marik; on the left: — Sherwenân (Husûdel), Mawân, Begîshne.

Holy places. Amongst the places which are venerated by the Kurds mention must be made of the numerous places of sepulture. There is the cemetery of Çel Shehidân on the mountain of the same name, where it is popularly believed that the remains of the companions of the Prophet are buried. At Mellîne Humârî there is the tomb of Molla Hâdîdî, the founder of the family of the Sheikh of Nehri. At Nehri itself, there are the tombs of the sayid 'Abdullah, the disciple of Mawlânâ Khâlid, the propagator of the Naksh-bandiya doctrine, of the sayid Tâ and of the sheikh Shâlih. These three tombs are found in a family vault called *Makbarê Shatukh* in the northern part of the village. Other tombs venerated are those of Pir Rashidân at Rashidân; Pir Abû Bakr at Gawlekân; Pir Wesân, at Basiyân. The gift of telepathy is attributed to the latter two saints. Having married one another's sisters, they were able to communicate with one another at a great distance. The tomb of Shaikh Farakh or Farikh at Nehîwa possesses a special virtue in gaining the acceptance of prayers that are offered there. There is also an ancient tomb which is not attributed to any one person, but bears the name of *em bek* (green lance). He who is buried here, the Kurds say, is continuing in the other world with this lance the fight against the infidels. In the village of Belâtîan there is a tomb called *marghade Sheikh Bekal*. This sheikh, at the invitation of the angels who appeared to him, is said to have been transported from Gulawar, where he lived, to Belâtîan, on a praying carpet, in order to build a mosque there. There is still shown on a stone of the gate of this mosque the imprint of the sheikh's foot. In order to correct the work of the masons he pushed with his foot and set in line the layer of stones, although other stones had already been placed above it. Under a cupola, at the side of his master, is interred the Sheikh's favourite cat. He always sent him with his little caravan to superintend the muleteers.

Besides the tombs there are other *ziyâret gâh*, in the veneration of which we see signs of the ancient cult of the spirits of the mountains. Thus on the mountain of Seri Sate the place called *Marium* is venerated without distinction by Muslims and Christians. This sanctuary is always guarded by a Christian of the village of Sate, who is exempt from taxes and treated with esteem by the Kurds. We must remember in this connection, with B. Dickson, that on this mountain there are "the remains of Urartian construction." On the other hand, the summits of Kûri Mirgewtân at Awliyân and of Çîaye Rezh at Benawûk (a place called *Mâlî Sharân*) are also considered holy places.

The ruins which have associations of a more or less historical nature, ought next to be mentioned. Near the road between Benârwe and Nehri, on the hill of Kemi Tîwân, is the Kal'a Gûzel Ahmed. Its site is very spacious and the remains of a fountain, to which the water was lead from Derâ Rezh are found. Gûzel Ahmed is said to have risen in revolt against the Persians, the masters of Shamdinân at this period, to have been besieged in this fortress and to have perished with all the garrison after having thrown the women from the walls; feminine ornaments have frequently been discovered at the foot of the hill.

It is difficult to pronounce with certainty regarding the exact period of Persian domination in these districts. Did Shamdinân share the destinies of the district of Mosul or on the other hand did it go rather with the district of Hakkârî? In regard to this question, no direct evidence is given in history, but it is just this vague frontier zone whose possession was in dispute between Turkey and Persia. Under the Safawids Shamdinân belonged to Persia. It passed to the Turks after the victory of Sultan Selim, but returned to Persia under Nadir, etc. All these frontier districts, Shamdinân as well as Merguiawar, Terguiawar, Burâdest-Somâi, Ushnû and Lahidjân, were known at first among the Turks by the name of *Mulanatavm fâh*, then by that of *Nawâhiye Sharûkiye*. The final delimitation, with Anglo-Russian assistance, took place exactly on the eve of the outbreak of the war. It must be added that in all this district on this side of the Grand Zab, Persian is the language employed by the Kurds.

At Shiwa Herki, on an isolated rock, the ruins called Kîahki-Kelâtî should be noted (*kîah* = little mountain in the Herki dialect). This fortress is attributed to a certain Mir Dâ'ud and it is believed that it was razed to the ground at the Arab conquest. We read in the *Shiraf-Nâmê* (I, 177), "... A great river passes under the bridge of stone in front of the Chateau of the Emir Dâwâd." The reference here is to a castle in the neighbourhood of Gulawar, while the one which concerns us, is in the middle of Shamdinân. Moreover, the name Dâ'ud is very frequently applied to the remains of the past in this part of Asia. (Cf. for example the grotto Dukânî Dâ'ud near Sari Pûl [q. v.]; cf. G. Hüsing, *Der Zagros und seine Völker in Der Alte Orient*, iii., iv., Leipzig 1908).

In the district round the village of Begâlta on the peak of Begâlta (Kela Begâlta) are the ruins called Kelata Timûr Leng, very difficult of access. It is known that the Mongol warriors overran Central Kurdistan in many directions (cf. Hammer,

Geschichte der Ilkane). According to a tradition, which is quoted by G. Soane (*Te Mengotania and Kurdistan in Disguise*), after the conquest of Diyarbakir by Timur, an Emir Kara Usman is said to have been nominated governor of Hakkâri and to have married a Kurd lady of noble birth, whose marriage contributed to the rise of the family of Hakkâri. Now the family of Hakkâri, as is shown below, seems to have been very intimately connected with the history of the governors of Shamdinân. Moreover, a historical example of these conjugal alliances between the Mongols and the Kurds is known, namely that of Nas Khatun (cf. Hammer, *op. cit.*, ii. 289): "Nas Chatur was the daughter of the lord of Kurdistan, which Coban's father, Melik, son of Turan Behadir, conquered in the time of Hulagu and took the lady Nas prisoner." Emir Coban is said to have seized certain lands at Kaxwin, Sharhan and Hamadin under the pretext that they formerly belonged to Nas Khatun. In a valley of the same peak of Begalta, at a place called Tuyra Deri, the remains of an important construction are to be seen. On the other side of the peak Kels Begalta, at the village of Baniyan, are found the remains of an aqueduct which are connected with the ruins of Tuyra Deri. Names formed with *deri*, *dera* (church — the Syriac *dar*(e), convent; cf. also the Armenian village of Deir near Bagh Kal'a with the convent of St. Bartholomew), such as Dera Baniye, Dera Barozha, Dera Resh, etc., indicate a certain connection with Christian tradition. The history of the Nestorian church in fact shows us that from the fifth century Christianity was more prevalent in these districts than it is at present. There are grounds for surmising that Shamdinân formed part of the ecclesiastical province of Hadyab (Adiabene). "The Syrians understood by this name the district stretching between the Great and the Little Zab" (cf. J. B. Chabot, *Synodicon Orientale ou recueil de Synodes nestoriens*, Paris 1902, p. 673, 617). F. N. Heazell (*Kurds and Christians*, London 1911, p. 64) thinks one can say of Shamdinân: "The ancient name of this region was Rustaka (that is to say black mountains), which described in a picturesque fashion the beautiful mountains covered with dark forests". This statement seems difficult to reconcile with what one knows about the name of Rustaka from other sources: Rustak, town in Fars (Barbier de Meynard, *Dictionn. Gêogr. de la Perse*); and in the *Sheref-Nâme* (i. 226): "The name of Restak, read Rustak, is given to the towns of Mawerannehr... the name is also given to the small towns of Khuzistan". Whatever may be the actual location of modern Shamdinân in the framework of the ancient Nestorian administration of this country, before the last *ghikâd* passed over it, the principal church was situated at Dera Resh, the residence of the Metropolitan Nestorian, Mar Hanânisho'. The right of sanctuary which was attached to this spot was respected by the Kurds. They had also churches at Shepatâne Zerrân and Guirdi, Bettuâ, Dera Baniye, Sate and Zerrâ. Christian tradition supports the view that the Kapr at Kâfina was built on the ruins of a very ancient church. Mention must be made finally of certain ruins, which are not named, but which are very extensive, between the villages of Heran and Nanj (nâhiya Guirdi) and that on the hill between Begor and Sherwin there are also ruins, which are not named.

Genealogy. The Kurd tradition traces the origin of the name of Shamdinân to that of Shaikh Shams al-Din, the founder of the very noble and ancient local line of Bekrâde 'Abbâs. It is said to have belonged to an Arab tribe (the Kurds usually show a marked preference for Arab pedigrees) between Mosul and Baghdad. Defeated by Shammar [q. v.], he is said to have taken shelter in the mountains of Shamdinân, where his first residence was at Stûni, in the nâhiya of Herki. His son, 'Izz al-Din, extended his power over the districts of Mergilawar, Tergilawar, Guirdi, Baridost, Duskânî, Oramâr and Rekân. Six or seven generations of this family resided at Stûni, which was at last abandoned for Bitkâr in the time of Mir Zain al-Din whose name a mosque at Nehri bears. After three or four generations the capital, in the reign of Mir Zain al-Din, was transferred from Bitkâr to Harûnân in the nâhiya of Humârû. The remains of the fortress which he erected at that spot are visible to the present time. One of his sons, 'Imâd al-Din, left his father after a quarrel and migrated to the district of Urmiya, where the beglerbegui Afshâr gave him Berde Sûr and Tergilawar as a fief. From him sprang the family of the Bekrâde of Desht. The second son, who succeeded his father, was the first to take the name of Mir of Shamdinân. For two or three generations the Mirs remained at Harûnân and thereafter they established themselves at Nehri, where they exercised their power until the time of the Shaikh 'Ubaid Allâh (1870—1883), who imposed his rule not only on Shamdinân, but on many other Kurd districts, even in Persia.

The Kurd oral tradition, which has only recently been written down, offers only rather uncertain chronological data. Only one reference to Berde Sûr is said to be known. It is given in Minorsky (*Matériaux pour l'étude de l'histoire, du Minist. des Aff. Etr., St. Petersburg 1915, p. 473*), who in speaking of the Bekrâde of Desht points out that at first this region was governed by a branch of the Mirs Hasanawâhi. The line of the latter having for a long time been extinct at Tergilawar, their place was taken by the Bekrâde of Desht, who trace their origin to the three 'Abbâsîd brothers of Bohtan: Raahid Beg, who died at Djûlâmerk, Musa Beg, who died at Shamdinân, and Kalandar Beg at Berde Sûr. The fortress which was erected there in 970 (1562) is still visible. These indications allow us perhaps to assign to the reign of the Shaikh 'Abbâs the period at which the separation into two lines of the 'Abbâsîd Bekrâde took place, for it was not till then that the Afshârs who accepted 'Imâd al-Din, established themselves firmly at Urmiya and began to exercise authority over the neighbouring Kurds.

On the other hand, v. Hammer (*op. cit.*, i. 55) speaks of the presence at the Kurultai of Gujûk (August 1246) of "the two rulers of Kurdistan, Shemseddin and Schihabeddin", while according to one story (*Sheref-Nâme*, ii. 67), "the Hakkery princes, who are descended from Chemseddin, are called Chemmu" (a regular Kurd etymology; cf. 'Izz al-Din = Izo, etc.). A confirmation of this is offered by G. B. Margaroli (*Dizionario Geografico storico del Impero Ottomano*, Milan, 1829), who is relying probably on the authority of Père Garzoni, "the father of Kurdology". (He refers to his name in the second volume under the name Kurgestan, "secondo Garzoni"....). Margaroli says

on the subject of the Djalāmerk (ii. 3): "... Its inhabitants call themselves *Sciambo*, according to others they have still the name of *Hakiri*, which is perhaps that of the principal family reigning in that place". Djalāmerk on the Grand Zab is not far from Shamdīnān. These concordances—Shams al-Din, Shamdīnān, Shembo, Sciambo, Hakkāri—seem to establish a certain connection between Shams al-Din and the powerful tribe of Hakkāri, which is well-known in Kurd annals. It should be recalled that, if on the one hand a Kurd (Hakkāri?) prince Shams al-Din, was present at the Kurultai of Gujuk along with other Mongol vassals; on the other hand at a later date in 1286, under Arghūn (cf. Hammer, *op. cit.*, i. 314), a revolt of Hakkāri took place, "after which 16,000 horsemen, commanded by the Amir Masuk Kuschd-schi and the Djalair Nuriaga, were sent against the Hakiri Kurds and their rising put down". This rather scanty documentary evidence does not permit any definite conclusion to be made, and we are content to note the references.

The Power of the 'Abhāsī Begāde, which we have seen to have been very great, had to bow before the family of Nehri Sadāte. The genealogy of this family traces its origin to the person of the Shaikh 'Abd al-Qādir Gilāni (or Dīlī; cf. R. A. Nicholson, *Studies in Islamic Mysticism*, Cambridge, 1921, p. 81, No. 1; contrary to the belief of Nicholson, we are here concerned with the locality called Gilān in southern Kurdistan and not with the province to the south of the Caspian). One of the sons of this promoter of the Khādirīya doctrine, Shaikh 'Abd al-'Azīz, is said to have established himself at Akri (to the north of Mosul), where his tomb is still venerated. His son, Shaikh Abū Bakr, proceeded to establish himself in the district of Herki at the village of Sūni, which had been the capital of Shams al-Din. Of the descendants of the Shaikh Abū Bakr, Shaikh Haidar and three or four generations resided at Sūni, then afterwards in the time of Molla Hādīdī they moved, some to Melān, some to Demāne Sūfi in the Humāri, until the time of Molla Sāliḥ. Of the two sons of this latter, Saiyid 'Abd Allāh and Saiyid Aḥmad, the first was the disciple and successor of Mawlānā Khālid. After having studied Naqshbandīya doctrine under him, he chose Nehri as his domicile which became from that time the residence of this family. At first it was content with purely spiritual influence, but in time it seized upon temporal authority also, which reached its apogee under Shaikh 'Ubaid Allāh. The ambitions of this great Kurd chief, who invaded the Agharbāidjān about the year 1883 and who was overcome only by the joint efforts of Persia and of Turkey, are well-known (cf. S. E. Wilson, *Persian Life and Customs*, 1895. See also in the *English Blue-Book*, Correspondence respecting the Kurdish Invasion of Persia, Turkey, 1881, No. 5). Saiyid Tā II and Shaikh 'Abd Allāh II, grandsons of the Shaikh 'Ubaid Allāh, are the present representatives of this family.

Besides these two principal families which disputed for primacy in the Shamdīnān, we may mention amongst the lords of less importance the Aghawāte-Zerrān. This tribe is divided into two branches, one at Ushaw in Persia and the other in the district called by its name in Shamdīnān. Both of them trace their common origin to Khālid Ibn al-Walīd (v. b. another Arab descent!). In re-

gard to Guirdi, the family of the Mirs divided in time into two branches, Zerrā Begāde and Bīn Cīa Begāde. For about a century, power belonged to the former. At Guirdi as at Zerrā besides the Mirs, there were pashmirs. The Taifci pashmir family of Zerrā is extinct; that of Guirdi, known as Kuče Begān, has pretensions to a more ancient nobility than that of the Mirs. In the Guirdi Baroka, the Mir Lashkeri family is well known. Lastly amongst the Herki, the most ancient family is that of Māla Shābe Aghā at Shīwa Herki. It no longer possessed influence nor wealth, but the prestige which it had formerly won, still remains; in all the assemblies of the Herki Kurds the first place is reserved for it. The Herki tribe has many branches. The settled part, Herki Benedjī (1,000 hearths), constitutes the population of the district of this name in Shamdīnān; the nomad part (6,000 tents) passes the winter between Rawandiz and Erbil (Hawler in Kurd), the Sidān and Serhātī and at Akri, the Mindan and in the summer at Terguiawar and Merguiawar in Persia. The common ancestor of the Aghas of Herki was a certain Abū Bakr, a dangerous rival of Zain al-Din, Mir of Shamdīnān, who ended by getting rid of him. Abū Bakr had four sons: Mendo, Sido, Serhat and Mam Shaikh, from which are derived the names of the nomad Herki clans. Jaba in his *Revue* wrongly places a part of the tribe of Herki in Kirmānshāh [q. v.].

Amongst clerical families the following enjoy a certain renown: in the Zerrā, Shaikh Djamāl, at Sūri; in the Guirdi, the family of Shaikh Tāi, that of Mollā Nābi of Kelit and that of Shaikh Farukh at Nehāwa. It should be mentioned that the evil spirits, *djinn*, recognize the authority of the families of Shaikh Djamāl, of Mollā Nābi and of Shaikh Bahk Pitrāni (in the 'ashirāt of Shirwān, which adjoins Shamdīnān).

Bibliography. As has been indicated at the beginning of this article, Shamdīnān is a Kurd country very little studied. Apart from certain vague references in the books of the American missionaries of the Presbyterian mission of Urmiya, e.g. Dr. A. Grant, *Ten Lost Tribes*, New York, 1841, there is a comparatively full description only in the works of B. Dickson, *Journeys in Kurdistan in the Journal of the Royal Geographical Society*, 1910. One can consult also W. A. Wigram and Edgar T. A. Wigram, *The Cradle of Mankind (Life in E. Kurdistan)*, London, 1914, ch. viii.; V. Cuinet, *La Turquie d'Asie*, Paris 1891, II. 717-199.
